Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I want to include an article which appeared in the Buffalo Evening News, Buffalo, N. Y., under the headline "Copies of Painting at Albright Given to United States Embassies." Such a gesture of international good will is certainly important to the cultural defense of the United States and it is in line with President Eisenhower's state of the Union message earlier this year. I recommend it to the attention of the Congress:

COPIES OF PAINTING AT ALBRIGHT GIVEN TO UNITED STATES EMBASSIES

In an unprecedented gesture of international good will, the Albright Art Gallery has shipped to 50 American embassie abroad large colored reproductions of its valuable painting, "Church at Old Lyme."

The choice of this oil is significant, for it was painted in 1905 by Boston-born Childe Hassam. In that year the Albright

Gallery was founded.

The gifts are in commemoration of the gallery's 50th anniversary, notes president Seymour H. Knox of the Academy of Fine Arts, which governs the gallery, in letters of explanation to American ambassadors in capitals from Tokyo to Rio de Janeiro.

'As we celebrate the 50th anniversary of the Albright Art Gallery," wrote Mr. Knox, "we think of the important work being done We believe by our various missions abroad. that the creative American spirit is an element in fostering the mutual understanding which we all seek."

APPRECIATED BY DULLES

Mr. Knox's sentiments were echoed in a letter of thanks from Secretary of State John Foster Dulles, on behalf of the embassies. The Secretary observed:

"I feel it is very important that our missions should be decorated with fine and representative examples of the American cultural heritage. * * * I want you to know that I appreciate very much your generous spirit in this regard.'

The lithograph reproductions, 30 by 331/2 inches, are the work of the Niagara Lithograph Co., 1050 Niagara Street. Albright director Edgar S. Schenck said the lithography work is "excellent" and the color "close to the original."

Mr. Schenck noted that the lithographers "even made an attempt to compensate for the slightly yellow varnish to give the painting the brilliance it had in its original state."

EMBASSY ART DEFICIENT

The lithographs were a gift from the company to the gallery for the anniversary. Additional copies will be presented to new members during the annual membership drive next month.

Our embassies abroad are notoriously deficient in representative American art, as illustrated by a letter of gratitude received by Mr. Knox from Robert F. Woodward, the Ambassador in San Jose, Costa Rica, who admitted:

"I have been trying to find sources of supply of fine reproductions of paintings of historical subjects and American statesmen for the Embassy walls. The pictures there now are of no significance in American life."

The Ambassador to Norway, L. Corrin Strong, wrote to Mr. Knox from Oslo: "I find that the Norwegians do not know a great deal about our paintings, and the ones we hang in the Embassy have attracted considerable attention."

PAINTED IN 1905

James Clement Dunn, Ambassador to Brazil, in a letter to Mr. Knox, said: "The work of the Albright Art Gallery illustrates both at home and abroad the interest of the American people in their own art and that of other nations. * * * A reproduction of Childe Hassam's 'Church at Old Lyme' on our walls will serve to remind all of us in the Foreign Service of the great cultural accomplishments of the country we repre-

Childe Hassam, a leader of the Impres-sionist movement in America, painted elmshaded Congregational Church at Old Lyme, Conn., on Oct. 17, 1905. The church, built in 1817, was destroyed by fire 2 years after Hassam immortalized it.

The artist was born in 1859. His painting career spanned 50 years. His paintings are included in almost all major museum collections in America, and during his life he received nearly every award available to an artist.

Conventions and the Popular Will

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. MULTER. Mr. Speaker, the following article written by Senator PAUL H. Douglas, of Illinois, is deserving of our attention. It appeared in the March 28, 1955, issue of the New Republic magazine.

CONVENTIONS AND THE POPULAR WILL

(By Senator Paul H. Douglas, of Illinois)

By next year the campaigns for the presidential nominations of the major political parties will be in full flight. Once again complaints will be heard that the party conventions do not accurately express the popular will and that they are in fact largely controlled by a relatively small group of insiders. Proposals will be made for increasing the popular control over the nominating process by means of the presidential pri-mary. But it will then be too late. Only a few State legislatures will be in session in 1956 and the selection of delegates will be virtually completed before the public can awaken and make its will felt.

If reforms are to be introduced into our process of nominating Presidents, they must therefore in the main be effected prior to presidential years. For then there is time to act. This is a most appropriate year since virtually all of the State legislatures will be in session and the presidential election is sufficiently near for public interest to be easily awakened.

We should therefore take stock of the nominating process by which we select our candidates for the Presidency, of the way in which the delegates to the national conventions are selected, how the conventions operate, and who controls them. We should also consider the comparative advantages and disadvantages of a more direct choice of the candidates by the voters through some form of the direct primary.

When Andrew Jackson convened the first National Party Convention in 1832, it was a big step forward. Prior to that time, the Senators and Representatives of the Federalist and of the Republican-Democrat Parties met in Washington during the legislative session and in caucus selected their candidates. As the Federalist Party began to disappear, control of the dominant Republican-Democrats by the so-called "Virginia dynasty" tightened. Thus Madison succeeded Jefferson and Monroe in turn followed Madison.

The advent of Jackson in 1828, however, brought fresh life into the political proc-esses. Jacksonian democracy expressed the turbulent and equalitarian life of the frontier together with the desires of the lowerincome groups of the eastern seaboard. was a popular movement aiming to make ours a government not only of and for the people, but also by them. As an inevitable part of this program, Jackson and his followers attacked "King Caucus" and the dominance of Congress which they alleged, with good reason, had by the combination between the adherents of Adams, Clay, and Crawford flouted the will of the people in choosing John Quincy Adams in 1825 as President instead of "Old Hickory." They called, therefore, for independent national nominating conventions, and in 1832 the revivified Democratic Party renominated Jackson by this process. This had been made possible by the improvements in the means of transportation and communication. With the advent of the railways, conventions became still more practicable, and under the pressure of public opinion the Whig Party finally followed the example of the Democrats in 1840.

Prior to the Civil War it was through the national conventions that the Democratic city organizations of the Atlantic seaboard made their unfortunate alliance with the southern slavocracy and nominated the succession of so-called dough faces, or northern men with southern principles, namely Lewis Cass in 1848, Franklin Pierce in 1852 and James Buchanan in 1856. It was by means of the national convention that in 1856 the new Republican Party largely replaced the old Whigs who so recently as 1848 had been able to elect a President. was in the Democratic National Convention of 1860 that the Union was really dissolved, for it was there that the South refused to go along with Stephen A. Douglas' program that the territories should decide whether or not they wanted slavery and insisted instead that the National Government, under the authority of the Dred Scott decision, should foster and protect the extension of slavery into the territories and possibly even into the free States themselves. When the Demo-cratic Party split on this issue at Charleston in 1860 and Douglas and Breckenridge faced each other as rival Democratic candidates, the one remaining cohesive national force had been torn asunder. For with the rise of the Republican Party, most of the southern Whigs had felt forced to enter the Democratic Party and a monolithic structure had been started in the South.

It was through the medium of the national convention that in 1864 the Republican Party was transformed into the Union Party and back again into its former self in 1868. It was in the national conventions from 1876 to 1884 that the groups coalescing around Blaine and Grant respectively waged

their bitter personal but nonideological battles for power. It was in the Democratic National Convention of 1896, that a new popular impulse surged into the Democratic Party which was crystallized in Bryan's amazing "Cross of Gold" speech and which, despite the temporary dominance of the conservative groups in the party in 1904 and 1924, has continued to this day.

It was in the Democratic Convention of 1948 that, swayed by the oratory of Hubbar Humphrer, the party ranged itself definitely behind the program of civil rights.

It is therefore seen that national conventions have in the past played an important and at times a highly constructive part in the political decisions of the Nation, Underneath the sound and fury and the apparently nonsensical irrelevancies which distract and annoy the thoughtful, there is a far deeper logic which is at work in most conventions and which is imperfectly seen except by active participants. It is the effort of divergent territorial and class interests and ideologies to find a successful unity without too great a sacrifice of principle. There are many features of the nominating process which lend themselves to abuse and which tend to produce government by the few rather than by the people. Gross mistakes are made, as at the Republican Convention of 1920 when Warren G. Harding was foisted upon the Nation by a coterie of Senatorial bosses. Sometimes inferior candidates are chosen over superior ones. But there is more sanity in the selective process than critics are frequently willing to grant and in making reforms we should take care not to throw the baby out with the bath.

THE RISE OF PRESIDENTIAL PRIMARIES

Beginning in 1905, under the initiative of Robert LaFollette, progressivism in Wisconsin and the companion movement in Oregon, direct presidential primaries were instituted in a number of States. Here the voters expressed their preference directly for presidential candidates and bound delegates from their Congressional Districts and States to vote for them initially in the national convention. It was these popularly elected delegates who in 1912 furnished the nucleus of the political support for Theodore Roosevelt in the Republican and for Woodrow Wilson in the Democratic Convention.

This innovation was naturally opposed by the professional politicians who preferred the hierarchy of local caucuses, and county, district, and State conventions whereby delegates were named to the national conventions. For in this way, the party leaders believed with good reason, that they could better control the final choice. The party leaders, therefore, in the main fought a delaying action against the introduction of presidential primaries. At times this attitude was one of outright opposition to any direct choice of delegates or candidates while at other times they made the primary vote purely advisory with no binding effect upon the delegates. In still other cases they permitted a popular choice of the delegates but either allowed no designation or an incomplete designation as to whom the delegates were pledged or favored.

As the progressive impulse in American politics weakened during the 1920's, some States gave up the direct primary, while in others the binding quality of the choices was weakened. But the direct primary States still furnished politicians with straws to show which way the winds were blowing and helped them to make up their minds. There is little doubt that the good showing made by Wilson in 1912 and by Franklin Roosevelt in the 1932 primaries helped to swing the conventions their way and that the same was true in the case of Dewey in 1944 and 1948. Similarly the primaries in 1952 confirmed the leaders of the crucial Pennsylvania and Michigan delegations in the belief that Eisenhower would be a stronger candidate than

Taft, and hence tipped the scales of the convention in his favor.

The fear that the 1952 conventions would not result in the choice of popularly approved candidates, but would instead be dominated by the national, State, and city organizations led to a marked revival of interest in some form of the presidential primary. Various proposals were advanced in Congress which will be described later, and New Jersey passed a direct primary law.

Had less popular candidates than Eisenhower and Stevenson been nominated in 1952 there would undoubtedly have been a tremendous upsurge of sentiment for the Presidential primary. Even so, there was enough dissatisfaction with the nominating process and the conduct of the conventions to cause Montana, Nevada, and Indiana in 1953 to provide direct primaries for voting on Presidential candidates and for the pledging of delegates to those candidates who received the popular preference. It is interesting to note that the Montana law was submitted to the voters by referendum in November 1954 and was approved by a vote of more than 2 to 1. The new Indiana law also pledges delegates to vote on the first ballot for those who win in primaries.

In all there are now about 525 delegates to the national conventions who are nominally selected in primaries. However, of that number, about 225 come from the States of New York, Pennsylvania, and Illinois, where the party voters do not really have an opportunity to ascertain the delegates' preferences as between prospective Presidential candidates, and these are hence not true Presidential primaries. The remaining 300 delegates. or not far from one-fourth of the total number in each party convention, are therefore the only ones who come to the convention with a clear mandate from the voters of their States as to the candidates they should support.

The 12 States which do have direct primaries of this type are New Hampshire, New Jersey, Ohio, Indiana, Minnesota, South Dakota, Nebraska, Montana, Nevada, Oregon, Maryland, and California. Nearly 60 percent of the delegates to the national conventions are, however, not elected by public primaries at all, but are instead selected by State and district conventions composed of delegates from lower political subdivisions.

WHO CONTROLS THE CONVENTIONS?

In the main, therefore, it is the party leaders and not the people as such who still control the conventions and select the candidates. This process is far more democratic than the rather tightly controlled methods by which the political parties in Great Britain and the Dominions select their leaders, but it is still primarily based upon the assumption that the selection of Presidential candidates is party business rather than public business.

Fifty years ago this used to be the practice as regards virtually all public offices of a State and Federal character. The direct primary and the direct election of United States Senators have enormously increased the popular power in these other fields but no such comparable development has taken place in the nomination of our Presidents. The people play only an indirect part in selecting the candidates for what is above all others the one office in which the people are interested.

The insiders who control the machinery of a national convention can within limits significantly control its results. By the chairman granting or refusing recognition for motions, by the switching on and off of the loudspeakers, by control over the music and by the planting of claques in the galleries and on the floor, the stage can be largely rigged for or against a candidate. Many of those who watched the conventions of 1952 on television became aware of this perhaps for the first time. It follows that a

President who controls the party machinery can with that instrument and with the Federal patronage largely dominate the convention of his party and hence either force his own renomination or that of his successor. The renomination of Taft by the Republican Convention in 1912 was thus undoubtedly contrary to the wishes of rank-and-file Republicans.

Similarly, the party leaders from New York, Pennsylvania, and Illinois can exert great influence in the final choice. This was formerly evidenced by the great power wielded by Charlie Murphy, Tom Taggert, and Roger Sullivan, the city "bosses" from those States who, with the aid of the conservative leaders of the southern democracy, nominated Alton B. Parker in 1904 and, had it not been for the shift by Sullivan at Baltimore in 1912, would have defeated Woodrow Wilson for the nomination. They also exercised a great influence in the 1920 convention. Behind these political leaders in turn Were the traction and gas combines operating through such financiers as Thomas Fortune Ryan and August Belmont. Similar groups have been influential, although to a much lesser degree, in recent Democratic conventions.

On the Republican side there is little doubt that the big financial interests of the East were largely instrumental in swaying the conventions' choice in 1940, 1944, 1948, and 1952, and that they are now in a powerful position both in the organization of the national party and in those of a very large number of the States.

THE DIRECT PRESIDENTIAL PRIMARY VERSUS THE CONVENTION

The proposal for a national Presidential primary was first seriously advanced by Woodrow Wilson and George W. Norris and is now before the Congress in the form of proposed Constitution amendments spon-Sored by Senators Langer, of North Dakota, and SMATHERS, of Florida. The Langer amendment calls, among other things, for the holding throughout the Nation of a Presidential primary upon a given day under which the candidate who received the largest popular vote in the given party primary Would be the nominee. Under this plan the Federal aspects of the electoral process would completely disappear, and a vote in New York or Pennsylvania would count as much as one in Nevada or Delaware. The smaller States which would lose much influence under this method naturally oppose it with the result that it would be virtually impossible for it to be ratified by the States even if Congress were to approve it.

To meet this difficulty, Senator SMATHERS, of Florida has proposed a variant of the Norris-Langer method. His amendment also calls for a national primary upon a given day, but he retains the electoral college principle upon which representation in the national conventions is fundamentally based. The votes in each State would have the same influence upon the Presidential nominations that they now have on the final elections. The small States would therefore be given the advantage they now enjoy through their equality of representation in the Senate.

Turning now to a comparison of these two alternatives, it is obvious that a national primary under the Smathers method would reflect the popular will far more adequately than does the present convention system. But it also would contain grave weaknesses in comparison with the convention system, which need to be considered.

1. The national primary would accentuate conflicts within the parties, whereas the convention system tends to minimize them.

The great merit of the convention system is that in its search for a winning candidate it tends to discard the extremists and bring forward the men around whom not only the party but the Nation as well may best raily. Underneath all the noise, turbu-

lence, and apparent conflict which characterizes a convention there is, as we have pointed out, a deeper search for unity which will best reconcile the conflicting interests and factions. In the final decisions one can see the working of a kind of political vector analysis in which each set of forces helps to determine the final position.

Were we to substitute a national primary, however, extremists would be encouraged to run for the nomination, and sometimes would win, and the conduct of the primaries would be knock-down and dragout affairs.

The issues would also tend to be drawn far more sharply and the losers would not be able to exert the tacit influence which they now exercise upon both the choice of the ultimate nominees and the platforms.

Many people would welcome this polarization of politics on the ground that it would lead to a greater stressing of real issues than the present centripetal tendencies of our 2-party and convention systems. But such a sharper conflict of ideas would only be purchased at the expense of endangering national unity which, in view of the Communist threat to democratic institutions, I do not beleive we can afford. Moreover, despite all the somewhat formless nature of our political groupings and the tendency parties and of the Nation to draw together around the center, we have made as much legislative progress during the last half century as any democracy in the world and have at the same time preserved national unity more effectively than in any country outside of the British Common-

- 2. It is argued that the party leaders commonly know the hidden strengths and weaknesses of the various candidates far more fully than does the general public. They can, it is said, quietly sidetrack men who have strategic weaknesses which would show up either in the campaign for election or in office. They, however, would either not want to wash this dirty linen during a primary campaign or if they did, passions would be so embittered that united action would later be impossible. There is a strong case for quiet rather than noisy judgments to be rendered on such matters as this in political as in social life. But it is also true that this exercise of judgment can be applied unwisely. Worthy men may be rejected because of their very virtues and unworthy men selected because of their compliance.
- 3. The national primary would make it impossible to draft reluctant or modest candidates. Men who were not willing to undergo the ordeal of a strenuous primary campaign would be automatically eliminated from consideration. But these are sometimes the very men who, once chosen, would make the best Presidents. Sometimes as high an office as the Presidency should seek the man.
- 4. Another objection is that the national primary would impose an added burden of strain and expense to what is already an almost crushing load upon candidates. Not only is the Presidency the most exacting job in the world, but the campaign which is required to attain the office is most exhausting. To superimpose a second nationwide campaign would mean that for almost a full year prior to the election the candidates would be subjected to intense physical and nervous pressures, and unless they were supermen, the winner would come to this most important of all jobs in a condition of almost complete physical exhaustion. A good deal of this is already involved in the preconvention campaigns, but it would be intensified by the requirement of a second national election. Additional millions of dollars would also be required to finance the primary campaigns, and the advantages which wealth already possesses in this respect would be intensified.

5. It is obvious that conventions would still be needed to adopt party platforms and that these need to be coordinated with the desires of the presidential nominees. Furthermore, a primary is an extremely poor way to select a vice presidential nominee since no one ever runs for that office, and it is generally assigned to some one who in the opinion of the presidential candidate and the party leaders will balance the ticket by representing a different geographical section and set of interests.

A RECONCILING PROGRAM

The truth seems to be that neither the convention system as it is now operated nor the national direct primary is a satisfactory method of nominating national Presidential candidates. The need is, therefore, to reconcile the two alternatives and, while retaining the good features of both, minimize their respective defects.

Representative CHARLES E. BENNETT, of Florida, and I believe that we have found such a reconciliation. We have introduced such a measure in the last two Congresses and this year have once again submitted it (S. 652) for action. It does not call for a direct national primary but seeks instead to stimulate the States so that they, in increasing measure, will provide for direct primaries as the method of selecting their delegates to the national conventions. Our bill provides that States which agree to operate under the Federal Presidential primary law will receive a grant-in-aid for 20 cents for each vote cast in such a primary. The Federal Government would thus meet the election expenses for the selection of candidates for the most important Federal office. The Federal Government in turn would set up a bipartisan Presidential Primaries Commission of five members who would hold office for staggered terms. A candidate, in order to be certified to run, would have to submit nominating petitions signed by at least 1,000 qualified voters from each of at least three-quarters of the States which had agreed to take part in the program. Candidates so designated would have until March 20 of election years to withdraw, and by March 25 the Commission would certify the names of those still in the race to the participating States.

States which had agreed to come under the system would, in turn, provide for the holding of their presidential primary between April and August. The States would only include on their ballots the names of those who were nationally certified and would only permit each qualified voter to vote in the political party in which he was registered. Increased party responsibility would therefore be provided. The delegatesat-large from a State would be bound to vote for a given period of time for the candidate who had a plurality of the primary votes in the State as a whole. Delegates from the various congressional districts would be similarly bound for the winners in their districts who, of course, might not be the same as for the State as a whole.

There is some question as to how tight the mandate should be upon the delegates. It is, of course, essential that some instructions should be given or otherwise the primary would have no point. Experience has shown that the so-called "advisory primaries" have little meaning or value. But the instructions should not be so ironclad as to prevent the convention from choosing from a number of aspirants, none of whom might have an initial majority.

In its original form, the Bennett-Douglas bill provided that the pledge would be binding on the first ballot and as long as the candidate's vote exceeded 10 percent of the total delegate vote, or until the candidate himself released the delegates. This is substantially the provision which now governs the Oregon and Wisconsin delegations. This created the danger that a convention might

be deadlocked between a number of candidates. The control over the votes of the delegates would thereafter largely rest in the candidates rather than in the delegates themselves, and this might result either in hopeless confusion or in a great deal of improper trading. We have removed this defect in our present draft, which provides that delegates may also be released if their candidate polls less than 20 percent of the vote on the third ballot and less than 30 percent on the fifth.

In my judgment, this plan combines the advantages of a far greater popular voice in the selection of presidential candidates while it retains most of the flexibility of the convention system. The primaries would thus be a first sifting of candidates on the basis of their relative popular support. The running of obscure favorite sons for the purpose of giving the delegation bargaining power would be discouraged. But the delegates could still exercise their independent judgment when the primaries disclosed no clear popular choice. The conventions would still be able to balance the ticket with appropriate vice presidential nominees and coordinate the platform with the candidacies.

No single plan is likely to be ideal in all respects, but we submit that this is probably as good a proposal as can be devised. It has the practical advantage, moreover, of being relatively easy of initial adoption by Congress while it would also permit gradual and voluntary growth within the States. It does not require sweeping and immediate changes. The sponsors of the bill hope that it may receive widespread popular support so that it may be passed this year and hence enable some States to act in time for the 1956 conventions.

We Can Baffle the Brainwashers

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. McCORMACK. Mr. Speaker, in the January 22, 1955, issue of the Saturday Evening Post, appears an article which I include as a part of my remarks, written by Rear Adm. D. V. Gallery, United States Navy, entitled "We Can Baffle the Brainwashers." Admiral Gallery is a gentleman and officer of profound thought and discerning and challenging mind. He knows communism and the dastardly "world-killer" mind of the Communists.

The article of Rear Admiral Gallery is worthy of deep consideration by the President and the officials and officers of the various branches of our armed services and by Members of the Congress.

The reader of this article will note that Admiral Gallery not only knows what he is writing about, but he has the courage of making striking suggestions that may be effective in combating or defeating the Communist "brainwashing" of American prisoners for propaganda purposes.

WE CAN BAFFLE THE BRAINWASHERS (By Rear Adm. D. V. Gallery, United States Navy)

The treatment of American prisoners by the Reds in the Korean war poses the free nations an evil problem. "What can we do about the Communists' hellish brainwashing technique for torturing confessions out of prisoners of war?"

This inhuman method for tampering with men's minds and souls defies all laws of God or man. It lays bare the frightful difference between our western civilization and the godless creed of communism. The Reds used it ruthlessly on American prisoners of war in Korea, treating our men like laboratory rats in a diabolical scientific experiment.

A number of these men, through fear of being tortured to death, gave lip service to the Red creed or signed obviously false "germ-warfare confessions." Now, some of them are being court-martialed or disgraced for cowardice and collaboration with the enemy.

This is happening in a country which let victory in Korea slip through its fingers because of fear, fear that we might touch off world war III, and thus get hurt ourselves. We try our soldiers for cowardice, after a war which we didn't have the guts to win.

There is an uneasy feeling in the land about these POW trials. But the trials are just a small, messy piece of the whole big problem, the piece least worthy of public sympathy. The real problem concerns the many other prisoners who took everything the Red devils could do to them and didn't break. Before we can live in good conscience with those 3,800 men the Reds let come back alive, we Americans have got to face this problem honestly and courageously.

Perhaps, if we wanted to, we could even forget the past, avoid looking our 3,800 ex-POW's in the eye, and just sweep the whole thing under the rug. But the future and the boys who haven't been captured yet make this problem cry out to heaven for solution.

I have no sympathy whatever for a prisoner who squealed on his buddies or who sold them out for his own benefit. We should throw the book at him and disgrace him. I have much sympathy for those who, under torture, gave the Reds military information of the kind we broadcast to the four winds in our magazines and newspapers. I understand and feel sorry for those who signed germ-warfare confessions or broadcast phony peace appeals. But the ones for whom I am really sorry are the boys who clammed up and took it, refusing to sign anything.

To be brutally frank about it, these lads accomplished nothing by their heroism. It certainly didn't bring the United States military victory. It didn't stop the Reds from winning a smashing propaganda victory in the Orient. Through the big-lie technique they convinced the Chinese and many gullible neutrals that we were actually using germ warfare. Now our lads who held out against hellish tortures find public sympathy going to those who broke. The only good that came of their heroic resistance to brainwashing is the internal satisfaction which they themselves will feel from now on. For the rest of their lives they can look themselves in the eye when they shave in the morning and say, "Well, soldier, you took it."

As an American I am very proud of these men. But as an American I'm ashamed of the position we put them in. This must never happen again. We must fix it so that no prisoner will ever again have to endure torture to preserve the good standing of the United States before the other free nations or will feel that an absurd confession extorted from him may be held against him if he survives.

General Dean, captured early in the Korean war, is a brave man. He got the Congressional Medal of Honor. He was never actually brainwashed, but when threatened with it, he decided the only way he could prevent the Reds from getting what they wanted out of him was suicide.

We've got to find some better choice for the defenders of our freedoms than torture, suicide, or disgrace. That's all we give now by our rigid insistence on the Geneva Convention formula. Our military regulations say that a prisoner may state his name. rank, and serial number, but beyond that he must clam up and endure whatever ungodly tortures the Communist devils inflict on him. As far as the regulations go, anything more can bring public disgrace when and if he ever gets home. This harsh rule is uncivilized, un-American, and stupid. It plays right into the Communists' hands, lending credibility to the few confessions which they are able to extort by brainwashing.

All through the whole stinking record of brainwashing in Korea one thing stands out like a sore thumb: What the Reds were after was propaganda, such as germ-warfare confessions and peace appeals. Any military information they picked up was an incidental byproduct. Propaganda was their real pay dirt, and it was to work this lode that

they used brainwashing.

Let's lay this evil thing on the page here and look at it if your stomach is strong enough. Brainwashing is a devilish new process developed by the Russians through experiments on dogs and rats. Their psychologist, Pavlov, found that by regimenting and frustrating animals, and by constant repetition of a set of circumstances, such as ringing a bell just before feeding them, he could condition their reflexes so that the animal's mouth would water every time a bell rang. He discovered he could blunt their natural instincts and replace them with conditioned reflexes of his own choosing.

The Red brainwashers follow this same technique. They first reduce their victim to about the status of a dog or rat. They make you live in solitary filth, deprived of all human contacts. They strip you of all human dignity and deny you food and sleep till you are nearly, but not quite, dead. Torture is used judiciously, with clinical skill. Time drags out into eternity, where you are alone with your thoughts. You become a borderline case between a human being and a rat struggling to stay alive. Then constant interminable repetition of their ideas erodes your brain. Your senses of proportion and values get distorted. Eventually your natural instincts may be replaced, like the rat's, by conditioned reflexes.

If they keep hammering at you that it is raining outside, sooner or later you may believe it. Sometimes, if your torturers are competent, skillful operators, they can eventually lead you out into bright sunshine and you will still think it's raining. A confused and beaten man can even be convinced that the Reds are right—that we are the aggressors and they are the peace lovers.

How much of this torture anyone can take without breaking depends entirely on the individual. No one who hasn't gone through the wringer himself can say where his own breaking point might be. Those who have been broken are the only ones who know. They are the only real experts on brainwashing on this side of the Iron Curtain. Those who took it without breaking are charitable toward those who did. They say, "Maybe they beat those other men harder than they did me."

The men who suffer most from brainwashing are the highest type of men our civilization produces. The Reds apply pressure to both your brain and body till one or the other breaks. If it's the brain, you confess. If it's the body, you die. The better man you are, the worse you get it.

Strong physical specimens of only average willpower get off easy, because they crack soon, before their bodies are irreparably damaged. If you are weak physically, but strong willed, that's not so bad—you will die fairly quickly. But if you are strong both

Physically and mentally, God help you. Occasionally the Reds lose patience with a strong will and quit, so the torturers can work on more productive subjects. But Communist patience is difficult to exhaust.

Men have always been willing to die for a principle. The history of martyrdom from the early Christian days down to the present time proves that simple fear of death cannot break a strong man's will or make him deny his faith. But months of a bare, animal-like existence, with the safe haven of death near, but always just out of reachthat is something new and diabolically different. There is abundant proof that many brave men, perfectly willing to face sudden death, cannot hold out indefinitely against this fiendish half-death. In any large group there will always be a percentage, not cowards or weaklings, but just average human beings, who will eventually break and conless to whatever the fiends demand. When this happens, the heroic resistance of those Who held out becomes a gesture of ghastly futility.

To show that the Communists break even strong characters by brainwashing, I cite three very different types of strong men they have broken. The first is Cardinal Mind-Ezenty. Cardinals are not weak charactersthey certainly are not afraid to die. But Mindszenty confessed in open court to what the Reds wanted. Another strong type is Colonel Schwable, United States Marine Corps. Schwable, a flier of 24 years' ex-Perience, was universally regarded as an outstanding officer in a corps noted for its officers. Fliers are not afraid to die. But Schwable signed a false confession to germ Warfare. A third type is the Reds' own com-missars. Commissars are unprincipled and ruthless, but they are strong, tough characters. They have to be. The Reds break them, too. In the Moscow purge trials the deposed commissars sang like canary birds.

We should know by now that we aren't all heroes and what happened in Korea will happen again. We had better quit burying our heads in the sand and do something to counter it. I don't think the American people want to keep on offering their sons the choice of suicide or disgrace.

There is a simple way out of this grim mess, if we have enough vision and imagination to use it. Recall what happened in the case of Cardinal Mindszenty. Living among the Reds and knowing their methods, he foresaw they might break him, and disavowed his "confession" before he was even arrested. His solemn disavowal and prediction of what they would do to him was published to the world before his confession. The confession, when it came as predicted, was useless for propaganda purposes. Its publication backfired on the Reds and made them look stupid. This points the way for us on the brainwashing problem.

Suppose the President of the United States were to issue an Executive order to the Armed Forces right now, telling our men that, if captured by the Reds, they may sign any document the Communists want them to or appear on radio or TV programs and deliver any script the Reds hand them. Tell them they can confess that the United States poisoned Lenin and Stalin; they can call the President a capitalist, warmongering dog of Wall Street; they can broadcast peace appeals, agree to settle behind the Iron Curtain when the war is over, and sign long-term leases on houses in Moscow. Give the Reds anything they want for propaganda purposes and defy them to use it.

This order would be transmitted to the United Nations with a blistering statement explaining why we had to do it, and serving notice that hereafter statements of our prisoners, made to the enemy, would be a bunch of fairy stories. This statement should be accompanied by several hundred affidavits from our men who went through

the brainwashing process that will stink to high heaven. Properly publicized, this could put the Reds on the defensive in their cold war with the free world. It would spotlight the inhuman atrocities of the Communists and bring out the grim fact that the Geneva Convention, which has more or less governed the warfare of civilized nations in the past, is useless in dealing with godless fiends like the Communists. We should hammer home, on the Voice of America and at the United Nations, that this Convention worked after a fashion in World Wars I and II, when we were fighting human beings of more or less our own background and type. Even the Japs believed in God and a future life. But now that our enemies are ruthless, godless devils, we have to release our men from Geneva Convention restrictions.

Worldwide publication of such an Executive order would make the Reds look ridiculous on this side of the Iron Curtain when and if they attempted to use brainwash confessions in the future. It would leave no further motive for brainwashing except sadism. I'm sure there are many sadists in the Communist ranks, but maybe the perverted sexual urges of Red interrogators will be satisfied sooner if our boys agree with their obviously false accusations.

Some people object that our disavowal won't penetrate the Iron Curtain, so the Reds could use these confessions to convince their own people that we were committing atrocities. They don't need them for that. They can manufacture confessions for the benefit of their own slave peoples—make them up out of whole cloth. They need confessions to convince guilible neutrals, and our disavowal will reach and impress them.

As long as we stick to the rules we had in Korea, the Communist devils, bound by no rules of God or man, will makes us look stupid. What chance has a lone GI prisoner against a battery of brainwashing Communists? Look at the record in Korea. By sticking to our outmoded Geneva Convention rule under impossible conditions, we let the Reds persuade millions that we had flouted all civilized rules and used germ warfare.

The germ-warfare charge was an easy bill of goods to sell in Korea and China, where many diseases are epidemic. What could be simpler than to blame them on United States germ bombs, producing many actual victims of the diseases to prove it? They didn't need actual confessions to do this; they could have manufactured the signatures as well as the confessions. Behind the Iron Curtain it made no difference whether Colonel Schwable actually wrote his confession or whether the commissars simply announced that he did. Slave peoples have no choice but to believe.

Their reason for wanting actual confessions was so they could publicize them, transmitting them to the United Nations, to raise doubts in the minds of our timid neutral friends. They succeeded in this diabolically well. They used the very organization which the free nations have set up to preserve peace and foster understanding among nations to spread lies about us and stir up distrust and hate. From a purely technical point of view, as a propaganda operation, it was a slick job.

In propaganda the Reds were always slick and we were clumsy. Through brainwashing they were able to broadcast peace appeals by our men. What kind of appeals did we broadcast? We pleaded with 22 of our men who had actually transferred allegiance to the Reds, "Come home, all is forgiven." When one of them did come home, we court-martialed him—just as the Reds predicted we would. How stupid can we get? That blunder will be a windfall to the Communists' propaganda for many years.

We missed one marvelous chance to make bums out of the Reds during the long-winded truce negotiations in Korea. One of the issues on the exchange of prisoners was whether we would force thousands of unwilling former Reds to go home. There were 70,000 prisoners who wanted to go back, and 100,000 who didn't. We haggled for months about this.

We could have stopped the haggling and made the Reds look foolish very simply. Suppose we had secretly loaded all the 70,-000 confirmed Reds into our amphibious fleet, landed them behind the Communist lines and just turned the whole rabble loose. Then we announce to the world, and the Chinese in particular, "These rats are so worthless that we are giving them back to you for nothing. For negotiating purposes they aren't even worth one American prisoner; you can have them free." Think of the loss of face this would involve in the Orient for every one of those 70,000. The Reds, carried away by their own germ-warfare lies, might have taken drastic antiseptic precautions.

But we can't think like that. We follow the book; our actions are unimaginative and perfectly predictable. The Reds know it, and use us as if they owned us. They sold the Big Lie on United States germ warfare to the whole Orient.

Many people ask, "Why did the Reds go to so much trouble extracting confessions which they didn't need in China or Korea, and conducting classes in POW camps to educate our men?" Some of our prisoners have a startling answer to this question. They say maybe the Reds were looking 10 or 20 years ahead, hoping for another depression in the United States.

What you have drilled into your brain in a POW camp stays with you the rest of your life. Maybe you don't believe it for a long time. But 10 or 15 years later, if what the Reds predict about a depression comes true, then maybe seeds the Reds planted will take root and sprout. This may seem farfetched to us who live from year to year. But it isn't to Asiatics, who look at centuries as we do at months. It is typical of the difference between our propaganda and theirs.

Moralists may object to my proposal, on the ground that it is always wrong to tell a lie. A lie is a deliberate false statement, made with intent to deceive someone who has a right to demand the truth. What I am proposing would be done with intent to deceive nobody. It would be done to prevent colossal deceptions such as the germwarfare lie, which all the Reds in China still believe. It would be given worldwide publicity beforehand, so the Reds would look foolish if they verified our predictions by producing this kind of confession. Past performance indicates they are far from stupid in propaganda. They are much smarter than we are.

Besides, the only truthful answers which the Reds have a right to demand from our prisoners are "name, rank, and serial number." If you insist that we must deal with devils on a moral basis, you can say, "This is a moral twist to the big lie technique." Call it the "sea of lies" if you want—lies that are harmless because we predict, identify, and authorize them; daring the enemy to use them.

Others object that this proposal would open the floodgates for a lot of military information. I don't believe it. In the first place, the Reds have access, through our magazines and newspapers, to more authentic military information on technical subjects than they can digest. The public-information branches of all three services compete with one another for press space, and the easiest way to sell a feature article on a military subject is to tell an editor, "This hasn't been released before; you're getting a scoop." If I were in the Red navy, I could easily make a reputation in Moscow as the greatest spy in history. I

would get assigned to Washington as naval attaché and simply do a rewrite job on stuff I can buy on any newsstand.

In regard to tactical information, no prisoner knows anything that can really affect the outcome of world war III. That will be decided by natural resources, production capacity, and things that the Communists know all about from the atomic scientist, Doctor Fuchs and others like him. To protect their own frontline units, most of our prisoners only have to keep their mouths shut for about a week. After that, tactical dispositions on the front have changed so that they can spill all they know without affecting the outcome of even a local battle one way or the other. Those who know things that might affect the future of the war, such as future tactical or strategic plans, must not be allowed to subject themselves to the risk of capture.

It makes fine reading in the newspapers when General MacArthur wades ashore right behind the first assault wave or General Patton barges into an enemy-held town in the lead tank. But it's a badly miscalculated risk when we permit them to do this. Sure, it's good for morale—of a limited number of front-line troops, and also of the generals concerned. But think of the shot in the arm it would be to enemy morale if they were captured. And think of the really vital military information their capture would jeopardize.

MacArthur is a brave man, and so was Patton. But they were never brain-washed. No one can say just how much they could have taken before they broke. Major tools of the brainwashing process are degradation and humiliation. Obviously the higher a prisoner's rank, the further you can degrade him, and the easier it is to humiliate him. We say you must tell "name, rank, and serial number," but if I were ever captured, those are the three items I would do my damnedest to conceal. Maybe I could give my rank as RADM and claim it meant "radioman."

All our ideas about military security require a drastic overhaul. Our GI's and all our citizens know too much. We should tighten up on military information and pass it out only a need-to-know basis. This would help to protect our prisoners as well as our secrets, because you can't betray a secret if you don't know it.

We might also revise our ideas on what constitutes collaboration with the enemy in the light of what goes on back here in these United States. Back here, during the Korean snafu, Peress stopped a Senate committee cold, when they asked him if he was a Communist, by invoking the fifth amendment. Soon thereafter he was promoted to major and given an honorable discharge. When our captured soldiers are being brainwashed, there is no law this side of hell they can invoke. All they can do now to stop the torture is to confess—or die.

Our present policy of dealing with some of our own prisoners of war is a windfall to the Communists. Compare how we treat a brain-washed GI with the treatment guaranteed by the Constitution even for criminals. A soldier who had an obviously false propaganda confession tortured out of him can be tried by court martial for giving "aid and comfort to the enemy." A criminal who has a true confession beaten out of him by the police goes scot-free if he can prove that he was forced to tell the truth about an actual crime. This is one of the American rights that our soldier was defending when he got captured. I wonder how he feels when a false confession, extorted by the Reds, is produced before a United States military court composed of men who have never even seen the Reds face to face.

We didn't even brief our men consistently in Korea on what to say if captured. The Army, Navy, Air Force, and Marines all had their own ideas on this question and different units of the came service differed. The briefings given to our men going into battie varied all the way from zero to carte-blanche advice: "Spill anything you know; they know it, too." The "name, rank, and serial number" briefing was stateside stuff that you got from people who knew they would never be captured. Some units avoided any briefing whatever on this question "because telling the men about Communist tortures would be bad for morale."

I agree that frank briefing on brain washing for men who may have to face it probably won't make them very happy. But that's no excuse for burying our heads in the

sand and trying to ignore it.

When all the brain washers want is agreement with their ideas, their job is relatively simple. They just put the heat on you until you sign what they want. Then the interrogator has documentary proof for his commissar that he is a shrewd operator. But if they go after military information, the job is much more difficult. They have to evaluate what you say, cross-check it against known facts, and make up their own minds, Their conditioned-reflex technique doesn't cover this. They may have to go back to the dogs and rats in their laboratories and conduct further experiments to find out how they can tell when the animal is behaving truthfully rather than the way they have

Some of our expert interrogators and psychologists say there is no use trying to deceive expert interrogators; you just have to clam up and refuse to answer. If you lie, they will find you out. Our boys who went through brain-washing say that on military information, they could get away with evasive or false answers. But when the Reds demand a "Yes" answer to a propaganda question, you either give it to them or else.

conditioned it to act.

We can't give our boys shots so they won't be hurt when tortured, get weak when starved or become dopey from lack of sleep. But maybe we can save them from enduring these tortures rather than confess to obvious lies. The least we can do is to assure them that whatever they say or do under these circumstances will not help the enemy, because we have disavowed it ahead of time. We can thus relieve their minds of the gnawing fear that what they say will be held against them when they get home. All our boys whom I have talked agree that was perhaps the worst fear that haunted them during their ordeals, That is one dragon we could slay forever with an Executive Order.

This is one of those things on which it seems we have nothing to lose and a lot to gain. The Communists, even if they continue their brainwashing, can't treat our men ay worse than they have. At the very least, we will insure that none of our men endures the ordeal of brainwashing through fear of being stigmatized as a traitor if he signs an obvious fairy tale.

General Dean, in his book, makes this very significant statement: "One of the first things I noticed was that these people were much more anxious to have me say what they wanted me to say than to extract any really new or useful information. Pressure on me was greatest to agree to perfectly obvious falsities." Many other ex-prisoners agree that the only real heat put on them was to extract false confessions for propaganda purposes.

Our present military regulations are designed to protect military information, and all evidence shows that the Communists don't use brainwashing to get military information; they use it to get propaganda material. Why should they bother trying to extract military information from our prisoners? In a battle to conquer mankind with an idea, it doesn't pay off. If an expert interrogator pries the location of your artillery battery out of a prisoner, they may destroy or capture your battery. But under

present conditions, if he pries a false confession out of him, he may capture the minds of 300 million Asiatic people.

There is no power on this side of hell that can prevent the Reds from brainwashing and breaking a certain number of our men. But we can cut the ground out from under them for propaganda purposes, and thus destroy the usefulness of brainwash confessions. We might spare our men a lot of heroic but utterly futile resistance to torture in the future, and insure that never again will the Communist devils be able to make us look as bad as they made us look in Korea.

To leave the solution of this problem in military hands isn't fair to anyone concerned, including the much-maligned military brass. Military men have a Spartan code of ethics of which they are justly proud, and the American people rightly expect them to live up to it. If we leave this problem in their hands, we can expect a Spartan solution, all wrapped up in a neat little ball of military wax, such as "name, rank, and serial number," for foot soldiers and the bombardier of a B-47 alike.

The problem is only partly military and it is much too big for any such pat solution as that. We have to educate the American people to realize that we aren't playing a game any more, a game that can be run by gentlemen's agreements and international pacts. We are in a life-and-death struggle with a godless system bent on world domination, a system which regards human dignity as a zero quantity.

Against the brainwashers the Geneva Convention is as obsolete as the TNT bomb. It is our duty to the future defenders of our freedoms to find a better answer to it.

Columbia University Conference on the Place and Future of the Creative Arts Today

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, on March 26, 1955, I had the great honor and privilege of participating in the Second Annual All-Student Conference on the Place and Future of the Creative Arts Today presented by the Columbia University Student Council. This council is made up of the students of over 15 schools on the Columbia campus. It is the conviction of the organization that only through such events as this can student interest in world affairs be stimulated.

I include here the program of the conference, a letter from Owen S. Rachleff, student chairman of the creative arts conference, and a letter and speech by Prof. Peppino Mangravite, dean of the School of Painting and Sculpture. Columbia University, in the city of New York

Columbia University is planning for the establishment of a 15-story art center building on Morningside Heights in New York City which will involve the work of the leading artists of our country. A short statement of the concept and the vision of the proposed arts center is included here also.

Some of America's outstanding cultural leaders participated in the 2-day conference. Many able statements were made, among them the brilliant presentation by Professor Mangravite.

COLUMBIA UNIVERSITY STUDENT COUNCIL PRE-SENTS SECOND ANNUAL ALL-STUDENT CON-FERENCE ON THE PLACE AND FUTURE OF CREATIVE ARTS TODAY, MARCH 25 AT 3 O'CLOCK, LOW MEMORIAL LIBRARY

Introductory remarks, W. Emerson Gentzler, assistant provost.

President Kirk's message, read by Gedale B. Horowitz, chairman, Columbia University Student Council.

The Conference as We See It, Owen S. Rachleff, chairman, Creative Arts Conference. Symposium 1, "What Is the Place and

Future of America's Great Art Institutions? Speakers: Lloyd Goodrich, associate director, Whitney Museum; John Gutman, assistant manager, Metropolitan Opera Co.; Lincoln Kirstein, director, New York City Ballet Co.; Lawrence Languer, codirector of the Theatre Guild; George Marek, artist and repertoire director of Victor Records; Robert Saudek, producer of CBS's Omnibus; Louis Untermeyer, poet, anthologist, and writer; moderated by Norris Houghton, codirector of the Phoenix Theatre.

(Intermission of 15 minutes.)

Symposium 2, "What is the place and responsibilities of the artist in society?" Speakers: Leonie Adams, poetess; Edmund Bergler, psychiatrist; Salvador Dali, painter; Morton Gould, musician, conductor; Fannie Hurst, novelist; Elmer Rice, playwright; Daniel Schneider, psychiatrist; Blanche Yurka, actress; moderated by Maurice Valency, playwright, educator.

(First day's activities terminate.)

Saturday, March 26, 11 to 1 o'clock

Lectures on music and theater arts in Casa Italiana and philosophy lounge, respectively. (Programs will be distributed then.)

Two to four o'clock

Lectures on literature and plastic arts in Casa Italiana and philosophy lounge, respectively.

Subscribers will go to the lectures they have selected.

Symposium 3, "What have America's contributions been to the creative arts?" To be held at approximately 4:15 in low library. Speakers: Louise Bogan, poetess; Bosley Crowther, film critic, New York Times; Lillian Gish, stage and screen actress; Harriet van Horne, television and radio critic, New York World-Telegram and Sun; Doris Humphrey, modern dance choreographer; Robert Schnitzer, international exchange program of ANTA; Sigmund Spaeth, editor of the Music Journal; James Johnson Sweeney, director, Solomon Guggenheim Museum; Frank Thompson, Jr., Congressman from New Jersey: Ralph Walker, architect of Voorhees, Walker, Smith & Smith; moderated by Douglas Moore, American composer, Mac-Dowell, professor of music, Columbia.

The conference is terminated.

COMMITTEE ON THE CONFERENCE OF CREATIVE ARTS

Owen S. Rachleff, 1956, chairman, conference; Elinor Murray, 1955, vice chairman, conference; Gedale B. Horowitz, 1955, chairman, Columbia University Student Council; Edward Cohen, Kent Horner, Barbara Mc-Gowan, John Plate, Sandra Schenker, Karen Sethur, Francis Stanton, Tom Watkins,

Our special thanks to Leopold Arnaud, dean of the school of architecture; Oscar J. Campbell, head of the graduate English department; W. Emerson Gentzler, assistant provost of the university; Robert Harron, assistant to President Kirk; Richard Herpers.

secretary of the university; Peppino Mangravite, dean of the school of painting and sculpture; Douglas Moore, head of the music department; Milton M. Smith, dean of the school of dramatic arts; and many other faculty, administration, and students of Columbia.

> THE COLUMBIA UNIVERSITY STUDENT COUNCIL,

New York, N. Y., March 29, 1955. DEAR MR. THOMPSON: On behalf of the Columbia University Student Council, the faculty, and administration we wish to thank you for your participation in our Conference on the Creative Arts in America, this past weekend.

The general feeling both in the press and in our public seems to be that our event was an admirable success, informative, lively, and with lasting values. We think you did much to contribute to that success and feel strongly that the future of our arts will be bright and healthy with your continued support and interest.

We would like to keep you posted on similar occasions, and most of all would like to feel that we have made a new friend for our council. Again thank you very much.

With kindest regards, I am, Respectfully yours, OWEN S. RACHLEFF, Chairman of the Committee on Creative Arts.

COLUMBIA UNIVERSITY IN THE CITY OF NEW YORK. SCHOOL OF PAINTING AND SCULPTURE, New York, N. Y., March 28, 1955. Frank Thompson, Jr., House Office Building, Washington, D. C.

DEAR CONGRESSMAN THOMPSON: Last Saturday you graciously requested that I send you a copy of my remarks at the Columbia University Arts Conference. I am attaching it herewith. For your information I am also sending you copy of a letter I wrote to Mr. Theodore Streibert, of the United States information agency, 2 days before I had the pleasure of meeting you.

Yesterday, Sunday, I spent some time in elated perusal of H. R. 4307, your bill for establishing a national symbol of America's least explored assets: The power of creative imagination as exemplified in our arts.

What you propose is the filing of a void in the life of our democratic community. Indeed it has been a conspicuous lack in our political diplomacy and in our relations with other peoples of the world.

I cannot conceive anything more devastating for the Communist ideology of the fettered spirit than a concrete encouragement of our national arts by our lawmakerstheir paternal affirmation that the creative act of the American artist is still dynamic and free would be salutary particularly at this time.

There are creative statements in your bill which must reach the vast body of the American pepole, lest the kernel of what you propose should fail to germinate in the arid soul. Your reminder to educators that they cannot afford to forget the "element of understanding as opposed to mere knowledge" is a source of strength to me since I have painted, written, and lectured about it for the past 28 years. I first expressed such views in Washington, D. C., in 1926 with the sympathetic support of Dr. William Alanson White, John Dewey, Agnes Meyer, Duncan Phillips, and Samuel Gompers. But that was during the false aesthetic evening of our Nation. Now, you are professing it during its "morning period." For the good of the perceptive life of these United States, I fervently hope you will succeed.

You will note in my letter to Mr. Streibert that I am scheduled to go to Europe early in

May as aesthetic ambassador for Columbia University. How much more proud I would have been if I had also represented the creative artists of my country.

My sincere best wishes for the success of your bill, H. R. 4307.

Cordially yours,

PEPPINO MANGRAVITE. Departmental Representative.

COLUMBIA UNIVERSITY IN THE CITY OF NEW YORK, SCHOOL OF PAINTING AND SCULPTURE, New York, N. Y., March 24, 1955. Mr. THEODORE STREIBERT,

United States Information Agency, Washington, D. C.

DEAR MR. STREIBERT: It has been brought to the attention of my office that the United States Information Agency is preparing art exhibitions to be shown abroad.

You may know that Columbia University is planning an arts center national in scope. To broaden the university's interest in the plastic arts and to stimulate closer relationships in the creative activities of European universities, I am scheduled to visit England, France, and Italy during the coming months of May, June, July, and August.

Dr. Grayson Kirk, president of the university, will plan meetings for me with academic leaders, scholars, and artists in the above mentioned countries. During my sojourn abroad it is also our plan to acquaint European art schools and universities with the creative work being done in the School of Painting and Sculpture of Columbia Uni-

In view of our creative activities and accomplishments in the field of art education, we feel that Columbia University should, with other American institutions of high learning, have some participation in the splendid plans for art exhibitions which the United States Information Agency is preparing.

Sincerely,
Peppino Mangravite, Departmental Representative.

P. S .- The enclosed exhibition catalogue lists paintings and sculpture by 22 of our students, 4 of whom are Fulbright Fellows, 2 are Prix de Rome winners, 1 a Pulitzer Scholarship, another a French Government Scholarship, and 5 others have won major awards for creative painting and sculpture.

REMARKS BY PROFESSOR PEPPINO MANGRAVITE AT THE COLUMBIA UNIVERSITY SECOND AN-NUAL ALL-STUDENT CONFERENCE ON "WHAT HAVE AMERICA'S CONTRIBUTIONS BEEN TO THE CREATIVE ARTS?"

Mr. Chairman, I do not believe that I will be able to stick to the 3 minutes allotted to me. How can I? I am a painter, and paint is my means of expression.

I use words only as self defense, and since the artist in America is often accused of one thing or another, I am apt to use lots of words-rational words, logical Aristotelian words, liberal arts words-in order to defend him. And, tragically enough, the artist in this country, until yesterday, has been on the defensive. Therefore, if anyone will point his finger at the artist and say, "J accuse," I will never stop talking.

Mr. Chairman, you are an artist yourself, and you will agree that we cannot be fettered by the skills of linguistic ambiguities.

It is tragic that the American artist should talk so much, when he should be sympathetically encouraged that he can speak best through the visual language of drawing and painting. I have already consumed 1 minute and a half of your precious time,

Time has been precious to America. It has wanted to grow old so fast. How could America, until yesterday, have spared the time to contribute to the creative arts?

No, I do not think that we have contributed much of importance to the visual arts. What fresh visual image of your world do you recall that, until yesterday, had not been imported from the Old World? Words, and the mark of the sharp ax on the stump of the aging tree have been, until yesterday, some of America's great creative arts.

Until yesterday, our world was brown in color. The architect imported his metier, and built brownstone houses. It was proper for the women to dress in brown and fitting for the men to wear black. Sousa's band was brown, and our elders' thought were so brown that they could not see the new color in the poetical metaphors of Walt Whitman.

To the American male of yesterday, if you had had the courage to say to him that your son was studying to be a painter, he would have thought: "What a queer duck," but would have said: "What waste of time." And now, in this anxiously desperate mid-century, it is all different.

James Johnson Sweeney, for whom I am pinch-hitting today, would have said that art in America is now in its "morning period." In a lecture he recently delivered in Canada, he said, "Today art in the United States is certainly in its morning period. That is its hope. In other quarters of the world, too often we see artists shackled by a nostalgia for their evening, or high-noon period of yesterday. One of the problems of contemporary art in Italy and in Greece is the difficulty both artists and public have in forgetting their morning art of centuries ago. In other countries, such as Spain and England, the problem seems to be in forgetting their late afternoon art of a century ago."

I will tell you now what I think that our contribution has been to the creative arts. We have created men like James Johnson Sweeney who do not consider time too precious to devote to the encouragement of our "morning period" of art. That is an immense contribution. You remember that, until yesterday, we were being exposed to vicariously experience the senility of someone else's "evening."

What the United States have long needed is a Johnny Appleseed of aesthetic attitudes, to uphold the self-respect and dignity of the contemporary artist. What we have needed is a disseminator of fresh visions and a believer in the aesthetic strength of America's "morning period."

Indeed, everywhere in these States there are signs that the creative arts are in the ascendant.

Columbia University is preparing the creation of an arts center, where, in its studies and laboratories, in its studies and workshops, in such a community of universal thinking and creative activities, the poet and the painter, the playwright and the architect, the scientist and the composer, the scholar and the sculptor will strive for new syntheses.

If, next year, your son will take up painting in such a company, your friends will no longer think that he is wasting time, but probably admire him as their forebears admired the pioneers who clear the dark forest.

Meanwhile, Sweeney is in Pittsburgh sowing contemporary aesthetic seeds. Great fellow, this American Sweeney: He has belief enough in the living American artist to extol him in two different places at the same time. Mr. Sweeney's kind is greatly increasing in the American community.

With institutions of high learning realizing the need to supplement the liberal arts with the creative arts, and the American male boldly extoling the delectable aberration of the artist, watch for a fresh and youthful image of America. That will be America's contribution to the creative arts.

Mr. Chairman, I rest my verbal case.

THE CONCEPT AND THE VISION OF THE PRO-POSED ARTS CENTER—BRIDGING THEORY AND PRACTICE

The guiding aim of the proposed Arts Center at Columbia University is to build a bridge that will bring into closer communication two major groups in the arts. The first group is made up of the professional creative artists, architects, musicians, playwrights, and producers. In the second group are the students, the scholars, the critics, and historians of the arts.

The harmonious integration of these two groups is an ideal that has intrigued mankind ever since the first successful attempt was made in fifth-century Greece. Rarely, if ever, has it succeeded since; in this country it has probably never been attempted before on a scale as ambitious as the present one. Certainly it could not attain the full measure of its aim except in a city comparable with New York or without a strong affiliation with an educational institution.

As stated by the chairman of the advisory committee for the Arts Center, Mr. Curt Reisinger, "bringing together under one roof the vast intellectual resources of a great university and the extraordinary wealth of artistic ability and facilities of this great metropolis seems to promise virtually unlimited possibilities for the development of the arts in this country."

The 10-story building proposed for the arts center on Columbia's Morningside campus will provide much-needed extended facilities for teaching, experiment, practice, and research in five already-flourishing schools and departments of the University: Architecture; dramatic arts, including television, radio, motion picture, and film production; painting and sculpture; music; archeology and the history of art.

The new center will contain classrooms, workrooms, libraries, studios, and theaters for students in these creative arts. It will be a place where music can be heard and performed, painting and sculpture exhibited. studied and created, drama and opera rehearsed and performed, ideas exchanged, books studied, wise counsel obtained. It will provide theater and other facilities for the extracurricular activities of the under-graduates in Columbia College and Barnard, as well as for formal academic training on the undergraduate, graduate, and professional levels. With different schools and departments living side by side in the same building, a strengthening measure of integration is bound to be generated spontaneously, Gradually, interdepartmental and interschool educational programs will be developed.

NEW YORK, THE CULTURAL CAPITAL

Located in the cultural capital of the country and the professional center of all the arts, this new educational center has incomparable advantages in providing its students with close access to the rich artistic resources of New York City—the museums, galleries, concert halls, studios, libraries, and the great host of professional and practicing artists available here.

It will be a bridge with two-way traffic, as Mr. Walter Kerr expressed it from the standpoint of the theater at the Bicentennial Conference on the Arts at Columbia last November—"not only the movement of the university toward the professional theater but the professional theater toward the university." Broadway needs the university as a training ground, he said, now that nearly all other training grounds have disappeared.

New York is the only place where this kind of mutual interchange can take place. Only in New York are there as many great names available—not only in the theater but in all the arts—to come to a university arts center

to lecture, to counsel, to join in common projects and enterprises.

As an example of the way this two-way action would operate, it is planned to construct an experimental theater for the center which will be available to professional producers and directors for trying out new plays of unusual artistic promise but not warranting a Broadway tryout.

It has been said that one of the most important features of the proposed arts center is that it will meet the need of intellectual background for the creative arts, which are at present struggling for reorientation, new affirmations and meaningful expression in the troubled world of today. To bring the arts together in this fashion is ideally the function of a great university. Only in such a climate may be found the resources. intellectual capacity, spirit of free inquiry, perspective, and broad range of interests required. The wisdom and vision inherent in a great university can bring mutual understanding and inspiration to the men and women working in the various creative arts. Their close daily association in the "common rooms" to be provided in the arts center will not only suggest integrated approaches, but may very well result ultimately in new art forms and techniques.

Columbia's long and fruitful background in the arts—its distinguished teachers and alumni in all fields of the arts—are assurance that here will be found a stimulating setting.

WHERE ARTISTS AND SCHOLARS MAKE COMMON CAUSE

Plans are designed to carry the influence of the arts center beyond the metropolitan area, for it is hoped to establish here an Institute or Seminary for the Creative Arts. This institute might well become a kind of national source for original research and productive communication as important in its sphere as is the National Science Founda-tion to scientific research. As one of the ways in which to give this institution im-mediate practical importance, its directors would invite men and women of the highest creative accomplishment to reside for specified periods of time at the center, where they would carry on their work unhampered by formal academic duties. They would thus be able to guide and to inspire students in a unique community of creative scholars.

TO MAKE ART MORE MEANINGFUL

For the proposed arts center building several choice sites on the university's Morningside campus are under consideration. It is estimated that the cost of the building will be about \$6 million, a part of which has already been contributed or pledged. An additional sum of about \$3 million will be sought for endowment and for scholarships.

Genuine as is the need for a building to integrate the arts at Columbia, true progress will come not so much from mere existence of facilities as from the coming together of great minds in the proper setting, their interaction, and their effect on students.

A national institution guided along the broad paths described above, will open limit-less possibilities for the encouragement of creative talent and for the spread of the understanding and enjoyment of art throughout the United States.

We of this Nation have an enviable opportunity to encourage and fortify the recent resurgence of interest in the arts so strongly in evidence throughout the country. To develop the finest potentials of this resurgence there is a need of intellectual leadership. This is the function which the arts center is being set up to perform.

"One of the problems of our age," said Lewis Mumford at the Bicentennial Arts Conference, "is not merely to restore the arts to a central place in life, but to restore life to its full dimensions to a central place in the arts."

The advisory committee for the arts center has faith that friends of the arts everywhere will catch the greatness of this vision and wish to share in its realization.

Advisory committee: Curt Reisinger, chairman; Oscar James Campbell, executive vice chairman; Ralph F. Colin, Norman Cousins, William J. Donovan, Frank D. Fackenthal, Charles Garside, Donald F. Hyde, Lincoln Kirstein, Henry Allen Moe, Richard Rodgers, Roger L. Stevens, James Johnson Sweeney, Robert Whitehead. University members: Leopold Arnaud, Grayson Kirk, John A. Krout, Douglas Moore, Ernest J. Simmons.

Hon. Edna F. Kelly, of New York

EXTENSION OF REMARKS

HON, EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I have great pleasure in inserting the following article by Ann Cottrell Free, of the North American Newspaper Alliance, on our very charming and lovely colleague, EDNA KELLY:

Washington, March 26.—Edna Flannery Kelly represents nearly 400,000 Brooklynites and a piece of real estate known as Ebbets Field in the Congress of the United States.

But this Democratic Member of the House labors under the same hardship as do many of her neighbors—except the Dodgers—of not attracting the strongest beams of the national spotlight. The publicity mills across the river in Manhattan seem to grind more constantly than those in Brooklyn where nearly 3,500,000 people live.

Representative Kelly is in there pitching, as the record shows and as her constituents know. Otherwise the voters would not have returned her to Congress three times in a row.

This dean of the Democratic House women Members is well equipped to play to the grandstand if she cared to. She is easily the most beautiful woman Member of Congress. Tall and slim (5 feet 7½ inches tall and 138 pounds), she has long black hair, now beginning to gray at the temples, deep dark eyes and classical features. She is 48 years old

Though women are often accused of not being able to make up their minds, she ran for Congress the first time because "the men couldn't make up theirs." When a vacancy occurred in the 10th District in 1949, her fellow members of the Democratic executive committee of Kings County couldn't decide whom to nominate.

"O. K.," she said, "to settle the question, I'll run."

She had gone into politics as a widow and working mother. Her son and daughter are now in their early twenties. Soon after the death of her husband, City Court Justice Edward L. Kelly, in 1942, she became research director for the Democratic Party in the New York State Legislature. She brought an academic background as well as "savvy" in everyday politics to the job. She is a history and economics major from Hunter College in New York.

"I was aware of the economic problems of the working mother when I came to Congress," she says. One of the first bills she introduced was one to grant tax relief to widowed working mothers, and widowers, too. Since she's been in Congress, she has worked for legislation providing equal pay for equal work. Though she has voted 100 percent for labor-backed bills, she recognizes that the big job is to get organized labor to accept the equal-pay-for-women principle.

EDNA KELLY is in the enviable position of being global in her thinking without neglecting the folks at home. As wrapped up as she is in her work as a member of the powerful House Foreign Affairs Committee, she is close enough to home to spend most weekends there.

Her foreign affairs record shows she has been motivated by humanitarian feelings as well as those of national self-interest.

"I sponsored in 1951 a direct grant of wheat from our surplus to India because there was a famine," she recalled. She then contended that the delay in Congress in sending the wheat, and then on a loan basis, could be one of the reasons India has been reluctant to aline itself with the West.

Mrs. Kelly also sponsored legislation to

Mrs. Kelly also sponsored legislation to make the United States a member of the Intragovernmental Committee for European Migration. As a result, thousands of refugees and surplus populations have been moved, free of charge, to new homes and a new life.

An economic aid program that is more than token, she feels, is needed for Asia. She is now studying the administration's proposal to add an additional \$200 million to the amount appropriated last year. This would make a total of \$915 million.

"I believe," she said, "in giving enough.

"I believe," she said, "in giving enough. If a man needs a plough, give him a plough. He is the man we must reach."

Her main foreign policy interest, however, is in Europe; she is chairman of the House subcommittee on Europe. She believes in Germany being rearmed, but she cautions, "We may forgive the past, but we cannot forget."

Mrs. Kelly has the opportunity to visit Europe officially this summer, but she admitted she thought she'd stay home this time. Her son is about to become a father and she a "working grandmother."

Sclerosis Researcher Makes Important Find

EXTENSION OF REMARKS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following article from the Philadelphia Inquirer: SCLEROSIS RESEARCHER MAKES IMPORTANT FIND

(By Joseph F. Nolan)

A Philadelphia woman research worker for the first time has been successful in isolating and culturing an organism she believes to be the cause of the dread disease multiple sclerosis.

Announcement of the work has been disclosed by Miss Rose Ichelson, director of research on multiple sclerosis at the St. Luke's and Children's Medical Center, Thompson and Franklin Streets.

She told the Inquirer she had been able to grow and propagate the so-called spirocheta myelophthera, which she believes to be the probable cause of multiple sclerosis, a disease that produces dimmed vision, paralysis of varying degrees, and loss of equilibrium, and able to prepare and filtrate antigens (a substance that stimulates the pro-

duction of antibodies or reacts to them), and that the research holds great promise for successful treatment of the disease.

Her work at this stage is believed by her to be a definite means of diagnosing multiple sclerosis and will not for the present be used in the treatment of the aliment, she said.

BORN IN BUSSIA

Miss Ichelson, a native-born Russian, who came to this country in 1922, said she started work on the multiple-sclerosis problem back in 1951, when she was sent specimens of the spinal fluid of patients for study.

She said that after inoculating the specimens with a culture mixture and letting them stand for 5 days she was amazed to "see something wiggling around in the specimens." It was then she identified the "wigglers" as the spirocheta myelophthera.

She has been able to preserve the same culture for years; and several months before coming to St. Luke's she was able in her home laboratory at 5841 Christian Street to improve the culture medium.

OUTSTANDING CAREER

Miss Ichelson is a graduate of the Bacteriological Institute of Poltava, Russia. From 1923 to 1927 she was bacteriologist at Mount Sinai Hospital here, and from 1927 to 1929 she did postgraduate work.

From 1929 to 1937 she was bacteriologist at Presbyterian Hospital and then joined the staff of the Pennsylvania State Department of Health. From 1939 to 1945 she was director of a special research department of the Woman's Medical College of Pennsylvania, and from 1942 to 1945 did special work for the Government.

From 1945 to 1947 Miss Ichelson did private work in her own laboratory and at the Temple University School of Pharmacy. In 1947 she became chief bacteriologist at the Jackson Memorial Hospital, Miami, Fla. She became director of research at St. Luke's in 1954.

Miss Ichelson is a member of the National Society of American Bacteriologists, the Eastern Chapter of American Bacteriologists, the American Public Health Association, the Pennsylvania Public Health Association, the American Association for the Advancement of Science, and the New York Academy of Science.

Boston Naval Shipyard

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

REMARKS OF ABRAHAM GREEN, TREASURER, BOSTON NAVAL SHIPYARD BETTERMENT ASSO-CIATION, MARCH 30, 1955, WITH THE MEM-BERS OF THE MASSACHUSETTS CONGRESSIONAL DELEGATION

In June last year we met with you in this room to alert you as to the condition that existed at that time at the Boston Naval Shipyard and asked you for your support.

A plan for united action was formed by you. This joint action of your delegation was directly responsible for new construction, conversion, and repair work when it was most sorely needed.

The employees of the Boston Naval Shipyard are grateful for this type of combined

Now we are here again to alert you to new dangers and to present a plan, and to enlist your combined active support.

The following speakers will bring you up to date and suggest a plan of action to revitalize this most important industrial asset to Massachusetts and the Nation.

REMARKS OF JOHN S. GANNON, SECRETARY OF THE BOSTON NAVAL SHIPYARD BETTERMENT Association, on March 30, 1955

Members of the Massachusetts congressional delegation, we are here today to alert you, and ask your constitutional support, in stopping this disgraceful disintegration of taking our Navy out of business. The Navy, gentlemen, is your responsibility. May quote in part the Constitution of the United States, article I, section 8: "That the Congress shall have power to 'provide and maintain a Navy'.'

The present directives issued by Secretary of Budget and Department of Defense would seem to be contrary to the Constitution. For example, the directive directs the rope walk to be closed August 1, 1955.

This, gentlemen, is not a manufacture of rope for public consumption in competition with private industry. On the contrary, this is an institution of research, of chemical analysis and testing for new products and improvements, and to maintain readiness for expansion and for mobilization potential.

Also our chain shop that was established in 1800 is now on the road to extinction. In the year 1800, 155 years ago, chain was made by blacksmiths and the Navy used this plant and its inventions and has developed 90 percent of the chain links used on naval vessels.

The die-lock chain now being used for the Forrestal-type carrier is another prod-uct of the Boston Naval Shipyard, and is now being built at the chain shop, and at the present time is the only chain shop in the country that has the facilities and know-how to produce this type of chain.

The directive also takes other components affecting all shops in the Boston Naval Shipyard, one being just as important as the other to our national defense and security.

Every administration and Congress since 1800 has seen fit to hold these components

intact as part of our Navy.

I would like to draw your attention to the facts that the rope walk, chain shop, and the other components have serviced our fleet continuously since their first institution through wars, peace, and depressions.

Gentlemen, I ask you, is this the time to take our Navy apart, in face of the grave situation in Asia and in the rest of the world?

Now I would like to present Mr. O'Donnell, president of the Boston Naval Shipyard Betterment Association. Mr. O'Donnell.

REMARKS OF CHARLES O'DONNELL, PRESIDENT, BOSTON NAVAL SHIPYARD BETTERMENT AS-SOCIATION, ON MARCH 30, 1955.

Members of the congressional delegation of Massachusetts and invited guests, you have listened very attentively to the conditions now existing in the Boston naval shipyard caused by the directive to take the Navy out of business. Time did not allow Mr. Gannon to expand on the various components, and the word "disintegration" of the shippard was used in his talk. These components, a copy which I now hold in my hand, indicate the extent of this disintegartion.

Is this a reorganization of our defense? We feel that this is not organization-this is disorganization of our Navy.

The fleet must be served by skilled workers and the components to do the job on short availability of the ship.

These ships cannot be standing by, waiting for parts from all sections of the country, such as propeller shafts, electronic equipment, special castings that have to be made

on short-term notice. These casting jobs can be accomplished in the foundry, processed in the machine shop, and assembled on shipboard in a matter of hours.

All these components are not like standard brand groceries that can be stocked and inventoried. On the contrary, these components are made by Navy specifications, fabricated, and assembled to meet any emergency of the ship.

Gentlemen, you would not allow your disabled fire apparatus to stand by idly in need of repair. Then why our naval fighting This is certainly not conducive to maximum efficiency and mobilization potential and cannot be in the public interest.

We the employees-and taxpayers-were led to believe that the reorganization program was for the purpose of preventing duplications of service, and for the reduction of cost. In the directive it has been set forth that the cost must not be considered, and that it is not the functions of department heads to try to justify these essentials. Again may I repeat, Is this in the public interest?

The President has stated in his directive that the components proven essential and in the public interest would not be removed.

We the employees of the Boston naval shipyard concur with the President's essential components and ask you, the Massachusetts congressional delegation, to band together and request a meeting with the President in the presence of your committee to present our case on the essentials of the components in question, so that the Boston naval shipyard may continue to serve the fleet as it has done in the past 155 years.

The Staff of Life

EXTENSION OF REMARKS

HON, ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which I made today during the hearings on H. R. 2851 before a subcommittee of the House Committee on Agriculture. This bill would provide for the processing of grain into forms suitable for distribution to needy persons in the United States. I wish to impress upon my colleagues the importance of this measure, and the need for immediate favorable action being taken.

The statement follows:

Mr. Chairman and members of the committee, I am deeply appreciative of this opportunity to appear before this distinguished committee in behalf of H. R. 2851. This bill is similar to H. R. 2824, which I have introduced, and to bills which various other Members have sponsored. It would provide for the payment by the Commodity Credit Corporation of the cost of processing wheat and corn into a form suitable for home or institutional use (for example, flour and cornmeal) for distribution to needy persons in the United States under authority of either section 407 or 416 of the Agricultural Act of 1949, as amended. Under the present law, wheat and corn cannot be processed into flour and meal respectively at the expense of the Commodity Credit Corporation prior to distribution in the United States.

Mr. Chairman, in my opinion, this legis-lation is a must. In West Virginia, we are

experiencing a depression. All throughout the coal-producing sections of that State are idle tipples, idle railroad cars, deserted shafts, and mine after mine closed down. During the past 3 years, at least 150 commercial mines have closed in the State, idling thousands of miners. Add to these the thousands who depend on coal for a livelihood-railroad workers, storekeepers, service station owners, and a host of othersand we begin to get the picture of a real depression in coal-producing areas.

When I think of the distressed conditions prevailing in my State, I am reminded of the Biblical plagues of Egypt. There can be no greater affliction than that of unemployment, starvation, privation, and want. and it is most perplexing and paradoxical that such a situation could exist in a land of plenty. Thousands of families are withfood, unemployment compensation checks have been exhausted, more and more demands are being made for free lunches in the public schools, and the specter of poverty stalks the countryside. Many of these families have barely been able to keep body and soul together with surplus food commodities which have been made available. In my 4 counties-Boone, Kanawha, Logan, and Raleigh, which have a population of 446,466—there are a total of 85,829 men, women, and children for whom surplus commodities constitute the principal source of food supply. This is almost 20 percent of the entire population in my district. are 250,000 persons certified to receive commodities in West Virginia, and this figure represents one-eighth of our total popula-

These people are of a noble race. They are good taxpayers, they are hard workers, they make excellent soldiers, and they are American to the core. Our Government has a responsibility to them. The precept that we are our brother's keeper has been assiduously followed with reference to our fellow human beings all over the world, but charity begins at home; and while we have been liberal in providing a helping hand to our brothers in foreign lands, we have been, in a manner, negligent concerning our own flesh and blood. Under title 2 of Public Law 480 of the 83d Congress, certain surplus agricultural commodities may be made available to meet famine or other urgent relief requirements overseas. Wheat, for example, has been shipped overseas under authority of this title as both raw wheat or as flour, depending upon the needs of the particular situation. It would be a serious indictment of governmental policy to continue to fail to provide flour for our own needy peoples.

At the present time certified individuals are being given butter, shortening, cheese, milk, rice, and beans. I and my people are grateful for these, but bread is the staff of life. The average American does not know what it is to sit down to a meal without bread. The recipients of surplus commoditles have every right to expect and demand that flour be supplied them. The wheat with which our storehouses are bulging has been procured with money from the taxpayers' pockets, and when the American taxpayer needs this grain for his very existence it is only right that it be provided. The cost of processing grain would likely be no greater-if, indeed, as great-than the cost of keeping it in storage, and I am sure that it would be far better to pay whatever cost is necessary to provide hungry people with food than it would be to continue wasting the taxpayers' money in warehousing costs.

In the days of Pharach, Joseph, in his wisdom, advised that food be stored during the 7 plenteous years for use against the 7 years of famine, and "in the 7 plenteous years the earth brought forth by handfuls" and "the 7 years of dearth began to come, according as Joseph had said. And the dearth was in all lands, but in all the land of Egypt there was bread * * * and Joseph opened all the storehouses."

Mr. Chairman, there is a virtual famine in some areas of our own country today; but, unlike the land of Egypt in Joseph's day, there is no bread, and unlike Joseph who opened all the storehouses, we are foolishly keeping them closed. Is this justice?

Shakespeare, in that magnificent work of genius, the Merchant of Venice, placed in the mouth of Portia these words:

"The quality of mercy is not strained; it droppeth as the gentle rain from heaven upon the place beneath * * * it is enthroned in the hearts of kings; it is an attribute to God Himself; and earthly power doth then show likest God's when mercy seasons justice."

Mr. Chairman, our people ask not for mercy; their plea is for justice. I urge the committee to act favorably upon this legislation in order that the unemployed and their children may have bread.

I am grateful, again, for this opportunity and privilege to give you this expression of my views on such an important matter. You have been kind to listen. With your permission, I shall include a letter which I have just received from Mr. Waggy, West Virginia State supervisor, division of commodity distribution. The letter follows:

"Hon. ROBERT C. BYRD,

"House of Representatives,
"Washington, D. C.

"DEAR CONGRESSMAN BYED: We have understood that it might be possible to receive flour processed from Government wheat for distribution to needy unemployed families. We have 250,000 persons certified to receive West Virginia, and flour commodities in would greatly add to the diet of these persons, in that we now have butter, shortening, cheese, milk, rice, and beans.

"We get numerous requests daily for flour for distribution and would appreciate it very much if this item could be made available.

"Yours very truly,

WILLIAM WAGGY "State Supervisor, Division of Com-modity Distribution."

Integration in the Public Schools

EXTENSION OF REMARKS OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ABBITT. Mr. Speaker, one of the most serious problems facing the country today has been brought about by the decision of the Supreme Court last May involving the question of intergration in the public schools. This is a problem which is not going to be easily solved. There has been a growing amount of so-called propaganda which has been forced upon the public by various groups in support of the integration movement. Of course there has been a great deal of discussion on both sides of the issue, but it is of particular concern to me that so much of the material appearing in the press is taking the position of misinterpreting the views of a large segment of our population. A number of articles have appeared recently in nationally circulated publications which have been giving an entirely distorted view of the feelings of the people of the South. It is abundantly obvious to me, and I am sure to all thinking people, that most of these reports are taken from a very small segment of the Southern population and are blown out of proportion by those who seek to present a spectacular point of view. I do not feel that this is fair nor does it represent a true picture, and it is certainly incumbent upon those who know the facts to properly present this information in its true perspective. There are a number of these polls being taken and it seems to me that the American people ought to be aware that they are only samplings of a very minor group and do not represent the thinking of the vast majority of the people in those States concerned.

I would like to refer to the attention of the Members of the House a splendid editorial appearings in the Tuesday, March 29, issue of the Farmville, (Va.) Herald, dealing with a typical example relating to the problem I have presented. I wish to herein include in my remarks the editorial written by Mr. J. Barrye Wall, editor and publisher, and also incorporate thte letter to which he refers: (From the Farmville (Va.) Herald of March 29, 1955]

THE STORY THEY WILL PRINT

We are indebted to Lynn Shelton, editor of the Halifax Gazette, for further information on the misrepresentation of the South, published in the Saturday Evening Post on February 18 from the pen of Mrs. Sarah Patton Boyle under the heading "The South Will Like Integration." Mrs. Boyle, the wife of a University of Virginia professor assumed to tell the Nation through the Saturday Evening Post that many southern people were afraid to speak in favor of integration, and in fact would approve it in schools. And she was billed by the Post as a typical southern woman expressing a typical southern viewpoint.

Mrs. Boyle is a dues-paying member of the National Association for the Advancement of Colored People. She attended the NAACP convention in South Boston in 1952. Her article was biased and did not represent the opinions of people in the South. Her statements misrepresent the South and mislead the uninformed readers of the Post in

other parts of the Nation.

The Reverend C. M. Webber mentioned in Editor Shelton's letter will be remembered as a Methodist minister appointed by Bishop Oxnam, of New York, as minister to labor in Virginia. He continued to serve for a number of years in this capacity in spite of honest disapproval of the officials of the Methodist Conference of Virginia. Affectionately known in labor circles as Uncle Charlie his activities were never thought by this writer to have been of value to labor, capital, race relations, nor of religion.

These are examples of what is happening to the people of the South (the people of both races). NAACP propaganda is pub-lished by a nationally circulated magazine as the typical opinion of the people of the The vehicle is then closed to the publication of a contrary opinion, which we believe predominates. Unless the Post opens its pages to some writer representing the southern viewpoint, a vast majority of the people in the United States will have been

The appointment some years ago of Rev. Mr. Webber, contrary to the good judgment and wishes of the Virginia Methodist Conference, is an example of what happens when local people lose their autonomy, even in the church.

In our opinion the sovereignty of the States has been abridged by the United States Supreme Court's decisions. Further implementation will fall into the field of legislation, which is the power of Congress, not the judicial power.

As a matter of broad principle Congress should test the authority of the United States Supreme Court to further implement their decisions with power of law. There are many cases, yet to be decided, in many fields of endeavor, which may be vitally affected by this procedure. If the Supreme Court can pass upon the constitutionality of law and then effect law, it has in effect changed the Constitution in an unauthorized man-

Congress has the power to make laws; the Supreme Court has the right to interpret law. The powers of Congress may be in the balance, and the freedom of Americans challenged.

[From the Farmville (Va.) Herald of March 29, 1955]

LETTERS TO EDITOR

DOES MRS. BOYLE REPRESENT THE SOUTH?

EDITOR FARMVILLE HERALD:

I have read with a good deal of interest your editorial of last Friday and another recent one by you on segregation in the

Saturday Evening Post.

It may interest you to know that on the Thursday after the Post article by Mrs. Boyle came out, I called her in Charlottesville and verified the fact that she attended a 3-day State NAACP convention in South Boston in October 1952. I covered that convention for the Associated Press, and the memory of a lone white woman and the Reverend C. M. Webb stuck with me. When I saw her name in the Post and her picture I recognized her.

So I asked her over the telephone if she was a dues-paying member of the NAACP and she replied she was, but had been only a short while. I published this information

in my paper.

A request went to the Post from an official of the university suggesting that a person familiar with the typical viewpoint of the southern people be asked to write an article from that point of view. I have a copy of the letter from the Post, which said that 23 other southerners had asked to do a rebuttal, but that the Post policy was not to publish rebuttals.

I was so fired up that I sat down and wrote the Post, sending them clippings from my newspaper disclosing Mrs. Boyle's affiliations, and all I got was the same reply.

It is a patent fact that the only side the national publications will carry on this issue is the side of the NAACP. As much feeling as I have for the Post (they carried a story on my paper, you remember), I know now that they do not have as much editorial integrity as your paper or mine. For I know both of us have strayed afield at times and have felt compelled by that same journalistic candor to react, make right, or in short give the other side of the story.

I have always decried sectionalism, but the idea you put forth about a southern association with a big voice seems the only answer to get the southern viewpoint across and make it felt. We need badly a southern slick-print magazine with circulation-and it would have circulation, too.

Again, congrats on your editorial. after them. I think our people are looking to the press for leadership and I'm doing my level best to keep dead aim on the targets.

Sincerely yours,

LYNN SHELTON,

Editor, Halifax Gazette. South Boston, Va., March 25, 1955.

(EDITOR'S NOTE .- In 1953 the Saturday Evening Post published a feature story on Editor Lynn Shelton, featuring his community leadership as a weekly newspaper editor, his fearless editorial policies, and his journalistic honesty. The Post is in an untenable position.)

CIO Supports H. R. 12

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the Record excerpts from the testimony of Walter Reuther, president of the Congress of Industrial Organizations, before the House Agriculture Committee on February 25 in support of H. R. 12.

Mr. Reuther and members of the CIO are cognizant of the fact that the drop in farm income has unquestionably contributed to the recent high levels of unemployment. It is this economic interdependence of farmers and workers which prompted Mr. Reuther to testify in favor of H. R. 12.

Following are some of the more important excerpts from Mr. Reuther's testimony which I urge my colleagues to study and consider before they vote on H. R. 12 in the near future:

In his desperate effort to win support in the cities for his program to reduce farm price supports, Secretary of Agriculture Benson has led in misrepresenting the effects of the price-support program upon the consumer. It is commendable that the actual facts to the contrary in this regard were set forth by the majority of this committee in the report which the then chairman of this committee, Representative Hope, submitted to Congress last year. The CIO is happy to join in endorsing these findings. We know that even in 1947, the best postwar year for agriculture, 70 percent of all farm families earned less than \$3,000. We also know that most of the price we pay for food does not go to the farmer and that the effect of price supports on the prices we pay is very small. Even if dairymen got their feed grains free, it would mean only about 1 cent a quart savings on milk. The effect of the difference between the 75 percent and 90 percent price support levels for corn and wheat on the price of milk has to be measured in fractions of a mill, which means that no savings whatever will be passed on to the consumer.

Aware of the lessons of history, we know that the welfare and destiny of farmers and wage earners are closely interrelated, that each depends upon the prosperity of the one to lift up the living standards of the other.

The CIO will not attempt to tell the farmers what kind of agricultural program they should have to protect their interest. We do, however, offer our assurances that we will give to farmers our full backing in their efforts to obtain agricultural policies which will both provide the Nation abundant production of food and fiber and assure farm families full parity of income. This pledge is made unequivocally and without reservation.

There have been times in the past when we have found most of the farm organizations and a majority of Congressmen from rural areas arrayed against us in our efforts to protect the interests of American workers, but we have never allowed legislative defeats to blind us to the fact that farm prosperity is essential to the prosperity of industrial workers and the Nation. We are confident that the day is not far off when farm organizations and an overwhelming majority of legislators from rural areas will realize that the reverse of this is also true—that the farmers of the Nation can prosper only as

the working men and women who purchase the products of the farm are also prospering.

The present administration appears to us to be responding to the plight of the farmer with the same disregard it has shown toward the growing ranks of unemployed workers in our cities. Only last week, in the face of the farm situation I have just outlined, Secretary Benson appeared before this committee and insisted that "the overall financial condition of agriculture has continued sound."

Admittedly, the farm problem is complicated and even the experts may hold differing opinions over the best way to solve it. But of one conclusion there can be no intelligent challenge: A drop in farm income of \$1.6 billion over a 2-year period with the end not yet in sight does not indicate a sound financial condition. It is not sound for agriculture and it is not sound for the national economy as a whole. The Commerce Department has estimated that a \$1 billion drop in farm income results in a drop of \$240 million in farm spending for buildings and machinery. The cutback has already been felt, and its effects are cumulative. is important to remember just how important farm purchases are in our total economy. Farmers normally use more steel in a year than goes into the output of automobiles; more petroleum than any other industry; enough raw rubber annually to put tires on 6 million cars, and enough electricity to meet the needs of the cities of Chicago, Detroit, Houston, and Baltimore combined. Agriculture also consumes great quantities of chemicals and other materials. is clear why agricultural purchasing power must be maintained if a faltering farm economy is not once again to drag the rest of the economy into a farm-led depression.

What the administration and its trickle-down economists fall to understand about present-day economic needs is that as the productivity of our economy rises, the incomes of both farm and city families must continually rise if they are to be able to buy the increasing flow of goods and services which the rising efficiency of our industrial system makes possible. Our present troubles are due to the fact that too much of the profits have been going to the top and staying there. Wages and farm income have not risen fast enough to keep up with rising production.

This economic philosophy prevents the CIO from having any sympathy whatsoever with the theory of the present administration that the way to sell more farm products to low- and middle-income families is through a reduction in farm prices that in turn will reduce farmers to insolvency. Recent developments do not support such theorizing. Throughout this period of falling farm prices, the prices which farmers and consumers have had to pay did not go down but held near-record peaks. The CIO be-lieves that this situation is patently unjust and must be corrected. We know that the farmer, like the worker, is entitled to a just return for his labor which will permit him to share in the better life made possible by our increasing productivity. We believe that the answer to our economic needs involves raising the buying power of millions of our families without tearing down the standards of others in the process.

The CIO therefore fully supports H. R. 12 and similar bills to reestablish 90 percent of parity price supports for basic agricultural commodities at this time. I want to make it clear, however, that CIO's historic position has been that the farmer is entitled to full 100 percent parity of income. Anything less than that will deprive the farmer of a fair opportunity to realize his just place in society.

The CIO does not agree with the administration that a very large carryover of wheat, corn, and other reserves of foods and fibers

from year to year must necessarily be considered a burden. We regard a properly administered reserve of food and fiber as a worthwhile form of consumer insurance that is better than money in the bank. In the time of drought or other crop failure, a favorable bank balance will not feed the hun-Such reserves are the same kind of national protection which we have set up in the form of strategic stockpiles of metals and minerals. It is important to note that the cost of maintaining the reserves of agricultural products has been small in comparison to that of the stockpiles of rubber, tin, and other reserves required for armament. The cost of carrying these insurance reserves and holding them off the market is quite properly a charge on the Public Treasury, since neither farmers nor industry should be asked to pay for protecting the entire Nation against the risks of unforeseen dis-

Actually, the CIO is not ready to accept the notion that we have a farm surplus so long as millions of our families are living on diets that are below the safety line. Nor can we regard abundant food production as a calamity so long as half the world goes to bed hungry every night and all of our output couldn't begin to feed the world's hungry nations adequately. The overall need for the food we produce is clearly evident. Instead of cutting back production, we must devise more efficient uses for that portion of our harvest that is surplus to our own national needs. Rather than blaming farmers for inefficiency, as Secretary Benson has done, we should be grateful for the enterprise they have shown in producing abundance.

Whose Money Is It?

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following editorial which appeared in the March 13, 1955, edition of the Washington Post and Times Herald:

WHOSE MONEY IS IT?

Representative Stewart L. Udall thoroughly deserved the general acclaim he received from his fellow members on the House Committee on Education and Labor the other day for his striking analysis of the school-aid problem. He provided some much-needed perspective on the issue which constitutes the essential difference between President Eisenhower's school-aid proposal and the formula sponsored by Senator Hill and Representatives Bailey and Kearns—whether the principal additional financial burden should be borne locally or by the Federal Government.

Mr. UDALL put his finger on what is apparently the nub of the President's objections to direct Federal grants-in-aid to the States—the fact that this will tend further to unbalance the Federal budget. "Did they ever mention the national debt?" Mr. Eisenhower retorted to critics who objected that his program placed increased indebtedness on already overburdened States and school districts. "I'm afraid," commented Mr. UDALL, that "the President's advisers have confused the Federal debt with the national debt. The Federal debt, as we well know, is some 278 billion; the national debt is the sum of the debts of Federal, State, county, city, and school district governments. Once we have agreed that the

classrooms must be built, the Rubicon is crossed, and the only question that remains is where the funds shall be raised to accom-

plish the agreed purpose."

Thus the problem, as this newspaper has suggested from the beginning of the controversy, is basically a bookkeeping one. We share Mr. Udall's view that just as the burden of financing schools was originally shifted from local districts to counties and State governments, it needs now to be shifted, in part at least, to the Federal Government. The reason is that the Federal Government has the revenue resources, while the States and the localities have not. And the problem has become a national one with a disastrous impact on the whole Nation.

Worthington C. Miner To Be Awarded the Honor of Television Man of the Year

EXTENSION OF REMARKS

HON, GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. McDONOUGH. Mr. Speaker, at Los Angeles, Calif., on Monday, April 4, the board of directors of the new Mount Sinai Hospital and Clinic will officially honor Worthington C. Miner as the television man of the year.

Mr. Miner's selection for this singular honor is best described from an excerpt contained in the scroll he will receive:

For enlightenment in the field of medicine and surgery through the presentation of Medic of which he is the executive producer. For 15 years of public service through the

medium of television.

Worthington Miner is not only a distinguished Broadway producer and director, but one of the few men who can claim the honor of being the first to pioneer in television, which has become the greatest means of communication known to mankind in the entire history of the universe and a medium through which more people reached in every walk of life than are reached through the combined efforts of the printed page, the mails, motion pictures and radio.

To Worthington Miner belongs a good deal of the credit for the almost universal acceptance of television and the advantages now enjoyed by mankind because of it.

In 1939, when no one in the world outside the field of electronics owned a television receiving set, Worthington Miner and a group of inspired pioneers gave unselfishly of their time and their talents day in and day out, experimenting with every phase of television communications in a tiny studio located at 15 Vanderbilt Avenue, New York City. These men thought they had reached a singularly important milestone when in 1940 they successfully telecast a 15 minute dramatic playlet beamed from their Vanderbilt Avenue studios to the Chrysler Building 5 blocks away.

It was Worthington Miner who directed and produced this first telecast of a dramatic playlet in the history of the

world. It was through the inspiration and success achieved in this original experimental studio that a similar one was established in the Hollywood hills that same year by Don Lee and another in Schenectady, N. Y., and at Pittsburgh, Pa.

When we consider that these sacrifices and experimentations on the part of Worthington Miner and the men associated with him in 1939 has given to America its tremendous network of television channels, its thousands of hours of free entertainment made available to millions of Americans and a medium through which the President of the United States can constantly be in face-to-face contact with his constituents, then certainly some recognition should be extended to Mr. Miner even beyond the important citation he is scheduled to receive next Monday.

Mount Sinai Hospital and Clinic where Mr. Miner will receive this award is the newest of Southern California hospitals to be constructed here and will officially open in June 1955. Though it borrows its identity from the mountain upon which Moses communed with God and so received the Ten Comandments, that govern the lives of all men of good will, as a hospital it will draw in true American fashion no discriminatory lines of race or creed.

Faith in Persons and in Authority

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. MULTER. Mr. Speaker, on March 18, 1955, Harry P. Cain, Republican Senator from the State of Washington, 1946 through 1952, and since then a member of the Subversive Activities Control Board, addressed the Seventh Conference on Civil Liberties.

The following are a few excerpts from his analysis of problems raised by the Federal security program. They appeared in the March 28, 1955, issue of the New Republic magazine.

I commend them to the attention of our colleagues:

FAITH IN PERSONS AND IN AUTHORITY

If the world of the present comes tumbling down, as it has the power now for so doing, those who remain alive must begin to build another home for the living from the ruins. The only possible tools to be in our hands in the beginning will be our courage and self-respect, and a hoped-for mutual trust among Americans.

Unless we remain enthusiastic about being Americans; unless we have confidence in our Government, we aren't likely to see any universal peace established and we aren't going to win any war which may engage us.

If this be so, we ought to reexamine the status of our enthusiasm and the degree of confidence we hold for those in authority.

For the present, millions of citizens * * *
have become bewildered and troubled by the
contradictions between stated purposes and
administrative results. * * *

Had you chosen recently between being indicted for a capital or infamous crime or being held to be a loyalty risk, there would have been no choice to make. From the indictment, you would have been found guilty or acquitted; sentenced or released through language and methods everyone can understand. From the allegation that you were a loyalty or security risk, you might have long wellowed in the wilderness of despair and mental torment without determining what the charges were all about, or where they came from. Please note my use of the tense. Future consequences from recent refinements in the employees' security program remain to be seen. * * *

If an ambition is to achieve uniform and consistent standards and procedures throughout the Federal structure, I can think of no sounder way to approach the problem than through a detached and distinguished nonpartisan commission of some sort. * * *

In utter sincerity, I do maintain that political considerations in security questions have been the major source of our discontent and diminishing confidence in authority since the close of World War II.

There is no reason to say that one political party has been more responsible for this mischief than the other. National campaigns have revolved around who was going to do what to whom in these fields. There has been no agency within the several administrations and few individuals who have been considered to be disinterested and objectively minded. The charge and countercharge are the weapons employed by partisan minds everywhere. One party is maligned for having attempted too little and the other party is criticized for having attempted too much. Republican and Democratic Party supporters mostly restrict their views to what their articulate spokesmen say. The independent voter picks and chooses from competing headlines.

A commission would have a far better chance of having its judgments considered on their merits. Much of what is good today is disregarded, held suspect, or neglected because it is written off as being politically inspired. The commission could stop most of this. It would, I think, place the greater emphasis on what rather than who is right and best for the Nation in the complicated equations which are the ingredients in the realm of internal security. * *

Regardless of who future managers are to be, there remains much to be thought about. * * *

Every applicant for the Federal service and every employee within that service has been required to state whether he is currently or has ever been a member of any organization listed by the Attorney General.

Is it not proper to explore the desirability of eliminating that portion of the question which relates to memberships which were resigned or renounced or which lapsed prior to the listing which was first made public in 1947? * * *

If an individual's conduct, attainments, and attitudes have been above reproach during the past 8 years, or since 1947, is it not a legitimate calculated risk to assume that he had been a loyal citizen during the years which went before?

The Attorney General's list ought, in my judgment, to be liquidated through procedures which our country supports. The merits of the charges against any listed organization should be adjudicated. Sanctions should apply to those who remain as members after an organization has been found to be guilty as alleged by the Attorney General. * * In my opinion, no organization should be listed unless it is simultaneously announced that prosecution will be initiated in the case within a period of several months. * *

The complete measure of a government, like that of an individual, can only be judged

by the fashion in which it assumes and fulfills its unenforceable obligations. * * * We expect and pray that our Government

We expect and pray that our Government will be just in its treatment of every citizen not because the laws of our land so require in every instance, for they do not, but because that Government wants and will remain determined to be just.

Premier Mario Scelba of Italy

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ANFUSO. Mr. Speaker, Washington is host this week to an honored guest and one of Europe's leading statesmen, the Honorable Mario Scelba, Premier of Italy. I am pleased to draw the attention of my colleagues to the warm welcome which has been extended by our Government to this distinguished guest from abroad.

Premier Scelba is not only a friend and ally of the United States, but is a firm believer in democratic methods and ideals as represented by our country. The hand of welcome and friendship extended to him in Washington is sincerely appreciated by freedom-loving people everywhere and by minority groups in this country. It will unquestionably help to cement the friendly relations between the United States and Italy and to strengthen the forces of the free world.

Having been born in Italy and serving in that country as an officer of the OSS during World War II and having maintained contacts with that Government since then, I can state without hesitation that the United States can have no greater friend and ally than the Republic of Italy and the people of Italy.

We are deeply honored to have had Premier Scelba as our guest today in this Chamber and to listen to his address. His words were a source of encouragement to all of us.

Mr. Speaker, I am happy to insert into the Record an editorial from the Washington Star of March 28 and an editorial and news article from the Washington Post and Times Herald of March 30 concerning the visit of Premier Scelba. They are as follows:

[From the Washington Star of March 28, 1955]

WELCOME VISITOR FROM ITALY

When Mario Scelba became Premier of Italy in February 1954 political observers felt his regime would be a brief one. Nearly 14 months later he is still in office, his prestige heightened by nine votes of confidence in the Italian Chamber of Deputies. Mr. Scelba is an official visitor in Washington this week. He has brought with him a record of outstanding accomplishments, especially including his part in the settlement with Yugoslavia of the Trieste dispute and in gaining parliamentary ratification of the Paris accords.

As leader of the Christian Democratic Party, Premier Scelba heads a coalition government in which rightwing Socialists, Liberals, and Republicans also are represented. With this group supporting him thus far,

he has successfully fought off the opposition of the aggressive Italian Communist Party and its scattered leftwing followers. As with most coalitions, however, there are political strains within it and even among the Christian Democrats there are strong rivals to Mr. Scelba's continued authority. The problems of Italy's domestic economy probably pose the greatest threat to the country's political stability, although the Premier has said there are "clear signs of improvement lately." Still, Italy has more than 2 million unemployed and a per capita annual income of only \$370. A program of land reform and modernization of agriculture are politically controversial issues.

The Italian Premier, in his own words, has not come here to ask "further sacrifice" by the American taxpayers. He is, however, anxious to increase the investment of American private capital in Italy and his government has pushed through legislation designed to facilitate such investment. His visit here will provide an opportunity for a full discussion of his objectives and of his country's needs.

[From the Washington Post and Times Herald of March 30, 1955]

ITALY'S STRONG MAN

A large share of the credit for the emergent stability in Italy belongs to Premier Mario Scelba, who is an honored guest in Washington this week. It was his vigilance as Minister of the Interior in charge of the police in 1947 and 1948, at a time when Italy was very nearly in the Red clutches, that denied the Communists an opportunity to convert their "soft" policy into one of revolution. Similarly, it has been Premier Scelba's ability to conciliate the center parties in the precarious Christian Democratic coalition during the year his government has been in office that has brought economic progress in broader tax legislation, land reform and the attraction of foreign investment.

Significantly enough, this lawyer-newspaperman-politician, who earned the reputation of being a tough cop, got the greatest hand at the National Press Club yesterday when he pledged: "We in Italy are firmly convinced that democracy can be defended and must be defended with democratic methods. Our public opinion * * insists upon respect for law and order, but it is strongly opposed to repressive measures that might suggest the return of, or recall of, nondemocratic systems." This was an impressive rebuke to the neo-fascists.

Americans long have had a warm spot in their hearts for Italy, not only because of its cultural heritage, its friendly people and its contribution of many distinguished citizens to this country, but also because American aid has played an instrumental part in the safeguarding of free institutions there. We could help even more, without financial outlay, by revising the discriminatory provisions of the McCarran Immigration Act. It is a source of pride to this country, as well as to Italy, that first the de Gasperi government and now the Scelba government have aided the quest for European unity through partnership in NATO and such moves as the Trieste settlement and ratification of the Paris treaties. Premier Scelba will have the encouragement of Americans as he moves more vigorously to extend land reform and other measures to promote more social and economic democracy.

[From the Washington Post and Times Herald of March 30, 1955]

SCELBA STRESSES FREE EUROPE'S NEED FOR INTEGRATION

Italian Premier Mario Scelba declared yesterday that free Europe's only alternatives are "either integration or disintegration."

In a speech to an overflow National Press Club luncheon, the visiting statesman stressed "the necessity of economic and social solidarity and of coordinated political activity" in the belief that no national economy can survive alone.

The Premier, speaking in Italian, called his visit to the United States one of friendship and good will. He expressed gratitude for American aid and stressed Italian economic moves such as land reform, tighter tax laws, new housing and new investment including use of foreign funds.

Scelba termed the Atlantic alliance the cornerstone of our foreign policy but declared that military defense, however, is not sufficient alone. He suggested that article 2 of the NATO treaty, calling for economic and social cooperation, be put to use.

Although the Premier gained a reputation when he was Interior Minister for tough treatment of Italian Communists, he yesterday rejected violent forms of repression against extremist parties and against the enemies of democracy.

In discussing Italian communism, Scelba said it should be remembered that the Allied authorities (at the end of World War II) brought the Communists into the Italian Government, thereby accrediting them as a genuinely democratic group.

Scelba met yesterday with Foreign Operations Chief Harold E. Stassen, Treasury Secretary George M. Humphrey and Defense Secretary Charles E. Wilson. It was learned that the American officials, in discussing Italian economic and unemployment problems, stressed their interest in promotion of public works, vocational training for unskilled unemployed and measures to encourage private foreign investment.

Today the Premier will call on Secretary of State John Foster Dulles, be the luncheon guest of Vice President RICHARD NIXON, visit the Senate and House, be the honor guest at an Italian Embassy reception and leave for New York by train.

Ethics in Government

EXTENSION OF REMARKS

HON, HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. DONOHUE. Mr. Speaker, on Sunday, March 20, it was my honor to speak before the Beth Israel Brotherhood, of Worcester, Mass., at their breakfast meeting in the synagogue vestry.

The meeting was directed by the program chairman, Mr. Jacob Shulinski and I have been requested to include my address, which follows:

ETHICS IN GOVERNMENT

For the last few years, and rather especially during the last presidential campaign, we have heard a great deal about the subject of ethics in Government.

The circumstances of persistent atomic danger to our individual and national life seems to be encouraging a reexamination of our whole moral fabric these days, and that is unquestionably a good thing.

The accompanying public realization that neither private nor party political ambition is a valid excuse for unethical and immoral conduct appears to have inspired our legislative bodies and political parties to seek the higher code of ethical standards the public is demanding. The appreciation of this prac

tical fact has led to the bipartisan creation of congressional committees to investigate and make recommendations for moral improvement in the fields of modern politics and Government.

There is no argument whatsoever about the need and desirability of a continuing high standard of moral conduct on the part of public officials, political parties and candidates. It is true, of course, that the major responsibility for the guidance of public and private morality lies with our religious and educational institutions and parents. However, there is no doubt that the conduct of public officials is also a powerful example influencing the general public toward higher or lower moral standards.

As a matter of fact it seems to me there are currently some very substantial reasons why ethical standards in American politics are perhaps more important to us today than ever before. The Federal Government has grown by leaps and bounds in the last few decades, until now it touches the life of each citizen.

Citizen at innumerable points.

As Senator Paul Douglas, of Illinois, chairman of a congressional committee which investigated ethics in the Federal Government, remarked: "What could be tolerated when government was small cannot be endured when government is big. For its consequences, if not its causes, can be relatively worse."

Big government, and none of us can deny that we do indeed have big government, affects the income and the welfare of individuals, of groups, and of industries. Members of Congress make the policies which govern the activities of big government, but the administrative officials have a great deal of discretion in interpreting the policies and applying them to specific situations. Furthermore, interested parties or groups are seldom content to let the wheels of government turn unassisted, but are ever present to put pressure on the Congress or the administrators to secure decisions favorable to their interests.

It has been pointed out that corruption in government occurs most often in what have been called the action-laden areas—areas where government action or inaction can make or lose fortunes for individuals or corporations. The letting of contracts, the collection of taxes, the making of loans, the fixing of rates, the issuance of licenses or certificates, the allocation of raw materials, the granting of subsidies—these are the kinds of Government activity which should be examined most carefully for evidence of corruption.

In addition to the increased influence of the Federal Government upon our national life and the resulting increased consequences of any corruption in Government, there are two other aspects of public morality which distinguish the present from the past.

For one thing, major scandals in the past have occurred at times when we were technically at peace, though they may have taken root in war or immediate postwar periods. At the present time, however, we are virtually in a state of war. It is obvious that we cannot afford to let the efforts of our Federal Government to establish a peaceful world be diminished by the stealthy drain of corruption in public office.

Furthermore, there are serious implications in the realm of international relations. The United States holds a commanding position of leadership in the free world. Any deviation from the course, any slackening of effort, any failure to live up to the demand for world leadership would result in serious repercussions in the other free nations. If through corruption in public affairs, the American people lost confidence in their own Government and accordingly were rejuctant to make the necessary sacrifices asked of them by the Government, there would be a very real danger that our effections.

tiveness as the leader of the free world in the fight against Communist aggression would be perilously impaired.

We should never forget, as I said, that public officials set powerful examples. The quality of the men and women who hold high public office shapes to some extent the character of the entire Nation.

I am pleased to say that an overwhelming number of impartial witnesses, from all walks of life, appearing before congressional committees investigating the subject, unhesitantly stated their conviction that the vast majority of our public officials are truthful, conscientious, and honorable men. They also unanimously testified that all in all, ethical standards in the National Government are at least as high as they are in business and the professions.

Public officials are, however, still human beings and, therefore, always vulnerable to the temptations which affect persons in other occupations. In truth, there may be extraordinary conditions and circumstances attached to political positions which make it relatively harder to preserve the trust of public office.

This fact was rather pointedly described by the late Harold L. Ickes, when he declared: "I have never known a public official to corrupt himself." After all, for every bribe, favor, or other consideration accepted by a Federal official there must be someone who tenders that bribe or favor to him.

That man is just as guilty of wrong-doing as the man who accepts the consideration offered. I am sure that all of us who think the matter over would agree that there is no reason that we can easily put into words for condemning the behavior of the public official while tacitly condoning the actions of the private citizen—and yet, that is what many of us do.

There is an old maxim to the effect that experience is the best teacher. We have had some experiences with corruption in the Federal Government and there are lessons which we have learned from it.

The first lesson we have learned, or perhaps it is better to say the first lesson of which we have been reminded, is that public officials are apt to show favoritism as a result of personal economic ties with businesses or individuals affected by the program they are administering. This category covers those officials who accept bribes or gifts or favors of one sort or another which are valuable in a financial sense.

Employment, both past and future, is another possible source of corruption in Government. In recent years, more and more businessmen have been brought into the Federal Government, creating at least the possibility that, consciously or unconsciously, they might favor their former employers in the administration of their programs.

A more common occurrence is future employment with private firms affected by decisions in which the public official is taking part. There have been several cases, in recent years, where shortly after a large loan was made to a corporation by the Federal Government, one or more of the employees of the Federal loaning agency resigned to accept employment with the private firm, usually at a considerable increase in salary. The most serious aspect of this practice is that it casts doubt on the impartiality of the Government agency involved, both in the particular case at issue and in all other cases before the agency.

Political appointments, too, are potential sources of trouble. There is some evidence to support the theory that political appointees are more prone to temptation than are career civil-service employees. Also involved are the caliber of the appointees, the political sniping to which they are subject, and the attacks on programs because of the politically selected officials who are administering them. In a somewhat different area,

there have been cases in which officials apparently have been misled by their personal friendships,

Administrative faults are responsible for some of the corruption which occurs in Government. Weak organization and dispersion of authority at the top invites subordinate officials to indulge in questionable practices.

Poor procedures or the lack of procedures are responsible for creating a climate in which corruption can flourish. When laws, regulations, or policies are inexact or couched in vague general terms, it becomes easier for an administrator to fail to observe the public interest. Then, too, there is a tendency in regulatory agencies to be less zealous as they grow older; there is an atmosphere of tiredness and routine performance of public duties.

These are some of the major lessons we have learned about corruption in the Federal Government. We have found, also, that corruption is most likely to appear after a major war, when there is a relaxation of effort and a careless attitude of "Let's get back to the good old days." All of us hope that corruption will receive no further stimulus from that source.

After examining some of the problems and some of the sources of corruption in Government, the logical question to ask iswhat shall we do about it? There have been a number of suggestions and I would like to tell you a little about some of them. We should remember that no one measure can be expected automatically to eliminate corruption.

Strengthening existing laws and plugging loopholes is one of the suggested remedies for corruption. It is proposed that the criminal law relating to bribery should be extended to provide that payments of something of value to a Government official, with the intent of having him use his influence with some other official, should be included in bribery. Bribes should include offers of employment and other considerations as well as cash payments, and penalties should be The laws governing conflicts in interest could be strengthened relative to private income, participation in making contracts, disqualification in certain cases, and speculation by Government employees. The Administrative Procedure Act might be amended relative to conflicts of interest, discussion of future employment, divulging of information, and a bar on the appearance of former employees before their agencies on any case within 2 years. Lobbyist registration laws also could be strengthened.

Another proposal which has been made is that all top administrative officials should be required to disclose all income from all sources, both public and private, and including gifts and loans. Disclosure often accomplishes more than criminal sanctions.

Existing standards of conduct for public employees should be enforced at all times, and every effort should be made to improve the general quality of Government employees. This probably would involve providing more adequate salaries, better promotion opportunities, improved means of weeding out the inefficient and incapable employees, and an effective loyalty-security program. The cooperation of our schools, universities, and communities, as well as the Congress and the Civil Service Commission would be necessary in this regard.

Improvement of administrative organization is an obvious remedy to some of the situations which are conductive to corruption. There should be clear lines of authority and the means of administrative control should be clear and effective. Congress can help by clearly defining the limits of executive power, by making laws more precise, and by providing adequate safeguards for the public interest.

Another possible procedure is the establishment of codes of ethics. There have been several proposals along this line, the argument being that they would be useful to those who "blunder into wrongdoing" through ignorance and would bolster the consciences of those who were tempted to stray from the accepted ethical standards. The Senate Subcommittee on Ethical Standards proposed including items regarding all business discussions to be held in public buildings during working hours, the disqualification of officials in a decision affecting a previous employer, and a prohibition against becoming deeply involved, either financially or socially, with persons outside the Government who might be affected by agency decisions.

A court of ethics to hear complaints about improper practices of public officials and to secure redress to the ordinary citizen has been proposed. There is relatively strong backing for a Commission on Ethics in Government, to be composed of persons appointed partly by Congress, partly by the Presi-

dent.

This Commission would not only investigate moral standards, but also would recommend measures for improvement. Related to this proposal is another for the creation of a nonpartisan citizens' organization to perform much the same functions.

These are the primary reform proposals now up for consideration. All of them are receiving study and are being pushed with varying degrees of vigor. As I have noted, no one proposal can be expected to provide a cure for the problem of corruption in Government. Certainly, some of these proposals if put into effect would improve the ethical standards in the Federal Government.

However, the greatest force to influence the observance of higher ethical standards in Government lies within each of us as individual citizens contributing to a higher national morality. If each of us in our pri-vate and social lives adheres to the divine laws of right conduct and right reason the betrayers of public trust will not long be tolerated in public life. We all have an individual responsibility for the manner in which our public business is conducted. If we increasingly accept that responsibility, we can remain confident that this Nation and this Government will retain the moral character and strength to survive in triumph over the immorality of Communist atheism. It will be only by a preserving demonstration of moral integrity as a people that we will be able to successfully guide ourselves and the civilized world to peaceful understanding and prosperous progress in an atomic age.

Loud Speaker of Appeasement

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from Human Events of March 26, 1955, entitled "Loud Speaker of Appeasement," and an article from Human Events of March 26, 1955, entitled "They First Make Mad," by Medford Evans.

LOUDSPEAKER OF APPEASEMENT

The elevation of Harold Stassen to the position of Secretary of Peace and Disarmament this week has not—indeed, far from

it—disarmed his multitude of critics in Congress and the prospects of political peace about the matter are rated zero.

The fact is that Stassen enjoys the dubious distinction (even among those who laugh at him) of ranking high among American apostles of appeasement. Stassen critics have all along attacked his giveaway and But. foreign handout proclivities. those who don't like him relate his expensive generosity abroad to a matter more serious than the budget, namely, disarmament. That includes atom power, the bastion of our security. (See article section of this issue, They First Make Mad-International Control of Atomic Weapons, by Medford Evans, for dissection of the dangerous proposal for an atomic pool designed to share our atomic power with the rest of the world.)

Stassen, as merciless analysts see him, is close to those businessmen who, while essentially patriotic, nevertheless listen to the swan song of big contracts and business abroad, as promised by the internationalist politicos. There is fear here that the reckless Minnesota maneuverer will try to lead the United States into vetures not consonant with our defense security.

Experts on atomic-power problems view with concern the recent statement of J. J. Hopkins, president of General Dynamics Corp., who advocated building atomic reactors all over the world, among other place, in India.

In any case Stassen's career—or rather careering, as some put it—in the past few years has not been marked by caution concerning trade abroad in products useful to Soviet Russia.

Last year, before Congress, Stassen uttered in substance a strange doctrine, that internal unrest in Russia arose from lack of consumer goods and therefore American restraints on trade with Russia should be modified to alleviate it. The record shows that Stassen has constantly sought to break down the embargo on strategic goods against Soviet Russia.

Such ideas and actions of the recently appointed Secretary of Peace and Disarmament explain why people in Congress intend to give wary attention to the gentleman. His initial proposal in his new job, a new giveaway program of \$8 billion for Asia, is said to be merely a promise of what is yet to come.

Whatever Stassen may actually accomplish in the next 2 years, there is no doubt that he has captured a powerful sounding board by his new position. And in a developing situation of international crisis, the words of the man from Minnesota will bear scrutiny.

"THEY FIRST MAKE MAD"-INTERNATIONAL CONTROL OF ATOMIC WEAPONS

(By Medford Evans)

I

Harold Stassen's new job as Presidential assistant in charge of disarmament, may be a way of providing for Harold Stassen. Little else can be said for it. The United States is ill-advised to promote disarmament talks at a time when only armament can offset hostile hordes of manpower.

The Soviet Union inspires hysteria over radio-active "fallout" to promote atomic disarmament. They get enough aid from United States citizens without our giving a man Cabinet rank to coordinate the effort. The best that can be hoped is that so far as actual accomplishment goes, Mr. Stassen will continue as usual.

The isolationists have won a victory in principle. The United States will now go it alone. The recent UN London Conference on disarmament brought "no progress." President Eisenhower reported. Great Britain has decided to make H-bombs; France desires

nuclear weapons. But, the United States will make a new effort to liquidate her own superiority. It is not without precedent that the Prime Minister of Great Britain should have made the only rational and courageous statement about the situation.

On March 1, 1955, Sir Winston Churchill asserted:

 "The United States has many times the nuclear power of Soviet Russia."

2. "Moral and military support of the United States and * * * possession of nuclear weapons of the highest quality and on an appreciable scale * * * is the policy which [Great Britain has] decided to pursue."

3. "The nuclear superiority of the Western powers [must] be stimulated in every possible way."

While Sir Winston was saying these things, which were noticed everywhere and nowhere seriously contested, the United States was still negotiating secretly to share with the enemy (over whom nuclear superiority is desired) the science and technology by which nuclear arms are produced, and trying to pool with that enemy significant quantities of the special material on which the manufacture of nuclear weapons depends.

The United States has offered to an international bank, in which Soviet Russia has been asked to participate, 220 pounds of plutonium, said to be "not of weapons grade." The material, this time, is not called "denatured." That word was already hurt when (1954) Robert Oppenheimer told the Gray Board: "I know of no case where I misrepresented or distorted the technical situation * * * The nearest thing to it * * * is that in the * * * Acheson-Lillienthal report, we somewhat overstated what could be accomplished by denaturing." This time, no one has stated—over or under—what "not of weapons grade" might mean in practice.

The Prime Minister, however, has stated: "It is now the fact that a quantity of plutonium, probably less than would fill this box on the table—it is quite a safe thing to store—would suffice to produce weapons which would give indisputable world domination to any great power which was the

only one to have it."

The Prime Minister did not say what such a box might weigh. It would probably weigh about a ton. The United States may have offered somebody a down payment on world

domination.

This is one consequence of the "Atoms for Peace" plan in President Eisenhower's speech before the United Nations General Assembly. December 8, 1953.

The President proposed a world bank of atomic energy. Nations with fissionable materials and scientific and technical information to invest would merge resources in 2 pool from which needy nations could borrow. Power development would be emphasized and construction begun in powerstarved areas. The United States, Britain, Canada, and the Soviet Union would contribute according to their abilities, and China and India would receive according to their needs. The atomic weapon would be taken out of the hands of the soldiers and put into the hands of those who will know how to strip its military casing and adapt it to the arts of peace. Private conversations between representatives of powers would settle the practical details.

Almost at once the Soviet Union announced its "readiness to take part in such negotiations," and a series of secret talks began between Secretary of State John Foster Dulles and Soviet Ambassador Georgi N. Zaroubin, once Igor Gouzenko's boss in Canada. The talks have presumably not been concluded. They are still secret.

11

United States participation in an atom pool is radically wrong for two reasons: (1)

it undercuts, confuses, and eventually destroys our whole defense program; and (2) it not only fails to establish a basis for negotlating international differences, but actually inclines to provoke new differences and aggressions.

The atom pool makes our defense program seem either silly or wicked. In order to arm effectively it is necessary to keep clearly in mind at all times how and why we are to

make the effort required.

The "why" is the logical and widely held belief that communism is essentially an implacable commitment to world power, that the United States of America is the principal obstacle in its path, and the U.S.S.R. is the main bulldozer in its possession.

The "how" is the new look in the Pentagon (also an Eisenhower creation) based on skillful use of airpower and atomic weapons, to compensate for inevitable inferiority in man-

power and to permit economies.

People could understand Senator MARGARET CHASE SMITH when she said, "My answer to the big question of 'how can we get more defense for less spending' was this: we have developed and are developing atomic weapons other than just the bomb that will provide much greater destructive power or defensive power if you prefer to put it that way. than weapons of the past."

People can understand that, but they cannot understand a proposal to share the revolutionary materials and information which make this kind of defense possible with the only potential enemy who makes any large-

scale defense necessary.

If the Russians are the kind of people with whom we can cooperate in an atomic energy laboratory, then they are not the people against whom we should spend \$60 billion a year.

There is no point in saying, "Oh, the laboratory will be devoted to peaceful develop-ments." Our best scientists have repeatedly assured us that practical developments coming out of a research laboratory are un-predictable. "Scientific research can flourish only when it is done for its own sake and hot with consideration of its practical application," Dr. Albert Einstein said in an interview with the Washington Post (published August 3, 1947). Dr. Einstein's own historic role in the development of the atomic bomb, Which he did not at all anticipate when he formulated "E = mc2", is probably the most famous illustration of the fact that research scientists do not know what the practical consequences of their researches are going to be.

Thus, if we went into an atomic research laboratory with the Russian we would have no way of predicting or controlling the practical developments that might occur. whole history of science shows," Dr. T. R. Hogness has said, "that the great boons to humanity which science has produced came, not as a result of a direct search for them, but rather as byproducts of a much wider search—the search for knowledge, for understanding of nature, for truth itself."

Dr. John R. Baker has said: "No planner could make the right guesses."

By the same token, of course, no planners can confine the results of an international atomic energy laboratory to "peacetime uses of fissionable material." They cannot do that anymore than Dr. Frederic Joliot-Curie could prevent his own researches from being of great value to the Military Establishment of the United States.

About the only plausible generalization suggested by history concerning the probable by-products of research is that military applications seem to come a bit sooner than civilian, presumably because it is easier to destroy than to build. It is a long road from the uncontrolled explosion of a 16th-century petard to the controlled explosions in a 20thcentury Cadillac.

Another feature of research is that one observer of an experiment may get an idea missed by others, and the members of a partnership may have different degrees of success in exploiting a common discovery. The discovery of fission in Germany in 1938 was exploited by the United States over Japan in 1945. If atomic information had not been pooled (by free publication and exchange of information) down to World War II, the A-bomb probably would not yet have been developed. It happened that we got it, but we got it by virtue of previous international cooperation, and specifically by virtue of an experiment performed in an enemy country.

Our scientists quickly recognized that this was a two-way street and cut off publication and exchange of information to keep Germany from learning from us as we had learned from her. That may seem ruthless, but we recognized the hostility between us and the Nazis and concluded it was unwise to collaborate with them. There is nothing in nature which says that in a common atomic laboratory with the Russians we might not miss the significance of a discovery which they would get. Likewise, they might miss something we saw.

It is assumed, however, that we have at present more to contribute to the joint venture than they have. This means we have to assume good faith all around to go into the thing at all, while they might be going into it for what they could get out of it. If we are trusting and they are not. then we will lose relative advantage and they will gain.

No one can predict with certainty what will happen if we go into an international laboratory with the Russians, but if the assumptions on which our defense program is based are correct, then in this venture we may look a lot like the young lady of Niger,

"Who smiled as she rode on a tiger. They returned from the ride

With the lady inside,

And a smile on the face of the tiger."

On the other hand, if past assumptions of implacable Communist hostility are wrong, then we should frankly admit it, and reduce our Military Establishment to the modest dimensions required for occasional police actions in a world where the great nations are united. To try a joint venture with the U. S. S. R. into the most sensitive and hazardous nuclear researches, and simultaneously to maintain unilaterally a crushing burden of arms against the U.S.S.R., can only mean the dissolution of military and civilian morale in the United States.

A few Americans think we dealt harshly and dishonorably with the Canadians and the British in 1946 when we cut them out of our main atomic program, in which they had originally been full partners. Whether we were right or wrong in this, the fact that we did it should remind us that the Russians could conceivably do the same thing to us. They could cut us out of any atomic laboratory in the Eastern Hemisphere.

III

This danger is increased by the fact that the Eisenhower plan ignores the distinction made by the Acheson-Lilienthal plan between safe and dangerous activities. Recall that the essential feature of the Acheson-Lilienthal plan was the establishment of an international Atomic Development Authority at all times in control of the atomic-weapons potential of the world, through monopoly of all dangerous activities-i. e., those which might lead to the clandestine production of weapons. Other activities, more remote from weapons production, were to be labeled safe and left to the individual nations. The Acheson-Lilienthal report emphasized the importance of this distinction, and indeed rested its claims to practicability largely on

the assumption that the dangerous activities could be readily identified and confined to installations owned and operated by the international authority.

The Eisenhower plan is supposed to be the reverse of the Acheson-Lilienthal plan so far-but at this point it would be helpful to amend the terminology. Responsibility for both plans was, of course, divided. But, in the main, both plans were due to Robert Oppenheimer. At any rate that is the published opinion of men like Eugene Rabinowitch and Ralph Lapp, who in this sort of thing probably know what they are talking about. Accordingly, I shall call the Acheson-Lilienthal plan Oppenheimer plan I, or Op I for short, and the Eisenhower plan Oppenheimer plan II, or Op II.

Oppenheimer Plan II is supposed to be the reverse of Oppenheimer Plan I as far as the assignment of unquestionably dangerous activities is concerned. That is, under Op II the international Agency would be dependent while the national projects would remain independent. But though this reversal of Op I is implied by Op II, the latter actually ignores the distinction between safe and dangerous activities. It not only ignores the verbal distinction, but by its emphasis on atomic power insures that the distinction

would be difficult or impossible in practice. It may be presumed, therefore, that the international agency will engage in dangerous activities. At the same time dangerous activities will certainly continue to be carried on by the individual nations. Thus a continuous transmission belt of dangerous activities from nation to agency to nation will be established. The result will be not an armaments race with defined lanes for the runners, but an armaments scrimmage in which the spectators and many of the particpants will never know who has the

"For every kilowatt generated in safe reactors," says Op I, "about 1 kilowatt must

be generated in dangerous ones."
"A special purpose," says Op II, "would be to provide abundant electrical energy in the power-starved areas of the world." But the plan makes no reference to the problem of where the safe kilowatt would be produced and where the dangerous kilowatt would be produced, and what would be the connection between the two.

Op II does say, "The ingenuity of our scientists will provide special safe conditions under which such a bank of fissionable material [as proposed] can be made essentially immune to surprise seizure." But this somewhat starry-eyed protestation leaves many questions unanswered. Who are "our scientists?" Americans only? If so, how do we know the Russians will not outwit them? On the other hand if Russian scientists are included in the first place, then against whom are the safeguards provided? In either case what is the basis for the assertion that essential immunity to surprise seizure can be built into an atomic development installation?

One is reminded of the hopes aroused by the use of the term "denaturing" in Op I, and of the somewhat embarrassing sup-plement released about 2 weeks later, with the statement: "Denaturing, though valuable in adding to the flexibility of a system of controls, cannot of itself eliminate the dan-gers of atomic warfare." There is, of course, no way to make an alloy of 1 part plu-tonium and 1 part international idealism, or 1 part U-235 and 1 part national loyalty.

Enrico Fermi once said, "There is no denying the fact that the possible use of plutonium for aggressive warfare constitutes a difficulty for the industrial uses of atomic energy that is much greater than any technical difficulty that we can foresee. The problem of preventing this use is essentially political and not technical." Surely it must

be disturbing that a political leader like President Eisenhower should so blithely consign to "our scientists" a problem that one of the greatest of scientists has said is

essentially political.

While Op II is inferior to Op I in the matter of definition of safe and dangerous activities, in a perhaps yet more basic matter the two are alike. That is in their common adherence to a doctrine of strategic balance. It is an assumption of each that what is desirable is an even distribution of power throughout the world. The acceptance of this assumption is what makes it so vital to those who do accept it that neither the national nor the international agencies should be in military hands. For it is of course a very rare soldier who is able to understand that it is just as important not to have an advantage over your enemy as it is for your enemy not to have an advantage over you. This is not because soldiers are unintelligent, but because the idea is so extraordinary.

It is not the Christian idea of loving your enemy, for it is not advanced on a Christian If it were advanced on that basis, basis. then a great train of consequences would ensue, far other and more important than any so far considered. Suffice it to say that while the duty of Christian love may or may not involve the perfect renunciation of force-we think it does not-it can never be reasonably construed to involve building up adverse forces. Our Lord enjoined Peter to put up his sword, not to make sure that the high priest's servant had one just as sharp. before we take it for granted that Christ taught pacifism we should digest the injunction recorded in Luke 22:36-"He that hath no sword, let him sell his garment, and buy one.

Certainly the Soviet oligarchy has never shown any signs of understanding a policy of strategic balance. We affect impartiality, they are frankly partial to their own interest; the resultant is of course not neutral but

in their favor.

The particular application of the principle of strategic balance emphasized by Op II is in the field of electrical energy. national Atomic Energy Agency is to "provide abundant electrical energy in the power-starved areas of the world." This means China and India. The Indian physicist, Prof. Megnad Saha, as cited by the British physicist, Prof. P. M. S. Blackett, in Fear, War, and the Bomb, "estimates that per capita energy available in India, from other than human labor, is about one-sixtleth of that available in America." It is small wonder that India's U. N. Delegate Krishna Menon listened with such rapt attention to President Eisenhower's proposal. What is not so clear is why any powerplants, which rational benevolence would lead us to subsidize in such a powerstarved country, would have to be atomic powerplants. If they need power so badly, and it is really our duty to see that they get it, there ought to be quicker ways than experimentation with fissionable materials.

The case of China is more difficult yet. is certainly a power-starved area. Blackett estimates its current resources as only slightly more than those of India. Should we participate in the construction of atomic powerplants there? The suggestion has been made

at least twice in the past.

In December 1945, Dr. Oppenheimer told the Special Senate Committee on Atomic Energy that "if in China, where I understand we are prepared to help with the generation of power in the Yangtze Valley, it were possible and sound to establish atomic power, it would be a very good thing to do that through the U. N. Commission." And later the same month, at a roundtable conference sponsored by the Institute of Pacific Relations "a scientist who had worked on the bomb" declared, "One operating uranium pile in China might be convincing testimony

to the Chinese, as well as the rest of the world, that we do not intend to monopolize atomic power for our own selfish national interests."

What about Russia itself? It is a powerstarved area compared to the United States. Should not the first concern be to establish a balance through equalizing these 2 nations? Blackett has written: "It is true that the development of atomic power may prove a long project. But the Soviet Government is in the habit of taking long views. On any hypothesis, the bridging of the gap between the power resources, and so the standard of living of the U.S.S.R. and America must take a long time. Any conceivable way of shortening this time is likely to be seized upon with avidity." That is credible.

The case against strategic balance can be stated simply. Atomic warfare is not a sport in which fair play requires us to arm our enemy, and fissionable material is not a crust of bread or cup of water which in charity we should distribute to friend and foe alike.

Operating an atomic laboratory with power-producing quantities of fissionable material is like driving a nitroglycerine truck or running a cobra farm. It is tricky business, and you don't want to go partners with just anybody

To ask the American people to go partners in this kind of business with a power which they believe is their mortal enemy is to inparalyzing confusion. In this frame of mind you cannot fight, you cannot prepare to fight. This is to stare frozen at the snake.

IV

Of course, if the plan succeeds diplomatically, we can afford-we would even -the relaxation of our own military potential which it involves. We would see the same relaxation in the Soviet Union and Red China. Diplomacy is always better than war while it works, and unless there is some probability of war there is no need for a military establishment. So if you could always be sure of your diplomacy you would do well to eliminate your armed services.

But then your diplomats themselves need threat somewhere in the background. They need to "negotiate from positions of strength." If they negotiate the strength away they are soon through negotiating. So it is not altogether simple. The diplomatic consequences of the proposal to create an atom pool, and of the pool itself if it is created, are more difficult to estimate than are the military consequences.

Diplomacy may seek two kinds of effects. It may be genuinely pacific, or it may be it-self a kind of psychological warfare, aimed at putting the enemy at a disadvantage without the pain and expense of shooting, bombing, No one measure can be seriously intended to simultaneously placate and em-barrass an enemy. The Eisenhower plan has been praised for doing both but is not well adapted to do either.

The Trojan War began when the goddess of discord tossed into a feast of the gods a golden apple inscribed "for the fairest." It is the nature of a prize to inspire contention. The first prize established by the Eisenhower plan would be the international atomic laboratory itself. We have already noted how national representatives might take from such a laboratory the militarily valuable information and materials which might be generated there. The value might be commercial, and still tempt the partners to try to outwit each other in their manner of taking it out of the business for their individual benefit. Such things have been known to happen.

So long as each thought he was winning this contest of wits the surface would be preserved, but if one of the partners decided he was losing he might be provoked into attempting seizure or destruction of the atom pool itself. At any rate such a pool is not

merely a place where "the great powers of the earth, both of the East and of the West, may cooperate; it is also something else for them to fight over.

But the feature of the plan which would most notably provoke aggression is the provision for building atomic powerplants in 'power-starved areas." We have already from time to time expressed fears that the Communists might take aggressive action in How much more would they be tempted if to the human resources of India were added one or more atomic powerplants. Red China is said to be now in possession of arms and commodities which we gave Chiang Kai-shek. How long would Nehru be likely to retain independent possession of a powerand-plutonium-yielding nuclear reactor?

Renunciation of a claim is often the way to peace, but renunciation of a responsibility more probably leads to disorder and strife. In October, 1945 President Truman referred to the atomic bomb as a "sacred trust." this he was ridiculed in some quarters, but the danger we now face is due to failure to live up to that trust, not to recognizing its

If this Atoms for Peace plan be regarded not as a sincere attempt at peacemaking. but rather as a maneuver in the psychological war, it is still not well advised. is not good propaganda for the United States of America, for the simple reason that it makes the U.S.S.R. sound quite rational by comparison. Consider the two positions as follows:

(1) President Eisenhower says, "The United States knows that if the fearful trend of atomic military build-up can be reversed this greatest of destructive forces can be developed into a great boon for the benefit of all mankind." In the same speech he says, "* * * the United States stockpile all mankind." In the same speech he s, "* * * the United States stockpile atomic weapons * * * increases daily. The development has been such that atomic weapons have virtually achieved conventional status within our armed services."

(2) The Soviet Union might well say to that, if reversal of a trend of atomic military build-up is what you want and you have yourself a stockpile that increases daily. then surely you have it in your own power to reverse the trend. Why don't you reverse it? The Soviet Union does say: "If some small part of atom material is to be directed to peaceful aims while the main mass of the materials-the quantities of which are constantly growing—is to be directed to the production of more and more atomic weapons, then the threat of atomic war will not lessen in the least. * * * It is necessary that not some part but the whole mass of atomic material be directed completely to peaceful aims, which would open up unheard-of possibilities for the progress of industry, agriculture and transport, for the employment of the most valuable atomic discoveries for the improvement of machines in many fields of their employment and for further and higher progress in science.

How do we answer them? Do we tell them we cannot direct all our atomic resources to peacetime uses because we do not trust the Soviet Union? They may say to us: Look, you brought up the subject. Your President is the one who said: "* * * allow all peoples of all nations to see that, in this enlightened age, the great powers of the earth. both of the East and of the West, are interested in human aspirations first, rather than in building up the armaments of war.' you mean it or didn't you? The Soviet Union may well say it to us. They do say:

"The Soviet Union is deeply convinced that mankind must and can be spared the horrors of an atomic war. Special responsibility for the solution of this problem rests with those states which already possess the States is the power which by its own admission has given atomic weapons virtually Conventional status within its armed services. "Is it possible," asks the Soviet Union, "to speak of the necessity of easing international tension and at the same time to pass by the problem of prohibiting the atomic weapon?"

And the best our Secretary of State can do by way of reply is to say in effect, "Oh, you misunderstood us, but come, let us talk about it privately, lest the citizens of the world overhear us." Mr. Dulles' exact words: "The Soviet Union seems not to have caught the spirit of the President's proposal. Its very purpose was to find a new and clearly feasible basis which will permit of actually getting started. It has long been evident, and the tone of the Soviet response makes it even clearer, that little can be achieved by the continuance of public debate."

Mr. Dulles may say if he likes that the

Soviet Union does not understand. But if the representatives of the Soviet Union are trustworthy men, then their logic is in-escapable. And if they are not trustworthy, We have no business going into private nego-

tiations with them.

The fact is we are now conducting such negotiations. Dulles and Zaroubin are discussing secretly the proposal to pool atomic materials and information, and the Soviet counterproposal to outlaw atomic weapons. By the time public debate is reopened-in order to get the congressional approval which the President said he was sure of-We may be sure a provisional arrangement Will have been made from which we can retreat only with monumental embarrassment and into which we can advance only with final recklessness. We may be sure of this because the commitments implied by the Eisenhower speech of December 8, 1953, are themselves either to be broken with chagrin or kept with peril.

we agree with the Soviet Union that helther is to use atomic bombs, it is probable that they will keep their word. We would surely keep ours and the result Would be the loss of our equalizer. If we continue these negotiations, we shall hardly avoid making some kind of pledge not to use the bomb. Propaganda which involves us in this train of consequences is not good propa-

When I was an English teacher I occasionally got themes which made just no sense at all, and from students who could talk Quite sensibly in the hall, who were certainly neither morons nor avant-garde artists.

The only explanation that ever seemed plausible occurred to me when we were studying Paradise Lost. They couldn't un-derstand it. It just did not make any sense to them. Then I thought: Well, that's it.
They are good kids. They have been told
Milton is great and they believe it. But
Milton does not make any sense. Therefore, the way to be great is not to make any sense. They think: This English teacher is O. K. Anyhow, he dishes out the grades. You got give him what he wants. He seems to like Milton, who obviously makes no senseso you give the English teacher a theme that makes no sense. Maybe it's great. Maybe he'll like it. It's a shot in the dark, but what you going to do?

Something like that is the only possible explanation of the American public's acceptance in principle of the proposals that have been made for international cooperation With the Soviet Union in the field of atomic energy. From the point of view of the United States, such proposals make no sense at all and never did make any sense. Apparently the majority of the American publie still believe that nothing connected with atomic energy is supposed to make any sense. So long as we assume that, we will probably go on allowing our policy to be determined

by certified security risks and propagandized by their journalistic and broadcasting asso-

Unless Mr. Stassen has a suggestion.

The Surplus Problem

EXTENSION OF REMARKS OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. HARVEY, Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Peter Edson, from the Washington Daily News of March 30, 1955:

THE SURPLUS PROBLEM

The idea that United States farm surpluses can be sold competitively on foreign markets is taking a beating.

The House Agriculture Committee has issued a report highly critical of Agriculture Secretary Ezra Benson for his alleged heavyhanded control over the foreign disposal program. Actually, Mr. Benson has been doing everything he can to move the surpluses.

Restrictions written into the Agricultural Trade Development and Assistance Act of 1954 limit his work. But the underlying cause is that the market is just not there.

American competitive prices are too high. Dumping and export subsidies to American farmers are ruled out as bad policy.

Where American surpluses are forced on foreign markets they frequently disrupt nor-

mal world trade patterns.

Secretary of State John Foster Dulles ran into this problem during his recent trip through southeast Asia. In Burma he found a severe economic dislocation on rice.

Burma always had been a heavy exporter of rice to Japan. But since the end of the war the United States has been shipping Japan wheat. Due to the presence of American troops in Japan there has been a considerable shift in the Japanese diet from rice to wheat.

For every such dietary convert and for every American wheat shipment to Japan, there has been a corresponding drop in Burmese rice exports to Japan. Burma has a rice surplus it can't sell.

It will take years for Asian countries to diversify their agriculture to meet these changes in trade patterns. Burma and other food surplus countries caught in a similar squeeze may be forced to make barter deals with Red China and Russia to move their

Gen. Alfred M. Gruenther, commander of NATO, has revealed another example of how American restrictions on surplus food exports make it difficult to combat Communist influence in Europe.

The United States now will sell surplus foods for foreign currencies. But there is an American requirement that half of the shipment must be carried in American vessels. To Britain and the Scandinavian countries with large merchant fleets of their own, this requirement merely raises the delivered price to the foreign buyers.

Russia, however, will let countries buying her wheat haul the grain any way they want. Russia has no surpluses to begin with. But the Communist Government takes grain away from its own people just to beat the United States in foreign trade deals. Russia thus uses foreign trade as an economic and psychological weapon.

Under the Trade Development Act passed by the last Congress, \$700 million were appropriated to finance the disposal of American farm surpluses for 3 years. Another \$300 million were appropriated for outright gifts of food surpluses for foreign disaster relief.

The total of \$558 million worth earmarked for disposal so far represents only about 8 percent of the \$7 billion worth of surpluses now on hand. Exports are now about 4 percent above pre-war levels and 10 to 15 percent above 1952-53. But the outlook for the coming year is not much better than this year.

The apparent congressional intent to raise price support levels to encourage the production of even bigger surpluses does not seem to hold much hope for improving the situation.

Are We About Ready To Repeat the Sin of Yalta?

EXTENSION OF REMARKS

HON, GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 10, 1955

Mr. McDONOUGH. Mr. Speaker, if a Big Four meeting at top level is to be held in the near future to consider the serious problems which confront the free world, a meeting which will include Russia as one of the Big Four, Russia who is the very source of the present threat to world peace and stability, it is time to give grave and serious consideration to such meeting and what can result from it for the people of the United States, as well as all other freedom-loving people in the world, including those who are now enslaved behind the Iron Curtain and look to us for deliverance.

Once such a meeting has been held and our Nation irrevocably committed to specific agreements which we are honorbound to abide by, it is too late to bemoan the fact that the results of the conference are unsatisfactory to the American people and their duly elected representatives. We as a free nation will not stand for or tolerate another

Now is the time to be informed of exactly what will be included in the agenda of such a meeting and whether we may be assured that any conclusions agreed to at such a conference will not be binding upon the people of the United States of America until ratified in proper treaty form by the United States Senate. This was not done with the Yalta agreements.

Also, now is the time to insist that the United States Congress be properly represented at any meeting at top level between the Big Four. The people of the United States are entitled to this representation and assurance.

Unless these precautions are taken prior to the next Big Four meeting, we could be faced with another Yalta, as reviewed in the following excellent editorial by David Lawrence:

THE SIN OF YALTA
(By David Lawrence)

The sin of Yalta was not contained in the offhand comments by heads of governments as revealed in the Yalta papers.

The sin was embedded in the secret decisions to carve up and award territories before World War II itself was ended.

The sin was in the flagrant denial of a great principle—the right of peoples every-where to establish governments of their own choosing.

This betrayal of human rights has since been perpetuated at other international conferences—at Fanmunjom and at Geneva—where the people of North Korea and the people of Northern Indochina, respectively, were condemned to slavery. It is the same tyranny that was imposed in 1945 upon the peoples of the so-called satellite states of Eastern Europe.

Are we about to repeat the vice of Yalta and engage again in more of these four-power conferences where the President of the United States makes agreements committing the American people to courses of action on which they have no opportunity to vote through their elected representatives in Congress?

It was the violation at Yalta of the spirit and the letter of the Constitution of the United States which left a blot on American history.

Although the official records of the Yalta Conference were withheld from the American people under one pretext or another for 10 years, it is amazing that there are misguided Democrats in Congress today who are assailing their own Government for bringing about at last the release of the Yalta papers.

Naturally European statesmen favor suppression. They have been steeped for centuries in the artifices of secret diplomacy. They believe in expedient deals made in the privacy of such conferences as have been held at Teheran, Yalta, and Potsdam.

America has three times in history been caught in the same dilemma—the sacrifice of many thousands of American lives for professed ideals only to see such ideals abandoned at the conference table.

The famous 14 points constituting the war aims of the Allies in World War I—including the right of self-determination of peoples and the demand for "open covenants openly arrived at"—were torn up at Versailles in 1919.

The famous Atlantic Charter—pledging, as one of the war aims of World War II, the right of all peoples freely to choose their own government—was torn up at Yalta in 1945.

The famous resolution of the United Nations in 1951 declaring Red China an aggressor in Korea was torn up at Geneva in 1954. The same aggressor was awarded possession of a vast area in Indochina while millions of innocent people were delivered into bondage.

The Constitution vests in the President of the United States the right to conduct relations with other governments. But it vests also in the Congress—as a coordinate branch of the Government—the right to declare war and to "advise and consent" in the making of treaties of peace.

There were no Representatives of the Congress of the United States present at the Yalta Conference.

There were no members of the press admitted to the Yalta meetings to tell the people of the world in detail what their representatives were doing.

It is not difficult to understand why some European newspapers are shocked by the persistent pressure in America to compel the publication of the long-suppressed documents of the Yalta Conference. The American attitude toward full publicity of the public business is rooted in the concept that the people do not delegate to a single ruler

the right to make commitments in their behalf

The European idea, on the other hand, seems to be that the head of a state is a sort of absolute monarch, and even now the talk there is of a big four conference "at the summit."

The American people do not recognize that anybody with sovereign power sits in for them "at the summit." or anywhere else.

Ambassadors and ministers of the United States are stationed in all the capitals of the world. This is an informal and confidential means of communication. Any proposals that can lead to a better understanding in the world among nations can be made to or by such diplomatic representatives and can be referred to the President and the Congress for approval or disapproval.

There is no right on the part of the President to sit down with any foreign ruler and make a binding agreement unless Congress has delegated such particular power to him, or unless there is an opportunity for the Senate to advise for or against ratification.

The sin of Yalta was its secrecy and its disregard for moral and constitutional principles. A few individuals usurped the power that belongs only to free peoples. Nobody should be permitted to barter away the ideals of the American people on the altars of expediency.

The Great Debate on Reclamation

EXTENSION OF REMARKS

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. SISK. Mr. Speaker, there has come to my attention an article which has been prepared by my good friend and colleague, the Honorable Stewart L. UDALL, who ably represents the fine State of Arizona in this Congress. It is my understanding that this article, entitled "The Great Debate on Reclamation," is being distributed to Congressman UDALL's constituents through the press and will be available for publication tomorrow.

Congressman UDALL'S statement so ably and clearly presents his views and so finely outlines the tremendous values of reclamation to our country that I believe it deserves a place in the RECORD and I request permission to insert it in the Appendix, so that it may receive a wider circulation.

In making this request, I would like to note further that I am in full agreement with the statements made by my honorable colleague and that I believe they reflect the views of many others who are sincerely interested in the future of the reclamation program as a tremendous factor in the development of the West and the economy of the Nation.

The article follows:

A CONGRESSIONAL REPORT
(By Representative Stewart L. Udall)
THE GREAT DEBATE ON RECLAMATION

There is a rising tide of antireclamation sentiment here which threatens western development. If the upper Colorado project gets to the floor, I suspect that discussion of this bill will be only part of a larger debate on the future of reclamation itself. To some extent this debate has already begun, and it seems essential to me that we

keep close watch on the forces and arguments marshaled against us, for the West's continued growth is closely linked to the future of reclamation.

At the outset, we must recognize that at nominal cost groups of farmers have, where conditions were favorable, brought water to much of our western land without Government aid of any kind. Since 1902, however, the Bureau of Reclamation has constructed many projects too large to be tackled by local interests alone. Naturally, the easiest and most promising works were built first—projects like Salt River, Boulder, Grand Coulee, and Central Valley of California.

It is now apparent that the projects yet

It is now apparent that the projects yet to be built (like central Arizona, and upper Colorado) are relatively hard projects where repayment by the water users may take longer and the Government must assume greater risks. However, this should not be a fatal stumbling block, as Teddy Roosevelt originally conceived the reclamation program as a bold, risk-taking venture—a western equivalent of eastern projects to develop rivers and harbors.

Until recent years, as the easy projects were completed and more difficult ones tackled, the reclamation and budget people here tended to liberalize the ground rules so that projects previously regarded as unfeasible financially could qualify: basin-wide accounting plans were approved: repayment periods were extended; and the principle was established that farmers could build power dams and use the net revenues to pay off prohibitive water costs.

It may be that the antireclamationists have been emboldened by right hand versus left hand actions within the Elsenhower administration. While the President on the one hand endorses upper Colorado and Fryingpan, his budget director has been busily drafting new regulations which would probably prohibit similar future projects, his Interior Secretary has exhibited a lukewarm attitude toward reclamation, and his proposed appropriations for new construction next year sets the lowest point reached since 1950.

The opponents of reclamation have burst upon this scene opportunely and now dispute its accomplishments and seek to discredit the entire program. Their chief spokesman, Raymond Moley of Newsweek magazine, calculates that the way to beat reclamation is to pit East against West and he is out to sell his arguments to Congressmen from the populous Eastern States. Moley has turned out a pamphlet denouncing the sorry record and waste of the Bureau of Reclamation.

We fully expect that the water resources task force of the Hoover Commission will shortly join this chorus. Its chairman, former Governor Leslie Miller of Wyoming, boldly strode into our upper Colorado hearings 2 weeks ago and bluntly testified that in his opinion the entire plan—including the participating projects in his own State—was economically appearance.

economically unsound.

The trouble with these sincere people is that pencil in hand, they look at the entire reclamation venture from the narrowest perspective, merely in terms of money directly paid into or out of the Treasury. Like overprudent bankers, they are so intent on these debits and credits that they fail to take into account the tremendous values produced where the economies and living conditions of entire valleys are transformed by successful reclamation projects.

In their excessive prudence, they overlook the millions of dollars of flood damage that would be sustained periodically by farms and cities if the reclamation dams were not in place.

(Not long after it was dedicated the new Falcon Dam on the Rio Grande stopped a disaster-bent flood in its tracks and saved a substantial part of its total cost.) They Point to the current farm surpluses and say the new farm acres are not needed. This is fainthearted thinking that misjudges the surging growth of our country and the re-

sourcefulness of its people.

The corner stone of the reclamation program has been interest-free loans, a feature particularly condemned by these critics who fail to note that the principal invested Will come back manyfold when new valleys are opened up to farmers and fresh sources of income are created. It is a fact that acres put under cultivation by the Bureau of Reclamation produced total crop values in 1953 alone of nearly \$1 billion.

Nor do these people concede that a substantial part of the \$3 billion we have expended thus far on reclamation will eventually be directly repaid, while the full \$7 billion the Government has spent at the same time on national rivers and harbors projects has been paid out without ex-

pectation of direct repayment.

Who, we might ask, are these "debit and credit" men who cry "failure"? Need we men who cry "failure"? Need we westerners bother to answer them at all when our green valleys mock their words, our prosperity mocks their logic, and our cities and farms testify they have misread our history?

How Communism Came to China-Part I

EXTENSION OF REMARKS

HON, GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. McDONOUGH. Mr. Speaker, the following is part I of a speech recently delivered to the Los Angeles World Affairs Council by Dr. George K. C. Yeh, Minister for Foreign Affairs of the Re-Public of China.

Nothing I could say would improve or embellish this comprehensive statement on one of the great historic tragedies when the United States lost one of its most loyal allies, and communism won her over to the Soviet Union as an ally and Red China came into being.

Following is part I of Dr. Yeh's speech: Mr. Chairman, members of the Los Angeles

World Affairs Council, ladies and gentlemen, it gives me great pleasure to speak before this distinguished body of American citizens who are specially interested in international relations. I am particularly happy to be on the Pacific coast where the interest in Asia, and particularly in the affairs of China, has always been very keen and widespread. Pacific is today no longer an ocean but a lake and this great city is one of America's windows to the Far East. What happens or may happen on the other side of this great lake may have a more instantaneous impact on the lives of the people who live here on this side of it.

I propose to speak to you this evening of how communism was introduced into China and how it developed there. The facts I shall bring to light are not widely known in this country. If my account of them should run into a number of unfamiliar dates and names, which I shall avoid as much as possible, it is because China's sad experiences with communism are not better known.

I should like to recall with you that it was not very long ago that the Communist movement in China had been considered in this and other countries as a mere agrarian reform movement. A well-known American radio commentator once said that the Chinese Communists were "agrarian radicals trying to establish democratic practices." Another Far Eastern expert once wrote: China is not like any other country, so Chinese communism has no parallel elsewhere. You can find in it resemblances to the 'grassroots' populist movements that have figured in American history." So, to these gentlemen at least, the Chinese Communists were not Communists at all; they were very much like the Democrats or, for that matter, the Republicans in this country, except that they carried guns and occupied a territory of their own.

Some of you may have read that Stalin told former United States Ambassador Harriman in June 1944: "The Chinese Communists are not real Communists. They are 'margarine' Communists." Soviet Foreign Minister Molotov said the same thing to Gen. Patrick Hurley and Donald Nelson in August of the same year when the last two gentlemen were in Moscow on their way to China on a very important diplomatic mis-"Although," sion. declared Molotov, Chinese Communists call themselves Communists, they had no true or real relation to communism; they expressed their discontent by taking the name, but if their eco-nomic lot was bettered, they would forget that they were Communists."

Stalin and Molotov were, of course, lying. It suited their purpose at the time to say that the Soviet Union had nothing to do with it, though they knew very well that the Communist movement in China was a Soviet-sponsored and Soviet-financed movement from the very start. The strange thing is that the world believed them because what they said happened to harmonize with the general tenor of the "grand alliance" period during the later part of the last war.

Happily very few people today are still under the delusion that the Chinese Communists are "mere agrarian reformers." But we should be profoundly mistaken if we think this propaganda line is dead and buried. It is not. Recently it has appeared in the press in another but equally beguiling form. We are now being told from time to time that Mao Tse-tung is a potential Tito. We are also being fed with the alluring notion that the West can wean Communist China from the Soviet Union by a reasonable and flexible policy, namely, by America's recognizing the so-called people's government of China, as the legitimate government of China, by admitting it to the United Nations, by lifting or relaxing trade controls, etc. Another variation on the same theme is that Mao Tse-tung and his fellow comrades are patriotic Chinese, and that sooner or later they would break away from Moscow. All this betrays a basic misunderstanding of the Chinese Communist movement.

The Chinese Communist movement, it must be remembered, was not an indigenous development in any sense of the word but an allen imposition. It began in 1919 when the newly founded Communist International. the so-called Comintern in Moscow sent to China one Gregori Voitinski, who was chief of its Far Eastern Bureau. Upon his arrival, Voltinski sought out the two leading Chinese avante garde thinkers of that time-Ch'en Tu-hsiu and Li Ta-chao, both professors at the National Peking University. Neither Ch'en no Li was a Communist. But they had written articles in praise of the Russian October revolution. Like many na-ive idealistic men of the time the world over, Ch'en and Li fell under the spell of the Russian revolution with its glorification of the common man, its championing of small and oppressed nations, and its promise of secuhappiness, and equality. urged them to start a Communist movement China. With funds supplied by him, Ch'en Tu-hsiu organized in Shanghai a Socialist Youth Corps, a Marxist study group, and a foreign-language school. This last was a school devoted to the study of the Russian language in order to prepare the students to read Communist works in the original. This was the beginning of the Chinese Communist movement. Voitinski's part in founding the Chinese Communist movement is fully recognized by the Soviet Encyclopedia (cols. 657-658, vol. XII, 1928 edition), which credits him with organizing the first Communist cells in Shanghai, Peiping, and Canton. Upon his return to Moscow in 1921, he was made chief of the far eastern division of the Soviet Foreign Office. In the 1930's he was placed in charge of the Soviet Council of the Institute of Pacific Relations.

Close on the heels of Voitinski came other Comintern agents. In the spring of 1921, the Comintern sent to China a Dutch Communist by the name of Maring. His mission was to find an ally for the Soviet Union among the various political groups in China. He traveled far and wide. July 1921 found him in Shanghai trying to call a meeting to organize a Chinese Communist Party. Thirteen young men responded to the call. They forgathered in the classroom of a girls' school in the then French concession of Shanghai. In the midst of their meeting, the police cracked down on them. They later met to conclude their deliberations in a boat on the waters of a lake in Shaohsing.

Most of them were in fact no more than an ill-assorted group of faddists who, like most young people of that turbulent period in China. were ready to accept any theory against the foreign exploitation of China. Among them was a young and not too prepossessing fellow called Mao Tse-tung. He was from the interior province of Hunan. His knowledge of communism at that time did not go beyond the reading of the Communist manifesto by Marx and Engels in a badly translated Chinese version. Yet he felt he was qualified to be a charter member of the Chinese Communist Party.

Thus, if Voitinski was the father of the

Chinese Communist Party, the Dutch Communist Maring was the midwife who brought the baby into the world. This weakling of a babe could not have grown to manhood and maturity and become the object of wooing today by some of the world's proud and leading powers, were it not for Soviet Russia's continued loving care and patronage.

The so-called Chinese Communist Party was then not so much of a party as the nucleus of one with not more than 50 founder members. Ch'en Tu-hsiu was made its secretary-general. With a monthly allowance of \$US25,000 made available by the Comintern. the party began to organize railway workers in North China and seamen in the south. So successful were its initial efforts that in the following year (1922) it instigated a crippling seamen's strike in the British Colony of Hongkong.

In spite of the promise shown by the Infant Communist Party in China, the Soviet Union had no illusions about it. The men in the Kremlin knew that if the party was to exercise decisive influence in a country as vast and populous as China, it must ally itself with some political group which had enjoyed a large following. This was in accord with the "theses" which Lenin had submitted to the Second World Congress of the Comintern in 1920. The "theses," in which Lenin outlined the strategy to be followed in colonial and semi-colonial countries, may be summarized as follows:

1. Colonies are essential to the existence of the capitalist or imperialist powers.

2. To overthrow capitalism the first step be to promote revolutions in the

3. Inasmuch as the proletariat in the colonies are weak, the proletariat must co-operate with the "bourgeois-nationalist revolutionary elements.'

It was Maring's mission to find in China this "bourgeois-nationalist-revolutionary" group with which the new Chinese Communist Party could cooperate and from which it could draw strength. He found the Kuomintang to be precisely such a political group. The Kuomintang had been founded by Dr. Sun Yat-sen and was working to overthrow the government in Peiking and to rid China of western exploitation. At a special plenary session of the Central Committee of the Chinese Communist Party held in August 1922, Maring presented a plan for the muchdesired Kuomintang-Communist collaboration. No decision, however, was reached. A few months later Moscow Intervened. The Comintern passed a special resolution ordering the Chinese Communist Party to take immediate steps to effectuate the Communist-Kuomintang collaboration along the following lines: (1) Members of the Communist Party should enter the Kuomintang as individuals; (2) The Communist Party itself must preserve its absolute political and organizational independents; and (3) the Communist Party should support the Kuomintang so long as the latter's policies were "objectively correct." In other words, the Comintern strategy was to infiltrate and subvert the Kuomintang in order to take over its leadership.

Maring approached Dr. Sun Yat-sen for the purpose. In August 1922 a Soviet delegate, Adolphe Joffe, came to China to negotiate with the Chinese Government in Peking for the resumption of diplomatic relations between China and the Soviet Union. In January 1923, Joffe, on his way to Japan for a rest, stopped in Shanghai and had a series of conversations with Dr. Sun. The result was the well-known Sun-Joffe Declaration. In this declaration, Dr. Sun had made it clear that he did not favor communism and that communism was incompatible with the cultural pattern of China. Yet Dr. Sun accepted the Soviet offer of military and financial assistance as well as the proposal of admitting individual Communists to the Kuomintang. Why?

Because first the Soviet doctrine of overthrowing imperialist domination seemed pertinent to the Chinese situation. China had been a victim of foreign exploitation for over a century. If there was a way to get rid of western domination, China of course would welcome it.

Second, the conspiratorial nature of international communism was not then well understood. Dr. Sun was told that what China needed was a national-bourgeois revolution to overthrow the yoke of imperialism and not a proletarian revolution to usher in communism. Little did he realize that this was deception and double-talk. The Kuomintang in its anxiety to achieve immediate results did not know then, as so many people do not know now, that the process of taking over an existing government by the Communists was called the nationalbourgeois revolution, and that the process of converting that government into a Communist dictatorship was to be the proletarian revolution. Whatever the revolution may be called, the objective is always the samethe capture of political power by the Communists.

Third, in 1921 the Soviet Union had tried to soften the rigor of wartime communism by introducing what was called NEP or the new economic policy. Under the NEP there was a revival of private enterprise and private trading. At the time Maring and Joffe approached Dr. Sun the NEP was in full swing. In order to dispel the Chinese leader's misgivings, Joffe told one of Dr. Sun's most trusted and loyal assistants, Mr. Liao Chung-kai, that inasmuch as the Soviet Union did not itself practice communism, why should China be worried about communism? When Mr. Liao asked. "Would communism ever come to Russia?" Joffe re-

plied that there would not be any communism in Russia for a long time. Liao inquired what did Joffe mean by a long time. Did he mean 5 years, 10 years, or even a generation? Joffe's answer was, "Perhaps a hundred years." Liao Chung-kai was no longer in doubt.

In October 1923, 9 months after the Sun-Joffe declaration, the Comintern sent to China a man who was to play a leading role in Chinese politics in the next 4 years. He was known the world over as Michael Borodin, but this was not his real name. He had, before the Russian revolution, lived in the United States and attended Valparaiso University in Indiana. It is not known whether he had ever become an American citizen. For a time he conducted a school for Russian immigrant children in Chicago. He went back to Russia during the revolution and later served as a Comintern agent in Turkey. He had already shown great talent as a conspirator and organizer.

Such was Borodin's background. He came to China as an adviser to Dr. Sun in Canton. Soon after his arrival in Canton, he drafted for Dr. Sun a plan for the reorganization of the Kuomintang. The plan was put into effect in January of the following year (1924). The Communists were formally admitted to the Kuomintang. It was Dr. Sun's understanding that once in the Kuomintang the Communists would act as loyal Kuomintang members, taking orders from its leadership, bound by its discipline, and deriving inspiration from its guiding principles. Indeed, in Dr. Sun's lifetime these new Communist recruits did behave as if they were loyal Kuomintang members.

After Dr. Sun's death in 1925, the Kuomintang was left for a short period with no leader of sufficient prestige and authority to enforce discipline on the members of the party. With no one to fear and with nothing to restrain them, the Communists lost no time in taking over control of the party, the Central Executive Committee, the highest policymaking and administrative organ of the party. Some of Dr. Sun's most trusted followers were expelled from the party, or removed from positions of influence, or exiled. This was engineered by the Soviet agent Michael Borodin.

At this juncture loyal members of the Kuomintang rallied around the person of Chiang Kai-shek. Still a young man in his thirties, Chiang soon became the leader of all those who were distressed by the spectacle of Communist ascendency. He was determined to save the Kuomintang from Communist domination. His chance came on March 20, 1926 when the Communist planned a military coup d'etat. He moved swiftly. few hours he rounded up most of the leading Communists in Canton. The Russian advisers were put under house arrest. Borodin was at that time in North China. Learning of the news he hurried back to Canton. The feud was, however, soon patched up. Chiang's purpose then was a limited one. It was to recapture the leadership of the Kuomintang from its Communist elements. He therefore caused the adoption by the Kuomintang central executive committee of a resolution debarring the Communists from holding key positions either in the party or in the government, forbidding them to call meetings in the name of the Kuomintang or wilfully distorting the teachings of Dr. Sun Yat-sen to suit their own purposes, and requiring the central committee of the Communist Party to hand over to the Kuomintang a list of those Communists who were at the time members of the Kuomintang. Communist political commissars attached to the armed forces were removed. A number of undesirable Soviet advisers were also removed from their positions. It was obvious that Chiang Kai-shek at that time was not powerful enough to go all out to clean up the Kuomintang of all the Communists and the Kuo-

mintang itself still had need of Russian assistance. Meanwhile both the Russians and the Chinese Communists submitted to the limitations thus imposed upon them with apparent good grace. They did so because Stalin believed that it was still useful to maintain the Moscow-Canton entente. Russian advisers in Canton were also of the opinion that it was still to Russia's interest to keep the Communists within the Kuomintang. Stepanoff, one of the military advisers in China, stated in his lengthy report to the Kremlin that both parties still had need of each other to achieve its common objective of overthrowing Western imperialism.

Dr. Sun Yat-sen had given his life to the cause of national unity and independence and democracy. He died with his concern for the future of China on his lips. It had been his ambition to lead a revolutionary army in a campaign to crush the feudal warlords who controlled North and Central China. In 1926 Chiang Kai-shek, having trained a small but highly disciplined army. decided to carry out the late leader's wishes by launching a northern expedition against the warlords. In this he was strongly opposed by the Chinese Communists and their Russian mentors. Their ostensible reason was that the whole project was a military adventure for which the Nationalists were not ready. The real reason, however, was something else again. The Communist hold on Canton was considered insecure. A great deal of work was still required to consolidate the Communist position in that region. If there was to be a northern expedition, it should not be undertaken until Canton had been made into an impregnable Communist base from which the Communists could operate. Premature dispersion of resources and personnel would be inimical to the Communist cause. Moreover, there was another and by no means minor consideration. Chiang had already become too strong militarily to lend himself to Communist control. So long, however, as he remained in Canton he was dependent on Soviet aid, and it was still possible to bring pressure to bear on him. once he had brought the rich Yangtze Valley under his control he would be independent of Soviet assistance. He would then be in touch with the United States and Great Britain. And what was more, military successes would so strengthen his prestige that he might be tempted to break the Moscow-Canton entente and purge the Kuomintang of Communists. Therefore, the Russians and their Chinese stooges used every means at their disposal to frustrate Chiang's plan of unifying China.

But Chiang was not a man who could easily be deflected from the course of action on which he had set his mind. In spite of Russian and Chinese Communist opposition, he launched the expedition in July 1926. His success was immediate. Within a few weeks his armies had already pushed their way to the heart of the Yangtze Valley. By the first of September the great cities of Hankow, Hanyang, and Wuchang—collectively known as Wuhan—were in Kuomintang hands.

While Chiang, as commander-in-chief of the expeditionary forces, was busily engaging the enemy at the front, Borodin transformed Wuhan into what Stalin then proudly called the "revolutionary center" of Under Borodin's expert direction, the central executive committee of the Kuomintang was reorganized in such a way as to become virtually his tool. In open defiance of the resolution barring Communists from holding key positions in the Kuomintang and in the government, two leading Communists were appointed to vital ministries—that of labor and agriculture. From the vantage point of these two ministries, the Communists set out to organize labor and peasants. Within a short time the rich provinces of

Hunan, Hupei, and Kiangsi were transformed lato a veritable pandemonium. A reign of terror was officially declared. The whole area was now under Communist control.

In its heyday, that area was the world's Prize concourse of Communist agents, fellow travelers, and frustrated idealists. French Communist leader, Jacques Doriot, the American Communist leader, Earl Browder, and the British Communist leader, Tom Mann, were all there to do their part. M. N. Roy, the young Indian intellectual and Communist, represented the Comintern and shared with Borodin the responsibility of directing the revolution into Marxist chanhels. In faraway Moscow, Stalin and Trotsky debated on the nature of the Chinese revolution. Stalin believed that the China of 1927 was the Russia of 1905 and therefore the Communist should still operate under the Kuomintang banner. Trotsky, on the other hand, contended that the China of 1927 was the Russia of 1917, that the time had arrived for the Communists to unfurl their own banner and organize "workers', peasants', and soldiers', Soviets" in order to establish a proletarian dictatorship.

In the meantime Chiang was preoccupied With battles in the field. He ignored Wuhan. At the head of the advancing armies, he Proceeded to march on Nanking and Shanghal. In March the Communists in the armies attacked foreign residents in the city of Nanking and murdered a number of British and American consular officers and missionaries. This was a diabolical plot concocted by the Communists to embarrass Chiang and to provoke foreign intervention. In Shanghai, the Communists, under the leadership of Chou En-lai, taking advantage of the void created by the evacuation of northern troops, took control. When Chiang's armies entered the city in the latter part of March he found the Communists Openly declaring that the Kuomintang revolution in China was merely the February revolution in Russia and that Chiang Kaithek was no more than another Kerensky.

How Communism Came to China-Part II

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the speech of Dr. George K. C. Yeh, Minister for Foreign Affairs of the Republic of China:

Chiang arrived in Shanghai toward the end of March. He now could have a breathing space and decided to remedy the situation at once. After conferring with his commanders, he came to the conclusion that unless he acted quickly the Communists would get out of control. On April 12, 1927, he acted. Communist leaders were arrested. Communist labor unions disbanded, and Communist armed groups disarmed. In the course of the fighting many Communists were killed. Chou En-lai escaped to Hankow. In July, 3 months after the Shanghai purge, the Wuhan revolutionary regime was at an end and Borodin was forced to fiee overland to the Soviet Union.

Thus the first attempt on the part of the kuomintang to coexist with the Chinese Communist Party came to grief. Dr. Sun had admitted the Communists to his party in good faith, hoping that they would cooperate in the movement to rid China of the warlords

and place the country on a united and democratic basis. This painful episode showed that the Communists are fundamentally incapable of acting in good faith. They must destroy the party with which they seek alliance in order to command the resources of their ally for their own ends. They must do all they can to discredit the leaders they have agreed to serve in order to capture the positions of these leaders. All this is part and parcel of the Communist code of ethics. a code which, as laid down by Lenin in his speech delivered before the Young Communist League in 1920, regards morality in the Communist movement as independent of any other morality and "entirely subordinated to the interests of the class struggle of the proletariat." It is clear to the Chinese who had lived through that period that coexistence with Communists is not possible. To a Communist, you are either his enemy or his comrade, but never can you be his friend or remain a neutral.

I hope I have made it clear that the Chinese Communist movement was not an indigenous movement. The problem of the Chinese revolution formed one of the focal points in the Stalin-Trotsky struggle in the 1920's. Both Stalin and Trotsky were convinced that "the road to Parls is through Peking." Their difference did not lie in the objective but in the strategy and tactics to be used to attain that end.

After the failure of the so-called great revolution of 1924-1927, Stalin sent his young and brilliant lieutenant. Lominadze, to China in an attempt to put the Chinese Communists back on the right track. Lominadze was a firm believer in armed insurrection. Under his direction a series of abortive insurrections were staged, beginning with the Nanchang uprising of August 1, 1927, and ending with the bloody Canton commune in December of the same year. The Communists suffered grievous losses in both these ventures. Moscow subsequently condemned them as adventurism and putschism. The men in the Kremlin seemed to have forgotten that they themselves had authorized these armed uprisings.

Out of these failures emerged Mao Tsetung, the present Communist chieftain in China. Mao, though already a man of no mean stature in the Chinese Communist movement, had played no spectacular role in the Wuhan revolutionary regime. After the July debacle, he was ordered to return to his native province—Hunan—to lead a peasant revolt. The revolt was crushed. Mao escaped with a few hundred men to the remote recesses of the Chinkan mountains on the Hunan-Kiangsi border. He gradually rose to be the leader of the so-called power faction of the Chinese Communist Party.

A series of circumstances favored him. The newly established National Government in Nanking, headed by Chiang Kai-shek, was preoccupied with the task of unifying China. This involved the suppression of the remnants of the feudal militarists. In consequence, civil war raged in many parts of China. No one paid much attention to the ill-armed band of desperadoes led by Mao Tse-tung. In fact, Mao's band was no different from the numerous bandit hordes which ravaged the countryside at that time. Nobody could have imagined that this small-time bandit chieftain could one day emerge as a menace to world peace and security as he is today.

Mao Tse-tung made most of his opportunity. Step by step he extended his power. He augmented his forces by what he called land reform. This meant the wholesale slaughter of all those who happened to own a small plot of land. He made the life of the people so miserable that they had no recourse but to follow him. By 1930 and 1931, when the National Government, having completed the military phase of the unification, began to deal with Mao, he was

already too strong to be easily suppressed, Meanwhile the Japanese, as if purposely to prevent the National Government from eradicating the scourge from the face of China, decided to invade Manchuria. From then on the National Government was obliged to give the major part of its attention to the problem of Japanese aggression. The Communist-suppression campaign temporarily fell into abeyance. In November 1931 Mao Tse-tung established what he called the Soviet Republic of China in the border region of Kiangsi and Fukien Provinces.

I would not tire you with an account of the various military campaigns which the National Government launched to counter the Communist menace. Suffice it to sav that toward the end of 1934 the Communist forces under Mao Tse-tung were so routed that they were forced to fiee from their base in the Kiangsi-Fukien border region to northwestern China in order to establish a new base within communicating distance of the Soviet-dominated Outer Mongolia. took more than a full year to complete the much-publicized long march. By that time Communist ranks were so depleted that another government campaign would have brought them to extinction or sent them on another long march across Outer Mongolia to Russia. That this did not happen was principally due to the intrigue of the Soviet Union. Let me narrate briefly how it was achieved. The rising tide of nazism in Europe at that time posed a direct threat to Soviet Russia. In the East the Japanese invasion of Manchuria had brought Soviet Russia face to face with aggressive Japanese militarism. In order to relieve the Japanese pressure on the Soviet Far East while Moscow's fear of Nazi Germany was acute, the Kremlin urged the Chinese Communists to make peace with the National Government under the slogan of "United Front Against Japan." The upsurge of nationalistic sentiments was such that an all-out war against Japan, which the Generalissimo had striven to avoid or postpone until China was ready for it, became inevitable.

In July of the next year war with Japan broke out. The Communists, following the strategic line laid down in 1936, entered upon a period of phenomenal military and territorial expansion. Instead of abandoning the policy of armed insurrection against the National Government, instead of abolishing their own form of government and their own independent army—all of which they had promised to do at the beginning of the warthey stepped up their antigovernment activities in all directions. The National Government, on the other hand, did its best to carry out the united-front agreements. Its army offered resistance only when it was forced to do so in self-defense.

In 1941, after the Japanese attack on Pearl Harbor, the United States entered the war against Japan. It was then the official policy of the United States to support the National Government. But this, unfortunately, was not consistently carried out. As the war progressed the Chinese Communists were painted in certain influential circles as democratic and progressive, while the National Government of China was called reactionary and feudal and corrupt. Certain American diplomatic and military officers in China were unfavorably impressed with the performance of the Chinese Government and of the Chinese army, forgetting that when the United States entered the Pacific war China had already fought against a vastly superior military power for 4 long years, single-handedly and without appreciable outside assistance. After 4 years the stress and strain of the effort had begun to tell. Naturally, there was war weariness and confu-In their dissatisfaction with the Chision. nese Government, a number of American diplomatic and military officers formed an

exaggeratedly high opinion of the Chinese Communists whom they in fact knew very little and understood still less. There was a time when the United States even seriously thought of arming the Communists with American weapons because, in the words of General Stilwell, the Communists were "really fighting the Japs."

It is undeniable that American criticism of the Chinese Government had done much to impair its authority and prestige in the eyes of the Chinese people. The effect on the youth and the intellectuals was particularly

devastating.

I am recalling these facts not for the purpose of recrimination. That would be futile and harmful. No one is more conscious than myself of our indebtedness to the United States. No one is more conscious than myself of China's own failings and shortcomings, of the egregious errors and blunders we had ourselves committed during the war years. But I would be less than frank if I failed to mention this unhappy episode in Sino-American relations.

The story of the Japanese surrender is all too familiar. On August 9, 1945, the day after the dropping of the second atom bomb on Nagasaki, the Soviet Union declared war on Japan. Five days after the Soviet entry the war was at an end. Soviet armies swept into Manchuria against practically no Japa-They soon took full possesnese resistance. sion of the Chinese northeastern provinces. Firmly entrenched, they began a systematic dismantling of the magnificent industrial plants in Manchuria. They vitiated the Potsdam Declaration and the Sino-Soviet Treaty of Alliance and Friendship concluded in 1945 as a result of the Yalta agreement. They armed the Chinese Communists with vast quantities of captured Japanese arms in They had pledged themselves Manchuria. to evacuate Manchuria within 3 months after V-J Day and allow the Chinese Government to take over Manchuria. As a matter of fact. 3 months after the Japanese surrender no Chinese Government troops were allowed to enter Manchuria. The Russians had denied the Chinese Government the use of its own railways and ports in Manchuria.

Immediately following V-J Day, Chinese Government troops had a 5 to 1 numerical superiority over the Communists. They were also much better equipped. If they had im-mediately embarked on a Communist-suppression campaign they could have held the Communists in check as least. The Soviet arming of the Chinese Communists in Manchuria shifted the balance of military power. American effort to mediate between the Chinese Government and the Communists further worked to the Communist advantage. The period between November 1945 and the end of 1946 was a crucial period. It was touch-and-go. It was wasted on futile negotiations under the auspices of the mission under General Marshall.

Here again I must say that I have not the

least intention of criticizing the Marshall mission. Nor do I imply any disrespect for General Marshall himself, who undoubtedly tried to do his best to make a democratic. united, and strong country out of China. Of General Marshall's great human qualities and good intentions there can be no doubt. Ambassador Leighton Stuart, another great American and friend of China. who had played a leading role in the mediation, has recently written in his illuminat-

ing book Fifty Years in China:
"We Americans mainly saw the good things about the Chinese Communists while not noticing carefully the intolerance, bigotry, deception, disregard for human life. and other evils which seem to be inherent in any totalitarian system. We kept Communist meanings for such objectives as progressive, democratic, liberal, also bourgeois, reactionary, imperialist, as they intended that we should do. We failed to realize fully the achievements to date and the potentialities of Chinese democracy. Therefore, we cannot escape a part of the responsibility for the great catastrophe-not only for China but also for America and the free world-the loss of the Chinese mainland."

Mind you, this comes from a man who counted among his friends many Chinese Communists and who, next to General Marshall, had also favored a coalition government in China with the best of intentions.

Let me repeat that I have no desire to rake up the dust of the past. If we try to do that we shall lose the future. We have to think of the future and not of the past. The past is useful only as a point of reference for the future.

Let me also say that the mainland of China would not have been lost if the Chinese Government forces had stood their ground, if the inflation had not set in and if the generals and politicians in the Government had remained united. The loss of the mainland of China, was disastrous not only to China but also to Asia as a whole, because without a free and united China there can never be a peaceful Asia. Today, we are building up Formosa as a rallying point for all the free Chinese. We know Taiwan is only a small island. We know our own resources and man-power are limited. But we have good reason to believe that the millions of people on the Chinese mainland are with The anti-Communist Chinese prisonersof-war in Korea had made this amply clear to us and to the world. The 13 million overseas Chinese are with us, too. Visitors of Hong Kong, Manila, Bangkok, Singapore, and other centers in the Far East where Chinese traders congregate, can tell you of the overwhelming pro-free China and anti-Communist sympathies of these people. In free China, we have today one of the most determined anti-Communist military forces in all Asia. In numbers our Armed Forces may be small in comparison with the Communist hordes on the mainland. But we are en-couraged by the old Chinese saying: "Though there are only three families remaining in the Kingdom of Ch'ü, it is the Kingdom of Chin that will eventually vanquish the mighty Chin." It would be foolish to suppose that this is an easy task. It would be still more foolish to lose heart and courage or to suppose that the Communists on the mainland would stay on for-

We believe that the existence of a free China is indispensable to the existence of a free Asia. It stands as a beacon of hope to the millions of Chinese behind the Iron Curtain. As I have just said, so long as mainland China remains under Communist domination there cannot be peace in the Far East and no country in Asia can be safe from Communist aggression. To uproot communism in Asia, there cannot be a policy of containment. The Chinese mainland must be restored to freedom and to the Chinese.

Nowadays we hear much of peaceful coexistence. It always fills me with wonder and amazement to hear people talk, with a glibness that almost amounts to lightheartedness, about the possibility of living peacefully together with the Communists. We in China know better. I have shown that we in China had tried to coexist with the Communists, not once, but twice. During the first trial (1924-27) the Communists pretty nearly took over political power. During the second trial (1937-45) they actually succeeded in capturing power. I hope the lesson is not lost on our good friends in the West.

At this point the audience may want to raise the question: Do you want to plunge the world into another war in trying to recover the mainland of China by force of arms? That question has been asked in London, Paris, and New Delhi. I can assure

you that we have no such thought. We do not believe that any attempt on our part to liberate China from Communist domination would provoke a global conflict. On the contrary, it may well prevent a global con-

There is a difference between a policy to prevent war and a policy to avoid war. British and French policy before 1939 was to avoid war by appeasing Hitler's Germany. By so doing, war became inevitable. has been avoided by running away from it. There is no surer way to lead the enemy into aggression than to show him that we are too soft to fight.

The fact is that the Soviet Union is no more anxious to engage in a global war than the free world. After all the Russians suffered more in the last war than anybody else, except possibly Germany. Soviet Russia is just as vulnerable to weapons of mass

destruction as any other country.

If the Soviet Union does not relish the prospect of another global war, it is not averse to using local wars as an instrument of policy. Indeed, since the end of World War II, local war has become the most useful and effective weapon of Soviet conquest. The civil war in China, the Korean war, and the war in Indochina are cases in point. Whenever and wherever a victory could be scored or some advantage could be gained you can be assured that the Soviet Union and its puppets would pursue their objectives with relentlessness and determination. On the other hand, if they stood to lose they would immediately beat a retreat by preaching the virtues of peaceful coeixistence. The retreat is but a temporary expedient. It is in line with the Leninist formula of "1 step backward, 2 steps forward "

To prevent a world conflict it is necessary to create world conditions more favorable to the free world. We must devote all our energy (a) to strengthen the unity of free world; (b) to avoid making further concessions of any kind at any moment and in any place; (c) to wrestle the initiative from the Soviet bloc and thus obviate the necessity of making little concessions here and there; and (d) to build up a balanced and coordinated strength adequate to meet Communist aggressions at all points of the globe.

It is no secret that the free world is at present far from being united. countries which are firmly anti-Communist like yours and mine, there are countries which regard themselves as neutrals, and there are also countries which, though anti-Communist, cherish the delusion of coexistence. It is clear that this kind of setup can never cope with the Communist menace. The Communist world, let me remind is one highly integrated and coordinated unit, receiving orders from a single center-Moscow-pursuing a definite objective, and animated by a common program of action.

Because of all this, the Communists have made phenomenal gains since the conclusion of the last war. In Asia, their gains have been particularly spectacular. At the recent conference in Geneva, the Communists have by means of negotiations brought some 77,000 square miles of territory rich in resources and manpower under their in resources and manpower under swing. Some 12 million helpless people in Victnam are now being reduced to a state of abject slavery. The situation in Vietnam is indeed critical and is liable to deteriorate quickly.

The problem of building up the necessary strength for the free world is of course difficult one. It involves military, political, and economic considerations. It must begin with the building up of the military strength of those countries which occupy strategic positions and which are definitely and irrevocably anti-Communist. Unless we are certain that a country is definitely on our side, that it will be willing to fight against communism when and if it must, it is dangerous to extend aid to it. Besides its own will to combat communism, there are also other factors which must be taken into account before there can be any assurance that the aid given will be effectively used. There be, for instance, a necessary degree must of internal security against Communist infiltration: there must be signs of a viable economy; and above all there must also be a stable and popularly supported government in control of the country. The United States is now the leading ald-giving country in the world. But its resources, though vast, are not unlimited. For this reason, it is necessary, in my opinion, that its aid programs must first be directed to those areas and countries whose strategic positions and internal conditions are best qualified to make the most effective use of the aid given.

Before I bring my speech to an end, I would like to touch upon, briefly, the important role that education plays in our fight against communism. This is a vital subject. If we want our youth to be prepared to fight communism, they must be told why and how. They must be made to feel that the free way of life will bring more happiness to themselves and their children. It is a well-known and startling fact, particularly in Asia, that Communist infiltration has been most successful in schools, Particularly in the last years of high school and the first 2 years of college. Communism is not just a school of philosophy like confucianism. It is a system of thought and action, basically different from ours. Unless We can convince our younger generation that our system must be better, that the Communist system will not hold out any promise of goodness and happiness, we may yet fail eventually in our fight against communism.

Ladies and gentlemen, I have told you how communism was introduced in China and how it developed, and how in my opinion, communism may be combatted without resorting to war. The experiences that my people have gone through have been bitter and tragic. It is for this reason that I have welcomed this occasion to speak to you this evening. China and the United States have been allies in the last 2 wars. The people of China have always cherished the most friendly feelings toward the American people. I am sure that my people will be glad to learn that their experiences of suffering, of having been made a victim of communism have been made known tonight to a distinguished American audience like this and in Los Angeles. Mr. Chairman, I thank you.

A Eulogy to Walter White

EXTENSION OF REMARKS

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. POWEIL. Mr. Speaker, the shocking news of the passing of Walter White reached me in Washington at a time when I am unable to return to the city to join the many thousands who paid their final tribute of respect to a man who gave his heart and soul for the full freedom of all human beings, irrespective of race, creed, or color. It will never be the fate of Walter White that "the evil that men do lives after them; the good is oft interred with their bones," for his goodness outstrips all

evil, and as long as history lasts, and there is the cry for full human freedom, Walter White's name will be echoed down the corridors of time as the symbol of a true champion of human rights.

In recent years many distinguished citizens, because of their identification in the struggle for human rights, have been designated as Mr. Civil Rights. Walter White was truly the one man in these United States who had the right to receive the coveted title of Mr. Civil He lived, breathed, and walked civil rights. He was not called Mr. Civil Rights, but without his courageous fight for full freedom, advancing where others, in fear, retreated, the cause of dynamic democracy would have been lost long ago in the United States, and perhaps the world over. Without Walter White, civil rights would have been sleeping in the laps of the forgotten past. He magnified civil rights to such a degree that the walls of prejudice, segregation. and discrimination came tumbling down in the Army and the Navy, in our educational system, our judicial bodies, and in both high and low places of the government and especially in the Capital of the

He, like others, has served his day and generation and has now fallen asleep, leaving behind the most formidable organization for human rights in all the world. The debt we owe to him can never be paid in words, but we can accept the mantle of responsibility which he wore so nobly in championing the rights of the disinherited and the downtrodden.

Here it can be said of Walter in the words of St. Paul the Apostle, another fighter for human rights: "I have fought a good fight; I have finished the course; I have kept the faith."

TRIBUTE DELIVERED AT THE FUNERAL OF WALTER WHITE, EXECUTIVE SECRETARY OF THE
NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, BY CHANNING H.
TOBIAS, CHAIRMAN OF THE BOARD, NAACP,
AT ST. MARTIN'S PROTESTANT EPISCOPAL
CHURCH, NEW YORK CITY, THURSDAY,
MARCH 24, 1955

A memorial service will be conducted in Walter's honor at the annual convention of the NAACP at Atlantic City next June, therefore my tribute at this time can be brief.

There is a very real sense in which Walter White needs no spoken eulogy. Nor is it important that a material monument be erected to his memory. A Man Called White, his autobiography, tells a large part of his life story, and a new book written by Walter but yet to be published entitled "How Far the Promised Land" will complete the picture. But the true story of his services is to be found written in the hearts of those whom he helped to liberate from the bondage of second-class citizenship.

Together with Mary McLeod Bethune I was with him when he protested to President Franklin D. Roosevelt against Jim Crowredistribution centers for our soldiers returning home from service in the war, and heard the President tell him that the Pershing Hotel of Chicago, taken over for a center, would be returned to its owners, and that the Theresa Hotel of New York, under consideration for a center, would not be taken over, and that Negroes would be accommodated in the regular redistribution centers without discrimination. Largely as a result of this protest and subsequent efforts by Walter White, Thurgood Marshall, Roy Wilkins, Louis T. Wright, and others

associated with them, servicemen of color today bear the arms of their country as Americans and not as Negroes.

I sat beside him in President Harry Truman's office in the summer of 1946 when he struck a telling blow against mob violence which resulted in the appointment of the President's Committee on Civil Rights—the committee that after a year's work issued the memorable report entitled "To Secure These Rights"—a document that moved the conscience of America into aggressive action against double standards of citizenship based on race.

Along with Arthur Spingarn and Theodore Spaulding in a room of the Commodore Hotel in this city I heard Walter's plea to Presidentelect Eisenhower to do away with racial discrimination as far as his executive influence could be used to that end. In spite of the fact that Mr. Eisenhower was flying the next day to Korea, he prolonged our visit from 15 minutes to an hour. I was not, therefore, surprised that one of his first appeals after assuming office was a strong personal word calling upon the District of Columbia to set the example for the rest of the Nation in abolishing racial discrimination. Today the hotels, the restaurants, and the public utilities of the city of Washington operate on a nondiscrimination basis. No wonder that Ralph Bunche, who once said that he did not wish to rear his children in Washington because of racial segregation, now says that because of the changes that have come about in recent years he would have no objection to living there again.

These are but a few highlights of what Walter accomplished in top level conferences. They are important because they illustrate the method of the NAACP in dealing with controversial issues growing out of discrimination. It is a method that blinks no facts and engages in no double talk. But it is also a method that does not make use of rabble-rousing as a technique. It recognizes progress when it comes to pass, as will be seen in Walter's new book, How Far the Promised Land, already referred to. Finally it is a method that looks forward to the completion of Lincoln's work of emancipation and the realization of his dream of freedom for all in the true American way.

Looking this way today and wanting to be a part of this tribute are sharecroppers of the deep South who are no longer voteless; dining car waiters and pullman porters who are now privileged to serve their own people as they do other people without discrimination; public school teachers whose salaries are no longer determined by the color of their skin; servicemen in every department of our defense forces who have been liberated from Jim Crowism; workers of all kinds who now enjoy union protection; children who have been lifted to a plane of selfrespect by the Supreme Court decision in the school cases; and thousands of white people who have been liberated from the blighting evil of race prejudice. I am conscious of the presence of this vast unseen audience.

Also the leaders of millions of the darker peoples of the world like Nehru of India; Matthews of South Africa; Mkrumah of Gold Coast; Azikiwe of Nigeria; Tubman of Liberia; Haile Selassie of Ethiopia; Manley of Jamaica; Magloire of Haiti; and others join us in this tribute.

If Walter could have one word to say to us now, I imagine it would be something like this: Board members, staff, constituency and friends of the NAACP close ranks and go courageously ahead to the accomplishment of the unfinished task with assurance of ever-growing support from all those who cherish the ideals for which we stand. As one of those fortunate enough to be with him in the office for a little while on the day of his departure, I saw in him again that characteristic mixture of protest

and optimism which leads me to conclude with that great poem of Walter's mentor and predecessor in office, James Weldom Johnson:

"Lift ev'ry voice and since
Till earth and heaven ring.
Ring with the harmonies of Liberty;
Let our rejoicing rise
High as the list'ning skies,
Let it resound loud as the rolling sea.
Sing a song full of the faith that the dark
past has taught us.

Sing a song full of the hope that the present has brought us.

Facing the rising sun of our new day begun, Let us march on till victory is won.

"Stony the road we trod,
Bitter the chast'ning rod.
Felt in the days when hope unborn had
died:

Yet with a steady beat, Have not our weary feet

Come to the place for which our fathers sighed?

We have come over a way that with tears has been watered,

We have come, treading our path thru the blood of the slaughtered,

Out from the gloomy past, Till now we stand at last

Where the white gleam of our bright star is cast.

"God of our weary years,
God of our silent tears,
Thou who has brought us thus far on the
way;

Thou who has by Thy might Led us into the light. Keep us forever in the path, we pray. Lest our feet stray from the places, our God

where we met Thee, Shadowed beneath Thy hand, May we forever stand. True to our God True to our native land."

[From the New York Herald Tribune of March 23, 1955] WALTER WHITE

Walter White was one of the most important leaders in one of the most important struggles of his day. As executive secretary of the National Association for the Advancement of Colored People, he was regarded as a leader and spokesman for the American Negro, a man who had long ago earned the affection of his own people and the respect of others.

In his iong service to the Negro, Mr. White had seen the virtual elimination of lynching, the enactment of fair employment laws, the reduction of discrimination, the outlawing of segregation in the Armed Forces, the approach, heraided by the Supreme Court decision, of racial integration in the Nation's schools. For all these objectives he had labored zealously and devotedly; he crusaded not by inflaming passions or by preaching violence, but by putting his faith in democratic ways and the conscience of his fellow citizens. And he lived to see his faith and hope justified.

Walter White might have led a different

Walter White might have led a different life, apart from racial strife. He was but one-sixty-fourth Negro and could have, if he had chosen, remained a white man to the world. But his people needed him and perhaps he, too, needed them. With their help and the help of other friends, he accomplished much. If, when he died, much still remained to do, none knew better than Walter White that freedom is a never-ending job.

[From the New York Times of March 23, 1955]

Walter White was the adviser of statesmen and soldiers, in peace and war. His work for the Negro was enormously effective over more than three decades. That he was the author of President Roosevelt's Executive Order on Fair Employment Practices in war industrise is but one evidence out of many of the weight of his counsel and his vision. In his post of executive secretary of the National Association for the Advancement of Colored People he was at the center of the conflict between bigotry and democracy which the so-called race question involves. Considerable progress has been made, in recent times here, in resolving this conflict. A great deal of what has been achieved can be directly traced to his influence.

Blue-eyed and fair of color, Walter White did not need to identify himself as a Negro. He did so deliberately, and in its way this act made a special mockery of race discrimination.

[From the Baltimore Sun of March 23, 1955]

Walter White devoted all his mature life to the struggle to eliminate the legal, economic, and social handicaps resting upon the Negroes in many parts of the United States. He sought, that is, to have the principle that all men are created equal and endowed by their Creator with inalienable rights accepted in practice as well as in theory.

In the beginning, the fight was up a steep hill. In some parts of the country the Negro was held to be a lower order of being and hence not worthy of the full protection of the law as accorded to white men. Accused of crime, he could be lynched with impunity and often was. Great national organizations, such as the Ku Klux Klan, were largely intended to keep him in his place.

Walter White's methods were not violent. He enlisted the support of able lawyers, both colored and white, to fight the battles of the Negro in the courts and in the press. He s instrumental in extending the scope and influence of the National Association for the Advancement of Colored People and was its recognized spokesman. In the face of constant rebuff and frequent defeat, he struggled on. He chose the ground for his successive skirmishes with great care and, as the years passed, the victories came gradually to outnumber the defeats. The most massive of these triumphs was the Supreme Court decision of last year outlawing segregation in the public schools. This was a personal victory for White because it was he who discovered and brought into the action the young Baltimore lawyer, Thorogood Marshall, himself a Negro, who steered the case through the courts.

All this is the more remarkable in that Walter White, though proudly acknowledging his Negro blood, was a blond. He was whiter, even, than most of us. He could easily have passed, as the saying goes, into the ranks of the dominant race. Instead he chose to remain among the Negroes, fighting their battles and, in the end, winning their victories. We do not pretend to understand his full motivation for this remarkable devotion, but we are certain there was an element of nobility in it.

[From the Baltimore Sun of March 22, 1955]

Walter White was a fortunate man. He recognized his mission in life at an early age, he bent all his talents to it over the whole span of his manhood, and he saw his crusade marked by one success after another. The mission was to secure to American Negroes the economic, educational, and social rights enjoyed by other Americans. And he lived to see what was possibly the most profound vindication of his long fight, the Suppreme Court decision abolishing segregation in the public schools.

Not many men are blessed with so clear a pattern in their life's work. Yet the pattern was only dimly seen when Walter White toined the National Association for the Advancement of Colored People as a young man of 25. In those early days of the fight against white-hooded bigotry and flaming intoler-ance the first task was to eliminate the pattern of violence. Men of good will everywhere were active in that part of the fight, but over the years Walter White could claim credit for much of the success. The race riots of Arkansas in 1919, when 200 Negroes died, and the lynchings of the 1920's, ranging from a dozen or more to as high as 64 each year, are now things of the past.

In later years the NAACP's efforts, under Mr. White's leadership, were devoted to securing Negro rights through laws and regulations, national and local. In the periodical press, before congressional committees, in dozens of court cases, the battle to chip away discrimination went on. Not all the battles turned into victories. Many, including this newspaper, felt that the NAACP's attempts to secure legislative redress for the Negro's social plight were extreme and clashed with equally valid individual rights.

But if Walter White's crusade was militant it was also conducted within the framework of law and order. The implications of all that has been won are still to be accepted and worked out. But one great chapter in the Negro's fight for equal rights closes with the death of the most effective leader that cause has seen.

[From the Washington Post and Times Herald of March 24, 1955] WALTER WHITE

It was given to Walter White to enter and experience much of the promised land to which he led his people. As a boy in Atlanta, Ga., he knew at firsthand the horror of race rioting and the ugliness of a lynch mob. He lived through racial discrimination in housing and schooling and recreation. But before his death the pattern of race relations in the United States had undergone a tremendous transformation. Violence against the Negro had virtually disappeared from the South. And segregation in public facilities had been declared by the courts of the land to be in contravention of the Constitution.

As executive secretary of the National Association for the Advancement of Colored People, Walter White played a dynamic part in effecting this change. And as a man. Nordic in appearance and predominantly of Caucasian ancestry, who chose freely to identify himself as a Negro, he played a dramatic part in helping his fellow Americans to understand the folly of race prejudice. He gave his life to a heroic cause now well on its way to triumph.

[From the Washington Evening Star of March 24, 1955] WALTER WHITE

Some leaders are made by their times, and Walter White was one of the number. In & different era than our own "age of confusion" he might have chosen different work. Conditions being what he knew them to be. he rose to their challenge and, heading the National Association for the Advancement of Colored People, waged a campaign of reform and correction which already is historic. His cause was good, and he did not spoil it by unworthy methods. Americans of all groups recognized him as a spokesman for millions. He lived to see many of his objectives written into the law of the land. Even more important, perhaps, he saw them accepted into the standard pattern of American thought and American behavior. Thus, he served the entire national community and, beyond that, the high ideals of democratic civilization throughout the world. [From the New York Amsterdam News of the house, and men patroling the streets March 26, 19551

WALTER WHITE

When Walter White died at his home last Monday night the entire world lost a dedicated champion to the cause of freedom. As the executive secretary of the National Association for the Advancement of Colored People, Mr. White had spent 37 years of his life fighting lynchings and Jim Crow and all of the other more subtle forms of racial Oppression. But his interest in mankind did not stop with the race question in America.

Mr. White was a genuine humanitarian ready to do battle for the victims of tryranny Wherever he found them. He knew the evils of colonialism from his firsthand contacts With that system and he wrote and spoke

out against those evils.

He recognized the stifling dangers of communism to the aims and dreams of free men and women and he pointed out those dangers in his speeches and in his newspaper columns and during his radio broadcasts.

Negroes of America have lost a fearless leader in the long and uphill struggle for full citizenship rights and privileges in the Passing of Mr. White, and mankind has lost true and tested advocate of freedom and liberty.

All of us shall miss him and his courageous leadership and counsel in the unsettled days that are ahead.

[From the Washington Evening Star of March 24, 1955]

WALTER WHITE'S MANY WORKS—A TRIBUTE TO A DEVOTED AND TIRELESS MAN WHO Worked Miracles in the Difficult Field OF RACE RELATIONS

(By Thomas L. Stokes)

Twoscore and nine years ago a fearful thing happened in the city of Atlanta, Ga. a race riot.

Out of that tragedy came inspiration for a career that has meant so much for the Negro race—and for the white race, too.

A boy of 13 stood guard at the window of his home with his father. Each had a pistol. They were ready to defend their home and their family-a mother and five girls. But the oncoming white mob was diverted when a volley burst from the Negro home next door.

As a result of that experience, the boy. Walter White, decided that, though white of skin, blond of hair, and blue of eyes-he was only one-sixty-fourth Negro-he would cast his lot with the Negro race and devote his life to them to do what he could to stop such horrors as race riots and lynchings and to abolish discriminations of all kinds. He could have passed for white.

Now he is dead, at 61, in New York. The hewspapers are recalling how much he has done for his race in the years between with his work for the National Association for the Advancement of Colored People. For the change—for better relations between the Paces, for an end to lynching and riots, and for the crumbling walls of segregation—we all owe so much to Walter White.

His life and what he did with it has special meaning for another who was a boy also in Atlanta in 1906 at the time of the race riots, a few years younger than the boy, Walter White. For way back across the years there is a point where somehow the two lives meet—though neither knew the other then because of the ordeal through which Atlanta went that left its mark upon the young minds of each—and, if you please, upon their Bouls.

This reporter cannot tell now whether it is remembered experience of the time or something he was told then and afterward that has become the same as memory. It is all like a long-forgotten dream, a dark atmosphere of night and whisperings about

with rifles and shotguns.

Nothing happened in our neighborhood. After Walter White had graduated from Atlanta University, he became active with the local chapter of the National Association for the Advancement of Colored People and. in 1918, went to New York as assistant secretary of the association. He had attracted the notice of James Weldon Johnson, who was then secretary of NAACP.

The other young man became a newspaper reporter after college and got another rude awakening when he worked in a small southern city where an atrocious lyn curred. That left another mark. where an atrocious lynching oc-

Before this time and for many years after. Walter White was on the frontline for his race. He visited the scenes of lynchings to gather the facts for his association as the basis for the campaign he directed through the years to stamp out this crime. Personally, he investigated 41 lynchings and 8 race riots and from one adventure he barely escaped with his life.

All through the years he was working also for removing discriminations of all sorts against his race. It was many years ago, in 1929, that he became secretary of NAACP when Mr. Johnson retired, so that he long had been a familiar figure here in Washington lobbying for antilynching legislation, for a fair employment practice law, and for an end to segregation.

One devoted and tireless human being can work miracles, if he keeps forever at his cause, as did Walter White. So in time the various waves that he stirred up here and there all over the country finally washed up last year into the great white building here where sits the Supreme Court of the United States.

Its decision banning segregation in public schools was a memorial to Walter White.

It was, now that he has gone on, a sort of final chapter in the story that had began twoscore and nine years ago back in Atlanta, Ga.

One who was there then, too, and who came later to know Walter White and to admire his courage and his patience and his understanding, wishes herewith to say:

"Farewell and thank you."

A message from President Eisenhower to Mrs. Walter White declared:

In the death of your husband, Walter White, there has passed from the contemporary scene a vigorous champion of justice and equality for all our citizens. His devoted service to his race over a period of 40 years was tireless and effective. Permit me to express to you my personal sympathies in your loss.

A telegram from former President Harry S. Truman said:

I am deeply sorry to hear of the untimely death of Walter White. Please express my sincere sympathy to his family.

President Magloire, of Haiti, declared in a cabled message:

The people of Haiti mourn the passing of this great friend of our country.

In a statement on the sudden death of Mr. White, Arthur B. Spingarn, president of the NAACP, noted that Mr. White's "daring and courage in exposing lynchings in his early years with the association contributed greatly to the disappearance of that frightful crime and national disgrace. Guided in its course by his leadership, the NAACP won for Negroes of the Nation the recognition which established for all time their birthright and dignity as American citizens."

Gov. Averell Harriman declared in a telegram that-

Mr. White rendered invaluable service to our country at home and abroad. His life has been an inspiration to all of us.

In behalf of the citizens of New York-

Said a message from Mayor Robert Wagner to Mrs. Walter White-

I extend to you and the family of Walter White our deepest sympathy. Our Nation, State and community have lost one of our greatest leaders whose entire life was dedicated to securing equality for all mankind. His whole life epitomized his belief in God's precept, "love thy neighbor."

Hulan E. Jack, president of the borough of Manhattan, New York City, told Mrs. White in a telegram that-

Your late husband left behind an invaluable and proud record of achievement which brought the hearts and minds of people closer together in the struggle for recognition that all of us are equal in the sight of God. The Nation has lost a great leader and his passing will always remain as a monumental heritage for all people to honor and revere.

A message from James P. Mitchell. United States Secretary of Labor, to Mrs. White said:

Mr. White made a great contribution toward the promotion of brotherhood and the elimination of discrimination in our country. You may be proud of his contribution to the strengthening of our democracy.

Dr. Ralph Bunche, Under Secretary of the United Nations, declared in a tele-

I have never known a man more dedicated to service of his fellowmen, more inspired by and more ceaselessly devoted to a cause. The American Negro, the American society as a whole, and American democracy, will be forever indebted to him, a stalwart champion of democracy, of human rights and dig-nity, an American in the proudest and richest tradition of our country, a patriot in the finest sense, a man of wisdom and unflinching courage, a warm and human personality. Walter White was above all a being of greatest goodwill. His name will be writ on the list of those who have contributed signally to the progress of our Nation.

Heman M. Sweatt, who, as the result of NAACP legal action, was the first Negro admitted to the University of Texas law school, in 1950, said in a message:

I speak for the hundreds of Negro students in the integrated colleges throughout the South whose lives have been enriched because of Walter White's love for us. is no death for one whose life repelled the winds of fear and whose spirit remains to chant the commands for a people marching determinedly onward into a new sun of freedom

Among the hundreds of other tributes paid to Mr. White are these:

Senator HERBERT H. LEHMAN:

He will be sorely missed in the battles that lie ahead and the whole liberal cause has suffered an irretrievable loss in his death.

Lester B. Granger, executive secretary, National Urban League:

Mr. White's contribution toward guaranteeing and buttressing the American Negroes' citizenship status has been of incalculable proportion.

Langston Hughes, author: America has lost a great man.

Judge and Mrs. Irvin Mollison:

The country has lost a great public servant. For a quarter of a century he was in the forefront of the struggle for equality for all Americans.

J. J. Singh, president, India League of America:

So long as there is discrimination and inequality among men in any part of the world the name of Walter White will be remembered with admiration and reverence.

Robert R. Nathan, chairman, Americans for Democratic Action:

By his courage, wisdom, and tenacity in fighting for the rights, not only of American Negroes, but of all oppressed peoples, he became an international symbol of all that is best in American democracy.

James L. Watson, New York State senator:

The loss of Walter White to the world community will be felt for many years to come.

Adolph Held and Charles S. Zimmerman, Jewish Labor Committee:

The oppressed and underprivileged the world over will miss him as spokesman for racial justice and freedom. America lost in him one of its greatest sons and democracy one of its stanchest defenders.

George Meany, president, American Federation of Labor:

On behalf of officers and membership of American Federation of Labor may I extend our sympathy on the loss of your distinguished officer Walter White who devoted his life and efforts to his work. The fruits of his labor will be an everlasting tribute to his memory.

Walter P. Reuther, president, Congress of Industrial Organizations:

No one, we suppose, will ever know how many Americans of all races, colors, and creeds were inspired by Walter White to fight for equal justice, equal rights, and equal opportunity, but that number must be legion. We regret that Walter White did not live to see his dearest dream, the end of segregation in our public schools, completely realized. In his name and in his spirit we of the CIO pledge ourselves anew to an unremitting fight for the abolition of segregation and discrimination in our land. That would be the best monument a grateful America could erect to a great American. We can and should do no less.

Harold J. Gibbons, president, St. Louis, Mo., Joint Council of Teamsters, AFL:

It is perhaps symbolic that his death came at the time when many sections of America were at last experimenting with new, vigorous methods of democratic living and learning as a result of the work of Walter White and his associates. With his death, he now belongs to the eternal struggle of man to understand himself and his fellowmen.

Jacob S. Potofsky, general president, Amalgamated Clothing Workers of America, CIO:

His personal character, his intrepld courage, his flaming eloquence, his immolation in a great cause won the support of presidents. Not only the colored people of America but all who bear the proud title of American regarded Walter White as a truly great American, in our best tradition.

A. Philip Randolph, president, and Ashley L. Totten, secretary-treasurer, International Brotherhood of Sleeping Car Porters, AFL:

Walter White will long be remembered for his brilliant leadership, oneness with mankind, and humanitarian spirit. We share with you the loss of one of the noblest men this world has ever known. Dr. Mary McLeod Bethune, founder and president emeritus of the National Council of Negro Women—(to Mrs. White:

No words can express what I feel in the passing of our illustrious champion, your devoted husband, my beloved friend. He lived to see the fruition of his unsurpassed courage and faith.

William J. Trent, Jr., executive director, United Negro College Fund:

The Nation and the Negro have suffered an immeasurable loss.

Lewis O. Swingler, editor, Memphis (Tenn.) Tri-State Defender:

Walter White's fight for Negro rights gained importance of worldwide proportions. * * * His was a passion that democracy must speak for all Americans regardless of race or creed.

Mrs. Sidney Hillman:

He did more than any man to help break the chains of oppression, discrimination, and segregation which bound colored Americans with whom he voluntarily threw in his lot.

Mrs. William Thomas Mason, president, National Council of Negro Women:

Walter White will be a symbol to men and women everywhere. His manifold achievements will be a beacon light for all who come after.

David J. McDonald, president, United Steelworkers of America, CIO:

His life truly mirrors the best in men who devote great abilities and unswerving energy to their fellowmen. * * The things he has accomplished in a rich lifetime will help all men in the future to enjoy a fuller life.

Dr. Israel Goldstein, president, American Jewish Congress:

He contributed vitally to the extension of equality and democracy in America and his memory will long be cherished by all persons who hold freedom dear.

Dr. J. Oscar Lee, director, department of racial and cultural relations, National Council of the Churches of Christ in the United States of America:

We thank God for the courageous and devoted service which characterized Walter White's leadership.

Frederick E. Hasler, Haitian American Association:

His Christlike understanding and sympathy for all mankind set an example for all to follow.

Officers, executive board, and members, Retail Union of New Jersey, CIO:

The world was richer with Walter White in it and immeasurably poorer now that he is gone. We shall never forget or deviate from the humanitarian principles that he fought for so valiantly.

Senator WAYNE MORSE:

The magnificent gains of recent years will stand as a monument to his memory. Walter White's passing is to me an occasion for rededication to the principles of democracy for which he lived.

Among the hundreds of other organizations and persons from whom messages of condolence and tribute were received were Representative William L. Dawson, Democrat, of Illinois; Judge and Mrs. J. Waties Waring; Judge and Mrs. Francis E. Rivers; Frederick D. Patterson, director of the Phelps-Stokes Fund; Miss Nancy Woltridge, president,

American Council on Human Rights; Nathaniel M. Minkoff, president, League for Industrial Democracy; Judge Ira W. Jayne; L. H. Foster, president, Tuskegee (Ala.) Institute; City Teachers Association, Galveston, Tex.; Judge William H. Hastie; Lena Horne, singer.

Also Mrs. Helen Reid, publisher, New York Herald Tribune; Elmo Roper, public opinion analyst; James B. Carey, secretary-treasurer, Congress of Industrial Organizations; David Dubinsky, president, International Ladies Garment Workers Union, AFL; John Gunther, author; Chester Bowles, former United States Ambassador to India; E. E. Moore of United States Steel Corp.; the New York office of the Commonwealth of Puerto Rico; Senator Stuart Symington; Leslie Huvos, sculptor; the National Congress of American Indians; David Sarnoff of the National Broadcasting Co.: Mr. and Mrs. Bartley Crum: Stanley Issacs, New York city councilman.

Also Marcel Fombrun, secretary of state, Haiti; Michael J. Quill, president, Transport Workers Union, CIO; Rev. Maurice A. Dawkins; Emil Rieve, general president, Textile Workers Union, CIO; New York State Committee on Discrimination in Housing; J. H. Wheeler, president, Mechanics and Farmers Bank, Durham, N. C.; Human Relatitons Committee, Battle Creek, Mich.; Lloyd Garrison; Bishop and Mrs. W. A. Fountain; T. G. Nutter; National Community Rela-Advisory Council; American tions Friends Service Committee; the AME Ministers Alliance, Dallas, Tex.; Catholic Interracial Council; George S. Mitchell, director Southern Regional Council.

Also Dr. C. B. Powell, president, New York Amsterdam News; United Furniture Workers of America, CIO; Retail, Wholesale, and Department Store Union District 65, CIO; Frank R. Crosswaith. Negro Labor Committee; Miss Nannie Burroughs; Associated Publishers, Inc.; Chicago Negro Chamber of Commerce; Saunders Redding; Atlanta University School of Social Work; Baptist Ministers Union, Waco, Tex.; Mrs. M. E. Tilly; Mr. and Mrs. Walter Wanger; Herbert Bayard Swope; Spyros P. Skouras; Bishop William J. Walls; Dr. and Mrs. O. Clay Maxwell; Rev. James H. Robinson; Clarence L. Holte; Dr. and Mrs. Ira De A. Reid; Dr. and Mrs. Ernest Alexander; Price Mars of Haiti; Paul R. Green, president, Civic Unity Committee of Seattle; and Charles Mahoney, president, Great Lakes Mutual Life Insurance Co.; the Baptist Ministers Conference of Greater New York and Vicinity; the Methodist Alliance of Charlotte, N. C.; Mr. and Mrs. George Logan; Common Council for American Unity and Commissioner Caroline K. Simon of New York State Commission Against Discrimination.

WALTER WHITE'S FUNERAL ATTENDED BY GOVERNOR AND OTHER NOTABLES

The "true story of Walter White's services is found written in the hearts of those whom he helped to liberate from the bondage of second-class citizenship." Dr. Channing H. Tobias, chairman of the board of directors of the National Association for the Advancement of Colored People, said at the funeral of the NAACP leader, who at the age of 61 died of a heart attack in his home on March 21.

Officiating at the service held at St. Martin's Protestant Episcopal Church in Harlem was the rector, Dr. John Johnson. The Right Reverend Horace W. B. Donegan, Bishop of New York, read the prayer and blessing, with other members of the clergy assisting. Loudspeakers carried the service to an overflow crowd estimated at 5,000 by the police.

Led by Arthur B. Spingarn, veteran NAACP president, officers, board, and staff members served as honorary pallbearers. Distinguished guests who came to pay a last tribute to Mr. White included Gov. Averill Harriman, of New York, New York State Attorney General Jacob Javits, well-known attorneys like Austin T. Walden, of Atlanta, W. Robert Ming, of-Chicago, James Nabrit, of Washington, D. C., and John Bolt Culbertson, of Greenville, S. C.; labor leaders like James B. Carey, George L-P Weaver, and Edward Welch, Congress of Industrial Organizations; Jacob Potofsky, president, Amalgamated Clothing Workers, CIO; William Oliver, United Automobile Workers, CIO; Boyd Wilson and James Jones, United Steelworkers, CIO; and Walter Kirschenbaum, Jewish Labor Committee; United States Government officials, Frank S. Horne and Campbell Johnson; Paul Robeson, singer; John Gunther and Marc Connelly. authors; Mrs. Helen Reid and her son, Whitelaw, publishers of the New York Herald Tribune; Mrs. Anne Hedgeman, assistant to the mayor of New York; Mrs. Ralph Bunche, Miss Stella Karn, Mrs. Louis T. Wright and her daughters, Drs. Barbara and Jane Wright; Richard deRochemont, film producer; representatives of various organizations, and many other individuals.

In mourning were Mr. White's widow, Mrs. Poppy Cannon White; his daughter and son by a previous marriage, Jane and Walter Carl; his three sisters, Mrs. Eugene Martin and Miss Madeline White of Atlanta, and Mrs. Alice Glenn of Cleveland. With Mrs. White were her three children by previous marriage, Cynthia, Alfred, and Claudia, and her sister, Ann Fogarty, the designer, who was accompanied by her husband, Tom. Also Mr. Eugene Martin, the Martins' daughter, Rose, Mrs. Glenn's daughter, Dorothy; and Mr. White's cousins, Mrs. Eva Tobias and Mrs. Estelle Gassett.

RECALLS PRESIDENTIAL MEETINGS

In his brief eulogy, Dr. Tobias recalled instances in which Mr. White had served as spokesman for delegations in conferences with Presidents Roosevelt, Truman, and Eisenhower. These conferences, he said, had been fruitful in that they opened the way to expanded job opportunities for Negroes, to the elimination of segregation in the armed services, and to the curtailment of racial discrimination in Washington. They also served to help "move the conscience of America into aggressive action against the double standard of citizenship based on race."

These achievements in "top level conferences" are important, Dr. Tobias asserted, "because they illustrate the method of the NAACP in dealing with controversial issues growing out of race discrimination. It is a method that

blinks no facts and engages in no double talk. But it is also a method that does not make use of rabble-rousing as a technique. It is a method that looks forward to the completion of Lincoln's work of emancipation and the realization of his dream of freedom for all in the true American way."

HELPED THE DISADVANTAGED

People all over the world whose lives have been enriched by Mr. White's work are "looking this way and wanting to be a part of this tribute," the NAACP spokesman said. Among these he cited sharecroppers of the Deep South who are no longer voteless; dining car waiters and Pullman porters who are now privileged to serve their own people as they do other people without discrimination; public school teachers whose salaries are no longer determined by the color of their skin; servicemen in every department of our defense who have been liberated from Jim Crowism: workers of all kinds who now enjoy union protection; children who have been lifted to a plane of self-respect by the Supreme Court decision in the school cases; and thousands of white people who have been liberated from the blighting evil of race prejudice.

And beyond our shores, he said, the leaders of millions of the darker peoples of the world like Nehru of India, Matthews of South Africa, Nkrumah of the Gold Coast, Azikiwe of Nigeria, Tubman of Liberia, Haile Selassie of Ethiopia, Manley of Jamaica; Magloire of Haiti and others now join us in this tribute.

Walter White's admonition, Dr. Tobias concluded, would be "board members, staff, constituency and friends of the NAACP close ranks and go courageously ahead to the accomplishment of the unfinished task with assurance of ever growing support from those who cherish the ideals for which we stand."

Following the funeral service, the body was removed to Ferncliff Crematorium for cremation.

BOARD MEMBERS PRESENT

Officers and board members present in addition to Dr. Channing H. Tobias and Arthur B. Spingarn included Mrs. Lillian A. Alexander, Dr. Algernon D. Black, Walter Carrington, Dr. Allan Knight Chalmers, Dr. Nathan K. Christopher, Norman Cousins, Hon. Hubert T. Delany, Mrs. Grace B. Fenderson, Dr. George D. Flemmings, Dr. Buell G. Gallagher, Lewis S. Gannett, Dr. Harry J. Greene, Hon. William H. Hastie, Oscar Hammerstein II, Dr. John Haynes Holmes, Mrs. Lillie M. Jackson, Mrs. Daisy E. Lampkin, Alfred Baker Lewis, Z. Alexander Looby, Eugene M. Martin, Dr. James J. McClendon, Miss L. Pearl Mitchell, Mrs. J. E. Spingarn, Dr. James M. Tinsley, Mrs. Jessie M. Vann, Dr. Robert C. Weaver, Andrew D. Weinberger, Samuel A. Williams, and Dr. Ulysses S. Wiggins.

STATE LEGISLATURES EXPRESS SYMPATHY ON DEATH OF WHITE

The Missouri House of Representatives and the New York State Senate and State Assembly passed resolutions this week expressing sympathy over the death of Walter White, NAACP executive secretary.

The Missouri resolution cited Mr. White for his courage and leadership in

gaining the enactment of legislation which has helped greatly to stop lynching and other such acts of violence and declared that his death is a great loss of all of the people of this United States.

The New York statement noted Mr. White's many contributions to his country and to the United Nations.

Copies of both resolutions were sent to NAACP headquarters.

ALAN PATON, OTHER NOTABLES, SORROW AT WHITE'S DEATH

Thurgood Marshall, chief counsel for the NAACP, telegraphed a message of sympathy to Mrs. Walter White on the death of Mr. White, from Acapulco, Mexico, where he is vacationing.

The renowned civil-rights attorney termed Mr. White's death a "real shock and terrific loss." Mr. Marshall said he would be unable to attend the funeral today because plane reservations were not available.

A cabled message from Alan Paton, South African novelist and humanitrian, expressed sorrow on the loss of Mr. White.

The Honorable Orville L. Freeman, Governor of Minnesota, conveyed "deepest sympathy" on behalf of the residents of Minnesota, and declared that "the passing of Walter White constitutes a great loss to the furtherance of the principles of democratic equality."

Two university presidents sent messages of condolence on the death of Mr. White. They were Dr. Mordecai W. Johnson, president of Howard University in Washington, D. C., and Dr. Charles S. Johnson, president of Fisk University in Nashville, Tenn.

Beginning in the dark period of race relations in the United States, [Walter White] risked personal safety, the calumny of demagogs, and the misguided censure of friends to stir the Nation of acceptance of its own avowed principles and light fires of hope for millions of hopeless here and over the world—

Declared Dr. Charles S. Johnson, in a telegram.

We salute a life that has contributed to and been a part of the most important history of this century.

Dr. Mordecai W. Johnson termed Mr. White "a pure-hearted leader who gave a whole life of tireless and courageous devotion to the cause of delivering the Negro people from lynching, persecution, segregation, and discrimination, and for the regaining and firm establishment of their rights as freemen under the Constitution."

Among hundreds of other persons and organizations who sent messages of condolence on the death of Mr. White were Adolf A. Berle, Jr., State chairman, and Ben Davidson, executive director, of the Liberal Party of New York; Judge Thomas L. Griffith, Jr., of Los Angeles; C. A. Scott, editor of the Atlanta (Ga.) Daily World; the Interdenominational Ministerial Alliance of Columbia, S. C.; John Hope II, a member of the faculty of Fisk University; Walter T. Deininger, a planter and philanthropist, of San Salvador; and Judge Charles W. White, of Cleveland, Ohio.

ADDITIONAL MESSAGES OF CONDOLENCE

Norman W. Manley, chief minister, Jamaica, British West Indies:

It was very sad to read the news this morning that Walter White was dead.

I had seen him in New York when I was there in January and although he still looked frail his spirit was so high that I thought and hoped that he had every chance for a stable recovery.

His death has robbed the world of one of the most powerful voices that it had on all questions of human justice and race relations. I always felt it a privilege to have known and in some small way on occasion to have worked alongside him.

Please convey to your executive my sympathy to them in their loss and my deep respect and admiration for the name of this great leader whose life spanned the ceaseless effort to improve the status of the Negro in America which is bearing such great fruit not only in America itself but all over the world.

Henry Edward Schultz, national chairman, Antidefamation League of B'nai B'rith:

May I, on behalf of the Antidefamation League of B'nai B'rith, extend to you and the other leaders of the NAACP our deepest sympathies on the tragic passing of your devoted leader, Walter White. His direction of the NAACP truly helped change the pattern of American life so that preachments more closely approached practices. These changes will endure as a permanent contribution of great import.

Joseph R. Garry, president, Helen L. Peterson, executive director, National Congress of American Indians:

We well know how difficult it is to lose a great and distinguished leader. We share in this sense of loss because Walter White was an inspiration to us, too.

Our deepest sympathies.

Clark M. Eichelberger, executive director, American Association for the United Nations:

Almost 10 years ago I was with Walter White at San Francisco where we served as consultants to the United States Delegation to the United Nations Conference. He made a lasting contribution to those provisions of the United Nations Charter dealing with human rights and fundamental freedoms. We were proud that Walter White was a friend of the American Association for the United Nations.

C. L. Townes, Sr., president, National Insurance Association:

I have just read in the Richmond (Va.) Times Dispatch front page Associated Press story of the passing of your executive secretary, Mr. Walter White, and hasten this letter to let you know the National Insurance Association, Inc., shares with you in this great loss.

Our association and its member companies through the years have supported the program of the National Association for the Advancement of Colored People in its crusade to uphold the human dignity and civil rights of all the citizens of this great country as guaranteed by the Constitution of the United States.

We believe the name, Walter White, will stand out as a symbol of justice and fair play for generations to come.

Mrs. Roy F. Layton, president, Girl Scouts of the United States of America:

I learned with sorrow of the death of Walter White who has done so much to build better understanding among people of all races in this country. Please extend my

deepest sympathy to his family and to the organization for which he did so much.

Angus Duncan, executive secretary, Actors' Equity Association:

The Council of Actors' Equity Association

* * * learned with sorrow of the death of
Walter White. * * * As a result, the Council
adopted the following resolution:

"Whereas Walter White passed away on March 21, 1955, and

"Whereas Walter White has been associated with the National Association for the Advancement of Colored People for over 40

years; and
"Whereas Walter White was the executive
secretary of the National Association for the
Advancement of Colored People from 1929
until the day of his death; and

"Whereas during his entire association with the National Association for the Advancement of Colored People he has been in the forefront of those who believed in the principles of equality and justice for all men, and

"Whereas his achievements will always remain as an everlasting tribute to him: Therefore be it

"Resolved, That the Council of Actors' Equity Association recognizes that in the death of Walter White, the Nation and humanity have suffered a great and grievous loss; and be it further

"Resolved, That the council is convinced that its feelings are shared by the entire membership of Actors' Equity Association; and he it further

"Resolved, That this resolution be forwarded to the president, Arthur Spingarn, of the National Association for the Advance-

ment of Colored People."

Grace E. Marr, assistant executive secretary, American Nurses' Association:

Many members of our staff join me in this note expressing our regret and sense of loss as a result of the death of Mr. Walter White. We have great respect for the work which the NAACP has done under his leadership.

We would like to convey to you, to all of the members of the NAACP staff and to your board of directors both our sorrow on this occasion and our best wishes for the continued success of your efforts toward the objectives which the NAACP has set and in in which many who are not active in NAACP's program concur.

Carroll V. Newsome, associate commissioner, the University of the State of New York, the State education department:

Walter White's sudden and untimely death is a great blow not only to your organization but also to our country and to our State. We will have with us for many a year a shining example, but in these times we could also use his willing hand.

His dynamic leadership was not only evidenced in the economic, political, and legal fields, but it was also, as you know, evidenced in education, broadly conceived. We all are the better for having had his vision and work. May we live up to his high ideals in the years ahead.

Lewis M. Hoskins, executive secretary, American Friends Service Committee:

We, too, in considerable degree share the great sense of loss which you at the NAACP must feel in the passing of Walter White. Almost more than any other contemporary American he has become the symbol of justice for minority groups. In his own lifetime and through his own efforts, he has carried forward and sparked the campaigns for human rights and civil liberties in the United States. Those of us who have known him a bit personally will feel keenly the loss,

All America will mourn him, but I am sure will feel the concern he would want us to have.

Women's International League for Peace and Freedom:

The national executive committee of the Women's International League for Peace and Freedom, meeting in Washington, D. C., March 23 and 24, 1955, voted to express to the National Association for the Advancement of Colored People its deepest sympathy in the loss of your eminent executive secretary, Dr. Walter White, whose great services to the cause for which you stand are so widely recognized in the United States.

Charles N. Ford, president, United Mutual Life Insurance Co.:

On behalf of the directors, officers, agents, and office employees of the United Mutual Life Insurance Co., I join with the many millions in this Nation and throughout the world who mourn the loss of the great American leader and patriot, Walter White, in paying humble tribute to him and the great institution to which he gave leadership.

We are happy that so many of the rights and freedoms which he labored to win for our people were attained while he was still among us to witness their fulfillment.

E. Roland Harriman, chairman, the American National Red Cross:

I was very sorry to learn of the death of Mr. White. I am sure that his great devotion to his country as well as to his fellow man will serve as an inspiration to all America.

Personally, and on behalf of the entire Red Cross, I hasten to convey to you and your fellow members our profound sympathy.

Clarence E. Pickett, president, Maurice B. Fagan, executive director, Philadelphia Fellowship Commission:

The Philadelphia Fellowship Commission together with all organizations devoted to equal treatment and opportunities for members of all racial, religious, and nationality groups mourned the death of Walter White for so many years the pioneer, mentor, and world leader of such work. The lives of countless thousands have been brightened and democracy has been immeasurably strengthened by the deathless work of Walter White and the NAACP, which he served so ably and devotedly.

Everett R. Clinchy, president, National Conference of Christians and Jews:

The death of Walter White is a deep loss to all men of good will and to all organizations working for the cause of brotherhood. In behalf of the national conference and myself personally, please extend heartfelt sympathy to Mrs. White and other members of Mr. White's family.

Willard S. Townsend, president, United Transport Service Employees, CIO:

With a sense of deep sorrow, we learned of the passing of Walter White. Certainly we have lost one of the most brilliant fighters for human rights this era has produced. The United Transport Service Employees, CIO, join with all freedom-loving people in mourning his loss.

Ellsworth Bunker, president, American National Red Cross:

It is with deepest regret that I learn of the passing of Walter White.

I wish to express to you and to all of his associates in the National Association for the Advancement of Colored People warm and heartfelt sympathy.

Frank R. Crosswaith, Negro Labor Committee:

In behalf of the Negro Labor Committee, with which is affiliated trade unions with a membership of over a million workers of all races, crafts, and creeds. I offer our condolence over the passing of your great and illustrious husband, Walter White. In this moment of painful tragedy, we have but one consoling thought in the knowledge that Walter White will be recorded by historians as among those great Americans whose contribution to our strength, to our culture, and to our enlightened concept of human values will be more clearly recognized and appreciated as we continue to travel on along the pathway of human progress, and that neither the wrinkles of time nor the music of years can remove from the memory of unborn generations the name of Walter White. As chairman of the Negro Labor Committee and as one who had the honor of being counted among Walter White's friends, I send to you and your family these words of condolence and sympathy over our common loss.

Marcel Fombrun, Secretary of State, Republic of Haiti:

We wish to express our deepest sympathy in the unexpected passing of this great friend of Haiti, Walter White.

Mrs. William Thomas Mason, president, National Council of Negro Women:

The National Council of Negro Women is shocked and grieved at the passing of one of the world's great leaders, a man whose life was devoted with passionate sincerity to the cause of human freedom and equality. He lived to see in the Supreme Court decision one of the greatest victories in his lifelong struggle. Walter White will be a symbol to men and women everywhere. His manifold achievements will be a beacon light for all who come after.

Dr. Israel Goldstein, president, American Jewish Congress:

The officers and members of the American Jewish Congress extend to you their deepest sympathy on the passing of your dear husband and our cherished colleague in the cause of human rights. He contributed vitally to the extension of equality and democracy in America, and his memory will long be cherished by all persons who hold freedom dear.

David J. McDonald, president, United Steelworkers of America, CIO:

We of the United Steelworkers of America received with profound grief the news of the passing of a true friend, Walter White. Because he worked so devotedly and closely With us in our common goal of justice and equality for all people we will feel deeply his loss in the days ahead. Walter White provided an inspiration to us. He was a man admired by people in all walks of life. His crusading spirit never faltered as he kept his eyes focused on a goal with which we sincerely sympathized. The steelworkers of the Nation knew Walter White personally because he mingled with us, addressed our conventions, and supported our people as they, too, fought for justice. His life truly mirrors the best in men who devote great abilities and unswerving energy to their fellowmen. And even though he has passed on, the things he has accomplished in a rich lifetime will help all men in the future to enjoy a fuller life.

H. K. Weed, the Alling & Cory Co.:

The announcement over the air and in the papers of the death of your esteemed accretary, Walter White, comes as a great shock to all who knew him, either personally or through his achievements.

He was a great man, and his passing in the prime of life leaves a void among his business friends and others who knew him only by reputation.

Our sincere sympathy is extended to those who have had the good fortune of being so closely associated with him.

Hon. W. Averell Harriman, Governor, State of New York:

Walter White rendered invaluable service to our country at home and abroad. His life has been an inspiration to all of us. He will be forever in our hearts and memories. I send you and your associates in the NAACP my deep sympathy in this great loss which has so suddenly come upon us.

Hon. Robert F. Wagner, mayor, city of New York:

In behalf of the citizens of New York City I extend to you and the family of Walter White our deepest sympathy. Our Nation, State, and community have lost one of our greatest leaders whose entire life was dedicated to securing equality for all mankind. As champion of the Negro, his talents and efforts accomplished notable success in his efforts to outlaw lynching, poll taxes, and segregation. The Democratic Party of our country will long be grateful for his in-spired assistance in helping to establish the Fair Employment Practices Act during World War II, and his continuing fight with them for civil rights. As executive secretary of the National Association for the Advancement of Colored People he has rendered invaluable service to our entire community. He was always ready with wise counsel and advice to ease the tensions which were inevitable in our great metropolis where millions of people of every race, color, and creed live side by side in truly democratic fashion. We who were privileged to know Walter White, as I was, from the very beginning of my public career will long mourn his loss, and always remember gratefully his integrity and kindliness. His whole life epitomized his belief in God's precept, "Love Thy Neighbor." If there is anything I can do for you and yours at this most sorrowful time, you have only to let me know.

Adolf A. Berle, Jr., State chairman, Ben Davidson, executive director, Liberal Party of New York:

Liberal Party joins with countless others in mourning the passing of a great American, Walter White. He was one of the finest and most valiant fighters for democracy, justice, decency, equality, humanity, and brotherhood of man. He has left behind a great monument of values, achievements, great aspirations, and your splendid organization. His life work represents the road to victory for democracy and freedom in the world of today.

Anson Phelps Stokes:

I want to send you, and all in the office of the NAACP, my very deep sympathy in the death of Walter White. He was unquestionably a patriotic American, and a very able and courageous leader in the cause of minority rights and interracial justice under our Constitution.

Dr. Hilton L. James, president, the Baptist Ministers Conference of Greater New York and vinicity:

The late Walter White dedicated his life to the high and noble cause of making all of the peoples of our land first-class citizens. He was fearless and faithful in the fight against all forms of racial discrimination. He will go down in history as a truly grand American who was a world citizen. The NAACP has lost its greatest champion. We therefore employ this method to convey to his family and the organization for which he gave himself unsclishly our heartfelt

sympathy. You have our prayers for divine guidance and strength in this your sad hour.

Spyros P. Skouras:

Please allow me to extend to you my sincerest condolences on the loss of your dear husband who has so long made such a distinguished contribution to American life. It was a great shock to me because Walter White was my friend of many years standing. I pray that in the record of his great achievements for his fellowmen there will be some solace for you in your grief. If there is anything I can do please command me.

Bishop William J. Walls:

Shocking sadness bewilders me as it does millions of others. Your beloved drops out when he is most needed. He has followers many who will close ranks and move forward as he will still lead with the leaders from beyond the yell. Accept deepest sympathies.

Herbert Bayard Swope:

I send you my deep sympathy on Walter's death. We have known each other for many years and I had high regard for him as a friend and as a dedicated worker in the field that mean so much to him. The memories of his courage will be a solace to you in your grief. My warm regards.

Dr. Frederick D. Patterson, director, Phelps-Stokes fund:

The trustees and staff of the Phelps-Stokes fund express to you and all members of the family heartfelt sympathy over the passing of your distinguished husband, Walter White. May the knowledge of his rich contribution to better human relations sustain you in your bereavement.

Senator STUART SYMINGTON:

Terribly distressed to hear sad news. Deepest sympathy to you in your loss.

Chester Bowles:

Shocked and saddened by Walter's death. My deepest sympathy for you in your loss. He was a very great man.

Caroline K. Simon, commissioner, New York State Commission Against Discrimination:

To you and the officers and members of the National Association for the Advancement of Colored People, I wish to express my sympathy on the death of Walter White,

Mr. and Mrs. John Gunther:

We are overwhelmed with grief at Walter's death. Our profound and heartfelt condolences to you for this irrefutable loss, not merely to you but to the American Nation. It is hard to believe that Walter is gone from us and we will always remember with joy our last meeting only a few months ago, when he was dynamic, gay, and brilliantly alert as always. What a wonderfully useful life led. We mourn a true friend and a great American.

Reed Lewis, executive director, Common Council for American Unity:

The common council and its staff want to express their heartfelt sympathy to you and your associates in the NAACP on the death of Mr. White. It is a great loss to all of us.

Willard W. Allen, sovereign grand commander, United Supreme Council, Scottish Rites of Freemasonry, southern jurisdiction:

I was deeply shocked to learn this morning of the passing of one of America's great citizens, Walter White. He was indeed a militant leader in the fight for equal rights of all citizens and he was able to see some of the fruits of his long labor. While his passing is deeply mourned yet he will ever be remembered by reason of his splendid contribution to the betterment of mankind and the fact that he had trained others to follow him in carrying forth the type of leadership which he unselfishly gave. My sympathy goes out to you in your bereavement.

Patrick Murphy Malin, executive director, American Civil Liberties Union:

The American Civil Liberties Union extends its condolences to the National Association for the Advancement of Colored People on the great loss it has sustained by the death of Walter White. An indefatigable fighter for the rights of man, Walter White led a crusade for equality which will be recorded in the pages of American history. His ability as a speaker and writer enabled him to stir the conscience of the country in the many campaigns for civil rights waged The growth and imporby the NAACP. tance of the NAACP today as the leading organization in America combating discrimination and segregation is a memorial to his leadership. The American Civil Liberties Union and other groups who join in the effort to achieve full equality for all Americans shall miss him, but we will be encouraged in our task by the achievements of his Will you please express our condolences to his family.

Lloyd Garrison:

Profoundly shocked by the news of Walter White's untimely death. The country has lost a great citizen, a magnificent fighter for liberty and freedom and a man of brilliant talents dedicated to the service of democracy. We will mourn him as a friend who was always warm and gay and delightful to be with and his name will be remembered as an inspiration to others long after we are gone. I deeply regret that absence in Boston will prevent my attending the funeral. Please convey my sincerest sympathy to his associates in NAACP.

Catholic Interracial Council:

The officers and directors of the Catholic Interracial Council were grieved to learn of the untimely death of a great American. Walter White. Certainly his vision and courage have inspired leaders in all walks of life to recognize the importance and necessity of securing equal social justice for all, Walter White's great contribution to America will continue to serve to awaken a greater interest in the task of perfecting our democracy.

Michael J. Quill, international president, Transport Workers Union, CIO:

We join with you and your fellow officers and members in grieving the tremendous loss suffered by all fighters for human freedom in the death of Walter White. He was a happy warrior with whom we were all proud to be associated in the never-ending struggle to achieve that full measure of democracy desired by all Americans. He was a partisan in the finest sense of the word. Unyielding in his dedication to the cause human freedom and equality Walter White will be remembered long after the goals he had set for himself, his coworkers and the people, have been achieved in our country, and his vision and courage were inspiring to all of us who are joined in the same crusade for equality. A living memorial to the memory of Walter White shall be our dedication to his principles. To the end that segregation in all its ugly forms is wiped out and true democracy is established in America.

A Code of Peace Between Egypt and Israel

EXTENSION OF REMARKS

HON, HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. LEHMAN. Mr. President, on March 23 the Ambassador of Israel to the United States, His Excellency, Abba Eban, made a presentation before the Security Council of the United Nations, proposing a code of peace between Egypt and Israel. On the succeeding day, I made on the floor of the Senate some comments upon this Israeli proposal.

I ask unanimous consent that my remarks be printed in the Appendix of the Record. I ask also that a condensation of Ambassador Eban's presentation before the Security Council be printed in the Record, following my remarks.

I hope Ambassador Eban's proposal will be carefully studied by our own State Department, and will be widely read by the general public.

There being no objection, the statement and condensation were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LEHMAN ON THE ISRAEL PEACE PROPOSALS

I have read, with appreciation and approval, of the proposal by the Government of Israel, through Ambassador Abba Eban in the Security Council, that Egypt join with Israel in a peace code for the Middle East.

I consider this to be the first constructive proposal I have heard in many months to deal frontally with the tragic tensions which now exist between Israel and her Arab neighbors.

The American people desire, above all, to see the Middle Eastern tensions allayed. They desire to see constructive steps taken in the direction of peace, understanding, and cooperation between Israel and her neighbors. We are as concerned with the welfare of the people of Egypt as we are with that of the inhabitants of Israel. The welfare of both peoples can best be served—can only be served—by settlements and understandings which will facilitate common and cooperative efforts to resolve the political and economic problems of the Middle East.

If the Egyptian Government would agree to give sober and sympathetic consideration to the Israeli proposals and enter into negotiations concerning them—as was envisioned in the Rhodes Agreements of 1949—the free world will have reason to rejoice.

I am convinced that the people of both Israel and Egypt desire an end to the tragic incidents of recent months, and the threat to world peace which those incidents—all of them collectively—continue to pose.

The Government of Egypt can assume its rightful role of leadership among the Arab peoples, by giving concrete evidence that Egypt accepts the existence of Israel within her present boundaries and is prepared to move forward to a normalization of relations between Egypt and Israel. Such a step would help, in my judgment, to break the unhappy stalemate which now exists in that area. It would, of course, bring an end to the violent incidents—to the raids and kill-

ings—which now occur almost daily along the Egyptian-Israell border.

Thirty killings occurring over a period of weeks are no less tragic than a similar number occurring in one bloody clash.

Even while the Security Council is weighing Egyptian charges against Israel, the press reports a new condemnation of Egypt by the mixed armistice commission, on the basis of a violation of the Israeli borders by Egypt.

I include at this point in my remarks the following press report of the incident I have just referred to:

"EGYPT-ISRAEL RELATIONS

"(Condensation of statement by Ambassador Abba Eben, permanent representative of Israel to the United Nations, before the Security Council, on May 23, 1955)

"The tensions on the frontier between Egypt and Israel are revealed with deep gravity in the reports presented to the Security Council by General Burns. The armed clash on February 28 illustrates the dangers arising from those tensions. On that date a series of long-standing antagonisms and immediate provocations exploded into a conflict with regrettably serious loss of life.

"Such clashes do not spring from the empty air. They arise from morbid conditions of international relations. In this case, they show a profound weakness in the current operation of the armistice system which Egypt and Israel established 6 years ago, on the solemn understanding that they would move forward on its basis toward permanent peace.

"The whole of Israel is a frontier area, with practically no hinterland; for nowhere in the country can a man live and work many miles from the shadow of hostile Arab guns. But this fact, and the consequences that flow from it, are especially marked near Gaza where a frontier created by recent war divides two closely settled regions.

"Egyptian Belligerency

"Against this complex geographical background, the Security Council should recall the political relationships between the two states whose armed forces clashed at Gaza on February 28. The unusual character of these relationships has been revealed to the Security Council in its previous debates on disputes between Egypt and Israel. At the root of these tensions lie a theory and practice of belligerency. Egypt considers and proclaims that there is a state of war. In the name of that 'state of war,' Egypt asserts a right to perform hostile acts of her choice against Israel. On the other hand, Egypt claims immunity from any hostile re-This is the sponse emanating from Israel. doctrine of unilateral belligerency; and it has no parallel or precedent in the jurisprudence of nations.

"It would be strictly and scientifically accurate to describe the essence of the Egyptian position in two sentences: Egypt may behave toward Israel as though there is war. Israel must behave toward Egypt as though there is peace.

"Tensions of Past 6 Months

"Now, this doctrine of a state of war is not a mere juridical theory. It is carried out in practice by relentless hostility on land and sea; by military incursions; by organized murder, sabotage, and theft; by maritime blockade; and by open threats against Israel's territory, integrity, and political independence. * * At no time since the signature of the armistice has the pressure of Egyptian hostility been exerted upon Israel

with such provocative intensity as during the past 6 months.

"The source of this hostility, the center from which the violence is organized and directed, is the Egyptian military headquarters

"The Egyptian representative has spoken as if the Gaza clash erupted suddenly out of a serene and peaceful background, without Origin or cause. The situation now before the Council cannot be remotely understood, still less fairly judged, unless this misrepresentation is corrected. For its correction we have recourse, not to the subjective claims of interested parties, but to the records of the Mixed Armistice Commission and the reports of the United Nations Chief of

"The reports submitted by General Burns to the Security Council on November 16, 1954, and March 17, 1955, tabulate the complaints investigated by the Mixed Armistice Commistion during the two periods of review. final columns of these tables specify 14 decisions of the Mixed Armistice Commission condemning Egypt—more than twice the number of decisions recorded against Israel during those periods. This fact is impressive enough in itself. It becomes all the more significant when it is observed that the few violations ascribed to Israel arose mostly from immediate response to Egyptian firing. For in the application of the armistice agreement, differentiation between firing in aggression, and firing in response to aggression is not always possible.

"As it is, however, in the cases examined and adjudicated between August 1, 1054, and March 7, 1955, the Mixed Armistice Commission, under United Nations chairmanship. has found Egypt guilty of violating the armistice on no less than 40 occasions, including the 14 recorded in the 2 reports before the Security Council which cover incidents occurring between September 1, 1954, and March 1, 1955.

"But even there statistics do not give an adequately vivid picture of the murderous harassment launched from Gaza against Israel in the period leading up to February 28. I therefore invite the Security Council to examine the more serious Egyptian violations organized from Gaza during the past 6 months; and to do so with a clear perception of the effects created by this torrent of assault on the lives of pioneering men and women striving to establish and maintain their lives in the regions east of the Gaza zone.

"Mixed armistice commission condemns Egyptian aggression

"The list which I have read is surely sufficlent to dispose of any extraordinary version which would assert that the period leading up to the Gaza clash was one of comparative quiet. The Egyptian objective was to Create an inferno of suspense and insecurity in the northern Negev; to blow up farm homes when built and water pipes when laid; in short, to prevent the peaceful settlement and habitation of the northern Negev area.

"The records show how the Mixed Armistice Commission began to perceive that it was faced not merely by specific incidents, but by a consistent policy of harassment. The resolutions began to express a mounting concern at a general tendency on the part of Egypt to replace her armistice oblisations by open and unrestrained hostility.

* "The Security Council is aware of the im-Portance attached to the water system in brael, especially in the arid area of the Negev. A sense of deep shock and indignation runs through our farming communityand, indeed, through the country—when large volumes of water are wasted through Guilberate and purposeful sabotage.

"How little the Egyptian Government was influenced by authoritative appeals against its policy can be deduced from the text which the Mixed Armistice Commission had to adopt on October 28 when an armed and well-trained group again, in the Commission's words:

'blew up (water lines) by heavy charge of high explosives * * resulting in very serious damage to the pipeline, installation and water supply.'

"The military character of the Egyptian attacks was clearly attested in the resolution

of the Mixed Armistice Commission adopted on January 24, 1955.

"On January 27, 1935, the Commission again developed its condemnation of Egypt into a generalized criticism;

'Notes with grave concern the serious situation prevailing along the Gaza strip resulting from these repeated attacks;

'Notes once again with extremely grave concern that despite the obligation imposed on Egypt by the general armistice agreement and number of MAC resolutions these penetrations and killings of Isareli citizens have not been terminated.'

"The Security Council would do well to consider the language in which the Mixed Armistice Commission interpreted the situation on the days immediately preceding the Gaza clash. On March 7, 1955, the Commission adopted and published its resolution on the incidents which took place in the 3d week of February. This is surely the authoritative answer to the question which arises in many minds as to the situation and atmosphere out of which the Gaza clash developed.

"Deep penetrations into Israel

"In summarizing Egyptian violations I referred to the assault near Rehovot, where an Israeli citizen was killed by an Egyptian armed group within the heart of Israel, 24 miles from the Egyptian frontier. This came 2 days after the penetration of an Egyptian intelligence unit-probably the same unit which penetrated into Rishon le Zion, 29 miles within Israel

'It is difficult for me to find words with which to portray the degree of horror and alarm which this attack evoked. A unit of the Eryptian headquarters at Gaza had penetrated 29 miles into Israel and spent 4 days indulging in espionage and murder at Rishon le Zion and Rehovot. Never since the armistice was signed had there been a penetration of such depth by an armed group of one party into the territory of another. It revealed an audacious quality of dynamic, purposeful hostility and of utter contempt for Israel's territorial integrity. Not a single citizen of Israel could fail, on reading of this event, to feel the cold wind of his own vulnerability. If the Rehovot episode could be repeated then no life in Israel was safe from a far-ranging Egyptian assault. we think of the solemnity with which the Mixed Armistice Commission had urged Egypt to desist from these acts, and the contempt with which those decisions had been encountered; when we reflect that Egypt was known by everybody in Israel after the Bat Galim affair to have at least an equal contempt for the Security Council whose resolutions Egypt has declared to be nonbinding upon herself, it is not surprising that our people became permeated by the strong resolve to resist further assaults launched under the directing hand of Egyptian headquarters operating a few miles across the frontier.

"The Egyptian record summarized

"It is seriously possible for anyone in full knowledge of these denunciations of Egypt by the Mixed Armistice Commission to assert that the Egyptian military headquarters on February 28 was the innocent victim of an attack which it had done nothing to provoke? If the Mixed Armistice Commission is held to be an authority on the Gaza incident itself, we cannot ignore the authority of its voice when it speaks to us time and time again of Egyptian aggression before the Gaza incident.

"And what the Mixed Armistice Commission tells us is tragically clear. It tells us that the period immediately preceding the Gaza outbreak was marked by 'repeated firing from permanent Egyptian military positions on Israel patrols operating within Israel territory'; by 'continuous crossings from Egyptian controlled territory into Israel by infiltrators and their illegal actions in Israel'; by actions in which Egyptian armed groups 'crossed the line and penetrated to a great depth into Israel'; by peated acts of aggression and hostility against Israel' which the Commission 'called upon Egypt' (on September 13, Oc-tober 28, January 24, January 27, and March 7) 'to terminate finally and immediately.' We are also informed by the Commission at its most recent meeting on March 7 that 'despite the obligations imposed on Egypt by the general armistice agreement and many MAC decisions an end has not yet been put to the aggressive and hostile

acts by Egypt against Israel.'

'The Security Council also has before it two reports from the Chief of Staff. first refers to 'a recrudescence of incidents mostly in Israel-controlled territory [. e., from Egypt], some of them of a serious na-The second report, referring specifically to the Gaza incident, writes that filtration from Egyptian controlled territory has not been the only cause of present tension, but has undoubtedly been one of its main causes.' The report conveys the astonishing assertion by Egyptian authorities that 'persons committing murders and sabotage [in Israel] were being inspired, paid and equipped by political elements in Egypt inimical to the Government and desirous of aggravating the border situation." Whatever the truth of the explanation, the murders and sabotage thus candidly avowed emanated from Gaza headquarters, for whose activities the Egyptian Government is responsible. The report describes a remarkable intensity of activities in intelligence and sabotage, and states that, 'the Gaza incident could appear in this context as retaliation for the spying, sabotage, and murders for which the Egyptian military intelligence was said to be responsible.'

"The report advocates that the Egyptian authorities should take measures against infiltrators, since otherwise, 'the Israelis refuse to believe that a serious attempt is being made to prevent the depradations which eventually build up tension to a dangerous point.

"With all this accumulated evidence of Egyptian aggression before us inscribed in the Mixed Armistice Commission Resolutions and in the Chief of Staff's reports, is it not incredible to hear an Egyptian suggestion that the Security Council should ignore everything that the Mixed Armistice Commission and the Chief of Staff have said about this persistent Egyptian responsibility, and should deplore or condemn only the response which these Egyptian violations elicited, after they had been patiently endured week by week and for month upon month?

"The Council will note that there is nothing in the records of the Mixed Armistice Commission in its consideration of Israel's attitude, to compare with its generalized crticism of Egypt for a constant and well sustained policy of military pressures against Israel. Indeed, the Egyptian representative himself was unable to make out any case

against Israel for the tensions existing in the Gaza region before February 28. therefore went shopping around all the other parts of the Middle East, reaching back 4 years in an effort to concoct a selection of Israeli actions which might balance the story of recent Egyptian provocations in the Gaza The Egyptian delegate would not have let his feet stray into the Huleh marshes in 1951 if he could have found any serious break in Israeli restraint on the Egyptian frontier in the period under review.

"Indeed, the one-sided character of Egyptian violations emerges clearly from analysis of the 36 complaints listed in the Chief of Staff's Report of March 17.

"When we compare these complaints with the earnest, grave, far-reaching decisions against Egypt which I have quoted, the balance of responsibility for the tension preceding February 28 becomes amply clear. That the Gaza incident is a result and not a primary cause of tension is particularly well known to all who have followed these affairs from close at hand in recent weeks

"In the official transcript of the meeting of the Special Committee of the Egyptian-Israeli Mixed Armistice Commission held on March 11, 1955, we find the Chairman ad-

dressing the parties as follows:

"'I think all of us realize that this did not arise out of a blue sky, and certainly no report or evidence before the Security Council by any responsible party would give that impression.

"How serious the situation had become before February 28 is illustrated by the fol-

"During the period August 1954 to March 1955:

"(a) The Mixed Armistice Commission condemned Egypt 40 times.

"(b) There were 9 cases of Egyptian sabotage and mine-laying.

"(c) There were 34 clashes with regular and irregular forces.

"(d) 1,006 cases of incursions and infiltrations from across the Egyptian border into

Israel were recorded by the Israel police.

"(e) 106 marauders were arrested during this period by the Israel police.

"A sinister feature of recent developments has been the emphasis by Egyptian head-quarters at Gaza on intelligence sabotage operations. * * * These incidents gave rise to the Mixed Armistice Commission's expression of 'grave concern over the repeated acts of planned demolition in Israel by well-sustained, organized, and armed groups coming from Egyptian-controlled territory.'

"Israel appeals to U. N. and powers

"On many occasions during the latter months of 1954 and the early part of this year the Government of Israel sought remedy for this situation by diplomatic means. Our leaders and representatives constantly engaged the Chief of Staff in discussions of Egyptian aggression, and pointed out the impossibility of suffering these assaults indefinitely without response. We heard periodically from General Burns that he had duly transmitted our expressions of deep concern and his own desire to see armed marauding brought to an end.

"The Governments of the United States of America and of the United Kingdom also considered the problem serious enough warrant the use of their good offices within recent months; and the Government of Israel received information from each of those two governments, as well as from the Government of Turkey, during the period between October 1954 and February 1955 concerning the representations which they had made in Cairo in support of the appeals of the Mixed Armistice Commission calling for the cessation of assaults and sabotage against Israel from the Gaza strip.

"It is impossible for us to imagine that members of the Security Council, or the Security Council itself, can fail to include in their expressions of view a strong condemnation of this campaign of hostility organized in Gaza, to which Israel was subjected between the summer of 1954 and the end of February this year. For the connection between these events and the Gaza episode is nothing less than the direct and compelling relationship of cause and effect. But for the Egyptian aggressions which I have partially enumerated; but for the persistent rejection both of Mixed Armistice Commission resolutions and of the representations and warnings from the powers, there is not the remotest chance that any event would have occurred which would have brought the Security Council into session this week. Nor can the Security Council, which is charged by members of the United Nations with the duty to consider international 'situations' and 'disputes,' fail to evince an interest in the general context of relationships of which Gaza is a single reflection in a particular local facet. For scarcely less alarming than the acts of violence which leaped at Israel's throat from the Gaza frontier over the past 6 months have been the ominous words of direct menace which furnished the ideology and philosophy of these Egyptian attacks.

"Egyptian threats

"On January 28, 1955, Major Salem, Egyptian Minister of National Guidance, stated publicly:

"Egypt will strive to erase the shame of the Palestine war. Even if Israel should fulfill all U. N. resolutions it will not sign a peace with her. Even if Israel should consist only of Tel-Aviv we shall never put up with that.'

"On October 15, 1954, the official mouthpiece of the Egyptian regime, El-Gomhouria,

"'Egypt and the Arabs must turn in the name of humanity and culture to all nations of the world who will aid in wiping Israel off the face of the map because of its barbarism '

"On November 16, 1954, the Saut el Arab (the Voice of the Arabs) the official broadcasting station, declared:

"'Egypt sees Israel as a cancer endangering the Arab peoples. Egypt is the physican who can uproot this cancer. Egypt does not forget that it is her obligation to take revenge and she is mobilizing all her forces in anticipation of the hoped-for day.'

"Egypt's expansionist claims revealed

"A most important and conspicuous development took place only 3 days ago, on March 20, when Major Salem, a leading member of the Egyptian Government, revealed the underlying purpose of Egyptian harassment in the Negev. The object is to impede the development of the Negev in order to bring about its annexation to Egypt. This insolent territorial claim put forward by Major Salem in the clear light of day, is the ultimate source of tension on our southern frontier. Let me say that Egypt or any other Arab State will not get the Negev, nor is our territory available for bargaining in discussions of regional defense organizations. The only result of this aggressive Egyptian pronouncement will be to fortify the passion and tenacity with which the people of Israel will defend every inch of their territory in any arena in which it may be threatened. But is there a single prece dent in contemporary international life for a state openly to assert a claim to half the territory of its smaller neighbor, to launch dozens of assaults upon it against severe international condemnation, and, on the first occasion when it provokes resistence, to run for protection to the very Security Council whose authority it had repudiated a few weeks before?

'Abandonment of bell!gerency

"We are talking of two countries, Egypt and Israel, which have no objective causes for conflict between them, two countries whose cooperation should form the keystone peace and progress throughout the Middle East. No advantage to either people is served by the sterile doctrines and practices of belligerency, hostility and nonrecognition which now prevail between them. Everybody knows that the answer to the problem before us lies in the replacement of hostility by normal relations based on mutual respect for the sovereignty and territorial integrity of each state. It is therefore disquieting to observe the refusal of the Egyptian Government to apply those provisions of the General Armistice Agreement and of the Security Council Resolutions which call for an early transition from armistice to permanent peace. We were similarly disappointed when the Israel proposal for the conclusion of nonaggression pacts, made in full responsibility and formality last October from the rostrum of the United Nations, was summarily rejected by Egypt's representatives.

Until such time as progress is made toward peace, it becomes increasingly urgent to correct the defects and imperfections of the armistice system. The main breach in this system is the proclamation of a state of belligerency and the application of that doctrine in acts of war by sea and land.

"My Government is prepared to give an assurance that if no hostile act is carried out by Egypt against Israel, then no hostile act of any kind will be carried out by Israel against Egypt. Indeed, this is our minimal plea to Egypt: Prevent your armed forces and armed groups from crossing our frontiers; stop firing on our patrols and villages; cease blowing up our water supplies; abolish these activities of sabotage, demolition, and murder; do not send people either into the heart of our country or into the border areas for the purpose of destruction and pillage; refrain from threatening our violent extinction or laying claim against our territory; renounce the blockade to which your right has been internationally denied; stop making the harassment and provocation of Israel 3 such theme of your national policy. By simple renunciation of a useless hostility. Egypt can insure on our part a profound, unvarying and universal respect for her peace and integrity.

"Questions to Equat

"It is fitting, 6 years after the armistice, for Egypt and Israel themselves to define the basis of their relationship under the agreement by which they are bound. We therefore ask:

"Will the Egyptian Government agree to proclaim the abolition of a state of war and of all actions and measures carried out on the basis of the existence of a state of war?

"Will the Government of Egypt join with us in a declaration of readiness to carry out all the obligations under the armistice agreement and all decisions of the Security Council adopted in relation to those agreements?

Will the Egyptian Government join us in declaring its fidelity to that provision of the armistice agreement which calls us to make a transition to permanent peace?

Will the Government of Egypt join us in a declaration of fidelity to the provisions of the United Nations Charter calling upon us to settle all disputes by peaceful means and to refrain from threat or use of force against the territorial integrity and political independence of any state?

"The acceptance of such a code of Egyp tian-Israeli relationships would not take us beyond our existing commitments under the armistice agreement and the charter of the United Nations. These are all things that we have agreed to do already. But under the burden of belligerent doctrines the pacific obligations which we have undertaken have

become lost to sight; and the insidious fallacy of a state of war has spread its contagion both in the theory and the practice of our relationships. If the Government of Egypt, through its delegation, is able at any stage to give affirmative answer to these questions, my Government would make Wholehearted response.

"CONCLUSION

"The Security Council can do much to Withstand the distortion of the Armistice Agreement by the doctrine of unilateral bel-It must be clear to everybody ligerency. studying the reports and tables and the Armistice Commission resolutions which I have quoted here, that for the Council to confine its judgment or criticism to the Gaza incident alone would be gravely prejudicial and unequitable. It would certainly be an inappropriate commentary on official reports which show Egyptian violations to have been more numerous and more generalized than any Israeli reactions which followed them.

"My delegation feels justified in seeking a condemnation by the Security Council of the Egyptian incursions, murders, demolitions and sabotage activities described in General Burns' report as 'a main cause of present tension' and in the Mixed Armistice Commission resolutions as 'repeated aggressive acts by Egypt against Israel.'

"We seek confirmation of the Security Council's view that the claim or practice of active belligerency by land and sea is inconsistent with the Armistice Agreement and

the Charter of the United Nations.

"We urge a reassertion by the parties of their obligations to each other in terms of nonbelligerency, pacific settlement and respect for political independence and territorial integrity; and we await the Egyptian reply to this proposal.

"We advocate, after 6 years of armistice, a serious effort to make a transition toward

permanent peace.

To any attempt at stabilization and pacification our Government will lend its full

support." We all recognize that there are many difficulties in the way of a settlement of all outstanding problems between Egypt and Israel. These difficulties must be surmounted, one by one. The separate points of tension and controversy need to be resolved, each on its own merits.

There is the problem of the refugees, many of whom are now quartered, inade-quately and unhappily, in the Gaza strip in Egypt. There is the matter of the Suez Canal and the right of Israeli vessels to transit the canal without interruption.

These are but a few of the problems ex-

Isting between Egypt and Israel.

Both Egypt and Israel must be willing to meet each other halfway, to negotiate and to reach agreements. I am sure Israel is so disposed. I hope that Egypt will be likewise disposed.

Surely all the nations of the free world, including the United States, would be ready to contribute to the resolution of as many of these problems as possible. It is to the essential interest of the free world that peace be established and maintained in the Middle

The United States Government, for its part, must and should give its full support to the Israeli proposal for a peace code. United States Government should use all its persuasive power upon Egypt to accept this proposal as a basis for negotiation.

Our Government can do a great deal which it is not now doing. Our Government should be moving with full force and vigor to rescue Israel from the isolation which now engulfs her in the Middle East. We should be pushing the excellent Johnson plan for the joint development and use of the Jordan River Basin. By bringing the nations—all the natlons-in the Middle East together, by helping to establish a common front among them, to the maximum extent possible, we thereby advance the cause of Middle Eastern security, and, consequently, of free-world

The peace and security of the free world are, of course, the highest goals of American foreign policy. The accomplishment of these aims would be a great achievement of unese aims would be a great achievement of our diplomacy. We must exert our utmost ef-forts to bring peace and security to the troubled Middle East.

A Tribute to the New Haven, Conn., Post Office

EXTENSION OF REMARKS OF

HON, ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. CRETELLA. Mr. Speaker, April 1955 is the 200th anniversary of the establishment of the New Haven, Conn., post office in my district of Connecticut. It was while Benjamin Franklin was Postmaster General that the first post office was set up in New Haven. According to historians the occasion for the establishment seems to have been caused by the French war, which emphasized the importance of postal communication between the soldiers and the loved ones they left behind, an occasion, incidentally, which is not overlooked in modern days with so many American boys away from home

Since its original site on Long Wharf in New Haven, the post office has been moved eight times to larger and more accessible quarters to accommodate the quickly growing settlement of New Haven and the increasing dependence of her citizens upon the postal service. After 1860 the post office has been located on Church Street, one of New Haven's busiest thoroughfares, and in 1918 a Federal building was erected for the post office in its present location.

By 1879 New Haven had one of the 75 post offices scattered throughout the Thirteen Original States. The post rider could travel at the rate of 4 miles per hour if the weather was good. It was said that during the early days of postal service, it was customary for recipients of mail to pay the postage rather than those sending it. Even by today's standards, postal rates were exceedingly high and an early account relates the payment of 5 dozen eggs for postage on 1 letter. Someone said at that time it would cost a farmer 1 good milk cow to pay the postage on 32 letters he might receive.

With the modernization of postal service in New Haven and the erection of a new parcel-post terminal have gone the spirit and the pride of postal employees in that city. Throughout their years of loyal service, these couriers have brought assurances to the patrons of the area that neither rain nor snow, sleet nor hail will keep them from their appointed rounds.

Since the first journey of the post rider, the efficiency and the importance of America's postal service has become a part of our great heritage. Our commerce, our industry, and our economy are based in notable part on the skill and the dedication of hundreds of thousands of men and women throughout the country who handle the United States mails.

In 1825 New Haven post-office receipts were \$1,510.22. In 1954 they totaled nearly \$41/2 million. So we can see as our towns and our cities, our farms, and our churches, and our schools were hewn out of the great wilderness of early pioneer America, the growth of our postoffice system was evident and necessary and today it is an integral part of our everyday life in the United States.

I offer congratulations and best wishes to the New Haven Post Office on its 200th anniversary and to my many friends there who serve its needs and the needs of its patrons with such pride and distinction.

The Skilled American Worker

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks. I should like to include a most interesting speech by the Secretary of Labor, Mr. James P. Mitchell, on March 22, on a subject of considerable general interest: ADDRESS BY SECRETARY OF LABOR JAMES P.

MITCHELL TO THE RESEARCH COUNCIL FOR ECONOMIC SECURITY, CHICAGO, MARCH 22, 1955

Thank you, Mr. Martin. It is a great pleasure and a privilege to come here to Chicago today to discuss with you one of our Nation's most serious problems. In choosing the topic for my speech, I was guided and inspired by the words from your preamble which I read on the back of program. I see that you are an organization devoted to research into the factors lying behind economic security. It would follow that just as you seek to find answers to the problems of individual security so you must consider the security problems of all our country's individuals, or, in other words, our national security. So here today I will discuss a serious national problem which relates primarily to our national security, but also to the economic security of the individual citizen, for what is national security but collective individual security.

Our world abounds with sweeping new developments. The atom has been unleashed. causing concepts of war and peace different from any the world has ever known; and creating awesome problems which fill many with fears and doubts. Our scientists have devised new and remarkable machines for the defense of our country, and our industry is expanding constantly in new and different directions. The big and obvious problems which follow in the wake of these developments are receiving thoughtful attention of

But beneath the surface lie other fundamental problems, less dramatic perhaps, less heralded, yet serious.

It is of such a problem that I speak to you tonight-an area of national concern which challenges for solution the farthest reaches of our national imagination and intellectual resource.

What is this problem? It can be stated briefly: It is the urgent need to raise the level of the skills of the American work force.

Whether we like it or not, we are now in a race with the Communist world for technological supremacy. The products of scientifis research have obviously revolutionized warfare. Compare, for example, the defense guns which formerly protected our major cities and Nike, today's supersonic guided missile, which can seek out and destroy attacking aircraft. Where the harbor defense guns could be handled and maintained by a handful of trained men, Nike requires more than 100 highly skilled men. This new defense weapon with its complex control mechanism contains more than 1,500,000 individual parts. You can well imagine the skills and abilities required to manufacture, maintain, service, and fire such a weapon.

As we in America look back in our history, we realize that we have been complacent about our natural resources—our timber, our iron, our oil. Likewise, I think you will agree, we have been complacent about our need for scientists and technical experts.

Had it not been for Hitler's barbaric destruction of human beings, the Germans would probably have been the first nation in the world to develop the mighty power of the atom. Fortunately, General Groves and America's scientists had the assistance of a handful of scientists who came to America to escape Nazi- and Fascist-dominated Europe—Einstein from Germany, Fermi from Italy, Meitner from Germany, Szilard from Hungary, and Bohr from conquered Denmark.

In contrast, it is perhaps in the development of scientific and technical manpower that the Russians have shown their greatest resourcefulness. Ever since the days of Lenin the Russians have been trying to catch up with the West in the scientific fields. Today they are making a major effort to develop trained manpower.

The Russians obtain their scientific manpower by directive, but I believe the freedom and incentives of our system give us an enormous advantage in this regard. Nevertheless the Russian efforts to increase their technical and scientific manpower should

give us pause.

We have indeed been entirely too slow to realize how closely our country's economic and military strength is tied not only to the exceptional contributions of the great scientists, but also to the everyday skills and abilities of our workers. No research laboratory could operate; no pilot models could be developed; no manufacturing plant could produce without the diversity of skills represented not only by our scientists and engineers, but also by the electronics technicians, the draftsmen, the setup men, the maintenance experts, the machinists, and a host of others.

And parenthetically let me just say here that likewise, we have been too slow in realizing how closely the worker's own individual economic security is tied to his skill ability. In many ways, from a worker's own selfish point of view, there is no law, no program, no protection as effective in promoting his own security as his skill.

What appears in our country to be solely a shortage of scientists is in reality a shortage of scientists and a shortage of skilled workers and technicians needed to back up the scientists. If the engineer, the physicist or the designed, is short of aides, or if the plants which make his product are short of skilled mechanics and technicians, then his skill is wasted. In short, we have to look behind the top scientist to see the full story. And that is what I would like to do with you

There are 64 million workers in America and of these about 9 million are skilled. That means they have distinctive abilities and competence in work. This group cannot be increased overnight. They are the product of years of experience and training. Many semiskilled workers eventually move up the ladder to become skilled workers, many skilled workers move into the scientific and professional group; and also, as I have mentioned, the contribution that the scientist makes is of no practical value unless what he develops can be manufactured and used. This, in turn, depends on skilled worken and technicians.

The largest skilled group are in the classic trades such as the craftsmen in the building trades, also maintenance and repair and metal machinery. Many skilled workers are in trades with long traditions—the glass-blower, the carpenter, the machinist, the draftsman, the milliwright, the typesetter, the baker and the barber. Others are in comparatively new fields such as the aircraft mechanic, the electronics expert, the orthopedic technician and the X-ray technician. In many jobs the old name has acquired new and different meaning. The electrician, for example, has a job wholly different from his predecessor half a century ago.

This is not a complete picture, however, for this does not indicate the segments of our work force where we are wasting workers who could be used to answer the urgent call for skills from industry and the armed services.

For example, women are grossly underrepresented among the skilled workers except for a handful of dental and medical technicians and foremen in the garment industry. Also, there are relatively few skilled Negro workers. As I said at the outset, we just cannot afford these types of waste.

In seeking the reasons why these groups have not entered the skilled group, it is first necessary to find out exactly how workers acquire skills. We must start with the home for there is where the basic attitudes that a man or woman has toward work are formed. The skilled craftsman is no accident. He is is a product of ambition, intelligence, purposeful drive, and opportunity.

He must have a firm background of basic knowledge about his trade and he must be able to develop his native talent to the utmost.

Schooling gives a worker the basic skills through which he can begin his development. Without the opportunity to acquire basic literacy, to master numbers, to be able to communicate, to learn self-discipline, he has no base on which to build the special competences needed to be a skilled worker or technician.

The Armed Forces are now an important training ground for a large number of young men. In present-day America, most men spend between 2 and 4 years in the armed services. Maybe they do not come out as completely polished skilled workers, but, nonetheless, anyone who spends 4 years in the Air Force, for example, on a first enlistment, will be one or two jumps up in the acquirement of skills. As we trace back the development of the skilled worker, we find that he frequently gets his initial stimulus and some advanced training in the Armed Forces.

There are four main additional sources through which a young person now gets his skill training. First, there are the vitally important formal apprenticeship training programs sponsored and promoted with industry and labor by the United States Department of Labor. Second, there is the relatively new development of the technical school or college. New York State has a large number of technical institutes as does California. Then, thirdly, industry has been moving toward different types of training

programs which add to the skills and competence of workers and which definitely contribute to a man's being transformed from an unskilled to a semi-skilled or skilled worker. I will discuss later how closely this training responsibility of management is related to a worker's economic security.

The last source of training, which accounts for most of the skill training today outside of the Armed Forces, is perhaps the most interesting of all and is not very well understood. In this category is the man who become skilled simply on his own initiative through experience, by changing from one job to a slightly better one, learning as he goes along from the fellow at his elbow.

This obviously is an admirable type of man and he should never be discouraged from his efforts to pull himself up. This type of skilled worker often lacks the versatility and training depth that the more formally trained worker has. But on the other hand, some of our best skilled workers are in this group, but many of them are good only at a specific job. In terms of our national security and in terms of meeting the demands of an ever-increasing mechanization in industry, versatility and mobility are becoming a necessity for the skilled worker.

It would be reasonable to inquire now What is the exact nature of the shortages of skilled workers and technicians? The simplest way to do this is to examine the problem in terms of the military, since there we have the best facts and figures. This does not mean, however, that industry does not suffer from skill shortages in very much the same way the armed services do.

By the end of World War II, there were almost half a million people under the age of 30 fit for military service, but they were deferred because they had industrial skills needed to meet the procurement requirements of the armed services. To give you just a rough idea of the kinds of people we are talking about, it was the aircraft mechanic, the blast-furnace blower, the cable splicer, the electrician, the lineman, the molder, the precision lens grinder, the X-ray equipment serviceman, and the tool designer.

These shortages existed at a time when American industry was operating to maintain an armed force of over 11 million men 10 years ago. When you look at the technological changes that have taken place since World War II, can you picture the industrial skill shortages which would result from full mobilization specialists, highly trained electronic experts who can repair such an instrument as Nike, technicians who can handle the modern radar equipment which has changed so much since World War II days and a host of others too numerous to mention.

Today, the Armed Forces, with a strength of only 3 million men, are roughly 30 percent short on fully qualified skilled personnel needed to fill many thousands of critical military jobs. For example, there is a need for some 35,000 aircraft mechanics and electronics technicians; about 25,000 electronic-equipment operators; 18,000 communications-equipment mechanics, and so on. These shortages reflect similar shortages in private industry. For every 3 skilled persons or technicians that the armed services require, only 2 are currently available, and the individuals who are in these positions in large part have been pushed in without adequate training.

Further evidence of the impingement of the shortages in this area on the efficiency of the armed services can be illustrated by what happens at the end of the first term of enlistment. Who reenlists? It's the military police, food service people, to some degree the automotive-maintenance men, the infantry, and supply personnel. But in the

more specialized and technical areas, only 1 percent of the electronics-maintenance personnel are willing to reenlist, which simply means that industry is bidding very high because these men are scarce. Your armed services are in a poor position to meet this competition, although if the Congress approves the new military-pay bill, the relative position of the armed services will be improved. More pay for the military, however, would tend to transfer military shortages to civilian industry, until a more extensive training program is undertaken.

In short, it appears that the more skill a soldier has, the less likely he is to reenlist, which, of course, throws a very heavy weight on the services in still another way. They have to take a large part of their budget and reinvest it in each 4-year or 2-year cycle to begin to train new people and as soon as they are partly trained, out they go again. This level of training in the Armed Forces undoubtedly has a direct relation to

Perhaps the most important problem in connection with the expansion of skills is the relation of schooling to a man's capabilities. Schooling is the base from which workers move on to acquire special competence. To give some indication of the way in which poor schooling reduces the number of men able to take advanced training in the military or even in civilian life, here are some startling facts.

Out of the First Army area, the overwhelming majority of the young men who are examined have enough educational and mental equipment to be taken into the Armed Forces. Only something like 7 percent fall to pass the mental examination. And in the Fifth Army area, less than 5 percent of the population, really the mentally deficient group, fail to make the grade. But in the Third Army area, where there were sometimes lower educational standards, as many as 1 out of every 4 persons cannot pass the simple 4th grade test the Armed Forces gives as an absolute minimal requirement.

So you have a situation where the Third Army area has five times as many people rejected as the Fifth Army area, and this is a direct consequence of the accessibility of basic schooling. Fortunately this situation is definitely better now than it was a few years ago and is improving all the time as new schools are being constructed and the general standard of living is being improved in those areas which have previously lagged behind. As they accelerate their progress the whole Nation will gain in military and industrial strength.

As you know, the armed services divide their personnel into five broad categories based on mental test scores. I and II are good, III is average, IV is below average, and V they do not normally take.

Now, of the people whom the armed services take from the different regions of the country, we see here 1 out of every 2 from the Third Army area falls in group IV or below, which means that they are definitely not material for further training within the Armed Forces.

In contrast, the First and Sixth Army areas, only 1 out of 4 of those who are finally taken in would not be good material for further training.

There is a very strong relationship between the educational level of the population and the number of well qualified people it can contribute to the skilled work force of the Nation both in and out of the armed services. In the First Army area more than 1 out of every 2 boys graduating from high school, and 40 percent of those who enter the Armed Forces are in the upper groups and definitely trainable. In the Third Army area, where only 30 percent of the young men of military age are high-school graduates, only 16 percent of those entering the Armed Forces

manage to qualify for the first or second group.

These proportions hold up throughout the country. Wherever you have more high-school graduates, you have the highest amount of good, qualified manpower. In the Far West, for example, 2 out of every 3 are high-school graduates and about 43 percent qualify for the upper groups.

We are all interested in low taxes, but we must realize that if low taxes mean poor schools, and poor schools mean lack of adequate skills, then our economic future and our national security may be jeopardized. In addition, industry must spend more to train those who have not had the basic education necessary to perform the work modern production requires.

Some areas of the Nation have had poor roads, isolated communities, inadequate natural resources, nonproductive land, and little industrial development. Such areas have lagged in providing satisfactory educational opportunities for their children. This has perpetuated the areas disadvantage from one generation to the next.

Fortunately, in recent years some of these areas are spending a great deal of their resources to narrow this educational gap and provide better training for their children. The beneficial results of this investment have not yet been seen because there is a time lag between the training of children and the production of workers. The dividends from this expenditure will, however, start being apparent in a few years.

Now, as I said in my opening remarks, this in a very real sense is a problem on individual economic security as well as one of national security, because a worker's ability to make a living and support his family is tied very closely to his skill. In many ways, perhaps, the most valuable thing that an employer can give his employees is skill training. This is true particularly today as mechanization grows and changing industrial processes demand increased versatility and ability. Without the versatility that comes from skill, a worker in a very real sense is handicapped. If, for example, the plant he is working in is shut down, or if his trade declines in usefulness, his one hope for real and permanent economic security lies in such skill as he may possess. After he has collected his unemployment-compensation benefits, this is all he has to help in continuing to sustain himself and his family. It is this—a worker's skill—that will give him the ability and confidence to seek and receive work.

If you look at the areas of our country which suffer from chronic unemployment, I think you will see that many of them are areas whose skilled workers know only one skill. And this, generally, is a skill for which employment opportunities are declining. Furthermore they are areas where, because of age, tradition, lack of education or lack of far-sighted industrial leadership there is a resistance to training and retraining.

There are some communities in the New England area, for example, which have for many years concentrated on one industry—textiles. To attract new industry into this area and to advance the economic security of its workers there must be provision made for widespread retraining.

The most serious underemployment in the country probably exists in the areas whose workers are either engaged in marginal farming or coal mining. There, practically the only skill that any workers know is coal mining. If new industry is to come into these areas, and if the economic security of the workers in these areas is to be improved, skill training is a prime necessity. And before even skill training can start there must be an improvement in ordinary basic education.

The more complex the industry of our country gets, the more important the skill

of each individual American worker is going to be, both to him in terms of his economic security, and to his country in terms of national security.

I think you will agree with me that the United States faces a real problem here and that it is one of critical importance. The Communist-dominated world outnumbers us in terms of population. We, therefore, must make up in skill what we lack in numbers.

There is no simple or single way in which we can raise the level of work skills in our Nation, and surely no way that the Federal Government can or should do it alone. This is a challenge to every segment of our society, particularly to industry, labor, and the local community.

We cannot afford to waste our manpower as we are now doing.

We cannot afford discrimination which wastes the skills of more than 6 million Negroes.

We cannot afford the pitifully bad schools which plague many areas of this country.

We cannot afford the prejudice and shortsightedness which today are making it increasingly hard for workers over 45 to find a job.

We cannot afford not to make the most effective use of the 20 milion women in our work force.

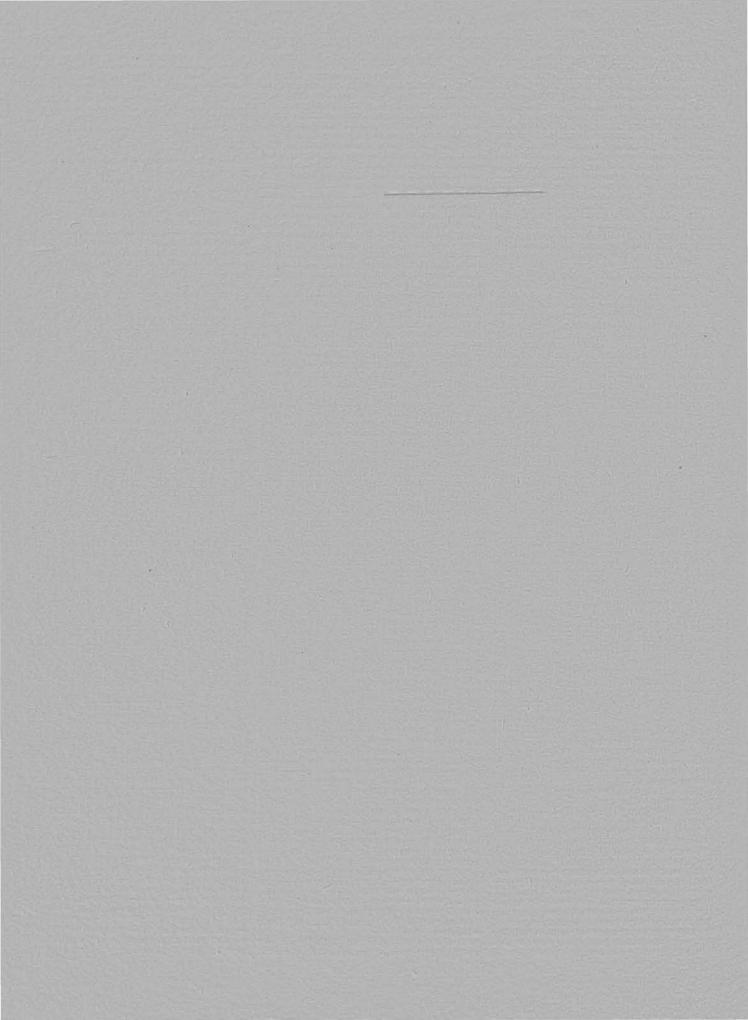

We cannot afford haphazard and ineffective training programs.

These are the areas where we all must strive for improvement. It is to the interest of you, the business leaders of America, to lead the way in this effort. We in the Department of Labor and the rest of Government can help. We can promote training and provide the facts and figures, but, in the last analysis, it is up to you to do the job.

It is the skill, ingenuity, and know-how in the brains and hands of American workmen that have built the sinews of a mighty America. This, together with our spiritual heritage, has made us a great Nation. It is my considered opinion that the level of work skills among our working people today has deteriorated dangerously and could perhaps imperil our survival as a nation. Furthermore, it could imperil the individual economic security of our workers. We are all greatly concerned with the preservation and development of our human resources in terms of work skills is an even greater and more pressing concern and is worthy of the attention of every thinking person in the country. For upon the depth, breadth, and scope of the skills of American artisans may depend the hope of the free world. critical resouces must be cultivated with direction and perspective, and we must begin

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies: to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commis-sioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

Appendix

Credit Administration Appropriation Bill. 1956

SPEECH

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

The House in Committee of the Whole House on the State of the Union had under Consideration the bill (H. R. 5239) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1956, and for other purposes.

Mr. H. CARL ANDERSEN. Mr. Chairman, I yield myself the balance of the

The CHAIRMAN. The gentleman is

recognized for 14 minutes.

Mr. H. CARL ANDERSEN. Mr. Chairmen, I regret that the debate on this most important of all bills relative to the farmers of America, has been forced somewhat along political lines today.

It has always been my observation in the 11 years in which I have helped to handle this bill, that here was one measure and one subcommittee that has been devoid of politics throughout the years.

I hope that it will continue so.

Mr. Chairman, our Subcommittee on Appropriations for Agriculture, after 2 months of careful study, has reported this bill unanimously. It contains what we consider to be adequate funds for the programs of our Nation's basic industry, agriculture, for the coming year. While our subcommittee of seven members ap-Preciates the grave need for economy, we also recognize that agricultural prosperity is the foundation of a prosperous national economy. We feel that we have Worked out an equitable bill, fair to the farmer, fair to the consumer and more particularly a measure designed to promote the welfare of our great Nation. In reply to the criticisms made here on the floor relative to the report on our bill let me just say, Mr. Chairman, that it has been my experience during the 11 years in which I have helped handle the annual agriculture appropriation bill, that the report is the responsibility and is prepared largely by the chairman of the subcommittee. Certainly the other members, including the minority members, had the privilege of looking over the rough drafts but in the main this report is the work of our chairman, the gentleman from Mississippi [Mr. WHIT-TEN]. I want to make it clear also, Mr. Chairman, that while I agree with the major portion of this report, I would, if I had the privilege, strike out certain

Department of Agriculture and Farm statements. However, I feel that in the main we have given you a comprehensive and informative report and a good bill.

PARITY FOR AGRICULTURE

The Seventh Congressional District of Minnesota, which I have had the honor to represent for nearly 17 years, is one of the few strictly agricultural congressional districts in America. Certainly the business people in the 155 villages and towns in my district and in the other than rural districts cannot prosper unless the farmers who buy goods, manufactured products and services from them receive a fair return for the food and fiber they contribute to the Nation's economy. It is just as simple as that. If the farmer does not prosper, the income of the people in the city districts cannot materialize. We are interdependent and no one segment of our economy can go it alone. Do you realize that the farmer representing 15 percent of our Nation's population produces food and fiber for the other 85 percent? In reporting the bill which provides for the reenactment of our 90 percent price support program, the House Committee on Agriculture brought out the fact that the parity ratio tumbled from 113 in February 1951 to 94 in January 1953. Since January 1953 the parity ratio has declined from 94 to a current level of 86, a change of 8 points while the average of retail food costs has remained unchanged, close to the postwar peak. The committee's study showed that since 1947-49 prices re-ceived by farmers for dairy products have declined 8 percent while retail prices on dairy products rose 6 percent. The farm price of food grains dropped 9 percent while bakery products at retail climbed 22 percent and fruit and vegetable producers received 4 percent less while consumers paid 12 percent more. The report disclosed that an important reason for the upward trend in marketing costs over a period of years is the increased packaging costs between the farm gate and the consumer's door. Increased labor costs also accounted for a part of the farm-to-table spread. Wage rates for workers in marketing farm food products increased from \$1.23 an hour in 1947-49 to about \$1.70 in 1954. Industrial workers can now buy more food with the earnings from 1 hour of labor than in any period of history. Out of each dollar spent by the housewife for domestically produced food, 57 cents now goes for processing, marketing and transportation charges while the farmer receives only 43 cents out of that dollar.

I have brought these facts to your particular attention since I want once and for all to disabuse your minds of the propaganda that has been circulated far and wide that 90 percent price supports are too generous. It is simply not the

fact, and these statistics prove it. Since adopting the flexible price support law, our price ratio has slipped from 90 to 86. The farmer does not want an unreasonable price for what he produces, but since his expenses for operation have remained high and his net profits have declined by nearly 30 percent since 1947, he is forced to demand a reasonable price support floor in return for the production of ample food for the Nation. He has no other recourse. Ninety percent price support under our basic storables is reasonable. We all know that when things are scarce prices are high and that high production should mean lower living costs. However, the equation has not worked out as simply as that. Is it fair to ask the farmer to produce the food and fiber the rest of the Nation must have without protection against a ruinous slump because the good Lord blesses us with bountiful production? The manufacturer of munitions of war is protected. Union labor is protected. Business is protected in many ways. Should the farmer be left to rely on the law of supply and demand? All we are asking is a square deal. We are certainly willing to give the same consideration to all other segments of our economy. Furthermore, agriculture must receive parity prices for its production to encourage this basic industry to produce the food our 160 million people require. Every year there are 2,650,000 more people in our Nation who must depend on agriculture for their food. Shall we say to the farmer, "You produce more food than the rest of the Nation needs and we will pay you off by ruining your price level"? Is that a square deal? Shall the farmer be required to answer to the city consumer for the high marketing and distribution costs? I say to you Members from the city districts, let us give the farmer the break he deserves. Let us not close our eyes to the actual situation as far as the farmer's return for his hard work and long hours are concerned. You will not find any farmer putting in an 8-hour day or a 5-day week. There is no minimum wage, guaranteed annual wage, or unemployment insurance in the farmer's book.

If labor and industry are entitled to a square deal, how about the farmer? It is high time that we got the farmer's situation into the proper perspective. Let me give you an example of how I feel the farmer and everybody in our Nation could have been helped. Last fall the egg producers of the Middle West should have received at least 35 cents a dozen for good medium eggs, but because of a comparatively small 5-percent overproduction the egg market collapsed and the average run of eggs through my area brought the farmer scarcely onethird of what he should have received. A little commonsense price support operation at that time would have strengthened the market and would have given assurance of at least a partial fair return to the producer and prevented much of the financial loss suffered by the poultry industry amounting to nearly \$300 million over a few months' time. The Department's refusal to grant my request that they buy up the 5-percent excess production makes them responsible, in my opinion, for this tremendous loss in gross income for the country's egg producers. An expenditure of \$25 million, or a little more, to buy up this temporary 5-percent overproduction would have prevented the larger loss. The excess shell-egg production could have been donated to the school-lunch program and the income-tax branch of the United States Treasury would have been ahead through the returns in taxes received from the producers. The people who advocate controlling production by lowering or doing away with price supports on agricultural commodities forget the basic fact that the Nation as a whole can easily lose 10 times the cost of price supports by failing to support the market adequately. The egg market situation last fall is a clear indication of what happens when no support, or little support, in the line of a minimum price floor is guaranteed to the producer.

Time and time again I have heard it said that the 90-percent price supports under our basics have resulted in the accumulation of the commodities we now have on hand. Never once have I heard it said that prosperity for agriculture would justify many times the \$2-billion loss incurred to date over a 20-year period. Nobody can estimate how many billions came to the Treasury in income taxes during that period because of a prosperous agriculture.

Agricultural prices are on the way down today. One hundred percent of parity should be given to the farmers of America. A net income of approximately \$15 billion, or an average of \$3,000 per farmer on the 5 million farms now being operated, would result. For every 1 percent which the general parity index

declines below 100 percent, the farmers lose at least \$150 million in net income. The Nation as a whole loses seven times that amount, or \$1 billion in purchasing power for every 1-percent drop in the farmer's net income. Can we afford low farm prices? I contend that a depression will result if we permit this situation to continue. Today we are at the 86-percent level. It is estimated that the net income for 1955 will be \$12 billion or less. The curve of loss to the farmer in net income becomes sharper as the parity price index becomes lower. In this year 1955, when most other lines of industry are receiving the highest rate of income ever received, and when prices in Wall Street are so high that they are the concern of the Congress, the farmer will receive \$3 billion less in

net income, not gross income but net

income, than he should receive. I re-

peat: this \$3 billion net loss means a

decrease of seven times that amount, or

at least \$20 billion less in purchasing

power throughout the economic blood-

stream of our Nation. Mr. Chairman,

we have been pennywise and pound foolish in begrudging agriculture the 90 percent of parity price supports to which it is entitled not only for its own good but for the good of the entire Nation. In the single instance I have pointed out to you, we penalized the farmer because he produced 5 percent too many eggs for the 160 million human beings in this Nation of ours. Suppose the farmers formed a union and arbitrarily cut the production of eggs and poultry by 15 percent. The consumers of the Nation would then be fortunate if they could purchase a dozen eggs for less than \$1. Is it not better to recognize that the farmer is entitled to a fair price for the food he produces and thus protect the consumer from exorbitant prices because of scarcity? That fair price should be 100 percent of parity, which in itself is an ever-changing factor, as cost of production changes.

I wish some of those who worry about our surplus foods and the fact that we have some \$7 billion invested in farm commodities at this time would visit some of the Near East nations as my subcommittee did and see the results of insufficient food supplies. If you saw the 450,000 Arabian refugees along the border of Israel, as we did, and the little children who have lived in these camps for the 7 or 8 years of their lives with only half enough food, or if you had gone into Pakistan with us and had seen the millions of half-starved refugees that were thrown out of India, you would realize, as we did, what a blessed country America is and how vital it is to the rest of the world that we continue our high rate of food production. These other nations have a real problem. should share our surplus with them. Those who consider surplus food a curse should take time out to count their blessings. If this great Nation of ours ever comes to the point where it cannot produce sufficient food for our people, then we will be in real trouble.

Our subcommittee could not, of course, go along with the Department's sharp curtailment of the so-called action programs. The Department came to us with a budget providing for reductions in the action programs, including plant and animal disease and pest control, Soil Conservation Service operations, flood prevention, inspection of fresh fruits, vegetables, poultry and eggs, and the school-lunch program. Our subcommittee restored the proposed reductions in these important programs which relate directly to our three greatest assets. children, soil, and water, since we believe firmly that expansion rather than reduction can be readily justified.

Our subcommittee restored the proposed reduction in funds for the Soil Conservation Service and provided an increase for technical service to staff the 58 new soil-conservation districts to be established during the coming year. We felt it was more intelligent to attempt to prevent the results of the drought and dust storms and other hazards which face the farmer than to let them occur and then endeavor to meet them. Work on the Andersen-Hope watershed-protection program has not proceeded according to schedule. Our

subcommittee also concluded that the work on the 11 old authorized watersheds should certainly not require 25 years for completion. We would like to see an earlier date set, and it is very apparent that the expansion of this type of conservation work to other areas of the country is not proceeding rapidly enough to meet the real need and demand. We, therefore, provided sufficient funds to restore the reduction in flood-prevention funds and increased the allocation for the work on this and the watershed-protection program.

The reductions proposed in the insect and animal disease control programs and the inspection and grading of fresh fruits, vegetables, poultry, and eggs were restored.

The subcommittee provided a total of \$37 million, or an increase of \$1,178,000 over appropriations for 1955, for the Department's research programs and insists that the work be done on worthwhile projects. Of this amount, \$200,-000 has been earmarked for special research on the effect of acreage reductions on the local and national economy. If, temporarily, we are producing too much food in this great Nation of ours, why not take the most practical course and remove 35 million acres of farmland from cultivation? Why produce wheat, corn, and cotton and other crops in surplus? Why not attack the problem at its roots and keep sufficient land out of production to prevent these surpluses? Early in January I introduced H. R. 2370, which so provides and was glad to note recently that Mr. Schumann, president of the Farm Bureau. agrees largely with my proposal. The Izaak Walton League has gone further and announced that they advocate taking 60 million acres of marginal land out of production. Let us, as I proposed several years ago, take 35 million acres of farmland out of production and turn it into a soil fertility bank. Let us retire this much land from production and pay lease rentals averaging about \$12 per acre to farmers who cooperate. This will cut down the surpluses and help maintain parity prices for what we do produce. It would do much toward solving the price-support

Particular mention was also made in our subcommittee's report regarding the recent deemphasis on home economics research. Testimony we took from persons engaged in home-demonstration work with farm families indicated that some part of the funds provided for the Home Economics Bureau should be used on such projects as household food consumption and family budgets and expenditures.

Seventeen million seven hundred and fifty thousand dollars was allotted for plant and animal disease and pest control. This represents an increase of \$496,000 above the budget estimates, including a supplemental of \$500,000 to meet a grasshopper emergency in the West. With these restored funds, the Department will have sufficient latitude to work out arrangements with the States as to adequate financial support and uniform quarantine regulations for those programs where further Federal

Federal participation in these programs Will, of course, always be necessary to assure free and unhampered interstate shipment of agricultural products.

The Meat Inspection Service was allotted the full budget estimate of \$14,-325,000 which will permit continuation of the program at the same level as was

authorized in 1955.

One million nine hundred thousand dollars has been allotted for research in foot and mouth disease and other contagious diseases of animals and poultry. I am a strong believer in research and in the dissemination of the results of the Department's findings and certainly hope these funds will be used to practical advantage.

There is another basic problem which I wish to discuss in the few minutes left to me. In my opinion, the Department officials and the Bureau of the Budget made a very grave error when they advanced the idea through smaller funds that the Soil Conservation Service should be subordinated to the Extension Service, and it would appear, gradually eliminated. Our subcommittee very definitely considers that these two great organizations are essential to the welfare of agriculture in America and agreed that neither one should be subordinated to the other. We have made appropriations available in this bill of \$48,895,000 for Extension and \$45,475,000 for payments to the States and landgrant colleges, for experimental stations, and we increased the item for soil-con-Servation operations by \$2,916,379 above the budget request.

The Rural Electrification Administration's program, so vital to every farmer in the Nation, was allowed \$160 million in loan authorizations, the full budget request, together with an additional \$100 million injected by our subcommittee for a contingency fund to enable the Secretary of Agriculture to meet any large or unusual needs in any area of the country which could not be handled Within the regular authorization. With an estimated carryover of \$21 million and probably rescissions of \$4 million, the REA will have a total of \$185 million available for electrification loans during the coming year, exclusive of the contingent fund I mentioned.

The rural telephone program was given \$75 million, which represents an increase of \$5 million over the budget estimate and should enable the telephone program to continue at the same level as was authorized last year. There is a large backlog of loan applications on hand and our subcommittee felt it would be unwise to reduce the funds for the program below last year's level. We hope that the additional funds authorized for the rural telephone program will speed up the handling of loan applications and construction work.

We have provided \$185,217,957 for reimbursements to the Commodity Credit Corporation to take care of funds advanced for special programs authorized by Congress. The very successful Paki-

Withdrawal appears warranted. Some stan wheat program was one of these for which CCC is being reimbursed.

As I said, when I opened my remarks, we have brought a good bill to the House and we have provided for the agricultural programs for America very adequately. I hope the membership will support our measure.

A Proposal to Repeal Federal Taxes on Gasoline, Lubricating Oils, and Diesel Fuel

> EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. PATTERSON. Mr. Speaker, today I introduced a bill in Congress to repeal Federal taxes on gasoline, lubricating oils, and diesel fuel.

If my proposed legislation is enacted it will save Connecticut's taxpayers over \$10 million a year and return to the voters the right to determine when, where, and what amount of their tax dollars are to be spent for highway improvements. This is the American way.

Nor are these the only objectives I have in mind in submitting my proposal to Congress. I offer the following additional reasons:

First. During the past several years the Federal motor fuel taxes collected in Connecticut were more than double the Federal allotments for highway construction in Connecticut.

Second. Only a few days ago President Eisenhower's own United States Comptroller General, Joseph Campbell, told the Congress that the administrationsponsored \$101 billion, 10-year interstate superhighway program raised "questions of legality," and indicated he might officially rule against the very heart of the program-the earmarking of Federal gasoline taxes to pay for highway construction.

Third. In the broad constitutional concept of States' rights, the construction, improvement, and maintenance of State highways is the primary responsibility of State governments.

Fourth. The construction of proposed defense highways is the responsibility of the Federal Government, and should be financed by special appropriations of The American Constitution Congress. provides that the common defense of the country is vested in the Federal Govern-

I wish to point out that the 1953 allocation of Federal funds to build highways in Connecticut was only \$4,897,000, compared to the \$11,512,000 paid into the Federal Treasury from Connecticut under the 2-cents-per-gallon Federal levy on gasoline and the 6-cents-per-gallon Federal tax on lubricating oils. During the same year the 4-cents-per-gallon

Connecticut State tax amounted to \$23,-759.000.

The United States Bureau of Public Roads estimates that approximately \$12 million will be collected this year in Connecticut. New allocations-fiscal year 1956-of Federal funds for Connecticut highways will be \$8,086,262-primary highways, \$2,057,610; secondary highways, \$1,031,625; urban roads, \$3,350,400; interstate highways, \$1,656,627.

While it is true that the Federal motor fuel taxes are not allocated directly to States for highway construction, but are revenues going into the general Treasury funds, the whole theory that Federal grants in aid for State highway construction is built on the premise that the Federal Government is making a comparable return for tax dollars collected. This is a distorted concept. Furthermore, the Federal Government has never adequately supported badly needed farm to market roads, but concentrated on expanding the bulk of Federal aid on building superhighways in sparsely settled areas of the West or poor sections of the South. This is another reason why the Federal levy ought to be abolished. But I am not in favor of abolishing the Bureau of Public Roads needed to plan and supervise defense highways and act in a research and advisory capacity to State highway departments.

If the 2 cent a gallon Federal gas tax is relinquished, the States can reimpose it to meet the specific needs of their own highway program. An intensified State and local highway program is badly needed in Connecticut.

In the event of air-atomic attack, the roads of Naugatuck Valley are appallingly inadequate to meet the needs of evacuating the entire population as now projected by the civil-defense planners.

In view of the fact that Naugatuck Valley has been designated a probable critical target area, civil-defense officials are planning a simulated attack exercise beginning June 15 to test civil defense operational procedures.

If a rapid mass evacuation of only 50,000 people in the Naugatuck Valley was undertaken, a terrible traffic jam would result. But a "dry run" of this nature would certainly highlight the essential need of defense highways in the valley.

I will support the proposed Federal superhighway program if all Federal automotive and motor-fuel taxes collected in Connecticut are earmarked for highway use in the State. Comptroller General Campbell's questioning the legality of earmarking these funds to retire the highway bonds calls for a reevaluation of the whole program.

Joe Campbell has the statutory authority to spike the very heart of the program, therefore my bill will release the Federal Government from the burden of collecting a gas tax it probably cannot use for highway building and allow the States to reimpose the tax where it can be legally earmarked to build drastically needed public highways.

Gen. Raymond S. McClain: The Best Weapon Is Still Man

EXTENSION OF REMARKS

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. JOHNSON of California. Mr. Speaker, perhaps the most outstanding civilian soldier of the second World War was Lt. Gen. Raymond S. McClain.

Life Magazine was thoughtful enough to send to me—and I assume to all Congressmen—a copy of an article written by General McClain during the last few days of his life.

It is the most powerful and convincing article on the need for trained reserves and the way to have them at all times that I have ever read.

In addition to the tremendous record as a soldier in the First World War and the Second World War he was an outstanding citizen. While Oklahoma claimed him he was really a national citizen. In addition he was a wonderful friend, charming, thoughtful, kind, and unassuming. I wish that every person in the United States, in this critical time, could read his explanation of the muchmaligned UMT plan that would, if put into effect, keep us in readiness for any eventuality all the time with a minimum of sacrifice and great benefit to those who were in the program.

Under leave to extend my remarks, I include the article, which follows:

BEST WEAPON IS STILL MAN
(By Raymond S. McLain)
There has seldom been a more maligned

and less understood subject than what has popularly become known as UMT. sal military training is strictly an American term, and strictly an American concept. It envisages a short period of military training for all fit young men, after which, as members of the reserve, they will stand in readiness to defend their country when the need arises. The basic idea in its present form was devised by Gen. George C. Marshall as an economical, equitable plan for meeting the accelerated speed of modern war in its initial stages. Marshall's belief in it was spurred by the many letters he received from those of us who had to command troops in combat and from our reports about shocking burden our soldiers had to withstand when the enemy bore down on us with superior strength, making it necessary for us to keep trained men in foxholes week after week and even month after month under distressing conditions because we had no trained replacements Britain, France and in fact all but very few of the world's nations have systems to the same purpose, but employ what may be actually described as universal service or conscription. The basic idea of those who advocate UMT is that it can give us adequate preparation for less cost in money to the Nation and less

required by selective service.

Since the establishment of this Nation there has been a cleavage in thought between those such as Washington and Jefferson who advocated strengthening our reserve forces and those professional military men who followed what has been called the "Utopian plan" of large and expansible regular forces. In the old days, this latter theory, based on

individual sacrifice of life and time than are

the idea of a force large enough to perform until general mobilization could be accomplished, seemed reasonable enough in view of our distance from Europe and Asia.

All of our wars have been eventually fought by civilian soldiers. The present problem is, shall we train them or not? If so, shall we keep them, as Russia does, for long periods in the regular forces? Or shall we raise them to a level of training so that they can be profitably utilized in case of emergency, but in the meantime are free to act as individuals for the Nation's welfare?

Here are some of the arguments used against UMT:

"It is against our traditions and contrary to the way of life our ancestors visualized for this new country. Our ancestors came over here to escape just such a system in the old countries and to avoid wars."

We have been shedding traditions ever since we shed the tradition of the divine right of kings. Some of our ancestors might have come over here with the idea of escaping military conscription. Probably more came for other reasons. But all had other ideas in their minds too. Our ancestors wanted and had, and we their descendants have, religious liberty, liberty of conscience, liberty of assembly, of petition, of the press, of personal choice of the means we employ to live and to enjoy living. Our ancestors' belief in defending these values overwhelmed their belief that they could avold wars, but our fallacious devotion to unpreparedness nearly cost us our independence, did cost those who fought the war for independence and every war since unprecessary sacrifice.

and every war since unnecessary sacrifice.

The voluntary system of fighting wars has been a delusion. Never have enough volunteers been available in any major war. Equity of burden in war should be just as essential an element in our existence as equity of benefit in our civil existence. What could be more democratic, more fair, more American? The volunteer system in time of war can only become a device used by those in authority to avoid the responsi-bility of making fair decisions as to who should perform hazardous duty. Any commander who calls for volunteers to undertake an extremely hazardous mission is shirking his responsibility. The courageous men volunteer time and again until there are few left. Why should the most courageous be liquidated first by their own generosity of spirit?

"Some say that massed armies are a thing of the past; that Russia so outnumbers us, man for man, that we cannot hope to meet its challenge in ground warfare."

Massed armies, as popularly conceived, have been on the decline since the Napoleonic wars. With continuing improvement in the efficiency of firearms, commanders have constantly had to revamp and disperse their troop formations in order that these could withstand the type of fire delivered against them. But because of new weapons and logistics, and because of this need for dispersal, major wars have required more and more men than ever before, and there is no indication that this will change in the future. Despite all the so-called ultimate weapons developed since the turn of the century, more and more men, not less, have engaged in our wars.

That Russia has more manpower and cannot be matched man for man is sheer fallacy. The total population of Russia and her western satellites was about 50 million less than that of the NATO countries before Greece and Turkey were brought into that organization. There is little question that the man of the NATO nations can acquit himself better on the battlefield than the average Russian because of superior fire-power, control, and mobility. In the factory he can produce probably six times as much; on the farm, probably four times as much; and in administrative positions probably

outwork the Russian better than two to one because of less red tape.

Any of us who were in contact with the Russians at the end of the war know that no policy or strategic decision can be taken by any Russian unless he has direct orders from Moscow. We can all imagine, too, how much bureaucratic machinery is required to transmit requests to and get orders from Moscow.

"Germany and France have both had universal service and both have been defeated whereas we as a Nation have never had either universal service or universal training and have always won our wars."

As a matter of fact, if France had not had universal service when World War I began, it would have been completely overrun. It was only because the French had trained men in readiness that they were able to stop the Germans before they took Paris. It might be more profitable to point to Switzerland and Sweden, both of whom have had a form of universal training and service and neither of whom has had a war in the last 140 years, while the United States has had five recognizable major wars and many little ones. In both World Wars and in Korea we had to resort to selective service before we could win.

"It is said by some that military training camps are dens of iniquity that would be bound to influence adversely the character of the 18-year-old trainees."

I have spent some 42 years around training camps, and it has been my experience that there is no more temptation at the average one than there is at the average high school in the United States. Training camps are run by officers who feel directly responsible for the trainees. And as an added safeguard, Congress, in the present Universal Military Training and Service Act, created the civilian-controlled National Security Training Commission to oversee training camps and make sure that the proper moral atmosphere exists.

"It is said that young men of 18 do not have the time to devote 6 months to military training."

Not only have many veterans of past wars taken much more than 6 months out of many of their lives, but some have taken as much as 4 or 5 years, and hundreds of thousands have sacrificed limbs or their very lives in order that those who advance such statements might enjoy the privilege of peaceful existence.

"Some people maintain that any military training program should be carried on in high schools."

There are over 23,000 high schools in the United States. To be carried on successfully the program would require building 23,000 armories, establishing 23,000 staffs to carry on instruction, providing 23,000 sets of equipment—and setting all this up right in the midst of our civilian life. Such a program would involve not young men of 18, but boys of 14, 15, and 16. Why shouldn't these youngsters be allowed to enjoy athletics and nonmilitary pursuits at this age?

It should also be remembered that many small high schools have less than 50 male students in attendance, while great numbers of our young men never finish high school and would escape all training. If there is any way to militarize this country, in my belief, a universal system of training in high schools would be the quickest way to do it.

I do not mean to detract from some of the fine private military schools which give this type of training as a part of their regular curricula, because in their case the individual has his choice of going or not going.

"Some argue that the training in a universal program would be largely wasted because it does not provide divisions ready to fight and that all training would have to be done over in case of mobilization because of advances in weapons."

This allegation completely ignores what UMT is supposed to do. True, it will not provide trained divisions ready to fight. But it will provide trained men ready to fight. There is no necessity for providing, at the moment the next war starts, all of the divisions that we would eventually expect to employ. What we will need is sufficient regular divisions so they can be deployed to the battlefield as rapidly as they can be used. By the time they had been deployed, we would have trained reserve divisions ready to follow them up and support them quickly.

To argue against this is just as logical as to argue that we do not need to harvest regular wheat crops; that we can wait until after we have run out of bread and then till the soil, raise the grain, thresh the wheat, mill the grain, and bake new bread as we need it—and presumably starve until all this has been done. A military training pro-gram allows us to lift men to a level of readiness from which we can complete the training process by the time we need them. A 6-month program will provide replace-ment with 50 percent more training than the 4 months that the law now requires before overseas service. From this pool of men Who do not belong to any unit, regular forces can be lifted from peacetime to wartime strength in a matter of days. Some of those regular forces could actually be maintained at less than war strength because of the existence of such a pool of trained reserves, and units could be lifted from peacetime to wartime strength with trained men and not with untrained or half-trained re-

After 6 months of UMT service and 3 years in a reserve unit young men would enter active service with over half of the training estimated as necessary for combat. The training they would get would be the kind men do not forget for a long period of time, like the ABC's of basic education.

This system would also avoid the shock of pulling men out of industry after they had established themselves in it over a long peric I and gained critical positions. In the Korean conflict, over 600,000 reservists who were veterans of World War II had to be pulled away from families, critical jobs, colleges, professions and industry because we did not have the trained nonveteran reservists which UMT would have provided had such a bill been passed immediately following World War II.

"We have an absolute weapon, the Hbomb, and therefore we do not have to have trained men."

This sort of argument has been cropping up for many years. Similar hullabaloo about "power weapons" has been heard whenever a new explosive has come to the fore. It is highly significant that as power weapons have become more and more destructive, losses on the battlefield have become fewer in proportion even as tactics and logistics have necessitated the use of more and more men. There was no battle in World War II and there was none in Korea where the casualties were as great for the number of men engaged and time elapsed as were the casualties on either side at Gettysburg or Fredericksburg—or even in any of the great battles of Napoleon, Caesar cr Hannibal. The reason is of course that commanders have found ways of avoiding such losses, largely by dispersion.

Dispersion is more practical now than it has ever been before because modern communications, rapid transportation and high mobility make it possible to plug gaps where breakthrough threatens. In Napoleon's time, the Ardennes breakthrough at the Battle of the Bulge would probably have meant disaster to the Allied forces. However, General Bradley's superior mobility and communications enabled him to move Pat-

ton's army to the Germans' flank and defeat them quickly.

Power weapons are extremely costly, not only in money but in the basic resources that go into them. They are also extremely costly to operate, requiring almost unlimited maintenance lines. This costliness has reached such a point that it is questionable whether or not the manpower devoted to keeping some of these weapons on the battlefield is commensurate with the destruction that they are capable of delivering.

Power weapons are even more costly in terms of their battlefield losses in the face of ever-improving counterweapons. In the latter stages of World War II, armor experienced approximately 10 percent to 14 percent per month attrition. In the next war improved means of destroying armor will make this figure much higher. Of course, tanks are now but a minor element in our array of power weapons. But the cost and the attrition of air power present the same problem multiplied many times. When a \$67 rocket launcher can knock out a \$180,000 tank, or a \$30,000 guided missile can knock out a \$9 million airplane, we must find means of employing the latter weapons in manners probably much less effective than the maximum possible if such defensive measures did not exist.

FORESTALLING NUCLEAR HORROR

No one can predict with certainty what the pattern of the next war will be. The type of aggression in Korea did not call for the all-out use of power weapons. It is immaterial to insist that if we had employed all of our weapons to their ultimate limit we could have ended the war quickly. The fact is that those in authority at the time decided not to employ them, and certainly there were good reasons-whether or not they were overwhelming ones is a matter of opinion. We might have bombed and destroyed many Chinese cities and destroyed China's means of production. But if such a thing had been done we would necessarily have had to expect retaliation, certainly on the great cities of Japan which were under our protection, possibly even on some of our own coastal cities.

Is it possible for us to fix the pattern of war? If our strategy is mass destruction through the use of nuclear weapons and airpower, who is to make the decision? our President do so, or must he consult our allies? Will Congress make the decision? Equally as important, when will it be made? Will the man who finally makes the decision by which millions of the enemy's women and children may be destroyed make it when he knows that hundreds of thousands of our own women and children will undoubtedly suffer a like fate? Will this man be able to say to himself, "I have not overlooked any alternative. This Nation has not overlooked any alternative. We have used every possible lesser means that could be employed." It seems to me that such questions will have to be answered in the affirmative before any human being who brings this vast destruction on the human race can do so with a clear conscience.

The question of when such a decision is to be made might depend on many circumstances. Not only must we consider the type of aggression that we are facing, we must also consider the possibility of the enemy's warning us that he will not use the weapon unless it is used by his opponent. If he gives this warning to the world, what position will it put us in if we come to the decision to adopt the strategy of total destruction? How would we defend ourselves before the world?

The answers to all these questions are very far from clear at this time. Certainly if we rely on the bomb and very little else, this is the only strategy open to us. But if we

have a large reserve of trained manpower, then we have a choice of what type of war we fight.

Trained manpower is our best assurance that the H-bomb will never have to be used.

Of course, there is the argument that no weapon has ever been produced that has not been used. That does not mean we should necessarily follow the pattern. Maybe there will be a first time.

Can we in any case be certain that a 5-day, 10-day, or 60-day nuclear war will be conclusive, or is it conceivable such a strategy against a great landpower will merely be the beginning of a war unimaginably terrible in its consequences?

Will it be our strategy to try to correct an impossible situation or to compound it by a means worse than the malady and a consequence more chaotic than human endurance can bear or human conscience tolerate?

The crux of national security is to protect the Nation and its institutions from destruction. The employment of a strategy based solely on nuclear weapons cannot properly be called a defense measure at all, for it almost guarantees the destruction of the very things we would be fighting to preserve. Thus what appears to be an easy way out—the reliance upon machines and atoms rather than upon trained manpower—becomes a trap for us all.

Is it not better that all of us bear equally the burdens and inconveniences of training for defense rather than face possible death, defeat, and slavery amid the ruins of our civilization?

God grant that we never descend so low in the enjoyment of our blessings that we lose the will to rise and defend the institutions that bring them to us.

Mistakes in History

EXTENSION OF REMARKS

HON, ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. BOSCH. Mr. Speaker, through the ages, as history unfolds, we are able to see the causes of the downfall of governments and people. We do not want future generations to read in their history books that the people of the United States lost their freedom in the 20th century because they allowed foreign nations to usurp this freedom through treaties, secret agreements, and so forth. The context of the Yalta Conference has made it amply clear that where the interest of our country and its peoples are involved complete disclosure and the opportunity for discussion and deliberation are essential. We must be alert to the mistakes of the past and avoid repetition in the future. It can and must be done. The Bricker amendment seeks to safeguard our sovereignty, and I am firmly convinced that it is necessary.

Under leave to extend my remarks, I include the following column of George Sokolsky, Mistakes in History, bearing on this subject.

MISTARES IN HISTORY (By George Sokolsky)

Those who make a faith out of humanity, rejecting the perfections of God for the perfections of man, often fall upon the error

of creating a deity out of a man. Thus, the followers of Hitler almost sanctified this curiously unattractive personality. We ridiculed the Germans for that, and the Italians for their adulation of Mussolini, but not the Russians, who had abandoned their God but carried ikons of Stalin through the streets.

In those very same years, there was a tendency in the United States to adulate Franklin D. Roosevelt as almost perfect, although in this country deification of politicians somehow did not take. We now know from the Yalta documents that Roosevelt not only had clay feet, but that he could speak out of both sides of his mouth.

Judge Learned Hand undoubtedly did not have Roosevelt in mind when he said:

"Over and over again such prophets succeed in converting us to unquestioning acceptance; there is scarcely a monstrous belief that has not had its day and its passionate adherents, so eager are we for safe footholds in our dubious course. How certain is any one of us that he, too, might not be content to follow any fantastic creed, if he was satisfied that nothing would ever wake him from the dream.'

But to me this applies to the whole cult of man-god worship which somehow diverts the human mind from tried experience which often is called orthodoxyevery brilliantly spoken absurdity that a popular politician advocates as sacrosanct. Roosevelt met Chiang Kai-shek at the Pyrasacrosanct. mids on November 22, 1943, and subsequently issued the Cairo Declaration. It sounded as though all questions relating to China were resolved in favor of our allies, the Nationalists. Within a few days at Teheran, Roosevelt apparently had already forgotten the Cairo Declaration. It is true that Chiang would have been happier had he been permitted to accompany Roosevelt and Churchill to Teheran, but Stalin did not want him for a very good reason; he planned to undo all that Roosevelt had promised Chiang, Stalin had no need for Chiang's presence at the rape of China.

The Teheran papers have not yet been published and the British do not want them to be published. But from the Yalta documents, we gain a fair insight into the nature of the Teheran conversations.

China, like Poland, was given no chance whatsoever at Yalta. Three men sat in a palace and cut paper dolls out of maps and millions of human beings found themselves enslaved and trapped.

What can be done about it? nothing. An historic mistake can only be corrected by war or revolution, by bloodshed and disorder.

But we in the United States can see to it that Yalta does not happen again. The Bricker amendment or some similar amendment needs to be adopted to safeguard our country from tired, sick, cynical or whimsical Presidents.

Kremlin Continues To Succeed in Lulling Americans To Sleep While It Plots Our Destruction

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

FEARFUL AMERICANS ASSIST REDS' DESPERATE CAMPAIGN

(By Edgar Ansel Mowrer)

Having failed to prevent the ratification of the Paris treaties rehabilitating and eventually rearming Germany, the Kremlin has plunged into a desperate campaign to prevent these treaties from being carried out.

It is being helped, unintentionally but definitely, by those Americans who fear another war more than they fear further Communist advance.

The Soviet plan is beautifully simple. The West must be disarmed while there is still

Disarming the West means, in Soviet eyes, (a) abolishing those superweapons in which the West is still far head of the Communists; and (b) keeping the West Germans disarmed despite the Paris treaties.

FITS PATTERN

Every current Soviet move fits this pattern. 1. Moscow has just revealed a doctored version of the London disarmament talks. As expressed by the Soviet London representative A. A. Gromyko to a TASS correspondent, the U.S.S.R. has aimed at abolishing superweapons and stabilizing conventional armies at the present level, without any German divisions on our side.

2. Premier Marshal Bulganin has tentatively accepted, without the usual conditions and propaganda squawks, the Eisenhower-George suggestions for a four power conference to decrease tensions.

3. After 10 long years of sabotaging the negotiations for a peace treaty with Austria, the Kremlin (as exclusively predicted here), now seems ready to sign such a treaty at a conference of the four occupying powers.

So much for the carrot side of the Soviet

campaign. Now the stick:

1. Moscow threatens to combine all the Communist forces in one big East European army under, naturally, a Soviet commander. Moscow threatens to denounce its 1944

defensive alliance with France.

RED HOPES

With these, and perhaps other similar measures. Moscow hopes to postpone if not to prevent the creation of a West German army and, by sowing discord among the Western nations, to compel the United States to revoke its recent decision to use atomic weapons, if necessary, against Red China.

The point is, taken together these Russian

concessions do not include one real sacrifice by the U. S. S. R. To date, they merely fit the by now thoroughly familiar pattern of peaceful coexistence talk. They do not preclude further Communist subversion, international intrigue, or even little wars. are merely intended to paralyze the adversary during the period while communism is growing strong enough for the final and, in Communist eyes, inevitable struggle with the capitalist world.

They show absolutely no change in the Red Russian, still less, in the Red Chinese attitude.

As of today, they indicate that a coming four-power conference at the highest level will be nothing but one more Soviet attempt to disarm our side while strengthening its own. This is demonstrated by the now monotonous Soviet declaration that a new war will not destroy the U.S.S.R., just the capitalist world.

EVER-MALEVOLENT

Soviet intentions seem (to this writer) as clear and as malevolent as ever.
Yet just as always, this "peace campaign"

is scoring some success, not only among our more exposed allies but in our very midst.

More and more frightened Americans are clamoring for the high-level conference, no matter how unpromising. Others, as pre-dicted here, are urging the administration to cease the drift into war by compelling

the National Chinese to withdraw from those offshore islands, Matsu and the Quemoys. Some American cartoonists are already asking our citizens if they wish to die for Quemoy-as though that were the issue. The New York Times, in an almost tearful editorial, appeals to President Eisenhower to "save this country and the world from irre-trievable disaster." And by "disaster" the writer means, not another Communist victory making an ultimate world war more certain, but an American decision to stand on the offshore islands even if it means fighting China.

Such a call for another surrender must be music to the Politbureau.

The Constitution-Temple of Liberty

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Congressional Record the excellent oration by Miss Kathleen Speer, of Altoona, Pa., a member of the senior class of the Altoona, Pa., high school, which she delivered in the American Legion oratorical contest held in

Washington, D. C., March 30, 1955.
Miss Speer won the American Legion oratorical contest in Pennsylvania, thus earning the honor of representing the Keystone State in the oratorical contest held in Washington, D. C. While Miss Speer was not adjudged the winner of the Washington contest, she made a highly creditable showing by her eloquent discourse on the subject The Constitution-Temple of Liberty.

Miss Speer's oration follows:

THE CONSTITUTION-TEMPLE OF LIBERTY (By Kathleen Speer, Altoona, Pa.)

Across the black abyss of tyranny the lamp of freedom in the temple of liberty beckons brightly to the oppressed peoples of the world. Its light burns into the hearts of the disconsolate and is reflected back from the far corners of the universe into the souls of men and women who live in fear and work in terror and die in horror.

We, the American people, are the guardians of this temple of liberty, of this lamp of freedom. Our forefathers were the builders of it. They molded and shaped our Constitution into a mighty barrier against the despots of the world. They took the Declaration of Independence and the Bill of Rights and fash ioned them into great, towering walls set firmly on the foundation. But they never closed the stars out by erecting a roof-and they never kept the multitudes out by building doors. It is through these open portals that the lamp shines.

How did this lamp come into existence? The foundation and walls of our temple were constructed from our most sacred American From what was the lamp of documents. freedom and its light constructed?

From the slap of red hot rivets being caught in a bucket high atop a skyscraper

and welded into a steel girder. From the aroma of apple pies cooling on the window sill.

From the "timber" of a calked boot, pine pitch smelling lumber jack and the "fore" of a relaxing businessman driving onto the

The lamp and its light were formed by a soldier saying, "I'm fighting in the streets of Korea so I won't have to fight in the streets of Hartford."

From a touchdown pass in the last 3 sec-

onds of the game.

From illicit whiskey stills in the Ozarks; from bebop and jazz turning the living room into a jitterbugging jungle and Mendelssohn turning Carnegie Hall into an enchanted wonderland.

From the marine praying, "Holy Mary, Mother of God * * *" as he zigzags across 200 feet of foxhoie-gutted ground to get a dismembered boy he used to throw touchdown passes to on Saturday afternoon.

From hayrides and hoedowns and country auctions and grabbing brass rings on the merry-go-round, and little girls grinning at you with pink cotton candy all over their

faces.

What is this Constitution of ours? No one yet has been able to lasso the definition with words and corral it within the confines of baragraphs or books. It is because our Constitution is a way of life—lived by every American. It is a million impressions of a million incidents that someone once labeled "Americana." Our Constitution is the small-business man, who is really about the biggest businessman that anyone will ever find anywhere. Our Constitution is Abraham Lincoln who is every American in every age and place who realizes that liberty is the breath of life.

It is a farmer picking up a musket and kissing his wife goodby. It is parents who are never quite asleep until the last of their brood is in for the night. Our Constitution is a song written by big Americans in words all Americans can understand, and the song begins, "We; the people of the United States." Because it was we who wrote the song—every American is a big American. Every American must be bigger and better and finer than he thinks he can be. Because America will be only as fine as is every one of her citizens. We all count. Each one of us, by his daily deeds, casts a vote in the ballot box of liberty. It is up to each individual to make his a vote of confidence for freedom.

Our Constitution is a temple of liberty—a temple that spans a continent, a temple that is a people, a way of life. A temple that is a people, a way of life. A temple that stretches to the far horizons where our practical dreamers focus their eyes. And in our continent temple we hear the sounds of a mighty people working. And the sound becomes a voice which says, "Greatness comes out of everywhere when it is free to come. It is free to come out of us. In America every man that can make a dream work is great."

We watch the flame of liberty in our temple—we watch the torch held aloft by 161 million hands and suddenly we know. We are this torch. Every American is a spark in the flame of liberty. Every American is a small flame in the large flame of Ireedom. And suddenly we learn a profound truth—that each one of us must be a torch consuming himself so that others may be inspired to become a part of liberty's great flame.

We watch ourselves working, playing, flexing our muscles, roaring with wrath or laughter—all because one-hundred-andsixty-odd years ago a handful of men had courage to fight for a way of life set forth in a document to which they had given birth; and because their posterity had the courage to keep on fighting for that way of life. They never forgot-and we must never forget that—that liberty is one of those sacred, priceless things that loses its preciousness and worth when it is taken out of the hands of the people. Its Worth increases as its use increases. more people who possess liberty the better it becomes. It is our duty to ourselves to hold our torch of freedom so high that it

shines into the heart of every man on earth. There are so many millions of people in the world who would give anything to be a part of America, a spark in Liberty's flame. We must give them the opportunity to become a part of our living Constitution, to dwell in our temple of liberty.

our temple of liberty.

Every American is an architect in the temple of liberty—each adding his bit to the sum total of effort and endeavor which comprises our temple. Each one of us has a vital part in perpetuating freedom; each one of us illustrates the workability of liberty as a living faith. Each day, through our actions and deeds, a block is added to the temple of liberty, and our temple will only be as strong and as invincible as are the Americans who each day make it grow.

The pages of history are crimson with the blood of our patriots and black with the names of our heroes. Those men made freedom work by winning a battle or harnessing electricity, or writing a dictionary, or hitting a baseball harder and farther than anyone else. They made freedom work. We must realize that freedom will work only as long as you and I can make it work. Our Constitution as a living unit of government will live only as long as you and I can make it live.

The ways of freedom are difficult ways to be enjoyed only as long as man can discover within himself the will to roll up his sleeves and grab a pitchfork, and wield an ax, and smash a hammer onto a horseshoe. Liberty will survive and thrive only as long as milkmen can whistle and street cleaners can sing. Only as long as we can write letters to the editor and have them published, only as long as little boys who are lost can go to the cop on the corner and be taken safely home; only as long as a man can stop being a barber and make a million dollars a year singing songs; so long as we have these things we have a living liberty and a vital Constitution.

Liberty speaks in many voices—in the clean, honest sweep of a church spire, in the whoops of children playing Indian in the summer dusk, in the voice of a man who has come back from war and of a boy who is going. It speaks in a Protestant girl singing Onward, Christian Soldiers, and a Jewish boy entering a synagog, and a Catholic woman saying the rosary. Liberty speaks in the sound of names—Kasmair, Klususki, Dorsay, Johnson, Costello, Pappayellion; and in the voice of a judge, and in the voice of a referee counting to 10, and always and forever in the soft rustle of ballots dropping into boxes.

Our Constitution—the temple of liberty—is only as potent and effective as is the life of every American, because without us there is no Constitution. Every one of us is a spark in the torch that brightens the world with dazzling brilliance, every one of us is a living Constitution, a living temple of liberty.

We will have freedom in our country as long as we keep the doors of our temple opened wide, as long as we let the stars shine down on our upturned faces, for we are Americans and our eyes must never be leveled any lower than the sky.

To paraphrase an unknown American

"Give us wide walls to build our temple of liberty, O God.

The North shall be built of love, to stand against the winds of fate;

The South of tolerance, that we may building, outreach hate;

The East our faith, that rises clear and new each day;
The West our hope, that e'en dies a glorious

way.

The threshold 'neath our feet will be humility;

The roof—the very sky itself—infinity.

God, give us wide walls to build this great
temple of American liberty."

Bossier City Post Office

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, an ugly situation is developing in the city of Bossier City, La., regarding the post office. The people in this great and growing community feel they are entitled to a separate post office. I have felt this way for a number of years; and I have been working steadily toward this end.

On June 20, 1953, I received a letter from Assistant Postmaster General Abrams, which was in response to my letter to the Postmaster General, which I read herewith:

JUNE 18, 1953.

Hon. Overton Brooks,

House of Representatives.

DEAR CONGRESSMAN BROOKS: Further ref-

Dear Congressman Brooks: Further reference is made to your interest in postal facilities for Bossier City, La.

A thorough investigation of this matter has been completed which discloses that no improvement in postal service would result if an independent post office were established at Bossier City.

As the present quarters occupied by the Bossier City branch are inadequate, the matter of a new location at a more central point with respect to the business interests and population to be served is now under consideration.

With regard to complaints of inconvenience in obtaining internal-revenue documentary stamps, delay in delivery of special-delivery matter, and evening collection of mail in the business area at too early an hour, these matters are being given attention with a view to taking corrective action.

No special advantages would be offered for the receipt and dispatch of mails in the event of establishment of an independent post office. In fact, a disadvantage would result in the delivery of special-delivery mail arriving on late evening trains and airmail flights if a later evening collection is furnished Bossier City.

As there are no railroad stations within the city limits of Bossier City and as no trains are scheduled to stop, additional expense would be involved in transporting mail between railroad stations and the postal transportation terminal.

The report discloses that sentiment for an independent post office is not unanimous. A representative of the Department contacted the heads of several concerns, many of which are heavy maliers, and such concerns were very much against the establishment of an independent post office requiring that they change their mail address.

The cost of operation of the present classified branch is approximately \$113,035.87 per annum as compared with an estimated cost of \$132,247.02 for operation of an independent post office, or a net increase of \$19,211.15 per annum.

In view of your interest, it is regretted that due to the additional expense involved with perhaps some disadvantages rather than any service advantages which may result, it is believed inadvisable to authorize an independent post office in Bossier City at this time.

Sincerely yours,

N. R. ABRAMS,
Assistant Postmaster General.

This rejection on the part of the Post Office Department of the application of the people of Bossier for a separate office has not been quietly accepted by them however. They still feel, and justly so, that they are entitled to separate and independent facilities for Bossier City. I know of no city anywhere that has the population and volume of business without an independent post office, and this community should have this particular service.

To show you something of the attitude of the people of Bossier City, which has a population of some 40,000 people, I reproduce herewith an editorial taken from the Sunday, March 20, 1955, issue of the Bossier Tribune entitled "Recuse 'Mr. Prejudice'":

RECUSE "MR. PREJUDICE"

There come times in the course of human affairs when long-sufferance loses its dignity and patience ceases to be a virtue. That time has arrived in Bossier City and Bossier parish in the matter of postal services.

When a people in the just exercise of appeal for redress of wrongs find that those in authority to hear their cause are unwilling to lay aside prejudice and listen with open minds to facts and reason, then common decency demands that they address themselves to whatever just action their sacred rights require.

It is a common concept of American justice that no person called upon to decide the fate of any human right shall preside in that office with prejudice. The people in Bossier City have recently and on former occasions appealed to proper authorities for rectification of certain intolerable conditions arising over the present deplorable postal service. In this matter they were entitled to and hoped for a hearing by an authority not bound by preconceived views. In this right and hope they have been woefully denied.

Last Tuesday in the formality of responding to this appeal Mr. E. W. Roderick, district manager of the Dallas Post Office District, came to Bossier City for the purported duty of hearing evidence and arguments in support of these claims. Instead of attending to these duties according to the concept of American justice, Mr. Roderick by design, word, and action cast aside reasonable procedure and reduced the so-called hearing to a hollow mockery. Even before any evidence had been offered to him in support of the position of the people, Mr. Roderick took the floor and indicated strongly that he came not to hear but to be heard; not consider but to force his preconceived views upon the appellants.

In view of this tack the people were forced to present their case amid an atmosphere hostile to their cause and marked by bureaucratic condescension.

But despite his previously expressed hostile attitude, Mr. Roderick gave repeated avowals at the close of the so-called hearing that he would not give a hasty decision but would keep an open mind. He kept this promise no longer than he could cross over the river. Whereupon he opened his mouth, closed his mind and confirmed the fact that he had come to the hearing with prejudiced views.

Listen to these words of his interview with a Shreveport newspaper:

"I am convinced that the people of Bossier City can get better service by being a part of the Shreveport post office, but I haven't been able to convince them."

Are those the words of an official who came to hear or consider? No, they are not. They are the confession of a prejudiced mind.

The lowliest person and the humblest cause of the people have a right to fair con-

sideration and when this privilege is denied the hearing is reduced to mockery of justice and a nullity. In view of this fatal error Mr. Roderick no longer represents proper authority in this case and his connection therewith endangers the rights of the appellants to fair consideration. His continuation to serve in the matter establishes a block upon human tustice.

There is but one just and proper course for the people of Bossier City to follow, and that is to demand that Mr. Roderick be recused because of prejudice and unfitness; and that the matter be reopened and a real hearing be held by impartial authority. These demands should go to Postmaster General Summerfield and to our representatives in Congress.

We are advising these officials of our at-

THE BOSSIER TRIBUNE, RUPERT PEYTON, Editor.

I also add to this statement the news article taken from the same issue of this paper in Bossier:

POST OFFICE HEARING IS REDUCED TO A NULLITY—RODERICK'S ASSURANCE OF FAIR-MINDEDNESS BROKEN

After he had given emphatic avowal of no hasty decision and assurance of an open mind on the matter to a Bossler City delegation of citizens Emory W. Roderick, of Dallas, district manager for the Post Office Department, proceeded to Shreveport where he gave an interview to a Shreveport newspaper declaring opposition to petitions for a separate first-class post office here.

Mr. Roderick held a so-called hearing at

Mr. Roderick held a so-called hearing at the city hall chamber Tuesday afternoon at which these assurances were given to the group. The following morning in Shreveport Mr. Roderick said in part to a reporter for the Shreveport Journal:

"I am convinced that the people in Bossler City can be better served by being a part of the Shreveport post office, but I haven't been able to convince them."

Although Mr. Roderick's quick change of tack came as a disappointment, it did not actually surprise many. He was unable to conceal his preconceived opinions, despite his pledges of impartiality. Even before the people had a chance to present one bit of evidence or argument to support their petitions, Mr. Roderick made opening remarks which revealed that he had come not to hear but to be heard.

However, after he had aired his prejudiced views, Mr. Roderick politely heard the people present their facts and arguments. He even expressed amazement at the disclosures made of the poor mail services received here, giving encouragement to some. However, he pointed out that most of the complaints could be adjusted with Bossier City still a branch office of the Shreveport office.

The people's side of the case was opened by J. Murray Durham, president of the chamber of commerce, which, along with the Doty-Sumner Post of the American Legion, initiated the movement. In a letter to the manager, Dr. Durham set forth 14 points why Bossier should have a separate first-class post office. In support of his contentions, several citizens in attendance spoke, pointing out instances of poor services.

Among the amazing disclosures made were that Bossier City is not even listed in the post-office directories; that Pineville and West Monroe, smaller cities than Bossier City and existing adjacent to a large city, have been granted first-class separate post offices; that important mail and in one case some important film addressed to Bossier City had been returned to addressors marked "No such post office."

Other arguments were made against the fact that box mail is picked up in Bossier City, sent to Shreveport, and then mailed back or subjected to other delays. One citi-

zen reported that he had mailed letters to his son from Bossier City and Shreveport the same day. There was a 30-hour delay in the letter mailed at Bossier City.

The Tribune editor pointed out that mall service between Bossier City and Beton required more time than to get mail from New York to San Francisco. "We are farther from our parish seat, 13 miles away," he said. "than we are from Chicago in mail time."

At the end of the hearing, Mr. Roderick arose, asserted that he would make no hasty decision, and would keep an open mind in the matter. He repeated these assurances. The following afternoon, under the headline "Inspector Gives Views—Separate Post Office for Bossier City Is Opposed," the following appeared:

"Emory W. Roderick, manager of the Dallas district of the Post Office Department, said Wednesday he was opposed to creating a new first-class post office for Bossier.

"It will cost \$30,000 more than the facility we have there now to operate an independent post office," he said, "and I am opposed to spending an additional \$30,000 unless we can provide better service, and in my opinion, we can't."

Roderick said he was "convinced that the people of Bossier City can get better service by being a part of the Shreveport post office, but I haven't been able to convince them."

Along with the letter Mr. Durham set forth that there were petitions containing about 1,400 names asking for the separate first-class post office as well as resolutions from 8 local civic clubs.

Briefly the 14 reasons set forth by Mr. Durham are as follows:

- Bossler City is rapidly reaching the 20,000 mark, with an aggregate adjacent population which would bring the total to 33,370.
- 2. Bossier City residents are paying for a first-class postal installation and service but has received neither.
- We would have our own carriers to meet trains and planes, resulting in the mail being in Bossier City hours sooner.
- in Bossier City hours sooner.

 4. Mail from Bossier City would be dispatched earlier.
- 5. We would have our own post mark.
 6. Mail in Bossier City drops would be brought to the Bossier City post office and
- worked locally.
 7. Parcel post and special deliveries would be earlier.
- Parcel post and other mail would be picked up in Bossier City instead of Shreveport in emergencies.
- 9. All postal claims could be checked through the local office.
- 10. Lockboxes, which are safer, would be available.
- 11. We can handle our own postal-savings accounts.
- 12. Undeliverable special-delivery mall would be speeded up.
- 13. Mailing permits would be available locally for second- and third-class matter, as well as precanceled stamps.
- 14. To be classified as a first-class post office the receipts must be in excess of \$60,000 per annum. The past year the branch office, exclusive of the Big Chain Center and Barksdale Air Force Base, had receipts of \$78,000.

BACK DOOR SERVICE FOR BOSSIER CHURCHES AND OTHERS NOW ON

From now on Bossier City churches, the Bossier Chamber of Commerce, and other organizations having large mailing lists to which they send out bulletins under non-metered permits without stamps affixed, must discontinue dropping such mail in the Bossier branch office but deliver it to the rear platform of the Shreveport office under an order received from Arthur L. Layton, acting postmaster of the Shreveport postoffice.

Hard hit by this new post office procedure ruling, which comes on the heels of Mr. E. W. Roderick's farcical hearing in Bossier City, will be the larger churches. At least two churches, the First Baptist and the Barksdale Baptist Church, will be affected and others are thought to be affected.

The chamber of commerce received its notice Friday. Bob Croft, manager, reported that the chamber sends out from 350 to 700 pleces of bulletin mail each month, and that he had been depositing such mail at the local post office. A report from the First Baptist Church was that such mail was handled in the same manner.

The bulletin from Layton reads as follows: "NOTICE TO PERMIT MAILERS—MATTER WITHOUT STAMPS AFFIXED

"Under revised postal procedures you will receive a receipt for mailings made under Jour nonmeter permit only if you request receipt and furnish an additional copy of Form 3602, Statement of Mailing, which the weigher will verify, initial, and deliver to you.

'Under the new postal procedures instructions the permit holder must deliver his permit imprint mail at the place where the ledger records or permit accounts are maintained. Those records are maintained only at the rear platform, main post office.

"ARTHUR L. LAYTON,
"Acting Postmaster."

This is only one of a number of strong articles written by the press of Bossier City indicating the interest which these people have in a separate office. The Planters Press in Bossier City has been very active on behalf of a separate and independent office. A number of articles have appeared in this fine paper aggressively demanding that the people be given proper recognition of their application for a separate and independent Bossier City office. I do not have these articles before me for use at the present time but at some later date I will have an opportunity to give these articles to the Congress.

I can see no reason why there should not be an independent post office for Bossier. Not only is Bossier the seventh largest city in Louisiana in population but it also originates a tremendous amount of postal business. A separate office will give this community the pride which should properly be theirs in having a post office named for this great center. The cost of the office will add nothing to the postal deficit. It can be done and handled in such a way as to cost practically no additional amount.

I think the Post Office Department has been inactive long enough. Some action is due and the plea of these people, who contribute so heavily to our Government, should not be overlooked or cast aside. I hope the Postmaster General will personally see this insertion in the Record and will act immediately in approving a separate and independent office for Bossier City.

Observance of Good Friday

EXTENSION OF REMARKS

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include

the following newspaper article from the Durant Daily Democrat, of Durant, Okla., of March 2, 1955, which contains a proclamation of the Governor of Oklahoma with reference to the observance of Good Friday:

GOVERNOR'S PROCLAMATION

At the request of Miss Ora O'Riley, of Durant, Gov. Raymond Gary has issued a proclamation urging ministers of Oklahoma to hold commemorative services and asking that insofar as possible business of the State be suspended on the afternoon of April 8, as an observation of Good Friday.

Miss O'Riley said she is seeking to have Good Friday set aside as a day of national

observance.

Governor Gary's proclamation follows:

"Whereas the approach of Easter gives rise to thoughts of man's redemption; and "Whereas it is fitting that our minds should dwell upon the sufferings that were endured for our salvation by the Saviour on the Friday preceding the resurrection;

"Whereas Good Friday should be observed as a day of thoughtful religious reflection:

"Now, therefore, I, Raymond Gary, urge the clergy of the State to hold commemorative services betwen the hours of 12 and 3 on the afternoon of April 8, Good Friday, and that insofar as possible the business of the State be suspended between these kours in order that all who can do so may spend this time in contemplating the greatest act of love in the history of the world.

"In witness whereof, I have hereunto set my hand and caused to be affixed the great seal of the State of Oklahoma on this 16th

day of February 1955.

"By the Governor of the State of Oklahoma.

"RAYMOND GARY."

Independent Offices Appropriation Bill for Fiscal Year 1956

SPEECH

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5240) making appropriations for sundry executive bureaus, boards, commissions, corporations, agencies, and offices for the fiscal year ending June 30, 1956, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana [Mr. Long].

Mr. LONG. I would like, if I may take this time, to explain why I raised the point of order against the provision beginning on line 3 of page 31 with the word "Provided," and continuing through line 14, inclusive.

May I say that a bill has been passed through the Veterans' Affairs Committee dealing with this subject, which will be a permanent law. Of course, as you know, a rider that goes through on an appropriation bill is temporary. Everyone I know of who is concerned with this legislation is satisfied with H. R. 5100. We have used a great deal of time and study in the preparation of this bill. We had the American Dental Association and the Veterans' Administration, as well as many other people, appear before

the Veterans' Affairs Committee to testify. After hearing all sides and wishing to write a bill that would be satisfactory and at the same time take care of the situation, H. R. 5100 is the result of that study.

This bill is much the same as the one introduced last year by the gentleman from New Jersey [Mr. Frelinghuysen]. It makes permanent the legislation we are seeking to pass. It costs very little, if any, more money and it is a great saving over what was being spent for this same purpose in 1951. The best I can figure it is a saving of in the neighborhood of \$75 million. We found that a great deal of money used at that time had been wasted.

The rider that was struck from the bill by my point of order as presently written and passed last year contains the same provisions as the appropriation committee made previously, namely, that it does not provide for any exemptions for the Spanish-American War group nor for trainees under Public Law 16.

H. R. 5100 which the Committee on Veterans' Affairs reported unanimously last Tuesday is accepted by the Bureau of the Budget and the Veterans' Administration since it contains all of the conditions which they believe would be permanent law and would not have to be appropriated each year.

Economic Situation in Valley Needs Study

EXTENSION OF REMARKS

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Crookston Times, Crookston, Minn.:

ECONOMIC SITUATION IN VALLEY NEEDS STUDY

There is food for thought—and speculation—statistics on department and general store sales in the Red River Valley district of Minnesota as compiled by the Federal Reserve bank, Minneapolis.

According to the data, sales in 10 of the 12 months of 1954 dropped below the figures for the same months of 1953. Only in February and April of last year were sales higher than for the corresponding 1953 months. In those months sales were up 2 percent.

On the other hand, March sales were down 12 percent; May showed an 11-percent drop. For the year as a whole, department and general store sales were 5 percent below 1953, while sales of this type for the State as a whole remained even with the year before.

Now comes the big question: Why? We are not economists nor statisticians. Figures are tricky things and an attempt at interpretation on our part might be wholly fallacious. But one thing does seem fairly obvious: The Red River Valley is not keeping pace with the rest of the State insofar as it economy can be measured on the basis of retail sales. For all of Minnesota, approximately as many dollars were spent in department and general stores in 1954 as in 1953; in the Red River Valley, for every \$20 spent in 1953, only \$19 was spent in 1954. The trend is continuing this year, judging by reports of the Federal Reserve bank.

Is this region actually spending less? Or could it be that money spent by valley residents is going in part to retailers outside the area? Again, if this is so, we must ask ourselves: Why?

Perhaps a little introspective thinking will reveal the answers to these questions. Perhaps by finding the answers we can find out how to remedy the situation. At any rate, a pretty thorough study seems to be indicated.

Manpower Policies Crisis

EXTENSION OF REMARKS

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech recently made before the Manhattan Rotary Club and B'nai B'rith, of Topeka, by former Gov. Alf M. Landon, of Kansas. I feel these remarks point up the need for scientists and other needed technically trained personnel in the planning for our overall national-defense program of today. Governor Landon has included direct quotations from the presidents of some of our leading colleges and universities, and I believe these statements are also of special interest at this time in view of the unsettled international situation and the nature of modern warfare.

The address follows:

MANPOWER POLICIES CRISIS

Beginning with the demotion of Malenkov and his faction on February 8, an unusual number of events have occurred of great consequences to free men all over the world.

The Japanese election results; the first meeting of the Southeast Asia Treaty Organization; Iraq's Mutual Defense Treaty with Turkey; the unexpected defeat of communism in the Andhra State election in India; the West German-France and Italian ratification of Western European Union; all are a great contribution to the future peace and liberty in the world.

To that impressive list of victories for lib-

To that impressive list of victories for liberty and democratic processes can be added the English Labor Party members of the Parliament ousting from their ranks Aneurin Bevan, friendly to Soviet Russia policies, hostile to American-British frienship and association in organizing the mighty forces of freedom-loving peoples to resist the steady encroachment of Communist tyrannical imperalism.

These monumental achievements can properly be attributed to the policy of assistance to nations resisting Communist aggression first formulated by former President Harry S. Truman, his Secretary of State,

James F. Byrnes, and British Prime Minister Winston Churchill. They have been successfully strengthened by President Dwight D. Eisenhower and the British Foreign Minister, Anthony Eden.

However, it is a great mistake to assume that there will be any sudden change in world conditions for the better.

If there is any dramatic immediate change, I think it will be for the worse.

I have long believed that if the Communists passed without overt act the rearming of Western Germany, the prospects of a third world war would gradually diminish.

Therefore, the value to a peaceful world in the Truman-Churchill-Eisenhower foreign policies lies in the long pull rather than in any swift change in world conditions.

The strongest part of the whole business is that now Western European Union is in existence, the less conclusive its policies are, the more the chances of a third world war diminish.

That is not only because of the internal situation in Russia but because the will to resist Communist conquest is increasing in the hearts and minds of freemen—as the means to do so increases.

I believe American fatalistic thinking of a year ago, that a third world war was inevitable and we might as well get it over—is subsiding.

It would be as bad a mistake to believe that the end of the cold war is in sight.

I have long advocated that we should meet with other powers—including Russia—at every opportunity to discuss settlement of the disputed points. We must never abandon that goal.

However, it is beyond expectation that anything is going to happen right away to change the menace to the free world of Communist imperialism.

We Americans might as well make up our minds to that and settle down to the long pull.

Satisfied as we have every right to be with the progress of American policies to save the world for peace and freedom, we must prepare for a long life in an armed camp.

For the immediate present, I think it means armed existence instead of peaceful coexistence—localized military actions that might be a prelude to broad scale war. It means life in an armed camp for practically the entire world on a scale never heretofore known and for an undetermined period.

That is a new kind of existence for the American people. However, the older peoples of the world have that background. That is true whether it was tribal history as related in the Old Testament or the Golden Age of Greece of the Dark Ages.

In those days it was the custom to turn over captured towns to the victorious soldiers for torture—loot—rape and murder, Able-bodied captives were sold into slavery. The old—the infirm—the infants were left to their fate.

American pioneers faced death and torture from Indian raids 24 hours a day. What is the difference in being killed by an Indian arrow or an atom bomb?

What difference would it have made to the people of Jericho whether their wall was tumbled down by the trumpets of rams' horns or an H-bomb. According to the 21st verse of chapter 6 of the Book of Joshua, "And they utterly destroyed all that was in the city, both man and woman, young and old, and ox and sheep and ass, with the edge of the sword."

We sprayed burning napthene on Japanese fishing villages in order to destroy their food-producing value. The home front is the battiefront as always. Only this time with the development of the long-range bomber the attack—if war comes—will be concentrated on the American home front.

That uncertainty calls for a thorough and objective study of the possible effects of radioactivity on health and heredity and a cessation of unsupported scare stories until more facts are available.

I think the prospect of peace has improved as a result of American-British community of interests and leadership.

I do not believe anything is going to happen right away to lessen world tension or to relieve the Congress of the necessity of facing immediately the question of how best to integrate a large and effective military establishment into our expanding economy without permanent damage either to our democratic processes or to America's basic continuing requirements in educating future scientists and technicians.

Chancellor Murphy, of Kansas University. President McCain, of Kansas State College. President Malott, of Cornell University, are all agreed that the need for long-range planning as regards to minitary manpower in self-zvident.

They also agree that equally important is the need for long-range planning as regards

technical manpower.

Chancellor Murphy says, "The American people dare not lose the race for new knowledge and we are running against a competent well-trained opponent—not the wishfully thought ignorant Russian peasant. The Russians are increasing the production of chemists, physicists and engineers at a far greater rate than we are in America, both percentagewise and in total number."

Last December, President McCain in a speech entitled, "Education—Newest Battle-field of the Cold War," summarized the facts of the sharp accelerations taking place in Russia—China and the satellite countries in the education of scientists, technicians and professional workers.

President Malott writes me, "I have just come back from 2 days in Washington spent discussing the impact on our colleges and universities under the new national reserve plan, and it has for us, I am afraid, many questions left unanswered."

That all adds up that three of the Nation's top educators believe that Russia and her satellites have a hard-nosed calculating policy which faces up to the facts of technological and scientific warfare.

The Communists obviously recognize that well-trained scientists and engineers are their most valuable asset. Assistant Defense Secretary Quaries at a recent science service dinner in Washington stated that in 1939 the United States turned out 50,000 graduate engineers as against less than 20,000 by the Russians while last year our total had dropped to 29,000 while the Russians had jumped to 54,000. That is simply a devastating commentary on the Congress' handling of America's manpower security activities.

Despite mounting evidence of increased need by both the Nation's industry and Armed Forces for scientific and engineering manpower, there does not exist in the Defense Department a civilian voice sufficiently awake to that crucial problem and sufficiently loud to overcome the poor judgment of the military and the Congress in dealing with the manpower problem.

with the manpower problem.

The military man who has lived his mature life in a concentrated environment charged with the military security of America is handicapped in his knowledge of civilian requirements. But at that, military leaders in many ways have been far in advance of the Congress on that crucial manpower problem.

The Communists are realists. They do not believe in either the economic or political equality and fraternity philosophy. They do believe in training their youth in concepts of conformity—that all good comes from the Russian Soviet—and all evil from the decadent capitalistic democracies.

Unlike the American Congress, the Soviet is not yielding to the pressures of uninformed public opinion.

While the Congress fears the charge of creating an "intellectually elite" class—the Communists base their manpower policy on the crucial fact that a national reservoir of brains as well as brawn is imperative to a nation's existence.

I believe the philosophy that so far has influenced the Congress and some of our generals that in the National Defense Draft Act there should be no difference between an oil man and a scientist is self-defeating.

In national defense the physicist or scientist is obviously far more important as a physicist or scientist.

The national reserve plan recommended to the Congress by the Department of De-

fense is really universal military training

by the back door.

As a result, it is a half-baked measure that is neither fish nor fowl.

It is not a truly operative reserve system because the plan is too nebulous, and it is not foursquare UMT.

Apparently the Congress is not going to accept the bobtail universal military training plan suggested to it nor the rag-tag national reserve plan which did not provide for any Practical way of enforcement or of organiza-

Ignorance and crass politics are truly imperiling not only our national security but literally risking the lives of millions all over our country by failing to solve this increas-

ingly vital problem.

I think another phase of our failure to solve this problem is that we failed to realize that in a cold war the weapons are political, economic, and psychological. There again our colleges and universities provide the only source of personnel appropriately and accurately trained for cold-war operations. We have ineptly waged a battle for the minds of men in this cold war we are engaged in.

The trouble with much of what we are doing seems to rise from the fact that generally we seem to be attempting to carry on a cold war with the means and methods of a hot war. Yet the more astutely we apply our capacities to winning the cold war, the more we forestall the possibility of a hot war. The problems of winning the cold war are not the same as those of winning a hot War.

The crucial problem of maintaining effective combat forces as well as a reservoir of scientists for a nation of our size and farflung commitments, and for an unforeseen period that is neither peaceful nor broadscale war-to protect our democratic processes from 2 or 3 generations of youth hammered into the military mold-transcends the factor of pay or the concept of treating the incipient oilman or scientist on the same basis.

Because I have never criticized a policy Without offering an alternative, I quote from a letter received from President McCain:

"Ever since the close of World War II, I have been seriously concerned about our military manpower policy. At the time I was released from the service, I was in charge of the naval personnel classification program in the Bureau of Naval Personnel in Washington, D. C. Some friends in Congress consulted with me about the UMT program then under consideration. I prepared for their guidance a plan that I still consider feasible, under which the Nation's civilian schools and colleges would carry on most of the technical training needed for our armed services.

There are several advantages to such a plan. In the first place, I learned from my own close association with military-training programs during the war that our civilian schools and colleges offered training for approximately 80 percent of the specialties for which trained personnel are required in the armed services. Secondy, if such training were made the responsibilities of civilian schools during peacetime, it could be undercation of our young people."

Chancellor Murphy has somewhat the same idea. He writes me:

"Although it is in outline (and no solution will be ideal considering all facets of the problem), these facts should be considered:

"1. In the United States today, certainly the bulk of the young people go as far as high school. Therefore, I should think that there should be a strong expansion of military ROTC work at the high-school level, with a guaranteed connection with a continuing National Guard relationship during summer periods and the like.

"Here then at least the military loaf would be leavened by the normal educational yeast and the largest percentage of our American youth will have a basic military experience which could continue through the medium of the National Guard.

"2. Our college ROTC programs should be sharply expanded and supported; while at a somewhat higher intellectual level the reserve military leadership can get even more advanced training, and again a continuing relationship to the National Guard and/or the reserve components can be guaranteed. But note also that this military training at the college level over a 4-year period will not interfere with the continuing training of the scientists and engineers, which we need even more than we do the infantry sol-

Neither of these essentially the same plans of course is a complete answer, but they could be by and large a good one if the professional military would support the National Guard and a truly reserve setup.

The top military tend to drag their feet because they believe it must be done under a strictly full-time military situation.

The Congress continues to allow our man-

power policies to be dictated too much by an uninformed public opinion and the scramble for funds between the Navy, the Army, and the Air Force.

I heartily approve President McCain's concept that 80 percent of the training should be given in civilian schools of all types. Why That is where this kind of a training belongs in a republic. It would be tragic indeed-if this all important phase of our national existence and future-should be taken out of the hands of the civilian-education system and put under the control of

either industry or military.

I also heartily approve of Chancellor Murphy's suggestion that the ROTC work could be expanded at the high-school level with actual training periods in the National Guard for a definite and specific number of

There cannot be any reasonable arguments against having the Nation's civilian schools and colleges carrying most of the technical training needed by the country-whether for

military or civilian purposes.

I believe the best thing that can be done for our country is to make sure that the armed services do not overreach themselves and compel them to function in their proper

Stop Calling the Dodgers "Bums"

EXTENSION OF REMARKS

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks. I should like to call the attention of my colleagues to a most worthwhile campaign started recently by the Brooklyn Bulletin. I quote from the front page of the March 17, 1955, issue of the newspaper:

STOP CALLING THE DODGERS THE "BUMS"

Let's stop calling the Brooklyn Dodgers the "Bums."

Let's start a campaign to urge everyone else to cease and desist from using that uncomplimentary appellation for our favorite baseball team.

The Brooklyn Bulletin herewith begins a drive to rid the Dodgers of that onerous moniker.

The Dodgers are neither rufflans nor individuals without obvious means of support. (Although sometimes our pitchers feel that way about their teammates.)

The dictionary says "a bum is an inebriate. a mendicant, a tramp, and a loafer." Now. I ask you, is that a nice thing to say about the flock? Let's all take the pledge now before the season starts to lay off the word "bums." Besides, think of our children Besides, think of our children. How can we reconcile our desire to inspire gentlemanly traits with an uncouth burst tossed in the direction of our beloved boys in the Brooklyn uniforms. We repeat, don't call the Dodgers "bums." Save it for the visiting teams.

Mr. Speaker, I endorse these sentiments. The Brooklyn baseball team will win the National League pennant this year, and go on to win the world championship. It is important that the dignity of champions be recognized.

Modern Farming

EXTENSION OF REMARKS OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article from the East Grand Forks Record, East Grand Forks, Minn.:

It is hard for most of us to realize just what a revolution has occurred in rural life. That makes it hard for us to plan for the future in business, schools, government, and many other ways. Our mental picture of 1955 farming just isn't realistic; we are likely to think of farms as we knew them in our youth, and so we start under a handicap when we project a mental picture of the future. An article in Life told how the revolution gained such impetus:

"During the farm depression of the twenties and the general depression of the thirties, scientists and inventors were creating marvelous new machinery, new fertilizers, new pesticides, and new seeds. At the time very few farmers had the money to buy them. But when war gave farmers an unlimited market, these aids to production were pulled down off the shelf and set to work all at once. With their help and the permission of the weather, United States farm output rose by a fantastic 33 percent between 1938 and 1944. It has now gone down a little, but the capacity to produce, when and if the market demands more food, has kept rising."

That same article describes what has happened on an actual, existing farm in the Middle West. In 1933 the present owner and his father depended for power largely on six horses. They owned only \$635 worth of crop machinery, along with some special equipment valued at \$286-less than \$1,000 all told. Now the owner and his son have 66 pieces of equipment, including tractors, combine, mower, sprayer, milking machinery, and so on, which is valued at some \$11,000.

Modern farming is a business, operated by skilled technicians and administrators, with a sound working knowledge of scientific conservation and production methods. That is what farm equipment and the other modern aids to farming have brought about.

Ireland

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting and educational address of Rev. George V. Kerr, assistant director, Catholic Charitable Bureau of Boston, which he delivered at the dinner of the Friendly Sons of St. Patrick, held at the Hotel Edison, Lynn, Mass., on March 17, 1955:

Tonight we sing the song of Ireland, a rich and rare land, a fresh and a fair land, the abode of leprechauns, the mossy green, the shamrock and the blarney, where the angels fold their wings and rest. Tonight we sing of Erin-where the tear and the smile in thine eyes blend like the rainbow that hangs in thy skies. Tonight we sing of Dublin's fair city where girls are so pretty of the maid of County Down, the wearing of the green, and Galway Bay. Tonight we sing of holy Ireland, the only land whose hero is a saint and whose national emblem is a musical instrument, a land where even the old are fair and even the wise are merry of tongue.

"I'd like to go to Ireland, if I were young once more;

I'd dance upon the gangplank and I'd skip along the shore.

And all the folks who looked at me would say the 'craythur's tipsy,'

Sure, she must be the offspring of a tinker of a gypsy. I'd find a shabby jaunting car (my scorn

on better travel) And bump along to all the fairs on rocks

and lumpy gravel. And many a candle I would burn in little

wayside bowers,

Where Mary and the Christ child rest amid the trees and flowers.

I'd visit all the nunneries around about Killarney,

And then I'd dangle by my heels to kiss the stone of blarney.

I'd spend a day in lovely Cork and sit out

after tea

To hear the bells of Shandon chime upon the River Lee.

And as I watched the fading of the glowing sunset hues.

I'd hope to see a Leprechaun come out to mend his shoes.

And I'd remember Erin's woes, should there be rainy weather.

And the gray Irish sky and I would shed our tears together.

The houses I would visit would be neatly roofed with thatch,

With roses growing round the door and strings upon the latch.

And then I'd board the car once more and travel to Tralee,

Clonmel and Inniscarra and the holy Innisfree.

And in the towns and villages that I would travel through, I'd stop at every wishing well and make a

wish or two. And when the sorry time would come to

leave the blessed isle, I'd be so heavy hearted that I might forget

to smile. And folks who looked at me would say:

'She's quarreled with her Maker,' 'Or else she is the offspring of a very solemn

Quaker."

As a young American I was rather amused at the natural tendency of the sanguine Irishmen to exaggerate the significance of Ireland in the history of civilization. Now I know that five peoples in the world's history have made supreme contributions to world civilization as we have it at the present time. They are the Hebrews, the Greeks, the Romans, the Irish, and the Italians. Someday the sheer might of American technological genius will be added to the list. To reecho Gladstone, "all of the spiritual heritage of our race we owe to the Hebrews." And to quote Sir Henry Maine, "Whatever lives and moves in the intellectual order is Greek in origin." The Romans added their own great gift of law and justice to the cur-rent of civilization. When the Roman life of the spirit was waning, and the torch of civilization was nearly out, the Irish in the distant west of Europe, converted as a whole nation to Christianity by Patrick, picked it up and carried it on adding their own distinct contribution of superb literature, music, rhyme in poetry, and fine decorative art to the light of civilization. Then came the Italians with their masterful work in the Renaissance enriching all departments of human endeavor, particularly the fine arts, music, literature, sculpture, architecture, and, above all, painting. These are the beacon lights of our race and of our western civilization covering 3,500 years. It is a supremely unbelievable fact that

from the 6th to the 10th century of the Christian era, the Irish were the teachers of the western civilization, that whenever a man anywhere in western Europe could talk or write a language other than his own, he owed it to an Irishman or to someone taught by an Irishman. There was a supreme need for their missionary and educational work, for the Roman Empire had fallen into utter decadence and approaching ruin at the rough hands of barbarians. Across the seas came the Irish missionaries, carrying with them culture, and love of beauty, and development of the heart as well as the head. Schools were founded in what we now know as France, Germany, Switzerland, Italy, even distant Scandinavia, Africa, and Asia. At home in Ireland the Irish were binding the most beautiful books ever made, the Book of Kells, and the most beautiful jewelry ever fashioned. Their love for music led to the production of literally thousands of melodies that are immemorial. If the Irish had con-tributed nothing else to civilization except rhyme in poetry, that would have put the world under the deepest kind of an everlasting debt to the Irish people. An indication of the glory that was Ireland's in the 8th century is a poem with rhyme composed by King Aelred of Northumbria, or England as we know it today:

"I found in Innisfail the fair. In Ireland, while in study there, Women of worth, both grave and gay men, Many clerics and many laymen.

"I traveled its fruitful provinces round. And in every one of the five I found Alike in church and in palace hall Abundant apparel and food for all.

"I found in Munster, unfettered of any, Kings and queens, and poets a many-Poets well skilled in music and measure Prosperous doings, mirth and pleasure.

"I found in Connaught the just, redundance Of riches, milk in lavish abundance, Hospitality, vigor, fame In Cruachan's land of heroic name.

"I found in Ulster from hill and glen Hardy warriors, resolute men. Beauty that bloomed when youth was gone And strength transmitted from sire to son.

"I found in Leinster the smooth and sleek, From Dublin to Slewmargy's peak, Flourishing pastures, valor and health, Long living worthies, commerce and wealth. "I found in Meath's fair principality, Virtue, vigor, and hospitality, Candor, joyfulness, bravery, purity, Ireland's bulwark and security.

"I found strict morals in age and youth I found historians recording truth, The things I sing of in verse unsmooth, I found them all. I have written sooth!

Two supremely saintly characters were more than all others responsible for making Ireland the Isle of Saints and Scholars, St. Patrick and St. Bridget. They, above all, gave the impetus to education which meant so much to the Irish people, that enabled the Irish nation to be the saviour of civilization when the invasion of the barbarians threatened seriously to put an end to it. with a great literature, marvelously beautiful books, transcendentally exquisite fewelry and unique originality in music that led them to the invention and perfection of rhyme in poetry, it would seem that the debt of the world to the Irish would be immemorially recorded. The clan system, however, which gave the Irish great freedom and a sense of the brotherhood of man and of genuine democracy unequalled elsewhere, unfortunately left them open to attack by their neighbors. Great fighters individually, they were unprepared for the mass attack of men who made a like work of fighting. Hence, the subjection of the Irish people and the gradual destruction of the record of their great achievements. That is why on St. Patrick's Day throughout the world the story of Irish glory is retold as well as the story of the Irish entombment and their epic struggle for a resurrection.

The first mass attack on Ireland came from the Danes, the warring and wandering Viking Norsemen, in the early 10th century. It lasted for 400 years. The second mass attack emanated from the Anglo-Saxon. It lasted over 700 years. The resistance was so fierce that one historian has said that every acre of land in Ireland was red with the blood of an Irishman. One by one the lights went out all over Ireland until, in the year 1775, one was left, the light of faith. At the time in history when the American Revolution was underway and the French Revolution was underground but poised for attack, the cause of Irish freedom was at its lowest. Sean O'Faolain in his King of Beggars sums it up-"The Irish people now had but one possession, their religion. They had not, under the heavens on earth, one single other weapon; not land—for they were allowed to own none; not schools—for they were allowed by law to enter none; not position—for they were allowed by law to accept none; not so much as a gun or even a horse, for they were allowed by law to possess none. They had, in a word, with the one exception of their faith, nothing; no parliament, no vote, no papers, no books, no leaders, no hope." At that time they could only look to a past of saints and scholars, to a present of mar-tyrdom, to a future of soullessness and Yet if the Irish people were gifted slavery. with divine foresight, they would have rejoiced to know that a new galaxy of Irish stars was beginning to glow on the horizon of Irish history—the Irish patriot. This unique kind of Irishman was destined to take a high place in the Valhalia of the Irish race and in the hearts of the Irish people. In fact to the crack of doom Ireland will always be remembered and commonly known not only as the land of saints and scholars but the land of saints, scholars, and patriots. In fact, two such stars had already shone brightly by the year 1800, two non-Catholic patriots who loved Ireland and who loved freedom, Theobold Wolfe Tone and Robert Emmet. Both are remembered in the famous Battle Hymn of Ireland-"Tone is our battle cry and Emmet our inspiration." Both of them died in the quest of Irish freedom. It was Tone who said, "In the cause of justice and freedom for Ireland it is no great effort this day to add the sacrifice of my life." The brave Emmet was publicly beheaded on a Dublin street.

While the great American patriot Paul Revere was arousing the countryside of Concord and Lexington in 1775, an Irish patriot was being born on the western seaboard of Ireland in County Kerry. His name was Daniel O'Connell, a man whose fame was destined to become worldwide and as Lecky, the famous English historian, said, "To be the most important and most conspicuous of his time and country"; a man who was to take and to fashion the Irish Nation into a modern democracy. Blessed with the vision to realize that a democracy could not be born out of the rack and ruin of Ireland, this Kerry peasant, one day to be entitled "The-Man of the People," took the people of Ireland and gave them first a kingdom of the mind. All he said to them was that they were not a rabble and that they could out of their own strength make themselves into a nation. And the people believed him. With his tall hat cocked on the side of his curly head, his cloak caught in his fist, a twinkle in his eye, he became the great liberator, the emancipator, for in 1929 he achieved his life's ambition-religious freedom for his people. Less than 100 years later his ultimate objective, the modern democracy of Ireland, came into being.

Daniel O'Connell first appeared upon the Irish scene in 1808. The hope of the Aristocratic Irish Committee that some of the restrictions under which people labored might be removed was dashed by the English Government and in the circumstances the committee deemed it best to adopt a policy of dignified silence. It was then that O'Connell, with the bounding blood of youth, caught the ear and mind of the country at large by opposing this servile policy and urging agitation for their commonest rights. Thus the Nation which had "no land, no parliament, no vote, no papers, no books, no hope," had a leader, a new captain.

It was his defense of John Magee, however, several years later that enshrined O'Connell in the hearts of his people. John Magee was a Dublin Presbyterian of stanch Irish principle and owner of the Evening Post, 1 of the 2 newspapers in Dublin that the Government was unable to curb. In May 1813 the Post took the occasion afforded by the resignation of a government official to denounce his administration and to review scathingly those of his predecessors. Government immediately instituted proceedings against Magee and Attorney General Saurin, a foe of Ireland, had charge of the prosecution. Magee engaged O'Connell for his chief counsel. Seamus MacManus in his History of the Irish Race, tells us that Saurin held the upper hand and dealt the cards unscrupulously.

In choosing the jury every man who was suspected of entertaining the most remote regard for Irish liberties was set aside. O'Connell, realizing his client had absolutely no chance of escaping from the picked jury, resolved to use the opportunity not to seek justice in a court of manifest injustice, but to fire the already excited nation by pillorying the mockery of justice to which the British Government treated them. In his Whole career O'Connell never made a more popular speech and only few that had a more far-reaching effect. O'Connell browbeat the jury in the box, flaying the chief justice himself on the bench, and arraigned, denounced, and defied the whole British administration in Ireland. Magee was, of course, found guilty and punished, but O'Connell's speech sent the country wild with enthusiasm, and no wonder, for he had bearded the lion of injustice in his very lair and he had lashed him till his roars of rage Were heard to the corners of the land and

of the world. This astounding brazenness of a commoner in attacking and mocking the practices of the governmental machinery in Ireland brought an attempt to have O'Connell driven from the bar. But for this petty persecution the future emancipator was re paid a thousandfold by the exuberant gratitude of a prostrate people acknowledging that they had found, if not a deliverer, at least a defender who did not fear to face and defy their oppressor. Daniel O'Connell had now complete control of the national mind, and his voice was the voice of Ireland. unquestioning faith of his fellow Irishmen put into his hands a power which he unsparingly wielded to accomplish the people's emancipation. It is this achievement of emancipation that is O'Connell's chief monument. It involved three cardinal points: (1) Freedom for his fellow Catholics to practice their religion; (2) eligibility of Catholics for every position and office in the State; (3) similar freedom for every man to follow his own convictions. The magnitude of his achievement will be realized when it is recalled that O'Connell was first and last a man of law and order with an ingrained hatred of revolution and violence. tunately, he has been usually depicted as a wild Irishman making things hot for England. Nothing could be more misleading, for if he stands out, in Gladstone's words, as "the greatest popular leader the world has ever seen," he is a symbol not of anarchy, not of rebellion, but of order. His gospel was logic and his practice was law. The radicalism of Robespierre was to him a peril that must be escaped. He was never a Bolshevist eager to smash society. On the contrary, his grievance was that the organization of government in his day did not permit him to play his part as a loyal subject of the

The year 1823 was especially propitious for agitation, for beginning the great work of emancipation, for it was a time of famine and discontent and unrest. To bring about organization and leadership, O'Connell founded the new Catholic association which would be organized by parishes with the priest as leader in each case, thus bringing into politics a new power never systematically made use of before. To provide sinews for the fight, a Catholic rent was established, I penny per month per man, to be collected at the church gate first Sunday of each month, and this individually small assessment soon swelled to the steady income of a thousand pounds a week. In a short time the country was organized more thoroughly than it had ever been before, and with a stronger organization it could be more virile and more determined in its demands than ever before. O'Connell became belligerent in his speeches, warning that a Bolivar, as in Central America, might in Ireland to activate the people if the Irish were driven to desperation. So dangerous became the people's attitude that the Government was forced to take the decisive step of suppressing the association and of introducing an emancipation bill. It failed. But, undaunted, O'Connell started to build anew. In the year 1828 O'Connell's Catholic association decided to contest the reelection of the perennial incumbent, namely, Fitzgerald, in County Clare. When no one dared to contest Fitzgerald, O'Connell decided to run for the office himself. This meant not only that a Catholic commoner was daring to claim a seat in Parliament, but also that the Irish people were staking everything on one tremendous gamble. They were turning the Clare election into a symbol of such imaginative force that it could not help but strike every observer in Europe as a decisive contest for the democratic ideal. That the democratic ideal won out is due in large measure to the heroism of the people themselves, who, without the protection of a secret vote, resisted the

threats of their landlords and voted for their idol. Sean O'Faolain calls them "the real heroes." On Saturday night, when the polls closed, O'Connell was by 2 to 1 elected member of Parliament for Clare.

It was known that the gamble had definitely won when in the following February the King asked the House of Commons to introduce the emancipation bill for Ireland; and when told it would take 70,000 troops to control Ireland, the King signed in 1829 the emancipation bill which gave freedom of worship to all the Irish people.

With emancipation won, the remainder of the leader's life was devoted to working for the repeal of the union of Ireland with England. That he was denied the privilege of seeing this objective realized was perhaps due to his conviction that liberty was not worth the price of a single drop of blood. Daniel O'Connell seemed in his later years to forget that an Ireland lulled by the opiate of English friendship always proved an Ireland foiled; while an Ireland rebellious was an Ireland successful. In 1841 Daniel O'Connell was elected to the exalted office of Lord Mayor of Dublin and by an inspired speech before the Dublin Corporation he succeeded in carrying a resolution to present a repeal petition to parliament. Then began a succession of monster meetings, unique in the history of nations, which he addressed, a series of 40 meetings that never numbered less than an audience of 100,000. It is difficult for us today to accept these figures, yet even the London Times conceded a million to the gathering on the Hill of Tara. When the government took the desperate resolve of forbidding the final meeting in Clondarf and Daniel acquiesced, the cause of Irish was postponed. O'Connell sovereignty wanted peace and consequent events proved that at Clondarf the grave of O'Connell's repeal was dug and a few years later his own grave was dug in Dublin. He was never the same old Dan, the bold Dan, whose magnetic power had gifted him, by the lifting of a little finger, to lead a nation.

As the years went on, so did the struggle for Irish freedom. The spirit, proud and indomitable, never weakened, never changed. Another great Irish patriot appeared, a non-Catholic, Charles Stewart Parnell, who restored to the Irish nation its constitutional rights, the right to vote, the right to hold office, he right of home rule. Charles Stewart Parnell was the type of leader who could "We shall never gain anything from England unless we tread on her toes; we shall never gain a six-penny worth from her by conciliation." Yet the agitation of Parnell never went beyond the force of public opinion. And so home rule for Ireland remained for many years as part of the Irish tradition. But the time for the repeal of the union with England, the urgency for complete Irish independence, was growing nearer and stronger. By slow degrees the Irish people had taken to their hearts the essence of the teaching of O'Connell namely to rely on themselves to rebuild their ancient and shattered civilization, to rediscover their soul as a people and to confront the world as an ancient, cultured and dignified race, no longer an obscure begger seeking dole by abject necessity from another nation's table.

The answer to complete freedom was not to be found in home rule but in Irish independence and worthily did the best of the Irish race respond to this appeal. No greater sacrifice of personal interests can be recorded than the work expended in Ireland at the turn of the century, 1900 to 1916. Father O'Growney gave his life for the language; William Rooney, for the national cause; Padraic Pearce, Thomas McDonough, and their comrades faced the firing squad on an Easter morning. And among the host who have given up their lives for the preservation of an Irish Ireland are numbers of un-

named, forgotten men and women who were prepared to work and to die in obscurity that Ireland might live as a free nation. The new patriot, the new champion of this spirit of complete Irish independence, was Padraic Pearce. "The time has come," he said, "when Ireland must protest in blood against foreign dominion. I believe in one Irish Nation and that free," was his password. "When every subject people ran for freedom was Ireland alone to make no sign?" This new spirit of patriotism hurried to an issue in the Easter uprising of 1914, and it is said that the first shots of the First World War were fired in Ireland. The Irish Republic was proclaimed to the world and to the people of Ireland by the leaders of the uprising, Pearce, McDonough, and Plunkett, "Irishmen and Irishwomen, in the name of God and of the dead generations from which she receives the old tradition of nationhood, Ireland, through us, summons her children to her flag and strikes for freedom." The Easter uprising died in failure and Padraic Pearce in martyrdom, but the heart of the Irish Nation, and this time the world, was deeply stirred. In the furnace of national suffering a free and independent Ireland was born. It was fitting that it took an Easter uprising to end centuries of entombment, centuries of Good Fridays, for the Irish people. It is significant, too, that the sentence of a young Irish commandant in the Easter uprising commuted from death to imprisonment for it meant that the life of a new Irish patriot was spared. He was an obscure mathematics professor, a silent Gaelic League worker, who was now strangely recognized as a national leader. He shot as it were to the nation's lead in a flash. Cool, reserved, gentle, masterly, humble, Eamon DeValera had impressed all. He was no great orator like Pearce, he did not pretend to have Parnell's marvelous mastery of political science, nor O'Connell's magnetic personality. He was in the words of another compatriot, Arthur Griffith, "a leader of peace while both a soldier and a states-

With Eamon DeValera the last link in the quest of Irish patriots for freedom was forged. It was Daniel O'Connell who gave direction and inspiration to the modern Irish democracy and who won the right of the Irish people to exercise their greatest possession, their faith: It was Parnell who gave the Irish people the freedom to exercise their greatest civil rights, their right to vote and their right to hold office: It was Padriac Pearce who gave to the Irish nation the will to fight for completely sovereignty, complete independence, at the risk of life, loved ones, and property, and it remained for the man of peace, DeValera, the supreme counselor in the day of negotiations, to effect the independence of a sovereign nation. For, in 1919, at the general election, all Nationalist Ireland declared its allegiance to the ideal of a republic, of a democracy, and the Sinn Fein policy of independence from Great Britain The Irish Constituent Assemwas adopted. bly was proclaimed, and a message sent to the nations of the world requesting the recognition of the Irish Free State, the nationalist sovereign government. It is said that even the sky over Ireland became green for

The remains of the great Irish patriots will never truly rest in peace, however, until some modern or some future patriot effects the repeal of the partition of Ireland; a partition that endures against the will of the overwhelming majority of the Irish people. It is a flagrant denial of the domestic right of a people to determine its own affairs. There is a sense of unfitness, too, that St. Patrick's Seat at Armagh, his grave at Downpatrick, and the scenes of his boyhood in Slemish, are cut off from the body of Ireland. The repeal of partition will complete the aspirations of the Irish patriots and the Irish people.

And so, the era of patriots is now a saga of Irish history, a shining star in the story of the Irish race, a priceless petal of the Trinitylike Shamrock, the symbol of Ireland's sanctity, scholarship, and patriotism.

I close with this query, What of the pres-nt? Is Ireland capable of making a contribution to the world today? Perhaps the query is best answered in the words of Bishop John J. Wright, of Worcester, at the Boston Clover Club. "The great nations have made their impressive, perhaps even dominant, contributions to the world's community. Theirs are the stockpiles, physical resources, and the sheer mass of numbers; but the small nations, like holy Ireland, have the gifts of the mind and of the soul, wisdom, faith, humility, and the promptness to recognize the limitations of the great powers." These are the gifts that the world needs badly at the moment, more than the needs of atomic energy and massive armies. These are the gifts that Ireland is prepared to share.

But what of the future? It may be significant that while the whole world is attempting to tear up photographs of Christian civilization that perhaps Ireland is holding the negative. It may be prophetical, says Bishop Fulton J. Sheen, that in the dark days Ireland will come again into its own, that the whole world will beat at Ireland's door for a blueprint of a better world. This is no vain, idle, nor pointless prophecy in this atomic age. It would be merely a reliving of the past destiny, the past mission, of the Irish nation. Ireland is and will be prepared. For to this day, the light of faith that Patrick kindled on Tara's hill and love of freedom that the Irish patriots forged in the hearts of the Irish people, remains in the Irish spirit and in the blood of the Irish nation; and so it shall remain, for so long as the sea shall gird this isle of Ireland, so long shall the name and the spirit of Patrick, Bridget, Columbkille, Tone, Emmet, Parnell, Pearce, DeValera, and O'Connell watch in splendor over it as the stars of God.

Closed-Eyes Policy

EXTENSION OF REMARKS OF

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mrs. BUCHANAN. Mr. Speaker, under leave to extend my remarks. I wish to include in the RECORD an editorial concerning the urgent need for an adequate Federal school-aid program appearing in today's Washington Post and Times Herald.

With reference to the recent testimony of Mrs. Hobby before the House Education and Labor Committee, I should like to point out that as of July 21, 1954, the estimated construction cost of needed schools in Pennsylvania was \$400 million.

The editorial follows:

CLOSED-EYES POLICY

The Secretary of Health, Education, and Welfare seems now to have adopted a policy of dealing with the Nation's critical classroom shortage by pretending that it isn't as bad as it was cracked up to be. something of a change from her first and second approaches to the problem. Initially. Mrs. Hobby proposed to deal with the crisis by holding a White House conference about it-sometime toward the end of the

year—and then perhaps working out a program of Federal aid at leisure. Next, she gave her backing to a sort of Rube Goldberg contrivance through which loans would be offered to school districts which already had exhausted their capacity to borrow. Tuesday, testifying before the House Education and Labor Committee, Mrs. Hobby asserted that the classroom shortage is not actually as serious as she herself had previously reported it to be. By 1960, she said, the deficit will be 176,000 classrooms instead of the anticipated 407,000.

It is difficult to check Mrs. Hobby's new figures. Perhaps, as she suggested, classroom construction has increased beyond expectations and many communities have found that they can, by repairs and renovation, extend the life of schools to a greater degree than previously supposed. The fact remains. nevertheless, as Mrs. Hobby acknowledged. that the shortage is a serious one and calls imperatively for some sort of Federal aid. It would be a pity to have the indubitable need for Federal aid blurred by conflicts as to the precise dimensions of the problem.

In terms of physical facilities, in terms of teacher recruitment, in terms of local and national support, the American public school system is in grave danger of a tragic breakdown. This is a time when every effort of the administration ought to be directed toward a dramatic revitalization of the schools. Those who regard penny-pinching in school expenditures as a form of economy can usefully ponder some observations on the subject by Alfred North Whitehead:

When one considers in its length and in its breadth the importance of this question of the education of a nation's young, the broken lives, the defeated hopes, the tional failures, which result from the frivolous inertia with which it is treated, it is difficult to restrain within oneself a savage rage. In the conditions of modern life, the rule is absolute, the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated."

The Late Justice Robert H. Jackson

EXTENSION OF REMARKS

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. DODD. Mr. Speaker, one of the finest tributes which has been paid to the late Justice Robert H. Jackson, of our Supreme Court, was written by William W. Bishop, Jr., professor of international law at the University of Michigan, and was printed in the American Journal of International Law.

Because I feel that this well-written article should be called to the attention of my colleagues. I am inserting it in the Appendix of the RECORD, as follows:

ROBERT H. JACKSON

In the death last October of Justice Robert H. Jackson, of the United States Supreme Court, the Nation lost an honored jurist and public leader who had served it well as lawyer, Department of Justice official, Attorney General, and Justice of the Supreme Court.

The cause of international law lost a distinguished advocate and diligent worker, and the American Society of International Law a valued and faithful member. Joining the society over two decades ago as a practicing lawyer in Jamestown, N. Y., Mr. Justice Jackson remained active despite the demands of Government service. He served on the executive council from 1946 to 1949, and as honorary vice president since 1949. In 1945, 1949, and 1952 he addressed the annual meetings of the society, and on numerous occasions spoke to groups of lawyers on matters of international law.

Justice Jackson was esteemed for his conscientious devotion to his judicial duties. Those who knew him well regarded him as a very simple and easy mixer, a man who did not stand on his dignity, and was the antithesis of a stuffed shirt. His friends and associates remarked his qualities of warmth, geniality, penetration, perception of the real issues in a matter, breadth of view—all of which made him a big man and a lovable one. In the pages of our journal he may best be commemorated by trying to look at and reassess some of his ideas about international law and his work in our field.

Among his opinions as Attorney General and on the Court I may be found illuminating discussions of international legal points, but his work there was better known in other areas of the law. Though in earlier years a famed protagonist of the New Deal and often mentioned as a potential president or Chief Justice of the United States, his name may well be best remembered in history for his efforts in connection with the Nuremberg trials of war criminals.

Most of those in the best position to know feel that Justice Jackson deserves a large measure of credit for what was attempted and accomplished at Nuremberg. Many lawyers from many lands played important parts, and one can seldom measure with certainty the individual contribution of each, but Justice Jackson appears to have been the dominating personality in the steps leading up to the trial and in the conduct of the trial itself. What really put across the Nuremberg trial plans in compelling overall fashion was his report to the President dated June 6, 1945.² In it he specified the possible ways to deal with the Nazi leaders:

"What shall wo do with them? We could, of course, set them at large without a hearing. But it has cost unmeasured thousands of American lives to beat and bind these men. To free them without a trial would mock the dead and make cynics of the living. On the other hand, we could execute or otherwise punish them without a hearing. But undiscriminating executions or punishments without definite findings of guilt, fairly arrived at, would violate pledges repeatedly given, and would not set easily on the American conscience or be remembered by our children with pride. The only other course is to determine the innocence or guilt of the accused after a hearing as dispassionate as the times and horrors we deal with will permit, and upon a record that will leave our reasons and motives clear.3

He had already insisted that "We must not use the forms of judicial proceedings to carry out or rationalize previously settled political or military policy," 4 He urged real judicial trials by an international tribunal, recognition of individual responsibility for violations of international law, and stress on the crime of aggressive war and the overall Nazi conspiracy as well as traditional war crimes in the sense of violations of the laws of warfare.

Impelled by his common law background to emphasize the importance of the judicial function, Justice Jackson felt the opportunity for constructive action as well as the responsibilities involved. He wrote:

Any legal position asserted on behalf of the United States will have considerable significance in the future evolution of the international law. In untroubled times, progress toward an effective rule of law in the international community is slow indeed. Inertia rests more heavily upon the society of nations than upon any other society. Now we stand at one of those rare moments when the thought and institutions and habits of the world have been shaken by the impact of world war on the lives of countless millions. Such occasions rarely come and quickly pass. We are put under a heavy responsibility to see that our behavior during this unsettled period will direct the world's thought toward a firmer enforcement of the laws of international conduct, so as to make war less attractive to those who have governments and the destinies of peoples in their

In the London Conference held June 26-August 8, 1945, by representatives of the United States, United Kingdom, Soviet Union, and France, Justice Jackson largely succeeded in obtaining agreement on the principles for which he stood. He deserves much credit for the success of that conference in overcoming wide differences between the substantive and procedural legal ideas of divergent national systems, and in obtaining agreement both upon a fair judicial procedure and the law to be applied by the tribunal. Through patient merging of the principles of the legal systems concerned, a procedure was developed which caused remarkably little trouble and which has generally been regarded as fair to the accused. His opening statement for the prosecution on November 21, 1945, set the pattern for much of the thinking of the trial. He served skill-fully in the detailed prosecution, and his report to the President on October 7, 1946, and various addresses since have well summarized his views and evaluation of whole endeavor.

Seeking to explore the thinking behind Nürnberg, we observe that Justice Jackson had great faith in the "existing and indestructible reality" of international law and the hope which it offered as a "foundation on which the future may build." Even in the dark days of early 1941 he wrote that "the structure of international law, however apparently shaken, is one of the most valuable assets of our civilization." He added that "lodged deeply in the culture of the world, unaffected by the transitory political structures above it, is a bedrock belief in a system of higher law." 18

By the time of his Habana address of March 27, 1941, 11 Robert Jackson had already expressed the ideas underlying the change of American policy from traditional neutrality to lend-lease and all aid short of war. Discrimination between the belligerents was justified on the illegality of Hitler's resort to war in violation of the Kellogg-Briand Treaty for the Renunciation of War, as well as upon the notion of collective self-defense. Speaking of this treaty and the Argentine Anti-War Treaty, he said at Habana that they "rendered unlawful wars undertaken in violation of their provisions. In consequence, these treaties destroyed the historical and juridical foundations of the doctrine of neutrality conceived as an attitude of absolute impartiality in relation to aggressive wars. It did not impose upon the signatories the duty of discriminating against an aggressor, but it conferred upon them the right to act in that manner." 12

Showing the thinking which later prevailed at Nürnberg, he concluded:

"To me, such an interpretation of international law is not only proper but necessary if it is not to be a boon to the lawless and the aggressive. A system of international law which can impose no penalty on a lawbreaker and also forbid other states to aid

the victim would be self-defeating and would not help even a little to realize mankind's hope for enduring peace." ¹²

While various others had urged that Nazi leaders be tried for the crime of aggressive war as well as for violations of the laws of warfare, Justice Jackson emphasized this approach. As he saw it, the facts clearly established the guilt of the Nazi leaders in this respect, and he based the legal conclusions on Germany's violation of the Kellogg-Briand Pact as well as other treaties into which Germany had freely entered:

"Unless this pact altered the legal status of wars of aggression, it has no meaning at all and comes close to being an act of deception." 14

The tribunal was to adopt his reasoning as to the legal effect of this treaty, and to agree that it "constitutes only one in a series of acts which have reversed the viewpoint that all war is legal and have brought international law into harmony with the commonsense of mankind, that unjustifiable war is a crime." 15

Repeatedly he emphasized that the charge of aggressive war was being used not to make criminal those acts which were otherwise lawful, but to deprive the violators of the excuse that their acts were done in lawful war:

"Doubtless what appeals to men of good will and commonsense as the crime which comprehends all lesser crimes, is the crime of making unjustifiable war. War necessarily is a calculated series of killings, of destructions of property, of oppressions. Such acts unquestionably would be criminal except that international law throws a mantle of protection around acts which otherwise would be crimes, when committed in pursuit of legitimate warfare. In this they are distinguished from the same acts in the pursuit of piracy or brigandage which have been considered punishable wherever and by whomever the guilty are caught." 18

He had little patience with the contention that the trial of these Nazi leaders for planning, initiating, and waging aggressive war would result in ex post facto application of criminal law. He believed that such acts had already become criminal by 1939 when they were committed, and that even assuming that they had not, yet the prohibition of ex post facto laws was not an absolute but a principle which should be used to attain just results. On various occasions he stated:

'International law is more than a scholarly collection of abstract and immutable principles. It is an outgrowth of treaties and agreements between nations and of accepted customs. Yet every custom has its origin in some single act, and every agreement has to be initiated by the action of some state. Unless we are prepared to abandon every principle of growth for international law, we cannot deny that our own day has the right to initiate customs and to conclude agreements that will themselves become sources of a newer and strengthened international law. International law is not capable of development by the normal processes of legislation for there is no continuing international legislative authority. Innovations and revisions in international law are brought about by the action of governments designed to meet a change in circumstances. It grows, as did the common law, through decisions reached from time to time in adapting settled principles to new situations. The fact is that when the law evolves by the case method, as did the common law and as international law must do if it is to advance at all, it advances at the expense of those who wrongly guessed the law and learned too late their error." 17

If this be thought unjust, he often pointed out that:

"We must not forget that we did not invoke the outlawry of war as a sword to punish acts that were otherwise innocent and harmless. On the contrary, it was the accused who had to establish the lawfulness of their belligerency to excuse a course of murders, enslavements, arsons, and violence which, except in war, is criminal by every civilized concept." 18

In this whole endeavor he realized the "far-reaching, and in its application to the facts * * * most novel" feature of "individual accountability to international law and authority." ¹⁸ In his opening statement at Nuremberg he went to the heart of the matter:

"Crimes always are committed only by persons. While it is quite proper to employ the fiction of responsibility of a state or corporation for the purpose of imposing a collective liability, it is quite intolerable to let such a legalism become the basis of personal immunity." m

In retrospect, if punishment by political decision " would have violated no international law, what useful purpose was served by the war crimes trials? And if all but one (Hess) of the defendants convicted of crimes against the peace were also convicted of more "orthodox" war crimes and crimes against humanity involving violations of the laws of warfare and of ordinary criminal law. why was it necessary or desirable to add and emphasize the notion of crimes against the peace? The decision to prosecute for crimes against the peace appears to have been taken, not for the purpose of obtaining convictions or punishments of persons who would otherwise have escaped, but rather for the purpose of firmly establishing as a principle of international law that a war of aggression is criminal.

The Justice himself always emphasized that the importance of the trial lay in the principles to which the four powers became committed by the London agreement, adhered to by 19 other nations, and by their participation in the trial. Not only did that agreement devise a workable procedure for the trial, but, more important, it "for the first time made explicit and unambiguous what was theretofore, as the tribunal has declared, implicit in international law, namely that to prepare, incite, or wage a war of aggression, or to conspire with others to do so, is a crime against international society, and that to perscute, oppress, or do violence to individuals, or minorities on poliitcal, racial, or religious grounds in connection with such a war, or to exterminate, enslave, or deport civilian populations, is an international crime, and that for the commission of such crimes individuals are responsible." 2

Pointing out the value of the trial also as "the world's first postmortem examination of a totalitarian regime," he reported to the President as one of the real accomplishments that:

"We have documented from German sources the Nazi aggressions, persecutions, and atorocities with such authenticity and in such detail that there can be no responsible denial of these crimes in the future and no tradition of martyrdom of the Nazi leaders can arise among informed people.'

Through the London Agreement and the incorporation of its principles in a judicial precedent, he concluded that "we have put international law squarely on the side of peace as against aggressive warfare, and on the side of humanity as against persecution " 24

Justice Jackson evaluated the Nürnberg trial as "an attempt to answer in terms of the law the most serious challenge that faces modern civilization-war and international lawlessness." " Referring to President

Wilson's remark in 1919 about international law having been "a little too much thought out in the closet," he sought to "bring international law out of the closet where President Wilson found it and impress it upon the consciousness of our people." 36 Citing the many successful arbitrations between the United States and Great Britain, he stated that:

"The world's hope for peace depends in the last analysis upon establishing patterns of national behavior that will sustain international institutions strong enough to settle conflicts before they break into wars. We must forge and use stronger and more inclusive instrumentalities for the hearing and settlement of grievances which may be used as an alternative for war without compromise of nationl honor." 37

In this successful extension and adaptation to international uses of the philosophy and technique of our daily law practice," he hoped that nations could "devise instruments of adjustment, adjudication, and conciliation, so reasonable and acceptable to the mases of people that future governments will always have an honorable alternative to war. * * We may as well face the fact that it will not be enough to have a mechanism for keeping the peace which a few scholars and statesmen think well of. If it is really to work, it must have such widespread acceptance and confidence that peoples as well as philosophers support it as a thoroughly honorable and reasonably hopeful alternative to war." 20

Doubtful of the utility of codification of international law until the world had many more shared experiences and values in dealing with international disputes by legal means, to he felt that-

"We should take advantage of every opportunity to deal with international controveries by the adjudicative or arbitral techniques. In this way we will enlarge and expand the world's experience in using these orderly and reasonable processes, fash ion an increasing body of decisional and customary international law, and encourage the law-abiding habit among nations." "

There may be room for much difference of opinion as to the validity of some of the views expressed by Mr. Justice Jackson, but in the main they are sound and necessary for making real progress in international law. He was only too aware that the last-ing value of the Nuremberg principles will depend far less on the ready acceptance given them by the United Nations General Assembly than on the use made of them in the future. Most of us will agree with his belief that-

"Those who best know the deficiencies of international law are those who also know the diversity and permanence of its accomplishments and its indispensability to a world that plans to live in peace." **

WM. W. BISHOP, Jr.

(Charles Warren was born March 9, 1868, and died August 16, 1954, at his home in Washington at the age of 86. A native Bostonian of pure Colonial ancestry, a graduate of Harvard, a student at the Harvard Law School for 2 years (obtaining a degree of A. M.), Mr. Warren came to be early marked as an author and historian. His career may be divided roughly into several more or less distinct phases. During the first phase up to 1914, while he was engaged in the practice of law in Boston, he tried his hand at a novel, The Girl and the Governor (1900), and a poem delivered at the dedication of the Harvard Union in 1901. But his penchant for historical writing was by that time distinctly budding. Besides various legal papers and historical notes in current law reviews, he published a two-

volume work on the Harvard Law School and Early Legal Conditions in America (1909), and a History of the American Bar, Colonial and Federal, to the Year 1860 (1911)).23

¹ One must at least mention his opinion of August 27, 1940, sustaining the President's power to conclude the "destroyer-bases deal" as an executive agreement (39 Ops. Atts. Gen. 484); this Journal (vol. 34 (1940), p. 728); his discussion of the bases, dissenting, in Vermilya-Brown Co. v. Connell ((1948) 335 U. S. 377, 390); and his comments, concurring, in U. S. v. Spelar ((1949) 338 U. S. 217, 224). Of more than passing interest, see Chicago & Southern Air Lines v. Waterman S. S. Corp. ((1948) 333 U. S. 103); Hirota v. MacArthur ((1948) 335 U.S. 876, and (1949) 338 U. S. 197); Johnson v. Eisentrager ((1950) 339 U. S. 763); Zittman v. McGrath ((1951) 341 U.S. 446); and Orvis v. Brownell ((1953) 345 U. S. 183). Justice Jackson's Cardozo lecture, Full Faith and Credit: The Lawyer's Clause of the Constitution (Columbia Law Review, vol. 45 (1945), p. 1), is a masterful discussion of constitutional controls over private international-law questions between States of the United States.

Text of Opening Statement Announcing Subject of Investigation by Subcommittee Chairman Clyde Doyle, California, for Subcommittee Hearings of House Un-American Activities Committee in Milwaukee, Wis., in Accordance With Recently Announced House Resolution 151

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. DOYLE. Mr. Speaker, by unanimous consent heretofore granted me by this great legislative body so to do. I herewith present the text of remarks made by me at Milwaukee, Wis., on Monday, March 28, 1955, upon the opening of 3 days of public hearings by a subcommittee of the House Un-American Activities Committee. I believe it is especially pertinent that wording of my opening statement, as subcommittee chairman, be thus conveyed to you and all of my other colleagues by reason of the recent unanimous approval of House Resolution 151, wherein section 2 (i) reads, as follows:

The chairman at an investigative hearing shall announce in an opening statement the subject of the investigation.

Having the responsibility and privilege of having House Resolution 151 bear my name, but without claiming any pride of authorship, or exclusive accomplishments in the submission of House Resolution 151 to the House Rules Committee and then the full House itself for consideration, I felt reasonably sure that this opening statement by me, as set forth in the following text thereof, would indicate to you and all my colleagues What I believe to be in accordance with the recently adopted House Resolution 151 in connection with the obligation therein stated that the chairman "shall announce in an opening statement the subject of the investigation." At these hearings at Milwaukee the other members of the subcommittee were my distintinguished colleague the gentleman from Louisiana [Mr. WILLIS], and my distinguished colleague the gentleman from Ohio [Mr. SCHERER].

My two colleagues and I were necessarily and officially absent from the floor of the House of Representatives Monday, Tuesday, and Wednesday, March 28, 29, and 30, inclusive, in performance of our official committee duties.

Mr. Speaker, I state that I believe the hearings were productive of much of value to the House Committee on Un-American Activities in accordance with the requirements made of said committee under Public Law 601. Amongst other developments in Milwaukee, some of the 15 witnesses who appeared before us might be termed cooperative or friendly witnesses. They did not plead the fifth amendment, and while more

than two-thirds of the witnesses did plead the fifth amendment, it is believed by we three subcommittee members that the Milwaukee hearings were well worth the time, effort, and cost expended to conduct them.

I wish to state that we felt throughout the 3 days of public hearings the public press and reporters and photographers were very cooperative in the observance of our required procedures.

The text of my announcement as the hearings opened was as follows:

OPENING STATEMENT BY Mr. DOYLE, SUBCOMMITTEE CHAIRMAN

The subcommittee will please be in order. Let the record show that the Honorable Francis E. Walter, chairman of the Committee on Un-American Activities, House of Representatives, pursuant to the provisions of law, Public Law 601, enacted in 1946, establishing this committee, duly appointed Representatives Edwin E. Willis, of Louisiana, Gordon H. Scherer, of Ohio, with myself Clyde Doyle, of California, chairman, as a subcommittee to conduct these hearings in Milwaukee, Wis. The full membership of the subcommittee is present. Also present for 1 day is Hon. Donald Jackson, a member of the Committee on Un-American Activities. We are pleased he is present.

The Congress of the United States has imposed upon the Committee on Un-American Activities the duty to make investigations of "the extent, character, and objects of un-American propaganda activities in the United States, the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution, and all other questions in relation thereto that would aid Congress in any necessary remedial legislation." This committee is not a court. Its duty is to investigate as an aid to Congress for purposes of more intelligently legislating.

This committee has devoted much time in the past years to the investigation of the subject of communism, and the committee has endeavored to keep Congress informed of the extent, character, and objects of the Communist conspiracy within this country. We have held investigations in many of the most vital manufacturing and industrial cities. In the performance of this huge task the committee, in its reports to Congress, has made 48 recommendations for new legislation or the strengthening of existing legislation designed to aid in the fight against communism. All but 4 of these recommendations, in 1 form or another, have been enacted into law by the Congress of the United States.

The committee wants it understood that in the conduct of this hearing it is not interested in any dispute between employers and employees or between one union and another. Neither is it interested in the internal affairs of any union. It proposes to follow and uncover, if it can, the Communist Party activities of any person as to whom reliable information indicates Communist Party affiliation, whether that be in the field of labor or any other field.

In pursuing these statutory objectives of the committee, as outlined above, former investigations have disclosed a concentration of Communist efforts in many of the strategic defense areas of the country. The city of Milwaukee, ranking eighth in size, as compared to the other great industrial cities of our Nation, having in its area more than 2,000 manufacturing plants representing 200 distinct lines of industry, and leading the whole world in the manufacture of heavy machinery and electrical controls, units and parts, is of great strategic importance to our

beloved Nation as a whole, both in time of peace and in time of war.

The purpose of this present investigation starting this morning is to determine first whether there has been planned Communist activity in this important area, and if so, the nature, extent, character, and objects thereof. It is not limited to this, however. The committee is especially interested in ascertaining the methods used by the Communist Party of the United States in filtrating local industrial units, civic organizations, or other groups, and the extent of its influence in the economic and social phases of our society. Whatever information we obtain will better enable Congress to legislate more ably and comprehensively.

It is a standing rule of this committee that any person named in the course of committee hearings be given an early opportunity to appear before the committee, if he desires, for the purpose of denying or explaining any testimony adversely affecting him. This is the American way of doing. If this be his desire, of any person named during these 3 days, he should communicate immediately with legal counsel for the committee as soon as possible.

mittee as soon as possible.

The committee is deeply appreciative of the action of the Immigration and Naturalization Service for changing the date of a hearing previously arranged by them to be conducted in this hearing room, in order that this congressional committee could have it available for these hearings. I desire to take this opportunity to thank Supt. E. A. Redlin, who is in charge of the Federal Building; United States Marshal Clemens S. Michalski; Chief of Police John W. Polcyn, and the capable members of their respective staffs for the important service they have rendered this committee in connection with this hearing. I desire also to thank Hon. Robert E. Tehan, United States district judge for the eastern district of Wisconsin, and his secretary, Miss Marlon Lynch, for their splendid cooperation in making it possible for us to have the use of this hearing

Being just informed a few minutes ago the Milwaukee Bar Association, constituted by the membership of practicing attorneys in the city of Milwaukee, voluntarily and cordially named a panel of nine of its members to render advice to any witnesses appearing before this committee as to said witnesses constitutional rights. On behalf of this subcommittee I compliment the Milwaukee Bar Association for offering to render this valuable service. Similar service by bar associations has previously been rendered in a few of the great metropolitan cities of our Nation and we recognize it as being in the best tradition of members of the bar to perform this valuable community service.

I would remind those present in this hearing room that we are here at the direction of the Congress of the United States, to discharge a duty and honorable, specific, official obligation that has been placed upon us by Public Law 601. You are here by the permission of the committee during these 3 days of hearings and I trust that throughout the hearings you will conduct yourselves as guests of the committee. A disturbance of any kind, or audible comment during the course of testimony, whether favorable or unfavorable to the committee or any witness appearing before it, will not be tolerated. For any infraction of this rule the offender will be immediately ejected from the hearing room. I trust it is only necessary to call this matter to your attention and that it will not be necessary that it be repeated.

The Committee on Un-American Activities consists of nine Members of the House of Representatives. Each member is also a member of one other major congressional committee. Since the workload of this committee is so constant and heavy, it has been

found necessary to divide the committee into subcommittees of three members when the work takes attention away from Washington, D. C. This makes it so the committee members are away from the Capital on less occasions and is also in the interest of saving expense as well as facilitating the necessary work. On such occasions the House of Representatives officially excuses our absence from our other daily duties at the Capital.

If any person in or about Milwaukee desires to cooperate with the committee during our brief stay, we invite such person to promptly see our legal counsel or our investigator. They are both here in the room with us. In many cities where the House Un-American Activities Committee has held hearings former active members of the Communist Party have voluntarily come forward and, either in executive or public session of the committee, testified against the Communist conspiracy of which they were formerly unwitting or conscious members, and thus given tangible evidence of the fact that they had had an experience in the Communist Party which convinced them that they had made a serious mistake in Joining it, and also that they desired henceforth to place their abilities and energies out in front in support of making up, as far as they could, for their mistake in joining the Communist Party and help their neighbors to know the inherent dangers of this subversive Communist activity in their respective communities. I give this same invitation to any person disposed to do the same service while we are here these 3 days. And if there be such persons who do not get around to coming forward while we Congressmen are here in Milwaukee, we respectfully suggest that you communicate that you are desirous and willing to render the service to us at the House Office Building, Washington, D. C., and your communication will receive prompt attention.

Peace in Our Time

EXTENSION OF REMARKS

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Facts Forum News of April 1955.

PEACE IN OUR TIME? (By Freda Utley)

Discussion of United States policy today is rendered singularly difficult by the impossibility of discovering what it is. One is hard put to decide whether we have a foreign policy at all, or are simply standing in the middle of the road, unable to decide which way to go, and in grave danger of being hit by the traffic moving rapidly in both directions.

Not only do the pronouncements of the President and Secretary of State vary from week to week, or even from day to day—and often fail to synchronize—they also tend to be as ambiguous as the sayings of the Delphic oracle which were wont to mislead the Greeks who consulted it and interpreted its mysterious messages according to their hopes and fears or prejudices. President Eisenhower's answers to questions at his press conferences, together with his own and Secretary Dulles' speeches, not to mention the remarks occasionally contributed by sundry Cabinet members, generals, and admirals,

serve only to leave the world guessing. Either their statements contradict one another or they can be interpreted in such diverse fashion by the pundits who explain them in the press and on the radio that the public might just as well continue enjoying itself watching TV dramas, comedies, or cheesecake, as seek information in the newspapers or anywhere else concerning the mystery of United States policy.

Insofar as America's Atlantic policy is concerned there is some clarity. True that our promises to France and Germany concerning the Saar contradict one another and may yet wreck the West European union and prevent NATO from acquiring a backbone in the shape of a West German army. Nor is there any guaranty that our British and French allies will not tear down the painfully-built structure of West European union at the forthcoming conference with Moscow, which is to precede the implementation (as distinct from ratification) of the Paris pacts.

But at least the world knows that the United States Air Force is on the alert, night and day, at its many bases around the periphery of the Soviet empire, and that if the Communists attack anywhere in the European or Middle Eastern area, we shall hit them with all that we have. It is in the Pacific, where the danger of war is far more imminent, that our intentions are so vague that neither friend nor foe knows whether America can be counted upon to help the Chinese Nationalists to retain the offshore islands which the Communists have already started to attack, following the evacuation of the Tachens at our insistence.

Certainly we cannot know what is our intention from Mr. Dulles' statements. In his February 16 speech to the Foreign Policy Association in New York he said that "the United States has no commitment and no purpose to defend the coastal positions as such." His subsequent remarks on this and other occasions that by "as such" he meant that we shall defend them only if their conquest by the Communists seems to presage an attack on Formosa, served only to make confusion worse confounded.

Since Peiping is proclaiming night and day that it intends to liberate Formosa, there can be no doubt that these islands would be steppingstones to their objective, just as in Nationalist hands they constitute Free China's last best hope of liberating the mainland from the Communists. But Mr. Dulles' phrase "as such" leaves it open to us to pretend to ourselves that Communist China will cease and desist from aggression if we let her take the Quemoys and Matsu in exchange for a cease-fire in the Formosa Straits.

Since everyone must know after our Korean experience that Pelping, like Moscow, cannot be counted upon to honor even its treaty obligations—much less any behind-the-scenes deal—the effect of the "as such" statement is to leave the way open for a graceful retreat if the President continues to believe "that there is no alternative to peace."

It would in fact seem that the only difference between United States and British policy is that London wants us to compel Chiang Kal-shek to abandon the Quemoys and Matsu without any quid pro quo, whereas Washington wants at least a tacit cease-fire and an end to Pelping's daily proclamation of its intention to attack Formosa.

GUARANTEED NO INTERFERENCE

Since the United States has let it be understood that the Communists need not fear war with us so long as they only nibble at the offshore islands; and since we have forbidden the Nationalist air force and navy to bomb the airfields the Communists are constructing at Foochow, or to interfere with the shipping bringing war supplies to Foochow and Amoy, we have in effect guaranteed to the Communists that there will be no interfer-

ence with their preparations for the all-out assault on the islands which we should regard as preparatory to an attack on Formosa and which would mean war with us. It is almost as if we had told the enemy that we won't fight him until he is good and ready and will have a fair chance to win.

On his return from Asia, on March 6, Mr. Dulles spoke as if he had become convinced that firm opposition to any additional Communist expansion is essential to block "the crumbling away" of allied authority in Asia. But, as the New York Times also reported on March 7:

"Nothing in Mr. Dulles' remarks today [March 6] or during his tour has removed the uncertainty about what the United States will, or will not, do about the offshore islands."

Nobody, except God and maybe President Bisenhower, although even this is doubtful, knows whether we shall, or shall not, fight to defend the Quemoy and Matsu offshore islands. The American public certainly does not know and can only choose between the varying opinions of commentators, columnists, and editorial writers. Congress does not know, although Knownand is determined that we shall and Morse that we shall not. It would seem that neither Mr. Dulles nor Admiral Radford knows, although the latter definitely, and the former almost certainly, wants us to stop the further triumphant advance of communism in Asia by a firm stand.

The Chinese Nationalists don't know, although they understood originally that the administration had pledged itself to help them defend these strategically and politically important islands. Their Foreign Minister, George K. C. Yeh, having stated on February 10 that the United States had promised to defend the Quemoys and Matsu. retreated from his premise next day. After leaving the State Department, on the day he returned to Formosa, he was reported by the New York Times as saying that "he had not intended to leave the impression that the United States had given the Nationalist Chinese a specific pledge." Mr. Yeh added that he would not eliminate that possibility but said that it is for the United States to decide.

The Communists don't know, and therein lies the greatest danger of war. For, as we should know from past experience, all wars are started by one miscalculation. History shows that both the First and Second World Wars might never have occurred if the intentions of the Western Powers had been realized. But, as Syngman Rhee has remarked, "There is an old saying that those who will not learn from history will be required to repeat it."

Ironically, considering the Republican campaign promises of 1952, it was left to James P. Richards, the South Carolina Democrat who now heads the House Foreign Affairs Committee, to remark, on March 6. that the United States is risking an armed clash over the Matsu and Quemoy Islands by withholding its intentions regarding them. As he wisely stated, the consequence is likely to be that the Communists "will start probing out our intentions * * * and in doing so will open an armed clash." was also Mr. RICHARDS who, on March 6. stated that when the joint resolution on Formosa was voted the administration had misled Congress into believing that it was guaranteeing the defense of the offshore islands. It was also a Democrat, Senator George, of Georgia, who pointed out the implications of Dulles' report, when he stated on March 8 that:

"The Communists portray us as weak, and unless the free people get a clear sense of our strength and of our willingness to use it, they may conclude that communism is going to win and that they had better join up."

On the same day that Dulles was reporting to the Senate Foreign Affairs Committee that the whole of Southeast Asia will be in danger unless the United States of America "makes its influence felt in a positive way," Mr. Eden was telling the House of Commons that a Formosan cease-fire and withdrawal of the Nationalist Chinese from the offshore islands could pave the way for consideration of Red China's entry into the United Nations "at an appropriate stage."

When questioned concerning Eden's statement, so completely at variance with his own, Mr. Dulles is reported to have said that he "knew nothing about it." But on February 11 Drew Middleton had reported to the New York Times that Herbert Morrison had said that day: "The United States intends to retire from situations imperiling peace, such as insistence on occupation of islands near the Chinese mainland."

As Mr. Middleton also wrote, no factual information on this had been made public, but in London it seemed as if some reassuring information about the islands "had passed from Washington to London." This no doubt accounts for Mr. Eden's affirmative reply in the House of Commons on March 8 to a question as to whether British "friendship, cooperation, and consultation with the United States remained as strong as ever." This was on the same day that the British Poreign Secretary praised the United States for having "effectively restrained the Chinese Nationalists from initiating attacks against the Chinese mainland" and for having persuaded Chiang Kal-shek to evacuate the Tachens.

BRITAIN'S PRIVATE DEAL

It would therefore seem probable that the Alsop brothers were correct when they reported that Dulles had made it clear to Eden at Bangkok that if Britain could arrange a private deal along these lines, we could persuade the Nationalists to withdraw from the offshore islands. Stewart Alsop represented Eden as offering the carrot to the Communist donkey while Dulles threatens it with a stick. Those who want us to stand by our Chinese allies might view them instead as Dr. Jekyll and Mr. Hyde.

"Pull devil, pull baker"—Britain's Intentions are all too plain while ours are veiled in the obscurity of double talk and double think. Moreover, British views are reinforced by the powerful voices of our own appeasers and anti-anti-Communists as voiced by the New York Times and Washington Post and a host of American so-called liberal commentators and columnists who have no conception of Communist aims and methods, or of the clear and present danger which menaces the United States.

UNIMPORTANT TERRITORY?

Just as, before the Second World War and their defeat, the French used to say, "Why die for Danzig?" we now have Walter Lippmann and others of his kind proclaiming that it would be folly to risk war over "such unimportant territory" as the Quemoys and Matsu.

Neither Mr. Lippmann, nor other sophists of his kind, realize that wars are neither waged, much less won or lost, according to an accountant's estimate of the value of a particular piece of real estate. Nor is victory assured to the side which has the most "hardware" to throw at the other. "Wars are won or lost in the hearts of men."

No American who knows and understands the origins of his country is likely to question the truth of this remark, made to me recently in Harrisburg by a Russian who had managed to escape the fate of the thousands of his displaced countrymen in Germany whom we handed over to Stalin to be shot, or sent to slave labor camps after our victory in the last world war. But too many of us today, having inherited the blessings of liberty, have no conception of what it means

to be without them and no realization that the price of freedom is readiness to die for it.

A year ago hardly anyone had heard of the Quemoy and Matsu Islands. Today they have become our Rublcon. The decision to cross it or to retreat lies with President Eisenhower alone. This at least is clear from the wording of the resolution passed by Congress on January 28 at the President's request, which authorizes him to secure and protect "such related positions and territories of that area now in friendly hands, and the taking of such other measures as he judges to be required or appropriate in assuring the defense of Formosa and the Pescadores."

CAMPAIGN PROMISES VANISHED

No one knows the mind of President Eisenhower; or rather no one knows who will make up his mind for him when the choice between peace or war in the Formosa Strait can no longer be avoided. One thing only is certain. The Republican campaign promises of 1952 have vanished like snow upon the desert's face. There is no longer any question of rolling back the Iron Curtain in Europe or Asia, or of liberating anyone anywhere in the world. Far from abandoning the sterile containment policy of the Tru-man-Acheson era, as promised in the Republican platform, the administration now aims only at peaceful coexistence with the Soviet empire based, at best, on the status quo, and at worst on further retreats in Asla.

Few today seem even to remember that President Eisenhower was elected on a Republican platform which promised that:

"It will mark the end of the negative, futile, and immoral policy of containment which abandons countless human beings to a despotism and godless terrorism which in turn enables the rulers to forge the captives into a weapon for our destruction."

For a few months this wise and courageous proclamation of Republican policy seemed to be more than campaign oratory. Mr. Dulles spoke of an "agonizing reappraisal" of our foreign policy which foreshadowed an end to our unconditional aid to those who, like the French, could not be counted upon to fight even to defend their own liberty, much less anyone else's.

CAPTIVE PEOPLES REGAIN HOPE

The captive peoples of the Soviet empire in Europe, together with the Chinese under the iron heel of communism, regained hope and strengthened the resistance forces, thanks to Mr. Dulles' statements concerning their liberation. The workers of East Germany revolted in the summer of 1953, and even the slaves in Russla's concentration camps went on strike that same year in large numbers.

Chiang Kal-shek's forces were temporarily unleashed when Eisenhower countermanded Truman's order to the 7th Fleet to protect the rear of our enemy in Korea "by neutralizing Formosa." And on February 25, 1953, Dulles told Congress that the United States "would never be a party to any international deal fixing despotism on peoples in Europe and Asia." On that occasion he also said that the peoples behind the Iron Curtain "have no ground to fear that the administration would sell them down the river for our advantage."

For a brief moment the clouds lifted, and it seemed as if, at long last, America would have the wisdom and courage to win the battle for the world without war instead of waiting for the Communists to acquire the positions of strength they need before they can attack us with the certainty of victory.

Soon the bright prospect faded. First, the Republican administration settled the Korean war on terms so favorable to the Chinese Communists that they had been rejected a year earlier by the Democratic administration. Next Indochina was given up

because the United States dared neither to intervene nor to compel France to take the measures necessary to defend the colony out of which she had derived great profit, but to which she refused either to give self-government or to defend with adequate forces.

During this same period, in spite of Mc-Carray's efforts to stop Stassen, the security barriers against trade with the enemy were lowered even while American prisoners of war were being starved and tortured in Chinese Communist prisons.

Under British pressure and because the administration nurtures the illusion that trade with Communist countries can promote friendship and peaceful coexistence, we started permitting our allies to export more and more of the sinews of war to China and the rest of the Soviet empire.

Meanwhile Chiang Kal-shek was being more effectively "leashed" than ever before, and Syngman Rhee's army was being rationed to a 2 days' supply of ammunition for fear it might attempt to liberate North Korea

In Europe, according to the same pattern, we gave our blessing to the Parls agreements, which were acceptable to France only because they are designed to insure that the West Germans shall neither raise nor equip sufficient forces to insure a viable defense of Europe, nor attempt to liberate East Germany.

SOVIET BUSSIA-NO. 1 "ALLY"

According to Walter Lippmann, a "constructive" reading of the Paris agreements offered "an excellent basis for negotiations with the Soviet Union" because they provide "for the limitation of armaments in Western Europe." Without agreeing that his adjective "constructive" is well chosen, one can agree with Lippmann's view that the Soviet Union should have been happy to negotiate, since, according to Dulles' statement of November 30, the purpose of the London-Paris accords was "not merely to create defensive strength * * but to limit and control that strength so that it can never be an aggressive force."

Since any attempt to liberate the captive peoples could no doubt be considered as an "aggressive" action, and contrary to the principles and aims of the United Nations at its foundation (when Soviet Russia was our dear "ally"), the Paris accords, like the Formosa Treaty, constitute in effect an assurance to the Communist tyrants that they have nothing to fear so long as they content themselves with the enjoyment of their ill-gotten rains.

NO AMERICAN REPRISALS FEARED

No one who understands the terribly effective measures used to suppress rebellion by the Communists can believe that any people can liberate itself without help from the outside. Thus Dulles' statement that "liberation normally comes from within," must have reassured Moscow and Peiping that they can continue to repress, or exterminate, the resistance forces in their farflung empire without fear of American reprisals. Once again, as during World War II, we are saving the Soviet government from the consequences of its crimes and follies.

Today, as yesterday, we fail to understand either the weakness or the strength of the Communists or their unchanging aims. Instead of pressing our advantage during the struggle for power which followed Stalin's death, President Eisenhower, on March 19, 1953, made what the New York Times described as the "most conciliatory White House statement on United States-Soviet relations since the start of the Korean war."

This was the occasion on which he observed that the Soviet leaders would never be met less than halfway, and also said that he would not do anything so provocative as starting a move in the United Nations to brand the Soviet Union as an aggressor in Korea.

More than a year later, on June 30, 1954, the President told a press conference that he "would not be a party to any treaty which makes anybody slaves." Optimists could take comfort from this statement. The pessimists noted that on the same occasion Elsenhower had again stated that the hope of the world lay in peaceful coexistence with the Communists, which is surely incompatible with nonrecognition of their right to hold and exploit millions of slaves.

MASSIVE RETALIATION-OR APPEASEMENT?

During his second year of office, President Eisenhower was proclaiming that there is "no alternative to peace." Thus the tyrants were assured that the big stick we carry is not intended for use. Instead of massive retaliation against Communist aggression and crimes against humanity and international law, we seemed to be embarking on a policy of massive appeasement based on the vain hope that, sooner or later, the Communist leopards will change their spots if we treat them nicely and give them plenty to eat. As usual, the Russian people were identified with their masters, and instead of being encouraged to resist were disheartened by our conciliatory attitude toward those who oppress them.

"Coexistence" or a modus vivendi, or whatever other expression is preferred as a substitute for the unpleasant word "appeasement," became the order of the day. By the fall of 1954 Republican and Democratic antiand pro-Eisenhower editors, columnists, and commentators were agreed that the objective of administration policy is simply peace in our time.

Drew Pearson wrote on November 29, 1954: "The decision is: Whether to accept the olive branches dangled from the Kremlin for coexistence with Russia—olive branches that are urged upon Ike by Churchill and Mendes-France; or to accept the advice of his Pentagon advisers and force a flat showdown with communism in the Far East—a showdown could lead to a preventive war.

"So far, President Eisenhower has taken a definite course toward coexistence and against his military advisers. More than on any other matter of late, he is inclined to play this policy with a lone hand. He personally overruled the Joint Chiefs of Staff when they proposed that the United States stand and fight at Quemoy, the small Nationalist Chinese island just off the Communist Chinese mainland."

David Lawrence's U. S. News & World Report, which, unlike Mr. Pearson, can be relied upon to tell all the truth which it is possible to know, was of the same opinion. On December 3, 1953, it said:

"Peace search, basis for a deal, to be pushed by Elsenhower despite almost any Communist provocation, is basic United States policy now."

Doris Fleeson, who likes Ike but prefers Truman, wrote on November 29 that the President's "noble aim" is "to avoid a military showdown * * * he believes that the free world will win in the end by wise action and the erosion of time."

And on February 11 U. S. News & World Report stated, all too truly, that "the Communists know from experience that the United States will pay a good price for a period of peace and quiet. Just now they're out to cash in again."

DULLES SAYS "WHEN"

John Foster Dulles, whose appointment as Secretary of State had seemed to herald the inauguration of a policy cognizant of the aims and methods of the Communist power, said on November 29, 1954:

"Of course we look anxiously for signs of real change in the attitude of international Communists. We hope that the day will come when they will renounce the effort to rule the world by methods of force, intimidation, and fraud. When that day dawns we shall greet it eagerly."

If our Secretary of State had said "if" there would be no reason for alarm. But he said "when" as if we had only to wait patiently and with restraint for the Communists to cease from troubling. Thus American policy would now seem to be based on the erroneous supposition that the free world can win by sitting back and hoping that God will help those who fail to help themselves; or, on the even more dangerous supposition that the enslaved peoples of the Communist empire in Europe and Asia can liberate themselves without our help.

The record speaks louder than words. By 1954 the United States was refusing either a security pact, or the continuance of arms aid and economic assistance to Chiang Kai-shek unless he promised never to use such aid for offensive purposes. And on March 2, 1955, President Eisenhower, at his press conference, was understood to have said that any attempt to liberate one's country or one's countrymen would be considered as aggression by the United States. In answer to a question concerning Generalissimo Chiang's statement to Senator Margaret Chase Smith that he expected United States moral and logistic support for an invasion of the Chinese mainland, Eisenhower

"The United States is not going to be a

party to an aggressive war."

Of course, like so many other administrative statements this one can be variously interpreted. But the White House issued no denial when the Washington Post and the New York Times, together with most other newspapers, commentators and columnists took his reply to mean that the United States would not help the Nationalists to liberate their homeland.

In the inelegant language of Doris Fleeson, Elsenhower had "slapped" Chiang. It was hard to disagree with her that, in effect, the President had "recognized the sovereignty of Red China."

TREATY FOR DEFENSE ONLY

There had in fact been little doubt for some months past of our intention to accept, if not as yet to "recognize," the Chinese Communist conquest of China. This was made clear by the terms of the Formosa Treaty and by the President's January 24 message to Congress in which he stressed the fact that: "It is a treaty of purely defensive character." The terms of the treaty make this fact all too clear. It not only forblots "offensive military operations by either party from the territories held by the Republic of China" without mutual consent, but also forbids the Chinese Nationalists to "remove" from Formosa without our consent any of the arms we have supplied.

Mr. Dulles' various statements have served to make it yet more clear that "liberation" is no longer the objective of our policy. As on November 29, 1954, he said in a speech in Chicago that we should not "allow ourselves to be provoked into action which would be a violation of our international obligations"; and that "we have agreed by the U. N. Charter to try to settle international disputes by peaceful means in such a manner that peace is not endangered."

All this would be very fine if our enemies thought likewise. Since they do not, it is folly to imagine that the evidence we continually give of our peaceful intentions will not embolden them to attack our friends or to continue blackmailing us. What the world is waiting for is proof that we can be counted upon to stand by those who stand by us and that there is a chance that ours will be the winning side.

Mr. Dulles evidently realizes this for, in his February 17 speech, he said: "A great danger in Asia is the fear of many nonCommunists that the United States has no real intention of standing firmly behind them. Already that fear has mounted to the danger point."

DISASTROUS POLICY CONTINUED

Unfortunately Mr. Dulles has to reckon with others who also have the possibility of influencing the President and are giving him contrary advice.

Truman was the inheritor of Roosevelt's disastrous foreign policy and can at least be praised for having finally started to take measures to stem the triumphant advance of the Communist power. But Eisenhower, on the occasions when he lends an ear to the so-called liberals who have maintained their footing in the White House, seems to be trying to out-Roosevelt Roosevelt in his desire for coexistence, if not collaboration, with the vastly extended Communist empire in Europe and Asia.

Instead of taking advantage of the agrarian crisis in Russia and the unrest in the satelite countries to compel the Kremlin to make concessions to the free world, we are proclaiming our readiness to give the Communists the breathing space they require to recuperate and prepare for a future attack on us when they feel strong enough to defeat us.

Truman, whose favorite game is poker, was perhaps better qualified to know when an opponent is bluffing than Eisenhower who spends his leisure hours on the golf course. True that Truman, after taking the risk of resisting the Communists in Korea, was afraid to stake enough to win. But Eisenhower seems not even to realize that a player who says he will never risk his blue chips, however good his hand, must lose in the end.

COMMUNISTS WIN JACKPOTS

Our Communist opponents win the jackpot every time, even if all they have in their hand is a pair of deuces, simply because we are afraid of risking anything, ever, anywhere in the world. Imagining that we are so rich that we can afford both to continue losing ourselves and also to stake other players too lacking in boldness ever to win a pot, we let the Communists take all, again and again and again.

Today we are no longer seeking even to contain the Communist power. Instead we watch them nibble away in Asia, secure in our President's frequent pronouncements that we fear war too greatly ever to use our strength to stop their depredations. While Mao-Tse-tung displays United States fiyers captured in the Korean war to the peoples of Asia as evidence that the United States is a paper tiger which cannot even protect her own nationals, much less anyone else, we have been busy extracting promises from Syngman Rhee and Chiang Kai-shek that they will never attempt to liberate their countrymen.

While proclaiming our policy as one of "partnership" and citing the wishes of our "allies" as the reason why we cannot pursue a boid policy in line with American interests, we do not hesitate to exert pressure on the Koreans and Chinese to prevent them from fighting to free their countrymen from Communist slavery.

PEACE AT ANY PRICE?

In a word, both in Europe and Asia we are now giving arms and promising support, not to those who wish to fight for the liberation of others, but only to those who promise that they will never resort to arms except in self-defense. We give "favored nation" treatment to the neutralists and appeasers instead of to those who today, as distinct from yesterday, wish to fight the totalltarian tyrants. And the very same people who cried shame on Neville Chamberlain after Munich now proclaim "peace in our time" at any price as a "noble" sim-

Few realize that our obsession with security must eventually place us in a position in which the United States would have no choice but to fight in the most adverse circumstances, without allies, or to submit to Communist conquest from within and without. For lost allies are not merely lost. Sooner or later those who looked to us in vain to help them liberate themselves from Communist oppression, together with those who had the courage to resist Communist aggression but whom we abandoned to their fate for the sake of peace in our time, must be driven to join our enemies. If there is no banner in the West to which those who prefer death to slavery can repair, even the brave must eventually give up hope and save their lives by joining the ranks of our enemies.

In the words of Senator Knowland:

"Coexistence and atomic stalemate will result in ultimate Communist victory * * * We must face up to the fact that the Communist concept of 'peaceful coexistence' means that the United States or other free nations of the world will be allowed to exist only until communism is able to subvert them from within or destroy them by ag-gression from without. • • • Since stalemate would put the Soviet Union itself 'off limits,' the intended victim of the aggression could only look forward to a localized War within their own frontiers with the destruction of life and property that would entail. Since the hope of restraining this new type of Soviet aggression by placing the body of the octopus in danger, these nations individually, one by one, might prefer to accept Soviet terms rather than even call on the West for aid.

POLICY OR INSANITY?

"Before our eyes the people of the United States would see nation after nation nibbled away and when the realization finally dawned that this policy would inevitably result in our country becoming a continental Dien Bien Phu in a Communist totalitarian world, the chances of our winning such a struggle would be so lessened and the Soviet world so extended that they then would be prepared for an all-out challenge to us wherein we would be allowed the choice to surrender or die."

The courageous speech made by the California Senator on November 15, from which I have quoted, interrupted the debate on Whether or not to censure McCarrny for having been rude to general Zwicker and for not having been sufficiently communicative concerning his finances to the Gillette committee. This debate can be compared only to Nero's notorious musical performance While Rome burned. Today it is not a city. but the whole free world which faces de struction. The McCarthy business served only as a distraction or as a smokescreen behind which those who are leading us down a road, proverbially paved with good intentions, can continue to work for "peace in our time."

As the Greeks said: "Those whom the gods wish to destroy, they first make mad." Could anything be more insane than our present policy of giving arms aid and financial assistance only to those who promise not to fight? Could anything be more foolish than listening to the siren voices of the protagonists of coexistence, which, to quote Senator Know-Land again, means that "the United States or other free nations of the world will be allowed to exist only until communism is able to subvert them from within or destroy them by aggression from without."

It would be as foolish as futile simply to blame the administration, or either the Republican or Democratic Party, for our tresolution. There is an old saying that a people gets the government it deserves. Today we should perhaps rather say that in a democracy the people get the kind of press

and radio and TV reporting which they want. The fourth estate is now more powerful than either Congress or the President. What passes for public opinion is that of our favored commentators and columnists or the editorial writers of such newspapers as the New York Times and Washington Post. And since the people favor those who tell them pleasant things, it is not to be wondered at that our newspapers, radio, and TV, and the advertisers who support them, enable only those who obscure realities, or delude us by false hopes, to form public opinion.

In a word, we have only ourselves to blame if the elected Representatives of the American people are more interested in getting reelected by being all things to all men than in saving the Nation. Those of us who credit the President and his advisers with being no worse than ourselves may see them instead as simply unable to make up their minds. Like Hamlet, they cannot decide whether to "take arms against a sea of troubles and by opposing end them" or to continue suffering "the slings and arrows" flung at us, not by "outrageous fortune," but by the Frankenstein monster which we created at Tehran, Yalta, and Potsdam, and which we are now too fearful to challenge lest in destroying it we make a desert of the world.

President Eisenhower may think that he can steer the ship of state along a nicely calculated course between the Scylla of atomic war and the Charybdis of submission to Moscow. But he is the captain of a mixed crew with opposing ideas as to the right course to follow. Thus, helmsmen who dread Scylla must alternate with those who veer away sharply from Charybdis, while the strong and varying winds of public opinion, buffeting the ship from all sides, increase the danger. Nor can we rest assured that if we escape shipwreck we shall not be lured to destruction, since, unlike Ulysses, Eisenhower has failed either to tie himself to the mast or to plug the ears of his crew so that they shall not hear the songs the sirens sing promising ease and security through appeasement.

The vaciliations, prevarications, ambiguities, and sudden changes in the direction of our foreign policy are nonetheless dangerous because they are understandable. If government by consent of the governed is taken to mean government by Gallup poll or government by the lowest common multiple of the intelligence of the citizens, we shall be unable to avoid the fate of the city states of ancient Greece where democracy degenerated into demagoguery and led to the conquest of power by native tyrants or to the enslavement of the people by foreign conquest.

Freedom cannot survive in this or other dangerous ages unless the leaders of the nation are men of character and courage who believe in the principles they profess and stand by them even at the risk of unpopularity or of losing office.

ALL THINGS TO ALL MEN

The representative form of government, which we now like to call democracy requires that the actions of political leaders correspond, at least remotely, to their opinions. It must certainly perish if the elected representatives of the people cease to mean what they say and say what they mean. The nadir of democracy is reached when double think and doubletalk make a mockery of the people's right to know and judge and decide. If both, or all, political parties try to be all things to all men, the electorate has no choice even at election time. In the name of democracy the people then find themselves with little more control over their destiny than the subjects of a totalitarian state, since they have no means of knowing what will be the actual policy of the party for which they vote.

The endeavor to be all things to all men is

The endeavor to be all things to all men is dangerous enough in domestic politics. In

the sphere of foreign policy it must be disastrous. For here the President is confronted. not only with the problem of keeping his mixed team together by doubletalk—or by acting like the legendary horseman who fulfilled his assignment by riding off rapidly in all directions—he also has to reconcile the irreconcilable desires and aims of a multitude of so-called allies. Since it is obviously impossible to pursue a policy acceptable to both those who want peace at any price and to those who wish to resist tyranny-much less those who yearn to liberate the enslaved peoples of the Soviet empire in Europe and Asia-America's endeavor to please everybody results in our losing friends on all sides and influencing nobody. By endeavoring to make the best of both worlds we are in danger of losing both.

"ISLAND-HOPPING RETREAT"

In this connection a dispatch from Rome, dated March 7, from one of the ablest of American foreign correspondents is of interest. George Weller, whom I knew well in China in 1946, when he was one of the few Americans who had no illusions concerning the nature and aims of the Chinese Communists, reported as follows in the Chicago Daily News:

"America's "island-hopping retreat" in the Formosa Strait is beginning to produce results on European public opinion opposite of those intended by Washington. Instead of winning sympathy for moderation, it is causing Communists and fellow travelers to seent the blood of further conquests. It causes America's allies to ask 'who next?"

The same view of the effect which our abandonment of the Quemoy and Matsu Islands would have in Europe was expressed by Richard Hottelet of CBS who reported on a TV program that the people of Berlin were saying that, if the United States failed to defend these Pacific outposts, they would fear that they too would be abandoned, since Berlin is also an island in a Communist sea.

Such voices as these telling us the true, or informed, reaction of the peoples of Europe to our policies are rare. For the most part American correspondents, columnists, and commentators, are wont to reflect only the image of their own desires or what they think is official American policy in their reporting of foreign opinion. Most of them do not even speak the language of the country to which they are accredited and therefore depend either on their prejudices or on United States Embassy handouts for their opinion of what opinion is.

Reason and logic tell us that we cannot retain the confidence of the forces in Europe and Asia, which are prepared to fight and die for freedom, and at the same time placate the neutralists and appeasers or those who, like the British, will fight only when their immediate interests or their own survival are at stake.

We cannot liberate the peoples under communism's iron heel, nor even protect what is left of the free world, without risking war, We cannot proclaim that there is no alternative to peace, and also expect that our power, great as it is, will be of any use in stemming Communist aggression. We cannot ensure peace in our time without agreeing to the perpetual enslavement of the millions of people delivered over to Communist rule Teheran, Yalta, and Potsdam; and also without serving notice on the world that those who are threatened by the Communists had better submit because they can expect no help from America. Nor can we please the neutralists by minor concessions to the Communists because they will not be satisfied until we have retreated past the point of no return.

Quoting George Weller again:

"Indications are that the policy of retreat, politically speaking, has no further dividends to offer the United States in the European

camp."

Nor can it offer any dividends in Asia where our vain attempt to placate neutralists such as Nehru is disheartening or alienating those who can be counted upon to fight with us in the cause of liberty or for their own legitimate national interests. The morale of the Chinese Nationalist Army must be destroyed if we compel them to abandon all hope of liberating their countrymen on the mainland and rejoining their families there. It is as unrealistic as it is cruel to convert them into American mercenaries dedicated only to the defense of our security or the promotion of our interests. Yet this is in effect what we are now trying to do by making our support dependent on their renunciation of their own national and per-The end result is likely to be sonal cause. the one calculated on by the Communists, namely, that they will be able to take Formosa from within through the disaffection or desertion of the Nationalist soldiers.

CONCILIATE INDIA OR LOSE JAPAN?

Nor is it likely that we shall be able to keep Japan in our camp if our main aim is to conciliate India, since Japan requires evidence of our determination not to give way to Communist aggression in Southeast Asia where her principal markets are today, while Nehru wants us to retreat and appease, appease and retreat.

Similarly in Europe we cannot expect to acquire the Germans as willing allies while also pleasing France, since the latter wants an assurance that NATO will never use its strength to roll back the Iron Curtain, while the Germans, if they are to enlist with any enthusiasm in the European defense forces, need hope that their enslaved countrymen in the East Zone will one day be liberated.

It is all too easy for the United States to use the threat of withdrawal of material and moral support from Chiang's and Rhee's forces in order to prevent them from taking offensive or aggressive action against the Communists. No great effort is required to damp down the fires of liberty for the sake of peace in our time. But it will be very difficult, if not impossible, to fan the spark of liberty to life, if and when we decide that our own security requires that we cease to act as firewardens for the Communists.

The American people, misled by press, radio, and television concerning the real issues, have been lulled into a false sense of security. Except for a few lone voices such as those of General MacArthur and Senator KNOWLAND, no attempt has been made to awaken them to realization of our peril. Most of our newspaper editorial writers and columnists, together with our radio commentators, use our predicament to scare us into a policy of appeasement.

Last year during the Berlin Conference, Frau Reuter, widow of the late great mayor of that courageous city, reminded me of what her husband had said to me when I visited them during the blockade: "The strength of the Soviet lies in the irresolution of the Western democracies." Echoing him nearly 7 years later, Syngman Rhee stated in a speech he gave in Seoul on March 1, 1955:

"The greatest enemy of the free world is not the armed masses of Communist soldiers * * * but its own fearfulness and selfdoubt."

These two brave voices, echoing each other, came from what Mr. Dulles has called the outposts of freedom. It is not from the front line of the battlefield but in the rear—where the Communist menace is not understood and where too many people hope to save themselves by sacrificing others—that the demand is raised for peace at any price.

Franklin Roosevelt said that we have nothing to fear but fear itself. Strangely enough his greatest admirers are those who now counsel us to be governed by our fears.

Generally speaking, those who urged the United States to intervene in Europe to prevent the victory of the Nazi totalitarian tyranny are now lined up on the other side and are advocating peace at any price and telling us that we can do business with the Communists.

Meanwhile, the former isolationists, or noninterventionists, are divided. Some few believe that the United States can still retire behind her own defenses and abandon the rest of the world to cope alone with the Communist menace which America herseif did so much to create by the crimes and follies of Roosevelt and his advisers. But the great majority of those who opposed Roosevelt's foreign policy realize that America cannot now go it alone while also opposed to our following the advice of those of our allies who wish us either to submit to Moscow or to defend only their own particular interests.

The Plight of Guatemala

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. MULTER. Mr. Speaker, the following article, written by Daniel James, is deserving of our attention. It appeared in the New York Herald Tribune of March 10, 1955:

THE PLIGHT OF GUATEMALA (By Daniel James)

United States policy in Guatemala is failing. That is the sad conclusion this reporter has reluctantly reached after a 4-week, one the spot survey.

on-the-spot survey.

The consequences, if we fail in Guatemala, will be disastrous. Our prestige in Latin America will practically vanish. Our programs in Asia will be compromised, Communists everywhere will have a field day as we argue over who "lost" Guatemala.

When Guatemala's Reds were overthrown last June, United States leaders from President Eisenhower on down swore to make the Central American Republic an anti-Communist showcase. They were solidly backed by both political parties and the public. Rarely has there been such unanimity as on the need for all-out aid to Red-ravaged Guatemala.

Now, 8 months later, how much aid have we given?

On paper, \$6,425,000. In fact, less than half that amount. Money is being doled out for certain projects only as, if, and when they start.

Of the total aid authorized, \$4.425,000 will eventually go into roads—if Guatemala can match it with \$1.5 million of her own. Another \$500,000 will go to finish a hospital—if Guatemala can match it with \$500,000. Health, agricultural, and other projects likewise depend on Guatemala's ability to match funds.

So far, then, our aid largely consists of putting up dollar for dollar in a situation where the matching party sorely lacks dollars.

But even if we donated the entire \$6.5 million outright, that would be about as helpful as feeding aspirin to a man with appendicitis.

That sum, Guatemalans point out, represents exactly what their Government paid its employees in back wages last December. It about equals what the Government ex-

pects to lose in coffee taxes this year.

It is less than one-third of what the Reds are known to have stolen.

"A fraud" is how one Guatemalan bitterly described our aid to me. He was echoed by others. Already our policy of "too little" is breeding disillusionment in us.

Washington is relying upon United States private capital to give Guatemala what she needs. This is sound general theory. The trouble is, it does not apply to Guatemala's immediate problems.

United States businessmen are swarming into Guatemala seeking investment opportunities. Some are already building roads, exploring for oil, selling machinery, making lumber.

The Electric Company of Guatemala, a United States subsidiary, is putting \$17 million into new hydroelectric facilities to increase the capital city's power capacity. Pan-American World Airways is about to join with local money to erect a big hotel. United Fruit reportedly awaits dispositions of a United States antitrust suit before investing \$25 million.

President Carlos Castillo Armas deserves great credit for the improving business picture. His personal popularity, general policies, and practical measures—such as a progressive petroleum code—have combined to assure United States business a warm welcome and fair treatment in Guatemals.

Backing up Castillo Armas is the most talented and dedicated team of United States officials this reporter has ever seen abroad. United States Embassy, Information Agency, and Foreign Operations Administration personnel deserve medals for their handling of a delicate task.

Owing to all these factors, Guatemala is acquiring a new look. Guatemala City streets, once deserted, are filled with busy and happy people. Stores are brimming with new merchandise. Hotels are full. New buildings are going up.

buildings are going up.

But overshadowing this bright picture is the dark legacy communism left behind. A looted treasury, a corn shortage, a jobless problem, and a falling coffee market (ofr which the Reds cannot be blamed) all spell a major crisis. Neither the Guatemalan Government nor United States investors are equipped to tackle it.

An economic crisis in Guatemala just now would, as a matter of fact, slow down the flow of investment. It would destroy confidence in Castillo Armas, and perhaps cause his downfall. It would wreck United States plans for Guatemala and United States policy nearly everywhere in Latin America. We must awaken to these dangers at once and realize that only swift and unstinting United States aid can ward them off.

The primary immediate job is to help Castillo Armas acquire sufficient funds to carry on the task of governing. Second, Guatemala may need emergency food and grain supplies. Third, we must expand and accelerate our technical assistance—and without requiring Guatemala to match funds. Fourth, coffee prices must be adjusted.

Further, we should announce a long-term program. Guatemala needs about \$50 million to build a decent road network—one of the keys to an expanding economy. She needs perhaps another \$50 million for such basic projects as modernizing her agriculture.

For about \$20 million yearly spent over the next 5 years, Castillo Armas' chances of finishing his term in 1960 would be immeasurably enhanced and Guatemala's stability and prosperity practically underwritten.

Vice President Nixon, just back from the Caribbean, and keenly aware of Guatemala's problems in particular, might well suggest that President Eisenhower ask Congress to enact a \$100 million, 5-year program for Guatemala. Only such a program will demonstrate that we are really trying to make the world's first anti-Communist revolution a success.

The Family Farm-Keystone of Agriculture

EXTENSION OF REMARKS OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the April 1955 issue of the Country Gentleman, the magazine for better farming:

> THE FAMILY FARM-KEYSTONE OF AGRICULTURE

(By Albert J. Ebers, overseer of the Nebraska State Grange)

Those of us who believe in the familysized farm must be on our guard. We hear much today about efficiency in farming. But it is becoming associated with very units-more land and extensive operations, large dairy herds, big cattle-feeding and hogfattening establishments, the same with every other kind of farm enterprise.

Is this the true measure of farm efficiency? And does it point in the right direction for

American farming?

I believe this type of thinking is wrong and that we should look where we are going. The family-sized farm can be just as efficient and is more stable than the big, hiredlabor farming operation. It also offers much more in other values that are important to the Nation.

We have seen a rise of 40 percent in total production and 91 percent in per-man-hour output on the farms of the country in the past 15 years. This has chiefly been accounted for by family-sized farms, for they make up the major part of American agriculture. culture. What better proof of efficiency do we need? The fact is that the man on a good family-sized farm today is likely to be a competent manager, alert to any new ideas, tools and practices that will increase his farming efficiency and his labor output. As his own capacity increases so will the size of his farming unit.

He has more incentive for doing his best than the workers on a big farm operation. Over the long pull a man will do a more thorough job when it means money and reputation for himself and providing well for his family than he will do for someone else.

There are other factors, important to people outside of farming, to be considered also. On a 2,000-head, cattle-feeding establishment a few hired men with the latest equipment can take care of the cattle. But 25 family-sized farms could make a large part of their good living feeding out the same number. Or a few hired men can care for 300 dairy cows with the help of up-to-date equipment. But 15 family-sized farms can make a large part of a good living from the same number of cows.

Now let us ask ourselves these questions: If you are a local businessman, which community would you prefer—one with 10 cattlefeeding establishments and 30 hired men or one with 250 family-sized farms? Or if you are looking for the best in country life would you rather live in a community with 10 large dairy herds and 40 hired men or in 1 with 150 family-sized farms?

We have enough examples now where schools, churches, neighborhood interests, and local trade resources have been "trac-tored off" to know what happens when the big farming operators take over. It is in communities composed of family-sized farms that you will find the better schools, stronger

churches, interest in rural-improvement activities, and more prosperous local business centers.

The number of large-scale farming enterprises has grown since World War II. But the same thing happened after World War I. with many resulting failures. A family-sized farm with some diversification can weather hard years better than the large specialized unit that must buy and hire most of its feed and labor needs. The roots of the family-sized farm go deeper. It is both a farm business and a home.

In all history there has been no stable, permanent agriculture where this relation-ship did not exist. Therein lies the failure of the Marxian theory of an agriculture based on large, collective units as it is being tried in the Communist countries.

American agriculture has followed a different principle. It is one where individual farmers, through their own work and the use of good farming practices, have been able to acquire land of their own, enough land to make an efficient farming unit and to provide a good standard of living. It is a type of farming where almost all of the grain and forage for the livestock is grown on the farm, where in time new machinery displaces old, and new conveniences make life comfortable. On such farms you find an appreciation for beauty in the surroundings and there is some time for recreation and community service.

All this and more are secured through the combined efforts of the whole family and little, if any, outside labor. As the author of Farming and Democracy has observed, the family-sized farm "Offers scope * * * to develop the initiative and resourcefulness, the sense of responsibility and self-respect that have always and everywhere been considered among the greatest assets of democracy.'

These facts show that the family-operated farm is both the basis for an efficient and healthy agriculture and a source of irreplaceable national values. They should leave no question as to what the public interest calls for. Our thinking and our research efforts should be directed more toward strengthening the kind of farming that has proved good for America.

Improve Patent Laws and Procedure

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. HOSMER. Mr. Speaker, a few weeks ago I introduced H. R. 4267, a measure calling for the establishment of a nonpartisan commission to study our patent laws and procedures with the end in view of coming up with specific recommendations for improvements in

Patents are a technical subject, and although there are amongst us many men who are competent to deal with the subject, its time-consuming nature makes that a practical impossibility.

There are millions of inventors in this country and probably each one of them has some complaint or another about present patent system. Some of these complaints may not be justified, others may be. That is why there is a need for such a commission as I have proposed. It would have both the com-

petence and the time to make a thorough study.

Needless to say, our patent system should be the most ideal that we can devise. The greatness of our country as respects to our industrial development has been founded on the inventiveness of our people. We must maintain the incentive for invention in this country that only a properly working patent system can sustain.

The following article appearing in Spotlight and written by H. J. Rand points up the problem:

AMERICA'S MOST PROFITABLE INVESTMENT—
THE PATENT OFFICE—IS BEING OVER-

(By H. J. Rand)

The basis of the advance of the people of the United States, to the highest scale of living ever attained, is invention and new development, fostered since the time of Jefferson by our patent system.

Now, America's most promising domestic avestment is being overlooked. The Patinvestment is being overlooked. ent Office, which is the life blood of invention and new development is being hamstrung through lack of funds. A few mil-lions of dollars could change this picture dramatically, speed up the issuing of patents and give enormous impetus to the pent-up creativity of the American inventor.

The Patent Office in Washington is accurately described as "the nerve center of American free enterprise." Without the protection it gives to the fruits of creative ideas and costly and prolonged research, invention would languish. Progress as we have known it would slow down to crawl. We Americans are reputed to be resourceful and inventive. Exercise these qualities has been and still is discouraged by the neglect of Congress and of recent administrations to provide as they should for needs of the Patent Office. "The nerve center of American free enterprise" has been partially paralyzed.

Because of insufficient appropriations, the Patent Office is undermanned. Because of insufficient staff, the backlog of patent applications awaiting action has grown each year until now it is over 210,000, at least twice what it should be. In many instances, an inventor must wait nearly a year after he has filed his application before he receives an action from the Patent Office and well over a year for action on his responses.

The average time between application for a patent and final issue of the patent is 3 years and 7 months. The delay will not get less but will lengthen, if the legislators and the administration do not correct the

situation.

The present waiting time is much greater than it should be. With a fully manned staff at work, less than 6 months should elapse before an inventor, after he has filed his application or replied to an Office action, hears from the Patent Office. Consider what a 31/2-year delay means. Inventors are handicapped in marketing an invention and a manufacturer in buying it because of the long Patent Office delay, even though some take a gamble, without waiting for final The inventor suffers as do all Ameriaction. can citizens who benefit by the new and improved and lower cost products that invention constantly brings. Add to this long waiting period of uncertainty a year and a half before the device may be manufactured and put on sale. That means a lapse of 5 years.

And what may happen during those years? I know of inventors who were advised by conscientious patent attorneys not to apply for patents because their devices might be obsolete before they reached the market. Here let me pay tribute to the patent attorney profession. Long delays between filing and disposal of a patent application obviously mean higher fees. Yet, almost to a man, patent attorneys want to see greater speed in the Patent Office.

One great danger arising from long delay is the opportunity for copying and infringement of ideas contained in a patent application. The labels, "Patent applied for" and "Patent pending," are little protection for the average inventor, maker, or distributor of a new product. But corporations with huge research organizations, backed by platoons of patent experts, and covered by a blanket of patent applications covering every conceivable phase of a new device may, with reasonable safety, go into production even though patents are pending.

It is true that patent owners can stop infringement only after a patent has been granted, but it is also understandable why copiers think more than twice before they would appropriate ideas developed by some

industrial giant.

Copiers and patent pirates are constantly on the watch for patents pending or applied for. Well aware of the limited protection which such labels give, they can appropriate an inventor's ideas for their own use. Counters of every hardware and specialty store across the country are loaded with ingenious kitchen and other household gadgets. Around these articles has grown an active new industry which is plagued by pirating and infringement.

Spokesmen for the gadget-making industry have told congressional Appropriations Committees of the almost daily occurrence of cases in which inventors and small manufacturers have found themselves amost powerless to get redress from those who have copied all or part of the patent-pending

inventions.

Independent inventors and small-business men are severely handicapped if they must wait several years for a patent application to be finally decided. They can't afford to keep money tied up for years. If valid patents can't be issued with reasonable dispatch, they are without even the modest protection which enables them to compete with larger enterprises. Yet it is the efforts of inventors and the continuous advent of small firms which keeps the American economy flexible and free from stagnation.

The patent system plays a major part in the creation of new products and processes. These appear every year and stimulate new companies to produce them. But with long waiting periods, inventors and manufacturers are discouraged from creating or seeking new ideas. Fewer patents are issued today than 20 years ago. Any slowdown in the granting of patents slows down by so much research, development, and new employment. It affects the entire American economy.

Responsibility for this roadblock to scientific and technical progress does not rest with the United States Patent Office, for it is hard to see how it could do better with the reduced funds at its disposal. It is served by as able and devoted a staff as can be found in any Government service. It has been untouched by scandal. Political chair-warmers can't hope to meet the exacting requirements for appointment as patent examiners.

Its Commissioners have never been party hacks; almost invariably, they have been outstanding patent attorneys. But the patent system, which has the honorable distinction of being superior to politics, is at the mercy—and the neglect—of politics, politicians and political compromise.

Although well aware that delays in handling patent applications can be corrected only by more personnel, the budget makers of the last 2 years clamped down further on Patent Office appropriations. Instead of the \$12 million allowed a few years ago, this year's budget item for patents is \$11.5 mil-

lion. More applications, fewer examiners to handle them, longer search time—that's the crux of the Patent Office situation which is imposing uncertainty and delay upon inventive research and development. The amount requested for next year is only \$12 million.

Nearly two-thirds of an examiner's time is spent in search of the 2,700,000 recorded patents to determine whether an applicant's claims are original. The examiner must also look through foreign patents and scientific literature, for one must be the first inventor anywhere to be awarded an American patent for a device or process. This search time increases with the years. Patent applications are much more complicated and bulky and require on the average half again as much search time as was called for 25 years ago.

One reason for the longer search time is that technological development and increased scientific knowledge has made a patent applicant's claims much more complex to examine and determine. Contrast today's radio and TV equipment with yesterday's crystal sets. Once gasoline was merely distilled from liquid petroleum; today it comes from complicated cracking processes. Back in the 1920's, the basis of comparison for a claim for a new automobile transmission was the simple gear shift; today, a whole series of patented automatic transmission systems must be examined.

All this complicates the classification and cross-indexing of patents. A device of, say, 75 years ago could be cataloged in a small number of groups. But as inventions have become more intricate, what with developments in electronics and synthetics, their components touch many fields, and previous classification methods become obsolete. As a result, an application for a patent for a golf ball capable of floating in a water hazard required search and study of 360 different patents. By reclassification and regrouping, a search of only five patents is necessary.

Need for regrouping and reclassification is not new. Patent Commissioners have continually sought money for this work. But the situation has become more critical in recent years. Time after time, Appropriations Committees have admitted the need, but have either recommended piecemeal appropriation or postponed action in the belief that such expenditure would be deferred until later budgets. Less than 1 in 3 of the 2,700,000 patents has been reclassified recently and can be found by reasonable search.

Last year, a Senate appropriations sub-committee took note of the classification situation by directing the Commerce Department to undertake "aggressive thorough investigation" to find whether patent search operations could be mechanzed. An advisory committee headed by Dr. Vannevar Bush and including business machines experts studied the problem and reported that although mechanized search operations are possible, machines capable of the job have not yet been devised; and that even were such machines available. they could not accomplish much until all patents had been properly reclassified. So, another year has passed with reclassification virtually dormant, and delay in the issue of patents is becoming more critical.

Actually, the Patent Office costs the Government not \$11.5 million but slightly more than \$5 million a year. Its annual receipts of fees are some \$6 million which is turned over to the Treasury's general fund. Until 1940, the patent office was almost self-sustaining; receipts from fees approached the amount of the budget. Later, with mandatory pay increases and with more intricate patents and complicated patent searches costs mounted.

Secretary of Commerce Weeks asked Congress for legislation authorizing fee increases so that the Patent Office might be

on a more nearly self-sustaining basis. But it is obvious that even should fees be raised from the present \$60 level to twice that amount, the ever-growing delay between patent application and final action would continue.

Whether fees should be raised is debatable. But whether or not they are increased, money must be appropriated; and without more money, the Patent Office people cannot give the service they wish to render American creative skill and industry. The Office would still be understaffed. With continued neglect of reclassification, examiners cannot reduce the backlog of pending applications.

Even should all its services be free, the patent system would pay for itself many times over. The royalties and licenses of patent owners are uncounted hundreds of millions a year—and the profits therefrom are taxed. Bureau of Internal Revenue reports of receipts do not distinguish between rents and royalties, so not even an approximate total is available for taxes paid by beneficiaries of the patent system.

It appears, however, that taxes upon patent royalties of a single American corporation like RCA would more than equal the net operating costs of the Patent Office. In its antitrust suit against the Radio Corporation of America, the Department of Justice estimated that RCA's current domestic patent royalties are well in excess of \$20 million, and upon profits from these licenses RCA pays a 52 percent corporation profit tax.

Failure to increase the Patent Office budget is described as an economy move. Actually, it is an extravagance. A few millions additional, spread over the next 6 years, would complete classification work and provide for enough additional examiners to reduce the backlog by half. This would cut at least 2 years from today's average waiting time for final patent action.

As much as \$4 billion a year is spent on scientific and industrial research and development. Whatever is new that has practical possibilities is written up in patent application claims and is filed at the Patent Office.

Congress has appropriated billions to restore and improve the conomies of foreign countries, yet neglects the Patent Office which made possible the creation of much of our great national wealth, a creation which made those gifts possible. The delay in processing patents affects our national economy and deprives the National Government of much-needed immediate revenue.

As Dr. Vannevar Bush's committee well said, "The United States patent system is at the crossroads today, * * * The Patent Office, established to stimulate industrial progress, is now heavily burdened by the products of the inventive genius it has fostered and encouraged."

Although responsibility for this situation rests with the administration and Congress, part of the blame belongs elsewhere. Once its budget requests have been examined and pared by the Department of Commerce and the Bureau of the Budget, the Patent Office cannot go over these heads in direct appeal or protest to Congress.

But the true state of affairs is known by the entire profession of patent law. Its professional organizations and a couple of inventors' groups sent representatives to protest to congressional Appropriations Committees against these budget cuts. But the thousands of victims of the situation—inventors, research groups, small and large manufacturers—have been silent. As long as their voices are not heard, there is little chance of betterment.

Most of these victims are persons of standing in their congressional districts. When they speak, their representatives in Washington will listen. The time for them to speak is now. And they will be speaking not only

for science and invention but on behalf of the dynamic expanding economy upon which the continued prosperity of our country depends.

Forrestal Wrote MacArthur Wanted Russians in War

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. -PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an article written by Brig. Gen. Thomas R. Phillips, retired, which appeared in the St. Louis Post-Dispatch on March 24, 1955. The article, entitled "Forrestal Quoted MacArthur as Urging Use of 60 Russian Divisions Against Japanese," follows:

FORRESTAL QUOTED MACARTHUR AS URGING USE OF 60 RUSSIAN DIVISIONS AGAINST JAP-ANESE—DIARY OF LATE SECRETARY OF DE-FENSE CONTRADICTS PRESENT STATEMENTS BY FORMER FAR EAST COMMANDER THAT SOVIET FORCES WERE NOT NEEDED

(By Brig. Gen. Thomas R. Phillips, U. S. Army, retired)

A little, rather than a great, debate is already underway over who was the villian responsible for getting the Soviet Union into the war with Japan.

On one side are Gen. Douglas MacArthur, supported by his former Chief of Intelligence, Maj. Gen. Charles A. Willoughby. On the other is the evidence of the diarles of the late Secretary of Defense, and at that time Secretary of the Navy, James A. Forrestal, the record of a visit with MacArthur by Gen. George A. Lincoln of the Army War Plans Division in February 1945, in the Army Official history of the War Plans Division, and some remarks by Harry Hopkins in Robert E. Sherwood's book, Roosevelt and Hopkins.

Senator Lyndon B. Johnson of Texas, Democratic leader, charged in the Senate that if there were miscalculations at Yalta they appear to have been based on the estimates and miscalculations of the military leaders in Europe and the Far East.

General MacArthur, in a statement issued yesterday, responded that "the imminent collapse of Japan was clearly apparent several months before Yalta when we captured the Philippines. All my dispatches and reports clearly enunciated this viewpoint."

QUOTES DISPATCHES

MacArthur then goes on to quote from dispatches of September 21 and October 20, 1944, which do not mention the Russian participation one way or another but do contain some of MacArthur's grandiose prose.

He goes on to say: "Had my views been requested with reference to Yalta, I would most emphatically have recommended against bringing the Soviet into the Pacific War at that late date. To have made vital concessions for such a purpose would have been fantastic."

General Willoughby supports his old chief in his book MacArthur, 1941-51, as follows: "Toward the end of 1944, Russian intervention in the Pacific appeared as a factor in secret diplomatic understandings. The general commented as follows: From the point of view of my headquarters, Russian participation was not required. I urged Russian intervention in 1941 to draw the Japanese from their southward march and keep

them pinned down in Siberia. By 1945 such intervention had become superfluous'."

NO DOCUMENTATION

By the context, the quote that Willoughby ascribes to General MacArthur must have been made after or late in 1945, since it speaks of intervention in 1945 in the past tense. Like most of the alleged quotations in Willoughby's incredible book no date or documentary authority is given.

Forrestal visited MacArthur in the Philippines February 28, 1945, after the Yalta conference, which had been held February 4 to 11, 1945. He entered in his diary that night parts of his conversations with MacArthur.

"On the question of war against Japan," he wrote, "and our objectives vis-a-vis Japan, he (MacArthur) expressed the view that the help of the Chinese would be negligible. He felt that we should secure the commitment of the Russians to active and vigorous prosecution of a campaign against the Japanese in Manchukuo of such proportions as to pin down a very large part of the Japanese Army; that once this campaign was engaged we should then launch an attack on the home islands, giving, as he expressed it, the coup de main from the rear while substantial portions of the military power of Japan were engaged in the mainland of Asia."

WANTED 60 RUSSIAN DIVISIONS

"He said he felt our strength should be reserved for use in the Japanese mainland, on the plain of Tokyo, and that this could not be done without the assurance that the Japanese would be heavily engaged by the Russians in Manchuria. He expressed doubt that the use of anything less than 60 divisions by the Russians would be sufficient. He saw little chance that the Russians could get an additional 30 divisions activated in less than 6 months time."

HISTORIAN'S QUOTE

General Lincoln had two long conferences with General MacArthur February 25, 1945. The official Army history reports part of the second conference from a message sent that day by Lincoln as follows:

"General MacArthur spoke of the strength of the opposition to be expected in invading the Japanese home islands. He declared that planning should start at once, that heavy firepower would be needed to cover the beachheads, and that as many Japanese divisions as possible should first be pinned down on the mainland, principally by Soviet forces."

Sherwood, working from the Hopkins papers wrote:

"MacArthur's calculations were based on the assumption that the Russians would contain the great bulk of the Japanese forces on the mainland as they had contained the Germans in Eastern Europe."

CONFUSION ABOUT TIME

It was perfectly natural and proper that MacArthur should have planned on Russian participation in the war in the Far East. It was likewise out of the question that the War Department would have gone ahead with the same plans if they had not been recommended by MacArthur. His effort at this late date shows his superior prescience can only be ascribed to confusion as to the time when he became convinced that Japan was a hollow shell.

MacArthur, during his effort to gain the nomination for President, in his keynote speech at the Republican convention, July 7, 1952, declared in fine partisan form: "We condemned our faithful wartime ally, the Chinese people, to subjugation to Communist tyranny."

At that time it was reported by the Alsops that MacArthur's wartime cables to the War Department proved that MacArthur was foremost in pressing for Soviet entry into the war. The cables were then top secret and still are. They have not been released

to the Historical Division of the Army. It was also reported then that President Truman had called for them and was prepared to make use of them if MacArthur were nominated for President.

MOST INFLUENTIAL ADVOCATE

As far as the writer can determine from search over a long period of time, and discussions with former members of the War Plans Division, MacArthur was the most influential advocate of getting Russian participation in the Far Eastern war.

pation in the Far Eastern war.

It is quite clear, however, that the military had nothing to do with the concessions made by President Roosevelt. In fact, they knew nothing about them until 2 or 3 mnths after the Yalta Conference.

The military position by the time the war had progressed to the point that the end could be seen in Europe, was that the Soviet could not be kept out of the war with Japan. The concessions appear to have been part of the overall deal made at Yalta—the Russians made concessions, too—rather than a surrender to military pressure,

United States Academy of Science

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Lowell Sun of Lowell, Mass., entitled "United States Academy of Science." I shall introduce a bill in Congress to carry out the suggestions made in the editorial. The scientific possibilities of such a program are worthwhile for the Congress to look into.

The editorial follows:

UNITED STATES ACADEMY OF SCIENCE

The Military Academy at West Point and the Naval Academy at Annapolis have for many years produced officers whose fine training and extensive knowledge of the science of warfare have accounted for the Nation's record of achievement in battle. We expect that the new United States Air Force Academy at Colorado Springs will soon share the prestige of the two older schools and will produce fighting men of the same high caliber.

The Federal Government puts a big effort into qualifying the officers who will lead the legions in uniform. Such an undertaking is without doubt one of the most important phases of national security.

But in recent months the American people have been told a great deal about the surprisingly large increase and effort that the Soviets are injecting into their program for educating scientists, technologists, and engineers. While the Soviets have no doubt made full capital of the skilled scientific minds of the East Germans, they have also been farsighted enough to institute their own scientific training programs to qualify their own young men in this extremely vital field of learning.

Up to World War I, military preparedness was measured primarily on the quantity of arms which a nation maintained. Since World War II and during this recent period of extraordinary scientific advancement, however, military preparedness has been gaged considerably by the success of a nation's scientists in producing new and

more effective weapons. The international race today is based more on the quality of

arms than upon the quantity.

The demand for civilian engineers and scientists in the United States is greater now than ever before because of the increasing needs of a highly mechanized society. It has been largely through the efforts of scientists that the country has developed so rapidly and has created a way of life that is well advanced beyond that of any other nation.

The task of preparing a sufficient supply of scientists and engineers to satisfy both the military and civilian needs of the United States is a difficult one. But it must be met and it must be handled with due attention to both considerations.

One of the most effective ways of meeting this challenge in this time of heavy stress on engineering is for the Government to do something progressive on its own.

Since the Government's program for educating experts in the field of military science is and has been so successful, it would undoubtedly be in keeping with the growing needs of the era to create and finance a fourth school of higher education, to be known as the United States Academy of Applicants, young men finishing their high-school courses who show unusual aptitude for the many phases of scientific study, would be appointed by means of competitive examinations and appointment by their representatives in Congress. Upon graduation from the Academy, they would be required to give their services to the Government for a period commensurate with that required of graduates of West Point and Annapolis. Thereafter, assuming that they wished to make the Government service a career, they would be up-graded in accordance with the formula which is now used with officers of the Army and Navy.

The building and maintenance of such a school would, of course, entail great expense, but the dividends on the investment would run high and many brilliant young men who might not be able to afford higher schools of learning would be given the chance to procure educational advancement. The scientific possibilities of such a program are practically unlimited—they would give tremendous support to the Nation's need for keeping ahead in the ever-running scientific race.

The Government can use more men of science; industry needs them, the American way of living needs them. It seems like a natural way to implement our national security and defense.

The idea is worth exploration by Congress.

The Good Sense of the American People

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I desire to include an editorial entitled "Congress Forgetting the People Aren't Dolts," from the March 2, 1955, edition of the Santa Rosa (Calif.) Press-Democrat.

On March 30 the Congress cleared, and sent to the President, H. R. 4289, which extends existing corporate and excise tax rates for 1 year from April 1. In so doing, the controversial individual

income-tax reduction provision was deleted from the bill as being economically unsound at this time.

The editorial was written prior to final congressional action. However, it is apropos in that its theme is that the American people are more interested in the Congress taking a commonsense approach to problems, rather than resorting to hasty decisions fabricated on possible political expediency.

I respectfully call your attention to the following editorial which, I believe, expresses the thinking of the vast majority of the people on this subject:

CONGRESS FORGETTING THE PEOPLE AREN'T DOLTS

As a people, citizens of the United States are no more immune from making mass mistakes than the people of any other nation, but as a general rule they have more collective good sense than they are credited with by politicians.

Democrats of the lower House of Congress passed a bill cutting everyone's income-tax payment by \$20. The action is economically unsound and those who voted for it are well aware of that fact. They simply thought it was good politics and would give the Democratic Party credit with the voters for trying to reduce taxes. They anticipated the measure would also be passed by the Democrats in the Senate, and that President Eisenhower, in vetoing it, would be branded as a tax gourer.

Present indications are that the Democratic majority in the Senate will not pass the irresponsible bill. The politicos are now worrying that this will indicate a split in the party, and result in a political liability instead of asset.

What they are overlooking is that the voters have a lot more sense than Congressmen assume.

Most voters do not take a split in the party very seriously. Far from regarding disagreements as signs a political party is falling apart, the voters think it is a pretty good thing when their public servants think for themselves and disagree. The Democratic Party was a divided camp during most of the time Presidents Roosevelt and Truman were in office, but it did not result in losses at the polls. The Republican Party has been split on several issues thus far during Mr. Eisenhower's term. It has not cost any

Far from becoming disgusted with the Democratic Party if the Senate refuses to pass the \$20 tax-cut bill, most voters probably will be glad that common sense prevailed over a bit of political expediency that didn't impress anyone very much anyway.

The Treasury Department Under the Eisenhower Administration

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an address delivered on March 15 before the Women's National Republican Club, New York City, by the Honorable Marion B, Folsom, Under Secretary of the Treasury.

The address follows:

THE TREASURY DEPARTMENT UNDER THE EISENHOWER ADMINISTRATION

I would like to talk to you today about the Treasury, its activities, problems, and accomplishments.

First, though, I want to describe briefly the progress of the administration as a whole in the fiscal field, which includes the income and outgo of the Government, taxes, debt, and the budget. While most of my remarks this afternoon will be about specific operational activities of the Treasury, we are, as you know, vitally concerned with the overall fiscal problems of the Government.

This administration has been dedicated to the policies of economy in Government, tax reduction, and a sound dollar. When we came to Washington we were faced with serious deficits—one of \$9.4 billion in fiscal 1953, and a further \$11 billion deficit in sight for fiscal 1954. We could do little about the 1953 deficit, but we cut the projected 1954 deficit to \$3 billion. Due to the intensive work by all departments, spending has been cut so that for fiscal 1956 it is expected to be about \$12 billion below the actual 1953 level, a huge reduction in so short a time.

Last year taxes were cut \$7.4 billion, the largest dollar tax reduction in 1 year in our Nation's history. This tax reduction cush-loned the impact on the economy of the sharp reduction in Federal spending. Of the cuts, \$3 billion was in individual income taxes, \$2 billion resulted from the termination of the excess-profits tax, and \$1 billion represented excise-tax reductions.

The balance of \$1.4 billion is accounted for by reductions included in the 1954 Internal Revenue Code revision. This recasting of the tax laws was a big step in improving our tax system. It had two main objectives: to remove many of the hardships to individuals which had crept into the tax laws; and to remove barriers to economic growth, and by so doing let American ingenuity go ahead full steam under the free-enterprise system which has made this country great.

The tax-revision law helped millions upon millions of taxpayers who had been plagued by unjust and unfair hardships for many many years. This relief went to many millions of citizens in all walks of life and all income levels including working women, farmers, small-business men, retired people on pensions, widows, and people in hospitals or with medical expense.

The tax-revision law sought to help permit the economy to expand and provide more and better jobs. The partial relief of the double taxation of dividends is one of the provisions which help stimulate the investments which make jobs. The more flexible allowance for depreciation also stimulates the replacement of outmoded equipment and the building of more efficient plants, which lead to more jobs and the production of better goods.

We must continue in the future to eliminate other hardships in the tax laws as well as remove additional barriers to economic growth whenever our financial situation will permit the tax loss involved.

Simultaneous with the cutting of taxes, steady progress has been made toward a balanced administrative budget. For fiscal 1956 we expect a deficit of \$2.4 billion, down \$7 billion from the 1953 figure. On a cash basis, comparing the total amount of money we collect and the amount we pay out, the cash deficit was almost eliminated last year and a small cash surplus is currently anticipated for 1956.

The budget could have been balanced last year if the heavy cuts in spending had not been accompanied by substantial tax cuts. But tax reduction helped sustain the economy in a period of transition to lower levels of Government expenditures. Personal income in the last quarter of 1954 was up \$1.7 billion from the fourth quarter of 1953. At the same time personal taxes fell at the annual rate of \$3 billion. As a result, disposable personal income, i. e., income after taxes, in the last quarter of 1954 was at the annual rate of almost \$256 billion, an increase of \$4.7 billion over the comparable period in 1953. This was the main reason for the continuous rise in personal spending during 1954.

Taxes remain high and present a serious obttacle to the long-term dynamic growth of the economy. But the Government must always make adequate provision for national security and other essential services. Further tax reductions can only be made as savings in Government spending or increased revenues resulting from growth in our economy are in sight.

This encouraging progress in reducing the deficit has helped to give the American people a sound dollar. The value of the dollar has been stable for the last 2 years, compared with a drop in value from 100 cents in 1939 to 52 cents in 1952. During these 2 years, the cost of living has risen less than one-half of 1 percent. * * *

A fundamental part of our sound money program has been the management of the Public debt in the interest of monetary stability. The public debt of \$278 billion is being handled wisely. Progress is being made toward our basic objective of lengthening the average maturity of the debt so that our huge debt is more manageable. Accelerated sales of United States savings bonds are stimulating widespread ownership of the debt by individuals. Finally, our central banking system—the Federal Reserve organization-has been allowed to carry out, in the interests of the American people, flexible monetary policies directed toward economic stability and growth.

A well-planned program, using the several fiscal and monetary tools I have mentioned, has enabled the Nation to stop the inflationary trend and make the necessary adjustment to a sound basis without a serious deflation and without direct Government controls. We have merely put into effect Freat American traditions established at the very founding of the Republic by Alexander Hamilton and carried forward by great men of all parties. While these traditions were cast aside for many years, they are now, gradually but effectively, being again to provide sound money, a firm foundation for economic growth, and opportunity for every American.

This background on the administration's progress in fiscal matters puts in perspective the operations of the Treasury Department, for the principal activities of the Department are the development and implementation of monetary and fiscal policies, management of the debt, collection of Government revenue, and the manufacture of stamps, bonds, coins, and currency. More than 90 percent of the Treasury's 79,000 civilian employees are engaged in these activities.

Overall policies, which are developed in the Office of the Secretary, are carried out by our operating bureaus. The largest of these activities is that of revenue and customs collection, carried on by the Internal Revenue Service and the Bureau of Customs. The size of the job is shown in the amount of Government receipts. In the 1954 fiscal year internal revenue receipts were almost \$82 billion and customs receipts exceeded half a billion dollars.

To carry out its work, the Internal Revenue Service had about 50,000 employees at the end of 1954. This was a reduction of almost 4,000 since the end of 1952. While the total employment of the Service has dropped, the number of revenue agents has increased from about 7,500 at the end of 1952 to almost 11,000 at the end of 1954. This stepup in

enforcement personnel has enabled the Service to do a more complete job of auditing returns than was previously possible. In the last 6 months of 1954 the Service audited 10 percent more returns than in the same period in 1953 and additional taxes produced by audit and other enforcement work increased \$120 million. Successful prosecutions of tax evaders were up 27 percent in 1954 over the 1953 level. In fiscal 1954 the cost of the Revenue Service was only 38.5 cents for every \$100 which the Service collected.

The Revenue Service has been making notable progress in increasing the effectiveness of its collection work. At the same time better day-to-day service is being given the taxpaying citizens of our country. Tax disputes pending before the Appellate Division have been reduced 57 percent in the last 2 years, thereby enabling taxpayers to settle disputes more promptly. Facilities for help-ing taxpayers fill out their returns have been expanded; this and other steps will help taxpayers take full advantage of the many beneficial tax changes made by Congress last year. All tax forms are under con-tinuous study in an effort to make them more simple and understandable. This year a new small punchcard tax return is available for wage earners with incomes less than \$5,000.

The Service, as you know, suffered from a period of scandals before this administration came into office. Through decentralization and a thorough reorganization, the Service has been greatly strengthened. We are proud of the work now being done by the Revenue Service, which has as its objective fair treatment to both the taxpayer and the Government.

The Bureau of Customs has as its main duties assessing and collecting duties and taxes on imported merchandise and baggage, preventing smuggling, and enforcing various export control laws. Customs' personnel is now about 8,000, a 10-percent reduction from the figure at the end of 1952. The staff of this Bureau is doing an efficient job in the face of a growing workload.

Progress has been made in eliminating difficulties of importers and others in processing goods through customs, and in facilitating customs procedures for travelers. Much of this was made possible by legislation sponsored by the Department and passed by the 83d Congress. Further efforts toward desirable changes in the law are being made.

Liquidation backlogs have been substantially reduced, required documentation for customs purposes has been simplified, and several significant aids for travelers have been placed in effect. Customs officers strive to maintain uniform courtesy and efficiency with the tact and patience of diplomats in spite of the careful examination of baggage which they make to detect violations at ports of entry—violations which are attempted by only a very small percentage of passengers.

The Bureau of the Public Debt has been steadily reducing its work force and at the same time has furnished prompt and satisfactory service to holders of Government securities. The Bureau this year is expected to handle the issuance or retirement of more than 180 million individual securities.

Closely related are the activities of the United States Savings Bonds Division. The function of this Division, of course, is to promote the continued purchase of series E and H savings bonds and to encourage the owners of these bonds to hold them rather than cashing them prior to maturity.

Excellent progress has been made in the savings bonds program. Cash sales of series E and H bonds in 1954 were the best in 9 years and the net sales, that is the excess of cash sales over redemptions, were the highest in 5 years. The series E and H

bond holdings reached an all-time peak of \$38.2 billion in eash value in the hands of over 40 million of our citizens. Through the savings bonds program many people, for the first time in their lives, have become systematic and substantial savers.

The success of this program is in large part a reflection of the active support of the many thousands of patriotic, public-spirited volunteers who give the Treasury their time, energy, and influence to sell savings bonds.

The Treasurer of the United States is the official custodian of the public funds. Although practically all functions of the Treasurer are rigidly prescribed by law and have been performed by the Office of the Treasurer since 1778, remarkable progress has been made in utilizing new, efficient procedures. Conversion from paper to card checks alone provided \$327,000 in recurring annual savings in fiscal 1953 and an additional \$112,000 in 1954. Decentralization of the destruction of unfit currency is saving over \$600,000 a year.

The Bureau of Accounts performs many fiscal activities. In addition to the payment function, other main jobs of this Bureau include central summary accounting and financial reporting for the entire Government. The Bureau's Division of Disbursement in fiscal 1956 is expected to process over 200 million check payments; this gives some idea of the size of the Bureau's job.

The Treasury through the Bureau of Engraving and Printing and the Bureau of the Mint produces the Nation's stamps, bonds,

coins, and currency. The Bureau of Engraving and Printing designs, engraves, and prints currency, securities, postage and revenue stamps, Government checks, military commissions and certificates, and other Government engraving work. This is a large-scale production operation employing more than 4,000 people. about 2,000 less than when we came to Washington. The operations of the Bureau are carried out on a completely reimbursable basis, as authorized by Congress in 1950. Lower production costs are passed on to other agencies in the form of reduced costs for currency, bonds, and the like. Improved management techniques are paying large ury activities. For example, in fiscal 1953 currency printing was converted from 12 subjects in each sheet to 18 subjects giving an annual saving of over \$4 million. Starting in fiscal 1954 savings of almost \$450,000 a year were made by converting \$25 savings onds from expensive plate printing to the offset method. A similar change in the printing of liquor tax stamps is saving over

annual savings of \$150,000. The main jobs of the Bureau of the Mint are the manufacture of coins and physical custody of the United States monetary stocks of gold and silver, including their purchase and sale. Coinage mints are in operation in Philadelphia and Denver, and, as you probably know, gold is deposited at Fort Knox, Ky., and silver at West Point, N. Y. Coinage production for the present fiscal year is expected to be over 1 billion pieces. Although salary costs have risen considerably, coinage costs are lower today than they were several years ago. The cost of shipping coins has been cut \$250,000 a year by using armored cars and trucks instead of express. tional annual savings of about \$415,000 will commence this year as a result of discontinuing coinage operations recently in San Francisco and the closing of the Seattle assay office.

\$125,000 each year. \$50 and \$100 bonds have

now been changed also, with additional

The Secret Service is a small and compact organization with three major functions. The first is the protection of the President and his family, and the President-elect, and

the Vice President at his request. The second is the suppression of counterfeiting of the currency and other obligations and securities of the Government. The third is the suppression of the forgery and fraudulent negotiation of Government checks and bonds.

An example of the excellent work done by the Secret Service is in detecting counterfeiting. While there has been no appreciable reduction in counterfeiting since 1951, there has been marked reduction in the amount of counterfeit money in circulation. This is due to successful efforts by Secret Service agents to discover counterfeiters and the seizure of counterfeiting plants before the money can be placed in circulation.

The Bureau of Narcotics administers a program designed to deal with the control of permissive manufacture, distribution, and sale of drugs, as well as the control of sources of the illicit supply of drugs on international, national, and local levels. The narcotic agent's job is ferreting out gangsters and drug traffickers and bringing them before the courts. Some of the most effective work done by this little Bureau is in collaboration with foreign police.

Next I come to the United States Coast Guard, a branch of the military service at all times, a wing of the Treasury Department during peace, and a fighting arm of the Navy in time of war or whenever the Presi-

dent so directs.

The primary peacetime activity of the Coast Guard is to prevent avoidable loss of life and property. The Coast Guard's activities include air-sea rescue duties, port security responsibilities, maintaining aids to navigation including ice-patrol work, operation of lighthouses and ocean weather stations, and inspection of merchant vessels and their equipment.

A dramatic example of the skill and courage of the men of the Coast Guard was the rescue of the crew of a Military Air Transport Service plane in the mid-Atlantic in Jan-

uary.

Finally, there are the Treasury's newest duties, those given the Secretary last year for administering the Federal Facilities Corporation, the liquidation of the RFC, and various defense lending programs.

The Federal Facilities Corporation has been conducting the Government's program for the production and sale of synthetic rubber and refined tin. It is currently expected that the synthetic-rubber-producing facilities will soon be sold to private interests, and that production of tin will be discontinued at the close of the current fiscal year.

The liquidation of the RFC is being carried out as expeditiously as possible under the general policy of securing the highest possible return on the funds invested in RFC assets without creating undue hardships for those indebted to the Corporation.

The programs for defense production and civil-defense lending are being carried on at the minimum levels required under present international and military conditions. Loans previously made under these programs are being placed in the hands of private financial institutions as rapidly as possible.

These many bureaus, divisions, offices, and services add up to the Treasury Department, an efficient organization carrying out functions vital to the operations of our Government. The Treasury has for many years been a well-run Department staffed with many able career people. It was not overstaffed so much under the past administration as some other departments, and the opportunity for savings was not so great. Nevertheless, in the last 2 years we have been able to make significant improvements in the management of this Department. While the total civilian employment of the Treasury is down from almost 88,000 to about

79,000—a drop of 9,000 or 10 percent—the enforcement activities have been strengthened by emphasizing more productive work, improving methods, and cutting out waste wherever we can find it.

In connection with specific activities, I have given some illustrations of savings from management improvements. The aggregate savings for the whole Department were over \$12 million in fiscal 1953, and well over \$20 million in fiscal 1954. The 1952 figure was \$4 million and the highest previous year for which we have figures was \$8 million in 1951.

In closing, I would like to say that I am proud to be a member of the Eisenhower administration and the Treasury team. I also want to stress the loyalty, hard work, and devoted service of the Department's employees. We are all striving to give the American people a fair, honest, and efficient Government, in which they will have confidence. Such confidence is basic to our policies of providing stability in the value of the dollar and a solid basis for economic growth.

Protection Against Bodily Attack to Uniformed Members of the Armed Forces

EXTENSION OF REMARKS

HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BOYLE. Mr. Speaker, today I have introduced for appropriate reference a bill to extend to uniformed members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard.

A number of Senators-the Senator from New York [Mr. LEHMAN], the Senator from Kentucky [Mr. CLEMENTS]. the Senator from Illinois [Mr. DougLAS]. the senior Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. Humphrey], the Senator from Massachusetts [Mr. KENNEDY], the Senator from North Dakota [Mr. LANger], the Senator from Washington [Mr. Magnuson], the senior Senator from Oregon [Mr. Morse], the Senator from Montana [Mr. MURRAY], the junior Senator from Rhode Island [Mr. PASTORE], and the junior Senator from Oregon [Mr. Neubergerl-have introduced a similar piece of legislation.

This bill is not new or novel. Similar bills were introduced in 1944 with the active support of the then Secretary of War Henry L. Stimson, in 1951, as an amendment to the universal military training bill, and during the 83d Con-

gress

This bill should be enacted by this session of Congress.

The purpose of this bill is to extend to members of the Armed Forces of the United States the protection of the Federal Government of the United States against bodily attack while such personnel are on duty or on account of the performance of their duty. The bill provides Federal sanctions against unprovoked physical assault on uniformed military personnel if committed while such personnel are engaged in perform-

ance of duty or on account of the performance of duty.

From experience we know that there are many localities in our country near which are located military bases where the local police authorities are inadequately staffed and do not possess the resources by means of which they can give adequate protection to the military personnel. Such protection by the Federal Government is already extended to many categories of Federal officers and employees, including members of the Coast Guard.

Only within the past year or 2 we have had a Federal grand jury accuse an entire police force of a small locality in the southern part of the United States for failing to provide protection for the soldiers on leave in the town, and where unprovoked attacks against military police were frequent. Press reports indicated that the local police force was involved in importing illegal liquor, protecting prostitutes, and maintaining gambling establishments. The military police were most seriously hampered in trying to carry out their duty, and this community had to be closed off to all military personnel.

This, of course, is not true of all the communities near which military establishments are located but because it can happen and because it is possible that the military personnel will not receive adequate protection we should enact this law which will provide for adequate protection by the Federal Government to our men and women in the service, regardless of race, creed, color, or national origin.

Yalta Agreements Are Analyzed

EXTENSION OF REMARKS

HON, MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an analysis of the Yalta Papers made by Brig. Gen. Thomas R. Phillips, United States Army, retired. The article, which is entitled "Agreements Made at Yalta Analyzed—Restraint Was Put on Russian Ambitions," appeared in the March 19, 1955, issue of the St. Louis Post-Dispatch, and follows:

AGREEMENTS MADE AT YALTA ANALYZED—RESTRAINT WAS PUT ON RUSSIAN AMBITIONS—LATER, HOWEVER, SOVIETS SAW OPPORTUNITY IN POWER VACUUMS IN EUROPE AND ASIA AND MOVED IN—COULD HAVE TAKEN ANYTHING THEY WANTED IN FAR EAST—CHIANG FAILED TO FOLLOW UP ADVANTAGES

(By Brig. Gen. Thomas R. Phillips, U. S. Army, retired)

Yalta has become a swear word to those who believe that China was lost because of concessions made by the late President Franklin D. Roosevelt at that conference in February 1945. The publication last week of the record of the Yalta Conference does not bear this out

Indeed, a good argument can be made now that the Yalta agreement, and the Sino-So-Viet treaty that came out of it, were to China's advantage. It is quite possible that China would have been communized earlier than it was except for this agreement.

The principal objections, in the light of hindsight, that are found in the Yalta agree-

ment are:

1. That getting the Russians to participate in the war against Japan caused the loss of China to the Communists.

2. That President Roosevelt made unnecesgary concessions to get the Russians to enter

the war against Japan.

3. That this was a compounded error because aerial bombardment and naval block-ade would have finished the war;

4. (By apologists for Roosevelt) That the Army and Gen. George C. Marshall, the Chief of Staff of the Army, forced the President to make these concessions because they were so

intent on getting Soviet help. The earliest mention of Soviet participation in the war against Japan is made by Averell Harriman, now Governor of New York, formerly Ambassador to Moscow, in testimony before the Senate Armed Services and Foreign Relations Committees August 17, 1951, he said: "It was our objective to en-

courage the Soviet Union to join in the war against Japan at the earliest possible date. Because of their ambitions in the East, there was never any doubt in my mind that the Soviets would attack the Japanese in Manchuria in their own due time. The question was whether they would come in early enough to be any help to us and to save American lives. I raised the subject with Stalin as early as August 1942. He told me then that it was his intention to come into the Pacific war when he was in a position

to do so." Gen. Patrick Hurley, who talked with Stalin in November 1942, also reported that

Stalin told him "It is my purpose to join the United States in the war against Japan when the situation in Europe justifies exposing my rear to a powerful enemy."

It was at the Teheran Conference, November 28 to December 1, 1943, that Stalin made his first positive statement to Roosevelt and Churchill, that Russia would some day fight Japan. He explained, according to Maj. Gen. John R. Deane, chief of the American military mission in Moscow, why this was impossible until after Germany had been defeated, but added: "Then, by our common front, we shall win."

Deane, like Harriman, said, "I do not think ny responsible American ever doubted that Russia eventually would come into the war

against Japan."

In 1944 Harriman discussed Soviet particl-Pation in the war with Japan with Stalin several times. Harriman was primarily interested in concerting our actions in Pacific, including operations by American bombers from the maritime provinces of Siberia, Stalin mentioned Soviet political Objectives in the East several times, but it was not until December 1944 that he outlined these objectives to Harriman in detail.

Stalin told Harriman that Russia's position in the East should be generally established as it existed before the Russo-Japanese War in 1905. The lower half of Sakhalin should go to the Russians, as well as the Kurile Islands. In order to protect Soviet outlets to the Pacific, the Russians wished again to lease the ports of Dairen and Port Arthur, and to obtain a lease on the railroads in Manchuria built by the Russians under contract with the Chinese.

Stalin said that the Soviet Union would not interfere with the sovereignty of China over Manchuria. He also asked for recognition of the status quo in Outer Mongolia. These were the concessions that were made

at Yalta.

As Harriman has testified, the crucial issue was not whether the Soviet Union would enter the Pacific war, but whether it would do so in time to help in the carrying out of the plans for an invasion of the Japanese home islands.

General Marshall testified that the Chiefs of Staff were unanimous that it was highly important for the Russians to carry out a campaign in Manchuria and Korea. feared that unless the Kwangtung Army in Manchuria, about 700,000 strong, were gaged by the Russians, a large part of it would be transported to Japan to be used against the American invasion.

Even Adm. Ernest J. King, then Chief of Naval Operations, who like Adm. William D. Leahy, the President's Chief of Staff, believed that the defeat of Japan could be accomplished by bombardment and blockade, considered the entry of the Soviet Union into the war necessary.

"At the time of the Yalta Conference," he wrote Senator Knowland January 21, 1951, "I was agreeable to the entry of the U. S. S. R. into the war in the Far East." He added that it was the belief of the Navy that blockade and bombardment could bring about Japanese surrender and that in connection with this course of action "engagement of the Japanese armies in Manchuria by the Soviets would hasten that capitulation.

As for concessions to the Russians, King would have given them only the lower half

of Sakhalin as a "sops."

There appears to have been no question in anyone's mind about the Soviets entering the Japanese war. What was feared was that they would wait until the war was over, or the end was easily to be seen, and until we have expended our blood and effort to win the war, and they would come in and do what they wished.

President Roosevelt sought to reduce the general assurances which Stalin had previously given, to specific undertakings for the early entry of Russia in the Pacific war. At the same time he wanted to limit Soviet expansion in the East and to gain Soviet support for the Nationalist Government of

China.

He succeeded in this in the Yalta agreement. The Russians could have taken anything they wanted in the Far East-Manchuria, Korea, Sakhalin, northern China. Instead they evacuated Manchuria, April 14, 1946, 8 months after V-J Day. In accordance with their understanding, the Chinese, at this time, had sufficient faith in the Russians to ask them to remain 2 months longer so they could move their troops north to occupy Manchuria.

The agreement was far better than no agreement. The concessions, which restored the status to that of Czarist Russia, were not excessive in the psychology of the time for an ally that had fought so strongly in the West against Germany. China had been promised the restoration of Manchuria and this was carried out, even though part of the rail lines were put under joint operation as well as Dairen and Port Arthur.

At that time there seemed to be no question about Soviet good faith in their agreement to support Chiang Kai-shek. Stalin told Harry Hopkins, President Roosevelt's personal emissary, that he would "do everything he could to promote unification of China under the leadership of Chiang Kaishek." He specifically told Hopkins that no Communist leader was strong enough to unify China.

If there had been no Yalta agreement with the Russians it is altogether likely that the Soviet troops would have remained in Manchuria, as they did in Korea, and would have established a puppet Communist government. As it was the Nationalists were not driven out of Manchuria until 1948, by the Chinese Communists.

General Marshall testified that he did not know about the Yalta concessions. They were a political deal between Roosevelt and Stalin, who wanted them kept secret. Military thinking, as explained to the Post-Dispatch by two of General Marshall's advisers at Yalta, was that there was no way to keep the Russians out of the Pacific war. But they wanted them in as early as possible so as to take some of the burden off the United States troops. They wanted to concert their actions with those of the Russians. When they later found out about the concessions given the Russians, they were

Whether the concessions were necessary or not cannot be resolved solely on the basis of the far eastern deal. The various agreements at Yalta were a package. The Russians gave up demands on Iran and the Dardanelles that were far more serious than what they gained in the Far East. They modified their demands on Poland. It is quite probable that Roosevelt thought he had made a good deal and it may be that he had.

At the end of the war the Russians were mostly interested in restoring their own economy from the effects of the war. it was not long before they realized what an opportunity the power vacuums, in Europe and the Far East, gave them for territorial expansion.

Stalin was heard to remark by a Russianspeaking member of one of our delegations that there might not be another such opportunity for a hundred years. Within 6 months from the end of the war they had shifted their policy to take advantage of the oppor-

The question of whether bombardment and blockade could force the unconditional surrender of Japan was debated extensively by the General Staff, the Joint Chiefs of Staff, and the Combined Chiefs of Staff, The Air Force and Navy both thought blockade and bombardment would succeed. The Army considered this to be an "overly optimistic attitude."

The Army's contention was that while it might work in time it would cause unacceptable delay. "It was now clear to the United States Chiefs of Staff" that, according to a JCS paper of July 11, 1944, "in order to finish the war with the Japanese quickly, it will be necessary to invade the industrial heart of Japan."

Nevertheless bombardment and blockade would facilitate the invasion and might cause surrender before the invasion could be prepared. The invasion was not expected to be ready until about 1½ years from the date of the study. This blunder does not seem to warrant the importance given to it. Japan surrendered as a result of bombardment and blockade and the helplessness of continuing against atomic bombardment.

The loss of China to the Communists is a long story. It is attributed by Gens. Albert C. Wedemeyer and David G. Barr, both of whom commanded there, primarily to the incompetence and corruption of the Nationalist officials. The Nationalist forces, after the end of the war, were about 3 million men compared to about 500,000 Communist regulars assisted by another half million guerrillas.

The Communists held territory with a population of about 116 million. The Japanese had occupied much of eastern northern China. The Nationalists had been driven south and west, there was a race between Communists and Nationalists to re-occupy territory held by the Japanese. The United States moved three Chinese armies by air to key sectors of east and north China, Between 400,000 and 500,000 more were moved by the United States by water and 50,000 United States marines helped to hold key points and keep rail lines open.

Chiang Kal-shek insisted on spreading too far and holing up in cities. In November 1945, General Wedemeyer reported his failure in advance:

"First, the generalissimo will be able to stabilize the situation in south China, provided he accepts the assistance of foreign administrators and technicians, and engages in political, economic, and social reforms through honest, competent civilian officials.

"Second, he will be unable to stabilize the situation in north China for months, even years, unless a satisfactory settlement with the Chinese Communists is achieved, and follow up realistically the kind of action suggested in paragraph 1.

"Third, he will be unable to occupy Manchuria for many years unless satisfactory agreements are reached with Russia and the

Chinese Communists."

The generalissimo did none of these things and China is now Communist, not because of Yalta.

The Artificial Barriers to Trade Between Nations

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I desire to include an editorial from the March 25, 1955, edition of the Napa (Calif.) Daily Register entitled "Tariff Issue Is Not Quite the Same."

The editorial is based on the artificial barriers erected to obstruct trade between nations of the world. Tariff reductions in themselves accomplish little or no purpose when countries desiring to exchange goods insist on maintaining various restrictions on imported commodities. In many instances these artificial barriers decrease or actually prohibit an exchange of goods, despite the reaching of agreements on tariff rates.

Someday it may be possible to do away with protective tariffs altogether. Until that time comes, however, when there is not such a wide gap in wage scales and currency valuations, protective tariffs must be maintained for the sake of domestic economic stability. But, when properly administered, protective tariffs are practically no deterrent to international trade when compared to the effects of artificial barriers which are the chief hindrance to a free exchange of goods.

The editorial referred to is as follows: TARIFF ISSUE IS NOT QUITE THE SAME

The hardy old perennial of American polities—the tariff—is a lively issue in the current session of Congress, just as it has been in virtually every past session. There is a difference, however, for the old lineups and traditional arguments between free traders and tariff protectionists have undergone a few shifts.

For one thing, tariffs aren't the only hindrance, and no longer the chief hindrance, to the free exchange of goods between nations. Our Congressman Hubert Scupper, in a recent speech before the House, pointed out that, "despite the existence of so-called reciprocal trade agreements, many countries

maintain Import-license systems, quotas, currency restrictions, monopolies, and various other devices which decrease or actually prohibit sale of American products on their markets."

As an example of how such trade restrictions work, Mr. SCUDDER cited the case of British-made and American-made motorcycles:

"A few years ago the British duty was reduced under a reciprocal trade agreement with this country. It sounded good. But, under their import license system, no American-made motorcycle may be sold on the British market—even though their motorcycles are flooding the American market under the low-rate tariff agreement."

At international conferences on world trade problems in recent years, American representatives have protested these artificial barriers to trade, and urged other nations to drop their import restrictions on American goods. The United States also has attempted to persuade other countries to cease the practice of state trading, or governmental buying and selling of raw materials and industrial products. But American efforts along these lines have been unavailing, largely because the United States is guilty of the very same practices, as a result of our domestic farm price-support program.

To protect our artificially high-priced domestic market for farm products, the United States often has found it necessary to place import restrictions against foreign-grown crops. And foreigners are quick to point out that the sale of grain and butter from the huge surplus stocks of the United States Commodity Credit Corporation is state trading with a vengeance.

Another new twist in the old free trade versus protective tariff argument is the growing industrialization of former raw material nations. In spite of the great advances in communications and the dramatic shortening of travel time which superficially seem to bring the countries of the world closer together, the industrialization of agricultural countries actually has made the world less interdependent. As each nation becomes more self-sufficient, world trade becomes less important.

Another new factor affecting current congressional arguments on the problem is the rapid industrialization of the United States South. Whereas the South always used to present a solid free-trade front in Congress, observers note that more and more southern Congressmen are crossing the Mason-Dixon line to line up with the damyankee members of the old protective tariff bloc.

Veterans' Hospital for the Metropolitan

Area

SPEECH

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5240) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices for the fiscal year ending June 30, 1956, and for other purposes.

Mr. LANKFORD. Mr. Chairman, I rise in support of this amendment. The purpose of it is to provide adequate veterans' hospital care or planning for that

care for one of the most thickly populated and most rapidly growing areas in the country. To give you an idea, the estimated veterans' population of Maryland in 1945 was 90,000. In 1949, only 5 years later, it was 263,000, almost triple the population and bear in mind that the population, particularly in the metropolitan area, is growing every day and is made up to a large extent of younger married couples, most of whom are veterans. The estimated veterans' hospital beds were increased slightly over one-fourth in that same period.

The area affected by this matter, the districts represented by Mr. Hyde and myself, are among the most rapidly growing counties in the State of Maryland. There is a crying need for this hospital facility and I urge everyone to vote for the amendment.

May I point out that there is no request for additional money, but this is simply to earmark money already in the bill. It is my understanding 4 VA hospitals, including 1 for this area, were approved at the same time. Three of those hospital have been built, but the one approved for this area has not been built. Each year the cry has been "wait until next year and you will get it then." But I feel now is the time and we cannot wait any longer and must start our planning for this badly needed facility for the veterans immediately. For these reasons, I strongly urge the adoption of this amendment.

An Act To Provide for the Protection of Public Property Near the Shores of the United States From Damage by Waves and Currents

EXTENSION OF REMARKS

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. CRAMER. Mr. Speaker, I introduced yesterday H. R. 5363 entitled "An act to provide for the protection of public property near the shores of the United States from damage by waves and currents," which has as its purpose what I believe to be a realistic and reasonable approach to one of the most serious problems facing many areas of our country where beach erosion, or the threat thereof, exists.

Under recent legislation concerning this subject matter of beach erosion, including Public Law 520, 71st Congress, 1930; Public Law 409, 74th Congress, 1935; Public Law 166, 79th Congress, 1945; and Public Law 727, 79th Congress, 1946, the Federal Government participates, upon a finding by the Beach Erosion Board of public interest being involved, to the extent of one-third of that portion of the cost of the project allocable solely to the protection of Federal, State, municipal, and other publicly owned property that abut immediately upon the water. The result of the pres-

ent legislation is, therefore, that in many instances, the Federal participation is inconsequential and obviously does not accomplish the purpose intended by Congress, that is, that the Federal Government should make reasonable contributions in beach-erosion projects where Dublic property is involved, in threatened beach-erosion areas. For instance, to take a specific example, there was ap-Proved by the Beach Erosion Board, the United States Army Engineers, and by the last session of Congress, the Pinellas County, Fla., project, at a total estimated cost of \$717,350, of which the Federal share is \$34,300, which is unquestionably justified in that the cost-benefit ratio of the total \$25 million project is 4.2. Due to the minimal amount of publicly owned property that immediately fronts on the shore, it is seen that the Federal contribution is only approximately 5 percent.

To further substantiate the fact that there is no question of justification of this project from the standpoint of the existence of a storm threat, the report to the Public Works Committee shows that 19 storms struck the general area between 1901 and 1950, inclusive, resulting in an average annual loss by annual erosion damage of \$112,400. During the last 4-year period the area involved has appreciated tremendously in real value, in that millions of dollars in improve-

ments have taken place.

Thus, under the present formula and existing legislation, and with the Pinellas County project as a specific example, the contribution of the Federal Government is very minimal despite the fact that substantial municipal, county, and State property that does not directly abut the shore is constantly subject to the threat of storm damage and erosion. This is true because the 25-mile string of islands involved is comparatively narrow and there is a public road extending in most instances within the erosion damage range of the entire coastline. Presently the Federal Government has no authority to participate through Federal contribution in the protection of any of this publicly owned property, simply because it does not actually abut on the water, although it is extremely subject to storm and erosion damage action by the water. This is only one of the examples of which many could be cited, where publicly owned property is affected by erosion from which there is no protection whatsoever and, under existing legislation, is not being reasonably carried out. The object of my bill is to some degree bring the Federal participation realistically in line with the existing threat to publicly owned property. Without this bill many needed beach-erosion projects have not been undertaken, partially due to the unfair and high percentage of participation re-Quired of local interests.

It will be noted that my bill is in no sense a windfall to the intervening private property between the publicly owned property and the shore, in that the formula for participation has been reduced to one-sixth in determining public interest that there may be a substantial benefit resulting to the public property as compared to the benefit

which might conceivably be derived by private property.

This bill is the result of lengthy conferences with the United States Army engineers and a representative of the Federal Beach Erosion Board, and it is hoped that it is a sufficiently realistic approach to a very serious national problem that it will merit the favorable consideration of the Public Works Committee and this Congress.

Criticism of Report of Attorney General's Committee To Study Antitrust Laws

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Congressman EMANUEL CELLER, Democrat, New York, chairman of the Committee on the Judiciary, and also chairman of the committee's Antimonopoly Subcommittee, stated today that he is deeply concerned and disappointed with the report of the Attorney General's Committee To Study the Antitrust

"The conclusion is inescapable," Mr. CELLER said, "that the majority of the Attorney General's committee views with equanimity and complacency the serious threats to our competitive system that have developed in the past few years. With a few exceptions the report advocates a substantial weakening of the antitrust laws. These exceptions are recommendations to repeal the Federal fair trade acts and to permit the United States Government to recover damages in antitrust suits."

"One of the principal threats to our competitive system," Mr. Celler said, "results from corporate mergers and acquisitions of firms engaged in healthy, profitable competition with each other. Passage of the Celler Antimerger Act in 1950 provided a powerful new weapon to prevent such unhealthy mergers and acquisitions. Notwithstanding this act, the Federal Trade Commission and the Department of Justice have done virtually nothing to prevent over 3,000 mergers and acquisitions that have taken place since 1950—a greater number than at any previous time in our history."

"Since 1950," said Mr. Celler, "the Federal Trade Commission and the Department of Justice have instituted a grand total of five prosecutions to stem this wave of corporate mergers. Yet no mention is even made by the Attorney General's committee of almost complete failure by these agencies to enforce the law. Instead, the report endorses a Federal Trade Commission decision recently handed down which virtually nullifies the Celler Antimerger Act."

Commenting further on the report, Mr. CELLER stated that in instance after instance the committee recommends by implication further curtailing present inadequate enforcement authority of the antitrust agencies.

For example, one of the most effective deterrents to antitrust violations is the provision for mandatory treble damages to the injured party in private actions. Although no finding is made that this provision has had any adverse effect on the public interest, the report urges that the provision for

treble damages be made discretionary rather than mandatory.

"Tam also surprised," Mr. Celler observed, "that the majority, at least in civil cases, in essence disapproved of a legal device inherited from the common law as being too extensive and untrammeled. I refer to the power to secure information by grand jury subpena. Its recommendation that in lieu thereof the Department of Justice be permitted to issue only a civil investigative demand, with power to demand documents but not testimony (except after court order requiring compliance) is but one of dozens of suggested changes which would hamper enforcement of the antitrust laws."

Mr. Celler noted that one of the few effective methods available to dissipate the unlawful effects of a monopoly and restore competition has been divestiture. Almost since the passage of the Sherman Act in 1890, he declared, the courts have repeatedly recognized the efficacy of such "trust-busting." "It is unfortunate." Mr. Celler stated, "that the Attorney General's Committee seems to think that this remedy is too harsh and should not be invoked except in the most extreme case."

"I am gratified," said Mr. Celler, "that the committee recommends congressional repeal both of the Miller-Tydings amendment to the Sherman Act and the McGuire amendment to the Federal Trade Commission Act. I trust that a number of repealer bills will soon be introduced in the Congress and that they will be referred to the House Committee on the Judiciary. As chairman of that committee, I shall be happy to recommend speedy hearings on such bills and shall press for passage of appropriate legislation."

"I deplore," Mr. CELLER added, "the manner in which the report has been released. Copies of the final document seem to have been available for press comment to publications such as the Wall Street Journal and Business Week, yet we of the House Committee on the Judiciary who will handle the hearings and most of the legislation that may develop from this report received but one copy on Monday of this week. Since it is a legalistic document of 394 pages, none of us have been able to study it in detail. Its recommendations are not only numerous and obliquely worded, but obscure in their implications. So far as I can make out, nearly all of them represent but links in a chain designed to frustrate effective enforcement of the antitrust laws."

"The Subcommittee on Antitrust Matters of which I am chairman will closely examine this report and I anticipate early hearings will be held."

They Wouldn't Give Time To Test Flexible Supports

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave granted to extend my remarks in the Record, I wish to call attention to an editorial in the Fairfield (Iowa) Ledger of March 14, 1955, with the hope that a perusal by the Members of Congress will call attention to the fact that flexible price supports have not yet been tested, and surely any sound legislation deserves a fair trial before it is abandoned.

The editorial follows:

THEY WOULDN'T GIVE TIME TO TEST FLEXIBLE SUPPORTS

Before time is given to learn the merits of flexible farm-price supports the House Agricultural Committee voted to restore rigid farm-support prices. Members of the committee from both parties joined, by a vote of 26 to 11, in reporting out a bill for 90 percent of parity prices for farm products.

Like the controversial \$20-per-person income-tax cut, this bill will be bitterly contested by the administration. It has hardly had time to test its theory of a flexible farmsupport system as a means of restoring independence of action to the farmer and relieving the taxpayer of billions of parity payments.

However, while the bill to restore rigid supports will certainly embarrass the administration, and has far-reaching political implications, it cannot be charged to party maneuvering for political advantage to the Democrats. A good number of Republicans from farm States joined with Democrats to give the measure the better than 2 to 1 clearance. Politically, the danger is that eventual defeat of rigid farm supports will be used to advantage by the Democrats.

The bill would restore 90 percent of parity on 5 basic crops—corn, wheat, cotton, peanuts, and rice. Tobacco, a sixth basic crop, would remain on flexible price support. The price support on dairy products would be increased from 75 to 80 percent and the fund for subsidizing milk consumption in the public schools would be increased from \$50 million to \$75 million.

The first fight on the measure will be on the floor of the House, where farm bloc Members are not a strong as they are on the committee that is drawn from Members with special interests in farm legislation. If it should pass the House, there is strong opposition in the Senate to changing the flexible farm-price system. But the running fight in both Houses will be embittered by the record both parties are making for the 1956 election.

Invasion of Wetbacks

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. WILSON of California, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Tribune of San Diego, Calif., of March 23, 1955: Invasion of Wetbacks Ends for County, Official Says

(By Vincent Dunne)

The wetback invasion across the Mexican border, which was one of the first problems tackled by the administration of President Eisenhower, has been halted in San Diego County.

"You could go out and hunt high and low, day and night, and be lucky to find one," Ed Bird, farm placement representative in the San Diego office of the State department of employment, said today.

The name "wetback" comes from the time when Mexican laborers would swim the Rio Grande to illegally enter the United States.

The wetback is distinguished from the "bracero," or Mexican farm laborer who is legally admitted to work on United States

farms and ranches. The bracero is employed under terms of a contract drafted by representatives of the United States and Mexico.

"Illegal entrants still jump the border," said Bird. "But they're a comparative trickle, and are soon picked up."

He recalled that wetbacks were apprehended at the rate of several hundred a week in San Diego County prior to the wetback roundup carried out here by the Department of Justice last spring.

The sweeping roundup was staged all along the United States-Mexican border and throughout California. It was ordered by Attorney General Herbert Brownell after he had visited San Diego and other border areas.

The roundup of the illegal entrants was conducted by the United States Border Patrol, which has a sector headquarters at San Ysidro.

The number of wetbacks picked up daily in the San Diego area now averages 30, it was reported by John P. Swanson, chief of the border patrol's Southwest region, which embraces San Diego.

Last month 1,118 aliens were apprehended by the border patrol in San Diego County, and parts of Riverside and Orange Countles, Swanson said.

"In February 1954, and the months before that, 10 times that number were regularly picked up," Swanson recalled.

Bird attributed the improvement to strict and continuous enforcement by the border patrol, and the cooperation of growers.

patrol, and the cooperation of growers.
"The growers are not hiring wetbacks," said
Bird, who visits farms and groves throughout
the county to obtain estimates on labor requirements in advance of crops.

"There are about 3,500 Mexican contract laborers now employed in San Diego County," he reported. "A year ago, there were probably not more than 1,800 'legals,' or contract workers."

Bird said the differential between the number of legals hired this year and the number employed last year represented 1,700, or the number of wetbacks in San Diego fields a year ago.

Swanson also credited the assistance he said was given by growers as largely responsible for the success of our efforts.

"We feel a great deal of the success of our enforcement program is due to the cooperation of the growers," he said.

Employers obtain the bracerous after they are selected at recruiting stations in Mexico and processed for admission to the United States by United States Immigration Service and Department of Labor officials.

The work contract between the employer and bracero is for a maximum term of 6 months. It can be extended once for a similar term.

Most laborers are engaged under the 6-month pact but minimum contracts for 4 weeks are issued, usually to harvest "flash"

Territorial Limits

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1955

Mr. PELLY. Mr. Speaker, supplementing my previous remarks of March 28 in connection with the seizure of the American-flag ships Arctic Maid and the Santa Ana, I am now advised by Mr. Byron Blankinship, of the State Department, that, pursuant to my protest, the following steps have been taken:

First. Instructed Ambassador in Quito to make strong protest to the Government of Ecuador. This was done on March 30,

Second. Asked the Ambassador from Ecuador, Dr. Jose R. Chiriboga, to come in for conference which is taking place

Third, Dispatched Mr. Rollin S. Atwood, Director of South American Affairs, and Mr. Fred E. Taylor, specialist in Fish and Wildlife Division, to Ecuador in connection with this particular incident. They are proceeding to Guayaquil to make investigations with the aid of the Consul and the Embassy in Quito.

I have been assured that following the investigation additional action as considered proper will be taken.

Meanwhile, steps have been taken to hospitalize the wounded man, who is William Teck, of my congressional district, in the Gorgas Hospital in Panama. At the time of my previous remarks his identity was unknown to me.

As background of this continuing attempt to extract tribute from American-flag fishing vessels, I might say the excuse used for illegal seizure of our ships is the declaration of Panama establishing a neutrality belt around the Americas. Chile, Peru, and Ecuador do not want to recognize that this declaration did not deal with specific territorial limits of any nation.

The following editorial in the Washington Post of February 27, 1955, covers this general situation:

TERRITORIAL LIMITS

The anarchy which is developing over International sea rights was remitted some time ago to the United Nations for consideration. But the law commission which was then set up is still deliberating. In the meantime disputes between the nations are growing, and there is need for a speedup at the U. N. Some of the maritime nations, notably Japan, are finding the situation hard to tolerate.

The usual notion of a territorial limit extending out 3 miles is an 18th century concept. This concept was based upon the distance of the firing of a cannon ball—the defensible, therefore the territorial, limit. However, we are now in the air-atomic era, and sea limits, in consequence, need to be reframed in the light of changed conditions. The fact is that the territorial limits have not even been codified.

Today every country has its own rules which impinge upon the freedom of the maritime countries. For instance: Peru, in association with Chile and Ecuador, has proclaimed that her territorial waters extend 200 miles from her shores. Under this proclamation she recently fired upon and brought into port a whaling fleet flying the Panamanian flag. Australia would carve out a similar sea area in safeguarding her pearl shells. Russia has always kept foreign fishermen beyond a 12-mile limit. The Gulf of Aqaba is only 12 miles across, yet both Egypt and Saudi Arabia assert jurisdiction up to 6 miles, or half the width. Korea has what is called a Syngman Rhee line, which is 60 miles offshore, and luckless Japanese who stray within this zone are shot at. President Truman talked about our American rights to the Continental Shelf in bland disregard of all the international implications involved.

This is the measure of the anarchy on what we used to call the high seas. It is an eruption of nationalism—in behalf of re-

cources in oil, swimming fish, or pearls which are beyond territorial reach. The national claims in some cases are monstrous, in all cases add up to international disorder. there is not some agreed-upon definition 800n-a definition based upon live and let live—we shall see develop a new kind of piracy on an official scale.

John W. Davis

SPEECH OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. SMITH of Mississippi. Mr. Speaker, the late John W. Davis was a Freat American whose contributions to our country earned him recognition as an elder statesman towering over many of his contemporaries who gained higher Political honors. It is my fervent hope that Americans will never forget or neglect the traditional responsibility for public service exemplified by Mr. Davis. He ranks as one of the great lawyers of our history.

Under unanimous consent, I include editorial tributes to Mr. Davis from the New York Times, the Greenville (Miss.) Delta Democrat-Times, and from a radio broadcast by Mr. Eric Sevareid:

[From the New York Times] JOHN W. DAVIS

The most conspicuous appearance John W. Davis made before the American public was in 1924 when he ran unsuccessfully against Calvin Coolidge as Democratic nominee for the Presidency of the United States. He had been nominated on the 103d ballot Curing a convention which had aroused such bitter feelings between the followers of William Gibbs McAdoo and the followers of Alfred E. Smith that a Democratic defeat was a foregone conclusion. He ran as a duty and as a sacrifice.

Yet this was only one episode in a long and substantial career. Mr. Davis came at the end of his active life—which was only a few months short of his actual life of nearly 82 years—to be perhaps the fore-most representative of the American bar. The range of his cases had been wide. He defended "Mother" Jones and Eugene V. Debs. He argued cases on behalf of J. P. Morgan. He appeared for segregation on be-half of the State of South Carolina. He appeared as an attorney on behalf of J. Robert Oppenheimer, who had been relieved of his duties under the Atomic Energy Commission as a security risk. He argued for the steel industry against President Truman's seizure of the steel mills. And he dighified the cases he argued.

He also served the public at the height of his career as an official. He was for several years a Member of Congress; was Solicitor General under Woodrow Wilson from 1913 to 1918; for 3 years represented the United States as Ambassador to Russia.

Mr. Davis was never spectacular. He was a solid citizen of absolute integrity and of great ability. He had the good fortune to live and to work until an advanced age. That was his country's good fortune, too. Dying even at that advanced age, he will be missed.

[From the Greenville (Miss.) Delta Democrat-Times]

JOHN W. DAVIS-GREAT AMERICAN

In our gloomier moments, most of us are likely to lament that our times have not produced any equals to the moral and intellectual giants of bygone generations. now and then emergence or the death of a contemporary great American gives proof of how wrong we are.

John W. Davis, the great constitutional lawyer and 1924 Democratic presidential nominee who died last week at 81, was worthy of inclusion in any list of notable Americans. He had the cardinal virtues of honor, candor, and independence. It is good to remember, in these days of character smirching of men of unpopular convictions, that John Davis could on the one hand represent leftwing clients, even Socialists like Eugene Debs, and great corporations on the other without challenge to his integrity and citizenship. And we can take pride in the political courage of a leading Democrat and one-time presidential candidate who could and did refuse to stay with the party in 1928 for reasons that to him were good and sufficient.

Like many another and lesser American, John W. Davis believed that the Federal Government has come to interfere too greatly in the lives of the individual citizens and the authority of the States. Yet, in his young manhood as Solicitor General under Woodrow Wilson he argued successfully the cases for an early wage and hour law, the income tax, and the Selective Service Act of World War I, all of them representing the expansion of Federal authority. This was not contradictory. Rather, it represents the flexibility of a brilliant mind, in contrast to the adamant hardness of less imaginative intellects.

As Ambassador, notable lawyer, and pleader of the cause of States rights and responsibilities, he served this Nation as few men have. God rest his soul.

RADIO BROADCAST BY ERIC SEVAREID

Mr. John W. Davis was buried yesterday at the age of 81; another of that dwindling group of towering Americans from a past age of event; great men, like Henry Stimson, who never achieved the pinnacle of public life, the Presidency, when lesser men did; men whose dedication to their country was whole-souled, nevertheless, and for whom the supreme frustration of personal ambition never deflected them away from public services of a monumental nature. The small band of true elder statesmen is dwindling still smaller; their counsel will one day soon be entirely lost, and sometimes one wonders how and when they are to be replaced. This may be illusion, but it always seemed to me they represented an influence in our public affairs fundamentally different from the mental and emotional promptings of most men now of the prime and middle age. Because the men like Davis and Stimson-one could add others, like Learned Hand or the poets, Sandburg and Frost-were formed, in their minds, in a quite different era.

Their views of life were rooted in the long American past, anchored in what seemed to be rock; their principles of conduct and action, their faith in the American vision, were matured before the First World War, which began the present process of anarchy in personal and public principle; nearly all who have matured since that first world slaughter. matured in doubt and the short-term view. They matured in faith and the long view. On behalf of their eternal principles of the free mind, they would join no hasty rationalizations in the misused name of security; they would today, I think, in the face of

possible war in Asia, look to the lessons of history, not to the alleged compulsions of strategy, where so many lesser men direct their eyes.

There were eternal verities for a man like John W. Davis and one was the meaning of the American Constitution. He was probably the greatest constitutional lawver of his time; and he would, if his verities were involved, defend a so-called security risk other men would shun, or even an acknowledged Communist.

Always, the principle was the thing, not the individual, not the pressing needs of the harried present, nor the fleeting charms of popularity. Such men would not bow to icons of public opinion, knowing the majority can be wrong; one cannot quite imagine them scrutinizing the public opinion polls, sending careful trial balloons into the air to see where safety lay; or surrounding themselves with ghost writers weighing each calculated word to offend no possible pressure group. They proceeded from principle and hoped the needs of the moment would fit; they did not proceed from the needs of the moment, inventing or adjusting prin-

ciple as protective coloration.

Such men had a positive effect on their country's course beyond, sometimes, the influence of those who had taken the great offices in their stead. One wonders, sometimes, what the course of reconstruction would have been, that period of public disease, had Horatio Seymour not lost the Presidency to General Grant, so vastly inferior to Seymour in intellect and vision. One wonders what would have been our course through the frantic twenties, ending in the depression collapse, had John W. Davis not lost the Presidency to Calvin Coolidge, who sat on the White House porch and rocked, impervious to a new idea. Those are the might-have-beens of history, indication in themselves of how wrong the majority can be.

But Davis' life and works were not mighthave-been in themselves. Private life did not frustrate the great lawyer; his works were many, important, and the country is the better for his long and enviable life.

Tax Rate Extension Act of 1955

SPEECH

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. SHELLEY. Mr. Speaker, I expect to vote against the adoption of this conference report-not because of any objection to extension of the 52 percent corporation income-tax rate or the excise-tax rates therein, but simply as my personal protest against failure to in-

clude in the bill any income-tax relief

for the small individual income taxpayer. When the revised Internal Revenue Code was before the House last year I felt very strongly that the individual low-income taxpayer was entitled to relief, particularly in view of the tax reductions written into the law to the advantage of big-business interests and wealthy stockholders. When the fight to include a reduction in taxes for the little man failed last year, I determined to do everything I could to push for such

relief in this session of Congress. I strongly supported the successful Democratic move to include a \$20-per-person tax reduction for individuals when H. R. 4259 was voted on in the House on February 25 of this year. To me it is extremely unfair and unfortunate that no agreement was reached between the conferees for the House and the other body to include at least some measure of tax reduction for individual taxpayers in this conference report. I cannot vote for a report which does not give the low-income groups in this country the relief to which they are entitled.

Mr. Speaker, I want to reiterate that I do not oppose at this point extension of tax rates to which H. R. 4259 has now been limited. My vote against the re-port is purely a protest against failure to do justice to the little man. It is, further, a protest against acceptance by the Congress of the trickle-down theory of tax relief held by this administration, under which they want to confine tax reductions to Big Business in the hope that in their goodness and mercy they will permit some of their added income to trickle down to the small-wage earner. That economic fallacy has been exploded long ago. The House was on the right track in February when we voted the \$20-per-person tax reduction. I suggest that we should soon get back on that track by forcing a reduced tax rate for the low-income groups in this country. By that method we give direct relief where it is most needed and, at the same time, promote economic growth by the only sure means available-increased consumer purchasing power. On those grounds I urge the rejection of this conference report.

I believe, also, Mr. Speaker, that we Members of the House are entitled to feel put upon in not having this conference report brought back to us for final action until we are under the gun. so to speak, as to expiration of the excise taxes and the extension of the present corporate income-tax rate. When we are asked to act on March 30 on a matter which must be decided by April 1. there seems justifiable reason to believe that the democratic processes are being slighted in favor of tactics more suitable to other forms of government. Perhaps the motive in delaying this legislation was not what it seems, but when we are faced now with only two choicesletting the present taxes expire or pass this bill-I think a protest is justified.

Tax Rate Extension Act of 1955

SPEECH

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mr. EBERHARTER. Mr. Speaker, I cannot bring myself to agree to the conference report on H. R. 4259, now before us for decision.

To do so will cruelly deny modest tax relief designed to benefit the needy family in the lower income brackets, while at the same time the "fat-cat" Republican Revenue Act of 1954 will continue to drain off billions in tax benefits predominately to large business, dividend recipients, and wealthy individuals.

It is arrant fiscal irresponsibility, we are lectured from high administration places, to give modest tax relief to lower income families—to give a direct tax saving of \$20 each to the father and mother and for each dependent child, so that the relief will be more effectively felt at the lower income levels where the family burden presses the heaviest.

But—so goes the lecture from the same high administration sources—it is an act of high and ennobled statesmanship, contributing to the welfare and stability of every humble home and fireside, to give unbounded tax relief to big corporations, coupon clippers, and wealthy individuals as was done last year in the Revenue Act of 1954.

I and other Members on my side of the aisle took the floor many times last year and this to protest the one-sided character of that 1954 act, particularly as to its dividend credit tax bonanza and its distorted and swollen depreciation tax allowances to corporation.

The dividend-credit provision of that 1954 act—the special tax reduction for coupon clippers—will cost \$362 million a year. Eighty percent of that relief will go to the six-tenths of 1 percent of American families who own four-fifths of all publicly held stock. Ninety-two percent of American families own no stock and get no benefit. Less than 4 percent of all taxpayers—those with incomes over \$10,000—receive 76 percent of all dividend income. And eightenths of 1 percent of all American families—those with incomes over \$25,000—get 55 percent of all dividend income.

I ask, is it a token of fiscal responsibility that special tax relief be accorded a favored limited group of dividend recipients—the unearned income class—but even most modest relief be denied the mass of taxpayers who work and toil for earned income?

The special depreciation allowances granted by last year's tax bill-thinly disguised special tax credits for increased corporate dividends or favored capital gains benefits to stockholders on corporate reinvestment of tax free earnings-will continue to cost billions in reduced Federal revenues for a generation. Expert students of intricate tax maneuvers and business finance estimate that by the year 1960 the United States Treasury would be losing, at present levels of gross national product, about \$3 billion per year as a result of these new depreciation provisions if current tax rates on business remain the same. The same sources estimate that by 1955 the tax loss would rise to more than \$5 billion per year, and it would continue to rise thereafter. I commend to the attention of the members the revealing study of Depreciation Under the New Tax Law, by Robert Eisner, published in the Harvard Business Review for January 1955, and reprinted in the RECORD of March 11 at page 2264.

But when the 1954 act was under consideration and even as of recent date, we were told in solemn assurance by the Secretary of the Treasury, and other administration fiscal pundits who now lecture us on fiscal irresponsibility, that these swollen depreciation tax benefits will really cost the Federal Government nothing. They say that if you view their tax effect on one piece of new machinery-and please limit your myopic view to only one added machine by the taxpaying corporation in this dynamic business economy of ours-then the Government will later get back the taxes it lost in the earlier years because no more depreciation tax allowances can be taken after the full cost of that single machine has been written off for tax purposes.

"Baloney," as a forthright statesman, dear to my memory, might have responded. The shallow assurance that the increased depreciation tax allowance "all washes out in the end"-to quote the study above referred to-"not only is misleading, it is to all practical purposes flatly erroneous." It mistakes the effect on a single piece of property for the cumulative tax effect, typical of American corporations, of increasing investment in new property additions each year in keeping with the economic growth of our system. Assume that gross additions of property are made at a constant rate each year by one of the big corporations in a heavy capital industry, if the properties last 33 years depreciation tax allowances under the generous new methods of last year will exceed tax write-off under the old method in each of the first 27 years under one of the new methods and in every one of the first 33 years under the other new method authorized last year. The tax benefit does not "wash out in the end": it can pile billions upon billions in reduced corporation taxes each continuing year for the next generation.

"When do we get back those billions?" I inquire after due heed to recent public sermonizing on fiscal responsibility. When I tried last year to find out from the Secretary of the Treasury, I ran into a stumbling block of refusal to give the information at first, then official stall, and finally airy assurance to the effect that "it all washes out in the end."

Not even the Wall Street Journal accepts the glib assurance of the Treasury that the new depreciation tax allowances "all wash out in the end." To quote from the lead editorial appraisal in the issue of March 28, 1955:

As shown here a few weeks ago, the depreciation change can produce large cumulative effects over the years. On any single piece of property the effect is minor. It merely postpones taxable income a few years by concentrating the depreciation in the early part of the life of the property. But as new facilities are built year by year, the relative weight of the early, heavy depreciation rates will keep growing, and Federal revenues will reflect this.

Yes, \$362 million a year of special tax benefits directly to stock dividend recipients—coupon clippers—and billions more per year in corporate tax benefits through tax-free depreciation allowances to be kept in company tills, distributed to stockholders, or reinvested with consequent increased stock values able to be realized upon at favored capital gains rate of taxation. In the eyes of administration lecturers, that must be the acme of fiscal responsibility.

Relief for the wealthy, we are told, will stimulate investment and promote confidence. It will sustain that delicate maiden, whose confidence we must so tenderly nourish, the stock market boom. Relief for the needy, this administration tells us, must be spurned as phony and base political trickery. For the latter—for the needy—the weight of the taxload on their burdened backs will help spur their daily toil and assure heightened awareness of the precious price of citizenship.

Some other observers, perhaps lacking in self-righteous zeal for the current brand of fiscal responsibility, detect in this strutting fiscal conscience only the old hard-panned "trickle down" theory again restored to its place of public eminence after years of brooding silence. I doubt that in our modern economy, sustained as it must be by mass purchasing power and ever-broadening distribution of the products of farm and factory, the "trickle down" will be adequate or timely in rate of flow to promote the truly dynamic expanding economy that lies within our reach.

I urge disagreement to the conference report. I respect the views reluctantly reported by the majority members of the committee of conference. I know their sincerity, their deep conviction, and their persistant effort to gain acceptance of House action in passing the \$20 tax credit. Only under adamant threat of Presidential veto, on the eve of expiration of current higher rates of corporate and excise taxes, did they bow to Executive fiat.

But I am still mindful that our Founding Fathers wrote in the Constitution that "all bills for raising revenue shall Originate in the House of Representatives;" and to the Congress the Constitution gave the power to levy and collect taxes. Too often of late has this House-its elected Members-forsworn its rightful prerogative. Let us assert it now, confident in the human justice and economic justice of our prior action, lest by failure to do so We embolden further the disciples of the McKinley era in their new onslaught of power and privilege. If we disagree to the conference report, then this House itself lifts the awesome responsibility from the individual shoulders of the able chairman of the conference committee and his fellow conferees. I doubt that the administration, despite its blustering threats, would rashly jeopardize by veto the true fiscal responsibility and fairness of our Government. The pages of history are studded with examples where human liberty and justice were won only by like defiance of entrenched power.

Yalta: What Happened and the Price We Are Paying

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HOSMER. Mr. Speaker, up to this time the most well-publicized result of the Yalta Conference has been the sell-out of Poland and the Eastern European nations. Poland, the Balkan nations, and all the rest have Communist governments today because of the deals made at Yalta.

What happened in Europe as a result of Yalta was bad enough, but what happened in Asia was even worse as far as the intersts of the United States are concerned.

As a result of a secret deal made at Yalta, concessions were given to the Russians which paved the way for the Communists to take over China. The Korean war, the war in Indochina, and the crisis in Formosa resulted directly from the fact that China went Communist.

The Yalta deal contributed in two ways to the Communist victory in China.

Turning over to the Russians rights to the jugular-vein Manchurian Railway and the warm-water ports, together with the recognition of Outer Mongolia as a satellite state, were concessions which materially assisted the Communists in their struggle with the Nationalists.

In addition, the fact that this agreement was made without the Nationalist Chinese being consulted had a disastrous effect in destroying the face of Chiang Kai-shek and the Nationalists once the deal became publicly known, soon after it was made.

In light of this, the restraint with which the two top men in our Government have handled the situation is remarkable, indeed. It was commented on in the following editorial appearing in the Long Beach Press-Telegram newspaper on March 24, last:

RESTRAINT, PAIRNESS DISTINGUISH IKE, NIXON VIEWS ON YALTA TALKS

Both Republicans and Democrats can take instruction from the words of President Eisenhower and Vice President Nixon about the Yalta papers.

The two top national leaders set an example of fairness and restraint.

In the long run this attitude can do much more for administration and party prestige than can be done by fighting with the past.

The people still appreciate the Golden Rule.

The President made two main points in his reply to questions on the subject at his news conference yesterday:

One, there is nothing to be gained by

One, there is nothing to be gained by going back 10 years and, in the light of subsequent events, trying to show that someone may have been wrong or right. Documents such as the Yalta papers should not be used to damage reputations.

Two, there is nevertheless a value in studying such documents. They may be consid-

ered with a view to profiting from mistakes which were made.

To learn from history, but not to judge the motives of its makers by hindsight that is an attitude reflecting intellectual maturity and real statesmanship.

There is no conflict between this attitude and the approval of public circulation of the Yalta documents. The publication of a fact is not in itself an act of condemnation.

Vice President Nixon, who has always been a severe critic of the products of the secret Yalta Conference, refused in a speech several days ago to accept the interpretation by a partisan in his audience that Yalta was a sellout.

He did stick to his guns when commenting on the results of the conference. The fall of China to the Reds could be laid directly to the door of the Yalta pact and "of course it naturally followed that we had a war in Korea and one in Indochina." He said there was no doubt that concessions given to the Russians in the pact were detrimental to the United States and the free world. That's a statement with which anybody, regardless of politics, should be able to agree.

However, Nixon continued, "The reason the concessions were made was that the leaders of the free world simply didn't know what the Communist animal was like. Another reason was that we badly needed Soviet support at the time for the conquest of Japan. I don't believe there actually was any deliberate attempt to sell us out to the Communists."

That is a fair comment. But we wonder if some partisans will eventually twist it around, as they have twisted Nixon's comments on other matters, to make it appear that he has smeared the opposition.

In any event, it occurs to us that historical events may do for American politics what Winston Churchill says the atom bomb may be doing for world peace.

The great depression as a political issue in a sense of balances off the Yalta Conference. Both sides having such ammunition in the stockpile of past events, they may decide it would be unprofitable for either to fight with that kind of stuff.

Emergency Hurricane Warning System Needed for North Atlantic Seaboard

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. PATTERSON. Mr. Speaker, I have introduced in Congress an independent appropriation bill, H. R. 5260, asking for \$5 million, providing for an emergency hurricane warning system based upon a special study prepared by meteorologists specializing in hurricane phenomena. I have requested this special study.

Few people realize that the property damages of hurricanes Carol, Edna, and Hazel last fall amounted to \$1 billion and killed over 150 persons in the devastation wrought along the North Atlantic seaboard.

Meteorological experts tell us that these last three big storms were not freakish sea storms straying inland off their regular paths. The scientists say that distinct changes in the worldwide upper wind patterns is creating a new cycle driving inland the great sea storms and may afflict heavy damages on the New England coast again this season and for years to come.

The United States Weather Bureau. operating under a drastically cut budget, is doing the best it can to detect the movement of hurricanes and issue warnings. In fact, the Weather Bureau has done a great job with limited mechanical equipment operated by overworked staff personnel. During the last big storm weather forecasters worked continuously 18 hours without relief. But there is a limit of human endurance. Budget cuts forced the closing of weather stations at Eastport, Maine; Bangor, Maine; Cape May, N. J.; Ocean City, Md. The Eastport station had been in operation since 1891. Also, forced reductions in the Bureau's working force resulted in only limited operation at offices at New Haven, Conn.; Bridgeport, Conn.; and eight other weather stations.

I recently appealed to President Eisenhower to act favorably on the recommendations of the Interagency Hurricane Research Conference for a more effective hurricane research and warning program. This was a long-range program.

The President advised me that he shared my concern for adequate safe-guards against hurricane disasters, and said, "You may be assured that thorough consideration will be given to such additional research activities as may be proposed."

I am now proposing a short-range emergency hurricane warning program to be financed by a special appropriation of \$5 million. I am appealing to 36 Senators, 18 governors, and 177 Congressmen to join me in the drive to secure necessary Federal funds to enable the Weather Bureau to set up a really effective hurricane warning system to save human life and property.

It is impossible to accurately determine in advance what the projected hurricane task program will accomplish in dollars and cents; but experts estimate that potential savings of 25 percent damages to property and 90 percent savings in human life will result if advance warnings from 7 to 21 hours can be widely disseminated via newspaper, radio, and TV news bulletins.

OBJECTIVES OF THE PROPOSED SPECIAL AND IMMEDIATE HURRICANE WARNING PROGRAM

First. To reduce unnecessary loss of life and property in all coastal States from future hurricanes.

Second. To reduce unnecessary interruptions, costly protective action, and time-consuming precautionary measures of thousands of business firms and millions of citizens in fringe areas of expected hurricane paths.

Third. To reduce unnecessary fear and apprehension in areas in or close by the expected paths of future hurricanes.

Fourth. To increase the value of hurricane forecasts to the people of 19

coastal States who need better and more precise information as to expected wind speeds, water levels, and times of hurricane occurrences.

Fifth. To enable the Weather Bureau (a) to provide an improved hurricane warning service immediately: (b) to give locations, speeds, directions, and intensities of future hurricanes with more accuracy than has been possible for past hurricanes; (c) to describe present and expected weather conditions in and surrounding future hurricanes more accurately than has been possible for past hurricanes; (d) to provide alerts and warnings of future hurricanes 6 to 12 hours farther in advance than has been possible for past hurricanes; (e) to distribute essential hurricanes reports and warnings with greater speed, efficiency, and certainty than has been possible for past hurricanes; (f) to give complete and accurate forecasts of highwater levels for all occupied coastal areas subject to inundation.

HOW THE ABOVE OBJECTIVES CAN BE ACCOM-PLISHED

(a) Secure appropriations to carry out a special and immediate hurricane warning program of the United States Weather Bureau starting June 1, 1955, and as long thereafter as may be necessary to avoid unnecessary loss of life and property from hurricanes.

(b) Secure the above appropriations in addition to the funds contained in the budget estimates for the Department of Commerce weather bureau submitted to Congress in January 1955 for fiscal year ending June 30, 1956.

(c) Secure appropriations for both of the above programs, and also for a hurricane research and development program for fiscal years 1956, 1957 and 1958. WAYS IN WHICH REQUESTED FUNDS ARE TO BE

EXPENDED BY THE WEATHER BUREAU

First. To provide staff sufficient to keep weather bureau offices open 24 hours a day in 10 coastal cities from Maine to Texas where existing weather bureau offices are now open only part time.

Second. To provide technically trained staff sufficient to reopen weather bureau offices in five coastal cities from Maine to Texas where formerly existing weather bureau offices have been closed.

Third. To operate special teletypewrite, facsimile, telephone, and radio networks for the prompt relay of meteorological information used in forecasting hurricanes and major storms, and used for instantaneous distribution of hurricane warnings and alerts to all areas and citizens concerned.

Fourth. To provide staff and observing equipment to operate 12 additional rawinsonde stations in the United States east of the 100th meridian and in other selected land areas adjoining the Gulf of Mexico, Caribbean Sea and western Atlantic Ocean; and to provide staff and supplies at existing rawinsonde stations to take required upper air observations at 6-hourly intervals instead of at 12-hourly intervals during the hurricane season.

Fifth. To provide additional weather observations during storm periods from merchant ships traversing the western

Atlantic Ocean, Caribbean Sea, and Gulf of Mexico.

Sixth. To provide additional forecasters, additional meteorological chartmen, and additional communicators to provide around-the-clock hurricane forecasting watches at each of the following six hurricane forecast centers: Boston, New York, Washington, Miami, New Orleans, and San Juan.

Seventh. To establish an improved high water warning service to inform coastal areas of approaching high storm tides, damaging waves, and other coastal inundations from abnormal water levels and floods associated with hurricanes and heavy coastal rainstorms.

Eighth. To provide meterological staff and facilities for emergency hurricane warning centers and for mobile storm warning squads to supplement the local weather bureau staffs during the intense activity accompanying the approach and passage of hurricanes and major storms; and afterwards to survey and review (a) the quantity and quality of hurricane reports, alerts, and forecasts; (b) the times, places, and amounts of hurricane information distributed by all news media; (c) the protective action taken by all concerned, and (d) the types and amounts of hurricane damage incurred.

Ninth. To reestablish the ocean weather ship station formely located halfway between New York and Bermuda and maintained there by the United States Coast Guard for 12 years prior to its removal in June 1954.

Tenth. To carry out a cooperative private and governmental public information program involving important aspects of hurricane alerts, hurricane warnings, the changing characteristics of moving hurricanes, and the precautions, that should be taken by citizens in the forecast path of future hurricanes to save lives and property.

Bill McCauley Speaks His Heart

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. O'HARA of Illinois. Mr. Speaker. I am extending my remarks to include a letter and an address that I would place on the list of recommended reading by my colleagues during the days of the Easter recess. The letter is from Illinois Department Commander Irving Breakstone, of the American Legion, and the address is by Past Commander Bill McCauley.

It has been many years since the first department convention of the American Legion was held in the city of Peoria. Marshal Field, the father of the present publisher of the Chicago Sun-Times, was one of the delegates. General Milton Foreman was elected department commander, Bill McCauley senior department commander, and it was given me the great honor and privilege of being

named to serve as chairman of the department executive board, a position since, I believe, abolished. It was the founding convention of the Legion in Illinois. The next year Bill McCauley was advanced to department commander. He is a great American, and in Legion circles he has attained with the passing years the stature of an institution. I sketch this background for the better appreciation of what follows, beginning with Department Commander Breakstone's letter:

Dear Comrade: Enclosed herewith you will find an extemporaneous address delivered by Past Comamnder William "Bill" McCauley before the meeting of the executive committee of the department of Illinois at Springfield on February 26.

It is, of course, almost impossible to recapture in cold print, the dramatic situation under which these remarks were deliv-

ered.

Comrade Bill McCauley has been a fighter in the ranks of the Legion ever since its inception some 36 years ago, for aid and assistance to our disabled comrades, their widows and orphans; he has devoted indefatigable effort, time, and money in an unselfish service and in unswerving loyalty to this basic program of the Legion, which has brought to him the love and affection of a multitude of friends and comrades.

Those who had the good fortune to be present at this meeting and to hear this farewell address (as he phrased it himself) will never forget the profound impression it left upon their minds and souls. The battles of the past which gave us victory will require eternal vigilance and equal fortitude to meet the assaults of the future against veterans' benefits.

Heed the admonition of our great comrade and continue the battle in behalf of those who have borne the battle, and if you can find time, and I trust you will, drop Bill McCauley, at Olney, Ill., a note of Congratulation and thanks for the heroic service he has given in this great cause.

Sincerely yours in comradeship, IRVING BREAKSTONE, Commander, Department of Illinois.

BILL McCAULEY'S ADDRESS

With your permission, I am going to digress for a few moments and take you back on a brief trip of the early days of the Legion for the benefit of the younger men, so that they will have probably a better understanding of what the Legion really is and what it has been doing for the past 35 years.

I recall very distinctly at the close of World War I when our crippled and disabled veterans began to return home with no hospitals and no jobs and no preparation having been made for their return. All at once they seemed to wake up in Washington to the fact that there was this dis-

abled problem.

Our Government made contracts with 1,400 hospitals to care for these disabled men and women, and they ranged from the very best down to some hospitals that were not fit to keep a human being in. We found tuberculosis cases in hospitals that were careless, men who were mentally sick, and men who were just nervous confined in State insane asylums, county jails, and many of them were placed in the State insane asylums among people who had become violently insane and the effect upon those poor fellows resulted in many instances that they are spending their entire days in mental darkness, making a greater sacrifice than a man way were resulted.

man who merely died for his country.

I have given 35 years of my life to this problem that is closer to my heart than anything on earth and I want you men to un-

derstand the problem just a little bit better than maybe you have ever understood it before. Many of those fellows are still there spending their days in mental darkness. We went to Washington and demanded that the contracts be canceled and that the Government start on a hospital-building program to give to them the kind of treatment that a greatful nation felt that they should have.

LITTLE FELLOW IN THE POST

As a result of the labors of your Legion, and when I say that, I mean the little fellow in the post back home who, by his membership, made it possible for your spokesman to try to do a job and if there is any credit due anyone, it is the average man and woman in the Legion. We finally prevailed upon Congress to embark upon a hospital-building program. They provided by law 100,000 beds for men and women who had served, 41% million men and women, and this was just in World War I and that program was started, and upon the start of it, we developed the finest hospital system in the Then Congress amended the law and world. said that if a veteran was a non-serviceconnected disability case, and he was not able to provide hospitalization for himself, he should be admitted when a bed was available. That answered the problem at that particular time.

Then World War II came along and millions of young men and women were called back into the service. We prevailed upon the then Chief Executive of the United States to try to provide adequate hospitalization for them when they returned. Three trips were made to the Executive Mansion to try to have the Veterans' Administration give it an A-1 rating, the same as the Army and the Navy, to provide all of the essentials for building and operating hospitals. We could see the dismal picture and the plan was rejected and no hospital beds were built, and then we went to General Hines and asked him to make a survey and determine how many beds would be needed for the disabled from World War II. That survey was made and the estimate was 300,000 additional beds, which would have made an allocation of 400,000 beds for 20 million men and women at that time who had been in the service of their country.

KICKED OUT OF HOSPITALS

Then General Hines was kicked out and the famous General Bradley was brought in. General Bradley was a trained soldier and a good soldier. He had spent his entire life training his men to go into the service and leading them in battle. He knew nothing, absolutely nothing of the problem of the turned to civilian life, he knew nothing about their problems and he was appointed director of the Veterans' Administration. Then he made an estimate and they cut that quota from 400,000 to 160,000 beds for 20 million men and women and another estimate was made and it was cut down to 147,000, and then lo and behold, it was cut to 131,000. Can you imagine that, 131,000 beds for 211/2 million men and women who by now had been in the service of their country for some Today 115,000 of those beds have been completed and it is almost impossible to get a man into a hospital unless he is a service-connected disability case.

The old men for whom these hospitals were originally planned, men without means of being able to care for themselves, have been kicked out of their hospitals and they are on the mercy of the local community.

Now, the program has been cut to 131,000 and I am not proud of this administration of ours. I don't think there has been a better Republican ever lived than I have been. I panned the Democrats and I reserve the right to say what I think about my own party and they cut it to 131,000 beds, and

115,000 have been completed, but even 131,000, Comrade Commander, are not in operation. They have chiseled and they have whittled and they have cut down hospital benefits and cut down compensation so that they have failed to provide adequate personnel to operate the hospitals, and if you don't believe it, go to Hines and look at my report that is in your jacket and you will find that they have closed 800 beds at Hines. Why? Because they claim they have not the money with which to operate those beds and yet within the last 10 days, Stassen, the Ambassador of goodwill to the world, who is doling out your billions by the scoop shovel full, allocated \$900,000 to buy paper to wrap oranges and other fruit to Pakistan, to ship back to this country. Yet they have not money enough to operate the hospitals to care for your disabled comrade.

CHALLENGE TO LEGIONNAIRES

The time has come when you young men of the Legion have got to wake up and realize your obligations. God was good to you. He allowed you to come back home to the bosom of your family and thousands and thousands of your comrades did not come home; some of them came home sick in body and sick in mind, expecting to be cared for by a grateful Government, and your Government has billions for everything on earth, but for the men and women who served in the emergency that made it possible for them to collect the taxes to pour down the ratholes of some foreign country, they have not the funds. It is time to talk plain.

You young men have got to assume the obligations of the Legion. The Legion was founded on service, service to God and our disabled comrades, and to the community, State, and Nation. Have we kept faith? Are we keeping faith? We have tried, and yet we have some of our own members on the floor of Congress and in the Senate cutting our throats every turn of the road, and until you wake up and go up and down the streets and alleys of this country and prevail upon the young men and women to come into the Legion and then you go to the socalled statesmen of yours and say to them that even if the Chief Executive, the Bureau of the Budget, the Director of the Veterans' Administration fail to care for these men and women, will you take it on the floor of the House and Senate and demand that they be cared for in the American way? Party politics? To hell with them when the welfare of one of our disabled comrades is at stake.

NO PROVISION FOR WIDOWS

There is another thing that is going to be close to the heart of you young men, too. Supposing that you have a wife and 3 or 4 little fellows and you die? What about them, if you die without service-connected disability? They are going to be left to the tender mercies of the charitable organizations in your community because no provision has ever been made for the widows and children of a deceased veteran unless he dies of a service-connected disability.

Since 1946, we have been trying to get Congress to amend the law and provide for the widows and children of veterans of World War II under the same plan that they care for the widows and children of World War I.

Now, that is your individual obligation. It may come home to your family; your home may be broken up; your children scattered to some charitable organization and if that doesn't heat your blood, then you are not right, and you are not Americans, and you are not even loyal to the youngsters that you brought into this world.

There is one thing more, God forbid, and it is only a question of time, if the groups that are at work today put all pensions and all compensations into social security. They say we are all of one class; that we are no better than anyone else and I deny that

statement. Any man or woman who has offered his or her life to his country in an emergency is in a class by himself. He is the selected class, the one that has the right to demand from his Government the opportunity for himself and his family that they might have had, had he not served.

MENTALLY SICK VETERANS

When you go to bed at night, thank God that you are not one of the 30,000 mentally sick veterans that are being denied hospitalization by your Government today. All they say is disability is not service-connected in many instances, but let me say this to you. The doctor or the psychiatrist never lived and never will live who can tell when that mind began to slip. It may have been something that happened years ago that left an impression upon that mind and as the years rolled around and the diseases of time and infirmity of age broke that down, who is going to deny to him that the original cause of that disability was not something that happened while he was in the service? they are denying to them the care that they are entitled to.

I have painted a pretty black picture to you, and I am sorry that I cannot bring you a glowing report, but this may be the swan song of an old man who has given his best to try to do a job that is closer to his heart than anything except God. Take it home with you, live through it, and when you get on your knees tonight, thank God for

the condition that you are in.

Address of Francis P. Kilcoyne, Professor of English and Dean of Administration, Brooklyn College

EXTENSION OF REMARKS

HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address before Lawrence Council No. 67, Knights of Columbus, on March 27, 1955, in Lawrence, Mass., by Francis P. Kilcoyne, Ph. D.

Dr. Kilcoyne is a former deputy grand knight of Lawrence council. He is a professor of English and dean of administration of Brooklyn College, Brooklyn,

N. Y.

The speaker is a graduate of St. Patrick's Grammar School, Lawrence High School, and Boston College. He was awarded his doctor of philosophy degree at New York University.

He taught at Fordham University, St. Joseph's College for Women in Brooklyn, and also taught summer sessions at St. Michael's College, Winooski, Vt.

Dr. Kilcoyne spoke at the annual communion breakfast following the 9:15 o'clock Mass in Sacred Heart Church, Lawrence, Mass.

I insert this address in the RECORD fully confident that it is worthy of the consideration of the Congress:

COMPETITIVE COEXISTENCE

I deliberately title these remarks "Competitive Coexistence" because I subscribe to the conviction, along with many others, that any other description of existence in a world, one-third of whose people is under the tyranny of Soviet domination, is the result

of shoddy thinking, or, worse still, wishful thinking.

In this season of Lent it ought not to be too difficult to complete a rapid review and recognize the fact that the Catholic Church has known no other existence than that which can be labeled "competitive." For has not the church been competing against the devil, his pomps and his works from the time of her founding? promised that the gates of hell would not prevail against her but He did not promise that His church on earth would be anything other than militant. Does not the gospel assigned for today, Passion Sunday, tell of the reaction of unbelievers when Christ answered their query, "Whom dost thou make thyself?" Shall we not read in next Sunday's passion narrative that the chief priests and the whole council sought to present false testimony against Christ before Caiaphas?

And what fate awaited all the Apostles, save John, and countless disciples as well as thousands of the early Christians, especially in the persecutions by the pagan emperors of Rome, a persecution which has its counterpart in many of the captive countries of our own day? What was Christ selling in the market place, in the temple, by the lakeside, in the villages? What was His message that has been transmitted across the ages? it and is it not the simple yet difficult message of the brotherhood of man because of the fatherhood of God? Has not an extreme effort been made to obliterate this message from among one-third of the world's peoples, an effort that would replace the message of love and charity by a doctrine of hate and revenge?

Why then should we be terribly surprised at the tension, at the cold peace in which we live for is it not another chapter, a chapter impregnated with fateful possibilities in the struggle between the positive traditions of the Judeo-Christian dispensation and the free nations of the world, on the one, hand, and the bloc controlled by the pagan disciples and administrators of the atheistic

doctrines of Marx?

We hear and read much about peaceful coexistence governing the relations between the free and enslaved portions of the world. including continental China. Let us not be misled by that phrase from out of the armament of Marxist psychological warfare. It is a phrase that has opposite meanings on opposite sides of the Iron and Bamboo Curtains which, by the design of the Soviet masters, separate the enslaved from the free peoples of the world. The very practice of shutting off millions of the peoples of the earth is a clear indication that the notions of peace and order and freedom and security and basic law carry quite contradictory meanings among the free and among the masters of the enslaved who maintain control only by psychological murder, military might, barbed wire, espionage, and the prisoning of hostages.

Is it not true that the phrases "peaceful coexistence" and "mutual cooperation" have, in some quarters, almost the hypnotic power of some barbaric ritual incantations? The few changes in window dressing provided by Malenkov were a part of the psychological attack on the West. It has been well said that peaceful coexistence is not only a propaganda phrase and an almost sure-fire tactical device, but its hand is the hand of Esau, imparting a fraternal, cooperative handclasp, while the voice is the voice of Jacob, carrying in its tones the guile of reference to the tightly controlled Communist Party.

If we recall the last Christmas message of His Holiness, the Pope, we may remember that it was marked by no great enthusiasm in support of the state of international relations as we then knew them and as they have continued. The Pope bluntly stated

that the number of men is increasing "who rebell against the idea of having to be dissatisfied with mere coexistence, or renouncing relationships of a more vital nature with other groups, and against being forced to live all the days of their lives in an atmosphere of enervating fear."

Here, then, is the chief spokesman for Christendom warning that the cold peace we have known for many months is not a true peace and cannot satisfy the aspirations of men. Why cannot it satisfy? The answer is found, in part at any rate, in the basic concept of peace which has been said to be "the tranquil security of an order of justice and charity which procures for each state, together with the full enjoyment of its rights, the most efficacious means of fulfilling its social mission and of contributing its share to the common good of international society."

While it is certainly true that Christians and most other religious-minded men have completely peaceful intentions and the will to sustain them, they have also the duty of thinking in quite realistic terms. To succumb to wishful thinking would be to serve not the cause of true peace but of pagan totalitarianism. Peace is never the result, solely, of a one-sided effort but it is, basically, the relationship between members of an international community which, observing the rules of justice, coperate for the collective welfare in mutual understanding.

Deep changes have come into the domestic and international relations of nations since the days of the Greek wars, the Hundred Years War, the French and American revolutions; yes, since the First World War. We know that each nation today has a tremendous potential for devastating war. Consequently, each nation cannot hope to stand alone. The tranquil security of order can be had only on a collective basis.

Someone has suggested that we ought to think of what might happen if the present cold peace were to continue for another 10 or 20 years. What would be the price paid not only by believing, practicing Christians, by Jews, but by other organized bodies who put spiritual values above the material? The Kremlin, first off, would permit no outside inteference with the ironclad control it exercises over captive nations. Were existing conditions in those nations to be thus accepted, what would happen to the older generations of religious peoples behind the curtains? What would happen to their children, reared in an atmosphere of fear and without what we view as normal religious conditions? Would not the recognition of the status quo be more powerful support of the tyranny that exists than mere diplomatic politeness called recognition? We would be saying that the inalienable rights of which we speak in our declaration were meant for us and for us alone. Would not the re-ligious peoples of the free nations, being confined to their own areas, do little more than maintain their own status quo in the midst of secularism. Would we not be standing alone in an alien world?

Look into history and note what has already happened to a once-predominant Catholic Christianity as a result of Moslem expansion, the Reformation, so-called, the loss of segments of the working class because of the then unchecked excesses of extreme capitalism. A bigger bite may yet have been taken by the tyranny of Soviet totalitarianism. What remains if the so-called cold peace continues?

To point in reply to the protestations of the masters of the Kremlin that they desire peace is to forget that the peace they seek is a debilitating one for the free nations. For a quarter century they have pleaded for a peace while altering in no essential their announced intention to control the world. What concessions they make are not basic. They merely change the window displays.

At no time has anyone in the changing cast of Kremlin personalities rejected the testament of Marx. During the quarter century, While the hypocritical refrain sang of peace, the Kremlin, with the aid of spies and domestic traitors in various parts of the world, has extended its tyrannical sway over more of the earth's peoples now living amidst violence and much despair.

True, in the 37 or 38 years of Soviet history there has been no all-out war against the West. Why risk it when progress has been relatively without cost to the Kremlin, although the price of deprivations paid by the people of Russia cannot be totaled. Nor is there any guarantee that an all-out attack on the West may not come without warning and at any moment. No Kremlin leader has rejected Lenin's November 26, 1920, statement: "As soon as we are strong enough to defeat capitalism as a whole we shall immediately take it by the scruff of the neck." Since that statement was made, piece-bypiece attacks have brought results. Stalin admitted in 1930 that he and his colleagues Were not unalterably opposed to all wars, such wars as might bleed likely opponents in the West, for example.

Let us, for a moment, recall that not many People paid much if any attention to the speeches and writings of Hitler whom they described in various unflattering phrases. But when he gained control of the Government of Germany and his booted Nazis started strutting across the face of the land and persecution became the rule, then people began to recall that he was putting into effect the very plans they had labelled as rantings.

So it is with the peace slogans we hear today, whether they come from Moscow or Peiping or Warsaw or Prague. Those slogans must be understood in the light of such statements as Stalin's that "the peace policy of the proletarian state certainly does not imply that the Soviet state has become reconciled to capitalism. * * It is merely another, and under present conditions, more advantageous form of fighting capitalism."

When Kremlin leaders profess their belief in peaceful coexistence they probably think and speak as did Kaganovich who held that an indefinite (yet limited) period of peace "proceeds organically from the very nature of our state and from the Leninist-Stalinist teaching about the coexistence of the two sytems."

There is not a phrase or sentence that can be cited to show that the Kremlin leaders, ho matter how or when they change, ever rehounce the basic purpose of world conquest. Let's not fool ourselves into believing that as long as the need for armaments and weapons of a variety of kinds still exists (the Soviet Union and satellites devote 50 percent plus of their incomes to such) the men in the Kremlin will actually, in fact and in demonstrated behavior, accept either disarmament or complete inspection of arms and weapons and factors producing them. Any conference on this topic will be joined by them Furely for propaganda purposes. To agree to inspection by an outside agency, with lower, would be to alter basic concepts in Soviet thinking and controls. This alteration will not come about.

Kremlin eyes seek weaknesses in all parts of the world—their own and ours. They watch because they have never rejected Lenin's blunt statement that "as long as capitalism and socialism exist we cannot live in peace; in the end, one or the other will triumph—a funeral dirge will be sung over the Soviet Republic or over world cap-

italism."

The peaceful declarations of Kremlin mouthpieces, when they are uttered, have in view only one end: To lull the opposition into paralysis while the Soviet build-up and espionage continue, while adults who should know better by now echo the false peace ideas, while the world on our side of the curtains forgets the single undeviating purpose of atheistic communism-world control.

Is there, then, any prospect for a truly peaceful coexistence, marked by justice and charity. What seems to be possible, under present conditions, is brutally competitive coexistence, not only for material natural resources, and the slave labors of countless men and women, but for the control of men's minds and wills as well.

No truly international community can be constructed without an order of justice and charity, without respect for the highest values of the community and of the individual human being, without a supreme effort to realize the common, international good. None of these goals do the Communists seek as we understand them.

Recognizing the possibility of a world Com-munist pattern which can come into being more by failures in the West than accomplishments among the Soviet nations, there no better international community possible than the existing United Nations? There is such a possibility in the way of Christian solidarity in the basically Christian West. Let me quote, finally, the words of a distinguished representative of Lebanon to the United Nations, Dr. Charles Malik, who has well said that: "Communism is a doctrine of despair. Its only and complete answer, therefore, lies in the existence of hope. If the western world can show a way to eradicate the shame and scandal of poverty, of exploitation, of oppression, of greed, without resort to social revolution and class struggle and dictatorship; if it can place these material values in their proper subordinate place within the mighty context of a mighty spiritual movement which will be revolutionary without being subversive, and which will draw its substance from the infinite riches of the western positive tradition, then the necessity for communism will vanish and the spectre which now walks the earth will be laid forever."

To live and work with this consistence, for make brutally competitive coexistence, for marth the price. The price of freedom from the yoke is clearly started by Dr. Malik. Do we wish to pay it?

ly adequate to support the population since it is estimated that there are only 3,500 acres of tillable land because of the shortage of water.

When the reservation was established for the Papagos, the mineral rights were withheld from them. The minerals can be prospected for and developed by anyone desiring to do so.

In the quest for minerals, there is no such thing as private property on the reservation. This is the only reservation in the United States where the Indians do not have the mineral rights to the land.

Prospectors from all over the United States and the Territories are pouring into the Southwest in search of uranium. mines are being developed within 70 miles of the reservation, and scarcely a day goes by that a claim is not filed for a piece of the Papago Reservation.

Are these people to be evicted forcefully from their homeland? Does not humanitarianism demand that the Papagos be protected?

We, as taxpayers, often decry the amount of money that is being spent by our Federal Government to care for the Indians.

The Papago Indians are an impoverished group and must be wards of the State unless they have a means of self-support. At present the average life expectancy at birth is 17 years. There are today 258 infant deaths out of each 1000 live births. This is the highest infant mortality rate in the United States.

If the mineral rights are returned to them, they will use the money received to improve themselves and thus save the taxpayer money. These people do not want to wards of the State nor do they feel the Government owes them a living.

The Goldwater-Udall bill has recently been introduced into Congress for the purpose of returning the mineral rights on the reser-

vation to the Papagos.

I would like to urge each individual to write to our Representatives and Senators to have this bill reported out of committee immediately and, further, to vote in favor

ROBERT L. DOWNING.

MIDLAND.

Mineral Rights for Papago Indians

EXTENSION OF REMARKS

HON, CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following letter to the editor which appeared in a recent edition of the Detroit Free Press and again calls our attention to the plight of American Indians within this country:

AS OTHERS SEE IT-PLEADS FOR PAPAGO INDIANS

During the past few months my family and I have had an opportunity to visit many Indian groups of the Southwest.

The economic standards of none of these cople are high, but the plight of the Papago Indians of Arizona I feel is the worst.

In 1917, our Federal Government saw fit to establish a reservation for them of some 2.5 million acres. At first this might seem a lot of land for 7,500 people, but upon examination it is scarcely enough.

The rainfall average is 10 inches annually

in the east and only 5 inches in the western part of the reservation. Agriculture is scarce-

Federal Aid to States To Assist in Construction of Schools

EXTENSION OF REMARKS OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks I include the following transcript of excerpts of proceedings of the Committee on Education and Labor March 16, 1955, containing my statement in support of Federal aid for school building construction:

Mr. PERKINS. The committee will come to order. It looks as though several members of the committee are absent this morning, but we will commence the hearings anyway.

The Secretary of Health, Education, and Welfare was to appear this morning, but due to her illness she will not appear. She will appear at a later date.

Our first witness is the distinguished gentleman from Arkansas, who was present all day yesterday, but did not get to testify, the Honorable Brooks Hays. We will hear from him at this time.

STATEMENT OF HON, RECOKS HAYS, A REPRE-SENTATIVE IN CONGRESS FROM THE STATE OF ARKANSAS

Mr. Hays of Arkansas. May I have permission, Mr. Chairman, to include a synopsis of the bill that I am introducing for your consideration, H. R. 5112?
Mr. PERKINS, Without objection, it is so

ordered.

(The document referred to follows:)

"Analysis of the chief provisions of the school-construction bill 5112, introduced by Representative Brooks Hays, of Arkansas

"1. The purpose of the bill is to assist the States and Territories in the construction of public elementary and secondary schools.

"2. The amount to be authorized per annum shall be \$250 million.

The funds are apportioned through an objective formula based on two factors, (a) school-age population, and (b) each State's average per capita income payments.

"4. The period of aid is to cover 5 fiscal

years, starting July 1, 1955.
"5. Use of funds is limited to the construction of public elementary and secondary school facilities. The term "school facilities" is defined to mean classrooms and related facilities, and initial equipment, machinery, and utilities necessary or appropriate for school purposes. It does not include (a) interests in land, (b) off-site improvements, (c) althletic stadiums, or (d) atructures or facilities intended primarily for the purpose of athletic exhibitions, contests, or games or other events for which admission is to be charged to the general public or structures to be used exclusively as singlepurpose auditoriums or gymnasiums.

"6. On the Federal level the program will be administered by the United States Office of Education, and in the States by the regularly established State educational

authorities.

"7. States wishing to share the benefits of the act submit State plans to the United States Commissioner of Education. The location and approval of projects are left to the States as well as the actual supervision of construction. The States are required to audit receipts and expenditures and to make such reasonable reports to the United States Commissioner as are necessary to assure that expenditures have been made in accord with the purpose of the legislation.

"8. Funds will be paid by the United States Treasurer, upon certification by the United States Commissioner, to the State treasurer who will make transfers to local boards of education upon requisition of the State edu-

cational authority.

"9. The matching of funds within a State, by local school districts, is left for State determination. The Federal share of a State's authorized school construction program may not exceed 40 percent in the State having the highest per capita income. In the State having the lowest per capita in-come, the Federal share may be 60 percent.

'10. Any State which finds itself aggrieved over the administration of the act may bring action in the appropriate United States

"11. Federal interference in the schools is prohibited by the following words of section 10 of the bill:

"'SEC. 10. In the administration of this act, no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the personnel, curriculum, or program of instruction of any school or school system of any school agency.'

"12. Under an appropriation of \$250 million the allocation under this bill will range from approximately \$6 per pupil in New York to \$9 per pupil in Mississippi; an average of about \$7.50 per child."

Mr. Hays. Mr. Chairman, No pending legislation before any of the committees of the Congress is as important or more important certainly than the bill which this committee is considering.

I feel that the time has come for the Federal Government to clarify its policy with reference to Federal aid for education.

It is not accurate to say that we have no policy, because actually over the years we have been evolving a policy with reference to the Federal Government's relation to its public schools.

When I speak of clarification, I mean clarification by recognizing some responsibilities for secondary and elementary education.

Of course, it is known that we participated in higher education as early as 1862 and even earlier, but that was the most dramatic and most notable participation by the Federal Government, because in the land-grant college legislation the Government's concern for education was recognized in a substantial way.

And even earlier, our leaders knew that there was a national responsibility for the schools of this Nation

I was struck, for example, by the words in George Washington's Farewell Address, a message that has been regarded as emphasizing other policies. You will recall that he said, "promote those institutions that make for diffusion of knowledge."

James Madison in the same period, forecasting the future of this experiment in free government, said that without popular education it will be either a tragedy or a farce.

So we are not talking about something that is new. We are simply recognizing the changes that have come about in the patterns of our economic, political, and social life since the Constitution was written.

Foreseeing that the foundations upon which popular government rests should be strong and firm, there was this responsibility for education which our forefathers recognized. But the changes I refer to create new demands.

I have the honor of being a member of the Commission on Intergovernmental Relations, generally referred to as the Kestnbaum Com-I had hoped that our work would mission. be completed before I appeared before this committee, that out of its studies I would have some facts that would be helpful to the committee, but as the committee knows, its work has not been completed and I am not free to discuss the tentative conclusions that have been recommended by the members of that important Presidential Commission studying the whole range of interrelationships of Government-Federal, State, and

Mr. PERKINS. May I interrupt you to state that I just wish all the membership of the committee were present to hear this presentation, because so many of the members on this committee want to speak of Federal ald to school construction as being a new proposition.

I am hopeful that before you get through other members will come in to hear your views this morning, Mr. HAYS.

Go shead.

Mr. Hays. Thank you, Mr. Chairman. I certainly do not speak as an authority in this field. Of course, I have had vast experience as an educator. I was the 1916 summer-session teacher at the Sunny Point School, District No. 7, Illinois Township, Pope County, Ark., but since 1916 I have had no professional experience with the school problems.

Mr. Perkins. I believe also you may have

little influence on the gentleman from Georgia today, Mr. Hays,

Mr. LANDRUM. Well, the gentleman has also had influence on me if we happened to be in the same line of thought. I respect his position. I love him as a Christian gentleman. He has influenced me greatly.

Mr. Hays. Mr. Chairman, I am not going to assume that the gentleman's thinking conflicts with mine. I am only going to try to fortify him in the view that the people of rural Georgia are entitled to the help that a mighty Nation can give them, and without the help that this Government can give I know that the future of some of the schools of the South is bleak. Not that we propose to relieve the States of their responsibility or to ease the burdens or the pressures on them, but merely to supplement what the States are doing under proper criteria, the Federal Government to establish and define those criteria as they lay out a plan for school-building construction.

Mr. Gwinn. Mr. Chairman, I hope that the gentleman from Arkansas, before he quits the stand, will give us another one of those good stories from Pope County that have made him famous in the Congress.

I hope, too, that the gentleman from Arkansas will not skirt around that Kestnbaum report that is not yet out. The little leak that we got indicated that that report was going to be against, or, in fact, the professional report that is now on file was against the point of view that you have, of the functions of the Federal Government; namely, that the function of the local community was to take care of education in the States and in the school districts.

You might tell us whether or not your suspicion is that that is the nature of the

Mr. HAYS. My beloved friend from New York is very effective and I find myself struggling here with the decision that he poses, that is, whether to praise this Commission as I would like to do sincerely, because I think its overall performance is good, and then be extremely embarrassed by finding what he says is true, or to say that the Commission, great as it is, can make mistakes and feel easier about having differed with them officially at the time I want to differ with them:

So I leave that unresolved, and I leave your question unanswered, because it would not be proper for me to say anything about its tentative conclusions on the question of aid for schools.

But I have plead with that Commissionthis certainly would not be improper for me to say, and you would suspect it if I did not admit it-I have plead with them to recognize the realities of the situation and whether or not I have influenced a lot of them with the help I have had from others with like points of view, remains a question.

I think the proper thing to do is to wait until its conclusions are reached and made

I am grateful to my friend for his comment and since he has referred to Pope County I recall one story which fits the comment of the chairman.

My father was a census enumerator back in 1900 up in the Ozark country. He said to one old man standing in front of his cabin: 'I am a census enumerator, sir, I need some information. What is your name? "Hearn, Randall J. Hearn."

"How do you spell it?"
He said, "spell it yourself, stranger, I am & nonscholar."

Mr. KEARNS. Mr. Chairman, I think this morning instead of having anything about school construction, you and Brooks should just start in telling stories.

Mr. GWINN. It would be a great relief to

Chairman Barden. I have seen times in this committee room when there was less

I want to apologize for being late. Mrs. Hobby's assistant called yesterday afternoon. I told her I would check with the office today and see what arrangements we could

you have Mr. Hays. Mr. Chairman, missed very much. I would like to repeat one Point I made, however, because it basis for some conclusions. I know that it has been often stated to the committee that this is not a new idea and I think that there is precedent in our national life for a recognition, a monetary recognition of the responsibility that the Federal Government has for its public-school system.

That is a vital point that cannot be evaded. It should be, I think, the basis of

all of our thinking in this field.

The point being that as we defend Federal ald for education we defend it not as an innovation, but as a modification of an old policy, a recognition of altered economic and social patterns. That is the principal point that I tried to make at the beginning.

Yet I recognize that at this stage, since our aid has been heretofore limited largely to higher education and specialized fields, such as vocational aid and the school lunch program, we should approach it with tentareservations about the final form that it should take. The best programs evolve, they are not written with complete wisdom at the beginning.

For that reason, if I had the power just to Order this legislation into existence, I would inaugurate it on a conservative basis. would not provide \$500 million which I think may be justified in the light of our national income. I would make it \$250 million. I would not make it indefinite. I would limit it to 5 years. I would take another look at it in a 5-year period after a program of that modest proportion had been tested and tried.

We should inaugurate it on a modest basis, considering the severity of our Federal budget problem and the fact that we will profit by experience as we go into a program that does have terrific implications in terms of the relationship of the States to the Federal Government, which is now under my concept a partner in the business of educating the children of this country.

Now, when I speak of altered patterns of social and economic life, I have in mind comparing it with the period in which George Washington spoke, of promoting the institutions which make for the diffusion

of knowledge.

I have in mind the simple life which found almost each State enjoying self-contain-ment, self-sufficiency, but now with the com-merical life of the Nation regarding State lines as of no consequence whatever, you have two factors that enter into the equation, one, the mobility of people, and I come from a State which has felt its impact.

Second, the mobility of wealth, its tendency to throw out of States that rest their economy basically on agriculture to States

that have a different structure.

That does not carry frightening implica-tions at all, though if we succumb to an equalitarian philosophy of an extreme type, We might find them dangerous.

I do not want to be guilty of any false reasoning on that score. I would not have the Pederal Government undertake by some magic formula to equalize the incomes of

people or of schools.

But I would take into account in devising a national policy the wide extremes in per capita incomes and the fact, strangely enough, that where the incomes are lowest the children are most plentiful. That is a fact that I am sure this committee is aware The stork and the wolf always did pal around together.

For that reason, the poorer States should be helped by the States that are in a position to supply some of the wealth to carry the educational burdens of this country.

I spoke of the mobility of people. They are moving out of areas like mine. I do not want to press the point that I am speaking. ing for a special situation this morning,

Arkansas, which, of course, has prior claim upon me. I would not apologize for speaking of its peculiar and urgent problems, but I hope that I can rest my case upon the national situation.

But the picture in Arkansas belongs in this composite and people have spent money to rear children that are giving their adult and taxpaying years to other States. Why should not the Federal Government tax the wealth of California where our people live their taxpaying period to educate the children of the State in the succeeding generation that has supplied some of the manpower of the State of California?

Yet under the formula that I would suggest to this commission which has only a modest equalization factor, I would provide California money to deal with the problem that Arkansas, by sending children there, has helped create.

As an illustration of the fact that it costs the poorer States something, my friend Howard Dolson quotes these figures:

In a 10-year period it cost the South \$2 billion to rear and educate the children that went into other States outside the South in the 10-year period between 1930 and 1940.

I speak guardedly on this point because I do not believe that you should overdo the

equalization factor.

I only ask the committee take it into count. The synopsis that I will give you of the bill which I believe will be acceptable on that point would range from 6 to 9 dollars per child. It would be 46, a one to one and a half range.

I would suggest that the committee give careful consideration to the equalization factor in order to take care of the States that have a higher proportion of children and at the same time suffer this disparity of income.

I am resting this not only upon the move-ment of people out of States, but also the draining off of some of the wealth of those States. This is said without envy of the richer States, or without blindness to the problems that they have, because I have been in New England and I know that the agricultural areas of New England suffer from the same disparities within the region, and that wealth tends to get out of the rural areas into the cities.

But even within urban areas there are disparities that can be corrected, I think, only by some recognition by the Federal Government so that we supplement the States

that are harassed by problems of revenues. Now, I have tried in other words, Mr. Chairman, to get a balanced view of this problem of getting the States and the Federal Government together on a partnership

When my friend, Mr. Gwinn, asked me, in my appearance for a bill that had general aid in mind as its purpose years ago, about that, why we should give the wealthier States anything at all, I replied that even as a symbol it would have value because to withhold from the richer States some help for its problem would imply that we think there are no problems in the States that have large incomes.

It is not true. In the State of my friend, Mr. KEARNS, I have seen evidence in the interior of Pennsylvania of the problem and in spite of the exertions of Pennsylvania, which are impressive, there is work to be done.

I would trust the State of Pennsylvania to put that money where it is intended by the Federal Government to be spent.

Once we imply in any kind of legislative provision that we distrust the States, that we must write out the formula with meticulousness, when we destroy that reciprocity that should exist between the States, then we would, I think, meet frustration.

We have to proceed on the basis of maximum faith in the States to do their job

and to determine the favored and the unfavored areas within their own borders.

One of the best speeches I ever heard made for Federal aid to education was by a Pennsylvanian. He went back to the fact I spoke of a moment ago, the movement of people from Arkansas into Pennsylvania. He said, "It would cost my State under the general aid for education about \$10 million. We maybe would put in \$20 million, but we would get back \$10 million. But it would be worth \$10 million to the State of Pennsylvania to have the Arkansans come better equipped to work on the assembly line, better trained as vocational school products.

As a taxpayer, Pennsylvania knows that the Federal Government spent through the Defense Department millions of dollars to give simple elementary instruction to enlisted men that should have been done in the schools of the United States.

Now, that is to impress the committee with my conviction that this is a national responsibility. Can we say that we are going to leave it to the States to struggle alone

with the problem?

At the same time I hope that the committee will see to it that a criterion is written into the law. The principle of faith in the States does not call upon you to do otherwise than to say you shall not participate unless you meet your responsibilities, too.

Mr. Gwinn. Mr. Chairman, has the gentleman from Arkansas a formula in his mind that would work this thing out? That has been one of our difficulties. If you are going to spread this \$250 million all around among the 48 States, Arkansas is going to have no relief comparable to its needs at all.

Mr. HAYS. Yes, we would get \$4,218,000. California would get \$14 million.

Mr. KEARNS. Under which formula? Mr. Hays. Under the formula 1 to 11/4, 40 to 60. Nine dollars per child approximately for the poorest State, \$6 per child for the richest State.

Mr. FRELINGHUYSEN. Which bill is that? Mr. Hays. I am going to put my bill in tomorrow. I hope it will help the committee. I have no pride of authorship. I only hope you might find in what I am saying. something that appeals to you and can find in the material that I am going to put in the record, some figures and facts that will be a help.

Mr. McConnell, I am a little bit puzzled as to your philosophy. I understood you to say you believe in giving to the rich as well as to the poor States, but you make a distinction when you say give to the poorer State more than to the richer State.

Mr. HAYS. Per child.

Mr. McConnell. Why do you follow such a procedure? Why not start with the procedure of what you are going to give to the poorer State and not give anything to the richer States at all? They just send it back down to get it back again with a big brokerage fee taken out of it.

Mr. HAYS. If you left the richer States out you would deny the basis of any legislation at all; namely, that it is a matter of national interest; this would deny that the Federal Government is concerned with the school problems of New York and Pennsylvania.

Mr. McConnell. I do not see the logic to that. I do not know why you say that. does the Federal Government have to give anything to Pennsylvania if we have our own money which we send down and we get it back again with quite a bit taken out

Why not keep what we start with and give to the poorer States then? I would not have made this statement if you said to give to all States, but you said you gave more to the poorer States than you do to the richer. Therefore, you are making a distinction in your thinking.

Mr. Hays. I am recognizing the disparity of wealth in the distribution of Federal funds just as in the State of Arkansas in the distribution of our revenues to the districts, we take into account the disparity of wealth between districts.

I think exactly the same principle should

Mr. McConnell. I accept that philosophy then. Therefore, why give anything to the rich States and give a certain amount to the poor States, if you once accept that philos-ophy that the poorer States should get more than the richer. Then you are in a position that it is just a matter of how you work it

Mr. Hays. I do not want to pursue that. still believe that there is some value in what I call the symbol of national interest. think it would be very unfortunate if in adopting the equalization idea we did not say as a matter of national concern that what takes place in the richer State is important.

Mr. FRELINGHUYSEN. Will the gentleman

yield?

Mr. McConnell. Yes. Mr. Frelinghuysen. You say there is a na-You sav tional responsibility in the field. also that there must be, as I recall it, a minimum exertion or responsibility on the part of the State before they can qualify for Federal funds.

But as Mr. Gwinn has pointed out, there is where our trouble lies. To what extent do you think it is necessary that, for instance, a State or a school district show that there is a need and show that they are incapable of meeting that need themselves? Do you think it is essential that they go through a qualifications test such as that, a means test of some kind?

Mr. Hays. I think it would be impossible for the Federal Government to determine that on a district basis. Now, I realize that puts me against one of the administration proposals and I have such respect for the position of the administration. I mean in its overall purposes and approach, that I hope the gentleman will not attach too much importance to my differences with the administration on that point.

But if I am right as to the principle of trusting the States to deal with the problem of low income and district impoverishment, then you must avoid bypassing the States in our eagerness to get to the local difficulty.

Mr. FRELINGHUYSEN. I hope the gentleman does not think that the administration ap-

proach bypasses the States.

Mr. HAYS. It provides, does it not, that the Federal Government shall determine by formula which districts within the States might qualify? . It goes to the district sit-uation even though they do not bypass the State. Even though they take into account the State's judgment as to a district's impoverishment, the net result would be that you would encourage the tendency of the States to put off its own equalization plans, and it would bolster unwise districting.

What would you do to a State like North Carolina that has virtually a State district.

Mr. FRELINGHUYSEN. I hate to disagree. I think the basic administration approach is just the opposite, that is that it is an attempt to encourage the State to solve its own problems, the State and local community combined, definitely not any at-tempt to bypass the States as one of those agencies responsible for the solution of its

Mr. HAYS. As I say, I have great respect for much of the content of the administration's proposal also. It would certainly be better than making no beginning at all, but I was under the impression that the administration proposal simply took into account a condition of insolvency by districts within the States to be determined by the State and then the Federal Government would come to the rescue of that particular district instead of leaving it to the State with some aid in a measure like this to equalize, and, of course, when I say equalize, I am not speaking in terms of the absolute.

Now, if I am wrong about that, then, of

course, you can disregard that comment.

What we really want to do is to help the States. The State is the key to this problem.

Mr. FreLinghuysen. But to what extent is it necessary to set up the means test in the allocation of Federal funds? That is my original question.

Mr. Hays. All right, let us get to that. I think you have a good example in Mr.

Taft's approach.

As I recall it, what I have in my bill is the same requirement as in Mr. Taft's bill. It requires that 21/2 percent of the total income of the State be devoted to school purposes. It will be impossible to get an altogether perfect criterion. You are going to have difficulty with that.

But I do suggest to the committee that

they consider Mr. Taft's formula.

As I recall it, it was based upon an expenditure for education of 21/2 percent of the State's income, not the State government's income, but 21/2 percent of the income of the

Now, it seems to me that you need some criterion to determine the exertions of the State. I would not object, as it is applied to my own State, which on the whole does a good job. You can hardly do it percentagewise in an altogether acceptable way for this reason: A State with a low per capita income-and my State has only 40 percent of the per capita income of New York, for example, in other words, for every dollar the Arkansan has, the New Yorker has two and a half dollars.

If we gave as much percentagewise we still have so much less per child.

Mr. GWINN. I must rise to the defense

Mr. Hays. It is not a criticism. I would praise New York for its industry, for its high income.

Mr. GWINN, I think one of our difficulties lies in the fact that if after a long, agonizing period, we come to a formula, by the time we get to adopt a formula down here, our whole factual basis has changed.

Now, your Commission, the Kestnbaum Commission, found a state of facts that apparently is surprising on this per capita capacity to respond, and one of the reasons that I believe they are going to hold that it is a local matter is because the Federal Government just cannot adjust itself to all the differing 63,000 school districts in these United States.

Here is a factor, for example, that they found. Your Southern States are increasing in their per capita income nearly three times faster than we are in New York State, in the Northern States. For example, the rise in per capita income in constant dollars from 1940 to 1953 in the 12 northern States, is 38 percent.

In the 13 Southern States It was 95 per-That is how this movement of population is benefiting you in Arkansas in terms of a rising per capita income and a rising capacity to meet your own needs.

Therefore, when we try to find a formula in 1955 that suits, by the time 1960 comes around we are clear out of joint.

Mr. Hays. I think what the gentleman says certainly must be given weight by the Commission. It fortifies my point that a 5-year cutoff, or maybe even shorter, would be good, because you may be in danger of building schoolhouses where the children are now, but will not be 5 years from now.

I recognize that and it is an important point, but I have this comment to make to the point that you suggest: That we are increasing disproportionately. Of course, you increase in high proportions, sir, when your income is so low.

When Arkansas went from a per capita income of \$250-and I remember struggling with some economic problems down when that was all we had-up to \$900, we dld pretty well.

Still New York is two and a half times our per capita income. I say that with no implications as to taking from New York and giving it to Arkansas to equalize wealth. want to be understood on that point.

Mr. GWINN. Again referring to the facts in your own commission which I think is doing a tremendous job on this, it shows that disposable income for education in the Northern States is \$1,490 and in the 13 Southern States it is \$1.017.

Mr. Hays. Now, what index are you using? Mr. GWINN. This is the per capita income as Federal taxes of the Northern, Central, the West, and the Southern States. It is a very interesting change that has taken

Mr. HAYS. I apologize for using the money index if it is to be assumed that I think that conditions are measured altogether by money terms.

But I do not see how you can consider the national problem of disparity if you do not pick out certain States to make comparisons.

Mr. Gwinn. We have been thinking of New York as a certain status as we have gone along. We have forgotten what the inroads have been in the last few years.

Mr. Hays. Certainly I realize as I know the gentleman will remember my stating that New York has its problems. Of course, if we gave to everybody, just returned to the States on the basis of population without reference to higher ratio of children, if we just made any kind of distribution, you get a degree of equalization because you are taking from a high income State a larger amount than they would get proportion-ately. So there is an element of equalization in any grant-in-aid program.

Now, this is arguing, perhaps, against one of the points I made, but it is something to keep in mind that a family with one child having the same income as a family with four children will have double the per capita income.

So those things may be deceptive. I realize, where calculations are made without reference to a family situation.

But I still insist, Mr. Gwinn, and we are talking now about dollar income, that there is a great disparity within States and within country.

Now, I would be just as eager to put pressure upon the States that are poor to carry their equivalent share, maybe more. And I think it is possible for Federal aid to have that effect.

I do not think there is the least danger of the Federal Government getting under a burden that Arkansas ought to carry if Arkansas gets only \$4 million in Federal funds for school-building construction when Arkansas in 1953-54 had a capital outlay of \$14 million. a capital outlay in the present year of \$131/2 million, and when the legislature was asked this year by the Governor to find new revenues for \$12 million.

I do not think if you eased Arkansas' burden to that extent that you are in any danger whatever of encouraging a lag on the part of the poorer States.

I cannot see that that is a consequence that you need to fear, but, at the same time, the necessity for getting maximum exertions by the State should cause you to take a conservative approach.

Now, sometimes you hear those who carry heavy tax burdens say, "How can we carry more? Arkansas has every tax you can find." Arkansas has every tax you can find. and we do. We devote a higher percentage to schools than the State of California, if I might use California as an example. We de-

vote more, percentagewise, in spite of our lower per capita income to our schools than the great State of California.

But the taxpayer says, "I am paying all I

can in State taxes."

I thought this was rather interesting, a conversation between two men on their way to the Cotton Bowl game in Dallas to see the Arkansas football team play. And, dentally, I hope none of you will say that I can hardly contend Arkansas is a poor State When we had the best football team in that part of the country. I pause to say that because I can just see a question in the chairman's eye, but we did not get that football team with money. These Arkansas boys running up and down the hills have better muscles than the level-ground boys and that is the reason for it.

On their way to the bowl this conversation took place. One Arkansas taxpayer sald, "I cannot afford to pay any more

taxes"

And the man who believed in more revenues for schools in Arkansas said, "Well, I am begging my friends in the Arkansas Leg-Islature to vote new tax burdens on me that will mean another \$200 out of my pocket.

You ought to see it the same way. You are spending a hundred dollars to come to

this football game."

So, I say that the States can find more money for schools if they see this in the right proportions which is that we are fac-

ing an emergency.

I know I do not need to belabor that point. What I am trying to say is that it is inconceivable that we will do anything to lessen the pressures on the States to exert themselves to the fullest.

Now, the committee is well aware of the fact that there are three grounds for particl-Pation by the Federal Government in State functions. One is to support a service which the Federal Government has the responsibility for.

Another is to stimulate a service which We think ultimately should be borne by the States, but which we think needs to be

stimulated.

The other is to equalize. That would call for some continuation.

It seems to me that on all three bases there is justification for a modest, conservative, soundly conceived Federal program of this kind.

It deals with a physical program in the first place and is important because you are not involved in any way in the problems of selection of teachers or curricula. You are dealing exclusively with the problem that escapes the delicate, troublesome questions that caused such concern to the committee in the years when you considered general Federal aid for education.

Mr. LANDRUM. You have raised a point which has given me quite a bit of concern. We come to the Federal Government now because of a crisis existing in our construction, in our plant setup, capital outlay for schools. We are coming to the Federal Gov-

ernment for help.

In my own State, for example, during the last 10 years we have increased the number or teachers and increased considerably the average salary of teachers.

But just 2 weeks ago our State auditor announced down there that the State was

now facing a financial crisis.

Because of that crisis and because of the fact that we have, for the last several years, devoted more than 50 percent of our income to education, we have to raise more money to pay these new teachers.

His statement headlined in the papers was this: Georgia will either raise more revenue or take off the payrolls about 3,500 schoolteachers.

Now, if such a crisis as that facing us in Georgia today develops nationwide, are we not going to also come to the Federal Government seeking aid to employ teachers?

I raise that question because of the statement you made that you are not concerned with the selection of teachers or the establishment of curricula. You are concerned only now with the building of our plants in which we house these educational instruc-

Mr. Hays. Let me explain what I mean when I say it does not involve us in the local questions. I felt that general aid for education did not involve us to the extent that it was charged. Certainly this does not involve us in criteria for the selection of teachers.

Mr. LANDRUM. I certainly follow the gentleman. I appreciate his remarks. I recognize it is not now a problem, but based on history and our experience in coming to the Government and particularly the history that we have established over the last 20 or 25 years, is it not true that the more our crises develop at home, the greater the tendency to come to a beneficient Federal bureaucracy. Is not that true? Mr. Hays, Yes, that is a fact of life that

has to be confronted.

But if I am right, that this is justice, if it rests on that concept of justice to the less favored States, then you cannot refrain from doing now what ought to be done in the interest of justice because it makes more difficult a decision that the Congress might have to make 5 years from now.

We can never afford to make an easy decision because of a complication that might

lie ahead.

I have no case whatever, unless the committee agrees with me that the Federal Government has a stake in education.

How can it be said that the Federal Government has no responsibility or no moral obligation? We take the lad when he is 18 years of age, we have not provided in the Nation an adequate minimum standard school system that enables him to understand the manual of arms.

Mr. LANDRUM. I agree with you that the Federal Government has something at stake. has an interest there. There is no belaboring that point. We all agree on that. We all agree that we come now to a crisis in building.

But I am assuming that the gentleman, and I have the same feeling that we want maximum control on the local level. want a minimum amount of control on the Federal level, none if we can get it.

Mr. HAYS. That is right.

Mr. LANDRUM. But my question was raised. as we come more and more to these other problems that are beginning to confront us, and will confront us 5 years from now, as the gentleman suggests, are we not going to gradually turn over our entire local responsibility to the Federal Government? Are we not facing that danger?

Mr. Hays. I know the gentleman is entitled to an answer from me. It has forced, and I want to meet it squarely, I certainly could not deny that the extension of Federal aid even to this milder extent, of \$250 million a year. I could not deny that it would have its impact on related programs within the

Of course it does. As you ease the pressures from the revenue standpoint, you release funds for raising teachers' salaries, of course, and other purposes.

But I would not be afraid of that. You are still holding the Federal Government to participation in a fiscal program.

Mr. Landrum. Would the gentleman say, then, why in the early stages of your re-marks you suggested that maybe we would limit this to 5 years, this experiment of \$250 million a year?

Mr. Hays. It gives us an opportunity to experiment.

Mr. LANDRUM. Where do we go at the end of 5 years if we find it not satisfactory

Mr. Hays. In all honesty, I would not want what I say in support of it to seal my lips to come back and say 5 years from now, "Give us further help."

But I would point out to the opponents of the program that their arguments against Federal aid of a general character do not apply to this bill. I would plead for a chance to see what experience produces on the question my friend from Georgia raises.

Mr. Landrum. I am not yet ready to let

the gentleman or any other, catalog me as an antagonist of the program.

Mr. HAYS. Good.

Mr. LANDRUM. I just simply want to recognize that these problems are confronting us. I want to hear the gentleman's discussion of it.

Now, while I have the gentleman's ear. may I ask one question?

You are familiar with the resolution introduced by the gentleman from Kansas, [Mr. SCRIVNER on the 22d of February? Mr. Hays. Yes, I am.

Mr. Landrum. Would you care to comment

on the provisions of that?

Mr. Hays. I am not well informed on it, but I did take time to look over the scale. Of course, it completely disregards this element which I have emphasized, of recognizing the children, the ratio of children, and differences in incomes.

For that reason it should not be considered if we believe in the equalization principle. The mere fact that you might save a little money in the handling in funds is not related to the purpose and the goal of this program.

Releasing Federal funds through subtracting a simple percentage would release

funds that are not needed.

The disparity is terrific between the wealthier States and the poorer States. Under his bill, as I remember it, Arkansas would get \$1 million.

Mr. LANDRUM. One million eight hundred thousand dollars.

Mr. Hays. I forget what California would get, but at any rate, you would not correct this disparity between California and Arkansas.

I use that just as an illustration.

Mr. Gwinn. I hate to interrupt so distinguished a member and so good a friend, but we are talking about the real nub of this thing right now.

Mr. Hays. Yes; we are.

Mr. Gwinn. We are struggling with this idea of how the national interest is better served by letting the parents and the local teachers, the school boards, be responsible. We are talking about responsibility. We are anxious about the Federal Government taking responsibility.

Can you imagine any better device for stimulating local responsibility and aid to the children in your State than the reduction of taxation which we gave Arkansas last year?

You are talking about a measly little \$4 million of aid to education for Arkansas by this \$250-million appropriation which must come out of more taxes.

Last year when we reduced the tax burden generally, Arkansas got back in 1 year \$47 million. That is the year 1954, and you spent on your whole public-school program \$46 million.

So you got back a million dollars more, which is available to the State, than you actually spent on your entire school pro-

Now, that is the way to help the folks back home, take this incredible burden off from Washington, then you have local responsi-bility. Then you do not have the problem of Federal aid, of Federal control and influence and waste and costs.

Mr. Hays. Well, the gentleman is very kind in his reference to me and I am sure he knows how I feel toward him. He and I \ have discussed these things in the spirit of warm friendship which we have enjoyed since he first came here. I am grateful to him.

Mr. GWINN. I thank you for that remark. Mr. HAYES. That is one thing I always delight to say about my friend from New York. Our differences, of course, are fundamental on this point. But he would let me say this, The Federal Government would not say that because of the grace of the Congress in extending tax relief and helping the taxpayer to that extent that we will be indifferent to these appeals for the schools. It just seems to me that that would be the wrong response. I believe that we helped the economic life of Arkansas greatly by that tax reduction. It stimulated it.

Further, I have given every indication that I do not defend all of my State's policies, or feel that they are to be relieved of burdens.

Now, the gentleman is interested in family life, in social conditions in the less favored areas, and I have supported those things which would keep my State with a balanced industrial life.

When I say balanced, I mean to keep those fine elements of its agrarian life that tend

to be lost when industry overtakes it.

I do not want to say that this is related to that problem, but I do think that a nation which disregards, shall I say, moral values, that inhere in its rural life, that that nation will encounter trouble.

Let me give these figures:

In 1950 the urban areas of the 9 most favored States-they happened to be in the Northeast-had 22 percent of the Nation's children and 30 percent of the Nation's income.

The less favored area, which was the rural section of the South, of 12 southern States, had 8.6 of the children and 1.6 of the income.

Now, you find, in other words, that in that favored area there was 19 times the income.

and 21/2 times the children.

So the favored area gets an advantage of seven and a half times per child over the least favored region. But again I would not withhold from the favored region some help from the Federal Government so that they would deal with their less favored districts because, while as a group it was favored, as I indicated to Mr. Kearns, I know that there were islands of distress within the favored areas.

Chairman BARDEN. Are there any further questions?

I would like to drop this, Mr. HAYS. That is, the constant and increasing invasion of the State's stores of taxes by the Federal Government has brought us to this rather distressing hour. I see no tendency on the part of the Government to either relax or give any consideration to relief to the State.

I expect last year we spent more in Europe on the field of education than the final bill, if one comes out of this committee, will carry.

Now, I do not know by what process of reasoning people arrive at that illogical conclusion, but we certainly cannot keep on doing things that force the Government to further invade the sources of revenue of the States and expect to relieve the situation in the next 2 or 3 or 4 or 5 years.

The gloomy side of this picture to me, in addition to the fact that our schools are in great need-I say that and we must work out some way to help-is that unless this Federal Government begins to take stock a little bit the States will be in worse shape 5 years from now than they are on this very

I do not know about the State of Arkansas, but the State of North Carolina has been bled pretty nearly white and we have every form of taxation that anybody could think of and at the present moment the legislature is wrestling with the problem of trying to raise about \$26 million additional revenue.

Now, to these folks that just go along and vote for every big appropriation on the theory that we can spend ourselves rich, then they had better turn their light on their own backyards and the States and see where we are going to wind up.

Your State has not any more loose revenue running around in it than mine. Federal Government took out of the State of Arkansas last year the modest little sum of \$148 million in income tax alone.

So I do not know. I join with you in hop-ing that we can put a limitation on this bill for a certain number of years, but we have the solution of this problem right here in the Congress, and we have the problem right in our laps.

But instead of helping solve it by giving the States some consideration, we talk about, well, we do not want any Federal control over the State.

No. I don't want any; we have too much as it is now.

But let me tell you this: When you are taking all the money from the State that the State needs to run its government, somebody eventually will have to take over and run it because the State will not have the sources of revenue.

I just felt like saying that and that is the sermon I preach often without the slightest provocation.

Mr. Hays. I always profit by hearing you issue a warning because I know how you

Chairman BARDEN. Well, we have brought about this condition, have we not?

Mr. HAYS, Yes.

Chairman BARDEN. And we are going to further aggravate it this year because we are just going right along and everybody is requesting a bigger budget and a bigger appropriation and here comes the foreign bill that will take all the rest of it and create a bigger overdraft.

But we still wrestle with it. I say we are going to have to do something with the schools.

Mr. Hays. May I make one comment on that? You have been very patient.

Chairman BARDEN. Yes, sir.

Mr. Hays. I feel that sometime, Mr. Chairman, we tend to deplore this centralization in Washington because it is in sharp contrast to the old Jeffersonian patterns. We say the Government is away from the people and we are incapable of making these decisions as responsible servants because of its hugeness.

I think maybe we underestimate our capacity to meet these changes in our society. But you and I are as close to the people down there in our townships as the governor in the State capitol used to be.

We can act with as much sensitivity to local needs as the State government. feeling is that when a bill is brought out, and I trust that this committee will recommend some form of aid, there is going to be glory in it for all of us, but I actually wish I could be a member of this committee to look back on what is going to be one of the significant events of 1955. I do hope that as it is done we can say that we have not done it with indifference to the dangers that the chairman wisely mentioned, but that we regard ourselves as still equal to that challenge.

For that reason I hope that the committee will defend what it does and will feel that it is something that is historic.

Chairman Barden. That is a very fine statement and I think we can meet the challenge, but here is the problem: It is much easier for us to cast a ballot than it is for folks down there to dig up some more money. That is what disturbs me. passed a resolution out of this committee

unanimously that went to the floor of the House and was passed by the House and then went to the Senate and for some reason it died a slow death, requiring this Federal Government to have some central point whereby we could find what this Federal Government is spending in the field of education, and yet, no, apparently somebody has not the nerve to even look at the picture because the best investigation this committee could make from the best research that we put on it, we found that this Federal Government in the field of education is spending more money that it cost to run the entire public-school system of the United States.

That is an appalling fact, yet we apparently have not the nerve to just look at the result of our acts.

So I get very much confused when I see apparently the carelessness with which we continue to invade the State sources of revenue, and I know and you know they are on their knees so far as sources of revenue are concerned.

It disturbs me greatly. Thank you so much.

Mr. Hays. I appreciate your patience with

Statistical Hokum and Broken Promises-Immediate Hearing Justified on Walter-McCarran Act

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks, I should like to call to the attention of Congress an article which appeared in the March 25, 1955. Detroit edition of the Jewish News. The statements which appear in this report explode the mythical advantages of the present Walter-McCarran Immigration and Naturalization Act, and certainly justify a hearing without further delay on the several bills to revise this statute, including my own, H. R. 4797, and H. R. 636, authored by the distinguished chairman of the Judiciary Committee, the Honorable EMANUEL CELLER: ADL ATTACKS CONGRESSIONAL REPORT ON IM-MIGRATION AS STATISTICAL HOKUM

New York.—The Antidefamation League of B'nai B'rith criticized as "statistical hokum" a Senate-House staff report supporting the McCarran-Walter immigration law.

Challenging the report, Henry Edward Schultz, the league's national chairman, said it was drawn by apologists for the contro-versial law. He disputed the report's conclusions as being based on invalid and unfair comparisons.

Schultz said that the report sceks to justify the present immigration law because the number of immigrants we allowed in last year was higher than that of 1953.

"The report plays up the statistic that 94,098 quota immigrants arrived here last year," the ADL leaders said. "But it ignores the more pertinent figure that some 60,000 visas were unused, despite the fact that there is a tremendous unsatisfied demand for visas in many countries throughout the world."

Meanwhile, in Washington, Atty. Gen. Herbert Brownell, Jr., said he does not believe the Justice Department has been assigned an implementing task to bring about revision of the McCarran-Walter Immigration Act in conformity with President Eisenhower's state of the Union request for revision of the act.

Brownell added, however, that he would check with Gen. Joseph M. Swing, Commissioner of Immigration and Naturalization, in order to be sure. The Attorney General spoke in reply to a question put to him by Milton Friedman, Washington correspondent of the Jewish Telegraphic Agency, who asked What the Justice Department was doing to implement revision of the discriminatory Immigration law.

Another question put to Mr. Brownell by Priedman concerned a challenge by Chairman Francis E. Walter, of the House Immigration Subcommittee, for the Justice Department to produce specific recommenda-tions for McCarran-Walter revision.

Representative Walter has said that if President Eisenhower were sincere in his criticism of the McCarran-Walter Act, he would "have the Attorney General of the United States submit specific legislation."

The Attorney General said that in a communication to Representative WALTER he took the position that a number of bills have been introduced in Congress in which the Justice Department is very much interested and would be glad to testify soon if requested.

"Sorry Day for Small Business"

EXTENSION OF REMARKS

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include, by request, the following statement:

George J. Burger, vice president, National Federation Independent Business, stated today that it will be a sorry day for small business of this Nation, and in fact for our overall domestic economy, if we find that the action as taken by Subcommittee No. 5 of the House Small Business Committee on Yesterday's date is continued by the Small Business Committee of the House and duplicated by other committees of the Congress.

He further charged, "We would then have arrived at a situation in our Nation of censored actions and a complete gag rule."

The National Federation expressed its Wholehearted opposition to such action by the following message which was today directed to the Honorable James Roosevelt, Democrat, California, chairman, Subcommittee No. 5, House Small Business Committee; the Honorable Tom STEED, Democrat, Oklahoma; the Honorable TIMOTHY P. SHEEHAN, Republican, Illinois:

"The action of your subcommittee of the House Small Business Committee on yesterday's date re announced hearings on complaints of independent gasoline dealers nationwide registered against major oil com-Panies for alleged violations of the antitrust laws has come as one of the most severe blows ever leveled at small business of this Nation.

"If small business cannot obtain an open forum through the committee in the Congress which is specifically designated to handle their problems through public hearings. then it can only be understood that small business, insofar as Government is concerned, is truly the forgotten man.

"Our position is based on close to 15 years experience with the help rendered by the Small Business Committees of the Congress through their heretofore procedure of holding hearings in which the public and the press were welcome guests. The record will show that during the life of the Small Business Committees no charge ever leveled against large corporations and others, in violation of the antitrust laws has ever been considered 'secret' evidence, and the charges made by independent business have been sustained. The only open forum that small business has in this Nation through which their problems may be brought forth is through the help of the Small Business Committees.

"It is our firm belief a poll of the indi-vidual Members of the House would determine that in the enactment of House Resolution 151 'to amend the rules of the House of Representatives to provide for a code of fair procedure for all committees,' it was never the intent of the Members of Congress that this rule should apply to small business or any other subject applying to our overall domestic economy.

"We urge that your committee immediately rescind and discontinue such action as was taken on yesterday's date."

Death of Joseph Pulitzer

EXTENSION OF REMARKS OF

HON, LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mrs. SULLIVAN. Mr. Speaker, I have just, a few minutes ago, learned with much sorrow of the death of a great newspaperman, publisher of a great newspaper, Mr. Joseph Pulitzer, of the St. Louis Post-Dispatch.

I think every Member of the House recognizes the Post-Dispatch as one of the truly outstanding newspapers published in the world today-a fearless searcher for the truth, a crusader for justice. We who live in St. Louis consider ourselves extremely fortunate in having this newspaper available to us every day of the year.

Mr. Joseph Pulitzer has published this paper in conscientious devotion to the principles established for the Post-Dispatch by its founder, his father, the late Joseph Pulitzer, who was one of the greatest figures in American journalism. Mr. Joseph Pulitzer has carried on the Pulitzer traditions in journalism and has been a credit to a famous name.

To his son, Joseph Pulitzer, Jr., editor of the Post-Dispatch, go the sympathies of all of us on the death of his father. As he carries on the family traditions in the publication of this great newspaper. I am sure the words of the Post-Dispatch platform as written by the original publisher on his retirement, will remain true as always, as follows:

"THE POST-DISPATCH PLATFORM"

I know that my retirement will make no difference in its cardinal principles; that it will always fight for progress and reform, never tolerate injustice or corruption, always fight demagogues of all parties, never belong to any party, always oppose privi-leged classes and public plunderers, never lack sympathy with the poor, always remain devoted to the public welfare; never be satisfied with merely printing news; always be

drastically independent; never be afraid to attack wrong, which racy or predatory poverty.

Joseph Pulitzer. attack wrong, whether by predatory plutoc-

John Foster Dulles Ouacks and Acts Like an Ambassador From Venezuela

EXTENSION OF REMARKS OF

HON, CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I direct the attention of my colleagues to the following article which appears in the April 1, 1955, edition of the United Mine Workers Journal.

This article which was written by Justin McCarthy, editor of the Journal, explains the difficulty of industry and labor in this country to receive any sympathetic attention from our State Department. It also emphasizes the necessity for the Congress to take back its constitutional authority for making the decisions regarding tariff policies.

The article follows:

JOHN FOSTER DULLES QUACKS AND ACTS LIKE AN AMBASSADOR FROM VENEZUELA

"I don't know of any department of our Government that knows less about the economics of the United States than the State Department." (UMWA Vice Thomas Kennedy.)

Is John Foster Dulles the American Secretary of State? Or is he a paid propagandist for the military dictatorship of Venezuela? There's an old saying that if something looks like a duck, waddles like a duck, quacks like a duck and acts like a duck-it's a duck. John Foster Dulles quacks and acts like an ambassador from Venezuela.

So worried is Dulles about the growing opposition in Congress to the administration's foreign trade bill that he took time out from his globe trotting on March 23 to make a return appearance before the Senate Finance Committee now considering Elsenhower free trade bill-H. R. 1. This is the legislation that would extend the socalled reciprocal trade agreements act for another 3 years and, theoretically, give the President virtual dictatorial powers to slash tariffs on foreign goods coming into the United States. Actually the power would be in the hands of State Department bureaucrats.

Among these foreign goods is the deluge of residual (waste) cil being dumped into coal's eastern markets from Venezuela. Senator MATTHEW M. NEELY, Democrat, West Virginia, and 16 other Senators of both parties are sponsoring an amendment to H. R. 1 that would restrict imports of foreign oil to 10 percent of domestic production.

Want to hear what cold-fish Dulles thinks of Venezuela, the military dictatorship now under a worldwide boycott by free labor for mistreatment of its labor leaders? This is what Dulles answered when Senator Alben W. BARKLEY, Democrat, Kentucky, questioned him about unemployment in the coalfields due to waste oil from the South American country:

Venezuela is a country that has adopted the kind of policies which we think the other countries of South America should adopt; namely, they have adopted policies which make Venezuela provide in Venezuela a climate that is attractive to foreign capital to come in. And that foreign capital has come in and, virtually, there has been an immense development of the economic life of Venezuela; social conditions are rapidly improved."

And how they have adopted policies that provide a climate that is attractive to foreign capital. And what are those policies? Well, Dulles didn't go into that, presumably because he admitted he couldn't speak as an expert. We'll tell you, though. They are the policies of a Fascist tyranny; namely, throw the labor leaders in jall and keep them there, destroy the labor organizations and slap down all efforts to improve wages and working conditions; make a deal with the international oil cartel to give them 60 percent of the take on the nation's greatest natural resource (the people of Venezuela would like to know who gets the other 40 percent); and then, just to make sure you keep things orderly, hoodwink the boys in the American State Department into thinking all this is necessary to prevent commu-nism, put full-page advertisements in the American papers telling the Yankees you're a good neighbor but can only remain so, so long as that unenlightened American Congress doesn't take action to put a stop to your rulnous shenanigans.

"Social conditions are rapidly improved," says Dulles. Sure, they are—in the country clubs and big estates and among the bankers and ruling politicians. What about the people of Venezuela? Well, some of those oil workers are getting as little as 15 cents an hour. But Dulles didn't mention this.

About low wages in such countries, Senator Russell Long, Democrat, of Louisiana, had a few pertinent remarks. He said:

"There is one thought that occurred to me, and that is—in connection with the efforts being made to help develop industries in these other countries, so long as we treat all these nations on a most favored basis—doesn't it stand to reason that American capital, in helping to develop these undeveloped countries, will tend to go to the countries with the lowest wage standards as long as government conditions there are the safest?"

And what do you suppose Dulles thought about that idea?

Why he didn't rightly think that had too much to do with it. There are a lot of factors, he said. "Freight transportation, all of those things would enter into it. Certainly cost of labor is one factor that we have seen in our country here." And then he added that in this country "the textile industry has, to some extent, shifted from the North to the South because of a combination, perhaps, of labor and power costs being more favorable."

Apparently it doesn't occur to Dulles that there is anything wrong about this. The comparison between our own country and Venezuela is, of course, ridiculous and another example of the fuzzy-headed thinking of Dulles and the rest of the State Department boys who have no sense of responsibility to the American people and make it quite clear with such remarks.

But then Dulles admitted he was no expert on such things.

Dulles, of course, goes right along with the phony old red-scare business. The theory is you have to let the bullyboys in Venezuela and similar countries do what they do or the "commies" will take over.

Someone ought to tell Dulles that the suppression of human liberty, sweatshop wages, had working conditions and the tyrannical actions of the bemedalled bums and thugs who run these countries with iron fists are just exactly what breeds communism. Don't kid yourself, Dulles—you with your patronizing attitude toward America's coal miners. We know these things.

You say if the Congress puts a quota restriction on Venezuelan waste oil "the consequences of it for our whole Latin-American policy will be very grave * * and (you say to Senator BARKLEY) that is the point of view which your coal miners cannot understand and I don't blame them for not understanding it." Whose coal miners are you talking about, anyway? They are your coal miners, too, you know. Or have you completely forgotten that you're supposed to represent the American people in foreign affairs and not the international oil cartel and the gunmen that run countries such as Venezuela.

A Wildcat Strike by Management

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial entitled "A Wildcat Strike by Management," which appeared in the March 24, 1955, issue of the Machinist, the official publication of the International Association of Machinists:

A WILDCAT STRIKE BY MANAGEMENT

What do you suppose would have happened if union members on one of the Nation's class I railroads pulled a wildcat strike, defied a recommendation of a presidential board, and willfully refused to go along with the decision of all the other railroad workers in the country?

The answer isn't hard to guess. The newspaper columnists, the editorial writers, the politicians, would have been sounding off at the top of their voices about "irresponsibility." Union officers would have been hauled before a congressional committee. Every imaginable pressure would have been brought to bear to whip the strikers into line.

Well, there is a railroad strike, the first major strike of nonoperating railroad employees, including machinists, helpers, and apprentices, since 1922. And, it is a wildcat strike—by the management of the Louisville and Nashville and two subsidiaries—the Nashville, Chattanooga & St. Louis and the Clinchfield.

MANAGEMENT DEFIANT

The management of these three roads has defied the recommendations of President Elsenhower's emergency board; they have refused to accept a reasonable, compromise health and welfare program that has been accepted by every other class I railroad in the United States.

If ever there was a strike forced by management in defiance of the Government and the majority decision of the industry, this is it.

However, as this is written, President Eisenhower has been strangely silent. No word of reproof has been directed at railroad management for defying the recommendations of the President's own emergency board. No column or editorial has been published in newspapers that come to our attention calling attention to the irresponsibility of management.

In Congress, only Senator Estes Kefauver, Democrat, Tennessee, has said a word so far about this strike. Senator Kefauver took the floor of the Scnate to explain the efforts that have been made by labor to avoid this strike and the hollowness of the management position. So far, no one else has said a word.

THREAT TO THE FUTURE

To read the newspapers, this is just another example of union members interfering with a public service. No attempt is made to put the onus for this interference where it belongs—on management.

What's behind the strike? There's no insurmountable economic problem attached to the settlement—or more than 100 other carriers could not have signed it. What's behind the strike appears to be a well-planned effort to break up industrywide bargaining on the railroads and thereafter to break down labor's bargaining strength on the railroads. Such a movement to force southern workers to accept substandard conditions is not limited to the railroad industry.

From the strange silence that surrounds this strike by management we can only conclude that a great many people in high places are tacitly supporting it. If this is to be a precedent allowed to stand unchallenged, the recommendations of future emergency boards won't be worth the paper they're written on.

It's a helluva way to run a railroad.

The United Nations Charter

EXTENSION OF REMARKS

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. ADDONIZIO. Mr. Speaker, I should like to call the Members' attention to the following letter addressed to the Secretary of State by a group of public-minded citizens in my district, on revision of the United Nations Charter. A number of people, meeting at the Orange Unitarian Church, recently held a series of discussions on this subject and their conclusions were reported to the Secretary of State. I commend Mrs. Ethel T. Stolte, the chairman, and the other members of the United Nations Study Group, for their positive action toward helping us find the road to a safer and sounder peace.

The letter reads as follows:

Orange, N. J., February 22, 1955. The Honorable John Foster Dulles, Secretary of State,

Washington, D. C.

My Dear Mr. Secretarry: In connection with the proposed conference to review the United Nations Charter, and with your expressed willingness to receive suggestionss on this matter, a group of residents of Orange and East Orange, N. J., wish to submit the results of their study and discussion. Meeting at the Orange Unitarian Church, the group has devoted six evenings, besides individual study to the charter and related material; and the following views are based on genuine effort by laymen representing various walks of life and various shades of political opinion.

United Nations: First we wish to join with you in your many statements in voicing the heartiest support of the United Nations-Like you, we applaud its many achievements and regard it as the world's best hope for peace. Our desire is to enable it to prevent

all nations from building armaments and committing aggression. To this end, we see a great opportunity in the scheduled vote in the 1955 General Assembly on the holding of a review conference, and in your announced support of that conference.

Universal membership: All nations must be members, without right to resign, if laws binding upon all in regard to arms and aggression are to be effective. Moreover, justice requires that nations bound by these laws should have a share in making and applying them. It is especially necessary to bring belligerent powers into this system of enforcible, universal law. We feel that coercion is to be avoided, but that the obvious advantages of membership will in time lead all countries to join voluntarily. the case of undeveloped, colonial, or otherwise disputed areas, the General Assembly could decide when the people are ready for the responsibilities and privileges of nation-

General Assembly: The present basis of one vote for each nation is obviously impractical if the United Nations is to have any real authority. Some more realistic basis of representation must be devised, acceptable to our own country and others. Population should be a major factor, but not without qualification. Other elements might be productive capacity, resources, and of course political entity (as in the present Assembly). An assembly of two chambers, made up on different bases and exercising somewhat different functions, might be an acceptable arrangement.

Security Council: First, it is evident that there can be no veto power if universal law is to be impartially applied. Second, with a fair system of representation, the General Assembly can properly do the work of an executive body, taking over major decisions regarding aggression which the original Charter entrusts to the Security Council. Thus the Security Council (however named and constituted) would become an executive arm of the Assembly, responsible to it, for the supervising of the U. N. armed forces.

Security: Security can exist only under a fundamental law prohibiting aggression and the manufacture of arms. The United Nations Charter, altered along the lines we envision, would be this fundamental law, to be formulated in detail and implemented by the Assembly. The law would be limited to armaments and aggression, with all rights reserved to the nations in matters commonly considered domestic, and a bill of rights to prevent unjust trial or other actions by the United Nations against any nation or individual.

Responsibility for keeping the peace would lie with the Assembly, which would have to be able to act quickly and firmly. As in any true system of law, a preponderant U. N. armed force to enforce it, and courts to apply it, as indicated below, would be necessary.

Armament and disarmament: The crux of World peace, as has been indicated by President Eisenhower and many others, is disarmament—universal, total, and enforceable. This would have to be achieved over a period of years, by proportional steps, under strict supervision. With this would go the building up of an armed force to maintain Peace that will be part of the U. N.-not hational contingents and stronger than any force that could oppose it. It must be carefully composed and directly recruited, with a monopoly of major weapons, strategic bases, etc., while national forces must be kept to a police level under continuous inspection.

International law: Courts with compulsory jurisdiction would apply the funda-mental law of the amended U. N. Charter

against arms and aggression.

Taxation: A direct U. N. tax, perhaps limited to a total of 2 percent of the world's gross income, would provide the means of carrying on the essential functions outlined

We hope that these views, the fruit of serious consideration, may be of some value in your tremendous task of building a peaceful world. Our best wishes go to you for success in this great endeavor.

Very truly yours, (Mrs.) ETHEL F. STOLTE,

Chairman, United Nations Study Group. (Signed by Dr. and Mrs. Phillips E. Osgood, John Loudon, Phyllis A. Loudon, Edith Charter, Sophie C. Frew, Mr. and Mrs. Burrill, Hedy Rosen, Aileen Hetherington, Vira Bubleniec, Mildred Lever, William Alibut, William H. Allbut, Joyce Allbut.)

The New Way in the New World

EXTENSION OF REMARKS OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. SIKES. Mr. Speaker, under leave to extend my remarks. I wish to include in the Record an article which appeared in the April issue of the Rotarian magazine entitled "The New Way in the New World." This article was written by the very able Carlos Davila, Secretary General, Organization of American States:

THE NEW WAY IN THE NEW WORLD

(By Carlos Davila, Secretary General, Organization of American States)

Just 32 years ago I helped 8 of my friends organize the Rotary Club of Santiago in my country, Chile. It is now the largest Spanish-speaking Rotary Club in the whole world.

Why did I help to found that club? The answer has something to do with a day we shall celebrate this month. Pan American Day. I was attracted by the idea of seeking international understanding through our individual selves. Rotary's way of going at international understanding—going at it with no governments, no treaties, no diplomats, no armed forces-this was something new, at least in modern times. It was also new to seek understanding by bringing men of different nations but like vocations together. I thought it almost revolutionary to establish friendly links between industrialists and merchants in Santiago and their counterparts in Washington or Rangoon. "But why not?" I wondered. "Notwithstanding the differences that separate them, they may really be closer than the man who lives next door."

It may surprise you, but that is also the way of the Organization of American States. We think together, the people of our 21 Republics. And we are working, really, the Rotary way. This work radiates from the central offices in Washington, D. C., branching out to no fewer than 600 specialized agencies, institutes, commissions, and committees at work all over the hemisphere. Our shared work deals with social welfare, scientific research, highways, navigation, banking, agriculture, medicine, business, industry, commerce, studies of art and literature, and even Indian affairs, folklore, and handicrafts.

We hear too little about these activities which constitute 90 percent of the task of the Organization of American States. The other 10 percent is the part which hits the front page. There is a certain fatality about this condition. The things that make news

are generally ones that build less. Latin America has been a casualty all over the world in this respect. We read so little about the upsurge in our countries during the last quarter of the century. And yet it is one of the great events of our times, in my opinion. Let us, then, examine some particulars.

The population of the Ibero-American republics is growing twice as fast as that of any other area on earth. It has just passed the 171-million mark, considerably greater than the population of the United States. The birthrate of Latin America is also increasing-at three times the rate of increase in the United States, and far above any other

part of the globe.

The Import capacity of Latin America grew 70 percent in the last 8 years alone; industrial production increased 66 percent, No wonder that Latin America is now on a par with Canada as the No. 1 customer of the United States. No wonder, too, that it is the largest area for United States investments abroad. In fact, these United States investments have doubled since the last world war, reaching a total of \$8 billion.

Yet this economic explosion in Latin America is such that United States investmentslarge as they are-look negligible in comparison with the sum total of all investments in Latin America. In the last 4 years, investments in these countries have been running at a rate of \$41/2 billion a year. Of that sum, both public and private investments of the United States have amounted to less

than 9 percent.

To that interesting fact, add this one: during the same 4-year period the total flow of cash dollars from Latin America to the United States has been \$100 million a year larger than the flow of dollars from the United States to Latin America—every year. This is a paradox, but it is a fact, so are these bits of information, even though they be crowded from the newspapers by more exciting news.

Buenos Aires is now larger than Paris. Rio de Janeiro is larger than Rome. Mexico City is larger than Madrid.

Had you imagined that the heaviest air traffic between any two cities in the world is today between Rio de Janeiro and São Paulo?

These countries with greater resources than the United States are now on the march, and nothing can stop them. Capital from abroad may help-but will not be indispensable. Those countries want neither gift nor grant. They invite their neighbors-good neighbors-to participate as partners in the grandest economic adventure of many centuries. These dramatic, if hardly noticed, events are affecting fundamentally the future of the whole world.

In this generation we have seen war disappearing from the American continent. I am certain that there will be no more wars between the American nations.

That is one of the greatest achievements in the history of mankind, and one of the most promising for the world at large. did not come without effort. The lat the patience, and the goodwill of many able men were invested in the ideal of a hemispheric organization long before that day-April 14, 1890-when diplomats resolved to create the Pan American Union. Nor did this resolution end the matter. Throughout 65 years, hard work has gone into our waging of peace.

Today the Organization of American States—for that has been its name since 1948-is the oldest organization of its kind in existence. It is a model for the world, as Dr. Milton Eisenhower states in his recent Dallas, Tex., speech. There is no difference in the Organization of American States between the vote of the powerful and the vote of the powerless. It has lived up to the purpose of its life.

It seems to me that Rotarians, sharing such sentiments, may well take pleasure this Pan-American Day in our new way in the New World.

Japan's Competition Chief Handicap of San Diego Tuna Industry

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Union of March 29, 1955:

JAPAN'S COMPETITION CHIEF HANDICAP OF SAN DIEGO TUNA INDUSTRY-PRICE ADVANTAGE FAVORS FOREIGN FISH DESPITE EFFICIENCY OF AMERICAN METHODS

(By Bryant Evans)

If San Diego fishermen could sell tuna for the same price as Japanese frozen tuna sells for delivered here the tuna fleet prob-lem would be solved. The fleet would be fishing up to capacity, new ships would be on the ways and everybody concerned would be happy.

Up until now this has not been done. Critics of the tuna fishermen have accused them of uneconomic practices. The tunaboat owners have been said to insist on fishing "from yachts." They have been criticized for not using mother ships as some Japanese fishermen have done.

Thus it was thought advisable to inquire into the different methods the American and Japanese fishermen use and the reasons for the difference.

Most San Diegans know what a San Diego clipper looks like but they do not know how

The answer lies in a typical American fight for markets, marked by enterprise and financial courage. When the owners of small boats that fished locally found they had to go farther to fulfill the demand of a national market, created by advertising, they built

The same men who bought the first clippers have built some of the largest and most recent.

BOATS BECOME DEEP-FREEZE PLANTS

bigger, costlier boats.

"That kind of enterprise seems to be something that only grows on the North American continent," said Harold Cary, American Tunaboat Association manager.

"People say the boats had to be built big because the tuna moved south." The truth is that the market made it necessary to go any place.

Through the years the clippers have become models of efficiency. The space in their holds is utilized to carry fuel and bait on the way out and fish on the way back to port. Ice refrigeration, first used, was augmented

by an ammonia system to preserve the ice.
Then the boats were built with brine systems and became floating deep-freeze plants. During he war the Government found them to be the best refrigerated ships affoat.

The ships are built with low afterdecks to permit surface fishing. After balt is floated on the ocean to attract fish the fish are caught with bare hooks. No lines are set to catch the larger tuna that swim a considerable distance beneath the surface.

The ships make cruises of up to 15,000 and 20,000 miles in search of fish. Cruises take from 50 to 80 days, depending on fishing

The Japanese use an entirely different method of fishing. Instead of hooking fish from the surface, they use the long-line method of suspending baited hooks from buoys into deep water. These are allowed to float all day and then pulled up at night.

FISHING DONE FROM SMALL BOATS

The fish caught in this way are much larger than those caught at the surface. They will weigh an average of 125 to 150 pounds. They are then refrigerated, usually with ice only, for the trip to Japan.

Sometimes the fishing is done from small boats and fish are transferred to a mother ship which furnishes the crew with quarters.

Some Japanese ships actually fish at greater distances from home than the San Diego ships. Both fleets make extensive use of equatorial waters.

How do the two methods compare?

In terms of man-hours the American method is more efficient. A study has shown that in 2 typical boats of 175 to 185 tons capacity, the catch per man on a Japanese boat was 192.9 pounds of fish a day. On an American it was 391.4 pounds On small boats of 80 to 90 tons, the comparison was 111.3 and 391.3 pounds.

As a whole the United States boats are larger but some of the new Japanese boats are in the 400- and 500-ton class-as large as the larger American boats. Cary said the trend was toward American-sized boats. The new Japanese boats cost from 70 to 80 percent of new American boats.

DARK-MEAT TUNA FAVORED IN JAPAN

So far as Japanese and American methods of fishing, Cary said they both were suited to their need. The big dark-meat tuna caught by the long-line methods is favored in Japan. The method requires more man-hours. also requires larger ships for the same fish tonnage because the large Japanese crews from 21/2 to 3 times the size of American crews-take up more of the ship.

So far as the mother-ship system goes, Cary said Americans had tried it and found it a money loser. He said the Jap-anese had had so much trouble with the system that they were abandoning it.

Then why is the American cost so high

that the Americans cannot compete?

"In the first place," Cary said, "we have to pay American wages and compete in the American labor market. Our smaller crews are more costly.

"In the second place, if we could get the full use of our ships, I think we could come reasonably close to the Japanese costs. But we could never meet the Japanese price."

Syngman Rhee

EXTENSION OF REMARKS OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, February 24, 1955

Mr. SHORT. Mr. Speaker, it was my great privilege and good fortune a third of a century ago to have attended Boston University as a student of theology at the same time my good friend, You Chan Yang, was a student in the medical school at the same university. That was the beginning of a warm and lasting friendship which I shall cherish all the days on this earth and throughout eternity.

Today You Chan Yang is the Korean Ambassador to the United States of America. He has a lovely wife and two fine, handsome, and beautiful childrenall of the Yangs would be a credit to any nation

His Excellency You Chan Yang is an inspiration to all who know him. The fires of the love for liberty burn fiercely and inextinguishably in his soul. His patriotism is akin to that of Washington, who won our independence, and to Lincoln, who preserved the Union that Washington founded.

My very dear, close, and personal friend, You Chan Yang, like the great President of Korea, Syngman Rhee, and the Free Republic of Korea that he represents, rose from humble origin and unpromising beginnings to high stature not only among his own people but the free people throughout the world.

In the Korean Information Bulletin of February 1955 Dr. Yang paid a glowing-but certainly not an exaggeratedtribute to Syngman Rhee, one of the great men of our century, and a man who will go down in history as the George Washington of Korea.

On previous occasions I have paid tribute to Syngman Rhee, whom I met in his humble home at Pusan, Korea, in 1952; and I will not try to add brightness to the sun, polish the apple, or give additional fragrance to the rose at this time. I do, however, want to include in my remarks the sane and sound, beautiful, and well-deserved tribute which Ambassador Yang has paid to this stalwart, faithful, indefatigable, and unconquerable fighter for the rights of men, not only in his own country but all over the world:

SYNGMAN RHEE

The description which best fits Syngman Rhee, in my opinion, is the one which he gave himself several years ago. It was during the course of an interview in the mod-President's house (Kyung Mu Dai) in Seoul when a correspondent asked him how he would describe himself-as a statesman, political leader, liberal, conservative, or the like-and President Rhee replied:

"I am a revolutionist. I was born a revo-lutionist, and I shall die a revolutionist-a revolutionist for the rights of man."

History, I am sure, will never record & longer struggle by any individual for the rights of man than that of Syngman Rhee. His dedication to this cause and the singleness of purpose which has characterized his every act soon will encompass 60 consecutive years. Despite torture, imprisonment, a price of \$300,000 on his head set by the Japanese. long years of exile, actual hardship and penury, Syngman Rhee never has faltered in his purpose to redeem the liberty of the Korean people and set them on the road of democracy. Few patriots have had to pay a higher price, for just as Rhee seemed on the eve of triumph, hopeful that the United Nations might bring about the unification of Korea by peaceful means, the Communists launched their attack from the north in an effort to conquer the Government and people of the Republic of Korea south of the 38th parallel.

SOVIET ENMITY

Russia, realizing that Rhee was one of the world's foremost foes of communism, wanted his liquidation, politically and physically-The Kremlin also knew that so long as the Republic of Korea and Rhee continued to exist, its timetable of world domination would be held up, and used every means short of actual war between 1945 and 1950, to drive him out of office and thus communize the entire Nation. Fake broadcasts heralded the end of Rhee and the downfall of his Government. Armed guerrillas were landed in force to kill, pillage, and burn, thus to cause the people to believe the government in Seoul had perished. Not one, but many actual attempts were made to assassinate the President, but God must have a special form of protection for the right kind of a revolutionist, for all of these failed.

It may be difficult for some occidentals to get a Korean's perspective on Rhee. He is the product of an ancient civilization and culture. Chosen, the land of the morning calm, was first known to the west as the hermit kingdom. Not unlike the famous actress, who expressed the wish to live alone, our people—because massive China was poised on one side of our borders and war-like Japan on the other, separated only by a strip of water—also wanted to live alone. For nearly 40 centuries, with occasional interruptions, we were able to do this. But the modern world shattered our self-desired isolation for all time to come.

Isolation for all time to come.

Now Rhee, of all Koreans, was the first to perceive not only the transition of the past to the present, but he also foresaw the Perils of the future. His ability to sense the future is almost occult. There is on record, years in advance of Pearl Harbor, the intention of the Japanese to challenge the United States for mastery of the Pacific. Similarly, Rhee foretold precisely what the west would be up against in striving to live peacefully with a truculent and bullying Russia.

HIS LONG STRUGGLE

The Korean people, who have long memories for friends and enemies, are aware of these facts. That is part of their devotion to Rhee, but not all of this devotion, by any means. The Koreans know that Rhee, over and above any of their fellow citizens, kept alive the torch of hope of freedom for them when the Japanese, in their 40 years of harsh military occupation of our country, made the land a vast prison camp and visited every indignity upon us their bloodstained hands could do.

Denied equal educational rights, subject to the most menial services, our entire economy exploited for the benefit of our masters, is it any wonder despair engulfed us and would have overwhelmed us, had it not been for one man?

That man was Syngman Rhee, The underground in Korea told of his wanderings for us. Washington arms conferences-was Locarno-there, too. Geneva, where the III-fated League of Nations debated fruitlessly the sickness of the world-there, also was Syngman Rhee, pleading the cause of Korean freedom, trying to recall to the Statesmen of that era the injustice that had been done us. To what effect? None whatsoever. A powerful Japan already was thumbing its nose at those who would question its seizure of Manchuria. A strutting Mussolini was contemplating, without worry, the conquest of Ethiopia. A plotting, scheming Hitler was conjuring up even more grandiose dreams—dreams which ended in millions of graves, including his own. All this. Rhee saw and pondered—all this he re-Ported to his fellow countrymen, but no re-Port he ever made failed to carry these words: "Do not give up hope. Justice and the right must and will triumph."

How does it happen that a man can keep alive a faith like this for year after year? To understand, one must know something of Rhee's background.

RHEE'S BACKGROUND

Nearly 60 years ago a young Korean walked into the compound of an American missionary school in Seoul, our capital city. It was a time of fermentation in the Orient. Japan had just achieved the impossible—defeated China. Already, she was casting greedy eyes upon Korea. So, too, was Russia, our only other neighbor to the north besides China.

Addressed in Korean by a missionary, Rhee, young Rhee—still in his teens—replied: "My name is Yi Seung Man. I would like to study here and learn of the Western World." Yi Seung Man, in spite of his tender years, already was well known as a distinguished Confusian scholar and poet. Moreover, he was known to be of noble birth and ancestry, a direct descendent of the famed Yi dynasty.

Yi Seung Man proved to be an extraordinary pupil. With a fresh and open mind, he absorbed rapidly all the knowledge his teachers sought to impart. He feasted hungrily upon the tenets of democracy, American style, and with reverence and deep feeling he also embraced Christianity. then he seemed to know he was in a race with time, and immediately upon graduation he began to put his teachings into practice. He founded and published the first daily newspaper in his country. It preached the heady tonic of liberty, man's right to be free, but the Korean soil of that day and age was far from fallow. Royalty, including the king, was both inept and decadent; officialdom was grossly corrupt. What was would always be, so silence this young firebrand. Away with him. He was arrested and sentenced to 7 years in jail. During his early incarceration he was in stocks and his hands, held by thongs, extended helplessly beyond the bars of his cell. Sadistic failers beat his fingers almost into deformity to curry favor with those alarmed by Rhee. Yet, once out of stocks, the indomitable youth wrote and smuggled, sheet by sheet, out of prison the book which today remains the bible of liberty of the Korean people. Its title? "The Spirit of Independence." Does this not reflect the inflexible purpose of the author?

ARRIVAL IN AMERICA

In 1904, Japan defeated Russia and to all intents was in Korea to stay, despite the solemnity of treaties. Rhee learned the Japanese were searching for him. He also knew that if they found him, not imprisonment but death would be his lot. He fled to America and here anglicized Yi Seung Man into Syngman Rhee. He tried without success to safeguard Korea's future at the Portsmouth conference. In Washington, he begged the Korean envoy to the United States to burn down the legation building rather turn it over to the Japanese. The timid diplomat refused.

Barred from his homeland, Rhee recognized his fight would be a long one. To augment his education, he went to college and in rapid succession took his A. B. degree at George Washington, his M. A. degree at Harvard, and his Ph. D. at Princeton. He is the only chief of state today who has three earned academic degrees. He became a favorite pupil of Woodrow Wilson, then president of Princeton, and Mr. Wilson often invited Rhee to his home where he invariably introduced him as "the redeemer of Korean liberty." Rhee's burning zeal could not be hidden by a friendly and gentle countenance.

When World War I began, Rhee's old Princeton professor was the President of the United States. Korean hopes soared when, on the defeat of Germany, Mr. Wilson enunciated his famous 14 points as a basis of peace and among them was his promise of the right of self determination among small nations. Rhee had tried to go to the Paris Peace Conference, but was turned down by the State Department on the grounds that his presence there might be "embarrassing" to the Japanese. Japan was a "Johnnycome-lately" in that war on the side of the allies, just as was Russia in World War II.

THE PASSIVE REVOLUTION

But Rhee believed his old professor's words, and in March of 1919, he instituted in Korea the first passive revolution in history. There was nothing passive about Japan's actions against the unarmed Koreans who had gathered, bearing their nation's flag, and intoning their desire to be free. The Japanese military slaughtered tens of thousands of them with machine-gun fire and broadswords. Others were publicly crucified. Still more were hearded into Christian churches (we have more Christians proportionately than any Asian mainland nation), the doors locked from the outside, and the edifices set fire. Hundreds and hundreds suffered this horrible death.

The leaders of the revolution, or a part of them, who had escaped the massacre, fied to China. There they organized the Provisional Government of Korea and named Rhee president. So as to escape Japanese arrest when his steamship, en route from Honolulu to Shanghal, paused at a Japanese port. Rhee occupied a coffin, alongside the coffins of dead Chinese being returned to their homeland for burial. A trusted lieutenant, now Col. Ben C. Limb, Korea's Ambassador to the United Nations, ministered to him in the dark hold of the ship.

As the years went by, the chancellories of London and Paris and the American State Department saw visit after visit by this frail countryman of mine in pursuit of the will-o-the-wisp of Korean freedom. Korean offices would be opened in various cities, but the inevitable lot of each was closing because of the lack of funds. There were no means available to get funds out of Korea for Rhee's singlehanded campaign. The Japanese saw to that. And the nonresident Koreans were pitifully small in numbers—a few thousand in Hawaii, a few hundred in the United States, Mexico, and Cuba.

Then came World War II and Rhee's crusade took a new lease on life. The Korean-American Council was formed and Rhee returned from the Christian church and school he had founded in Hawaii to direct American activities again. Beside him was the lady he had met in Geneva, Francesca Donner, a distinguished Viennese, and who became Mme. Rhee in New York in 1934. His surprising health, even now at the advanced age of 70, is due to her watchful and loving care.

THE ROLE OF ALGER HISS

But again the State Department said no to everything Rhee suggested. "Put me aboard a submarine and land me on Korean soil," pleaded Rhee. "My people will follow me in open revolt against the Japanese," Many times he was unable to see division chiefs, but had to be content with the cold and negative intellectual arrogance of a young man—now a number in a penitentlary—but then known as Alger Hiss. He would listen with detached indifference to the pleas of a man who suffered exile, imprisonment and torture in behalf of the rights of man.

When World War II came to a climax, with Yalta, and Alger Hiss beside an ailing President as one of his chief advisors, Rhee learned of American promises to the Russians regarding Korea. Frantic as this new impending misfortune, he protested again, but in vain. He made a final effort at the San Francisco conference which saw the birth of the United Nations. The Secretary General of that Conference filed his petition without action or acknowledgement. The Secretary General was Alger Hiss.

With the help of the Army, however, Rhee was enabled to return to Korea after the Japanese surrender. From the moment he stepped on the soil of his homeland, there was not the slightest doubt as to his place in the hearts of the people. We Koreans have long memories for friends and foes. In Syngman Rhee's case, we had before us the embodiment of all of our prayers, hopes, and aspirations during the nearly 4 decades of anguish under a cruel Japanese military rule.

The task confronting Rhee could easily have daunted a less dauntless soul. He was in possession of only half his country. The problems of its transition from serfdom to

a vigorous democracy were multitudinous. Yet, little by little, land reform was put into effect, women were given the right to vote, and the people—responding to the sunshine of freedom—set about to build themselves up from their bootstraps. We all knew what Russia was doing in the north—training and arming a formidable army. Rhee pleaded for adequate arms, but again to a deaf ear, His forces possessed only the sidearms of a constabulary.

RHES'S LETTER TO HULL

Yet, when the Communists attacked, the people once more responded to Rhee's leader-ship and fought back. We would have been overwhelmed without aid from America and the United Nations, but even that—grateful as we are for it—does not diminish the glory of that first hour and Rhee's pronouncement, "We shall fight to the death rather than

accept Communist slavery."

I would like to close this article with a never-before published letter by Dr. Rhee to Secretary of State Hull which bears out all I have said about his gift of prophecy. But first, may I state that I should like an explanation from those who charge Rhee to be a dictator, the head of a police state, etc., etc., ad nauseam. Why is it that whenever he has appealed directly to the people on anything, and more specifically in two presidential elections, he has received their overwhelming support? Could they, by chance, know he is a champion of freedom and a revolutionsit for the rights of man?

And now to the letter to Mr. Hull. It was addressed to him on the stationery of the Korean Commission, which Rhee headed in Washington, and was written and delivered to the State Department 11 years ago, February 16, 1943, when the war was at its height.

It read as follows:

"Dear Mr. Secretary: You are familiar, I assume, with the many efforts I have made, as the representative of the Provisional Government of the Republic of Korea, to bring to the attention of the Government of the United States, especially since December 7, 1941, the desire of the Korean people to be as active as are any participants in the war against Japan.

"I feel I can address you, my dear Mr. Secretary, as a contemporary who has, as you have done, both dedicated and devoted his

life to the cause of democracy.

"There have been times in the past when a representative of Korea could ask and be granted a hearing by the highest diplomatic officer of the United States—as Secretary of State Gresham, in the administration of President Cleveland, addressed on behalf of the President of this great democracy a sharp note of protest to the even-then menacing Japanese. He did this when the Korean Minister, invoking the treaty of 1882 between our two nations, sought under its terms the intercession of the powerful republic which had persuaded Korea to forsake isolation and to permit trade and diplomatic relations to exist between our two countries. That treaty has never been abrogated.

"You are aware of the long and bitter fight of the Korean people to regain their liberty; you are aware of the revolution of 1919 against the Japanese and the continuous struggle since then of a government-in-exile, the oldest government-in-exile in the world, to keep afiame the light of democracy for 23 million people who have ever willingly continued to give their life's blood in its

defense.

"We have, Mr. Secretary, a national existence of more than 40 centuries, and we are compelled to supplicate the world's greatest democracy and to receive, in nearly 15 months of war against a common enemy, no word of encouragement, no deed of assistance, no sign that America, save for one fleeting reference by President Roosevelt, who was aware of our existence, sympathized with us, wished to help us, or even cared to receive our offers of assistance."

HIS GIFT OF PROPHECY

"I wish in this letter to go on record that, with the publication of reported Russian aims to establish a Soviet Republic of Korea, your Department, more than a year ago, was warned both by me and American friends of Korea, in visits and talks with your aides that the inevitable consequences of the action of the Government of the United States in spurning the provisional government of the Republic of Korea—a Government conceived in the ideals of Democracy—would result in the creation of a Communist state.

"May I beseech you again, my dear Mr. Hull, for the opportunity to come by and

talk to you personally?"

Dr. Rhee never was given the opportunity to see Mr. Hull. Some of his American friends believe to this day that the Secretary of State never was given the opportunity to receive and read the letter.

Complete the Lewis and Clark Highway

EXTENSION OF REMARKS

HON. GRACIE PFOST

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mrs. PFOST. Mr. Speaker, under unanimous consent to extend my own remarks, I include in the Congressional Record Senate Joint Memorial 4, which was passed by the recent session of the Idaho State Legislature.

The memorial asks that Congress appropriate sufficient funds to complete the last remaining link in the Lewis and Clark Highway—that fabled road which follows the trail blazed exactly 150 years ago from Montana to the sea by the intrepid explorers whose name it bears.

Sentiment has been growing for many years for the completion of the road, and has come to a head in this sesquicentennial year of the Lewis and Clark Expedition. Organizations throughout the Northwest are joining in a crusade to complete the so-called missing link—all of which is in Idaho.

For more than 40 years Idaho has been whittling down the unfinished portion of this road, and now the remaining gap is less than 30 miles in length. Some of it is watergrade road—all of it is through the beautiful, but rugged, Bitterroot Mountains.

It is an expensive stretch of road to build—in fact, it is estimated it will cost \$10 million to close the gap. It is difficult for a small State like Idaho to raise sufficient funds to match available Federal funds for the construction of such a road.

Idaho Senate Joint Memorial 4 is eloquent argument for a congressional appropriation to complete the Lewis and Clark Highway. It follows:

Senate Joint Memorial 4

To the Honorable Senate and House of Representatives of the United States in Congress Assembled:

We, your memorialists, the Legislature of the State of Idaho, as assembled in its 33d session, do respectfully represent thatWhereas the building of the unfinished link in what is known as the Lewis and Clark Highway, popularly known as the Wash-Ho-Tana Link, over the Bitterroot Mountains, joining Washington, Idaho, and Montana, is vitally essential to the defense of the Pacific Northwest in the event a mass evacuation becomes necessary because of an enemy attack on the strategic defense installations in this area; and

Whereas the building of this link of approximately 30 miles on the transcontinental highway would bolster the economy of this region, by providing better transportation for its vast lumber, mining, and agricul-

tural products; and

Whereas said Lewis and Clark Highway, with its wealth of historical landmarks, can become one of the great tourist attractions of the North American Continent, attracting thousands of visitors annually; and

Whereas the completion of this highway would be a fitting tribute, by the people of this generation, to the heroic trailblazers. Lewis and Clark and their immortal Indian guide, Sacajawea, who opened up to exploration and settlement the great Northwest territory of the United tSates exactly 150 years ago; and

Whereas the sesquicentenntial celebration of this historic event will take place on said trail within the State of Idaho during the present year: Now, therefore, be it

Resolved by the Thirty-third Legislative Assembly of Idaho of 1955, now in session (the senate and house of representatives concurring). That we do most earnestly request the Congress of the United States to appropriate sufficient moneys to provide for the construction of said unfinished link in said Lewis and Clark Highway; be it further

Resolved, That the Secretary of State of the State of Idaho be authorized, and he is hereby directed to forward certified copies of this memorial to the President of the United States, the Senate and the House of Representatives of the United States, and to the Senators and Representatives representing this State in the Congress of the United States.

This senate joint memorial was adopted by the senate on the 22d day of February 1955.

J. Berkeley Larsen, President of the Senate.

This senate joint memorial was adopted by the house of representatives on the 4th day of March 1955.

R. H. Young, Jr., Speaker of the House of Representatives.

The Easter Egg That Did Not Hatch

EXTENSION OF REMARKS

HON. JAMES C. MURRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. MURRAY of Illinois. Mr. Speaker, I understand the House is adjourning today for the Easter recess. I hope that all of the Members of the House will have an enjoyable Easter.

In their enjoyment of the Easter holiday I would like to direct the attention of the Members of the House to a few Government employees who will be working to make their holiday more enjoyable. These are the postal workers. They will be trudging muddy streets and

sunny streets, delivering Easter greetings to us from our many friends.

This Easter could have been a most joyous occasion for them if this Congress had acted upon their needed pay raise. The spirituality of Easter will, in all likelihood, be enjoyed by all of the postal workers, as well as all Americans, since the spiritual side of Easter discloses the hope of all humanity.

However, there will be no material en-Joyment of Easter for the postal workers. Materially, all it will mean is more un-Daid bills and fewer Easter eggs in their

children's baskets.

I hope that the significance of Easter will instill in the conscience of the Congress a recognition of our obligation to our fellow Government employees—the postal workers—and that we quickly enact legislation providing them with an adequate pay raise.

Story of a College

EXTENSION OF REMARKS

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. HALEY. Mr. Speaker, under leave to extend my remarks in the Apbendix of the RECORD, I include a recent editorial from the Tampa Tribune of Tampa, Fla. This editorial is entitled "Story of a College." The editorial is quite short, and does not tell the whole story of the college or of its magnificent President, Dr. Ludd M. Spivey. The editorial is splendid and heaps additional praise on the college and Dr. Spivey. But words in a book cannot describe What a fabulous person Dr. Spivey truly is nor can words express the many contributions that he has made to higher education during his association with the college.

Florida Southern College at Lakeland has become one of the finest colleges in the Nation under Dr. Spivey's tutelage. For more than 30 years now Dr. Spivey has devoted his energies to this school, not only in building a physical plant of unique design, but has built an educational plant on a spiritual foundation.

About 2 years ago Dr. Spivey suffered from a heart attack. Perhaps many of my distinguished colleagues read a recent article in the Washington Post and Times Herald that was written as an aftermath of this malady. It was entitled "I'm Glad I Had a Heart Attack." This does seem strange coming from a man who has been as active as Dr. Spivey, but when one analyzes the contents he realizes that Dr. Spivey was hever more serious in his life. We here in the Congress can learn a lesson from this article. That lesson is to learn to relax while doing our jobs. By doing this we will find our jobs will be easier.

Dr. Spivey's contribution to higher education is well known throughout the educational and lay circles of this coun-

try. His complete devotion to his school, church, family, and Nation has endeared him to those who have had the opportunity of knowing him.

The editorial follows:

STORY OF A COLLEGE

The growth and development of Florida Southern College, at Lakeland, is a source of pride to the people of this section, particularly to the Methodist denomination, under whose auspices the institution is conducted. It took a long time for the college to become permanently established. During the 40 years to the time Dr. Judd M. Spivey became its president, in 1925, it had used 4 different names in 5 different cities, under 11 different presidents.

The story of Florida Southern under Dr. Spivey's presidency is interestingly told by Charles T. Thrift, Jr., in a book entitled "Through Three Decades." Dr. Spivey became its head at the height of the boom, when the college had only two buildings and a big debt. Now it has 1,600 full-time students during the regular academic year, with a faculty of more than 100, and an imposing plant of modern buildings and equipment.

Dr. Splvey has labored earnestly and successfully in the upbuilding of the college. He has had the assistance of outstanding Floridians as trustees and enlisted the services of the distinguished architect, Frank Lloyd Wright, in designing the buildings and campus. For many years the late J. Edgar Wall, of Tampa, was chairman of the board of trustees.

We congratulate Florida Southern on its record of progress and achievement and President Spivey on the wonderful results of his devoted leadership. In prospect are numerous other improvements and expansions which will make it a still greater institution.

As I See It

EXTENSION OF REMARKS

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, trying to describe to the home folks the situation as it exists here is not a pleasant nor is it a simple task. This for the reason that the present outlook is for billions of additional tax dollars, conscription for universal military service, greater hardship for those without jobs, and no adequate remedy in sight for the immediate future. Now, as some radio commentators say, the details or specifications.

The increase in pay for Members of Congress and for the Judiciary is estimated to cost approximately \$5 million.

The conscription act passed by the House on February 8, 1955, calls for a minimum annual expenditure of \$36 billion.

The bill increasing the pay of men in the armed services, passed March 10, will cost approximately an additional \$745 million.

The contemplated increase in the pay of postal employees is estimated to cost an additional \$200 million. Additional pay for other Federal employees is figured at \$325 million.

One phase of foreign aid calls for \$3 billion.

The President, on March 11, reiterated his promise to keep our Armed Forces—250,000 fighting men, additional thousands of civilians—in Europe until there is no threat of war from Russia. Just when that will be, what it will cost, your guess is as good as anyone's.

By the adoption of the Formosa resolution, we promised to defend Formosa and any other territory the President might decide if and when Chou En-lai attempted to take that island as he has promised the world he will do. We authorized the President to use the Armed Forces for that purpose when and where he pleased.

Today's press states that Senate Democratic Leader Lyndon B. Johnson described talk of a war to defend two of the islands as "an irresponsible adventure for which we have not calculated all the risks."

Why authorize the President to exercise his judgment; then, when he does, complain?

Then, to finish the job there is in the hopper, with supplementing legislation in sight, a demand for universal military training for a period of 8 years with a possibility of an additional 2 years or a total of 10 years—120 months—confronting the youth of our land.

Oh, yes. Several hundred letters have come in from employees demanding that the minimum wage be increased to \$1.25 per hour. Personally, I have no idea how many employers can pay \$1.25 an hour, continue in business, create, and give jobs. Nor do I know the price at which the things produced by such employees and management must be sold; nor where the prospective customers are to get the purchase price to buy and so keep folks employed. Nor do I know whether or how many industries in small towns and cities will be forced to fold up because they cannot meet the competition of the billion-dollar corporations, which perhaps can pay a guaranteed annual wage at that rate.

Hope you are doing some serious thinking. Know I am.

The Problems of Our Older Folks

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. TUMULTY. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include an editorial from the New Jersey Herald News, of Passaic, N. J., dated March 28, 1955. This is an illustration of the outstanding humanitarian work being conducted in so many fields by my distinguished colleague, the Honorable Peter W. Rodino, Jr., of Newark.

The editorial follows:

THE PROBLEMS OF OUR OLDER FOLKS

Having learned to live longer than our forefathers, we now face the need to do something about our old age. The number of Americans over 75 years old has almost dou-bled in the last 13 years, and the anticipated continuation of the trend for the next 50 years emphasizes the problem of what to do about the health, security, employment, housing, and care of the aged.

Most old people are not well off. Many are unable to work. In many instances, pension plans make it difficult or impossible for in-

dustries to hire them.

A Jerseyman in Congress, Representative PETER W. RODINO, Jr., of Newark, is interested in the housing problem of the elderly. He has introduced legislation authorizing the admission of elderly persons in straitened circumstances to low-rent housing projects.

In the other branch of Congress, Michigan's Senator CHARLES E. POTTER wants a thorough study of the whole problem by a special commission. His statistics point up the seriousness of the situation. Millions of our older folks, he finds, are not eligible to receive social-security benefits. Approximately half of our 7,500,000 widows are over 65. In too many cases their incomes do not meet the most modest needs. Physical as well as financial limitations make it impossible for many of our older people to do enough for themselves.
Senator Potter does not know the answers.

But his Commission on the Aging and Aged, if created, could turn up the answers.

Cal-Sag Waterways Development

EXTENSION OF REMARKS OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. KLUCZYNSKI, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Marine News of March 1955 on the Cal-Sag waterways development:

CREDIT WHERE CREDIT IS DUE

Commenting on the formation of the Cal-Sig Waterways Development Committee in its Inland Waterways editorial appearing in the May 1954 issue, Marine News, said in

"The formation of the Cal-Sag Waterways Development Committee * * * constitutes a major forward step in the fight to develop and improve this vital link in the Nation's Great Lakes-to-gulf-waterway system. It is a guaranty of continuing effort.

In view of this, it is heartening to note that the Chicago committee, which last year (1953) was formed to sponsor this educational program for the development of the Cal-Sag project, has affiliated itself with the new organization, the Cal-Sag Waterways Development Committee; for by so doing it has assured continuity of effort. * * *

To achieve this continuity of effort * * * the new organization has retained the services of the group of men who were the creators of the dynamic and constructive program which has made of the Cal-Sag project

a major issue before Congress.

"Recognizing the national importance of Cal-Sag-and of so many other waterways projects falsely tagged with the label local interest-the Marine News in the past has given its unqualified support to those attempting to achieve improvements * * *

and shall continue to give this support.

That the confidence expressed by Marine News nearly a year ago was justified is proven by the fact that the President's Budget presented to the present Congress provides that funds amounting to \$4 million be spent in the first step toward the modernization and improvement of Cal-Sag.

This initial request constitutes the first crack in the wall of indifference that for so long seemed insurmountable-in fact, for

years was insurmountable.

Let it be recognized, then, that by no stretch of the imagination is this initial success a matter of luck or chance. On the contrary, it is the direct result of continuous effort to obtain action on behalf of Cal-Sag.

And, giving credit where credit is due, Marine News congratulates the Cal-Sag Waterways Development Committee on a job well

But sight cannot be lost of the need for continued effort. As Henry E. Seyfarth, Chairman of the Cal-Sag Waterways Development Committee, puts it: "One of the toughest phases of our work still lies ahead-for we must see to it that when the budget is finally passed the Cal-Sag project is still there and that the necessary funds for the start of construction are finally appropriated. As always, the last mile is the all important one."

Our Fraternal Responsibility

EXTENSION OF REMARKS

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, February 24, 1955

Mr. SHORT. Mr. Speaker, under leave to extend my remarks I include a brief biographical sketch of George E. Stringfellow, and an address he delivered before the Freehold Level Club at the Crescent Temple, Trenton, N. J., on February 20, 1955.

It is my hope that every American citizen might read the address delivered by George Stringfellow, because he is one of the finest Christian gentlemen I have ever known, one of the most successful businessmen who has been and is unselfishly devoting his life to the building of a better and stronger America:

GEORGE E. STRINGFELLOW

George E. Stringfellow, born in Reva, Va., the son of James and Elizabeth F. (Bowers) Stringfellow. Married Carrie M. Fearnow.

He is a director of Thomas A. Edison of Canada, Ltd., and Thomas A. Edison, Ltd., Scotland, and director and senior vice president of Thomas A. Edison, Inc., West Orange; was daily business associate of Thomas Alva Edison for many years.

He is director of Mine Safety Appliances Co., Pittsburgh, Pa.; member of the board of directors of the American Mining Congress, Washington, D. C.; member of the American Iron and Steel Institute and the American Institute of Mining and Metallurgical Engineers, New York City; member of the board of directors of Indiana Technical College, Fort Wayne, Ind.; and member of the board of governors, American Foundation of Religion and Psychiatry, New York City.

President and director of the New Jersey Taxpayers Association; founder and first president of the New Jersey division of the American Cancer Society; and the recipient of the American Cancer Society award. is also former chairman of the New Jersey Republican Finance Committee.

He is honorary member of the New Jersey Medical Society, was awarded the certificate of service by the Rotary Club of Orange. N. J.; was cited as the outstanding citizen of the Oranges and Maplewood; was cited by the Brotherhood Committee on Christians and Jews for bringing about a better under-standing among the three religious sects.

Received an honorary degree of doctor of fine arts from Ithaca College; honorary degree of doctor of laws from South Jersey Law School; honorary degree of doctor of laws from Upsala College; honorary degree of doctor of humanities from Indiana Technical College; a citation of merit award from the New Jersey Association of Business Schools; the 1953 Gustav Lucie brotherhood award.

Served 2 terms as president of the Kiwanis Club, of New York City; served 2 terms as president of the Chamber of Commerce and Civics of the Oranges and Maplewood; for-mer chairman of the finance committee of the Republican Party of New Jersey; mem-ber of the imperial divan of the Shrine of North America.

His clubs: The Kiwanis Club of New York City; Advertising Club of New Jersey; Union League Club of New York and Philadelphia; York Railroad Club; Duquesne Club of Pittsburgh; Montclair Golf Club, Montclair, N. J.; and the Essex Club of Newark, N. J.

Residence: 75 Prospect Street, East Orange, N. J.

Office: 177 Main Street, West Orange, N. J.

OUR FRATERNAL RESPONSIBILITY

(Address by George E. Stringfellow)

Gentlemen and brethren, I address you in this way because we are closely bound together by the precepts of our fraternity and by our belief in the brotherhood of man.

I was highly complimented by your invitation to address such a fine group of patriotic, liberty-loving, and enlightened citizens. who place the welfare of their country above all other considerations. I am sure that as citizens, you recognize your responsibility to preserve and protect our way of life, but I would like to remind you that as Masons you have an additional responsibility maintain the principles upon which our Nation was founded.

The doctrines that prompted our affiliation with our fraternity are those upon which our country rests. The foundation of which our country rests. our way of life, and of every institution of freedom, is faith in the existence of the Supreme Being. The thesis of our craft is the Golden Rule. To worship God as conscience dictates is our common statute.

Ours is a great Nation because it was born out of principle. It became strong through the application of integrity. But, let us take heed-it can die at the hands of moral decay, socialism, extravagance, or corruption-

The integrity of Rome, the cradle of western civilization was undetermined by moral corruption and extravagance. The power of France, once the protectorate of Christianity, was destroyed by selfishness and loose living. England sowed the seed of common law throughout the world, yet her great empire disintegrated when her people embraced socialism and placed social security above liberty. She is now in process of losing both.

We have observed in our country in recent ears, especially among some public officials. the kind of moral corruption and the kind of extravagance that ruined Rome. We have observed in America a trend to the kind of socialism that brought about England's disintegration, and we have observed the kind of loose living and selfishness that destroyed France.

In the last few years, loyalty to flag, to country, to our cherished institutions, and to our way of life, in some quarters, has been discounted and often jeered at by those disbelievers in God and those spreaders of hatred. Bereft of faith in God, they exercise their tyranny, unrestrained by the dictates of the Golden Rule. Their pattern is to impose on the people the fallacy that religion interferes with man's progress and the common good. They boldly proclaim that re-ligion is an opiate of the people and that belief in God must be destroyed.

We believe in the Fatherhood of God and the brotherhood of man. Our belief is in the right of the individual to life, liberty, and the pursuit of happiness. Such was the Philosophy of our Founding Fathers, who built on this continent a civilization which for prestige, wealth, and power, has no equal in the annals of history. We have had great material success, but with it we also encountered hazards of great magnitude.

In our economical gains we have suffered important spiritual losses. We have lost in a large measure that assurance that springs from faith in divine guidance, which was a powerful factor in the lives of those ploneers who laid the foundation of America. It was divine guidance that gave them faith and courage to push forward the frontiers of world commerce, and to build up our Nation and to increase the living standards of all people. To maintain all that we have gained in the short history of Our Nation, we must recapture that strength that comes only from a spiritual source.

While there is a dark side to the picture, there is also hopeful evidence that the people are turning more and more to God for help. In the period from 1945 to 1954 the number of church members in the United States increased from 72 million to 95 millionan increase of 13.7 percent, as compared with a 12.5-percent increase in the Nation's population. Today, 59 percent of the population of the United States are church members, as compared with 16 percent in 1850, when the record was first available.

Even in Russia the Communists are dis-Covering that too many Russians go to church and are stepping up their program to combat this movement which is a threat

to their atheistic philosophy.

There is the encouraging evidence that the membership in the Girl and Boy Scouts, in the YMCA, YWCA, the YMHA, and YWHA, and similar organizations, is increasing, and of course you all know that the number of Freemasons in our country is greater than ever before—having increased about 550 percent during the last 75 years, compared to a 276-percent increase in population.

These are good omens and should encourage every one of us. A revival of moral and ethical standards and the simple integrity of our people will insure the perpetuation of the basic principles of life for which our ancestors fought and died. There is hope for America when organizations such as ours reveal a deep appreciation for American ideals. There is hope for America when Masons put into practice the teachings of our great fraternity. As you know, we can preach a better sermon with our lives than with our lips. It is what we do in this world that counts, not so much what we say.

As Masons it is our responsibility to bring men of all faiths and groups to the understanding that there is a common meeting place where men can understand one another, cooperate in a tolerant way, and rec-Ognize that the true foundation of individual freedom is to be found in the Ten Commandments and the teachings of both the Old and

New Testaments.

Spiritual light is desperately needed throughout the world today. It is needed by enslaved people and it is needed by free people. We, as citizens and as Masons, must help develop the spiritual resources essential to the maintenance of freedom and democracy. We must, by our conduct and example, do our part to create a moral climate which will bring hope and freedom to the world.

Confucius stated this much better than I when he said:

"With righteousness in the heart, there will be beauty in the character; with beauty in the character, there will be harmony in the home; with harmony in the home, there will be order in the nation; and with order in the nation, there will be peace in the

We can do much, if we will, to make Confucius' philosophy become a living reality.

Kaskaskia Valley Project

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include House Joint Resolution 20 adopted by the 69th Illinois General Assembly, which calls upon the Congress of the United States to give favorable consideration to the survey report of the Kaskaskia Valley project and to appropriate sufficient funds to continue planning of the Carlyle Dam and to commence planning of the Shelbyville Dam of the project, as well as to provide appropriations for construction funds.

The resolution follows:

House Joint Resolution 20

Whereas the Congress of the United States. in 1938, authorized the construction of a dam on the Kaskaskia River at Carlyle, Ill., with auxiliary structures above and below such dam, in accordance with a report of the Corps of Engineers, for the purpose of flood control. with other incidental benefits; and

Whereas the 2d session of the 83d Congress of the United States appropriated a sum of \$50,000 to commence detailed planning of said dam, which planning is now being performed by the Corps of Engineers, and there is now a request before the Congress of the United States for additional funds to continue such planning; and

Whereas subsequent to the aforementioned authorization, the Corps of Engineers, at the behest of the Congress of the United States, made a comprehensive study and survey of the entire Kaskaskia River Basin, with a view to submitting a report outlining an economically feasible flood-control plan for the entire basin, and now have that report in its final stages before submission to Congress; and

Whereas said report is expected to recommend the expansion of the original authorization to include the construction of a dam and auxiliary structures at and below Shelbyville, Ill., on the Kaskaskia River; and

Whereas the Kaskaskia River services and drains 22 countles, representing approxi-mately one-fourth of the State of Illinois;

Whereas water is now universally recognized as our most valuable and limited natural resource, and the need for water conservation and control is both a local and national problem; and

Whereas the Kaskaskia River is noted, not only for its disastrous and costly floods, but also for its extremely low levels during the dry seasons, thereby causing the Kaskaskia

Valley Basin to be annually threatened with the prospect of disastrous floods followed by prolonged and dangerously low water supplies which now endanger the welfare of the people and acutely increase the economic necessities of the area; and

Whereas completion of the comprehensive plan of flood controls on the Kaskaskia River in accordance with the recommendations of the Corps of Engineers will control floodwaters, eliminate flood damages, and will hold and conserve floodwaters for use during seasons when the area normally suffers acute water shortages and will, thereby, encourage and increase the economic and social development of southern and central Illinois. and, in addition, will operate to alleviate flooding and improve essential navigation downstream on the Mississippi River; and

Whereas the benefits to be expected from completion of the Kaskaskia Valley project will exceed the estimated cost thereof and the State of Illinois is ready and willing to assist in this project: Now, therefore, be it Resolved by the House of Representatives

of the 69th General Assembly of the State of Illinois (the Senate concurring herein), That the Congress of the United States be, and it hereby is, memorialized to-

(a) Give immediate and favorable consideration to the recommendations in the survey report of the Kaskaskia Valley project, as soon as such report is submitted to Congress by the Corps of Engineers; and

(b) Appropriate sufficient funds in the current session of Congress to continue and complete the detailed planning of the Car-

lyle Dam; and

(c) Appropriate funds to commence detailed planning of the Shelbyville Dam as soon as the Corps of Engineers indicates it is ready to commence such planning; and

(d) Appropriate construction funds for both dams at such times as they can be economically used by the Corps of Engineers;

and be it further

Resolved, That copies of this resolution and its preamble be forwarded by the Secretary of State to the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, the chairman and minority leader of the Senate Appropriations Committee, the chairman and minority leader of the House Appropriations Committee, and to the Senators and Congressmen representing the State of Illinois in the Congress of the United States.

Byelorussian National Republic Day

EXTENSION OF REMARKS OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. LESINSKI. Mr. Speaker, I wish to call attention to a people whose national aspirations have not been realized. Nevertheless, the example of the Byelorussian people living under a relentless dictatorship offers a continued basis for our faith in the ultimate freedom of man everywhere. I am grateful for this opportunity to submit the following proclamation of the Governor of the State of Michigan, G. Mennen Williams;

PROCLAMATION

BYELORUSSIAN NATIONAL REPUBLIC DAY

For historical and geographical reasons the Byelorussian people have been unable to establish a national state of their own. On March 25, 1918, the first Byelorussian congress declared the independence of their nation. As a result of the Communistic onslaught, this independence was short-lived.

However, citizens of Byelorussian descent throughout the world have continued to work for the liberty of their homeland. They have never accepted the domination of Moscow and have been one of the leading anti-Communistic voices in the world.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim March 25, 1955, as Byelorussian National Republic Day in Michigan, and urge all our citizens to join with their brethren of Eyelorussian descent in paying tribute to the great will for liberty and independence which these people have presented to the world.

Given under my hand and the great seal of the State of Michigan, this 23d day of Marchin the year of our Lord 1955, and of the Commonwealth the 119th.

By the Governor:

G. MENNEN WILLIAMS,
GOVERNOR,
JAMES M. HARE,
Sccretary of State.

The President and Formosa

EXTENSION OF REMARKS

HON, DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I submit the following editorial from the New York Herald Tribune of Thursday, March 31, 1955.

Only yesterday I had lunch and spent more than 2 hours with the President of the United States. My heart goes out to him in the tremendous decisions he himself must make.

As I stated to the press, I do not know what the President and Secretary Dulles, one of the great and good men of our times, has decided, but whatever decision they make, I am for wholeheartedly.

This is not "passing the buck"—because some of us who have visited all the countries in the Far East know a little about it, and will not capitulate to pressures from both sides—but we fully realize that the final decision must be made by those higher and bigger than ourselves.

Knowing our good and great President and his outstanding Secretary of State, I shall abide by their decision because I know they will act only in the best interests of America and Americans.

THE PRESIDENT AND FORMOSA

The country is fortunate that at this juncture in its affairs it should have in the White House a leader so calm, so able, so universally trusted as Dwight D. Eisenhower. It is impossible to exaggerate the degree to which he has steadled the potentially turbulent situation of these months. His steadfast devotion to peace, his absolute insistence of the Nation's long-range interests as opposed to narrow or partisan considerations, have been the factors which permitted the United States to proceed with confidence along the path of a difficult and complex policy.

At his press conference yesterday Mr. Eisenhower showed again the qualities which explain the trust in which he is held by an unprecedented majority of the citizens. He was unwilling to be stampeded by alarmist or unsubstantiated views. By the same token, he was unwilling to engage in any personal recriminations, in any show of pique or censoriousness. Standing upon the facts as he sees them—and no one else is in a position to see them all with so clear a perspective—he could focus public opinion upon the true center of our present situation.

A different kind of leader in the White

A different kind of leader in the White House could have brought the country before this to the brink of confusion and disunity. It will be recalled that the original Formosa resolution, when threatened by disquieting delays, was cleared for passage by the simple assurance that the President himself would make the decision as to what might be necessary for the defense of Formosa. The rock-like posture of the President has since then cemented the bipartisanship necessary to meeting the Far Eastern crisis. At every step the belief in his moderation and profound good sense has kept Americans together, even when they could not see for themselves the precise contours of our Asian commitment.

As things now stand, Mr. Elsenhower bears himself the responsibility for determining in the light of events what moves are necessary to safeguard Formosa and the Pescadores. It is a sobering responsibility. Even if the threat is not as immediate as some military sources have wanted to make it appear, a decision in regard to the offshore islands in all likelihood cannot be indefinitely postponed. A clarification of policy is perhaps possible in the interval before the Red Chinese take any action; indeed, this newspaper has urged a greater precision in relation to Quemoy and Matsu. But the burden of such clarification, too, rests on the President. He moves under a staggering load, and the people cannot but take heart from the realization that he moves with such quiet strength.

If ever a man deserved the understanding support of the people, if ever one was entitled to their prayers, it is Dwight D. Eisenhower today.

Tenth Anniversary of the Occupation of Hungary by the Russian Army

EXTENSION OF REMARKS

HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. O'BRIEN of New York. Mr. Speaker, under leave to revise and extend my remarks, I urge all who sorrow for the good peoples of the world who are enslaved behind the Iron Curtain to give thought to a sad anniversary for the

people of Hungary.

On April 4, Hungarians throughout this country and the world will mournfully observe a tragic date in their history. That date will mark the 10th anniversary of the complete occupation of Hungary by the Russian army.

I should like to insert in the RECORD the following letter from the Hungarian General Benevolent Society at Schenectady, N. Y.: MARCH 25, 1955.

Hon, Leo W. O'BRIEN.

Congressman, House of Representatives, Washington, D. C.

DEAR SIR: We, the American Hungarians of this Tricity area (Albany, Schenectady, and Troy) are respectfully calling your attention to the fact, that April 4 is a mournful day for Hungarians all over the world. On this day, April 4, 1945, the Russian Bolshevik Army completed the occupation of Hungary, the land of our birth.

For 10 years Hungary and her people are being ruled with tyranny and terror. Her rulers are not chosen by the people, but placed and kept in power by the Communist

dictators of Soviet Russia.

For 10 years this godless reign has been plundering the country and holding the people in terror and slavery. Tens of thousands are in prison, concentration, and slave labor camps.

For 10 years all of these suffering and bleeding people are waiting, hoping, and praying for their liberation by the western free world.

The American Hungarians of this Tricity area at their mass meeting on March 13. 1955, resolved to ask your Honor to bring this sorrow and mourning of the Hungarian people to the attention of your colleagues in the House of Representatives, asking them on this day to remember the Hungarian nation, the freedom-loving people of Louis Kossuth and Cardinal Mindszenty.

Your cooperation in this matter would be highly appreciated by all Americans of Hun-

garian origin.

Respectfully yours.

Andrew Toth, President.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 723, Supp. 2).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by 'he Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Farm Research Is Not Keeping Pace

EXTENSION OF REMARKS

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1955

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Mr. Frank R. Ahlgren, the editor of the Memphis Commercial Appeal, before the Valley Oilseed Processors Association at Biloxi, Miss., on March 29, 1955.

Mr. Ahlgren is an outstanding leader and newspaper editor of the Midsouth and has long taken a strong and effective lead in agricultural research for the entire Nation.

I strongly feel that an expanded research and educational program will assist greatly in developing a strong and prosperous American agriculture. This Speech by Mr. Ahlgren is an outstanding example of the recognition of this important program by one of the Nation's outstanding editors. I have been particularly impressed with the excellent manner which Mr. Ahlgren has described the problems, the challenges, and the opportunities offered by the program. I am particularly interested in developing a long-range approach for the program, and hope that the entire Senate will join with me at a later date in giving their full support to a long-range plan for agricultural research and education.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FARM RESEARCH IS NOT KEEPING PACE

(Address of Frank R. Ahlgren, editor, the Commercial Appeal, before the Valley Oliseed Processors Association, Biloxi, Miss., March 29, 1955)

Agriculture has been getting more than its usual share of headlines in the last couple of years. Headlines like these: "Farmers Still in Tight Cost-Price Squeeze—Farm Surpluses Pile Up in Storage—Farmers Vote To Take Acreage Cuts—Farm Acreage Increase Studied by Congress—Farm Groups Study Ways To Boost Foreign Markets."

Now the striking thing about my subject today is that it has to do with agriculture; it has a definite bearing on farm problems of the day; it concerns the welfare of every American; and yet it seldom makes big headlines

I want to talk with you about the Government's traditional job of doing farm research, and of extending the useful results of research to farmers.

Let me say right at the beginning that private enterprise also has a big job to do in this field, and that we ought to get just as much of the job done by private firms as we can. But everyone agrees that government, both State and Federal, also has a great responsibility for agricultural research

and education. It is the Government's part of the responsibility—and particularly the Federal Government's part—that I would like to discuss with you.

There are reasons why this subject doesn't

capture big headlines.

For one thing, Government farm research isn't new. It dates back to 1862, when the U. S. Department of AR

United States Department of Agriculture and the land-grant college system were founded.

For another, the idea of spending tax dollars on farm research isn't controversial. Everyone agrees that each small farmer can't possibly set up his own experiment station; that he nevertheless deserves to keep pace in a national economic growth geared to, and sparked by, scientific research; and that the taxpayer's research dollar is returned many times over in the form of abundant food and clothing.

This should be a happy situation. Here we have a long-standing Government program that has proved its worth in a hundred different ways. Everyone seems to think the idea is fine.

And yet I believe one of the most urgent farm issues of our time centers around research. Not whether we are to have it, but whether the program is going to be big enough and good enough. Farm research has been inadequate so long, it has been underemphasized so shamefully, that it cannot keep pace with the Nation's economic growth.

HOW CAN WE TELL THAT FARM RESEARCH IS NOT KEEPING PACE?

The answer comes in several parts. It comes first in a quick look at what has happened to research appropriations in the last 15 years.

Until 1940, the Federal Government's investment in farm research was steadily expanded. It kept in step with the general growth of the Nation.

Since 1940, the story has been different. Our Nation has surged into the greatest period of growth in its history. Our population has jumped by almost one-fourth. At the same time, our production of everything combined has jumped by about three-fourths—so that the average American can eat better, clothe himself better, live in a better house, drive a better car, and be better off than ever before.

Scientific research played a vital role in making this possible.

Almost everywhere-in business and industry, as well as in Government-scientific research won a new prominence, a wider acceptance. The new products and new methods developed in American research laboratories became the envy of the world. From 1941 to 1953, the number of scientists and engineers employed on research and development work in this country increased from 87,000 to 192,000. The total expenditure on such work rose from \$900 million to an estimated \$4 billion a year. And the Federal Government was clearly the leader in this great expansion. In 1953, it picked up the check for \$2.5 billion-or about five-eighths of all the money spent on research in this country by all public and private agencies combined. We must not suppose that all this was explained by military research. Actually some of the most striking increases were nonmilitary. For example, the Federal Security Agency is spending 21 times more money on research now than in 1940; the Department of Commerce over 5 times more; the Interior Department, over 21/2 times more.

When we come to agriculture, however, we get a shock. Between 1940 and 1953, the Federal funds appropriated for agricultural research increased only about 56 percent, and this was just barely enough to offset the increase in costs. In real buying power, the Government's investment in agricultural research had no increase at all.

If we should trace the record of appropriations for agricultural extension, we would find that it parallels the record for research. In research, to find ways of making better products at lower costs of production, and in educational work to get those findings into actual use, the record of Federal support for farmers since 1940 is a record of neglect.

The biggest exception to this record of neglect was in the appropriations made by Congress for agricultural research and education during the current fiscal year. We had an increase of nearly 20 percent. I am sure that all of us here are gratified that leadership in achieving this increase was provided by persons like Senator STENNIS and organizations like the National Cotton Council and the American Farm Bureau Federation.

This was a healthy step, but just the first healthy step, in the right direction. We have to go a long, long way from here before farm research and education can begin to keep pace.

Does the policy of neglect, which we have followed so long, find any justification in a dwindling need for agricultural research? The truth is, the need has never been so great before.

Look first at the problem of lowering the costs of production. The farmer is indeed feeling a painful cost-price squeeze, and not enough is being done to get those costs down, We see examples all around us:

Closest home to us, we see the many problems of chemistry and engineering and farm management that are standing in the way of faster progress toward mechanized production of cotton. But there are urgent problems which span the whole length and breadth of American agriculture:

Improvements in our knowledge of soil fertility have only begun to show what they could do for this Nation.

The principle of hybrid vigor, which has been applied with such spectacular success to corn, is an almost unexplored agricultural frontier.

We are losing 10 percent of all our farm animals from diseases and parasites.

animals from diseases and parasites.

The vast array of animal parasites bring wastage through lowered feeding efficiency, death loss, and unusable animal products.

Insects are costing the Nation \$4 billion worth of crops and livestock every year.

In this perid when form surpluses h

In this perid when farm surpluses have become a general source of national concern, it's very timely for us to think about utilization research. I wonder if people generally have any notion as to the inroads that are being made upon the farmer's markets because nonfarm products are being pushed more aggressively through utilization research. We can now cite many important examples, and the list will grow and grow until the people who are interested in agriculture—you and I—decide to face it and

to insist on a farm research program as big as the needs of this scientific age in which we are living.

The farmer must now face the fact that research has made it possible for a lot of alcohol to be made from natural gas instead of grain or sugarcane. He must contemplate the way detergents have been replacing soap, the way chemical extenders are replacing farm-produced fats, the way plastic products are taking the place of wood. The cotton farmer must consider the way synthetic fibers, supported by enormous programs of utilization research, have been attacking his markets in one use after another.

markets in one use after another.

Your great

And what about cottonseed? industry, which has done so much to create markets for southern farmers, is itself a product of modern scientific research, combined with the vision and capital and pioneering spirit of American free enter-

prise. *

For two or three decades, cotton people have been worried about the new competition facing their staple lint; but today one of the major worries is, or certainly should be, the new competition that is facing their seed as well.

I am not the least bit inclined to discount the problems involved in the governmental support programs affecting cottonseed. This, however, is not my subject today. I do want to say that it is increasingly evident, from the viewpoint of a layman, that we need a lot more research on the utilization of cot-

tonseed products.

Even to a layman, it is perfectly clear that your industry in recent years has had to contend with a lot of competition that was either bigger or stronger than it had been in years past. I refer to the competition of soybeans and other oilseeds for your oil and meal markets and the competition of woodpulp for your linters markets. In every case, as I see it, your industry needs a great deal of emphasis on scientific research, in order to keep you in the running with your competitors either by overcoming quality handicaps or by widening your margin of superiority. I'm not suggesting that this could solve all your problems-not by any means-but I do say it is a very fundamental problem of your industry, as I'm sure you realize.

All I have said up to now has been background for my chief point, which is this: Something must be done to put this program back in step with our national economic growth.

What is the remedy?

If we really want a good prescription, one that will give more than temporary relief, I think we must set our sights pretty high. I think we must have a long-range plan for building up farm research to an adequate level—a long-range plan based on the Na-tion's needs rather than on the shifting sands of political expediency.

The necessity of a long-range plan of farm research is my message to you today.

It is necessary because basic research, our most urgent need, is by nature a time-consuming, long-range business. This type of work promises the really big payoff in farm research, but a payoff which may be 5. 10 or 15 years away.

Our research men have been forced to skip most of the basic, longrange projects. Their budget leads such a precarious existence from year to year that they have had to conbudget leads such a centrate on short-term projects where the payoff may be small but is likely to be quick—say in a year or two. They know they will have money to complete the "quickle" projects, and that they will be armed with at least some new results in fighting for next year's appropriation.

This matter of shooting for the little rather than the big payoff can be pointed up in any number of ways. For example, we know weeds are a big problem in most crops, and that chemicals show great promise as a low-cost means of controlling weeds. The "quickle" project approaches this problem head-on. It simply starts field testing a head-on. It simply starts field testing a whole horde of chemicals in a search for those which will kill weeds, but not crops. We might call this the needle-in-the-haystack approach. Up to now, it has achieved many small successes in chemical weed conno really big ones.

The approach through basic research is The first job here is to search into the inner plant processes of both crops and weeds. The goal is to find out how these plant processes differ—why chemicals will kill one plant and not another. In short, basic research first tries to get an understanding of what should work and why; then it becomes possible to tailor-make various chemical compounds that should do the job. The big payoff in this case might be many years in coming, but it could completely revolutionize our methods of controlling This is the kind of payoff we weed pests. can expect with definite, long-range buildup in farm research.

But long-range planning is necessary for still another reason. If the fruits of research are to be applied on farms without wasteful delay, we must have a farsighted buildup in the size and effectiveness of the agricultural extension service.

County agents of the Extension Service are spread too thin to give farmers the kind of help they need in applying research.

Each time research turns up a new prac-tice, it must be carefully fitted into each individual farming pattern. Every pattern is complex, no two are quite alike. So the county agent, in helping apply research, should work directly with each farmer.

But even now our agents find it impossible to get foot on most farms. What of the future when science steps up the flow of complex new practices? Farmers will need individual help more than ever. We must have a long-range plan for supplying this

We can't just say to the Extension Service, "Go out and hire more men and work directly with farmers."

The immediate problem is, Where do we get the men? You can't send just anyone out to help farmers apply research. You must have men with sound agricultural backgrounds; men who have been trained in extension work; men who have been specially schooled to know the farming problems in the areas they are to serve.

Few such men are now available. Most would have to be trained. This would require a sharp expansion in the teaching facilities at agricultural colleges, perhaps setting up some entirely new departments. It would require a special effort to interest more promising young men in becoming county agents.

These things take time. They have to be planned and developed over a period of years. They require a gradual buildup in extension funds, carefully scheduled to meet both our needs on the one hand and our ability to staff the expansion on the other

The necessity of a long-range plan is clear, both for research and for research application. But a plan is worth little unless carried into action.

How can we make sure that our long-range plan, once set in motion, will not have its heart cut out next year, or the next?

How can we eliminate the annual guessing game over appropriations, so our research men can do their job as it should be done?

We cannot do it by simply having an allout drive to increase appropriations for any 1 year. We need firm commitments on how much money will be available 2 years from now, 3 years, 4 years, and 5 years.

Otherwise the annual guessing game will start all over again. The research man's

budget request will still be a compromise between what he needs and what he believes Congress and the administration will stand There will still be the regular battle of the Budget Bureau, with the friends of re-search besieging the White House if the ax gets too heavy. There will still be the House and Senate gauntlets to run every year, and the usual scurrying to restore vital items chopped from the budget request.

This kind of guessing game just doesn't make sense for a Government program which everyone agrees is good, which is politically nonpartisan, which so urgently demands

long-range planning.

That is why it is so important to commit ourselves to a definite buildup in farm re-

search over a period of years.

During the present session of the Congress Senator STENNIS and others like ourselves interested in agricultural research had a decision to make: Should we settle for the \$131/4 million increase for research recommended by the President's budget or continue to press for the \$20 million which we had thought would be a minimum appropriation? We decided on the \$131/4 million figure, but with a distinct understanding. we hope, that we will be supported in our plans for a long-range program in later appropriations.

A long-range plan should appeal to almost every lawmaker. At present he tends to see farm research as a year-to-year thing which may or may not help his constituents during his term of office. A long-range plan, iden-tified with the Nation's future progress and well-being, should allow him to raise his sights above the immediate interests of special groups. It should inspire his vision and statesmanship and patriotism.

Any taxpayer, properly informed of the facts, should welcome the idea of a longrange plan. His investment will earn higher dividends if research dollars can be spent more effectively in a long-range program.

And what about farmers themselves? How do they feel about a long-range program of

research and research application?

The leaders who have been chosen to represent farmers provide the answer. Those who represent the biggest cross-section of the Nation's farmers are not just for a longrange plan of research. They have taken leadership in actually developing such a plan. As soon as final details can be worked out. they believe their organizations will commit themselves to the plan.

The plan will call for a firm commitment to provide specified sums of money, for specified years, over a specified period of time.

As it now stands, the plan is being projected over a 5-year period. It will not call for a sudden, swift buildup in appropriations. Research projects are not developed in a day—nor laboratories built, nor new staff members trained. So the plan will call for moderate annual increases, scheduled to come no faster than they can be used in an orderly expansion of work.

The long-range plan sets 1960 as the target date for our farm-research program to be keeping pace with the overall growth of the country. But what of 1961 and beyond? Are we to start another 15-year cycle of neglect?

By no means. But it just isn't sensible to commit ourselves to specific annual appropriations that far in the future. Our longrange plan must have reasonable flexibility. As time goes by, we see new needs, new opportunities. They require new projections.

For the time being, it is enough to look

5 years ahead. Our farm organization leaders feel this is a critical period for agricultural research. So do our research and extension workers in the Department of Agriculture and the land-grant colleges. By working together, they are developing a practical long-range approach to the prob-lem. By drawing on the thoughts and resources of thousands of persons, they are putting the final touches on a realistic projection of where we need to go with farm research over the next 5 years.

So part of the lob is about done. soon have a long-range plan. Commitments to this plan will be in order before very

To be sure of success, we must have commitments from several different places.

The long-range research plan must be politically nonpartisan, so we need commit-ments from both major political parties.

The plan calls for united action by both bodies of Congress, so we need commitments from the House and from the Senate.

The plan calls for the President and the Budget Bureau to see eye-to-eye with Con-gress, so we need a commitment from the administration.

Of course, there is one additional commitment that underwrites all others; that is, a commitment from the American people. The issue of whether farm research keeps bace is not for farmers alone. It is for everyone who wants to see this country realize its true potential for improving the well-being of its citizens.

Americans do not hesitate to commit themselves when an issue is clear cut. So a part of our tob is to make the long-range program of farm research as clear cut as it really is. If we do this well the American people will not hestitate to give their commitment.

Sermon of Rev. Mitchell Whiterabbit on the Reinterment of Col. Mitchell Red

EXTENSION OF REMARKS

HON, LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. JOHNSON of Wisconsin, Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the RECORD the sermon delivered by Rev. Mitchell Whiterabbit on the reinter-ment of Cpl. Mitchell Red Cloud on March 26. In a previous issue of the RECORD I covered the career of Corporal Red Cloud, who was killed in Korea on November 5, 1950, and awarded the Congressional Medal of Honor posthumously for his bravery. Corporal Red Cloud was born, raised, and educated in Jackson County. His mother, Mrs. Nellie Red Cloud, and brother, Merlin, now live at Route 5. Black River Falls. Following is the text of Reverend Whiterabbit's sermon.

Text: "Greater love hath no man than this, that a man lay down his life for his friends."

A son, a brother, a comrade, and a friend has returned. He has come back to the land of his birth, to the land of his fathers, to the land he loved. No more will he be called upon to leave us, for he has come back to rest in peace. Mitchell Red Cloud, Jr., has returned not in the manner which he chose, nor in the way which we would like to have him return, but destiny has stepped in and has decreed the manner of his return. Yet he comes back in glory, full of honors and recognition.

Because Mitchell Red Cloud, Jr., belongs to that select few of valiant men, we today are gathered here to render unto him the tribute which he rightfully earned on the field of battle. He was called upon again to defend the principles of freedom and our inalienable rights which were threatened. In that call to duty by his country he chose to make a supreme sacrifice in order that our heritages may be preserved. He gave his very life so others may live. His courageous action and self sacrifice can only bring to our minds the words of our Lord and Master, "Greater love hath no man than this, that a man lay down his life for his friends" (John 15:13). It is on this plane of love which he chose to die.

Some of the greatest chapters in human living have been written in terms of the sacrifices of life for the sake of others. Students of life have pointed out that the higher you ascend in the scale of life the stronger is this element of sacrifice. In the lower order of life you find parent organisms feeding on their own offspring. As life rises in the animal scale you find the mother principle asserting itself-life rising to the protection of the young. When you arrive at the human level you find the tender relationship of love between friend and friend, parent and child, and husband and wife. The highest level of human living is found at the point where one life is willing to sacrifice itself, if need be, for the good of another.

The classic story of the 4 chaplains of World War II on the naval ship Dorchester. is an illustration. Standing on the deck of the sinking ship the 4 chaplains, 1 Catholic, 1 Jew, 2 Protestants, gave their lifebelts to the enlisted men aboard, and with arms and hands joined in a symbol of fellowshin and love, went down with the ship. "Greater love hath no man than this, that a man lay down his life for his friends."

Such a sacrificial love can only command admiration.

In the days of old, Tigranes, King of Armenia, emerged victorious from battle after battle, but at last he met defeat at the hands of a Roman general, Pompey the Great. Before long, King Tigranes and his queen, with their children, were brought before Pompey to receive the sentence of death.

In that august presence the captive mon-arch pleaded that he alone might die, and that his queen might return to her home with the children, whom she loved. Moved by that plea, Pompey granted pardon and freedom to the entire family. On the way home Tigranes turned to the queen and said, "What do you think of Pompey the Great?"

"I do not know. I scarcely looked at Pompey."

"Where were your eyes that you did not see Pompey the Great?"

"My eyes were fixed upon the one who loved me and my children so much that he wished to die to set us free."

This is the kind of love which Jesus, the son of God, spoke about. It is a love which does not fail in the crucial moments. a love that demands all, even unto death.

This is the love which we desperately need in our time. Twice within the life span of man have our finest young men and women been called upon to go to war. There have also been lesser wars which did not demand the total effort of the Nation.

These young men and women obeyed and went. They helped to set things right. Some even failed to return home.

Once more the nations are arrayed against each other in armed camps ready to march. With long-range bombers capable of attaining tremendous speed and guided intercontinental missiles carrying atomic and hydrogen and even cobalt, warheads no nation is now safe from being totally destroyed and being rendered ineffective. The weapons of today, devised by ingenious men, are capable of destroying our civilization.

When Dr. Albert Einstein was asked if he when Dr. Albert Einstein was asked if he knew what would be the weapons used in world war 3 he replied, "I do not know. But I can tell you what the weapons of world war 4 will be—stone clubs!" By that he meant that our civilization will go back to barbarism. Nations and people can co-exist and endure only in the spirit of sacrificial and brotherly love.

Anger and hatred are destructive forces in

any heart or life.

Hatred and ill will can destroy the man who harbors them in his life.

All of us would then agree with Henry Drummond that love is "The greatest thing in the world." Love drives men and women to do wonderful deeds, to make unbellevable sacrifices. Love is the lubricant of life which makes for coexistence with others to run smoothly and without friction.

In the logic of the Christian faith, greater and prior to Drummond's "greatest thing in the world" is God's love for us. From that we learn what love is and can be-and we are then moved to love in return. That love for God can only be expressed by love

for our fellows

Sometimes love may seem slow and may seem to fail. It seems to have failed with Jesus, with Stephen and Paul, and with thousands of others. But has it failed? History gives testimony to the fact that, given opportunity and time, it will succeed. It is the persistence of love as manifested in Jesus and others that causes us to respond today. "Love may seem to be the long way around but it is the only way."

We here today ought to be thankful to our God that He has raised up in our midst men and women who believe in the power of love to change the climate of the times. Fortified with that conviction they have fought tyranny, injustice, and evil. They have pro-tected with their very lives our cherished freedoms and our inalienable rights and our right to pursue our own way of happiness. They died in faith in order that we may live.

The faith of a man, how he lives by faith, and how he defends that faith is the only true standard by which a man can be judged. No greater tribute can we pay to Mitchell Red Cloud, Jr., and of valiant men of his kind than the tribute which our Lord and Master Himself gave: "Greater love hath no man than this, that a man lay down his life for his friends."

The Outlook for the Eisenhower Program

EXTENSION OF REMARKS

HON, PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. FINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a speech delivered by me on March 28, 1955, before the Young Republican Club of Hunter College in New York City.

The topic of my talk was the outlook for the Eisenhower program, and is as

follows:

THE OUTLOOK FOR THE EISENHOWER PROGRAM

Mr. Chairman and young Republicans, I wish to thank the members of the Hunter Young Republican Club for this cordial invitation to speak to you on "The Outlook for the Elsenhower Program."

The focus of the Eisenhower program is of course Elsenhower himself. In coming here to speak to you about the outlook of that program I am beset by certain imponderables. A Government program in our country, depends upon the mind and the will of the people. Those who in the past have had the audacity to predict the public will—even the professional prophets—have had occasion since then to adopt more humble and mecker attitudes. They will not easily forget the literary digest poll and the assured election of Alf Landon in 1936. They will even less easily forget what happened in 1948—a catastrophe for the prophecy industry.

Apart from election results, ours is not a country in which a program is laid down and followed. Ours is a country in which a program is debated—after it is laid down. Then it is modified. And then the modification is debated, with quite likely, a modification of the modification, and concomitant debates for each change. The Congress of the United States as well as the administration see to it that the people are informed, a process of public education which on the whole is inescapable under the compulsion of our system. The Congress awaits or acts in anticipation of reaction from the grass roots. There are deliberately intended political irritants in the democratic system to protect our country from the practices that apply in a monolithic state—like Soviet Rus-

The major of these irritants is something rather sweetly called the party in opposition. It seems to some to be the function of the party in opposition to needle, to criticize, to waylay, to ambush and to so puncture, mo-lest and annoy the party in power, that the people will lose faith, elect the critics to power, and put the party in power in the being the party in opposition. position of In the Soviet Union they have an immediate, a summary, and a decisive answer for the faintest sign of a beginning of a party in opposition. Such a party ipsofacto becomes a party of traitors, of enemies of the people, of capitalists, imperialists, warmongers, and just plain and fancy scoundrels.

And, of course, they are shot and disappear from the Soviet scene, and from Soviet encyclopedias and history books.

So, as we can see, in a monolithic state a program is laid down and it is acted uponor else. This does away with all the non-sense of debate, it cuts through red tape, and it does not bother and baffle the people with details. In fact, Prayda and Izvestia are Soviet newspapers which see no point in printing more information about the government and the news for 200 million people than can be encompassed in something like 6 pages and often only 4. And there is no advertising to distract your attention from the pravda in Pravda-pravda being the Russian word for truth. In fact, in the Soviet Union you can go directly from your bed to the salt mines knowing simply that you are helping to fulfill patriotically the newest 5-year plan to make up for the old 5-year plan that the traitors they shot the day before sabotaged.

But since political science in the United States has not yet evolved to the fine sensitivity that prevails in the Soviet Union, we must necessarily put up with what we've got. So that under our awkward and faltering system when we speak of the outlook for the Eisenhower program we are dealing with imponderables which may very well knock whole chunks of any program into a cocked hat. Yet I believe that this is not going to happen to the Eisenhower program. I believe that the Eisenhower program will sail through to successful fruition mostly intact. And I feel so sanguine about this optimistic outcome, that in presenting it I do not feel that I am putting myself out on a limb, or joining my fortunes to those wretched unfortunates who predicted the election of Alf Landon, the defeat of the Dimocrats in 1948, or the election of a Republican Congress in 1954.

The basic essence of my faith in the Eisenhower program is Eisenhower.

If you relate the Eisenhower character, the Eisenhower personality, the Eisenhower pattern of action to the Eisenhower state of the Union speech-which is in so many words his program—then you can see the ground for my optimism. It is my purpose to give you a speech of evaluation, not a speech intended to inch. speech intended to incite or encourage applause. I want to be as objective as may be, in the light of my freely acknowledged bias for the Republican Party point of view. My admiration for President Eisenhower I shall make no effort to conceal. But if I give the effect of making a political address per se, I shall have failed in my aim. Of when a Republican discusses the outlook for the Eisenhower program certain political overtones are to be taken for granted. But this is a student group and I want you to enter into this evaluation with me more on the basis of what we both know than on the basis of what I want, or would seek to persuade you to believe.

Now the more I grow in legislative experience the more amazing it becomes to me how much it is really the people who make the decisions. I cannot tell you how that is beyond facts which are commonplace to us all. You decide because you write. You decide because Congress reads—but avidly—what you write. The newspapers you subscribe to and the comments you make in them, the meetings you attend, the issues that arouse your pride, your fear, your anger, your approval, all these become straws in the wind that contribute to the direction of legislative decision.

They are the meat and the potatoes that invest congressional action.

The Congress follows your thinking because for so many of us our official life depends upon doing what it is you want done. Out of this vast imponderable area of the public's mind on what direction the Government should take, the people, it seems to me, have found an extraordinary focus and an incredibly sympathetic reaction in President Elsenhower. They say the President is popular—but what does that mean? What it means is that the President's personality, his thinking or philosophy, his policies have been revealed to the American people in such a way that they find confidence in his leadership and comfort in his personality. find it a bulwark of strength to the Ameri can destiny that this man is in the White House. It means that for the era in which we live this relationship between the President of the United States and the 164 million people of the United States is about the happiest political marriage in the last quarter of a century.

That's what it means.

Suppose we inquire into the reasons for the happiness the American people feel in President Eisenhower. I have spoken about the era in which we live and the tailored suitability with which President Eisenhower meets the needs of this era. For what we seck so much out of our very soul's wish is amity-amity-amity with ourselves and with the world. What we want is a period of reason and reasonableness. We wear the scars and feel the exhaustion of two world wars, a depression and Korea. We seek the peace of untroubled waters. We know the meaning of stress and strain but we want the tensions released. No easement of any of our problems is worth an lota unless our security is intact, our strength formidable, our position mightily fortified. We know the threat from the Kremlin in all its ugly proportions. The question is; can we have alertness without fear, security without nervous friction. The question is can we move forward in our national life to a progressive future without feeling that we are

perpetually looking into the mouths of the Kremlin's cannon.

In Eisenhower the people have found the complete answer. He oozes amity at every pore. He avoids the bar room type of brawling that goes with a certain phase of politics. He has the common touch but he stands above the battle. Where other irritate, he reconciles. He is hard as nails and firm as Gibraltar with a proved soldier's knowledge on the complex problems of military strength. But he is sweepingly broad and paternally gentle in matters of the public welfare. Where he walks there is victory. The designs for success are woven into his career. His place, his superiors decided, when he had superiors, was in the foremost place of leadership. Leadership, not only of his own troops, but of the troops and the ships and the leaders of the allies. The judgment to give him leadership, determined by those set over him was afterwards overwhelmingly endorsed by the people. was a remarkable unanymity of opinion— everywhere—that in a crisis get Eisenhower.

It is a pity there is not time to go into the record of the 83d Congress, Eisenhower's first Congress: Governmental reorganization, veterans' and servicemen's legislation, legislation for the national defense and internal security, termination of economic controls, reduction of excise taxes, revision of the Internal Revenue Code—an omnibus tax revision bill that by itself is a historic achievement. The reciprocal trade agree-ments extension, and the extension of the Mutual Security Act, the agricultural legislation to give a sound basis for improving the lot of the farmer, all these and more constitute the foundation upon which the current program in the 84th Congress is built. The Eisenhower program in the 84th Congress is an extension logically of the Eisenhower program that went before.

In terms of the earth on which we live and with which we must survive or perish the President wants new billions voted in foreign aid. He wants lower tariffs. He asks that the United Nations be strengthened. The President wants the United States impregnable with 20th century emphasis on air power and the means to strike back with terrifying impact. In line with the possibilities under military developments he seeks to cut military manpower to 3 million by July 1 and to 2.85 million by 1956. But he wants to continue the power to draft for 2 years' service, building up a big military reserve and making professional military service attractive as a career. There is, of course, the continuation under the Eisenhower program of the stockpiling of strategic materials.

You have all heard about the Eisenhower \$101 billion highway plan. We know that while socialistic experiments are being curtailed, the President approves impetus toward partnership between Government and private interests in developing resources. Progress is indicated in the Federal development of major projects and there is the impending help to localities to build schools.

The President wants to raise the minimum wage to 90 cents an hour. Determination is strong to keep the price supports for farmers flexible. The Eisenhower program calls for changes favorable to unions in the Taft-Hartley Act. New housing units for lowerincome groups are planned by the tens of thousands. The President feels strongly about health reinsurance. The President's recommendation for raising the pay of the military—and substantially at that—is al-ready on its way through the congressional process. The same is true of salary increases for Federal employees. And the pay of judges and Members of Congress is already law-a long and painfully delayed consummation of elementary economic justice. President's program also seeks to bring Federal workers and the military under the oldage and survivors insurance program-social

If that program has not got the forward look then those who say so suffer from political bias and partisan blindness.

And it is not just a program like so many talking points in a sales pitch. Whole pieces of it are even now, as I speak, going through the congressional process-actively-on the path to the President's signature and to law. Some of it has already been made into law. Of course some of it will not go through entire. And, of course, there will be modifications here and there. The President's plan to have his authority extended to enable him to enter trade agreements passed the House, as I was preparing the material for this address, and is in a committee of the Senate. The same is true of the Uni-Versal Military Training and Service Act and the Dependents Assistance Act. The outlook is good for foreign aid especially since Harold E. Stassen, former director of the Foreign Operations Administration, returned With a favorable report after his tour of the Far East.

The amity and the peace I have been talk-ing about are predicated on hard steel and not on some visionary fool's paradise. President has said that the United States Would maintain fighting forces in Europe so long as there is the threat of a Russian attack on the continent. That is what I mean when I say the President's popularity is not the popularity built up on the basis of a smile and a benign expression, after the manner of an idol in the motion-picture industry. It is built on the faith of the people in a man of good will who knows the score and will not be deluded, cajoled, or softened up. They know he will avoid bloodshed and that he cannot be drawn into costly combat for indefinable ends in distant areas where results can be catastrophic If they go wrong and are of negligible consequence even if they go right. He knows the cost from firsthand knowledge to the Other fellow and his kith and kin, as well as to himself and his own kith and kin, and he will reckon with the cost. But above all, the people know that a man with an unbroken record of valor and achievement in combat like Eisenhower does not flinch and the people know that better than they know anything else.

History tells us that people in the mass have-for the most part-an unerring instinctual genius in their choice of leadership. And in a democracy this genius is, to be sure, developed to the finest point of sensitivity and accuracy. In fact I believe that the word "popular" is not the precise term. The word, I insist, should be faith. The word should be confidence. The word should be respect. The people know that they have a strong hand on the helm and that the man in the White House will not fling his fists about in random gestures, or make severe or abusive speeches, after the manner of the propaganda floods from the Kremlin. They know he will not be provoked by an enemy that would like to see him spend-if not waste-his country's substance and its prestige in the wrong place, in the wrong way at the wrong time.

What he insists our country shall have is a powerful economy at home—the most Powerful of all time in all the recorded anhals of nations—and formidible and prodigious military strength in being. He wants the potential enemy to know and to see both and to beware of their meaning. Behind all this is the moral principle of the West. There are allies tied to us with hoops of steel and integrated friendships founded upon a common faith in God, and a common civilization. We know and the President knows and the enemy knows that this country will not commit the overt act which may precipitate the unbelievable holocaust of world war III. But Eisenhower is letting the enemy know in no unmistakable terms that the Kremlin had better not commit the overt act either.

The same hard sense and bold planning the President has combined with understanding in his program for the domestic progress of the country, he has applied with perhaps even more intensity in confronting foreign policy and the half world of communism on the march. The United States has 6 Army divisions in Europe and 18 Air Force wings. The 6th United States Fleet is in the Mediterranean. There are equally mighty deterrent forces in the Pacific and I doubt whether the world has ever seen a more powerful fleet than the 7th which is now prowling the waters around Formosa. We hold the lead in the atomic race.

The peace the world enjoys today is not founded upon soft talk but upon hard muscle.

Of course the President's smile is warm and his expression is gracious. He has a word of praise for Marshal Zhukov, a good soldier's admiration for a good soldier, and this is returned in kind. Maybe good will come of it, But the President does not depend upon that for peace, except insofar as it may be an avenue to world amity. Now taking all these threads together, I think we can see the outlines of an Eisenhower program that makes for peace and I think the outlook for that program is sound, and that we can afford to be optimistic. But we cannot afford to be complacent, and we cannot afford to forget that we must remain forever on the ready.

There you have it.

I cannot pretend to know all the detours and corners that may have to be turned before the Eisenhower program becomes fact. But I hold it will be successful and that it will come to pass because it is a program that is not hitched to the moon. It is not a program that seeks the remaking of America. It is not a program that cuts corners with the Constitution of the United States. It is a program within foreseeable probability. It is not a program that has to be driven through with a sledge hammer to a rubberstamp Congress. What do the President's critics complain about-the critics of his own party? They complain that he is moderate and they want him to be extreme. And what is the answer to their criticism? The answer is that the President of the United States has become a mighty force inside our country for unity. Just what is wrong with that? When the President put through for congressional action his \$101 billion highway plan the complaints against it were not directed at the plan itself-more and better roads, for defense, for economy, for the safety of our people on the highways. The complaint against it was directed at the method of proposed financing, an all-important detail but still a detail. When I spoke of possible modifications in his program it is this kind of modification I have in mind. The basic idea will go through and become reality, like most of the rest of the program. That highway program is a monumental undertaking, an engineering feat comparable perhaps in our time, and in our context, to what the building of the pyramids must have meant to the ancient Egyptian civilization. But here is utility, here is national security, here is convenience, here are bigger and more avenues of communication for a more prosperous economy. I emphasize it because it lands itself to drama and easy explanation and because it is symptomatic of the Eisenhower philosophy.

The President seems to have effected to a considerable degree a cooperative reaction from a Congress the most powerful part of which is politically hostile. Of course there are rifts—here and there—and there would be if every Member of House and Senate were a Democrat and the President were a Democrat, too. And there would be if they were all Republicans. This is a democracy and not a monolithic state and rifts are what democracy is made of. But the President has drawn to himself the threads of

divergence and the threads of amity and brought about a harmonious pattern as nearly as that can be done by the genius of man dealing with a world of human conflict.

It is for these reasons that I believe the outlook for the Eisenhower program is solid and that the country is sensing this has achieved a prosperity in the last year that outstrips everything in the past. And the whole world, sensing the vigor of the Eisenhower program for peace, feels likewise a sense of sureness and of security, that, while not total, is at least reassuring and stronger than it has been since the end of World War II. Ladies and gentlemen, we are in the midst of a period of leadership comparable only to the greatest in our history. The future—I thank God—looks to me like an Eisenhower future.

Germany's Role in World Affairs

EXTENSION OF REMARKS

HON, ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. HRUSKA. Mr. President, on Sunday afternoon, March 27, His Excellency, Heinz L. Krekeler, Ambassador of the Federal Republic of Germany, delivered an address in Concert Hall, of Joslyn Memorial Art Museum, in Omaha, Nebr., on the subject Germany's Role in World Affairs.

His appearance on this occasion was in response to invitations to deliver the Alpha Sigma Nu lecture of 1955, as extended by the Very Reverend Carl N. Remert, S. J., president of Creighton University, its board of regents, and the Creighton University chapter of Alpha Sigma Nu, National Jesuit Honor Society.

My home city of Omaha and my alma mater, Creighton University, were highly honored by the visit of His Excellency, the Ambassador, and of the consul general, the Honorable K. Heinrich Knappstein, and of Dr. Erwin Boll, who accompanied him.

The Ambassador's address is timely and of especial interest in view of the present consideration by the Senate of the Paris protocol of 1954. Pursuant to leave to do so as kindly extended me by the Ambassador, I ask unanimous consent that the text of his address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GERMANY'S ROLE IN WORLD AFFAIRS

(Address by His Excellency Heinz L. Krekeler, Ambassador of the Federal Republic of Germany, Omaha, Nebr., March 27, 1955)

Ladies and gentlemen, it is an honor and a privilege for me to be here in Omaha, the center of the United States and the gateway to the West. I am happy to say that I do not come as a stranger; for I made the acquaintance of your city many years ago, and I always feel at home in farm country.

It was 22 years ago, as a matter of fact, that I came here as a young businesman. Traveling by train from the East, I was tremendously impressed by the vast distances I had to cover. I was impressed, too, by the agricultural and livestock production that

was evident on all sides, because I myself come from farming stock and I still live on my farm whenever I have occasion to return home. These early impressions have stayed with me, but they are heightened by comparison with the changes that have taken place during these past two decades.

I think, therefore, that I can talk about farming people and those who live in rural areas with some assurance, and I believe I am correct in saying that these people combine their deep love of country and of nature—their idealism, if you like—with a keen sense of reality. Without the latter none of us could survive in a world which has changed so amazingly in a relatively short span of time. Just as a farmer would not survive, or at least would not succeed, if he did not learn to cope with such hard realities as climate, and weather.

The changing realities to which we all have to adjust, because they vitally affect the lives of all of us, result from the revolutionary developments in the fields of atomic energy and of transportation and communication. It is a breathtaking experience for every observer like myself, living in the United States, to see how you accept these changes in a true pioneer spirit. No other nation has adapted itself with such determination to a radically altered set of circumstances. And this adjustment is carried over into your conduct of foreign affairs. Your energetic participation in the North Atlantic Treaty Organization and in the Southeast Asia Treaty Organization give ample proof of this.

Your foreign policy, as expressed in these community arrangements, is based on the concept of cooperation among friends and allies. This policy was cogently stated by Secretary Dulles when he said, and I quote: "Security for the free world depends, therefore, upon the development of collective security and community power rather than upon purely national potentials." Now this is true to an even greater degree for European nations, for our traditional military, political, and economic system is in many respects obsolete in mid-20th century.

We in Germany have realized that we cannot exist without closely cooperating with the other free nations of Europe. The entire concept of our national life and policy has changed. This is an adjustment that we have had to make, and I think we have made it successfully. We have come to understand that community power, as Secretary Dulles said, the consolidation of our resources is the first fact of life for us. We acted accordingly by participating in the formation of the Schuman plan, the European Community for Coal and Steel-an important step toward consolidation in the field of economics. The same six nations which pooled their resources in the Schuman plan attempted to extend the idea of consolidation to the military field by forming the European Defense Community. As it turned out, this was expecting too much in view of Europe's history; and the EDC failed. I am frank to say, though, that we in Germany still consider EDC the ideal solution.

It was at this time, however, that the real strength of the movement toward consolidation became apparent. The statesmen of the free world immediately recognized the urgency of the situation, and a short time later—within only a few weeks—they came together in London and then in Paris. That these meetings were held so promptly is a tribute to the statesmanship of your Secretary of State, Mr. Dulles, for he made clear to the countries of the free world the need for united action while at the same time making known unmistakably the position of the United States Government and of public opinion in this country.

In Paris a number of treaties were signed. There are three principal ones. Each of them has an underlying philosophy, for a treaty, after all, is only the legal form given to an idea about which there is common consent among the partners of the treaty. This is not the place for me to go into the detailed provisions of these treaties; but I think, on the other hand, it would be appropriate and worthwhile to consider their underlying philosophies.

The first treaty is concerned with the termination of the occupation regime in the Federal Republic of Germany. This treaty gives Germany the status of equality with the other partners. In this way it frees German sovereignty-and sovereignty is an inherent attribute of any nation-from the restraints which have been placed upon it. The underlying philosophy of this treaty is that there can be no partnership except among equals and that only a free member of the community is able to give his best for the common effort. Thus this treaty, even though the German people are the foremost beneficiaries of it, also serves the interests of the other partners.

Perhaps many of you wonder why a complicated treaty is needed for this purpose instead of a simple declaration. The reasons are manifold and reflect a complicated situation. There are, for instance, special provisions included concerning the status of Berlin, this outpost of freedom behind the Iron Curtain. Berlin is not formally a part of the Federal Republic. The deputies from Berlin in the German parliament, for instance, do not vote but act only in an advisory capacity. This not because we do not consider Berlin a part of our country. Quite the contrary. The decision, for instance, to hold the election of the Federal President in Berlin in 1954—where then President Heuss was reelected-symbolized in an impressive way the affection we have for our old capital and the great importance that it still has for

One part of this city, however, is still under Soviet control. The three western allies have stated that they would, and I quote "treat every attack against Berlin from any quarter as an attack upon their forces and themselves." They can maintain this position, however, as Chancellor Adenauer has said, only if they remain in Berlin in their present capacity as occupying powers.

Other provisions related to this treaty concern the status of the allied troops in Germany. There are American forces today in Great Britain, in France, and other countries. And under present conditions defense considerations make it imperative that these friendly troops continue to be stationed in the Federal Republic as well. And I can assure you that your boys are welcomed as by the German people, because we friends know, as they do, that they are there for the protection of all of us. No wonder, therefore, that we were greatly encouraged by President Eisenhower's recent statement that the United States will, and I quote again: "Continue to maintain in Europe, including Germany, such units of its Armed Forces as may be necessary and appropriate to contribute its fair share of forces needed for the joint defense of the North Atlantic area while a threat to that area exists, and will continue to deploy such forces in accordance with agreed North Atlantic strategy for the defense of this area."

A second treaty concerns Germany's membership in the North Atlantic Treaty Organization. Its underlying philosophy is obviously that the partner who enjoys the privileges of protection which only this mighty alliance can provide has to contribute his fair share to bearing the burdens of defense.

Let me say a word at this point about the attitude of my people toward this problem. You perhaps have noticed that so far I have not used the word rearmament. This was intentional, because rearmament, as such, is highly unpopular in Germany, I

think its unpopularity is understandable in the light of circumstances and is, as I have said often before, a rather healthy attitude. This does not mean, however, that the Germans are not prepared to do their duty when it comes to faithfully accepting the obligations that go with this new partnership. They will do so, for their sense of duty is as strong as ever. But they do it in a sober mood, because bearing arms again is not an occasion for jubilation among the German people.

I should like to mention one other point connected with this treaty. I refer to the declaration made first by the Governments of the United States, the United Kingdom, and France and later supported by the other parties to the North Atlantic Treaty. They stated that, quote: "They consider the Government of the Federal Republic as the only German Government freely and legitimately constituted and, therefore, entitled to speak for Germany as the representative of the German people in international affairs." We are very grateful for this, because here is a basis for an approach to our greatest specific problem which I still talk about later.

Now there is a third treaty, and I would not be surprised if many of you wondered why we need it. For as far as you and many other members of NATO are concerned, the NATO treaty is the only instrument which is deemed necessary for the purpose of common defense. Indeed, if it were not for conditions peculiar to the Continent restoration of our status of equality and membership in NATO would have been sufficient.

The Western European Union treaty, however, in its underlying philosophy, again reflects specific needs of the participating European nations for closer cooperation in The purpose of the Western many fields. European Union, as stated in the treaty, is to strengthen peace and security, to promote unity and to encourage the progressive integration of Europe. The treaty is designed to serve not only the interests of collective self-defense, but collaboration in economic, social, and cultural matters as well. To this extent it is a substitute for the defunct EDC treaty, although it does not contain that element of all-out integration that was the essence of this treaty. Nevertheless, the Western European Union is proof that the member nations are prepared to adjust themselves to present-day circumstances. I should like to add that this adjustment is not easy for nations with traditional rivalries, old feuds, and highly diversified cultural developments. The most important aspect of WEU, however, rests in the following fact. This is that at the London conference the British Government, under the leadership of Sir Winston Churchill and through his Foreign Secretary, Sir Anthony Eden, announced its historic decision to abandon its traditional policy and commit itself to close cooperation with the continental countries. It was declared that the British Government would agree to maintain for the indefinite future on the Continent four divisions and an adequate air force and not to withdraw these troops against the wishes of the majority of the member nations. I believe all the other participating nations appreciated deeply decision, for you will, I think, remember that one of the main objections which its critics advanced again EDC was that Great Britain was not a partner.

I think that in the long run the emphasis which this treaty puts on the consolidation of economic, social, and cultural affairs is as significant as its military aspects. Military power, to be effective, must be founded on a healthy economy and on sound social conditions. I need only mention the importance of raising by common effort our standard of living in Europe, for a high standard of living is a most effective safeguard against Communist infiltration and subversion. Actually, we have already made more

progress than is generally known. We have achieved excellent cooperation in the field of transportation, in the operations of rail-roads, and in highway planning. We have abolished all visa requirements, and the next step is in preparation, that is, to make it unnecessary to carry passports from one country to another and to make traveling in Western Europe as easy as it is, for instance, between the United States and Canada.

One of the most important steps in this field concerns the convertibility of currencies, because restrictions on currency exchange are a great obstacle in the way of economic coperation. We have already achieved great progress in this respect. Among the partners of the European Payments Union this exchange of currencies is liberalized to an extent that was unthinkable some 4 or 5 years ago. But one thing remains to be done. We must also free the exchange of currencies from restrictions as far as the dollar is concerned. We have made some progress in this respect, too. German importers can get for most items, especially for consumer goods, all the dol-lars they need without specific licenses. But the final step remains to be taken; and this is a problem of special interest to you. to speak very frankly, that many regard these currency restrictions, which we had to establish in order to preserve our monetary stability, as discrimination against the dollar, although they were not meant to be. Of course, we are pleased about every step you take in the direction of facilitating trade with the European countries, but we are also aware of the fact that we have a contribution to make. We are prepared to do this, but we cannot do this alone. It must be in cooperation with other nations, especially with Great Britain.

I should like here to draw your attention to another very constructive element contained in the WEU Treaty, and one that we hope will have far-reaching effects in the future. It is an agreement on the limitation of armament. You will recall that President Eisenhower, in his famous address before newspaper editors and publishers in Washington on April 16, 1953, proposed such a limitation on a worldwide basis. The President now has followed up this farsighted proposal by appointing Governor Stassen his special assistant on disarmament Problems, and I think it is helpful in this context that the members of the Western European Union will, with your advice and encouragement, set an example by proving that a freely accepted limitation of armaments is workable.

Now, to realize the greatest benefit from these treaties, we must see to it that major points of disagreement among the partners do not stand in our way. One such point concerns the Saar. The population of this area is ethnically German. No one has ever questioned that. But France does have a great economic interest there. An agreement on the Saar has been signed in Paris, as you know, and has been ratified by our parliament. I am sure you are also aware of the many objections to this agreement in Germany. It is true that it was a difficult decision to reach, but we hope sincerely that, in the long run, it will serve the purpose of this whole complex of treaties—that is, to foster closer cooperation in Europe and, especially, between France and Germany.

It is important to remember. I think, that this Saar agreement, although formally concluded between France and Germany, involves the participation of other countries as well. The high commissioner for the Saar, for instance, will be appointed by the council of ministers of the Western European Union and this council will supervise his functions. In addition to this, the United States and Great Britain will be asked to guarantee this statute.

The statesmen who drew up these treaties and the people who are participating in them have been constantly aware of the great overriding problem that has profoundly influenced all their actions. That is the division of Germany into two unequal parts by the Iron Curtain. Their awareness of it is apparent at various points throughout the treaties. In the treaty concerning the termination of the occupation regime, for instance, the signatories pledge themselves to end the division of Germany. The declaration which I have already cited in which the NATO and WEU members say that they regard the Government of the Federal Republic as the only representative of the German people is further evidence of their interest in this problem. To understand this situation fully it is necessary to realize that my country is not divided equally; but that three-fourths of the population live in freedom and one-fourth in bondage under Soviet

This problem is at the center of the great debate that has been carried on in my country ever since the treaties came under discussion in Parliament. In this debate there is no disagreement that the split should come to an end in order that those 18 million Germans in the Soviet Zone may enjoy the privileges of freedom, their unalienable human rights. The issue here is not a geographical one and for that reason the label that is so often used-German reunification—is inadequate. Our primary aim is to help our countrymen in their plight and to bring it to an end through peaceful means. When these men and women are again able freely to exercise their human rights, the unification of Germany will follow as a matter of course. On all these points there is agreement in Germany.

The difference in opinion lies in the best means of attaining this goal. The opposition wanted, for instance, that another try at negotiation with the Soviets over the question of reunification should have been made before ratification of the Paris agreements. The government position has always been that such negotiation could hope to be successful only if the nations of the West could negotiate from that position of unity and consolidation that the completed treaties will provide. We, in Germany, are happy that this is also your position, and grateful that we have your support, both moral and physical, in this matter.

I have tried at some length to explain certain recent developments as adjustments to the realities of the present-day situation and to make clear the meaning of Germany's role in these developments. That we can role in these developments. That we can make these adjustments of our own free will is, I think, an indication of foresightedness and strength of character. This pic-ture would not be complete, however, if we forget even for a moment one other important point. And that is that there are fundamental principles on which we must and will be firm, principles on which there can be no adjustment. These are the principles which form the basis of our common western heritage. This heritage is in great danger today, and in our constant preoccupation with preserving it we have formulated these treaties, which I have just outlined to you. We think that they are good and practical instruments and that they will serve this purpose.

The developments which I have spoken about, and to which we have tried and shall continue to try to adjust, can, I think, broadly be interpreted in the following way: Our scientific and technological achievements have outraced in many respects our social and political accomplishments. Perhaps one could say that scientifically man has achieved a far greater stature than morally or ethically. The achievements, therefore, present a challenge to our moral strength. Every single human being as well

as every nation is called upon to meet this challenge.

In our endeavor to atain unity among free peoples through freely negotiated agreements we meet many obstacles. We must overcome selfish desires; we shall have to abandon old and cherished ideas; we shall have to make sacrifices. If we can do these things, that will be proof that we can meet the supreme challenge of our time. If it is difficult to do this, if it hurts to make sacrifices, then I think we should always remember that infinitely more is asked of the present and following generation than was required of the preceding ones. If we cannot solve these problems that are small in proportion to the crucial questions of our day, we shall not survive.

day, we shall not survive.

If, however, we constantly prove that our moral fiber is strong enough to match the marvelous achievements of our brains, that the power of our soul is always greater than the power of our intellect, then we shall be able to hand down to our children and grandchildren a better and safer world. I believe that this thought contains the true meaning of the efforts being made by statesmen of the free world to bring about greater harmony and greater unity between their peoples. I can assure you that we in Germany shall continue to do our best to contribute toward the attainment of this goal.

Thank you.

Surgical Triumphs of the University of Minnesota

EXTENSION OF REMARKS

HON, EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial which was published in the Minneapolis Star of March 28, 1955, commenting on surgical triumphs at the university.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U'S SURGICAL TRIUMPHS

Minnesota is building a worldwide reputation for preeminence in heart surgery. The most recent operation, performed on a 13-year-old boy Wednesday, involved the use of a dog's lung to oxygenate the patient's blood. It was the first operation of its kind performed anywhere.

Minnesota's reputation in heart surgery has been steadily increasing since 1953 when university surgeons announced methods of refrigerating patients' blood in order to slow down the flow and thus give operators more time to work within the heart.

In 1954 the university again wrote international headlines with news of the first cross-circulation, or hooked-up heart, operation in which a human donor was used to supply heart and lung action for the patient. Since then more than 40 cross-circulation operations have been performed at the university hospitals.

Now the doctors have found a way to eliminate use of a human donor, thus decreasing the risks of each operation. A dog's lung is used to oxygenate the blood from the patient while surgeons are working within his heart. These techniques give surgeons a chance to operate in a dry field with the heart directly exposed to view. Earlier heart operations were "shots in the dark," because

the surgeon necessarily had to work within a pool of blood, obscuring his vision.

These surgical triumphs reflect great credit on our State university. They are striking evidence of the high quality of teaching and research that are carried on within its

Commencement Address by Spyros P. Skouras at the New York Medical College

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, April 1, 1955

Mr. LEHMAN. Mr. President, about a year ago Mr. Spyros P. Skouras, president of Twentieth Century-Fox Film Corp., and one of the outstanding public-spirited citizens of America, delivered a commencement address before the New York Medical College, in the course of receiving an honorary degree from that college. Mr. Skouras spoke on a subject which is most timely today, Mental Health.

I ask unanimous consent that this fine address by my good and eminent friend, Mr. Skouras, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SPYROS P. SKOURAS, PRESIDENT, TWENTIETH CENTURY-FOX FILM CORP., NEW YORK MEDICAL COLLEGE, WEDNESDAY, JUNE

Mr. President (Charles Halsey, president of board of trustees), members of the graduating class, ladies and gentlemen, with humility, and appreciation, I accept this honor from one of the great institutions of medical learning of our land. I thank you from my heart.

For nearly a century, New York Medical College has sent forth its young men, rep-resenting the blood of many races, to minlater to the afflicted and allay mortal pain.

These ministrations have been given, regardless of race, or creed, or national boundaries, for the art of medicine is the true practice of brotherhood among men. It represents democracy at its best.

Therefore, I feel an exaltation today, like that I have had on other wonderful occasions in my life.

One such unforgettable thrill came to me when, as an immigrant boy, I was uplifted by my first sight of the Statue of Liberty and its symbolic meaning to the tired masses of humanity.

Again, many years later, I was equally overwhelmed with emotion, when I returned to my native Greece-the cradle of democracy-as a citizen of the American democracy, and gazed upon the ancient Acropolis, lighted up at night in honor of the occasion.

At another time, when I visited old Jerusalem, and stood at the sepulchre of our Lord. I was carried away by a feeling of awesome reverence.

Years later, I was moved to the depths of my being, when I flew over the border between Chile and Argentina, and had my first view of Christ of the Andes, standing high among the peaks, imploring the peo-ple of the New World to give an example of peace and brotherhood to the people of the

On all these occasions, I was profoundly thrilled, as I am now, over the bonds that unite men and make democracy a blessing.

The profession you, young men, are about to enter, is the most democratic and noblest of all mortal callings.

The sacred trust reposed in you is exemplified, best of all, by the exalted words of the oath of Hippocrates. This vow of devotion has guided the medical profession for many centuries.

As you know so well, it was Hippocrates and his contemporaries who rationalized medicine as a science and removed it from the realm of superstition.

These early Greeks drew upon all sound knowledge existing, up to that time, in order to organize the medical profession. This was another of their great gifts to the arts, sciences, and culture of civilization.

That was a golden age of human progress. But, even so, the Greeks could not have dreamed of this miracle age of medical advancement, and the great discoveries which save human life and abate pain.

Your profession is now repaying these pioneers in the laboratory, in the hospital and home, on the battlefield, and in the midst of disaster.

Besides constant endeavors to widen the horizon of medical science, the doctor is always present where there is suffering, and his courage and fortitude are taken for He expects no honors, and no medals for gallantry. But he is, nevertheless, brave under all circumstances, whether in ministering to the wounded soldier in Korea, or in Indochina, or to the victim of violence, or accident, at home.

Only last week, many lives were saved by the extraordinary medical preparedness that followed the disaster aboard the aircraft carrier, Bennington.

Always the doctor stands in the presence of God.

I welcome this opportunity to speak to you because, in spite of the breathtaking achievements in modern medicine, I want to implore you, and through you, the entire medical profession, to conquer another great human suffering. I refer to the related field of mental health.

Another adage of the ancient Greeks was in effect this, "A healthy body, a healthy mind."

A healthy mind is the first requirement of a health citizen. But, believe me, gentlemen, there remains no greater challenge for you than that of penetrating into this vast and pathetic field.

Words cannot express the gratitude that future generations will owe you, if your profession can also help to ease the torment of the mentally ill, and explore more deeply this field, in order to reduce this awful sickness.

I know of no illness that brings greater torment, both to the afflicted ones, and to loved ones around them.

Beyond that, the ills of this world of ours can largely be traced to minds that are warped and twisted. It is the madmen of history who have created wars.

Who knows, but that it is along the lines of meeting this problem that, in time, we can help bring peace, and security to the world.

This is an age of miracles, in every branch of science, and all human endeavor. Let us pray that we can bring about another one. In view of the wonders achieved in the last half century, the possibilities of the next 50 years are staggering.

This golden opportunity is yours. You, young men, receive your degrees today from a warm and vibrant human institution, interested in a healthy citizenship. Your heritage is a precious one.

As a respected leader of his community, the doctor must minister to the soul and to the aspiration of his neighbors.

The community, where people are knit closely together, is the source of great ideas

that reach to all the corners of the earth. The communities into which you will go, are the segments of America which constitute the glorious sum total of our country which, today, is the hope of the world.

Your community will look up to each of you for the spiritual inspiration which will help to make your neighbors better citizens

of a free world.

You are the most fortunate of men, and you can render tremendous service. You will be leaders in the whole fight for freedom, because no matter what treasures of health, and prosperity we possess, they are of little consequence if we are not freemen.

Today, our freedom is again threatened because evil despots want to conquer and control all the world.

Yesterday, it was the Nazis and Fascists who inflicted sorrow, and suffering upon the world, and particularly upon their own people, by their greedy and insane ambitions.

Today, it is the distorted minds of the Kremlin which have enslaved half the world, and seek to conquer the rest of it with their satanic doctrines.

As long as our country has faith in God, and freedom, as long as it is the good neighbor and the good Samaritan to all peoples, and as long as its devotion to democracy remains, we know that this effort to conquer and enslave cannot succeed.

We must, therefore, work with all our hearts and souls, whatever our calling may be, to build a better America, as strong in its faith to these principles, as it is strong in its material resources and resolute purpose to resist, and overcome any aggression,

May God grant you the power to build a citizenship that is as healthy in mind as it is robust in body, to meet this respon-sibility without flinching.

Your generation, and your profession can give greatly to the leadership that will keep America safe, and the beacon of liberty aflame for all men.

The Late Senator Maybank

EXTENSION OF REMARKS

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Wednesday, March 2, 1955

Mr. JACKSON. Mr. President, in accordance with the unanimous-consent agreement of March 2, 1955, I present and ask to have printed in the Appendix of the RECORD a statement in tribute to my late colleague, the Senator from South Carolina, Burnet R. Maybank.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JACKSON HONORING SENATOR BURNET R. MAYBANK

Mr. President, it is not possible for me to add to the outstanding tributes that have been paid today to Burnet Maybank. I can only confirm and corroborate these deserving statements. I shall always remember him for his deep and devoted interest to the problems of not just the State of South Carolina but the the Nation as a whole. He was sincerely interested in assisting other Senators with their many problems. He never hesitated to devote his talent, his energy, and his wisdom to the many social and economic problems of the Nation. He had a broad vision, a broad understanding of our country and the world as it is today. His wise counsel, his devoted service, will be sorely missed in this Chamber. I wish to join with my colleagues in extending to his family my deepest sympathy.

Ike Frowns on War Talk

EXTENSION OF REMARKS

HON, EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Ike Frowns on War Talk," which was published in the Minneapolis Morning Tribune of March 30, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE FROWNS ON WAR TALK

President Eisenhower has done his countrymen and the free world a great service by letting it be known that he is not a party to the war talk being put out by some of his principal advisers.

his principal advisers.

This talk appears to be designed to maneuver the President into a position in which he will be publicly committed to using the Armed Porces of the United States to keep the Chinese Communists from taking islands within a few miles of the Chinese mainland.

Some of the President's military advisers and top commanders in the Far East want the President to say he will fight for Quemoy and Matsu. They have the support of a few Members of Congress who share their desire for an early showdown with the Communists and conviction that the United States can win such a showdown with atomic weapons.

This faction believes a declaration that the United States will fight for Quemoy and Matsu as well as for Formosa may deter the Communists from trying to take the offshore islands. It contends Russia wouldn't help China fight the United States if war broke out over those islands.

Admiral Carney, Chief of Naval Operations, recently gave rise to a flock of stories that the Communists are likely to attempt to take the offshore islands any time after April 15.

Talk of early Communist moves against the islands is accompanied by warnings that fallure to resist such a move would cause all of Asia to lose faith in the United States and turn toward communism.

Despite their exalted position those who put out this talk about what the Communists will do and how Asians will react are Just guessing. They are in no better position to know what is in the minds of the top leaders of China and Russia than any other diligent students of communism and Chinese and Russian history.

Confident predictions that Russia will not go to China's aid reflect wishful thinking rather than something to be relied upon.

Most Asian governments think the United States has no right to use its Armed Forces to keep the Communists from taking islands within a few miles of the coast. That view is shared by our Western allies. Asians are as likely to be alienated by use of United States atomic weapons to hold Quemoy and Matsu as by nonintervention in those islands,

President Eisenhower cast doubt on Carney's estimate that the Communists are likely to try to take offshore islands by the middle of next month. The political and military intelligence reaching the White House does not support the Navy's estimate that the Communists will have enough strength for such an operation by that date.

The President is keenly aware of the danger of war in the Formosa Strait but he does

not take the view that war is imminent or inevitable. He does not intend to be maneuvered into a position in which the danger will be unnecessarily increased.

It is to be hoped that the President's public indication of displeasure with warscare talk will have a restraining influence on those in his administration who have been talking along those lines.

It is to be hoped that the President's views and clear indication that he continues to make basic decisions in Formosa will have a reassuring effect in allied countries.

Allied relations with Russia are entering a stage in which the allied cause may suffer greatly if our principal allies do not have full confidence in American policy in Formosa as well as in Europe. The President's advisers must not be permitted to undermine allied confidence in his leadership by irresponsible talk and uncoordinated actions.

Hans Christian Andersen Day

EXTENSION OF REMARKS

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Friday, April 1, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a proclamation issued by the eminent Governor of Michigan, G. Mennen Williams, designating Saturday, April 2, 1955, as Hans Christian Andersen Day.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

STATE OF MICHIGAN, EXECUTIVE OFFICE, Lansing.

PROCLAMATION: HANS CHRISTIAN ANDERSEN

In a world where accomplishment, not ostentation and vain glory, is the foundation of enduring fame, the man longest and best remembered is the man who serves his fellows with honesty of heart and mind.

Such a man was the Danish writer Hans Christian Andersen, the 150th aniversary of whose birth will be celebrated on April 2 in 60 lands throughout the world. Born in the little village of Odense, the son of a poor shoemaker, he learned early in life how often men, deceived by outward show, forget to be human.

First recognized in Europe as a novelist, his international and lasting reputation rests not on his plays and novels but on the unpretentious fairy tales in which he set down countless wise and witty observations. When in 1875, at the age of 70, he closed his eyes to the world, he did so in the knowledge that his stories were read by grownups as well as children everywhere, and that he had become Denmark's best known and most widely respected son.

As young and old in every land to whom his tales have brought delight and pleasure observe with special ceremonies the sesquicentennial of the poor village boy, who within his lifetime achieved worldwide fame but who always remained sympathetic to the humble and the poor, it is most appropriate that in America every State in our great Union join in the celebrations honoring his memory.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim Saturday, April 2, 1955, as Hans Christian Andersen Day in Michigan, and urge that on that day our people, individually and

as members of literary, educational, and other groups and organizations, pay tribute to the memory of the man born on that date in 1805, whose fanciful yet profound fairy stories, written more than a century ago for the boys and girls of his native Denmark, today are still read and loved by an ever-growing worldwide audience of children and adults.

Given under my hand and the great seal of the State of Michigan, this 24th day of March, in the year of our Lord nineteen hundred and fifty-five, and of the Commonwealth the 119th.

G. MENNEN WILLIAMS,

By the Governor:

James M. Hare, Secretary of State.

Industry Moves South, and With It, Prosperity

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very fine article entitled "Industry Moves South, and With It, Prosperity" from the Evening Star of March 31. This article, by Mr. Joseph Fox, emphasizes the great role being played by former Senator Charles E. Daniel in attracting and building new industries in our great Southland. It also points out that the Piedmont area of South Carolina has become the textile center of the United States.

Speaking further of our great State of South Carolina, Mr. President, I should also like to call to the attention of the Senate the outstanding performance of South Carolina bands and floats in the Cherry Blossom Festival parade in Washington last night. For the second year in a row, the parade's grand prize was won by the South Carolina float from Myrtle Beach, S. C.

The Winyah High School Band of Georgetown, S. C., also won first prize in the State band competition, for the second consecutive year. In addition to all this, Mr. President, the Spartanburg High School Band won third place in another contest yesterday afternoon.

On behalf of these able representa-

On behalf of these able representatives of the State of South Carolina, I wish to say that I am proud of these remarkable achievements, Mr. President. I salute them, and extend to them my most sincere congratulations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRY MOVES SOUTH, AND WITH IT,
PROSPERITY

(By Joseph A. Fox)

This is the story of one of history's greatest industrial migrations.

It is mostly about textiles and their move from New England to the South. But it goes much deeper than that. It involves other industries, related and unrelated, which have joined the parade. It involves changes—potentially great changes—in the social and economic structure of the Nation. It also involves a prime example of short-

sighted labor policies.

In New England, where office workers are the poorest paid in the country, textile wages are the highest in the country. unions made the fatal mistake of demanding more than the textile traffic could bear. Exodus to nonunion territory has been the result.

To assess the dispersion of America's light industry-its causes and effects-this reporter recently completed an extensive tour through New England and Dixie. It was a study in many different contrasts. But the greatest contrast between the two regions, businesswise, is one of mood.

In the late winter chill, the grimy windows of New England towns stare from deserted buildings like empty sockets in a

row of skulls.

Spindles and looms—that once clattered a symphony of prosperity-are junk.

Jobless men and women are counted in the thousands.

Decay and despair go hand in hand.

This is how it is in Lawrence and Lowell-New Bedford, Woonsocket, Pawtucket, Manchester-in scores of once thriving communities from Connecticut to Maine to which America looked for its cottons and woolens.

The new textile empire centers, like the head of a comet, in the Piedmont area of the Carolinas and George-but the tail of the comet trails all the way to the Gulf of Mex-To the hard core of the region's longestablished textile industry, runaways from the North add constant increments.

In this expanding network, the drab work centers that other generations knew are disappearing before the push of a resurgent

economy.

Ultramodern machinery in specially designed buildings raises production rates far above old levels.

Everywhere, the economy hums with busy confidence. The South is experiencing a new reconstruction era. This time, it's good.

New England is fighting for its life; some of the tough Yankee strain, which never gives up, still professes to see hope for the textile industry there. But the battle is most unequal. Just how unequal, a few statistics will show.

EIGHTY PERCENT IN SOUTH

The South now claims 80 percent of the Nation's clothmaking business. There are about 600,000 textile workers in Dixie—all of them white—as against the 170,000 jobs in cotton synthetics and woolen worsted left in New England.

The shift has been accelerated since World War II and has almost exactly reversed the situation which obtained in the World War

More than 350 New England mills have called it quits or made a start elsewhere during the last 20 years. In the past 9 years, liquidations have wiped out 236 plants with nearly 92,000 workers. It is not possible to say how many of these mills actually moved south. The migration does not work that way. A factory closes in the North. Sometime later-or perhaps earlier-the company operating it opens a new plant or several plants south of the Mason-Dixon line.

The business has gone, and with it the jobs. But the people who manned the northern plant do not move to the new operation. A few key workers may be trans-planted, but the rest stay behind jobless.

New England's exact unemployment figures are hard to come by-a clue to the size of the problem may lie in the fact that 127,877 people are now drawing unemployment benefits in the six-State area. There is no telling how many may have used up their benefit privileges and failed to find new work. On the other side of the coin, Labor Department employment figures are

significant. From 1939 to 1953, New England showed a gain of 37.4 percent in nonagricultural employment as against the national average of 63 percent. In comparison no State in the Southeast was less than the national average. This ratio still holds good.

UNJUSTIFIED OPTIMISM?

New Englanders like to tell themselves things will pick up shortly; that the textile migration is about over. They will draw migration is about over. They will draw little comfort in this connection from a recent check which showed that 21 textile firms from the North were conducting simultaneous scouting operations-in the Greenville (S. C.) area alone.

In any economic development of this sort, there is an inevitable snow-balling effect. In the wake of the textile shift, manufacturers of textile machinery and the pro-ducers of chemical materials that are woven into synthetics are heading southward to get

nearer their market.

And, having observed the happy experience of these pioneers, other industries, totally unrelated to textiles, these days, are taking their clue from the clothmakers and looking toward the South. Why? What is the exp

What is the explanation of this

phenomenon?

As already indicated, union labor must take a large share of the responsibility for industry's flight from New England to Dixie. What labor did to the New England millsand what the burgeoning of the industrial South is doing to the cause of unionismwill be examined in detail in later articles of this series.

LABOR NOT ONLY FACTOR

But the labor problem is not the only factor behind the great migration. Besides offering an abundance of nonunion labor at nonunion wages, the South is fighting aggressively to attract new industry-and the effort is paving off.

Free plant sites and relief from taxation are big weapons in the southern arsenal. Cities are issuing bonds-borrowing money to buy attractive factory locations for prospective customers. State governments see to it that the newcomers get a break from the tax collector. The theory is that increased payrolls are better revenue producers than are taxes.

Greenville, mentioned above, calls itself the textile center of the country. But this South Carolina city is not above capitalizing on the current trend. It is busy promoting its Golden Strip, a large area of undeveloped land which is envisioned as the eventual site of a huge development of di-

versified plants furnishing employment for thousands.

It already has attracted one important and perhaps surprising customer: The W. R. Grace Co. This old-established shipping firm is branching out into plastics—and setting up a multi-million-dollar operation

in food packaging.
South Carolina's efforts to attract new industry are typical of the South, though few if any can match this State for aggressive-The State frees immigrant business ness. from all but the school-millage tax for the first 5 years.

STATE'S PRIME MOVER

A big cog in the South Carolina industrial-recruitment program is Charles E. Daniel, of Greenville, head of the construction company which bears his name, and an associate of the former Gov. James F. Byrnes. Mr. Daniel was Governor Byrnes' interim appointee to the Senate last year after the death of Senator Maybank. But he is a businessman rather than a politician. Even in adjoining North Carolina, which might be pardoned a bit of jealousy, he is rated as the principal driving force behind the buildup in the Piedmont.

A visitor is told that Mr. Daniel not only does the spadework to pave the way for attracting industry, but promises to have a modern plant ready for occupancy by the newcomer in 6 months, at minimum cost.

Some of the structures the Daniel concern turn out are show places. Always the utilitarian side is stressed.

ONE-LEVEL BUILDINGS

Most of these buildings, for example, are of ground-level design, with great production advantages over the traditional multistoried factory. In textiles they are set up for an integrated operation that may carry a bale of cotton right through to the point where it emerges from the mechanical maze as a finished sheet.

All of which only adds to the migratory snowball. The tired old New England mills lack that sort of efficiency. And dwindling receipts have kept their owners from doing the plant modernizing that is needed so

They have spent about \$185 million for this purpose since World War II. It has not been nearly enough.

Thomas Parran

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Friday, April 1, 1955

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Thomas Parran," which was published in the Baltimore Sun of April 1, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows.

THOMAS PARRAN

Thomas Parran was the Republican candidate for the United States Senate in the year before the outbreak of the First World He was at the time 53 years of age. These bits of history tell us that Mr. Parran reached his fullness of life in a kind of world that is past forever. Adaptable though he was, Mr. Parran must have had in later years a feeling of movement through strange, unreal places. And younger people who met him-say, people under 50-must occasionally have wondered whether he belonged in the period of William McKinley, Abraham Lincoln, or Andrew Jackson. Perhaps, they felt that these periods merged and blended, anyway.

The great time in Mr. Parran's life was 60 years ago, come November. That was the day when the Republicans elected their first governor after the Civil War. Two months later, Lloyd Lowndes assumed his duties as governor and ambitious Republicans saw & new panorama unfold before their eyes. lift their spirits further, Republican victory in the Nation was in the air and, in fact, 10 months after Mr. Lowndes was installed in Annapolis, Mr. McKinley won his first victory over William Jennings Bryan and started 16 years of Republican rule in Washington.

Exciting days. And there in Annapolis was Tom Parran, a man beginning to be well seasoned at 36. Other men who fasten their names in the minds of older men and women were there, too. Phil Goldsborough, the young State's attorney in Dorchester County. was there. He had the audacity to shoot for a seat in the United States Senate though he was barely eligible in age. He got the seat 32 years later. Sydney Mudd was therethe first Sydney. He was planning to make southern Maryland his personal domain, and

he made it such later that year. He went to Congress and became "Marse Sydney." His name was so potent that, after his death, his elder son soon followed him in Congress

because his name was Sydney.

Also there was George L. Wellington, the self-educated man from Cumberland, who had the best mind and the best tongue in the lot. He had managed Mr. Lowndes' campaign and he was to break with him. He was also to break with President McKinley while a Republican Senator and to support Mr. Bryan in 1900. His speech for Mr. Bryan in the Lyric was one of the things in Maryland politics to be remembered. In the Politics of the day, which might be described as mischievously innocent, Wellington was an Aneurin Bevan-a man of talents and moods who seemed to have wells of inexhaustible fervor which could be governed neither by himself nor any or all of his associates. He lived to support Theodore Roosevelt in 1912. Stricken and crippled he made from a box in Ford's Theater a short speech which still echoes in the memories of some who heard it.

In that faraway life, Tom Parran had his fulfillment and to him, and to others who go that far back, it was a pleasant life, in which politics could be at once a serious purpose and a gay game in a broad land which was safe and sure of itself. He was wise enough to spend the overflow of years as a humorous patriarch who thought the Lord had been wonderously good in planting

his feet in Calvert County.

Cost of the United States Army

EXTENSION OF REMARKS

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. MARTIN of Pennsylvania. Mr. President, recently the distinguished Representative from the 18th District of Pennsylvania, the Honorable Richard M. Simpson, in his weekly letter to his constituents, gave some interesting figures on the cost of the United States Army. I ask unanimous consent that an excerpt from his letter be printed in the Appendix of the Record.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

Some facts and figures were developed during hearings by the Military Appropriations Committee which I am sure will be of interest to all my readers. We hear about the billions spent for national defense, but that is a vague figure which may not be thoroughly understood. However, some of the facts and figures are understandable, fascinating, and almost fantastic.

For instance, for aviation fuel, the Air Force uses over 400,000 tank cars a year. For auxiliary fuel tanks alone, 6,000 freight carloads of these tanks, which would form a train over 50 miles long, are utilized.

Our military men are the best fed in the world. The Air Force alone used enough eggs in 1 year to supply the needs of a city of 10,000 for 100 years. Our chicken farmers would probably put it this way: The Air Force alone would use the products of 2 million laying hens per year. Our beef cattlemen will be interested to know that the Army consumes beef from about 700,000 animals each year. Our potato farmers will be amazed at the fact that the Navy consumes

150 million pounds of potatoes a year, and our dairymen to learn that the Navy alone consumes 18,500,000 pounds of butter.

For bread, pastries, etc., the Army, Navy, and Air Force consume the wheat yield of 500,000 acres.

Our servicemen are also the cleanest in the world, so we are told. In 1 month, for instance, our sallors alone used 22 carloads of paper toweling just to dry their hands.

The Principles of Collective Security

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. WILEY. Mr. President, I was interested to read in the Letters to the Editor" column of the New York Herald Tribune a significant comment from Mr. Goodhue Livingston, Jr., making certain important observations on the future of American foreign policy and pointing out the unsound alternatives to the present wise American policies of partnership with the free nations.

I send to the desk the text of this letter and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITING FOR PEACE

To the New York Herald Tribune:

Can America go it alone? Can our country meet the threat of Communist aggression without allies?

There are some who would have us believe so—recently their voices have grown more strident.

They would have us believe that collective security—the concept of free nations working together to safeguard freedom—is somehow a dangerous doctrine. With their impaired vision they see the network of defenses which our country is building throughout the free world as entangling alliances.

The neo-isolationists would have us break diplomatic relations with Soviet Russia and thus reduce the possibility of preventing a world war. They would expel Communist-controlled countries from the United Nations and so encourage international lawlessness by freeing such governments from the "invisible deterrent" which the U. N. membership imposes. They would discontinue the work of special agencies of the U. N. and thereby abandon the fight against the breeding grounds of communism—hunger, sickness, and poverty.

Perhaps their most insidious and fallacious argument is that collective security is incompatible with national sovereignty and that our very freedom is threatened when we make agreements to give strength and encouragement to our allies.

They exploit false fears by charging that we have surrendered our independence and relinquished our rights. They ignore the fact that no treaty can deprive us of the liberties which are guaranteed by the Bill of Rights in our Constitution.

What are the alternatives in American foreign policy today?

Should America stand isolated and alone, or seek the active support and cooperation of the other free peoples of the world?

Shall we abandon these peoples, leaving them helpless before the economic, political, and military pressures of the Communists—or give them the strength that will enable them to resist these pressures and maintain their freedom?

Shall we give the Communists the chance to spread their falsehoods, escaping our arguments and evading our logic—or shall we make sure that there is a world forum where Communist propaganda can be effectively answered, where world opinion can be mobilized, and where joint action to resist aggression and maintain peace can be taken?

Shall we surrender to the counsel of despair and defeat—or seek to convince all men who would be free that they must be willing to fight to defend their freedom?

willing to fight to defend their freedom?

Only through constant effort, in public debate and action, can we demonstrate to all the world the superiority of our ideas and our ideals over the Communist program.

Only by being militarily, economically, politically, and spiritually strong can the free nations of the world prevent aggression.

Only by uniting for peace can we secure peace.

Chairman, Policy Committee, Chairman, Policy Committee, Committee for Collective Security. New York, March 15, 1955.

Accomplishments of the Civilian Conservation Corps

EXTENSION OF REMARKS

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. IVES. Mr. President, yesterday, March 31, marked the 22d anniversary of the Civilian Conservation Corps. I ask unanimous consent to have printed in the Appendix of the Record a short summary of the accomplishments of this important organization.

There being no objection, the summary was ordered to be printed in the REBORD, as follows:

Some Accomplishments of the Civilian Conservation Corps

March 31 marks the 22d anniversary of a memorable adventure in service to American youth through the conservation of natural resources. On that day, in 1933, President Franklin D. Roosevelt signed the act that that gave new meaning to the letters CCC. For 9 years thereafter, the Civilian Conservation Corps offered needy, unemployed young men opportunities to earn, learn, and serve.

Camps were set up in every State and Territory, and in the insular possessions. From these as bases, the boys built truck roads and telephone lines, erected towers, and helped promote a nationwide program of forest-fire prevention and suppression.

They planted nearly 3 million acres to trees, fought fires, and removed diseased and deformed trees from other millions of acres of forest. Where they worked green stands of forests now grow and protect the hills and mountains as they yield valuable crops of wood and give places for recreation.

They built check dams, diversion ditches, terraces, and did other jobs to fix the moving soil and restore fertility on millions of acres from coast to coast.

Western stockmen are indebted to them for better grasslands, sportsmen for wildlife cover and fish ponds, and everybody for parks and places to picnic or make overnight camps.

When the Civilian Conservation Corps was ended on June 30, 1942, its accomplishments were estimated as worth some \$2 billion. Greater than this, however, were the benefits received by some 3 million young men, with their parents or dependents. To them was given health, hope, a sense of security, and an understanding of man's dependence upon the earth. The record of this organization is a dramatic example of the influence a nation can have on the lives of its citizens.

Experiments in Mung Bean Sprouts in Treatment of Burns

EXTENSION OF REMARKS

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I should like to have inserted the following article by John O'Donnel, of the New York Daily News, and chief of the Washington bureau for this publication.

Mr. Speaker, this article was called to my attention by a constituent of mine through the mail.

Ninety-five percent of all the mung beans in the United States are grown in my district. I have made several insertions in the Record pertaining to the subject matters in this article in the 82d and 83d Congress. I am pleased to hear that the product is now undergoing a test by the Medical Research Foundation of Oklahoma.

Mr. Speaker, I feel that this product properly tested will certainly be of great service to the people of the world. I certainly hope that the Medical Research Foundation of Oklahoma will not hesitate to call on the chemist who discovered this product to assist them in anyway possible in making this product available for the use of mankind.

Mr. Speaker, I personally speak as a layman on medical research and biochemistry, but I have certainly seen and know of some terrific results that this product has done for people in the Washington area and my State. I am looking forward to hearing from the results.

CAPITOL STUFF (By John O'Donnell)

Washington, D. C., December 29.—In these final hours of 1954 we are happy to report that a combination of eagerness by farmers in the Southwest to make more money out of their mung bean crops (the product is now used almost entirely in making chop suey) and the political influence of such powerful individuals as Senator Kerr, Democrat, Oklahoma, the new junior Senator from Kentucky, Alben Barkley, and others on Capitol Hill is about to confer a boon on suffering mankind.

This is the now successful effort to have the Oklahoma Medical Foundation conduct a year-long test under the auspices of the medical chiefs of the Armed Forces to determine the efficacy of the mung bean sprouts in the treatment of burns of all degrees. This project has been considered for more than 2 years by the all-powerful National Research Council and top medical men who realize the importance of treatment of burns in these days of atom warfare and the hazards of fire and explosion from jet plane fuel.

In the past 12 months, this reporter has listened to some of the most conservative and highly esteemed medical men in this Capital. The accidental discovery of the mung bean juice as a medical weapon to treat burns on a par with other important aids to human life which have been stumbled upon by accident.

It isn't clear what old wife discovered that the leaves of the blooming foxglove in her kitchen garden eased pains around the heart. But from the discovery we got digitalis. Some Indian in old Peru learned that the scrapings from the bark of the cinchona shrubs releived the bone-shaking agony of majaria. That gave us quining

malaria. That gave us quinine.

The story of the mung bean juice and its present part in modern medical investigation is one of absorbing interest.

In 1944 an explosion took place in a chop suey canning factory in a Chicago suburb. Several employees were severely scalded. The uninjured who rushed to give first aid seized the nearest cool liquid at hand. This was in the vats containing the freshly cut mung bean sprouts and their juices. It was poured on the injured and they were hurried to a hospital.

THE JUICE PROVIDED PROTECTION

Several were on the dangerous list. An observant surgeon in the hospital noticed an unusual development. Although the parts of the bodies which had not been drenched with the juice showed deep blisters, the faces, throats, and limbs which the juice had reached showed little blistering. What wounds there were healed with remarkable speed and left little or no scar tissue. The doctor went back to the manufacturing plant and made his own investigation on the nature of the first aid treatment.

The doctor suggested to the head of the chop suey plant, Ben Zaremba and his research chemist, Joseph Ryankeiwicz, that there was evidently some property in the raw juice of the mung bean that was unusually effective in the treatment of burns. For a year and a half the experiments went on.

The raw juice, it developed, was an effective agent in the treatment of burns or a skin affliction (such as poison ivy, sunburn, etc.) for only 24 or 48 hours. The trick was to discover an enzyme which would preserve the qualities and so make the juice available for bottling and shipment.

O. K. ITS SALE FOR MINOR BURNS

This was accomplished a year and a half later. The Food and Drug Administration gave its O. K. to the sale of the product for "the relief of minor burns, sunburns, poison oak, and poison ivy." But efforts to get the medical qualities of the product tested for surgical use in the treatment of burns by the Armed Forces, hospitals, Red Cross, etc., ran into years of delay—delays which continued until this month.

Then the accidental, human element moved into the picture. The head of the chop suey factory and his research chemist came to Washington to see if it were possible to get a test by a foundation to determine the worth of the discovery. They finally invaded the suite of the then Vice President BARKLEY and talked the Veep's administrative assistant, William Vaughan.

Vaughan wasn't much interested.

Then came the interesting development. A case of samples was left by the disappointed visitors from Chicago. The Veep took some home. Several months later, Mrs. Barkley suffered a severe accident in the kitchen, she poured a bottle over the burns, called the doctor and came back to Capitol Hill singing the praise of the lotion.

Then came a series of fortuitous events. Washington's senior radio broadcaster, Earl Godwin, picked up a few sample bottles in the Veep's office. Some time later, Mrs. Godwin, opening a can of steamed plum pudding screamed when the Christmas delicacy exploded in her face. Husband Godwin emptied the bottles over the burns, called the doctor and a few days later went on the air extolling the power of the magic drug.

Six months later, more than 60 reputable physicians were using the lotion in their private practice.

MUST GET RESEARCH COUNCIL'S O. K.

But—and this is highly proper—the medical men of the Armed Forces cannot use any medication or drug on personnel until it has first been formally tested and approved by the Nation's top scientific board, the National Research Council.

Now, the mung bean juice is getting its formal year-long test, first on animals, later, if it works, on the human hide. And the force that finally put the test across was the demand of the Oklahoma and Arizona mung bean growers on their Senators and Representatives that they wanted the test made because here was what seemed to be a good chance to increase their acreage of mung beans.

The National Debt

EXTENSION OF REMARKS

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Friday, April 1, 1955

Mr. MARTIN of Pennsylvania. Mr. President, the matter of the debt of the United States is, to my mind, one of the most serious problems confronting us. In a recent editorial entitled "Visualizing the National Debt," the Oil City (Pa.) Derrick presented some figures showing that if we took the salaries and the wages of all our people, including those in the armed services, the total would be \$70 billion less than the total debt.

I ask unanimous consent that the editorial be printed in the Appendix of the

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VISUALIZING THE NATIONAL DEBT

The national debt is owed, in part, by ever American family. It amounts to a first lien on all our national assets.

Just how big is the national debt? In round figures it is \$279 billion.

Figures like that, however, mean little to the average individual. To get a better ides of the magnitude of the national debt, the Tax Foundation draws this graphic picture:

Suppose we took the total annual paychecks of ever one of the 55 million people
who work in our factories, our businesses,
and on our farms. Suppose we added to
that the pay of 7 million civilians on Government payrolls and the 3 million persons
in the Armed Forces. Suppose we then added
such extras as all the social-security payments made by employers—

We'd then have a total of \$209 billion, or \$70 billion less than the total of the national debt.

Isn't this a convincing argument of the necessity for the vigorous support of every citizen of continued efforts to reduce Government spending and bring the budget into.

Urgent Need: Bossier City Post Office

EXTENSION OF REMARKS

HON, OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, I have previously brought to the attention of the Congress the situation in reference to a separate and independent post office for Bossier City, La. The Planters Press, of Bossier City, La., in its issue of March 19, 1955, carried a further news article on this subject. This well-written, clearly thoughtout article presents the thinking of the citizens of this fine city. The editor is prompted to carry this article by his real for the improvement of this community and is deeply interested in his fellow citizens. The article answers many of the points which have been raised and I feel it should be presented to the Congress so that the full and com-Plete picture will be known.

The article is as follows:

CONFUSED POSTAL MESSENGER HAD HIS FACTS
BADLY TWISTED

(By Ned Touchstone)

A confused Texan came to Bossier City Tuesday afternoon to tell Bossierites why he thinks he should turn thumbs down on this city's request for independent postal service.

Emery W. Roderick, manager of the Dallas district, based a large part of his argument on difficulty in other cities in sorting mail which would be addressed to Bossier City. He indicated that mail handlers are very familiar with Shreveport but would have difficulty recalling the small city of Bossier City when they see an envelope addressed here

What never occurred to the Dallasite is this fact; Mail which comes to Bossier City as a branch is addressed "Bossier City." Mail which would come if a change is made is also addressed "Bossier City."

The other half of his argument against separate postal service was based upon the high cost. He indicated that it would be too expensive to give Bossier City the type of mail service that West Monroe and Pineville have been able to get for themselves. He estimated that it would cost \$30,000 more per year to sort outgoing mail on this side of the river instead of sending it across the river to be sorted in Shreveport. He did not explain why the same number of employees relieved of duties in Shreveport by taking away a fifth of the mail volume could not be used in Bossier City to handle that volume of mail.

He cited efficiencies and improvement of mail service under the administration which appointed him to his new post of high authority. He seemed surprised to learn that Bossier City receives just as bad, or worse, mail service than it received under earlier administrations.

Several of the Bossler City civic leaders interrupted him while he was discussing efficiency to determine why the mail service requires 2 days to deliver a letter from Bossler City 2 miles out the Benton Road, or to Red Chute. He explained that the rural routes serving these areas run out of Benton and Haughton and that it is politically unwise to change a mail route. He had no ready prepared answer for the unbelievably poor service given Benton patrons on letters from Bossler City.

Roderick told the gathering that his Dallas file does not show when or why the Shreveport Post Office abandoned its promise to cancel Bossier City mail "Bossier City." He promised that this promise to Bossierites would be remembered in the future and again promised some of the other promises made earlier by postal officials.

He indicated that a final decision had not been made officially, and that he might give the city a favorable decision even though he is personally convinced that Bossier City would be better off doing things like they are done in Texas. He frequently cited suburban areas and small towns in the Lone Star State which have asked to be made branch offices instead of independent offices.

Bossier City is the seventh largest city in the State of Louisiana. Although Bossier Parish is among the top parishes in the State in total population, it does not have a first-class post office.

J. Murray Durham, president of the National Bank of Bossier City, presented Roderick with written arguments in behalf of independent service for Bossier City. Homer Cox, commander of the American Legion post here, also presented arguments in behalf of Bossier City.

Nearly everyone at the meeting cited examples of poor service to the Bossier branch. Roderick suggested that the problems be taken up with the local postmaster.

After the meeting he was reminded that Bossier City is one of those few cities in the United States which doesn't have a local postmaster.

Again, I state it is my hope the Postmaster General will act immediately to give these citizens the postal facilities to which they are entitled—an independent and separate post office.

Senator Neely's Attack on the President

EXTENSION OF REMARKS

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial which was published in the Washington Post of March 31, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEELY'S SLIPPERY GROUND

Senator Neely's blast at President Eisenhower could be dismissed as merely an explosion of political gas, except for one fact. The Senator accused the President of making a show of his religion and of hypocrisy in his profession of faith. That is a foul blow which will be resented by a large number of people without regard for political or religious affiliations.

In this land of free worship religion is entirely a personal matter. A man's faith has no place in the political arena. If there were a shadow of truth in Senator Neely's accusation of insincerity on the part of the President in his profession of faith—and we do not think there is—the President would be answerable for his offense before his God and not before the people. For a politician to invade this realm and presume to judge the state of the President's conscience is a gross disservice to the cause of religion, as well as that of politics. We agree with Senator Durf in saying that "To criticize how or

where any American worships is a direct violation of that right and infringes the very spirit of religious freedom." If Senator NEELY thinks this sort of bigotry will pay political dividends, he has gravely misjudged the temper of the American people.

John F. Stevens and the Panama Canal

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1955

Mr. PAYNE. Mr. President, the history of the construction of the Panama Canal was marked by a series of grave crises. Fortunately for the future welfare of our Nation, able leaders were available to cope with the acute problems which arose. Those leaders included men such as President Theodore Roosevelt, Secretary of War William Howard Taft, Gen. William C. Gorgas, and John F. Stevens.

Of all these men, John Stevens has received the least recognition for his role in the construction of the Panama Canal. He served as Chief Engineer of the Isthmian Canal Commission from 1905 to 1907, and was Chairman of the Commission, as well as Chief Engineer, in 1907. It was largely on his recommendation that Congress decided in 1906 to authorize construction of a lock instead of a sea-level canal. Of particular significance in this early stage was his determined support of General Gorgas. whose plan for exterminating mosquitoes as a first step to combating yellow fever was considered impractical by many people. Stevens drafted complete plans for most of the canal, assembled and organized the working force, rebuilt most of the Panama Railroad, and prepared specifications for and began the digging of Culebra Cut, which presented the greatest single obstacle. He resigned in 1907, when the canal project was placed under the War Department, and was succeeded by George W. Goethals.

John Stevens was born at West Gardiner, Maine, on April 25, 1853, and died at Southern Pines, N. C., on June 2, 1943. The State of Maine is indeed proud of this illustrious son who became one of the world's greatest engineers. In addition to being the basic architect of the Panama Canal, his notable achievements in the field of engineering included discovery of the Grand Marais Pass in Montana, construction of the Great Northern Railroad, and rehabilitation of Russian and Siberian railroads following World War I.

Recently, his son, John F. Stevens, Jr., brought to my attention an unpublished account of some of the events connected with the construction of the Panama Canal which Mr. Stevens wrote after the death of the other principals. This brief account throws new light on the history of the construction of the Panama Canal, and I ask unanimous consent that it be printed in the Appendix of the Record. As an aid in identifying the

individuals mentioned in the article their names have been inserted in parentheses.

There being no objection, the article was ordered to be printed in the Record, as follows:

A MOMENTOUS HOUR AT PANAMA

(By John F. Stevens, former Chairman (1907) and Chief Engineer (1905-7), Isthmian Canal Commission)

There has been published from time to time such a mass of information about the Panama Canal, a project which aroused much controversy a quarter of a century ago, that any reference to it after the lapse of years may seem to be quite superfluous; but as is often the case in human affairs, history does not always record events which have had a profound influence for good or evil upon the solution of the problems involved. The history of the planning and construction of the Panama Canal is no exception to such general rule.

The condition of affairs on the isthmus during a part of the year 1905 can truly be described as desperate; by many well-wishers even it was regarded as hopeless. When the speaker arrived there in July of that year, he found not even the skeleton of a general organization, Supreme authority was vested in no one. The sanitary department was the only one having the semblance of a proper organization, and it was doing a limited amount of work under what would probably have proven a fatal handicap had it continued. The usual tropical diseases were prevalent, and that scourge of the white race, yellow fever, was taking its deadly toll daily. While the situation was in some degree psychologic, the danger was great, enough so that unless the disease was promptly checked and thereafter held under control, the success of the great enterprise would be jeopardized.

The tragic story of the French attempt to build a canal there was in many mouths, and predictions were freely made that the history of the Americans on the isthmus would be a repetition of the De Lesseps failure. Under the then existing conditions it would not have been possible to have held the small force of clerical and skilled white labor which had been collected, much less to have induced thousands of other whites to have entered the service. Especially so in view of the pessimistic attitude which some of the American press had taken, and the exaggerated accounts which they were publishing as to living and health conditions on the isthmus, some influential members openly advocating that the whole undertaking should be abandoned as affording no hope of a successful outcome.

At that time few of the general public knew anything of the so-called mosquito theory of the transmission of yellow fever, and they mostly regarded it as purely theoretical. Not so with the medical scientists who had successfully demonstrated it Cuba, and of those scientists was Col. William C. Gorgas of the Medical Corps of the Army, who was the head of the sanitary department on the isthmus. He was working intelligently with a small but efficient staff, but with an utter lack of cooperation on the part of his immediate superiors. He was one of the first officials that I met there, and from him I gained my real insight into the famous theory.

Of Colonel (later general) Gorgas, his work and supreme service to mankind, it is unnecessary to speak here. His memory is so deeply cherished, and his fame is so secure that no words of mine can add to either. Best of all, he was a kindly, sincere man, the highest type of gentleman, and I am proud to have known him, not only officially, but also as a warm friend.

The then Chairman of the Isthmian Canal Commission, Theodore P. Shonts, accompanied me on my first vist to the isthmus, he remaining there but 5 days, as the situation did not appeal to him. At that time Colonel Gorgas was reporting to the Governor of the Canal Zone, Charles E. Magoon. Neither the Governor or the Chairman had the least faith in the efficacy of the mosquito theory, at least they so emphatically advised me at once, and their actions confirmed their words.

Quoting from a brochure of General Gorgas' life and activities, written by the president of the American College of Surgeons:

"Finally, in June 1905, the Governor [Magoon] and chief engineer [John F. Wallace, my predecessor], members of the executive committee of the Commission, united in a recommendation to the Secretary of War, William H. Taft, that the chief sanitary officer, Colonel Gorgas, and those who believed with him in the mosquito theory should be relieved, and men with more practical views be appointed in their stead. They stated that the sanitary authorities had visionary ideas with regard to the course of yellow fever, and no practical methods even of carrying them into effect.

The President, Theodore Roosevelt, declared his faith in the theory and directed that every possible support and assistance be extended to the sanitary officials. Personally, I have no knowledge except from hearsay of the accuracy of these statements, although I believe them to be true. What I do know is that such directions were not carried out either in letter or spirit.

Quoting again from the same authority: "About this time Mr. John F. Stevens was appointed Chief Engineer of the Commission, and he recommended that the Sanitary Department should be made an independent bureau and report directly to himself. This enabled Colonel Gorgas to make known his needs directly to the highest authority, and there he was accorded loyal support. This, remarks Gorgas, was the high-water mark of sanitary efficiency on the isthmus, and more sanitation was done at this time than during any other period of the construction of the canal."

Incidentally, I may here remark that on my recommendations some time afterward the President [Roosevelt] appointed Gorgas as a member of the Isthmian Canal Commission.

However, these results were not achieved without a sharp controversy during which the Chief Engineer [Stevens] clashed sharply with the Chairman [Shonts] and the Governor [Magoon]. I had been very deeply impressed by my conferences with Colonel Gorgas as to the probable truth of the mosquito theory, as well as by his personality. I also feit well assured that no canal could be built at Panama until the specter of yellow fever had been laid. There was no other promise of relief in sight than that of Gorgas and the mosquito theory, and there seemed to be but one course to follow.

On the occasion of a trip over the Panama Railroad, accompanied by the Chairman [Shonts] and the Governor [Magoon], the sanitary work which was in progress, visible from the train, such as drainage of pools of water, applying oil where drainage was not practicable, fumigation of houses, etc., was pointed out to me in great detail by these officials, accompanied by constant ridicule, not only of Colonel Gorgas but also of the mosquito theory, some of these comments reflecting very severely upon the quality of the colonel's mental equipment.

My attention was repeatedly called to the great waste of money and the utter futility of the whole procedure. It became very apparent that a serious situation existed, and I was in a quandary as to how it could be met, as I well knew that it must be, or a total collapse was inevitable. The climax came quickly.

The day before the chairman (Shonts) sailed for the States he advised me that he and the governor (Magoon) had decided that Colonel Gorgas must be gotten rid of (in his precise language, that he would fire him) and the mosquito theory, also. Some quick thinking and an important decision needed on my part, which decision I proclaimed in rather heated language, not to be repeated here. At the close of the harangue I said that if there seemed to be the least likelihood of approval of his action being given by the President (Roosevelt) (which I did not believe possible) I should take the matter in person to Washington; and that if Colonel Gorgas were removed I should not come back to the Isthmus.

I asked him what he thought the resction would be from the doubtful ones, and from the already unfriendly press, if it became known that the Commission had urged the abandonment of the mosquito theory and the disruption of the sanitary department, and stated that, furthermore, if after a hasty visit to the Isthmus the new chief engineer (Stevens) had, by his action. indicated his belief that the construction of the canal was impossible, it would mean chaos, whatever attitude the President (Roosevelt) might take. If it did not kill the project, it would certainly delay it, and the end no man could foresee. He left for the States without further comment on the matter. If he urged his views in Washington (which I do not believe he did) was never advised, and so the matter ended there, as it should.

I was seeking a way to stabilize the situation, for it was no time to be rocking the boat. Opportunity must be given for the sanitary department to prove its faith by its works, which I believed it could do.

It was not a question of Colonel Gorgas' business ability, but one of making the isthmus a safe place for white people to live and work, and that quickly, regardless of whatever cost in mere money might be involved. Beyond doubt, those officials were sincere in their opinions, but in my judgment they were wrong.

It was after this occurrence that Colonel Gorgas began to report to me, and from that time forward harmony prevailed. The Santary Department was furnished with everything it asked for as fast as it could be provided, and every other activity was made subordinate to its needs. Sanitary success soon became so apparent, coincident with the creation of a general organization, that carping criticism was practically stilled, for the first time since the American occupation of the isthmus. Science had scored a wonderful triumph over a deadly foe to the human race.

Sanitation was fundamental, and the success which the Sanitary Department achieved under Colonel Gorgas made the Panama Canal possible. When the results of its work became manfest, and when the lock type had been adopted, then the successful construction of the canal was as well assured, early in 1906, as it was on that historic day in August 1914, when the steamship Ancon passed through it from ocean to ocean.

At this distance of time and space the episodes related may seem trivial. Only one who was on the ground, charged with tremendous responsibilities, can comprehend the magnitude of the issues at stake. A rejection of the mosquito theory at that juncture would probably have meant the indefinite postponement of the canal project.

I have said that I did not then deem it possible that President Roosevelt would uphold the elimination of Colonol Gargas, but an occurrence which took place some years later gave me food for thought. Some time after Mr. Taft had become President, Colonel Roosevelt sent me an invitation to call upon him, which I did at the office of the Outlook magazine in New York, After some prelim-

inary talk, he told me that friction among Officials on the canal had reached such a Point that changes would have to be made, and that he thought Colonel Gorgas would have to go. He said that he was well aware that I knew more of Gorgas and his work than any man, and asked if in my opinion he should be kept.

It is needless to repeat what I told him. It was emphatic and to the point, and I closed by saying that if Gorgas were removed, it would be a stupid blunder. Colonel Roosevelt pounded the desk in his usual vehement manner and exclaimed, "That settles it; Gorgas stays." Which he did, through what influences one can only conjecture.

I have thought since that time that pos-Bibly it was just as well that the issue was not raised to a finality in July 1905. reason to know that the President [Roose-Velt] then had great confidence in the Chairman [Shonts], but the status of the Chief Engineer [Stevens] in that respect had yet to be demonstrated. I did not have faith enough in the result to wish the matter put to a test.

In the year 1914, when Gorgas was Surgeon General, I received a letter from him

reading in part as follows:

"I have a very clear and grateful recollection of the support and friendship you always gave me on the Isthmus. I knew very Well that you were the only one of the chief officials who believed in the sanitary work we were doing, and who was not taking active measures to oppose us. The fact is that you are the only one of the higher offi-cials on the Isthmus who always supported the Sanitary Department, and I mean this to apply to the whole 10 years, both before and after your time, so you can understand that our relations, yours and mine, stand out in my memory of the very trying 10 years I spent on the Isthmus, as a green and pleasant oasis."

Only fragmentary accounts of these episodes have ever been related, and as now that every one of those officials who were directly concerned with them, President [Roosevelt], Secretary of War [Taft], Governor [Magoon], Chairman [Shonts], General Gorgas everyone excepting myself-has passed beyond the sphere of human activities, it seems fitting that while firsthand knowledge of the matters then at issue is yet available, it should become a part of the history of the construction of the Canal, for it is not believed that the full significance of these events has ever been appreciated.

The Leading Question: What Should Be Done About Wiretap Evidence?

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD a transcript of the CBS radio program, The Leading Question, of March 28, 1955, on which appeared our colleagues the gentleman from New York [Mr. KEATING] and the gentleman from New York [Mr. KEOGH]. The program consisted of a most interesting discussion on the subject of wiretapping and its use as evidence in Federal courts.

The transcript follows:

Mr. Cooke. What should be done about Wiretap evidence?

The development of electronic knowledge now means that almost any telephone can be easily listened in on without cutting your telephone wire or making clicks or warning noises to you; and one wiretapper has already testified to a congressional committee that he has tapped over 60,000 different telephones.

Some 30 States have legalized the admission of evidence that you get from wiretapping; but under a 1934 Federal law, the Department of Justice has tapped phones but has not been able to use the material it got in a court of law.

Today the House Judiciary Committee is holding hearings on whether or not the Federal Government should authorize and legalize wiretap evidence.

There are three big questions, maybe two big ones, and a small one, involved here.

First, the most important overall tion: Should wiretapping be legalized in any form; if so, who should O. K. it? The Attorney General, the courts, or whomever

And then, one other thing the Attorney General is especially interested in: If you O. K. wiretap evidence, should the bill be so passed that past evidence which he has and has not been able to use should be legalized along with future evidence?

Mr. KEATING, you have introduced the bill, you have a firm set of positions on all of

these questions.

Mr. Keating. Yes, Mr. Cooke, I have a bill in this Congress, and my bill, if you want just a word about it, does this:

First, as regard national security cases sabotage, espionage, treason, and crimes of that kind, some six enumerated crimes, it provides that evidence obtained by wiretapping can be used in court.

As to evidence heretofore obtained, upon the written authority of the Attorney Gen-

eral, that can be used.

As to evidence hereafter obtained, it is necessary to go to a court and convince a court that a crime or crimes have been or are about to be committed in this category, and that these communications may contain information which would assist in the conduct of those investigations.

Mr. Cooke. What about Mr. KEATING, a question like kidnaping, which is a Federal offense?

Mr. KEATING. Kidnaping is not covered in this bill. That's one of the controversial areas. It has been contended that the bill should be enlarged to include kidnapping and, for instance, another heinous crime that we all abhor, the selling of narcotics to minors.

Now, that's one type-that's one part of the bill.

The other part of it, equally important, I think, Mr. Cooke, is this: that it makes it a criminal offense to do any wiretapping which is not in accordance either (1) with the terms of this bill, that is, by the FBI under that bill, or (2) by the FBI in detect-ing other crimes, because they have a perfect right under the law now to wiretap; and third, anything done by the authorized agents of the various States or Territories in the 30 States that you have referred to who do legalize wiretapping.

Mr. Cooke, All right, Mr. Keoch. How do you feel?

Mr. Keogh. Now, Mr. Cooke, I am delighted to be here with my distinguished colleague, Mr. KEATING, who has made such a great study of this subject.
Mr. Cooke. Be careful, Mr. Keating, that

sounds like a windup.

Mr. KEATING. That's always dangerous with Mr. KEOGH.

Mr. KEOGH. Well, Mr. KEATING has in fact spent a great deal of time on this subject.

I would like, if I could, to divide our question, and take up first whether wiretapping should be permitted; and then follow that

with-what should be done with evidence obtained thereby?

Now, Mr. Keating, I think that this new bill of yours, H. R. 5096, is a successor to the one you had in the 83d, the last Congress, which passed the House but never became

You have indicated that you have sought to set up safeguards that would impose criminal penalties upon people not authorized to make the taps authorized under your bill.

Is that not a basic admission that the tapping of wires is inherently dangerous and should, if it is permitted, be confined to authorized agents?

Mr. KEATING. Well, I would agree that wiretapping is, as it's been described, a "dirty business." It is something which we do not like, and the thing that my criminal penalties are seeking to reach are the criminals and the snoopers and the blackmailers and that kind of people that use the telephone wires improperly.

Now, we have to balance that against our national security, and I know that the gen-

tleman, Mr. Keogh, is equally interested in our national security as am I. Mr. Cooks. Does Mr. Keogh agree with Justice Holmes that wiretapping is a dirty

Mr. KEOGH. I do, indeed, and it is from that agreement that my basic opposition to permitting or authorizing anyone to tap wires springs.

Now, you must realize, Mr. KEATING, as I know you do, that the Federal rule of permitting the introduction of evidence obtained by illegal wiretapping sprang from the decision of the Supreme Court in the Olmstead case, which took place in 1927, and involved a violation of the then noble experiment which will go down into history as the Prohibition Act, and as I read the decision of the Court, the Court turned on the fact that no trespass of the property of thet defendant had been committed in order to affect the tap. They did not directly pass on the legality or the illegality of wiretapping, as such, but dodged by indicating that since there was no basic violation of the fourth or the new much discussed fifth amendment, that the evidence so obtained could be used to support a conviction for violating the Prohibition Act.

Mr. Kearing. Well, now, in 1934, we passed the Communications Act, and ever since that time it has been generally accepted by every Attorney General, from the time of Justice Jackson down to the present time, under all administrations, it has been accepted that the FBI, upon the written authority of the Attorney General, could tap wires. cannot use that evidence in court. In other words, the hitch that we are in now is that if over the telephone an FBI agent hears that somebody has stolen or peddled important bomb secrets, or that he is plotting the assassination of a high Government official, or he is about to blow up a strategic defense plant, and hears that over the telephone, he can listen to it, that's perfectly legal, but he cannot use that evidence in

court. If he heard it behind a door or heard it in the next room, he could use it, but just because he heard it over a telephone

cannot use it, and it seems to me that that gives the enemies of our country a distinct advantage with regard to our technological progress in this country, which they are not entitled to have.

Mr. KEOGH, But, Mr. KEATING, when you do, as you so ably point to these types of crimes that you would seek to prevent, I think that you are begging the basic question.

Mr. COOKE. Which is?

Mr. Keogh. Which is: Should we encourage the violation of the basic guarantees of our Constitution for however high and noble a purpose it may be contended?

not the rights of our people greater than apprehending a criminal?

Mr. Keating. The only people who would suffer, under the bill that I have introduced, are the traitors or enemies of our country, nobody else.

Mr. KEOGH. That's-

Mr. KEATING. Because all other wiretapping, all this snooping and the-the listenin on one business concern against another, or one union against another, or a business concern against a union, or a uinon against a business concern, or somebody trying to blackmail somebody, all of that is made a Federal crime under this bill.

Mr. Keogh. That is not true, actually it is not true, and if it were true, I'm sure that

no one would oppose your bill.

Mr. Keating. Well, that is provided right

in the bill.

Mr. KEOCH. All the Attorney Generalsbut the bill, you know that bills are not selfexecuting, they have to be administered by

Mr. Cooke. Could you make that a little clearer for me, Mr. KEOGH? What do you mean, it isn't true? You mean an Attorney General in courts would not follow out what the bill says, or the bill wouldn't protect

Mr. Keogh. No, I do not contend that any Attorney General will encourage the violation of the basic rights of the people. What I am contending is that permitting wiretapping is permitting an invasion in the basic guaranteed rights of our people.

Mr. KEATING. It is permitted now.

Mr. KEOGH. Permitted? It's suffered; it's

not permitted.

Mr. KEATING. Under the Communications Act, it is only made illegal to wiretap and divulge the information; simply to wiretap is not made illegal.

Mr. KEOGH. Well, what is the protection the person whose wires are being tapped

Mr. KEATING. The protection is this-Mr. Keoch. The protection is that under the Communications Act. no one-no one is authorized to disseminate the information obtained. There is an admission that there is something wrong with the practice.

Mr. Keating. That is correct, that no one can disseminate it, and this bill only enlarges that in the very limited area-

Mr. KEOGH. That's right.

Mr. Keating. Of treason, sabotage, and espionage.

Mr. KEOGH. That's right.

Mr. KEATING. And it seems to me in balancing the interest, we must do something to protect our country against that type of activity.

Mr. KEOGH. We must do everything we can to protect our country against saboteurs and traitors and espionage agents, but I contend, Mr. Keating, that in order to afford that protection, it is not necessary for us to create what is the basis of a police state of our

Mr. Cooke, Well, are you saying, Mr. KEOGH, that wiretapping is a basis or intrinsically unconstitutional and contrary to the Bill of Rights?

Mr. KEOGH. It certainly is. It goes directly to the heart of the fourth and fifth amendments. We recognize, Mr. Cooke, the inviolability of the United States mails and we do do not permit anyone to interfere with the sending of mails and we place heavy penalties on that.

Mr. KEATING, I would be very interested to know-

Mr. KEOGH. Would not the espionage agent who wants to transmit messages have the protection that the Constitution guarantees everyone?

Mr. KEATING. I'd be very much interested to know what provisions of the Constitution

are violated by it because it's been held again and again that the right of privacy, which is an important right-I don't minimize it at all-is not a constitutional right. You've got a right now to place a dictaphone in anybody else's home. You've got a right to wear a radio transmitter under your necktie when you are talking to someone and have him say something which you can then use in court. You've got a right to do all of these things, which are, all of them, violations of the right of privacy, but it is not a constitutional right-

Mr. Keogh, Oh-Mr. Cooke, Wait a minute.

Mr. KEATING. All of which have again and again been approved in the courts.

Mr. Keogh. And all of them-Mr. COOKE. Let me get one thing clear,

You mean I can, if I choose, put a dictaphone in anybody's place I choose, and then

use any information I get from that in a court of law? Mr. KEATING. If you get a dictaphone in

there, no matter how you get it there, the courts have held that you have a right to use the evidence that's obtained over that dictaphone.

Mr. KEOGH. That's the difficulty. That's why your bills are pending, you want to give legislative sanction to an iniquitous practice that has grown up.

Mr. Keating. My bill has nothing to do with dictaphones. The dictaphone business hasn't anything to do with—

Mr. KEOGH. Then why talk about it?

Mr. KEATING. Because I am pointing out that the right of privacy has already been invaded in many instances, and legalized by the courts.

Mr. KEOGH. And you-

Mr. KEATING. And mine is limited. There are many objections made to my bill because it does not include kidnaping and some of these other heinous crimes, but mine is limited purposely to those crimes involving our national security. There is no one who can suffer under the provisions of this bill except a traitor or an enemy of our country.

And in addition to that, as a recognition of the necessity of clamping down and tightening up on this wiretapping, is this criminal provision that any wiretapping that isn't done in accordance with this bill shall be a Federal offense.

This bill tightens up on the whole wiretap situation, instead of loosening it up.

Mr. KEOGH, Which, Mr. KEATING, again I repeat, is an admission on your part that wiretapping is inherently dangerous.

Mr. KEATING. Wiretapping is not good, I agree with you.

Mr. KEOGH. Well, if it's not good, do not authorize it. That's my position.

Mr. KEATING. It is not authorized in this That's one of the things that the opponents of this again and again say-wiretapping is today perfectly legal, it's being done every day by the FBI. This does not legalize anything which is not done, it simply legalizes the use in court of evidence that the Capitol is going to be blown up, when it's heard over a telephone, just the same as it would be legal if it were heard behind a closed door.

Mr. KEOGH. Mr. Keating, do not frighten people with statements that unless your bill to authorize wiretapping is passed the Capitol will be blown up.

Mr. Cooke. Especially when we are sitting in it, gentlemen, talking.

Mr. KEOGH. I have far more confidence in the security agencies of our Government.

But I want to point out to you, without discussing the merits of a pending judicial matter in New York, where a private organization cloaking itself with a pseudo-public character, has contended seriously in court that that quasi-pseudo-public character of the Anticrime Committee vests in it the authority and the power to engage in wiretapping and to seek refuge in not revealing the sources of information.

Mr. KEATING. I am very glad you brought up that New York case.

Mr. KEOGH. I knew you would be, Mr. KEATING; that's why I brought it up.

Mr. KEATING. Because under this bill, under this very bill, it would tighten up on such a situation as the New York situation. It would make it not only a violation of a State crime but a violation of a Federal crime, if it was done, not by the FBI and not to get a traitor or an enemy of our country.

Mr. KEOGH. I question that very much, Mr. KEATING, and I take refuge in my position by the-in the learned words of a great jurist in this country, Mr. Justice Brandeis, whom you referred to earlier, who in 1927, in the

Olmstead case, said:

"The progress of science in furnishing the Government with means of espionage is not likely to stop with wiretapping. Ways may some day be developed by which the Government, without removing papers from secret drawers, can reproduce them in court; and by which it will be enabled to expose to a jury the most intimate occurrences of the home. Advances in the psychic and related sciences may bring means of exploring unexpressed beliefs, thoughts, and emotions."

Mr. KEATING. And right today, Mr. KEOGH, it is only the enemies of our country who can use these technological processes, and equally with them we should give that right-

Mr. KEOGH. It's only-

Mr. Keating. To the proper officials of our Government.

Mr. KEOGH. Mr. Keating-

Mr. KEATING. Let me read you one sentence from Mr. Justice Jackson, who says:

"That unless the Court starts to temper Its doctrine with logic and a little bit of commonsense, you are going to turn the Bill of Rights into a suicide pact."

Now, that applies just as much to our legislative arm of government as it does to the judicial arm, in my judgment.

Mr. KEOGH. Mr. KEATING, you are not con-tending that the potential enemies of our country are the only ones who have access to developments in science?

Mr. KEATING. I am not, but-

Mr. Keogh. You said that.

Mr. KEATING. But they are the only ones that are in any way covered by this bill which is before us, because it applies only in those cases of treason and sabotage.

Mr. Keogh. That's what you think. Mr. Keating. Well, it says so, in so many words.

Mr. Cooke. As I hear this discussion, gentlemen, this narrows down to a difference of opinion here over whether or not in one particular category of possible crime, namely, crimes against our national security and subversion, in that area only; as I understand it, the question is whether or not evidence obtained via wiretapping should be submitted in court.

You'll agree, Mr. KEATING, in other areas it should not?

Mr. KEATING. I do, yes.

Mr. Cooke. But in this area it should. Therefore, Mr. KEOGH, it sounds as if Mr. KEATING was saying there was a difference of category here, the fact that it was a national security item raised the importance of changing-

Mr. KEOGH. Of course, Mr. Cooke, the only possible way for justifying our flying in the face of our basic guaranties is to wrap ourselves around such terms as "national security," and "protecting the Capitol from being blown up," and "apprehending espionage agents."

I want to say this, and I think it sums up my position as well as any brief statement could: That the resasons for not permitting wiretapping, and therefore not permitting the introduction of the evidence obtained therefrom, are basic and historical in this country. The reasons for permitting it, that are now being advanced, are, in my opinion, more hysterical, and the Founding Fathers of our country, in my judgment, provided us with a system that can protect the lawabiding and apprehend and punish the criminals, without violating the rights of any citizens.

Mr. KEATING. Our Founding Fathers weren't faced with technological progress that has been made, and which the enemies of our country are now able to use. This whole

question has arisen since-

Mr. Keogh. Then, Mr. Keating, excuse me. KEATING. Just a minute. Let me fin-Mr. ish this.

This whole question has arisen since 1934, when the Communications Act was passed. There is nothing historical back of That is the only-up to that time you could use wiretap or any other evidence. was no restriction on it. But here, in this limited class of cases, and this is the reason why it is limited to this, here we're got a lot of subversive zealots dedicated to a cause hostile to the very existence of our Government, who are expertly trained to operate Within the confines of our country in secrecy and stealth. They are equipped with all these latest technological devices, and if We do not allow our Federal agents to cope with this problem, then we are putting them at a disadvantage in the use of this technological equipment and letting the enemies

of our country have the sole use of it.

Mr. KEOGH. Well, now, Mr. KEATING, you will have to admit I have been pretty patient in letting you finish that last statement; but again you return to the statement that the enemies of our country, or the agents of potential enemies, are the ones who are using these developments and improvements

in science.

I maintain that our security agents are just as capable, are just as alert, and are just as diligent; and I return again to the basic question before us, and that is, that I believe far greater harm to our system, and far greater danger to all the law-abiding people of this country, will flow from authorizing the tapping of wires and the intercepting of communications, than the benefits you'll gain thereby.

Mr. KEATING. Again, this bill does not authorize any interception which is not done every day right now, and done perfectly

This bill only says that if you hear this evidence over a telephone, you are not going to give the traitor an immunity over the telephone, you are going to allow that evidence to be used in court. And that's all this bill does.

Mr. KEOGH. Mr. KEATING, I have to take exception with-to your statement that it is done perfectly legally. If it were done perfectly legally, you would not have to draft this pending bill.

Mr. KEATING. Oh, yes, you would.

Mr. Keogh. You wouldn't have to give them the express right. You would not have to make it a crime for any unauthorized person to do it. You—you admit, I'm sure you will admit, because you are a reasonable man, that the difficulties with which your committee have been—has been faced in considering the proper type of bill is an indication of the difficulty that besets-

Mr. Keating. That's right. There are many details about the bill upon which reasonable men may differ, but this bill does not authorize the wiretapping. This bill recognizes the legality of the wiretapping that is done now, and every other bill we have had before us recognizes that, because everyone that has introduced a bill has rec-Ognized that they are doing that all the time, but this authorizes the use of that in court, in the cases of treason and sabotage, and then says anything outside of that will be a Federal criminal offense, as well as an offense in any of these States.

Mr. KEOGH. But, Mr. KEATING, under the Federal rule now, evidence, however obtained, is admissable in Federal cases.

Mr. KEATING. Not-it's not admissible if it's obtained over a telephone.

Mr. Cooke. By wiretapping. Mr. KEOGH. In Federal cases.

Mr. KEATING. No, it's not. Under the Communications Act, it has been held that not only-that you-if you divulge the information, you are then violating the Communications Act, and it's been held that divulging in court would be the same as

divulging elsewhere.

Mr. Cooke. Well, gentlemen, thank you for divulging much material on this rather pertinent question of wiretapping.

Give Mr. Benson a Chance

EXTENSION OF REMARKS OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HESELTON. Mr. Speaker, under permission granted to me to extend my remarks in the Appendix, I am including an editorial in the March 25 issue of the Springfield Union, of Springfield, Mass., which, I submit, points up most effectively the problem facing all of us in terms of the recommendation of the House Committee on Agriculture that we should amend what we did last year and return to the completely unsound program of high rigid price supports.

In recent days we have heard many justifiable complaints as to the enormous stocks of wheat, cotton, corn, butter, and other commodities purchased by the Government under that program and of the cost of storing them. Obviously, all of that has occurred under the high rigid price-support program since existing law will not apply until this year's

crops are harvested.

I hope that this sound editorial will be helpful to all those who will have the responsibility of acting upon the recommendation of the majority of our Committee on Agriculture.

GIVE MR. BENSON A CHANCE

Many of the harshest critics of the administration's flexible price-support farm program believe it is headed in the right direction and is economically sound. But some of them—particularly the farm-bloc Congressmen—are still afraid of it polit-

Most of these know, and will admit privately, that rigid price supports were largely responsible for the enormous surpluses of wheat, cotton, corn, butter, and so on. They admit, too, that a return to the rigid pricesupport program will not reduce these costly surpluses.

The administration program recognizes that radical shifts in production are necessary to bring production in line with consumer demand. And most critics of that program agree that rigid price supports prevent the very changes that are necessary.

Seven years ago a majority in Congress agreed that flexible supports provided the proper peacetime Government assistance to agriculture. But when the Eisenhower administration proposes to make a start toward gradually returning to a peacetime plan for agriculture, these same Congressmen reject the program they advocated 7 years ago and demand restoration of the rigid high pricesupport plan.

In 1948 President Truman favored the principle of the present Eisenhower program and said in his message to Congress: shifts in production will have to be made, and flexible price supports will help us make them in an orderly manner." But the farmbloc Congressmen later changed his mind

on the eve of an election.

Secretary Benson says the only way to show that the administration program will work is to give the gradual introduction of flexible supports a chance to work. Certainly the high rigid supports have not worked in the past.

High supports did not keep farm prices high during World War I and the following years. It was demand that did it. Rigid price supports have not held prices even at 90 percent of parity when supplies overtook demand.

It is doubtful that the majority of farmers are against flexible price supports, as the politicians claim. It is doubtful that the Republican Party would suffer at the polls, or that the Democrats would gain by rejecting the Republican program. We doubt that the farmers wish to revert to the rigid price-support program. In other words, it is highly probable that the Benson program has the backing of a substantial majority of the farmers. At least the President seems willing to stand or fall by their votes.

Postal Pay Raise

SPEECH

HON. JOHN E. MOSS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. MOSS. Mr. Speaker, will the gentleman yield?

Mr. RHODES of Pennsylvania. I vield. Mr. MOSS. In discussing the question of a compromise, I was rather interested in reading this morning in the Washington Post a statement in the column by Mr. Jerry Kluttz, contending that we have not compromised, that it has been a one-way street, and that all the compromises have been on the part of the administration. Is it not true that as far as showing the need-not the desirability, but the need—for reclassifi-cation, little or no case was made either last year or this year by the administration.

Mr. RHODES of Pennsylvania. The gentleman is absolutely correct.

Mr. MOSS. They did say they needed the authority in order to bring about the changes which might be desirable in the overall relationship of supervisory personnel to those whom they supervised. Despite our misgivings-and they are very fundamental in many ways-we did yield point after point on the question of reclassification. During this week, we offered to support a rule which would permit only one amendment to be offered affecting the classification procedures in the bill. That amendment would give a simple right to the Civil Service Commission to review the decisions taken by the Postmaster General or those to whom he might delegate the authority contained in the legislation. Is it not true that that right of review is held by every other executive department of this Government, and that under H. R. 4644 a new precedent is being created which could effectively cripple the merit system?

Mr. RHODES of Pennsylvania. The gentleman is right. I am sorry to say that while I have always had a great deal of respect for the Washington Post, I do not think its readers are being given an accurate account of this controversy, and particularly of the position of the minority. It was quite evident again in the newspaper report this morning.

Mr. MOSS. In view of the fact that the chairman of the committee and the administration have taken the position—which is now quite clear and a matter of record—of not yielding, and in order to prevent any loss of income to those employees because of the policy of studied procrastination which seems to prevail at the moment, we will offer an amendment to make the salary retroactive to the first of March. That is the date our own salary increase becomes effective, and that amendment will be offered when the bill comes to the floor of the House after the recess.

Mr. RHODES of Pennsylvania. That would be a meritorious amendment. I think it would be a real test as to where the Members stand on this legislation.

Mr. MOSS. It is not our intention to delay action, nor did we contribute to the deadlock which resulted in this matter going over until after Easter. We tried every means possible to get this matter before the House so that the Members of the House could work their will.

Mr. FASCELL. Mr. Speaker, will the gentleman yield?

Mr. RHODES of Pennsylvania. I yield.

Co-ops and Tax Concessions

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HAGEN. Mr. Speaker, in the course of my customary reading of the daily newspapers and various specialty publications I frequently encounter material which is unfamiliar to me or once learned and then forgotten material. The news story which I submit herewith falls in that category. It was printed in Labor's Daily and points out that cooperative corporations were overlooked in the 1954 Republican tax concession bill.

CO-OF CORPORATIONS IGNORED IN HANDOUT OF TAX CONCESSIONS

CHICAGO.—The Eisenhower administration's tax law of 1954 gave favored treatment to stockholders in private profit corporations but not to stockholders in cooperative corporations, according to the Cooperative League of the United States.

The league, in a memorandum issued to counter antico-op assertions coming mainly

from the National Tax Equality Association, said the Republican Congress exempted from taxation the first \$50 in dividends from stock most taxpayers receive and gave them a 4 percent tax credit on additional dividend income.

"But stock dividends received from cooperatives and credit unions are expressly denied this favored treatment."

(The Senate last week rejected a Democratic Party tax bill which also would have removed this "favored treatment" from tax laws.)

The league said that most co-ops pay exactly the same taxes other corporations pay, in the same manner and at the same rate, with some exceptions.

One exception pertains only to rural electric co-ops. They are exempted from Federal corporate income taxes because they ordinarily make few if any profits.

("Until the Government gets back most of the money, with interest, that it has loaned these co-ops, Congress has felt it unwise to wipe out this exemption.")

Most co-ops pay a corporate income tax on profits put into surplus. Again there is an exception; credit unions must set aside a fixed amount under law, so are not required to pay a tax on that amount.

DIVIDENDS LIMITED

Most co-ops pay corporate income taxes on dividends paid out to stockholders, although their dividends are limited by law whereas the dividends of non-co-ops are not limited. Some farmer-owned co-ops don't pay a corporate tax because they refund profits to their members; only about 20 percent of those co-ops which can qualify seek this status, however.

Cooperatives—just like other businesses—don't pay taxes on money refunded to customers.

Representatives NOAH M. MASON, Republican, of Illinois, and CLIFFORD DAVIS, Democrat. Tennessee, have introduced legislation which would tax the refunds of co-ops but would not tax refunds of other types of corporations, the league said. It called this punitive taxation aimed at reducing competion in the economy.

Co-ops don't pay corporate taxes on cash received from the issuance of shares or investment certificates.

Neither does any other corporation.

The league said mutual fire and casualty insurance companies pay more taxes than stock companies do proportionately either to premium income or profits.

Stock companies pay either that tax or 1 percent of gross income from interest, dividends, rents, and net premium income less dividends to policyholders and tax-exempt interest—whichever is greater.

HIGHER MUTUAL PAYMENTS

In 1942-50, mutual companies paid 6.07 percent of their premium income in Federal income taxes; stock companies paid 2.81 percent.

Or, compared with profits, mutuals paid 80.3 percent of their profits in income taxes while stock companies paid only 32.3 percent.

There is an exception for mutual companies with incomes of less than \$75,000 a year. They make up 78 percent of the total number of such companies but handle only 3 percent of the total premium income.

Life-insurance companies are taxed the same—on net investment income—whether mutually owned or not.

The league said co-ops generally pay more property taxes than other businesses of the same size because their financial statements are so much more readily available to local assessors.

It cited an example where a co-op service station had an assessed valuation twice as large as a nearby station of approximately equal facilities owned by a major oil company.

Asian Policy

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HAGEN. Mr. Speaker, I am submitting an editorial from the Christian Science Monitor of March 21, 1955, which deals with a great many aspects of our current policy with respect to Asia:

FOR A STRONG LINE IN ASIA

Strength derives more from acts than words, more from resolute clarity than from belligerency. The United States has improved its position in Asia in the last 2 years by giving greater attention to Asian thought and needs. Relief of famine in India and Pakistan, stepped-up economic aid, practical measures to help Vietnam and Thailand resist Red pressures—such acts may well count more than SEATO.

But the greatest gain has come in the response of Asian opinion to President Eisenhower's developing peace program. The President's manifest "courage to be patient" in face of plane incidents, truce violations in Korea, prisoner outrages, and Peiping's belligerent threats has blunted Communist charges that the United States is "an imperialist aggressor" reaching clear across the Pacific to interfere in Asian affairs.

Mr. Eisenhower's call for a cease-fire and sharp disengagement from any Chinese Nationalist effort to attack the mainland were reinforced by the Washington-ordered withdrawal from the Tachens. These things all supported the worldwide drive for a relaxing of tensions which has been such an impressive feature of American policy in recent months. Even the firm declaration for defense of Formosa did not damage the impression that the United States position was genuinely a defensive one.

But one detail has been allowed to cloud the picture. That is Washington's ambiguous position regarding the Chinese coastal islands—the Quemoys and the Matsus. Geographically, militarily, and legally, they are tied to the mainland rather than to Formosa. But they have been fortified by the Chinese Nationalists as bases for attacks on Communist shipping and military installations.

OFFSHORE ISLANDS A MILITARY LIABILITY

As outposts they have some military value in the defense of Formosa. But they serve mainly as symbols of Chiang's aim to recapture mainland China. One argument voiced in Washington for American aid in holding them is that the morale of Nationalist forces depends on sustaining their hope of returning to China. But only by deceit can that hope now be fed. Deceit is no sound basis for morale and no business for the United States to engage in.

Moreover, these islands are military liabilities. Red artillery already rakes most of them. Bigger guns are being emplaced which can blanket the islands. They divide the forces available for defense of Formosa and could prove to be traps for Chiang's troops. Any effective American intervention is likely to require attacks on the mainland.

One body of American opinion says the coastal islands should be held as potential bases for defensive attacks on Red China if it attempts more expansion. But the most likely attempt will be continued efforts at subversion and infiltration—against which military action is not the most potent weapon.

It is contended that for the United States to withdraw support for the Nationalists on the Quemoys and Matsus would strike & major psychological blow at American prestige in the whole Far East. Fear is expressed that any such move would discourage and demoralize other peoples now resisting communism. That is arguable. But if withdrawal clarified American purposes and was accompanied by positive action to strengthen such peoples it need have no such effect.

Moreover, the alternative must be considered. Would not the damage to prestige be greater if the United States were forced by the Chinese Reds to give up the Quemoys and Matsus? Indeed, when one gets into psychological values it is easy to believe that the Communists would prefer the second course. Surely their propaganda is better served so long as they can point to American power on their doorstep.

UNUSUAL OPPORTUNITY TO DRAW A CLEAR LINE

It is hard for Americans, sure of their own nonaggressive purposes, to understand how other peoples may feel about American operations in far corners of the globe. Particularly do Asian peoples, sensitive from their colonial experience, feel that American military forces are defending the United States very far from home. But countries such as India have shown that they can understand defense of Formosa. Mr. Nehru has urged the Communists not to use force against it.

The Formosa Strait offers a natural buffer—an unusual opportunity to draw a clear line. Crossing it would plainly spell aggression. Actually the United States sought to draw that line with its declaration on defense of Formosa. It intended to disengage cleanly from Chiang's project for invading the mainland. But the islands, plus certain military and political crosscurrents, have been allowed to blur the picture.

There has also been a hope in Washing-

There has also been a hope in Washington that the coastal islands could be used in bargaining for a cease-fire. But Peking shows no interest in a cease-fire. Quite possibly the Reds prefer to use the islands as talking points at home and abroad. If they would rather push the United States out,

Why bargain?

The bargain Washington might better be interested in is trading the military and psychological incubus imposed by support of the Nationalists on the islands for a clean and plainly defensive line in the Strait of Formosa. In such a bargain it could win the confidence of many Asians and turn them against a Peking move on Formosa. It could strengthen its own position militarily and morally.

The National Cotton Council

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. SMITH of Mississippi. Mr. Speaker, the board of directors of the National Cotton Council met in Washington last month to discuss the council's position in regard to the cotton export trade. The leaders of the council decided that this organization could not properly become involved in a controversy involving export price policy for cotton.

At the same time the council reafnmed its belief that maintaining a high level of international trade and a wider distribution of goods and services throughout the world is vital to the continued prosperity of the cotton industry and to the national economy, as well as to the security of the free world. The council recognizes that the greatest opportunity to expand United States exports of cotton and cotton products is through increased per capita consumption of cotton goods over the world.

The National Cotton Council represents all segments of the cotton industry—producers, ginners, warehousemen, cottonseed crushers, merchants, and spinners. Naturally conflicts of interest develop among these groups and differences over price policy can never be satisfactorily reconciled. President W. T. Wynn and the other leaders of the council were wise in their decision to avoid involvement in such conflicts.

The basic purpose of the council is to help increase the efficient production of cotton. Under Mr. Wynn's leadership the council expects to expand its efforts to encourage general economic development, advertising, and sales promotion, market research and development, and more efficient production and distribution of cotton products throughout the world. Such a program will be of primary benefit to the American cotton producer.

Under unanimous consent, I include an editorial concerning the work of the cotton council from the March 1955 issue of the Progressive Farmer, the South's outstanding farm publication:

CONGRATULATIONS TO THE COTTON COUNCIL

In 1939 when the National Cotton Council was organized, cotton was a sick industry. It was losing out to its competitors. Rayon, the first of the synthetic fibers, was capturing its markets. In United States stores, cotton goods had been pushed into the bargain basements. On the farm, both cotton yields and quality were unsatisfactory; production costs were excessively high, due to heavy use of hand labor. All in all, the outlook for cotton was dismal.

Once organized, the council had to choose between two broad objectives. It could follow the lead of the butter industry, which for many years sought a way out of its troubles by imposing Government restrictions on its competitor. Or it could meet competition (1) by promoting a program of better cotton at lower cost, and (2) by developing new uses and new markets. Fortunately, it chose a constructive program of building up cotton in preference to one of tearing down rayon and other synthetic fibers. This basic choice has set the pattern for its program over the years. And with such a program the council has developed a proved formula for success.

Now, 16 years later, what is the situation? Cotton has a new outlook. It has confidence in a bright and shining future. It believes that it has no problem that can't be whipped by the industry cooperation in a program of research, education, and promotion.

Summing up its regeneration, cotton can point proudly to these accomplishments:

1. It has expanded its domestic market by 50 percent in the face of ever-increasing competition from synthetics. Losing heavily in some uses, such as bags and tires, it has more than offset these losses by large gains in wearing apparel and other fields. It has triumpled because it has won more market battles than it has lost. Cotton, once considered the poor man's fiber, is now equally at home in high society.

2. It has stopped the downward trend in exports that started in the middle twenties, and hopes to turn exports upward.

3. United States farmers have outdistanced foreign competitors in improving production practices.

4. The quality of United States cotton has been improving constantly. Fiber strength has increased 13 percent.

5. Man-hour requirements, for producing cotton have been cut in half; lint yields increased 30 percent.

increased 30 percent.
6. Mechanization has come so fast that 22 percent of the 1954 crop was harvested with machines.

7. The cotton industry, from farmer to spinner, has a vastly improved spirit of mutual understanding. Its leaders have been meeting around conference tables for 16 years and have developed an immense stockpile of know-how.

The council would be among the first to admit that it cannot claim credit for all that has happened in the world of cotton during the last 16 years. It first duty has been to get others to work harder and more enthusiastically for cotton—and to help them work more effectively. The council does not operate its own research laboratories. It investigates to see what research is needed. Then it works to obtain the needed expansion in research. And it follows a similar strategy to obtain needed educational work for getting research findings into use.

The cotton council is the joint effort of six groups—growers, ginners, cottonseed crushers, warehousemen, merchants, and spinners. Most outstanding is the success of the council in getting the majority of people in each of these groups to contribute to its financial support. On an average, about 70 percent of all 6 branches of the cotton industry is now making a financial contribution to the council.

Viewpoints in Asian Policy-MacArthur and the Record

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HAGEN. Mr. Speaker, I am submitting, for inclusion in the Record, two thoughtful editorials from the Bakersfield Californian, a daily newspaper published in my district. The first editorial, published March 5, 1955, deals with the current situation in Asia. The second editorial, published March 25, 1955, discusses the role of General MacArthur in the Yalta Treaty controversy:

[From the Bakersfield Californian of March 5, 1955]

VIEWPOINTS IN ASIAN POLICY

As Secretary Dulles and Chiang Kal-shek concluded their negotiations with a mutual-assistance pact this week, there was much discussion concerning just what the United States intended to do about the Matsu and Quemoy Islands and how far the defense of Formosa will extend.

These subjects have led to more discussion concerning the lengths of the administration's commitment in the Asiatic region, particularly since the meeting of Manila Pact members and the tour of Secretary of State Dulles through Southeast Asia.

It would seem that the President, armed with the resolution of full powers passed by Congress last month, is determined to keep the Communists out of areas considered vital to our defense and out of areas whose possession by unfriendly powers would in the long run jeopardize the stability of the Pacific area.

To draw a line and embark upon a rigid policy is to invite irritation and challenges from an enemy, and the administration is not willing to give the Communists this advantage, nor is it willing to give them a full plan of its operations. But it has shown enough of its hand to let the Reds know that the bluffing stage is over, at least as far as we are concerned, and that further aggression will be firmly dealt with if it infringes upon the areas we consider sensi-

Some observers, basing their views on agreements, public statements, and policy moves, both diplomatic and military, believe the situation to be roughly this: Wherever Communist aggression touches our outer perimeter of defenses in the Pacific, we will react forcefully. Wherever possible, we will bolster independent nations in Southeast Asia and elsewhere in the Pacific area with military, technical, and economic assistance, so that Communist infiltration or intimidation will be blunted. Already this doctrine has begun to take beneficial effect in Vietnam, a territory that today is considered to have a good chance to stop Communist ambitions in its direction, although 6 months ago it was being written off.

These observers regard as unlikely any plan for the United States to assist Chiang Kai-shek to invade the mainland of China, since the risks for this country in such an adventure are far greater than any advantage. It is likely that the Matsu and Quemoy Islands will be allowed to pass into Red China's possession. Possession of Formosa by a friendly power as a key spot in the outer perimeter of our Pacific defense has been underscored many times by administration leaders, although they have carefully avoided any pledge to underwrite an inva-

sion of the mainland.

As a matter of fact, there is little Chiang can do in this direction without our aid, and indeed, there is little he can do about anything except serving as a guard for Formosa. Therefore he serves the purpose of relieving his ally of the burden of securing this outpost; any disappointment he may feel about this will be mitigated by the fact that the United States is the only nation

offering him any support at all.

Insistently, there comes from Washington the report that in time, the administration will come to some sort of recognition of the present regime in China as the de facto government on the mainland. will imply no approval of the regime nor of its beliefs and practices, and certainly will indicate no relaxation in our posture of opposition to its designs beyond its own borders, but the fact of its existence cannot be denied, and acknowledgement of it can hardly be avoided. At least, this seems to be the gist of articles coming from the Nation's capital by informed writers.

These are thoughts on the subject that have been expressed in various places and at various times recently, and are based, as we have said before, on public expressions by administration spokesmen, on policy moves and on appraisals of directives and

actions in the Pacific area.

It would seem that the administration has set certain definite limits upon its toleration of Communist action but it refuses to be stampeded into mistakes or revolation of its strategy. It likewise declines to be bound by a rigid policy, realizing that no policy can be rigid unless all the elements of a situation are under control.

[From the Bakersfield Californian of March 25, 1955]

MACAETHUR AND THE RECORD

To avoid getting himself identified with the military leaders who are said to have advised President Roosevelt and others that the Japanese were still, in February 1945, full of fight and would undoubtedly put up a good scrap if an attempt were to be made to invade their homeland, Gen. Douglas MacArthur, who commanded the Pacific forces at the time, has come forth with a statement of his own views on the subject.

The statement is very interesting both against the background of the Yalta conference and the events of the Pacific war subsequent to the Yalta conference. It points out the broad strategic concept of the Pacific campaign and declared that as early as September 1944, he advised Washington that Japan had defeat staring her in the face.

The statement concludes as follows:

"In broad strategic conception the defensive line of the Japanese which extends along the coast of Asia from the Japan Islands through Formosa, the Philippines, the East Indies to Singapore and Burma, will be pierced in the center, permitting an en-velopment to the south and to the north. Either flank will be vulnerable and can be rolled up at will.

"All my reports from that time on presaged the imminent collapse of Japan. Discussions were even held at my headquarters concerning the possibility of ending the war with Japan before its termination in Europe.

"As a matter of fact, the time for Soviet Russia to have entered the war against Japan was after the Japanese attack upon Pearl Harbor. At that time the German onslaught had been stopped on the Eastern front and the great counteroffensive of the Soviet armies was well underway. Had the Soviet then brought combat pressure on Japan in the Far East, Japan would have been unable to conduct operations on two fronts. Had she been engaged in the north, the southern front, in all probability, never would have been opened. This would have saved the Philippines, Malaya, and the Dutch East Indies and prevented the Japanese thrust out into the Pacific to the very threshold of Australia. Millions of lives and untold agonies would have been spared by such a strategic course which I recommended most urgently in a message to Secretary of War Stimson on or about December 13, 1941. I received no reply.

"Had my views been requested with reference to Yalta I would most emphatically recommended against bringing the Soviet into the Pacific war at that late date. To have made vital concessions for such a purpose would have seemed to me fantastic.

"I have no slightest desire to be involved In the debates now going on and am making this statement solely to correct certain misinterpretations which have been advanced through error."

The Japanese evidently disagreed with General MacArthur's confidence, because in February 1945, at Iowa Jima, they required the American Forces to employ 115,000 men, 495 ships, including 17 aircraft carriers; 1,170 planes, and killed 4,590 Americans, while losing 20,000 of their own men; on Okinawa in April 1945, a battle between American and Japanese Forces began that lasted 63 days, cost the Americans 49,151 casualties and required the employment of more than 1,000 ships and engaged more than 300,000 American soldiers, sailors, and Marines. The Japanese lost 110,000 men. On the basis of resistance at Tarawa, Guadalcanal, Bouganville, Vella Lavella, New Guinea, and the Philippines, and of that encountered on the islands closer to the homeland, it was reasonable to assume that the Japanese would put up a pretty good scrap at home, and from the representations made to the Russian Government by the United States occupation command after the war concerning the thousands of Japanese held prisoner in Manchuria, there must have been a sizable force engaged here that otherwise would have complicated things in any invasion.

Then, too, if Japan had been so close to defeat in 1914, there would have been no reason to employ the atomic bomb to bring the war to an end a year later.

As far as the Russians entering the war in December 1941 the record shows that they

were taking a pretty good beating from the Germans then and continued to take one until nearly the end of 1943. Their lack of interest in a two-front war is understandable.

While statements are interesting, the record should be the determining factor in any decision, if there must be one.

Teachers and the School Crisis

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. REUSS. Mr. Speaker, under permission to extend my remarks, I should like to insert an article entitled "So You Need More Teachers," which appeared in the February 1955 issue of the American Teacher magazine, written by Mr. James L. Fitzpatrick, vice president of the American Federation of Teachers, president of the Milwaukee Teachers Union, editor of the Wisconsin Teacher, and since 1920 a public-school classroom teacher in our Milwaukee public schools.

Mr. Fitzpatrick's article is a thoughtprovoking analysis of the current crisis in our teaching profession. The article

SO YOU NEED MORE TEACHERS (By James L. Fitzpatrick)

Yes, you do need more teachers. And the thousands of overburdened teachers now struggling with classes that are too large, in classrooms too small, need help. But we are not going to get more teachers by merely talking about it, or appointing committees to investigate what we already know about the school crisis and viewing it with alarm.

How, then, are we going to get them? The answer, Mr. Congressman, Mr. Legislator, and Mr. Citizen, is quite simple. We are going to get them by offering them salaries on which they can support families decently, and maybe buy homes on the installment plan and drive Fords, or perhaps secondhand

All this, so they won't have to do odd jobs after school hours, or run to the credit union every summer to borrow enough money to them over the vacation months finance a study course demanded by a lay school board to demonstrate to you, Mr. Citizen, that it makes your teachers keep on

And after we get more teachers, we are going to hold them by also giving them job security and by improving teaching condi-tions, both in the classroom and in other required school activities.

Did I hear you say: "I thought teachers were dedicated and received their reward from that warm feeling inside, that comes from serving others," Well, how else do you think you have been hiring teachers in so many cases for less than the corner grocer pays its delivery boys?

That warm feeling, however, doesn't heat a teacher's home on a cold winter night. For this and nor does it buy coal to do so. other reasons, more than 450,000 teachers. a number nearly equivalent to half the total now teaching, have left their desks in the

last 10 years. More are leaving annually.
Where do they go? One New Jersey teacher, tired of odd jobs after hours and being continually in debt, took a job driving a truck. The majority go into business and industry, where their education and train-ing get them ahead more rapidly. The teachers' college of an eastern university recently released the results of a survey of salaries being drawn by its graduates. Many reported incomes of \$20,000 a year, others \$40,000 to \$50,00 and some \$100,000 a vear.

The editor of the American Teacher magazine received a press release about the survey and fired back the inquiry: "Are your graduates reporting these kinds of incomes still in education, or if not what are they doing? After quite a wait, she got a letter saying the survey returns had not been sufficiently analyzed to make the question answerable.

The cold, hard facts are that there is not enough money in classroom teaching to fill schools of education or teachers' colleges. One-third of the 35,000 who do graduate annually, do not go into teaching. Some of the young women marry and become housewives, but the majority of the truant group take other positions. Industry simply outbids the schools for youngsters coming out of teachers colleges with good grades, especially for those majoring in the sciences.

We not only lose one-third of the graduates of teacher-training institutions to business and industry. Many of the remaining two-thirds are not available for new teaching jobs, since many of them are teachers already employed, who have completed courses for degrees through extension or summer-school courses. A 1954 report of the Illinois State department of instruction stated that only slightly more than 65 percent of the available new graduates could be classed as new teachers.

There are sundry estimates of the number of qualified teachers the public schools now need but don't have. This is mainly because there are so many legal and other definitions of a qualified teacher. Some States qualify for teaching after 1 or 2 years of college. Many small country schools are lucky to obtain high-school graduates.

There ought to be a reasonable standard with which to measure whether a teacher is qualified, but there isn't. Some State legislatures, including the Illinois legislature, have passed laws lowering requirements in order to get emergency teachers.

Let's assume, for the sake of argument (and it's a pretty good argument), that a public-school teacher, to be qualified to teach your child and mine, should hold a degree from a teachers college, or a degree from the school of education of some State university or private college, or have some other equivalency in specialized training in art, music, business, industry, or the like.

This equivalent training should represent only a part of the usual 4-year college course; there should be sufficient teacher training courses to meet the usual requirement of a qualified teacher, as well as other basic cultural courses.

These are yardsticks legally and otherwise used to measure minimum qualifications in most other professions. A reasonable estimate is that more than 300,000 of the 1 million teachers this year do not measure up to them.

Nostrums to correct the shortage are numerous. But like all nostrums they are not effective medicine. Future Teachers of America Clubs might be helpful if the high-school youngsters joining them could be shown that there's a future in teaching. The project to bring in housewives with college degrees after short teaching courses isn't working very well.

This latest stopgap, to bring women from the kitchen to the classroom, seems to have hit some 50 communities in various parts of the country. As a temporary expedient in an emergency it may be justified. But, Mr. School Board Member, beware of it as a solution. Undoubtedly, some of these women are qualified to become teachers, or eventually may qualify. Obviously, however, only a small percentage of them will stay in the profession. What is really needed is to retire the housewife to the home, to eliminate most if not all the emergency-certified teachers, and start building the profession with career men and women.

Citizens in many areas are becoming concerned over the problem of finding and keeping enough teachers to take care of ever-increasing enrollments. Newspapers, magazines, the radio, and citizens organizations have been highlighting the needs. But it's largely in the form of resolutions, talk and little action.

Horace Mann, the father of American education, once remarked: "I've never heard anything about the resolutions of the Apostles, but an entire book was written about the acts of the Apostles." What we must have now, Mr. Congressman, Mr. Legislator, and Mr. Citizen, are fewer resolutions, less alm-less and worried talk about the teacher shortage, and more action.

What if you don't take action? Well, the schools will probably continue to muddle through, with more and more students and fewer and fewer qualified teachers. Fifty thousand new teachers will be needed every year for the next 10 years to take care of increased enrollments, and 50,000 more will be required to replace those retiring. This, on top of the present shortage. It will be quite a muddle.

What will it take to get enough teachers? The American Federation of Teachers has recommended as the first prerequisite, adequate salaries. The salary of the average teacher, currently, in the United States, is about \$3,600 a year. The A. F. of T. recommendation is for a starting salary of \$4,500, to reach \$8,000 a year in 8 or fewer annual steps.

Benjamin Fine, the New York Times' dean of education editors, has recommended that the present average salaries be doubled. Carl J. Megel, A. F. of T. president, and himself a classroom science teacher, has estimated that it will take \$500 to \$1,200 across-the-board increases, depending on current local schedules, to even stop teachers from seeking cost-of-living pay elsewhere.

Those delving deeply into the justification for such increases, will find that teachers' salaries generally are currently 25 percent less than those in the occupations, and 65 percent under those in the other professions. Half the teachers in the United States work after hours and during vacations to supplement their teaching incomes sufficiently to be able to support their families.

This low estate of public-school teachers impelled Superintendent Louis P. Hoyer, of Philadelphia, to Join in declaring that one of our first objectives is to "place salaries on a level in keeping with the rising cost of living."

Many salary schedules are essentially paper schedules. There are so many hurdles and roadblocks that it is almost impossible to reach the maximum. These phony schedules serve only to fool the public and frustrate teachers. States should help school boards find enough money for honest schedules, enabling teachers to advance rapidly and automatically.

A few, but only a few, communities are beginning to realistically approach good maximum salaries, but teachers must have masters degrees or better to get them. Most communities do not have the funds to "go it alone."

What's the answer, Mr. Congressman, Mr. Legislator and Mr. Citizen? At the risk of dividing the responsibility three ways, it's Federal aid for teachers' salaries, greater State aid earmarked for the same purpose,

and increased local financing. How much will it take?

Mr. Megel has estimated that it will take \$1 billion to meet the need for increased teachers' salaries. Obviously it is a national, State and local job. Congress should not pass the responsibility to the States, meanwhile letting the schools deteriorate.

Federal aid will be more than just financial help. It will be an incentive for the States to develop standards for salaries and certification. A few salary standards set up by Congress as a requisite for obtaining Federal aid will do no harm and will certainly not mean Federal control. Imagine the crazy-quilt of our national highways if the Federal Government had not guided the States in helping to route them. States and communities have had control of the schools up to now without too great success. Surely no one can say the addition of Federal funds could make them worse.

Next to low salaries and slow promotions, the lack of job security is obviously the major cause of the teacher shortage. Only a few States now have adequate tenure laws, giving their teachers job security. The ideal law for this purpose is one enabling a teacher after 2 or 3 years of probation to go under tenure, to be discharged only for reasons proven at public hearing.

Seventy-five percent of the teachers of the country are not under tenure of any kind. This means they can be removed at any time without recourse. Tenure established by board of education regulation is unsatisfactory because it can be abolished as it was created—by board action. In the tenureless States, teachers' contracts are renewable from year to year, and the renewal time has come to be known as the "open season on teachers."

Tenure bills have been introduced in the majority of State legislatures. You can increase the teacher supply in your State greatly, Mr. Legislator, by (a) first making sure such a bill's provisions are clear and adequate, and (b) if it is, working to pass it. If the bill pending is inadequate, or none has been introduced, then help your children toward a good education. Introduce and back a good one.

Next to lack of tenure, certification laws (as they now exist) do most to confuse a teacher's life. They differ in nearly every State, and one State is said to issue 23 different kinds of certificates, but none of them good for more than 4 or 5 years.

Physicians receive licenses enabling them to practice for life, after they fulfill educational requirements and successfully pass State examinations. So do dentists, osteopaths, chiropractors, naturopaths, and accountants in most States. Similar lifetime certification of teachers is another prerequisite to the stabilization of the profession.

The adequate financing of teachers salaries is a combined responsibility of Congress, State legislatures, and local school boards. Tenure and certification are responsibilities of the State legislatures. Another coming under legislatures this year is the enactment of enabling laws for social security for teachers if they want it.

Now, let's get down to local levels—to what school boards and citizens must do if they want more teachers. We include you, Mr. Citizen, in this, because the schools belong to you, and it is your responsibility to see to it that school boards which you elect take the leadership in promoting solutions to your educational problems. Many school boards have failed to accept this responsibility with the excuse they could do nothing since funds were not available.

Not all local communities are channeling as much money as they should into teachers' salaries, and many do not allocate as much State aid to salaries as they must allocate. Presently this financing is a two-way street, with the State legislature and the local community treading it. Federal aid will be forthcoming when the States and localities make themselves heard in Congress.

You, Mr. Citizen, can look into your school, but not cursorily. To get at some of the other things that are causing the teacher shortage locally you'll have to dig deeper than study meetings and interviews with your school administrators.

Are your classrooms overcrowded, making it difficult for teachers to teach and do the good job they know they owe your children? Is a teacher expected to handle more than one class at a time, with a teacher substitute (a student) sitting in for her in one of them?

Are teachers in your school badgered and bothered by unnecessary class interruptions by the school's administrators? Is lunch at lunchtime mostly prohibited, because teachers are given supervisory jobs to do or called into urgent conference with the principal during their lunch hour? Is your principal an Osgood Conklin or a minor dictator?

Do your school board and principal consult with teachers on school affairs and extracurricular activities? Does your school superintendent consult with the teachers' representatives on such things as regulations affecting them, their salaries, and so on?

If you discover that the answer to most of these questions is "No." then you have another reason why there is a teacher shortage in your community, or why teachers are cool or shy when parents come around, and fail to take part in community affairs.

And, Mr. Citizen, that matter of taking part in community affairs is an important one. Does your school board permit your teachers to exercise the same rights as you do, or are your teachers second-class citizens, who are not supposed to participate fully and freely in the political and other civic affairs of the community?

Does your school board allow your teachers to join the professional organization of their own choice, attend the State conventions of their own choice, and to negotiate and bargain collectively?

You will find that these freedoms are important in the thinking of teachers, and help to build the profession. The best teachers want to be able to say with Ralph Waldo Emerson, an early advocate of academic freedom, who wrote in the American Scholar; "We will walk on our own feet; we will work with our own hands; we will speak our own minds."

One last suggestion, Mr. Congressman, Mr. Legislator, and Mr. Citizen: If you want to find out about what teachers need to enable them to stay on the job of teaching, talk to the teachers themselves. I mean the class-room teachers.

It will, of course, be impossible for you to get the views of every teacher. But in most States and communities the teachers, or many of them, have their local federation affiliates with the American Federation of Teachers.

They will tell you that you have to do all, or most, of the things I have outlined here to make teaching a good job and an attractive profession. Without waiting to be asked, I want to mention a jibe that was aimed at me early in my career when I was struggling to support a growing family. When I told a salesman I couldn't afford to buy a new car, and when he found that I was a teacher with graduate training, he remarked: "With your education you ought to be able to get a good job."

What you need to do is to make teaching a good job, so that you will attract more capable career people. Then, when you get these dedicated teachers, you can keep them—and you can keep them dedicated.

Seriously, you had better reverse the usual process and go to the teachers instead of waiting for the teachers to come to you. When they come to you, you think they

merely represent another pressure group with an ax to grind.

So, ask the officers or legislative representatives of the teachers' federations, or the rank-and-file members. They know the score.

The Yalta Controversy

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HAGEN. Mr. Speaker, the Fresno Bee, one of the outstanding independent newspapers in the United States, has seen fit to comment editorially on the burning controversy over the release of the Yalta papers and the background of those documents. Aside from their intrinsic worth these editorials, one published March 21, 1955, and the other March 22, 1955, are noteworthy because they reflect the reaction of a newspaper which is not committed to the undying promotion of either of the major political parties.

[From the Fresno (Calif.) Bee of March 21, 1955]

PRESIDENT STILL MAY READ THE FACTS ABOUT YALTA

Release of the 500,000 word Yalta conference record may have been planned to embarrass the Democrats. But the first person to be spread eagled on this piece of political flypaper was President Dwight D. Elsenhower.

The President's press secretary, James C. Hagerty, in an apparent effort to clear his chief of any responsibility for the document's release, raised even more urgent questions of Presidential responsibility. Hagerty said Eisenhower did not release the papers, had not gone over them, and indeed, never had studied them.

Any reasonable man would conclude that this being so, the President could have no strong opinions on the subject, at least, no informed opinions. Yet Eisenhower ran on a platform which pledged the repudiation of the Yalta Pact and in his 1953 state of the Union message he called for such a repudiation.

The move to repudiate the Yalta agreements was embodied in a 1953 congressional resolution favored by Eisenhower which was sidetracked largely through the intercession of the so-called Taft Republicans.

What kind of bamboozlement and flummery is this? The president was making political capital of the Yalta agreements in 1953 and urged their repudiation, with all the legal international consequences, when now it is revealed he never had studied the documents involved.

Who then told him the Yalta agreements were bad? Or who told him to say they were bad? What shall be assumed of other positions taken by the President?

Will they be the result of his own investigation of the facts? Or will they be based on the political potential in any given subject, to be followed by a gigantic display of disinterest in the facts once they become available?

These are disquieting but necessary questions. The revelation the President espoused a course of vital import to American foreign policy without examining the record is an appalling one. It is particularly appalling when it is recognized this course was politically advantageous.

It is a sad but powerful illustration of how the American people have been victimized by deliberate efforts to heap political advantage from unavoidable events in world history.

Publication of the Yalta documents already has served the great purpose of demonstrating how many passed judgment on this event without ever having read the evidence.

It is said the President has no plan to submit another resolution repudiating Yalta. Let us hope he does have a resolution to read the record at last.

[From the Fresno (Calif.) Bee of March 22, 1955]

HATRED OF ROOSEVELT IS KEY TO YALTA CONTROVERSY

Like scavenging hordes of little foxes, the haters of Franklin D. Roosevelt are digging in the boneyard of Yalta.

The release of the incomplete, already challenged records of the Yalta Conference has been leaped upon with smug indignation or ill-concealed delight, to degrade, belittle, and defame the man who did as much as any single person to see America through both its worst domestic crisis and its greatest hour of peril.

The defamers of the dead are almost drooling over every action and word of Roosevelt which in their own extensive hindsight can be presented as a mistake.

Sooner or later their vindictive second guessing is bound to boomerang. The American people are not that stupid, not that petty, and not that ungrateful.

Had it not been for Roosevelt, Winston Churchill, yes and Josef Stalin, there might

Had it not been for Roosevelt, Winston Churchill, yes and Josef Stalin, there might not have been a Yalta Conference. It might have been a Berlin conference presided over by Adolf Hitler and Benito Mussolini to which America, Britain, and Russia might have gone as defeated supplicants.

The bold and ridiculed goal of 50,000 American fighting planes set by Roosevelt, the lend-lease deal which kept Britain in the war, the long struggle back from Pearl Harbor, the unbelievable acceleration of American industry, the high level of national morale, and the brilliant battlefield strategy all were in part contributions of Roosevelt to his Nation's victory and salvation.

Yet never since Abraham Lincoln has any American encountered such hatred and deprecation as that heaped upon Roosevelt. It is an unrelenting hatred which he incurred by the methods he employed to save the Nation from economic disaster just before he was called upon to shoulder the burdens of a world war. It is a hatred which does not have the best interest of the American people at heart.

To these detractors Roosevelt in death is a threat. It is necessary from their view to destroy even his image and reputation. To accomplish this end they cry imprecations against a voice which is silent; with eyes which have seen all that has happend these last 10 years they damn those eyes which being mortal, could not foresee the precise future. And to make this cowardly hypocrisy supreme many who now denounce Roosevelt's efforts in Yalta to keep Russia in the war are the very ones who cheered loudest when he succeeded in doing just that.

The man who attended the Yalta Conference did not have long to live. He did not see V-day. He had led the Nation out of the pit of fear in the depression and done much to invest it with sufficient strength to save the free world.

Certainly he deserves from all freemen a resolute resistance to the present nibbling of the scavengers. Deep in the heart of the hatred of Roosevelt is hatred of the people themselves. The affection the people held for Roosevelt is what the defamers really seek to destroy. Only disgust and indignation should greet their efforts.

Appendix

Getting Surplus Food to Those Who Are Hungry or Undernourished

SPEECH

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill H. R. 5239, making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1956, and for other purposes.

Mrs. SULLIVAN. Mr. Chairman, I am grateful to the chairman of the Subcommittee on Agricultural Department Appropriations for yielding to me for these comments on one phase of our surplus agricultural supplies which seems to receive little attention—the distribution of this food to needy Americans.

I do not say this in criticism of the subcommittee, which I believe has done an outstanding job in drafting this bill, particularly in regard to funds for the school-lunch program. I was simply aghast earlier this year in looking over that portion of the President's budget recommendations to see that the administration was actually recommending a cut of more than \$15 million in funds for the school-lunch program, apparently under a mistaken belief that the use of surplus foods would make up that difference.

The subcommittee's action, then, in placing in the bill the full \$83,236,197 for the school-lunch program, refusing to make the reduction of \$15,236,197 suggested by the President and his advisers, was a fine thing, for which I am most appreciative. All of us have heard of the difficulties of the schools participating in the school-lunch program in obtaining the share of surplus-food commodities promised them, so that a cut in funds for the purchase of foods of high nutritional value would have created a much more severe problem, and would have forced either an increase in the cost of the lunches or a poorer menu.

DISTRIBUTING SURPLUSES TO THE NEEDY

There has been a great deal of discussion here on the House floor, Mr. Chairman, and also in the hearings of both the Appropriations Subcommittee and of the Committee on Agriculture of the problem of disposing of our huge surpluses of food. We passed several bills here last year to encourage a greater distribution of our surpluses by either sale or gift abroad, and there has been much criticism of the slowness of the distribution.

My concern, however, is over the extremely limited distribution of these surplus foods to needy Americans—to those who are unemployed, on relief, actually hungry right here in the midst of the most abundant harvests we have ever known—here in rich America.

Unfortunately, the Department of Agriculture does not apear to be too much concerned about this. It has made some of this surplus food available on a rather hit-and-miss basis to the States for distribution pretty much as they see fit to persons of low income. The standards, if any, seem to be extremely loose.

It is, I believe, a wholly unsatisfactory system of distribution of this surplus food if the desire is to reach those who really need this food—people who are hungry or undernourished.

Last year, Mr. Chairman, I attempted to correct this situation by introducing H. R. 7870, a bill to establish a food stamp plan for the distribution of up to \$1 billion a year of this surplus food to needy persons, particularly those on relief or old-age assistance, aid to dependent children, and so on.

The Agriculture Department showed no interest in the proposal last year and so far has shown very little interest—publicly at least—this year. I am hoping that the Committee on Agriculture of the House will soon schedule hearings on my new bill this year, H. R. 5105, which differs in some particulars but not in overall concept from the one I introduced last year.

MECHANICS OF SULLIVAN FOOD-STAMP BILL

My new bill requires consultation by the Secretary of Agriculture with both the Secretary of Health, Education, and Welfare and the Secretary of Labor in establishing standards for the distribution of the surplus foods.

This provision arises primarily out of a suggestion which was made to me by Missouri Welfare Director Proctor N. Carter, who pointed out that the Department of Health, Education, and Welfare maintains direct relations with the State and local welfare agencies which would play such a large part in a successful food-stamp-distribution program.

I added the provision giving the Secretary of Labor a voice in the distribution of the surplus foods because of the responsibilities of his Department in the field of unemployment.

The continuing high level of unemployment in the country, even though production has been increasing over the levels of last year, makes it important that we devise an effective program for getting some of our vast stores of surplus food to needy families.

The present system of distribution of the surpluses has been, I am sorry to say, very much of a hit-and-miss proposition, with some States participating and some

not, with some areas operating their own food-stamp plan, and others giving out the food to anybody who wants to come and register for it. So far as I can determine, there are no uniform standards and no means of assuring that the people who really need this help are actually getting it. The Department of Agriculture seems to be concerned more with getting rid of a storage headache than in helping to solve a serious human problem.

Furthermore, there has been a good deal of criticism of the program in some areas of the country for permitting or encouraging so-called chiselers to get this food, while elsewhere people who are really hungry can get none. I do not know that the chiseling is actually occurring, but the whole surplus-food-distribution system has been chaotic and that encourages all kinds of abuses and criticisms.

Under the food-stamp plan the Secretary of Agriculture would be given broad discretion in setting up the actual mechanics of the distribution system-that is, in determining whether or not the food should be distributed through regular grocery stores or at special outlets set up in each participating commu-The bill would require, however, that the food be packaged in convenient form for distribution at the local level, with the food stamps themselves to be issued by the welfare department or equivalent agency of the individual State or political subdivision participating in the program.

Stamps would be issued for each type of surplus food to be distributed.

A major principle of the bill is that any surplus food distributed under the act be in addition to, and not in place of, welfare assistance normally granted to needy persons by a State or local welfare agency.

For the purposes of the act needy persons are defined as those receiving public-welfare assistance or who are in need of such assistance but are ineligible because of State or local law—such as Missouri's employability law.

Many of the bills which have been introduced on this subject since I first put mine in last year, and the surplus-food distribution system itself in some areas. provide for issuance of surplus food to people on unemployment compensation, or on social-security pensions or who have low-paying jobs. I do not oppose that idea at all-I think it is tragic to have people going hungry or not getting enough to eat when we have all this surplus food-but I think the most important part of this whole problem is to get this food to those who need it most. That is, to those on relief, those without jobs or unemployment compenedge of malnutrition.

Perhaps once we get a food-stamp program actually started and functioning smoothly then we can include all these other groups. My bill calls for a report by the Secretary of Agriculture within 6 months after the food-stamp program starts on the costs and problems of expanding it to include all of these other groups. But I think primarily we should get busy at once on providing a direct and effective system of distribution to those who we know are in real distress.

PRESENT DISTRIBUTION LIMITED IN SCOPE

Among the foods which are, or have been, available for such distribution, are butter, cheese, dry milk, cottonseed oil, shortening, beef and gravy, dry beans, and several others.

Only a small percentage of the millions of persons in the United States who are receiving public assistance of one type or another are obtaining any of this food. Three-fourths of the distribution has been to families in temporary straits due to drought or localized unemployment. They are certainly in need of and entitled to help of this nature-particularly in the coal mining areas. But there is so much of this surplus food available-constituting a storage headache for the Government-that we can certainly do much better than we have done in getting it to needy folks.

For instance, of the 2,620,000 persons last reported to have been certified for such food in the country, more than 950,000 are from 1 State-Pennsylvania. Most of the remainder are in Mississippi, Alabama, West Virginia, and Kentucky. And all we are getting out to these people is about \$5 million worth a month-\$60 million a year at that rate.

A MORE EFFECTIVE PROGRAM NEEDED

Mr. Chairman, instead of the hit-andmiss method now employed in the distribution of this food to the needy, we should adopt a national, unified, intelligently planned and organized system, using food stamps which would go to those most in need of this extra help.

The fact is that there are more persons in this country on old-age assistance-not social security pensions, but old-age relief-than the total of those now receiving surplus food help. When you add the extra millions who are receiving aid for dependent children, aid to the blind, sid to the permanently and totally disabled, and the hundreds of thousands of general assistance cases in the country, it is obvious that the 600,000 persons in this category receiving surplus food are only a small minority of those who need the help.

There are, in addition, many persons in actual need of public assistance but unable because of State or local law including such laws as Missouri's employability law, who cannot qualify for public agency financial aid and who are dependent upon private charities.

These, too, should receive surplus food. as provided for under my bill, H. R. 5105.

Mr. Chairman, I submit for the Recorn at this point, for the information of interested Members of the House the full text of my bill, as follows:

sation, those who are living right on the [84th Cong., 1st sess., in the House of Representatives, March 21, 19551

Mrs. Sullivan introduced the following bill; which was referred to the Committee on Agriculture:

H. R. 5105

A bill to provide for the establishment of a food stamp plan for the distribution of \$1 billion worth of surplus food commodities a year to needy persons and families in the United States

Be it enacted, etc., That in order to promote the general welfare, raise the levels of health and of nourishment for needy persons whose incomes prevent them from enjoying adequate diets, and to remove the specter of want, malnutrition, or hunger in the midst of mountains of surplus food now accumulating under Government ownership in warehouses and other storage facilities, the Secretary of Agriculture (hereinafter referred to as the "Secretary") is hereby authorized and directed to promulgate and put into operation, as quickly as possible, a program to distribute to needy persons in the United States through a food stamp system a portion of the surpluses of food commodities acquired and being stored by the Federal Government by reason of its price-support operations or other purchase programs.

SEC. 2. In carrying out such program, the

Secretary shall-

(1) distribute surplus food made available by the Secretary for distribution under this program only when requested to do so by a State or political subdivision thereof;

(2) issue, or cause to be issued, pursuant to section 3, food stamps redeemable by eligible needy persons for such types and quantities of surplus food as the Secretary shall determine:

(3) distribute surplus food in packaged or other convenient form on the local level at

such places as he may determine;

(4) establish standards under which, pursuant to section 3, the welfare authorities of any State or political subdivision thereof may participate in the food stamp plan for distribution of surplus foods to the

(5) consult the Secretary of Health, Education, and Welfare, and the Secretary of Labor, in establishing standards for eligibility for surplus foods and in the conduct of the program generally to assure achievement of the goals outlined in the first section of this act; and

(6) make such other rules and regulations as he may deem necessary to carry out the

purpose of this act.

SEC. 3. The Secretary shall issue, to each welfare department or equivalent agency of a State or political subdivision requesting the distribution of surplus food under section 2 (1), food stamps for each kind of surplus food to be distributed, in amounts based on the total amount of surplus food to be distributed and on the total number of needy persons in the various States and political subdivisions eligible to receive such food. The food stamps shall be issued by each such welfare department or equivalent agency to needy persons receiving welfare assistance, or in need of welfare assistance but ineligible because of State or local law, and shall be redeemable by such needy persons at local distribution points to be determined by the Secretary under section 2 (3).

SEC. 4. Surplus food distributed under this act shall be in addition to, and not in place of, any welfare assistance (financial or otherwise) granted needy persons by a State or any political subdivision thereof.

SEC. 5. In any one calendar year the Secretary is authorized to distribute surplus under this act of a value of up to \$1 billion, based on the cost to the Federal Government of acquiring, storing, and handling such food.

SEC. 6. The distribution of surplus food to needy persons in the United States under this act shall be in place of distribution to such needy persons under section 32 of the act entitled "An act to amend the Agricultural Adjustment Act, and for other purposes," approved August 24, 1935 (7 U.S.C., sec. 612c), as amended, and section 416 of the Agricultural Act of 1949, as amended: Provided, however, That nothing in this act shall affect distribution of surplus food presently provided for in such sections other than to needy persons as defined in section 7 of this act.

Sec. 7. For the purposes of this act, needy person is anyone receiving welfare assistance (financial or otherwise) from the welfare department or equivalent agency of any State or political subdivision thereof, or who is, in the opinion of such agency or agencies, in need of welfare assistance but is ineligible to receive it because of State or local law.

SEC. 8. The Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare, and the Secretary of Labor, shall make a study of, and shall report to Congress within 6 months after the date of enactment of this act, on the feasibility of, the costs of, and the problems involved in, extending the scope of the foodstamp plan established by this act to include persons receiving unemployment compensation, receiving old-age and survivor's insurance (social security) pensions, and other low-income groups not eligible to receive food stamps under this act by reason of section 7 of this act.

SEC. 9. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the pur-poses of this act.

Our Neighbor the Indian

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. UDALL. Mr. Speaker, I present herewith the third in a series of firsthand articles written about the plight of the American Indian by Harold E. Fey, executive editor of Christian Century magazine. Written with keen insight, this article describes the Pima Indian people of Arizona and their problems:

OUR NEIGHBOR THE INDIAN (By Harold E. Fey)

When Z. Simpson Cox was asked to address a gathering of protestant churchwomen in his native city of Phoenix, Ariz., he decided to talk about his clients, the Pima tribe of Indians. This young attorney told the churchwomen of Phoenix that the easiest way they could obey the biblical injunction to leve their neighbor would be to support an orphan in school or to collect clothing for needy people far away. Such activities are worth doing and reward the doer with a sense of satisfaction out of all proportion to the amount of real sacrifice involved.

But if they were really serious about loving their neighbors, said Mr. Cox, they should plunge into politics and work for justice for the Indians of their own State. He noted that several of the Arizona Congressmen, who have to legislate on Indian affairs, are sympathetic with Indians. But they cannot survive in politics unless they receive votes, and most of the voters in Arizona are white people. White people and Indians compete for the use of water for irrigation in an arid State where the politics of water is deadly and relentless. It happens that the Indians have prior rights to water in the parts of the State where they live. Nevertheless, the whites get most of the water. So, said Mr. Cox, women who are moved to Work for justice for the Indians will have to face opposition from members of their They will not go far before they own race. arouse their best friends to anguish or even to anger.

- PREFER TO HELP THEMSELVES

Mr. Cox admitted that it is easier to hold a cake-social to raise money so an Indian boy or girl can go to school than it is to help the Indian child's father contend for justice at the polls or in the courts. But if the Indians can secure the water to which they are entitled by prior possession and by law, they can and will earn a good living and be able to educate their own children. The attorney pointed out that the Indians prefer justice to charity, just as we do. He argued that Christians should prefer that Indians receive equality of protection in the courts and legislatures, rather than hand-outs. He asked whether Christian love can be divorced from justice and remain Christian love.

The question asked by this Phoenix attorney of his townswomen is one which every church member in this country should ask of himself. Like the Arizona Congressmen, most Americans have an attitude of benevolent good will toward the Indian. We are prepared to help him on occasion by appropriations in Congress to avert starvation, or by gifts to missions, or by approving bills to end Federal wardship, which we are told are for his good. But are we prepared to help the Indian help himself, when such help may involve offending or causing economic loss to people of our own race? The real choice we have to make is between a course of action based on sentimental aversion to seeing people suffer and another course based on readiness to endure suffering ourselves to insure that justice is done.

To be specific, consider the situation of the Pima Indians. Most Americans became aware of the existence of this tribe through the publicity given to Ira Hayes. Who does not know he was the Pima Indian who with five other marines, all white, raised the United States fiag on Mount Suribachi in the bloody attack on Iwo Jima just 10 years When Ira Hayes died of acute alcoholism in February 1955, a funeral service was held in the Presbyterian Church in Sacaton. central town of the Pima Reservation. Next day his body lay in state in the capitol building in Phoenix. Then it was taken to Washington and buried in Arlington National Cemetery, near a 75-foot bronze replica of the Iwo Jima flag-raising scene. Veterans' organizations raised money to give to the Hayes family—father, mother and three brothers—so its members would be clothed in presentable fashion for the trip to the National Capital.

HOME IN THE DESERT

The second day after the funeral, Nelson Jose, the Pima tribal judge, took Russell Carter, Indian affairs secretary of the national council, and myself to the trading Post called Bapchule, Ariz. There we saw the home of Ira Hayes. The family was away, being en route to Washington with the body of their son. On the desert we found a typical Indian house, made of wood Posts and mud bricks, 25 or 30 feet square. Nearby were a shed and an arbor covered with sticks and boards to provide shade. About 100 feet away was another little mud-walled building with a cross on top. That was the

Bapchule Presbyterian Church. A quarter of a mile away were the trading post and the Catholic Church and school. That was Bapchule.

Although the soll was said to be fertile, the surroundings of the Hayes home presented a picture of dust and desolation, since no water was available for irrigation. After seeing this place, it was easier to understand why Ira Hayes drank his way to oblivion and death; why alcoholism is a major affliction to a frustrated and discouraged people.

A few miles away water runs in the irrigation ditches and the desert produces cotton, barley, wheat, and alfalfa, to say nothing of citrus fruit. Why, then, do the Hayes family and its neighbors have no water? Search for the answer to that question leads one another step into the difference between justice and sentimentality in our dealings with the Indians.

FROM TIME IMMEMORIAL

The Pimas have lived on the Gila River and its tributaries for many centuries. These "peaceful corn growers," as Ruth Murray Underhill describes them in Red Man's America, had developed a large-scale corn culture on this river before the beginning of the Christian era. By A. D. 1000 irrigation ditches had reached a length of 10 to 16 miles. Villages of pit houses stood near the cornfields; the people were dressed in coarse cotton woven on a horizontal loom. They were making handsome painted pottery, figurines, and shell ornaments.

The arrival of the Spaniards made little difference to the Pimas, except that they got their name, meaning the "I don't know people." from the newcomers. Their right to hold their land and to use water from the Gila and its tributaries for irrigation was recognized first by Spain and then by Mexico. About 150 years ago they were joined by the Maricopa Tribe, which settled peacefully to the south of the Pimas and lives there today, using the same means of livelihood and having the same problems in keeping them.

This tribe supplied a large quantity of wheat to American soldiers in the Mexican War, and later helped the United States Army in wars against the Apaches. It is their boast that they do not know the color of white man's blood, never having spilled any. The Gila River Reservation was established in 1859 for the sole use of the Pimas and Maricopas by an act of Congress which specified that the waters of the Gila and Salt Rivers should be for the use of its wards, the Indians. But after the Civil War white squatters, first Mormons and then others, settled upstream and took the water river for their own use. In a few years the ancient canals of the Pimas went dry, and for nearly 40 years these peaceful farmers fought a losing fight against starvation.

MISSIONARY DEFENDER

Then Dirk Lay, a tall and earnest Presbyterian missionary, took up the cause of the Indians. He went around the country crying out against the injustice which was being done them and finally carried his campaign to Congress. In 1924, largely through his efforts, Congress passed a law authorizing the Department of the Interior to build Coolidge Dam across the Gila River. act specified that the dam was for the purpose first of providing water for the irrigation of lands allotted to Pima Indians on the Gila River Reservation, Ariz., now without an adequate supply of water, and, second, for the irrigation of such other lands in public or private ownership as in the opinion of the said Secretary can be served by water impounded by said dam without diminishing the supply necessary for said Indian lands.

That should have settled the matter. The Indians had first rights to Gila water through immemorial use and now through two ac-

tions of Congress. But they were Indians, and so nothing was settled. Political pressure from white Arizona caused the Interior Department to go into court and swear the Pimas did not need all the water Congress had given them. When the Pimas sought to protest, the Indian Bureau and the Interior Department refused to recognize their lawyer and caused him and the Indians to be thrown out of court. The resulting Gila River decree, which is still operative, has been described as one of the greatest crimes of water law.

Meanwhile the area around the Indian reservation was filling up with white farmers, attracted by the warm climate and the productive capacity of the soil when it had water. These farmers combined in a land-owners' agreement which concerned the pumping of underground water to the surface for irrigation. The drilling of wells was to be subject to approvel by the Secretary of the Interior. Indian priority in use of water was not recognized. Today there are 144 wells on land farmed by whites surrounding the Indian reservation. Many of the wells are just across a fence or road from Indian land. Attorney Cox and the Pimas insist they are illegally taking water which belongs to the Indians, or in which they have

SHUT DOWN YOUP PUMP

Why don't the Indians drill their own wells? Is this just another case of shiftlessness and lack of initiative? Hardly. The Pimas tried to secure the required permission from Washington and nothing happened. Many Indians believe the Indian Bureau had made a secret agreement not to allow the Indians to drill irrigation wells. When after many efforts they could not secure official approval, Mr. Cox's clients de-They drilled four wells, using cided to act. their own funds. One well is pumping. Another produced water too alkaline for use. The Indians have been unable to get electricity for a third from the Government-owned powerline. At a cost of \$3,500 a fourth well was dug, equipped with a pump, connected with the powerline and started. It threw a big stream of good water.

But again political pressure was applied by white people on the Interior Department. Again that Department acted to favor the greatest political strength. Within 15 days a telegram arrived from the Interior Department ordering the Indians to shut down their well until the Solicitor of the Department could give them a legal opinion as to whether they were entitled to use the water under their own land. This was in the summer of 1954. Threats were made that if the Indians did not comply the limited supply of water they get from the Coolidge Dam would cut off. Other threats said Indian tribal funds in Washington would be frozen. Meanwhile, the 144 wells around the reservation continue to pump, and the Ira Hayes home and many others sit in the dust of the That was the status in early Febdesert. ruary 1955.

TYPICAL STORY OF SOUTHWEST

Obviously the business of loving one's neighbor becomes somewhat more complicated in Arizona than holding a cake sale. In their troubles over land and water the Pimas are typical of many of the tribes of the Southwest, where a good share of the 400,000 American Indians live. But they are interesting for many more reasons than those which have been mentioned. To discuss these it is necessary to glance at some figures, drawn from Government sources and less than 5 years old.

The Pima Indian Agency, at Sacaton, Ariz., is responsible for about 7,300 Indians, of whom 6,700 are Pimas. In 4 areas their reservation consists of 465,169 acres, being mostly mountain and desert. Tribal ownership accounts for over 340,000 acres of this

domain. "Allotted lands" is nearly 100,000 acres, and four-fifths of this is involved in heirship proceedings. The reports show Indians farm over 25,000 acres and lease about 20,000 to whites. Indians have 2,600 head of beef cattle, about the same number of horses, about one-tenth as many dairy cattle. About 900 Indians are listed as employed; of these only a few over 100 are working on the reservation. Nearly all are farmers, so they work as field hands for whites. The average income per family is estimated at \$960 for the Pima, \$540 for the Maricopa. Nine out of ten of the Indians read and write English; 6 have finished college, 137 high school, 1,050 elementary school. Only a few have intermarried with whites.

Why don't more Indians work? Why don't more of them work on the reservation? Why do they lease nearly half their arable land?

Perhaps we had better begin with those 100,000 acres of allotted land, since that is the best they have. This was land par-celed out to individual Indians under the 1887 Allotment Act, passed when Congress decided without consulting the Indians that it was going to make farmers out of them. The idea was that a farm of his own would make the Indian acquisitive, and his awakened acquisitiveness would make him indus-It might have worked out that way in New England, where everybody's land gets rain, but not in the Southwest, where the man who owns the riverside or the water hole controls everything dependent upon it. The best land was parceled out and soon most of it was lost to whites. During the 47 years the act was in force, land in Indian possession shrank from 139 million to 48 million acres. These 100,000 acres are what is left of the Pima allotted land.

TRIBAL FARM

That is a great deal more land than these Indians are farming. Why? One reason is that much of the land is tied up in fractionated parcels too small for any economic The death of the original owner and of his heirs has split the land up into splinters, so the heirs let the land be leased to others who can assemble enough land to make a field and can afford the tractors and other machinery to farm it. This consequence of the Allotment Act will provide employment for all the lawyers in the Indian country for the next hundred years unless Congress attempts to undo the harm it has done.

The Pimas have a tribal farm of around 5,000 acres. It is run by an Indian farm manager who is a graduate in business administration from the University of Arizona. About half of the farm is idle each year for lack of water.

Current gross income from the tribal farming operations is expected to be around \$200,000, coming mainly from cotton, barley, and cattle. The tribe owns several huge cotton-picking machines, as well as other machinery. I saw these complicated machines lumbering slowly up and down the rows of ripe cotton, driven by intent Indian mechanics. The machines do not pick up all the cotton, so the old method of gleaning by hand is also used. Ira Hayes was so employed just before he died. Cost of operations is considerable, and much of the net farm income goes to pay costs of tribal government. Last year when farm operations produced a little extra money, the tribe gave scholarships to four boys and a girl, who are now in school. The productivity of Indian-operated land is not as high as that of whiteoperated, and this is given as a reason for not permitting the Indians to have bigger allotments for cotton.

Critics of the big-farming operation of the tribe say it is a welfare-state proposition. Other lands are neglected and people depend on the little they get from the big farm. In the Salt River area 70 percent of the arable land is leased to whites. Leases run from \$20 to \$49 an acre. The Indian Bureau is accused of encouraging leasing and of being partly responsible for the fact that many Indians sit in idleness and drink up their meager income. Yet the Indians say: can we do? They lack capital, experience, machinery. It takes all three, plus some in-They lack capital, experience, fluence in the right places, if one is to assemble an economically viable plot of land and get water to farm it.

INDIAN INITIATIVE

It is not surprising that many Indians are bitterly unhappy about their situation. In the old days of Pima self-sufficiency, everybody worked on the irrigation ditches and in the fields. They worked, but they had an economy of plenty, and the neighboring Papagos came and worked for them and were paid in food and cotton. Now, there is idleness and many of the young people get into trouble. Pima tribal income from prison labor, mainly of persons arrested for being drunk and disorderly, is \$18,000 a year. Some of the villages are social cesspools. The old men shake their heads and mourn the loss of initiative and energy on the part of the young. Yet the old men sit in the tribal council and draw their \$8 a day and show little initiative or energy themselves. They feel so dependent on the Indian Bureau.

A short distance away, however, a development is taking place which presents a very different picture. The Maricopa Reservation is even farther downstream than the Pima, and its people know even greater hardship. But part of this tribe have started a cooperative farm. Its leaders are young Indians, many of them former GI's. Although the farm is only a year old, it has two irrigation wells pumping, has more than 300 acres in production, and is working to subjugate 200 more. Instead of relying on free water, the cooperators are paying for theirs and are getting help to pay \$100 for subjugating each 10 acres. The chairman of the cooperative is a dynamic man of about 40, who is not afraid to go before the tribal council or any other group and argue his cause.

It would not be expected that a departure as radical as this would occur without oppo-sition. Some of the opposition is in the tribe, from persons who fear this energy will imperil their position or income. Some of it is from persons who are skeptical as to whether this venture will not go the way of previous enterprises of one kind or another. Other opposition can be laid to pure inertia.

AFSC OFFERS HELP

The Maricopa cooperative is fortunate to have the help of James and Lois Hayes. Jim Hayes is a white Californian who got very deeply involved in the Pacific fighting in World War II. A journalism graduate, he and his wife came to Phoenix after the war to work on a newspaper. Assigned to write about the Maricopas, he became well acquainted with many members of the tribe, and eventually found his work with them taking all his time. After a year a representative of the American Friends Service Committee heard about what he was doing. Now the committee is backing his efforts to encourage the Maricopa cooperative. The Haveses are grateful for this backing.

This courageous young man, whose nonpacifist police dog accompanies him on surveying expeditions, recognizes that the cooperative confronts many adversaries, but believes its simple democracy awakens something deep in the Indian heritage. Hayes says it is a mistake to assume that all prewhite Indian culture was communal. of the Pueblos was communal, and the tribal organization of the Plains Indians may have been strong. But the Pima-Maricopa life-way allowed considerable room for individualistic action, and it is this which is coming to the surface now in this new turn of the Maricopas.

When he was asked what might be the next step in Indian development, Jim Hayes replied he would like to see a planning and operations board set up on each reservation. It would work with all governmental and voluntary organizations, and not just with the Indian Bureau. He finds the soil-con-servation staff most helpful, for example. The board should consist of people who are best qualified to help Indians with their problems, and not just bankers who are protecting their loans or lawyers who represent Indians in legal matters. The Indian Bureau has a plans and development board, but it is responsible only to the Commissioner and is not close enough to the people. The Hayeses believe and practice their conviction that real cooperation requires day-in and day-out living if it is to be effective for

So the business of loving one's Indian neighbor consists not only in political action. as Mr. Cox said, but in economic and other kinds of action as well. It requires breaking down the wall of strangeness with which we isolated the Indian with even more effectiveness than the Government has isolated him on the reservations. It demands repentance for our toleration of injustice and a determination that we shall not through ignorance continue to do collectively what any decent man would be ashamed to do if he were singly and personally responsible.

The situation of the Pima Indians applies in part to others in the Southwest. moves being made in Congress toward termination do not immediately threaten their security, such as it is. They are nevertheless keenly aware of what is happening to the Northwest Indians and want to be ready for self-sufficiency. At present it seems a safe guess that they will be ready before the American people are. Does Congress realize that ending wardship lays upon us the obligation to do justly?

The Limit of Our Foreign Policy

EXTENSION OF REMARKS

HON, ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. CHIPERFIELD. Mr. Speaker, the greatest single issue confronting the American people today is the foreign policy of the United States. Unless it is successful all other issues become incon-

Our foreign policy has expanded to all parts of the world, involving us in tremendous economic and political problems, until the very existence of our Nation depends upon their correct solution.

If we should become involved in the holocaust of a worldwide war with its H-bomb, jet planes, and the mechanized weapons of modern warfare, not only the future of our Nation but even the world would be at stake.

It will not help us, however, to have any illusions about our foreign policy. No one need have any obligation or inclination to look through rose-colored glasses to see what has been done or to minimize the difficulties of the future.

In a constantly changing world we cannot pull a master switch and shunt independent sovercign nations around to do our bidding as if they were boxcars

in a switch yard, or outline a new master simplification we must constantly keep plan for the future.

The difficulties of master planning are Well illustrated by archy, the cockroach, spelled with a lower case a, appearing in the Don Marquis stories. Archy, in discussing with his brethren the sad life of cockroaches in general, their struggle for food and their danger of being oppressed by human feet, discovered a wonderful solution to their problems by simply deciding to change all roaches into grasshoppers so life would be merry and food plentiful.

But when Archy was confronted by one of the more practical of his brethren as to just how this could be accomplished, his only reply was, "Oh, just leave the mere details of the transformation to the administrators of the

Just because of the difficulties of master planning, this does not mean we must adopt the views of those who apparently adhere to a doctrine that the United States is better off to pretend the world beyond our shores does not exist.

We need not wash our hands of the whole business and concentrate on building shelters that will be proof against the H-bomb. In our foreign operations we have not reached the place where we ought to close up shop and liquidate our assets or liabilities for whatever they may bring.

While we are not prophets, we can plan for the future by analyzing successes of the past, avoiding our mistakes as far as possible, and constantly keeping in mind the objectives of our foreign policy and strive for their success.

But before we do so, we must have the firm realization that there are certain definite limitations in dealing with for-

eign policy.

One of our best diplomats frequently makes the statement, "If you can give the other fellow orders, it isn't foreign policy." His point is that you can't give orders to independent sovereign nations. If the nation has a status which makes it possible for it to be ordered around. in the way Russia orders its satellites, it is no longer foreign policy but domestic policy which is involved. All this means that the methods which we can use to get a foreign country to do what we want it to do are limited. We should not base Our foreign policy on an assumption that other countries are going to behave differently than they really are.

We cannot by edict or flat in Washington control the action of our allies. to say nothing of our adversaries. We know that each nation has interests different from those of every other nation and that its reactions are not likely to

be identical to ours.

We cannot halt the actions of Russia or Communist China-all we can do is try to deter them from aggressive action by creating conditions that will be in their own self-interest to do so.

This will become abundantly clear as We analyze what has happened in the past and consider the possibilities of our future course of action.

But before we do this let us state the primary objectives of our foreign policy. Fully realizing the danger of overin mind our goal or we will lose sight of the forest because of the trees.

We must promote and obtain security and peace for the United States. We must maintain our independent sovereignty. For our own self-interest our foreign policy must be inherently selfish.

At the same time, if by cooperating with our allies and freedom-loving peoples we can accomplish these goals we should likewise strive for permanent peace everywhere in the world.

We cannot be the sole gladiator to save the world. We need all the help we can get. But if by overtaxing our own strength we destroy ourselves, we destroy the world.

The time has come, however, to call in some engineers who are not "yes men" for the old management to make sure that our future foreign operations get on the right track.

No matter on which side of the world we look the most vigorous defender of United States foreign aid has to admit our program has not worked as well as was expected. This is true whether one sympathizes with what has been done or sees in recent events their past predictions of failure.

There are few people who still believe we have not been generous enough in dealing with other countries. If we could have bought friendship there would be little doubt as to the success of our efforts.

The policy of "give them the aid and assume they will do the right thing" might make sense if you can assume that the recipients of our help are seeking the same things we are, that they agree with us on major issues, and that they are ready to accept our leadership in the step-by-step action necessary to attain our major goals. I am afraid that many of our internationalists have allowed themselves to be fooled on this point. It is natural for everyone who regards himself as intelligent, highminded, and a keen analyst to think that others who possess these same characteristics will see issues in the same way that he does and will react in specific emergencies in a similar manner.

It is easy to see how, at the beginning of the Marshall plan, our officials and many of our people believed that an aidwithout-detailed-commitments policy was sound. The United States at the end of World War II was undoubtedly preeminent among the nations of the world. We had the best Army, Navy, and Air Force. We had the atomic bomb. We had the highest standard of living, the most food, and the most money. It was, and it is, easy for us to visualize ourselves as having reached the most advanced stage of civilization known to mankind as the result of a process of natural development. It was, and it is, easy for us to visualize the rest of the world as struggling forward in a sort of evolutionary process, striving to be as much like the United States as possible. Under such circumstances, if by giving aid we could hasten this evolution a little bit, it would be sound policy to do so.

But France, after dragging its feet for years with regard to the European Defense Community, has finally rejected it. Our hopes now must be based on a substitute plan which is now in the process of acceptance. The United Kingdom advocates a policy toward Red China which is opposed to ours. India does not believe in a regional defense effort in southeast Asia. Denmark has recently announced that its membership in NATO is now on an inactive basis.

We have only secured an uneasy peace in Korea and Indochina, and face a most critical situation in Formosa and the Pacific area.

It would seem, therefore, we have been wrong in some of our fundamental assumptions. We have gone wrong in assuming other countries want the same things we do and will react the same way we react in specific events. We must recognize these new developments for which we have not made adequate adjustments in our policy. In the future we must assume our allies will not always carry out our dictates as we wish they would, even if we place certain conditions on our aid. We have reached the place where we must assume many countries will demonstrate their freedom from United States domination by doing just the opposite.

I think that, therefore, we are going to have to work out with nations what each of us is to do about certain specific matters in the current year and the next year and the next. If we can agree as to a course of action, each party should contribute on a fair basis to carrying out the agreement. If we cannot agree, let us not go ahead assuming that things will work themselves out in the long run.

This does not mean that every nation which is unwilling to join us in a military alliance against Russia is immediately classified as an enemy and denied future United States aid or cooperation. Whether we like it or not there are many countries, particularly those which have only recently emerged from a colonial status, that sincerely believe they can remain neutral. There is no advantage to us in driving them into the enemy camp. On the other hand, we should limit our aid and our expectations to those things that can be undertaken by mutual agreement and mutual selfinterest.

For example we must recognize that the problem of unification of Europe not only is of the utmost importance to us. but that it is also a European problem whose solution must be worked out by the Europeans themselves.

It seems to me that the United States should state its policy unequivocally favoring European unification, and we should stand ready to assist in specific matters when asked by the Europeans to help. The United States should not, however, take the initiative in the matter. We should not have our Ambassadors in London, Paris, and Bonn calling on Ministers with various proposals and counter-proposals to advance the cause of unification. We should not have the United States Information Agency putting out propaganda in favor of unification. There is no use trying to go faster than the Europeans are able and willing to go themselves.

They must realize once and for all that they must help themselves and that their own fate is involved; and that their only chance of survival is to cooperate to the fullest extent with other libertyloving nations of the free world.

I believe our future policy should be to continue to strengthen regional arrangements such as NATO and SEATO if they are willing to cooperate on a basis of self-help and mutual aid. This is necessary because assistance should only be given to a country if it advances the foreign policy of the United States.

The North Atlantic Treaty Organization was ratified by the United States Senate. It is the law of the land. Aggression against one of the member nations is considered aggression against all. Under this treaty we have entered into mutual security arrangements to protect ourselves as well as other liberty-loving nations.

We have furnished NATO with military end items amounting to billions of dollars, and are maintaining thousands of our young men in the military service in that area. For us to withdraw at this time our aid and leave a vacuum for the Soviet to take over is unthinkable. We have but a Hobson's choice—no choice at all.

The situation reminds me of the Texas jackrabbit which, under hot pursuit by the hounds, climbed a tree remarking. "This is contrary to my natural predisposition but necessity leaves no choice."

Our aim should be liberation rather than containment. We should continue to encourage and implement the military arrangements entered into by Greece, Turkey, and Pakistan. We should use our good offices as well as the United Nations to settle the disputes in the Middle East between Israel and the Arab States.

I believe the recent implementing of the Southeast Asia Treaty Organization is a step in the right direction. Taken together with our arrangements with Japan, South Korea, and Formosa, these agreements greatly strengthen the security of the United States and our allies in the Pacific area, and in my judgment are a great deterrent to the further aggression of the Communists. Without such arrangements the chances of becoming involved in war would be much greater and without them our defenses would have to be, for all practical purposes, withdrawn to the continental United States.

The resolution which was passed almost unanimously by the Congress expressing our determination to defend Formosa and the Pescadores and related positions and territories of that area, strengthens our security in that part of the world. In unfriendly hands these islands would seriously dislocate our military strategy in the Pacific. It would create a breach in the island chain of the western Pacific which constitutes for the United States and other free nations, the geographical backbone of their security structure in that area.

We should not trade any part of this area for a cease fire or recognition of the Red Communists in the United Nations.

Another policy which I feel should be continued and implemented is the point 4 program for the rehabilitation of so-called backward countries. I do not know of any program from which we receive more benefit for as few dollars. However, we must be careful in its implementation that we confine it to its original purpose; namely, to help those countries to help themselves by giving them scientific knowledge and the know-how in the fields of education, agriculture, health, and sanitation. We should not permit these programs to grow into a worldwide WPA.

In my judgment we should not engage in a preventative war. While it might be a temptation to precipitate a general war while we are still ahead in the armament race, in the field of nuclear and mechanized weapons, the ruin, exhaustion and devastating effects which would follow would make it preposterous to follow such a course.

To fight a preventive war to avoid such a worldwide conflict is equally foolhardy. It would be as absurd as a man committing suicide because he is afraid to die.

There are those who believe that the Soviet, ourselves, and our allies can settle our differences by peaceful coexistence, Such an argument is fallacious. It would allow the Soviet to retain all the territory that they have won by aggression, and we would have to write off to Communist domination without a contest all the territory which they now control. It would permit the Soviets unimpeded exploitation of these tremendous areas with their high industrial potential and natural resources, including the vast area of China. By such a policy we would strengthen the hand of the Kremlin for further world conquest.

One of the doctrines espoused by President Wilson in his fight for the League of Nations was that we should have open covenants openly arrived at. While I do not decry the use of international organizations as not being helpful in the cause of peace, I do feel that sometimes this public or "microphone diplomacy" is fraught with danger. While the United Nations gives us an open forum and a sounding board to answer the illogical charges and propaganda of the Soviet and her satellites, it seems to me the very publicity attending such open forums places limitations upon what we may accomplish. For example, a somewhat minor issue may be publicly debated, each party taking opposite sides, until an issue is blown up to so much importance that neither side can retract from the position it has publicly taken. Each side may find itself in the position of the small boy who has put a chip on his shoulder and dared his opponent to knock it off. Both sides are afraid to

While it may be a slow and tedious process, I believe we should continue our discussions of the issues that come up in the foreign fields with the countries concerned, working together to find mutual and reciprocal solutions. It may be a tedious and difficult process to reach such an understanding and mutual consent that will be for the benefit of all

concerned, but I believe such negotiations will be on a more firm basis by such methods, and will help to bring about the permanent peace and security all the free world is so devotedly striving to accomplish.

Expansion of Farm Production

EXTENSION OF REMARKS

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. AUCHINCLOSS. Mr. Speaker, the great economic and social progress we have made as a nation is in direct relation to what we have done in this country to expand our production and increase distribution. Through these efforts more and more goods have steadily become available to more and more people. Through this process, we have greatly expanded employment opportunities for our people and sharply increased both their income and buying power. All of this is directly reflected in the high standard of living that prevails throughout this land and of which we are all so justly proud.

In large part, the improvement in living conditions which has so steadily taken place in this country stems from the fact that our people have long had the incentives needed to encourage the exercise of individual initiative. Our people have the willingness to work and the desire to bring about improvements. These attributes and the advanced techniques that have been developed in production are among the basic reasons for the striking gains we have made as a nation.

The productive resources of our agriculture have contributed heavily to our national progress. The capacity of our farms to produce has risen to an unprecedented level. The very fact that our agriculture is so highly productive provides our Nation with a firm foundation for continued growth and development.

Looking ahead to the future, one of our basic needs is to improve the balance in our agriculture so as to make the most effective use of our productive resources and at the same time meet all of our requirements for farm products. We need to promote desirable shifts in production, both from the standpoint of improved nutrition and pattern of land use. In all of this, we need to make sure that agriculture continues to make its full contribution to the Nation's healthy growth and development.

Last year Congress took definite action to help facilitate the adjustment that our agriculture needs to make to cope with the sharp changes in demand that have come about since the end of the war. One important step was to provide a system of flexible price supports which will enable farmers to keep their operations adjusted to the requirements of our expanding economy. This move will

also help minimize the need for production and marketing controls which have had to be imposed by virtue of mandatory high rigid price supports. Although this is the first year that flexible price supports will go into effect under the legislation enacted by the last Congress, it is already becoming evident that this is the best course we can take to achieve and maintain a balanced and fully productive agriculture.

Experience in recent years has amply demonstrated that rigid high price supports lead to the accumulation of unwanted surpluses which necessitate forced restrictions and sharper and sharper cutbacks in production. To the extent that farm production is cut back and restricted, it, of course, tends to reduce farm operations. This in turn tends to undermine national prosperity on which profitable farm markets depend.

High rigid 90-percent price supports have continued in effect over the last few years despite the drastic changes that have taken place in the war and immediate postwar demand picture. The conditions created by this have made it necessary for the farmers of our country to cut back their highest profit crops by some 35 to 40 million acres. These reductions were made in some of the most fertile and productive farming areas. The effect of this curtailment is already being felt in many communities. From an overall standpoint, it tends to slow down the expansion of our total economy.

When agricultural production is restricted and cut back as has been necessitated by the high rigid price supports. all those who sell to or serve farmers, transact less business. This affects sales of farm machinery, fertilizers, chemicals, automobiles, and all other supplies and services required when farms are in full production. The decline in sales to farmers brings on a reduction in the amount of employment in both business and industry. This is in addition to the great loss of jobs that result directly from cutting production back on the farms and is reflected in less work in producing, harvesting, processing, transporting, selling, and storing agricultural products. The result of all this is a vicious spiral of declining incomes and buying power in virtually every segment of our economy.

The importance of increasing and maintaining farm production at a high level, cannot be overemphasized if we are to maintain full employment at good wages. For farmers to get more profits there must be increasing production—and increasing consumption. This cannot be achieved by restrictions and production cutbacks which in reality mean scarcity. Agriculture must produce—and produce in large volume if it is to be most profitable and also provide the means for farmers to buy the goods and services which our towns and cities have to offer.

There is an interdependence between agriculture and business and industry which is too easy to overlook. Full agricultural production helps maintain full employment of labor in productive enterprises. In turn, when workers have good

incomes, it helps insure strong markets for the farm products desired by consumers.

Our farm people represent close to a 30-billion-dollar market for nonfarm goods and services of all kinds. In terms of raw materials alone, our farmers are customers for 7 million tons of finished steel, 50 million tons of chemical materials, 17½ billion gallons of crude petroleum, 300 million pounds of raw rubber, and 22 billion kilowatt-hours of electric power.

This huge volume of buying power exerts a tremendous leverage throughout our national economy. It is estimated that the purchases made by farmers provide nonfarm employment for from 5 to 6 million persons, or about 10 percent of total nonagricultural employment. In addition, these nonfarm workers employed because of agricultural purchases also make a market for industrial goods-and these workers, in turn, create an additional market. Altogether, it is reasonable to assume the expenditures by farmers account both directly and indirectly for about 15 percent of the total nonfarm employment.

The great contribution that agriculture is making to our way of living can be maintained and increased only by expanding production in keeping with the requirements of our growing economy. Our country did not become great by restricting production and following a policy of scarcity. By the same token, our country will not remain great under such an approach which would ultimately place us in an economic straightjacket of inhibited production and consumption. Through the years we have learned that a dynamic economy requires both increased production and increased consumption. Ours is a dynamic economy and we must keep it so if we are to enjoy a continuing rise in our standards of living.

New York Times Says "Time To Face Facts" on Quemoy and Matsu

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. UDALL. Mr. Speaker, the Sunday New York Times reported a "very perceptible movement of press and public opinion against getting into a war over Quemoy and Matsu." Over the past several weeks the Times itself, with its customary caution, has analyzed the issues at stake and has now come to the firm conclusion that we should not risk military involvement over these islands. The lead editorial yesterday sums up the thinking of the Times on this crucial problem and should merit our attention:

THE BALANCE SHEET

At the end of last week, as William S. White wrote for this newspaper: "The President did not know and could not yet know whether he would intervene militarily if the Communists attacked Quemoy and Matsu,

just off the China mainland." We believe Mr. Eisenhower is honestly puzzled. We also have to admit that his puzzlement is based on a wider knowledge of soldiering and considerably more inside information than the rest of us possess. However, these considerations should not prevent the public from speculating as to the Far Eastern situation and making up its own mind as to certain phases of that situation.

Let us therefore try to draw up a kind of balance sheet as to Quemoy and Matsu. In the first place, the strategic value of these islands, except as they interfere with traffic going in and out of Amoy and Foochow, is not great. The second point made in favor of retaining freedom of action toward the islands is that morale on Formosa would be weakened if we said we would not defend Quemoy and Matsu. Maybe it would. There are, however, other ways of maintaining morale than by trying to defend territory that is not needed.

In the third place, it is argued that American prestige in Asia would decline if we made another retreat. But it is hard to believe that communism would immediately sweep still-free areas of southeast Asia if we told Generalissimo Chiang Kai-shek that he had better draw in his lines a little. These arguments for retaining the islands or for defending them with American lives and at the risk of a great war are too simple. They

are almost naive.

Let us consider the arguments against retaining the islands. First, there is a danger that an attempt to retain them by force may produce a big war in which, unless it becomes worldwide and a question of naked survival for the free countries, our allies in the Pacific and in Europe would not support In the second place, if such a war as it might, to bombing attacks on the Chinese mainland-even though by some miracle the bombs actually hit only the "pinpoints" at which they were aimed-we would kill countless numbers of innocent persons, Would this not-inevitably, we might say rightly-alienate the multitudinous millions of Asiatics who are ready enough to believe evil things of the United States? It seems to this newspaper that this risk is too great to be run.

What sort of solution can we find? It would be possible, surely, to evacuate the Quemoy and Matsu Island groups. Simultaneously with this action or preceding it, we could give a new guaranty to Generalissimo Chiang Kai-shek for the defense of Formosa, and we might induce our allies in the Pacific and Western Europe to join us in this guaranty.

Finally—and this is crucially important—we might push for United Nations action, already pending, to guarantee a cease-fire in the Formosa Strait. If the Security Council would not give such a guaranty—and presumably it would not, because of a Soviet veto—then there could easily be a special session of the Assembly in which there could be a two-thirds vote for the moral commitment of the United Nations.

While this was going on we could increase our aid to Formosa on the understanding that Chiang Kai-shek's government would not attack the mainland. We could put in a force of infantry as a token of our intentions. Surely the visible signs of American aid—and possibly of United Nations aid—would reassure the Formosan population. The oriental tradition of "face" is not really oriental—it is human. If we say to Generalissimo Chiang Kai-shek that we and our friends will do our best to make Formosa a prosperous and democratic state, if we say again that we will defend it against its enemies, surely we give Chiang's government the "face" it needs.

It is time for ourselves and for our friends on Formosa to face the facts. Communist China at this moment cannot be conquered from Formosa. The essential task is to keep the spark of freedom alive on Formosa and to fan it into greater vitality. When that task is viewed in its right proportions the Quemoy and Matsu Islands shrink to what they are—inconsequential heaps of rock and soil not worth the shedding of blood or the risk of worldwide catastrophe.

The Trend Toward Larger Farms

EXTENSION OF REMARKS

HON, COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mrs. KNUTSON. Mr. Speaker, the trend toward larger farms concerns us in the smaller communities. When consolidation brings efficiency to a family unit it means a higher living standard. However, in event holdings grow depriving family ownership it inflates detriment to the whole of a rural community. Under leave to extend my remarks, I wish to insert an article from the Warren Sheaf, a county newspaper in my district, for interest and study, to show the trend in Marshall County.

The article follows:

FARMS IN MARSHALL COUNTY ARE GETTING LARGER

Marshall County is following the trend of most counties in the State with farm acreage in the county being slowly consolidated into larger farms. This has made fewer and fewer jobs on the farm available and the rural population of the county continues to reduce as surplus people go to the city and village.

Concentration into larger farming units is being forced on the operator as a trend of the times with more and more machinery available making the economical farming unit larger than was previously the case.

At present Marshall County is second only to Kittson in the largest number of acres per farm in the State, according to the Minnesota State farm census for 1954.

Marshall County has a total of 1,152,000 acres of land, of which 859,817 were under cultivation in 1945 in 2,635 farms for an average acreage of 326.3. In 1950 the land under cultivation had dropped to 848,731 acres divided among 2,567 farms for an average of 330.6 acres per farm.

In the last 4 years the land farmed has dropped 14,000 acres to 834,817 and the number of operators has dropped by 270 to a total of 2,297. This has increase the average size Marshall County farm in the past 4 years to 363 acres.

One good sign, however, is that most of the drop off in farm operators came in the tenants and this is a healthy economic sign. The number of farm owners was 2,217 in 1945, 2,297 in 1950, and 2,101 in 1954, while the number of tenants dropped from 418 in 1945 to 270 in 1950 and 196 in 1954. People living on Marshall County farms in 1954 were 8,699.

On a statewide basis the decline in farms has been at a rate of about 1 percent a year, with the biggest decline coming since 1935 when there was a record high of 184,203 farms in the State as compared with 154,277 now. According to the 1953 census there were 1,762 more farms then than currently.

With the decrease in the number of farms there has been a slight increase in the number of acres in each; an average of 201 acres in 1954 as compared against 198 in 1953 and 195 in 1952. In 1935, when the peak number of farms was reported, the average acreage was only 165.

The most notable thing in production was the decrease in wheat acreage, due undoubtedly to the allotment quotas now in effect, and the increase in the production of barley, the latter being doubled over the 5-year period from 1946-54.

Acreage figures for all crops in Marshall County as reported by the Minnesota farm census are as follows:

Marshall County farm statistics

	1954	1049	1944
Farms	2, 207	2, 567	2, 635
Acreage in farms	834, 817	848, 731	859, 817

Federal Contributions to the District of Columbia

EXTENSION OF REMARKS

HON, WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. COLMER. Mr. Speaker, I observe from current press reports that the District of Columbia is also having its revenue problems. According to these reports, it is anticipated that the District's revenue will fall short of meeting the budget requirements for the next fiscal year considerably in excess of \$20 million. It is further stated that for the first time in its history, the District government is faced with deficit spend-

Furthermore, the current press reports indicate that the annual cry for additional Federal contributions is going up by those responsible for the fiscal affairs of the District. In fact, it seems that the city commissioners are prepared, if they have not already acted, to call upon Uncle Sam to again increase the annual Federal contribution to the District of Columbia. There are even suggestions that this contribution should be increased to meet half of the city's budget of approximately \$175 million.

That the Federal Government should make some reasonable and equitable contribution to the maintenance of the District government is recognized. This, of course, is based upon the fact that the Federal Government occupies a considerable portion of the District

territory. But what seems to be overlooked by the advocates of ever-increasing Federal financial contributions to the operation of the District Government is the economic contribution made to the city of Washington, D. C., by the Federal Government. We are constrained to believe that most any city in the United States would be willing to contribute to the Federal Government in return for the Federal payroll and other advantages enjoyed by the economy of the District. In fact, the city of Washington is one of the most prosperous cities in the world as a result of this Federal situation.

Mr. Speaker, other cities, States, and subdivisions of government have their financial problems also, but they cannot look to the Federal Government to bail them out. It so happens that the legislature of my State of Mississippi is now and has been in session for the past 3 months for the sole purpose of raising enough taxes to meet the increased demands on the treasury of that State. But the State of Mississippi and all other States as well as cities must look to their own resources rather than Uncle Sam for the needed revenues to operate their governments. As a Representative in the Congress of that State, I cannot idly sit by and permit my people to be taxed further for such increases by the Federal Government to the city of Washington, D. C., while the legislature of my State is verily scraping the bottom of the barrel to get further taxes with which to operate our State government.

The following table shows how the Federal contribution to the District of Columbia has been steadily increasing for the past 10 years:

Federal annual contributions to the District
of Columbia, fiscal years 1946-55

Year:	Amount
1946	\$6,000,000
1947	8,000,000
1948	12,000,000
1949	12,000,000
1950	12,000,000
1951	10, 800, 000
1952	11, 400, 000
1953	11, 000, 000
1954	12,000,000
1955	21, 890, 000

Mr. Speaker, I hope that the Congress will not grant this increase and that the District government, like the other governments of the country, will relie on its own resources.

Ode to the White House Squirrels

EXTENSION OF REMARKS

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. McDOWELL. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record the following poem which has to do with the subject which has reached national proportions in its appeal within the past few weeks. The author, Mr. Clifford Hall, is the State

auditor of Delaware. During the political campaign last fall, he became quite famous in my State as a campaigner through his ability to add a touch of humor from time to time through his political poems.

ODE TO THE WHITE HOUSE SQUIRRELS

The squirrels on the lawn of the White House they say,

Are fouling up a game that Ike likes to play. He putted his little balls all around the place,

With a smile of contentment all over his face.

But those wicked little varmints with the long bushy talls,

Had better retreat—and lower their sails.

For they have stirred up the anger, the
wrath, and the ire

Of our Republican leader—our Five-Starred

They have presumed to scamper and romp

and play.

On Ike's private golf course—and get in his way.

They scatter his balls out into the rough, And play heck with his score, which sure makes it tough.

On Republicans and Democrats, and wife Mamie too;

'Cause the people catch heck when Chief Ike is blue.

The stock market zooms up—then falls to the ground,

And his thousands of aides must not make a sound.

Secretary Humphrey wants an interest increase,

And Secretary Benson wants crop payments to cease.

Then Secretary Wilson turns his bird dogs loose,

And all the people have left—is the egg of a goose.

So please, little squirrels, get you back in

your beds, Before you get shipped—to the Siberian

Reds. It ain't worth the price you're asking us

to pay,
So get off Ike's golf course—it's no place
to play.

Mr. Farley's New Job

EXTENSION OF REMARKS

HON, EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Watertown Daily Times of February 23, 1955:

MR. FARLEY'S NEW JOB

Governor Harriman has appointed James A. Farley, of New York, as a member of the State banking board and, through speedy confirmation, the senate has heartily concurred in the choice of the chief executive, Mr. Farley, who succeeds Carl T. Hogan, begins his 3-year term in the nonsalaried job on March 1.

If the many whose services are available to the new Democratic Governor, we can think of no one better equipped by training, by temperament, by energy, and by conservative political persuasion than Mr. Farley. The particular position the latter will full is that of public representative on the board, and if there is a man in the United States

whose finger is closer to the pulse of the people than Mr. Farley, we should like to know who it is.

The former New York State and National Democratic chairman and the one-time Postmaster General is now chairman of the Coca-Cola Export Co. He knows business and he knows management, but, best of all, he knows the people. Here is the ideal public-relations man in the very highest sense of that now somewhat abused term.

We think, too, that the appointment of Mr. Farley reflects a breadth of judgment and political know-how in Mr. Harriman that many of us had not initially discerned among his attributes. It is a good appointment, conferring, as it does, honor on the giver as well as the receiver.

Mr. Farley is in political retirement, but not in political eclipse. His counsel is still sought and abided by in important circles, and that with all his duties he can still find time to serve on the banking board is a new indication of this worthwhile man's great sense of responsibility to the public.

Fiftieth Anniversary of Stuyvesant High School

EXTENSION OF REMARKS

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. ZELENKO. Mr. Speaker, crowded in between stores, hospitals, and apartment houses in the lower East Side of New York City is an educational institution which has an amazing 50-year record. Since it was founded, in 1904, Stuyvesant High School has made a reality of the American ideal, "each according to his ability," for thousands of talented boys who later made their marks in the world.

Among its nationally known alumni are Actors James Cagney, George Raft, and Sam Levene: Judge Irving Saypol, former United States attorney for the southern district of New York; and New York Supreme Court Judges Samuel DiFalco and Saul Streit; Motion-Picture Director Joseph Mankiewicz; former New York Health Commissioner Dr. Marcus Kogel; Radio Announcer Ted Husing: former West Point coach and war hero Maj. Gen. Gar Davidson; Queens College President John Theobold; worldfamous Photographer Victor Keppler; Philip Sporn, president of American Gas & Electric Co., one of the Nation's largest utilities: Dr. Irving Fischer, worldfamous obstetrician; Dr. William Hitzig, one of the world's greatest diagnosticians and heart specialists; Federal Judge Sidney Sugarman: Architect William Hohauser; Commissioner of Taxation and Finance of the State of New York George Bragalini; and Olympic champion Frank Hussey.

What makes Stuyvesant so unique? It has an excellent educational record. It has many famous alumni. It has a great athletic record.

All of these things are part of the Stuyvesant story. However, there is much more to it. In many areas of the world, education of any type is difficult to

obtain at best. Special education for leadership is even more difficult. Stuyvesant was created to provide such education at no cost to all New York boys who could meet its high entrance requirements.

Although the school prides itself on scholastic achievement—61 percent of the students have I. Q.'s of 120 or over—its record in other fields is equally impressive. Last fall its football team was coholder of the city championship. Recently Stuyvesant's undefeated fencing team won the school's ninth city crown in the sport. Its track teams have garnered 16 city championships.

Dr. Irving Fischer, president of the alumni association, reports that Stuyvesant boys have set a national record by earning more than \$2 million in scholarships during the last 10 years. To supplement this achievement, alumni are setting up a scholarship fund to help the school's many other talented youngsters to obtain a higher education. Dr. Fischer says, "It is an investment that will pay off in tomorrow's leaders."

Stuyvesant teachers also help make the school unique. Many have successful careers outside the field of education. For example, swimming coach and physics instructor Dr. Siegfried Meyers has made notable contributions to radar, medical, and guided missile research. Art instructor and sculptor, Nat Werner, has had two of his works accepted in the new Whitney Museum for permanent exhibition.

Because the need to develop leaders in a democracy was never greater, New York City has started a multi-milliondollar renovation of the school.

With this kind of support Stuyvesant hopes to continue its great record of service to students, community, and Nation.

Materials Handling Handbook

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter addressed to Mr. J. W. Hall under date of March 25, 1955, by the materials handling division of the American Society of Mechanical Engineers:

THE AMERICAN SOCIETY
OF MECHANICAL ENGINEERS,
MATERIALS HANDLING DIVISION,
March 25, 1955.

Mr. J. W. HALL,

Westinghouse Electric Corp.,
Meter Division, Newark, N. J.

DEAR MR. HALL: You have asked me for informations regarding the Materials Handling Handbook.

For some time it has been felt that there was an urgent need for a handbook covering various phases of materials handling. There was a widespread interest in materials handling but there were very few books on this subject and none of these, individually or collectively, properly covered the field.

About 4 years ago the American Society of Mechanical Engineers, material handling division, and the American Materials Handling Society decided to jointly sponsor a material handling handbook. After some discussion of the project a contract was made with the Ronald Press Co. of New York City.

A joint materials handling handbook committee was formed, most of the men on this committee being members of both ASME and AMHS. After many meetings and much discussion on the coverage of the subject, an outline was drawn up on the specific subjects to be included. This outline covered the analytical phases of material handling, operating procedures for the five main divisions of material handling—bulk handling, unit handling, packaging, warehousing, and carrier handling. Also included in the handbook will be descriptions of the principal types of material-handling equipment.

The collection of this mass of information has taken several years and now the material is being organized for printing the latter part of this year. The handbook will be a very comprehensive volume and we are sure will fill a need in the colleges and in industry. A great many experienced material-handling men are contributing to the handbook, which will have a much wider scope than anything previously published on this subject.

The widespread interest in this handbook is another manifestation of the importance of material handling to the modern industrial life of the Nation. It, therefore, seems appropriate that a National Better Material Handling and Packaging Week be proclaimed and celebrated to bring to the attention of the public at large the importance of this new science and art of material handling.

I would suggest that the importance of this new Materials Handling Handbook be drawn to the attention of the Honorable Peter W. Rodino as a further contributing reason for establishing a National Better Material Handling and Packaging Week.

Sincerely yours,

HERBERT H. HALL,

Chairman, Materials Handling Division, ASME.; Chairman, ASMEAMHS, Joint Materials Handling
Handbook Committee.

Just Share for United States Sugar Producers

EXTENSION OF REMARKS

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I submit the following resolution adopted by the Grand Forks Chamber of Commerce. In view of the expanded consumption of sugar, it is necessary to maintain our production. The quota provisions of the 1948 Sugar Act are out of date. The following resolution well expresses the need for a revision of these figures:

Whereas the sugar industry is a vital and necessary part of the agricultural and industrial life of this community Grafton and North Dakota; and

Whereas quota provisions incorporated in the Sugar Act of 1948 as temporarily expedient still are in force, denying the historic right of this industry to grow with our Nation; and

Whereas the domestic sugar industry has, through important technological progress, increased its own productivity per acre by some 20 percent since establishment of fixed marketing quotas in the Sugar Act of 1948; and

Whereas the combination of rigid marketing restrictions and increased productivity per acre is forcing injurious acreage reductions and other sharp constrictions of the domestic sugar industry; and

Whereas these pressures not only are acting to the severe and unwarranted detriment of the domestic sugar industry but also are having a depressing effect upon the economic life of this community and North Dakota: Now, therefore, be it

Resolved, That the Congress of the United States be and hereby is petitioned to provide for immediate quota increases for the domestic industry and restoration to the domestic industry of its historic right to share in all future increases in United States sugar requirements; and be it further

Resolved, That the secretary of the Grafton Chamber of Commerce is hereby instructed to forward copies of this resolution to the Senators and Representatives elected to the Congress by the people of North Dakota; and to the Secretary of Agriculture, Secretary of State, and the Secretary of the Interior.

Passed by the Grafton Chamber of Commerce, Grafton, N. Dak., April 2, 1955.

Dr. J. V. Jaehning,
President.
Donald O. Numedahl,
Secretary.

What Went Wrong With TVA?

EXTENSION OF REMARKS

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1955

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Appleton (Wis.) Post-Crescent:

WHAT WENT WRONG WITH TVA?

Elsewhere on this page today is reprinted an article from the Milwaukee Journal about Gordon Clapp, a distinguished alumnus of Lawrence College, who along with his family is well-known here in Appleton, both as a former student and administrator at the college. Shortly after leaving here he became employed by the Tennessee Valley Authority and rose to the position of Chairman of that vast Government project before being dropped by President Eisenhower last year. Clapp has great things to say for the ac-

Clapp has great things to say for the accomplishments of TVA in the Tennessee Valley region, and few will dispute his words on that subject. But what he fails to say is as important as what he says.

For like all laudators of the TVA, he talks about the people who have benefited from it but says not a word about the people who paid for it. TVA is the biggest example in our history of a project instituted for the benefit of a relatively small portion of the country but paid for by the taxpayers of all 48 States.

There is nothing wrong with that; indeed, it is one of the things that has made this country great. Every since the inception of our Central Government, citizens all through the Nation, usually without protest, have

contributed through their taxes to projects designed to do for the people of certain areas what they could not do for themselves. Texans and Californians will contribute to the construction of the St. Lawrence seaway. New Yorkers and Wisconsinites and Virginians have helped to build hundreds of dams and reservoirs in the West, and will help to build many more. The money that pays for a dredging operation on the Fox or the Chattahoochee or the Columbia comes from the taxpayers located everywhere in the Nation.

Clapp tells of TVA's accomplishment in wiping out malaria, encouraging good crop practices and forestry methods, and controlling floods and erosion. The people of Wisconsin and of all the other States, we believe, are happy to have helped with their tax dollars this fine work in the Tennessee Valley. But Clapp passes over very quickly the fact that cheaper electricity made possible by TVA power is the heart of the TVA operation, and that it also is a present to the people of the Tennessee Valley from the taxpayers of all the other States.

TVA was a great dream and in many ways has seen a great fulfillment of that dream. But something went wrong. For the men who operated it were not content with controlling floods, fighting erosion and malaria, and encouraging good crop practices. They wanted the people of the region to feel favorably toward TVA, and set about to buy that favor with cheap electricity subsidized by taxpayers in Ohio and Wisconsin and California and New Mexico.

TVA produces power from hydroelectric dams, and from coal-burning steam plants as does any privately owned utility. It can sell that power more cheaply than a private company simply because it does not pay any Federal income taxes or any other taxes although it occasionally makes token payments to localities in lieu of taxes. If it paid those taxes it would have to charge as much as a private company except, of course, for the profit factor which is so small that it would make a negligible difference in the unit price of electricity.

Residents of Wisconsin are happy and proud to have helped make possible the many fine things that TVA has done for the people of the Tennessee Valley. They realize that flood control and erosion control and a lessening of malaria in that area or any other part of the country contributes to the well-being of the Nation as a whole. But they fail to see why they should reach in their pockets every April 15 so that the people of the Tennessee Valley can enjoy cheaper power rates than we do, and attract industry away from us with those rates. That is something Mr. Clapp apparently did not talk about in his interview with the Journal reporter.

A Connecticut Farmer Speaks

EXTENSION OF REMARKS

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include an editorial captioned "A Connecticut Farmer Speaks," which appeared in the March 29 issue of the Meriden (Conn.) Record.

The bill to which George Dudley, the president of the Connecticut Farm Bu-

read Federation, has reference is H. R. 12, which soon shall be considered on the floor of this House. The article follows:

A CONNECTICUT FARMER SPEAKS

Tremendous pressure is building up to fight for the House farm bill when it comes up for debate in Congress right after the Easter recess. This bill which the administration opposes in its entirety would restore mandatory 90 percent of price supports to wheat, corn, cotton, peanuts, and rice. It is reported that House farm leaders are taking advantage of the time provided by postponement of debate to fill the mails in the next few days to sell city slickers the case for high rigid farm-price supports. One pamphiet is reported to tell how organized labor backs such supports. The other attempts to make out a good case that high supports for basic crops have no appreciable effect on prices paid by consumers for food, which on the face of its seems unreasonable.

It is refreshing to hear a loud voice from Connecticut giving another side to this case, and one which should bear considerable weight since it comes from the farmer ranks in a clear and positive statement. The president of the Connecticut Farm Bureau Federation, George Dudley, who is a dairy farmer in Litchfield, says Chairman Cooley, of the House Agricultural Committee must be forgetting that the Nation's farmers have told Congress plainly what sort of price support they want, and it is not the plan advocated by organized labor leader Walter Reuther for rigid high supports, the plan ac-

claimed by Mr. Cooley.

Mr. Dudley is quoted as saying more than 700,000 farmers at 23,000 local meetings throughout the United States in 1953 voiced their desire for flexible supports. Mr. Dudley fears the public will also forget this fact as Mr. COOLEY seems to have done. He was quick to take up the gauntlet and to utter a warning that the public must not be misled by distorted facts promoted by leaders with selfish interests at heart. Perhaps he had in mind the persistent rumor that organized labor support of rigid high farm supports is tied in to a hope that farm leaders would not fight a labor-supported proposal to raise the Federal minimum-wage standard from its present 75 cents an hour There has been talk of a mutual potsweetening understanding which we can hope is rumor only, because it is not the just way to determine national policy.

At any rate the battle will be joined. Administration foes are sure to bring up the GOP platform promise to farmers for full parity in the market place, a promise that can be variously interpreted. But common sense should dictate a flexible program that is fairer to everyone in the country than the proposed rigid high supports. If Mr. Dudley is right about the general feeling among farmers, we can hope his voice reaches to the halls in Washington.

Anniversary of Russian Occupation of Hungary

EXTENSION OF REMARKS

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. KEARNEY. Mr. Speaker, today, April 4, is an anniversary of a day which must be forever circled in blood in the annals of Hungarian history. It was on this date in 1945 that the armies of So-

viet Russia completed their brutal occupation of Hungary. Earlier the siege of Budapest from December 1944 until February 1945 had resulted in the virtually complete destruction of that historic

It has now been 10 years that the Hungarian people have been kept in subjection under the hirelings of the Soviet Union and the Red army. These years have held untold hardships and deprivations, both psysical and of the spirit. There has been a systematic attempt by the Communists to destroy all vestiges of racial and national autonomy. In order to further convert the individual Hungarian into the soulless, subservient robot, which is the ideal Communist citizen, the government under the aegis of the Red army has through mass deportations, terrorization, and religious persecution attempted to instill in him a feeling of individual helplessness. He has been made to feel that no aspect of his daily existence is safe from the mad caprices and controls of the government.

And yet, the Hungarian people have resisted the alien ideologies which the Communists have attempted to force upon them. Time and again the Communists have retreated from a manifestly unpopular course in an effort to obtain popular support. The very variety of their tactics and their reversals of policy attest to the fact that they have been unable to carry out their plan for Hungary.

On this sorrowful anniversary for Hungarians the world over, we join in praying that the liberation they so earnestly desire will soon reward the steadfastness of the Hungarian people.

Treatment of Advance Subscription Payments as Prepaid Income

EXTENSION OF REMARKS

HON, E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BERRY. Mr. Speaker, an amendment has been proposed to the Internal Revenue Code which would repeal the 1954 provisions permitting newspapers to treat advance subscription payments as prepaid income. Such a repeal done on a retroactive basis would be a hardship to many weekly and small daily newspapers, the large majority of which have adjusted their operations so as to use the 1954 provisions on the reasonable and justifiable basis that was intended by the Congress.

The South Dakota Press Association at its annual meeting on March 26 stated their views as to the effect of the proposed change. The resolution reads as follows:

The revision of the Federal tax laws in 1954 contained a provision that authorized newspapers to treat subscription payments as prepaid income, as they properly are, and permitted them to set up reserves in proportion to this obligation. This was in ac-

cord with good business principles and sound accounting practices.

Now it is proposed that this provision be repealed and that the repeal be made retroactive to January 1, 1954.

The South Dakota Press Association strongly opposes the proposed repeal of this section and urges Congress to respect the sound sense of the 1954 provision in respect to newspaper subscription revenues. Furthermore, it considers the proposal that the section be repealed on a retroactive basis to be sharply in violation of good faith. Many newspapers have adjusted their books to conform to the 1954 provision and they would be subjected to a considerable hardship to be compelled to go back now and make changes in records that they had every reason to believe were past history.

Relief for Farm Losses From Natural Causes

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. GATHINGS. Mr. Speaker, the recent freeze during the last days of March imposed another economic loss on the Nation's farmers. The result of the record low temperatures on March 26 and 27 across the greater southern farm belt will be added economic loss to our farmers, who have already suffered by drastic cutbacks in all controlled crops.

The fruit and vegetable farmers will be especially hurt. In Arkansas the fruit and vegetable farmers, in many cases, have suffered the entire loss of their crops. From North Carolina down to Florida and across the South to Arkansas, Texas, and Oklahoma, the peach crops are considered a near total loss. It is reported, that with few exceptions, it will not pay the fruit farmers to set up packing sheds for what crops remain. The same is true of the apple crops.

For this reason, it was pleasing to see the dispatch of interested Members of the other House of the Congress through the introduction of S. 1628. This would appear to be a method of relieving to some degree the great burden to the farmers, and it is my hope that the House of Representatives Committee on Agriculture will study this matter along the principles of S. 1628 immediately upon the resumption of sessions following the Easter holidays.

This action, together with the disaster loan assistance from the Farmers' Home Administration will be of great assistance to these farmers. I am pleased to be notified by the officials of the Farmers' Home Administration that they are rushing their surveys and county eligibility designations throughout this disaster area.

The economy of our Nation is dependent on the solvency of our farmers, and we must not delay in striving to relieve this latest blow to our Nation's agricultural economy. I include the following copy of S. 1628: 8. 1628

A bill to provide relief to farmers and farmworkers suffering crop losses or loss of employment because of damage to crops caused by drought, flood, hall, frost, freeze, wind, insect infestation, plant disease, or other natural causes

Be it enacted, etc .-

CONGRESSIONAL FINDINGS

SECTION 1. The Congress hereby finds (1) that crop losses due to drought, flood, hail, frost, freeze, wind, insect infestation, plant disease, or other natural causes result in severe hardship, suffering, and economic loss, not only in the case of operators of farms but in the case of their tenants and employees as well: (2) that, by reason of acreage limitations or other production controls, farmers suffering such losses are often prevented from planting other crops to replace those lost or damaged; (3) that as a result thereof agricultural workers and other persons dependent on such crops for a livelihood are forced to seek other employment. thus causing dislocation of populations and other trends which tend to unbalance existing ratios between rural and urban populations: (4) that the economies of the areas affected are thereby disrupted and the economy of the entire Nation adversely affected.

STATEMENT OF PURPOSE

Sec. 2. It is the purpose of this act to alleviate hardship, suffering, and economic losses resulting from disastrous loss or damage to agricultural crops due to natural causes, and to prevent serious dislocation of populations, and other adverse effects on the economies of the areas affected and the Nation, by making possible the planting of additional acreage of other crops which will in part replace those destroyed or damaged and thus provide a livelihood for farm operators and workers who would otherwise be forced to seek other means of support for themselves and their families.

INCREASE IN ACREAGE ALLOTMENTS

SEC. 3. (a) Whenever the Secretary of Agriculture determines—

(1) that in any area any agricultural crop which is important to the economy of such area has been destroyed or severely damaged by drought, flood, hail, frost, freeze, wind, insect infestation, plant disease, or other natural cause; and

(2) that, except for acreage limitations or other production controls, other crops could be planted to replace or supplement the crop destroyed or damaged,

the Secretary, upon application by the operator of any farm within such area, shall cause to be allotted to such farm additional acreage for the planting of any such crop in such amount as the Secretary determines to be necessary to carry out the purposes of this act.

- (b) The Secretary of Agriculture is authorized and directed, whenever he determines that the normal production from the acreage allotment for the principal crop produced on any farm, together with the normal production of other crops grown on such farm, is insufficient to provide a livelihood for the operator of such farm and his family, to increase such acreage allotment to the extent necessary to enable such operator to produce sufficient agricultural commodities to provide such livelihood.
- (c) The aggregate of the additional acreage allotted for any crop year under this section for the planting of any agricultural commodity shall not exceed (1) 500,000 acres, or (2) 3 percent of the national acreage allotment for such commodity for such year, whichever is smaller.

ADDITIONAL ACREAGE NOT TO BE CONSIDERED FOR PURPOSE OF FUTURE ALLOTMENTS

SEC. 4. The additional acreage authorized to be allotted to farms under this act for

any year shall be in addition to the county, State, and national acreage allotments for such year. Such additional acreage shall not be taken into account in establishing future State, county, and farm acreage allotments.

DEFINITION OF AGRICULTURAL CROP

SEC. 5. As used in this act, the term "agricultural crop" means any crop of a product of the soil, including horticultural crops.

TERMINATION DATE

Sec. 6. This act shall cease to be in effect on June 1, 1958.

The United States Foreign Policy Toward India, 1947-52

EXTENSION OF REMARKS

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. TRIMBLE. Mr. Speaker, India is a new member of the sisterhood of nations, having achieved her independence in August 1947, a very short time ago indeed. Already she is taking her place as a leader of world opinion. We need her love for freedom, and she needs ours. We need her patience and understanding, and she needs ours. All these, I think, our two countries have for each other to a very great degree. The peace of the world depends upon further growth of these attributes in our own country and hers. We are neighbors.

Recently I have become acquainted with a young man from India, Shiwaram K. Kshirsagar, who is a student at American University here in Washington, where he is a candidate for his doctorate of philosophy degree in international relations. I am impressed with the love and respect which he holds for our country, and his deep devote for his own beloved country. Recently as an assignment for one of his classes at American University, he wrote an article touching upon our relations with his own country. I though it rich in historic detail and am inserting it as a part of my remarks so that my colleagues may read it also:

THE UNITED STATES FOREIGN POLICY TOWARD INDIA, 1947-52

(By Shiwaram K. Kshirsagar)

After President Franklin D. Roosevelt had influenced Prime Minister Winston Churchill's views toward India's efforts to achieve her independence, only one significant incident in the last 10 years in United States—Indian foreign policy preceded the proclamation of Indian independence by Great Britain in June 1947. This was Col. Louis Johnson's mission to India in April 1942. As the personal representative of the President, Colonel Johnson went to India at the time when Sir Stafford Cripps was there on his mission to solve the Indian political deadlock of 1942. The Indian National Congress was appreciative of this friendly action by President Roosevelt.

II. PRESIDENT HARRY S. TRUMAN ON INDIA'S INDEPENDENCE

On August 15, 1947, India achieved her independence. On this memorable occasion, in Indian history, United States President Harry S. Truman telegraphed the best wishes of his Government and the American people to Lord Louis Mountbatten, the Governor

General of the Dominion of India, and to Prime Minister Jawaharlal Nehru and the Indian people. President Truman expressed his hope that Indo-American friendship would continue and that these two great nations would cooperate in the international struggle to fashion a world society founded on mutual trust and respect. He continued that to achieve this objective a mutual understanding and cooperation were essential. Both the Government and the people of India greatly appreciated these best wishes of the President of his Govern-ment and of the American people. India, extended reciprocal good wishes to President Truman, his Government, and the American people. She assured the President and the American people that such mutual cooperation would be forthcoming from India. Such action on the part of United States carried great influence in India. It has strengthened the hope and given encouragement to the people in their own efforts to raise the standard of living and to educate the Indian masses for the success of a democracy is largely dependent on the spread of education. After President Truman's recognition of Indian independence, diplomatic relations were established between the United States and India.

III. PRESIDENT TRUMAN'S INAUGURAL ADDRESS, JANUARY 1949

Recognizing the world's new problems, President Truman, in the fourth point of his inaugural address in 1949, suggested a "bold new program for making the benefits of our scientific advances available for the improvement and growth of underdeveloped areas." President Truman's proposal was hailed as an instrument toward fashioning world peace not only by India but by all the freedomloving countries. The free citizens of these countries have always hoped that once they made a start toward self-help to solving their own problems, some help might be forthcoming from the world's greatest democracy. There is no question that India shared such a hope. In a democracy dis-semination of foreign aid has always resulted in strengthening ties of mutual understanding and cooperation among nations. When such nations are willing to help themselves, then there is no fear whatsoever that foreign aid might make the receiving country a parasite. But if no such foreign aid is forthcoming there is a possibility of the danger that the weaker nations may fall a prey to Communist imperialism.

IV. PRESIDENT TRUMAN'S INVITATION TO PRIME MINISTER JAWAHARLAL NEHRU TO VISIT THE UNITED STATES OF AMERICA

In order to strengthen the ties of friendship between the United States and India Madame Vijaya Lakshmi Pandit was appointed Indian Ambassador to United States in May 1949. President Truman still further strengthened these ties of mutual friendship by inviting Prime Minister Jawaharlal Nehru to visit the United States in 1949. Prime Minister Nehru accepted this invitation and arrived in the United States in October 1949 for a month's stay. This was Mr. Nehru's first and only visit to the United States. For many years he evinced an interest in the United States and its democratic ideals. Mr. Nehru in his first speech to the House of Representatives on October 13, 1949, said:

"I deem it a high honor and privilege to be given this opportunity of addressing this honorable House, and I must express to you, Sir, my gratitude for it. For this House represents in large measure this great Republic which is playing such a vital part in the destinies of mankind today. I have come to this country to learn something of your great achievements. I have come also to convey the greetings of my people and in the hope that my visit may help to create a greater understanding between our respective people and those strong sometimes invisible links, stronger even than physical links, that bind countries together. * * It

may interest you to know that in drafting the constitution of the Republic of India we have been greatly influenced by your own Constitution which lays down as a self-evident truth that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. * * * The great democracy of the United States of America will, I feel sure, understand and appreciate our approach to life's problems because it could not have any other aim or a different ideal. Friendship and cooperation between our two countries are, therefore, natural. I stand here to offer both in the pursuit of justice, liberty, and peace."

Mr. Nehru was warmly appreciative of the hearty welcome that he received from both President Truman and the American people. V. UNITED STATES EFFORTS TO STRENGTHEN THE TIES OF PRIENDSHIP WITH INDIA

The Truman administration took keen interest in establishing good Indo-American In 1949 the State Department started the educational exchange program between the United States and India under the Fulbright and Smith-Mundt Acts. Under these acts Indian exchange students, teachers, and professors came to study and teach at different universities in the United States. - Likewise, United States exchange students and professors went to India. There has been a great change in India since August 15, 1947. After her independence many students began coming to the United States for their education. It is hoped that such young Indian people will contribute to the success of democracy in India.

In June 1950 the Korean war broke out. India supported the United Nations action in Korea. Prime Minister Nehru received full cooperation of his Government in this matter. He was in favor of halting the United Nations forces at the 38th parallel in Korea. This was the point where the U. N. authorities and Mr. Nehru differed. In order to effect a token participation, however, he sent a medical corps to Korea.

In December 1950 the Indian Ambassador, Madame Pandit, presented to President Truman an official request for a wheat loan to India since famine was rampant in India. That year the crops failed due to the paucity of rain. It always takes some time in democracles to take action on such international requests for long-term loans. Finally on June 15, 1951, President Truman signed the Indian emergency food aid bill. President expressed particular satisfaction with two provisions of the act. One permits the use of \$5 million from the interest of the loan for exchange of students and technicians between the two countries, and the other authorizes ocean transportation for relief supplies given to India by individuals and private organizations. Mr. Nehru expressed his deep gratitude at the adoption by the United States Congress of the Indian Emergency Assistance Act of 1951. This act made available \$190 million to purchase 2 million tons of food grains in America. Both Mr. Nehru's government and the people of India expressed their gratitude to the United States.

In the fall of 1951 the President appointed Mr. Chester Bowles as United States Ambassador to India. The credit for strengthening the mutual ties of friendship and better understanding goes to Ambassador Bowles. In his short tour of duty in India he represented the United States in the best Possible way. He truly deserves the title "The Ambassador of Good Will." He has recently published his book, Ambassador's Report, in which he presents the facts in an objective manner. It is a good picture of what is going on in India. His efforts should certainly achieve deserved success. He became interested in India's technical

development and on January 5, 1952, signed the joint Indo-American cooperative program, which extends technical assistance to India under the point 4 program. This assistance was proven to be of great help to the success of the Indian first 5-year plan.

Soon after Ambassador Bowles' arrival in New Delhi, he was invited, along with other Ambassadors, to attend a party at the Soviet Embassy. Every year the Soviet Embassy celebrates the October revolution of 1917 in honor of Lenin. At this party Ambassador Bowles observed that more than 3,000 people were invited from different walks of life. He immediately sensed that this was not the usual diplomatic party, but a covert ma-neuver to reach the Indian masses. In February 1952 Ambassador Bowles sent out 7,000 invitations to celebrate George Washington's Birthday. Some 5,000 people attended the function. This was perhaps a Machiavellian stroke on the part of the Ambassador toward informing the Indian people concerning this great man and his search for American independence.

VI. FUTURE TRENDS OF THE UNITED STATES FOREIGN POLICY TOWARD INDIA

When we review the foreign policy of the Truman administration toward India, we find that President Truman has laid down a solid foundation for friendship between the United States and India. In the political picture of the world today both these countries need each other in combating world communism. Both countries have the same objectives, this is, to help the enslaved nations to achieve their independence and to maintain international peace and security. In reaching these objectives each nation follows an independent foreign policy. On these and similar lines the future foreign policies will shape themselves.

The Matanuska Valley

EXTENSION OF REMARKS

HON, E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BARTLETT. Mr. Speaker, a very interesting article on the Matanuska Valley of Alaska, written by Max K. Gilstrap, chief of the central news bureau of the Christian Science Monitor, was recently published in that paper, and I take pleasure in quoting it here.

The article follows:

PALMER, ALASKA.—A look at the lush harvests of Matanuska Valley in south central Alaska, 'neath snow-covered peaks lifting in jagged outline, offers one of the best arguments this Territory has for attracting would-be settlers.

Even enthusiastic Matanuska Valley residents, however, candidiy advise that no one should come to this valley or anywhere else in Alaska to live without definite assurance of a job, and without enough money to pay for the trip back to the States should the job fail to materialize.

Greeting the visitor here are the happy, virile communities of Palmer and Wasilla, which have great faith in their own futures and in the future of Alaska. Their thriving appearances, together with the rich farmlands, quickly apprise one that the Matanuska Valley, with nearly 5,000 residents scattered over 1,200 square miles, no longer can be called a colonization project as it was when started in the day of the depression of the 1930's.

THRIVING COMMUNITY

Approaching by car, we left the pavement and took a dusty, graveled road. Palmer loomed before us along a branch of the Alaska Railroad. It was here in May 1935 that 200 refugees from the depression from Wisconsin, Minnesota, and Michigan debarked from the train to live in a tent city until cabins could be built. It has been here 20 years that a lively, substantial commutty of 900 persons has grown up.

We drove past the cluster of buildings housing 100 businesses. Across the railroad track were large exhibit buildings for the annual Labor Day fair. A swing through the residential area took us past a red frame library, churches of logs and cement blocks, a new apartment building, and a mixture of

old and new houses.

BUMPY START RECALLED

We chatted with many residents, including Gary LaRose from Phillips, Wis., a dairy farmer; Bill Bowens of Rhinelander, Wis., grocery store owner; Mrs. Max Sherrod of Battle Creek, Mich., wife of a successful truck gardener; Bill Irvin of Basin, Wyo., and A. J. DeJulio, owner of Palmer's weekly tabloid, the Frontiersman.

Each settler, through the Alaska Rural Rehabilitation Corp., was provided with a home, 40 acres of land, and funds for its improvement. During the first summer, 50 of the first 200 families went back. By 1938 almost half the families had returned to their homes, but they were replaced by persons from throughout the United States and Alaska. The period of largest single exodus was during World War II. Now only about 30 of the original families are left.

Looking back, the original settlers spoke of early trials. From the first, they had complained about the paternalistic attitude of the Corporation and representatives of the Federal Government. A big mistake had been made, the settlers said, in turning over the selection of the settlers to young social workers instead of to farmers. As a result, 20 or 30 families never had been on a farm; some were physically unfit. A few came for the expense-paid trip and apparently expected to go back as soon as possible. In addition, transient laborers came up from Montana and California and elsewhere.

OUTGROW SMALL PLOTS

Another mistake, according to the early settlers, was the original idea of the colony founders that small self-sufficient types of farms on small plots should be established. They hadn't counted on the initiative and resourcefulness of the people. As the settlers forged ahead and the military brought an influx of people to create bigger farm markets, tracts were enlarged, buildings remodeled, and dairying, vegetable growing, general farming, and poultry raising expanded into commercial enterprises. This stimulated the activities of assisting farm organizations.

After 1938, the Federal Government began to lose interest in the Matanuska colonization project, financial assistance was withdrawn, and the corporation was left to work

its own way.

Since 1942, the remaining aspects of the colonization period have disappeared. No control over the social or economic condition or the farming development is exercised any longer by the colonization program or the corporation management. Many of the original contracts signed by the colonists are still in force since they were written to be paid over a 30-year period.

SELF-RELIANT SETUP

The corporation's activities now involve, primarily, the financing of farming projects principally within the Matanuska Valley. The corporation is presided over by a nineman board of directors made up of local farmers and businessmen. Its capital consists of about \$1 million in assets left from

the \$4,500,000 originally granted for the project by the Federal Government. The corporation at present lends about \$200,000 an-

nually for farm development.

In the opinion of James J. Hurley, general manager of the corporation, the colonization project was a success from the standpoint of the development of an agricultural community. From the standpoint of rehabilitating needy rural farm families, it was a success in the majority of the cases. Many mistakes were made, it is conceded, but in the process the immediate needs of the United States and Alaska were served.

Out of Matanuska Valley have come lessons that can be put to good use as Alaska, with an eager eye on statehood, beckons to more pioneers to swell its population.

Enormity of Needs of Schools Makes United States Aid Imperative

EXTENSION OF REMARKS

HON, GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my reremarks in the Appendix of the RECORD, I include the following editorial from the Reading (Pa.) Times:

ENORMITY OF NEEDS OF SCHOOLS MAKES UNITED STATES AID IMPERATIVE

Albany Township, Berks County, Pa., would seem to a far cry from any of the considerations which impel the design of Federal policy on any matter at all. Yet the fact is that Albany Township, together with all the other Albany Townships in the United States, add up to a compelling reason why Congress should pass legislation granting substantial Federal aid to education.

Let Albany be a symbol of the urgent need for Federal aid to education. Like virtually every other school district in the Nation, its schools are supported by real-estate taxes, principally. Approximately half the township is mountainous, unarable. There is only one industry of any importance. As a consequence, its assessed valuation for school-tax purposes is low, woefully inadequate to permit the township to junk its 1-room schools and build a modern, consolidated school. In short, it needs help.

The Commonwealth provides some help—but not nearly enough for Albany's purposes. And there are thousands of other communities throughout the country in Albany's position—and in States which are in Albany's position, inasmuch as they don't have the assessed real estate valuation to bring in enough taxes properly to support their schools. In this situation, can one reasonably oppose Federal aid to education?

Yet many are opposed. Why? Well, there are stock arguments. Somehow or other, Federal aid to education is socialistic. Somehow or other, they say, aid for school construction would get lost between Washington and the school districts. Somehow or other (they argue) Federal aid would result in Faderal control. Let's examine these arguments.

In the first place, it costs the Government about one-fifth as much to collect Federal taxes as it costs local governments to collect real-estate taxes, according to reliable authority. In the second place, if Federal aid to education is socialistic, then George Washington and Thomas Jefferson were Socialists, for both believed in Federal aid to education. As a matter of historic fact,

even before the United States was the United States—in 1785, that is—the Congress of the Confederation voted grants for school construction, maintenance, and operation.

Would substantial Federal aid really result in Federal control? Well, it depends upon what the legislation provides. Thus, President Eisenhower's idea of Federal aid to the schools is opposed by 42 of the 48 principal State school officers because it might result in Federal control. On the other hand, legislation proposed by Senator Lister Hill, of Alabama, and Senator John McClellan, of Arkansas, is endorsed by the executive secretary of the Council of Chief State School Officers as having "no possibility whatever for Federal control of educational programs."

The enormity of the problem must make every American wince. We are now short 390,000 classrooms; only 60,000 classrooms are scheduled for completion this year. We need teachers, by the thousands, especially in the sciences. Teachers are leaving the profession because of poor pay and the same reason prevents promising young mon and women from entering the profession.

women from entering the profession.

Moneywise, Neil H. McElroy, chairman of the White House Conference on Education, has indicated we will need \$10 billion a year more for our schools by 1965 if the are to do an adequate job. And the hard fact is that neither local nor State governments have any hope of providing that kind of money. Real estate can't and on the local level, and State taxes won't. Pennsylvania, for instance, is constitutionally barred from levying a State income tax for school purposes or any other purpose.

What, then, despite all the objections to Federal aid to education, is left but Federal aid? Unless, of course, we don't value our freedoms too highly. For it is as Thomas Jefferson said: "If a people expect to be both ignorant and free, they expect what never was and what never will be."

S. Regensberg's Interview With Max Abelman in the Forward Published in Congressional Record

EXTENSION OF REMARKS

HON, GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. LONG. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include the following statement from S. Regensberg's interview with Max Abelman in Forward:

S. REGENSBERG'S INTERVIEW WITH MAX ABEL-MAN IN THE FORWARD PUBLISHED IN CON-GRESSIONAL RECORD

The interview of the Forward's S. Regensberg with the Brooklyn Jewish community worker, Max Abelman, has been published in English translation, in the CONGRESSIONAL RECORD of January 13, 1955. The article is translated by S. Haironson.

In the article, Regensberg told of the fine type of Jew which Abelman represents and of all the good he has done for Jew and Gentile alike, which has won for him so much

love and respect.

The article was entered in the RECORD on the floor of the House of Representatives by the Democratic New York Congressman, Hon. Eugens J. KEOGH, who, on introducing the article, said the following: "Mr. Speaker, I have the honor of entering into the Concarssional RECORD an article which was published in the Forward June 26, 1954. The article in the Forward is a wonderful tribute

to a Brooklyn Jewish citizen, Mr. Abelman, who deserves to be honored by all Americans."

In the introduction to Regensberg's translated article, it is explained that this is an article about a Brooklyn Jew who helps a Supreme Court Judge to smooth out disagreements botween married couples; that his name is Max Abelman, who is thought of as the "Ambassador from Brooklyn" and who, in the course of his 50 years of community work, has collected \$100 million for the American Government and for Jewish and Gentile philanthropic causes.

Col. Robert R. McCormick

EXTENSION OF REMARKS

HON, TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. SHEEHAN. Mr. Speaker, it is with great regret and a deep sense of loss that we learn of the death of Col_Robert R. McCormick, publisher of the Chicago Daily Tribune.

It is not often in the course of a generation that a name or a personality rolls across the horizon in such a manner as to attract almost worldwide attention to itself, but Colonel McCormick had such a personality.

No matter where one travels in the civilized world, the name and accomplishments of Colonel McCormick are readily recognized. Certainly he was one of the controversial figures of our century, but controversial only in the sense that he was a man of strong convictions who was willing and able to state those convictions and defend them. Many times in the course of Colonel McCormick's life he adopted stands and espoused principles which were unpopular at the time of his dedication to them. Yet, in the majority of cases, history has proven the correctness of those convictions and the brilliance of his foresight.

For instance, when the Nuremberg trials were underway, Colonel McCormick and his paper, the Chicago Daily Tribune, stood virtually alone in their denouncement of them and in warning the American public of the dangers inherent in these trials. Today, a decade later, most thinking Americans question the wisdom in the holding of these trials.

Similarly with the Yalta proceedings. Colonel McCormick immediately attacked, through the medium of his paper, the decisions made at Yalta. The publication of the Yalta documents last week—which, incidentally, resulted in the accomplishment of a feat rare in the annals of newspaper history when the Chicago Daily Tribune published 32 full newspaper pages of the Yalta proceedings in a matter of hours—gave proof positive to the correctness of Colonel McCormick's stand on the Yalta agreements,

His long, unrelenting fight against the prohibition amendment, his continuing fight against Communist infiltration, and the inroads socialism was making in our own Government, were stands that could be taken only by a man who was firm in his conviction and dedicated in

principle.

Colonel McCormick took great pride—and justly so—in the designation of his Chicago Daily Tribune as "the world's greatest newspaper." He also took great pride in carrying the American flag on the paper's masthead, with the caption underneath reading "The Voice of the Middle West." However, Colonel McCormick's greatest pride was in his country, and his fierce spirit of nationalism was always in evidence in the policies of his newspaper.

May America always be blessed with men of such stature as Colonel McCormick, who are willing to fight for the freedom of expressing their philosophy and principles which they will not compromise

Colonel McCormick took a very vital interest in the affairs of his native city of Chicago, having served as an alderman in the Chicago City Council from 1904 to 1906, and as president of the Chicago Sanitary District from 1905 to 1910.

He always fought against crime, corruption, and against political privileges for the few at the expense of the general public. Through his newspaper he continually brought to the attention of the citizens of Chicago civic conditions which were inimical to their well-being and the general welfare.

Colonel McCormick may have left us bodily, but his courageous spirit and his tenacious adherence to the principles he believed in will be remembered for a great many years to come.

Robert Rutherford McCormick, lawyer, editor, and publisher, was born in Chicago, Ill., July 30, 1880, the son of Robert Sanderson and Katharine Van Etta (Medill) McCormick, Education: Yale University, bachelor of arts 1903, and Northwestern University Law School, Political record: Member, Chicago City Council, 1904-06; president, Chicago Sanitary District, 1905-10; member of Chicago Charter Convention, 1907; member of Chicago Plan Commission. Business record: Editor and publisher of the Chicago Tribune; admitted to Illinois bar 1907. Military service: Major, 1st Illinois Cavalry on duty on Mexican border, 1916; attached to General Pershing's staff in France, American Expeditionary Forces, 1917; assigned as major, 5th Field Artillery, adjutant, 57th Artillery Brigade; lieutenant colonel, 122d Field Artillery, United States National Guard; colonel, 61st Field Artillery, United States Army; served as commandant, Fort Sheridan, Ill.; awarded Distinguished Service Medal; author of With the Russian Army-1915; Army of 1918-20; Ulysses S. Grant, the Great Soldier of America-1934; Freedom of the Press-1936: How We Acquired Our National Territory-1942; American Revolution and Its Effect on World Civilization-1945. Numerous shorter works on historical, military, scientific, legal, and Political subjects. Member, Racquet and Tennis Club, Chicago Club, Presbyterian. Home: DuPage County, Ill. Office, Tribune Square, Chicago, Ill.

The Meaning of Passover

EXTENSION OF REMARKS

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. ZELENKO. Mr. Speaker, on Wednesday night, April 6, 1955, Jewish people all over the world will usher in the festival of freedom, Passover. Passover commemorates the exodus of the Jewish people from their slavery in Egypt, under the divinely inspired leadership of their great leader. Moses.

The season of Passover can serve to teach all Americans to be grateful for the manifold blessings of freedom which our beloved country confers upon all its citizens. Jewish people, especially, who have been among the most oppressed in history give due recognition to their blessings in this "land of the free and home of the brave."

Passover is the holiday which unites the family at one festive board at its main festive meal, the Seder. The entire family, young and old, are present. The table is set with special dishes, and the candles, lit and blessed by the mother, shed their soft light. A goblet stands at each plate to receive four fillings of wine, the amount that should be taken on this night of historic celebration. There is an additional great silver goblet, reserved to be filled later for Elijah the prophet, who will come one day to announce the Messiah and the final redemption.

The ceremonial ritual of the Seder service is conducted from special booklets, called Haggadahs. In Biblical narrative style and through bold, colorful pictures, the Haggadah tells the wondrous story of the deliverance from the ancient Pharaoh, the cruel king of Egypt. Before the master of the house is a special ornamental plate, containing pieces of food symbolic of this festival. On it is a bitter herb, representing the bitterness of the Egyptian slavery—the charoses, the fruit, nut, and wine mixture, designed to appear like the mortar out of which the Hebrew bondsmen were forced to make bricks for their masters-the roast bone, suggestive of the sacrifices offered in the Temple of Jerusalem on Passover in olden days-the egg, symbolizing the new life and hope of the free-the salt water, the tears shed by the enslaved.

Matzoh is the most important food at this meal. It is an unleavened cracker, suggested by the sunbaked dough eaten by the freed Hebrews as they marched without stopping on their way to liberty. There are thousands of years of history in every morsel. Much painstaking labor has gone into the preparation of this family ritual meal, for no detail may be omitted or performed incorrectly.

Children are especially joyful on this evening of evenings, for they have a special part to perform. They will recite the four questions, taken from the ancient Talmud and thoroughly memorized for this occasion. The story of passover

deliverance is chanted from the Haggadah, a full meal is served, and then the company reclines to sing the traditional songs of praise and hope. The songs go on into the night to end with Chad Gadyo, a delightfully simple ditty which details the fate of the beast who would destroy the kid, which is Israel.

The Seder, the Passover observances, and the prayer book, all keep alive the memory of the event known as the going out from Egypt. This has become one of the greatest Jewish doctrines. It declares that God is on the side of the slave and the oppressed. Tyranny may flourish for awhile, and may even appear all powerful. But God detests the oppressor and sooner or later overthrows him. Egypt seemed unconquerable but it fell before God's just punishment. So shall all tyrannies ultimately vanish and be destroyed.

The Jew is told not only not to despair of freedom, but also to take care never to fall into the temptation of becoming an oppressor himself. The Bible commands him, "Thou shalt treat the stranger who lives among you as the native, and thou shalt love him as thyself; for ye were strangers in the land of Egypt." The story of Jewish slavery in Egypt always reminds all people never to lose the quality of sympathy and never to treat fellowmen without mercy.

Our world today should heed both these lessons of passover—first, that through the perspective of history, freedom is invincible, and second, that each man must remember that his fellow is equally entitled to freedom in the eyes of God.

Preferential Hiring Barred

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BARTLETT. Mr. Speaker, I desire to call to the attention of the House an article written by Louis R. Huber, special correspondent of the Christian Science Monitor, noting that a trial examiner of the National Labor Relations Board has ruled that employers may not differentiate between residents and non-residents of Alaska in respect to offering employment.

The article follows:

FAIRBANKS, ALASKA.—A cherished frontier right—that employment, whenever it is available, shall be offered first to local residents—has been held illegal here by a trial examiner of the National Labor Relations Board.

The "Alaskans first" principle sprang up as

The "Alaskans first" principle sprang up as an encouragement for and protection of workmen who have chosen Alaska as their permanent home. It has had bold underscoring in the recent defense-construction boom, in which many workmen drawn northward had a tendency to get theirs and get

Territorial newspapers have long upheld the local-labor-first tenet editorially, and labor unions have insisted that it be written into contracts with employers. ACCEPTED BY UNION

The NLRB ruling to the contrary concerned A. B. Coates, who came here from California last March. On May 14, 1954, he was offered a job as night foreman by

a construction firm. Before leaving California, Mr. Coates applied for membership in Local 3 of the International Union of Operating Engineers, A. F. of L. After arriving in Alaska, he received notice he had been accepted as a

member

Local 302 of the same union, which has jurisdiction here, refused to accept a transfer of membership which Mr. Coates tried to secure and also refused to assign him to the job he had been offered by the employer.

Ten days later, however, Local 302 officials dispatched Mr. Coates to a job as bulldozer operator with the same firm; upon arriving for work, he was given the night-foreman

job.

By the NLRB action, the Alaska chapter of the Associated General Contractors of America. Inc., representing the construction firm, and local No. 302 must reimburse Mr. Coates for the approximate 10 days' pay he lost.

And they must also stop giving preference of employment to Alaska residents—although, the NLRB report of the case notes, the labor contract does not define the term "legal resident of Alaska."

Mr. Coates appears to be making his permanent residence in Alaska and, for the purposes of this record, must be deemed to be a resident of Alaska, observed Martin S. Bennett, trial examiner before whom the case was heard.

POSITION DEFENDED

Russell T. Conlon, secretary-treasurer of local No. 302, whose headquarters is in Seattle, commented there, "We have tried, like other agencies, to discourage men from going to Alaska unless jobs are available. believe men who have families and other ties in Alaska should be given the first op-

portunity at work when it opens up."

Observers here feel that the letter of the Taft-Hartley Act may well be upheld by the NLRB ruling, but that this ruling works a hardship on Alaska in its struggle to attain

economic stability.

Each winter the defense-belt cities of Anchorage and Fairbanks have a long list of unemployed workmen-Fairbanks currently has 1,000 unemployed and Anchorage around 2,000. The greater-area population of the 2 cities is around 60,000 and 40,000, respectively.

The NLRB ruling is seen also as seriously affecting the great transition going on among Indians and Eskimos of interior, western,

and northern Alaska.

few years ago these natives lived entirely by hunting and fishing and by the sale of furs to traders. Came the defenseconstruction boom and they got jobs building barracks, radar stations, airfields, and other military installations,

This has been their first real step from what was essentially a Stone Age existence

into modern civilization.

The Two-Price System for Rice

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I wish to call attention to a letter

written by a good friend of mine, Mr. Bill Jones, of Fisher, Ark.

Mr. Jones is a member of the Poinsett County Agricultural Stabilization and Conservation Committee, and is a rice producer. He is intimately acquainted with the problems of the rice farmer and can appreciate from personal experience the situation created in the rice industry by the drastic cutbacks in acreages. In 1954 Mr. Jones raised 286 acres of rice. and under the 1955 rice acreage allotment program he was reduced to 165 acres-a reduction of 41 percent.

For this reason, Mr. Jones is quite interested in any proposal to increase the disposal of rice, and he has given deep consideration to the recent report by the Secretary of Agriculture on the various plans for a two-price system for rice.

The analysis of this matter as made by Mr. Jones should be of great interest to the Members, and I wish to place in the RECORD Mr. Jones' letter in its entirety:

Hon. E. C. GATHINGS.

Congress of the United States.

Washington, D. C.

DEAR TOOK: In response to your invitation to study the recent report by the USDA regarding the various two-price plans as applicable to rice, I respectfully submit some comments regarding these plans for your information and consideration.

Since receiving your letter, I have talked with several people interested in this subject and will try to present their views, as well

as my own, in a condensed form. The two-price plan, as applied to rice, is

unworkable for a number of reasons. 1. There is a real danger that the rest of the world would get the impression that we were merely using them as a dumping ground for our excess production since the primary

- or domestic market would be protected at a fairly high level and the excess sold in the secondary or world market at prevailing prices. It is reasonable to suppose that the other countries of the world would retaliate by setting up high import barriers against rice as well as other agricultural and industrial commodities from the United States. Should this happen, rice would have more to lose than any other agricultural commodity, because we export a larger percentage of its production than any other agricultural crop.
- 2. There is danger of consumer reaction against supporting the primary market at a relatively high-price level and selling our export production at considerable lower prices. This situation would be very undesirable at a time when the rice industry, through a very extensive advertising campaign, is raising the per capita consumption a little each year.
- 3. It is believed that it would be very undesirable to single out rice as a guinea-pig crop in a two-price plan experiment. If this plan should prove unworkable, it would hurt the future of the rice industry and might even lead to its being dropped from the basic crop group.
- 4. It is believed that the satisfactory administration of a two-price plan would be next to impossible. This was mentioned often in the report.
- 5. Since some 80 percent of the rice produced in Arkansas is consumed in the domestic market, which includes Cuba, we would be at a decided disadvantage in obtaining marketing cards or certificates in comparison to areas that export a large percentage of their production.
- 6. The report shows that it is possible for the farmers gross income to be increased under this plan. It is also possible in case of overproduction for the secondary market

for the farmers net income to be materially decreased.

With the drastic reduction in acreage, if the markets we lost during the Korean war would be substantially recovered plus the markets we now have in Asia, we wouldn't need to think about the two-price plan for rice. It is my present opinion, provided that we have even a normal year, that this year's production will be considerably below current estimates of the USDA. We have had 3 years of abnormally high yields and extremely good harvest conditions. If some method could be found to dispose of the rice now going into the hands of CCC, the acreage reduction plus any adverse conditions that might reduce yield, rice might well be in a strong position by the first of next year. Since we produce less than 2 percent of the world crop, it doesn't take much increase in demand by the world market to get us out of trouble.

Thanks very much for the invitation to write you concerning the report on the twoprice plan.

Sincerely.

BILL E. JONES.

FISHER, ARK.

The U. S. S. "Shangri-La"

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. PELLY. Mr. Speaker, the tense situation over Formosa and the Far East looms less serious on account of the strength of our Navy and particularly of our modern aircraft carriers. Most modern of all carriers afloat today is the U. S. S. Shangri-La, which has just undergone extensive conversion at the Puget Sound Naval Shipyard at Bremerton, Wash. Some idea of the new features incorporated in this great carrier can be gathered from the following article which appear in the Salute. I hope all Members of Congress will take time to read this short article.

I call particular attention to one paragraph which mentions the Shangri-La's forthcoming trials in California waters. Why the Navy continues to base no ships in the Pacific Northwest and why we concentrate our fleet in southern California, leaving a defense vacuum in the north, is beyond me.

FOR THE U. S. S. "SHANGRI-LA" LOOM NEW HORIZONS

Already known throughout the fleet as a carrier with a brilliant World War II record. this week, after an absence of nearly 21/2 years, she returns to active service ready to take her place in the foremost ranks of the Navy's carrier task forces.

A position for which the Shangri-La has been amply prepared, having just undergone in this naval shipyard the most extensive conversion yet given a Navy carrier.

NAVY'S LATEST

She is the Navy's latest move to offset the bewildering challenge of ever increasing aircraft speeds that have dogged its struggle to take airpower to sea.

Her modernization is further Navy recognition of the fact that, if our fleet is to sail, naval airpower must, as well, control the sky above the sea.

For she now embraces within her massive framework two recent advancements which Vice Adm. Raiph A. Ofstie, as Deputy Chief of Naval Operations (Air) pointed out, "have tremendous implications for the development of the carrier."

A FORWARD STEP

The admiral was referring to the angled deck and the steam catapult which combined, complement the transition to an all-jet-powered aircraft team. "A forward step," he said, "in the development of naval air power still to come."

Today, with her angled deck, steam catapults and greatly reinforced flight deck, the Shangri-La can launch and land the world's most modern jet-propelled aircraft.

Not to be overlooked are other modernizations that likewise increase the carrier's worth to the fleet. Ranking high among these is the all-aluminum deck-edge elevator with its lighter weight but greater strength and lifting capacity.

A GREAT SHIP

The hurricane bow, the ultramodern primary flight-control tower, increased medical-hospital spaces, and improved facilities for fuel and provision replenishment at sea likewise add to the Shangri-La's seaworthiness.

Puget Sound Naval Shipyard worker pride in a job well done will be riding high on the Shangri-La's performance in her forthcoming sea trials in California waters.

Having given their best in making her the most modern attack carrier in the Navy, it is not out of line for them to expect her to perform magnificently.

She is a great ship with a great crew. How can she miss?

Court Decision on Indian Claims

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BARTLETT. Mr. Speaker, the issue of native land claims in Alaska has been of concern to the people of the Territory for many years. Recently the Supreme Court made an important decision in a case bearing directly on the matter and Louis R. Huber, a special correspondent for the paper, has written about it in the Christian Science Monitor. The article follows:

JUNEAU, ALASKA,—The United States Supreme Court's recent 5-to-3 decision that Alaska natives have no legal claim to aboriginally occupied land has been received here with mixed feelings.

The Court's action rejected the claims of the Tee-Hit-Ton Indians that they should be paid damages because the Government sold timber from land they claimed as their property in the Tongass National Forest.

This was a test case, involving only a small number of southeastern Alaska Indians. By extension, the principle involved and the practical effect includes the entire Territorial native population of approximately 14,000 Indians, 4,000 Aleuts, and 16,000 Eskimos.

On the bright side, this decision removes a sword of Damocles that has been hanging over the Territory's prospects for industrial development. Entrepreneurs no longer need fear that natural resources on which their ventures are based many prove to be owned by natives.

COURT OF CLAIMS

On the dark side is the possibility that a morally justified claim by nearly 35,000 generally underprivileged Alaskans may now never receive full consideration and compensation

It has long been felt that court action not this Supreme Court action, but separate suits on each individual native land claim would be the only final solution to the native-claims issue in Alaska.

Bills introduced in Congress—but never passed—for years have envisioned the Court of Claims as the avenue for settlement of Alaska natives' land claims."

But the Tee-Hit-Ton case seems to have wrapped all these claims up in one package the Supreme Court was willing to handle. The trouble may be that the package was not unwrapped, but was merely handed to Congress.

"Our conclusion," said the Court's majority opinion, "does not uphold harshness as against tenderness toward the Indians, but it leaves with the Congress, where it belongs, the policy of Indian gratuities for the termination of Indian occupancy of Government-owned land rather than making compensation for its value a rigid constitutional principle."

MORAL RIGHTS?

Edward W. Allen, attorney in Seattle for the Alaska Salmon Industry, Inc., says the high court's decision ought to settle all aboriginal-claims questions

original-claims questions.

But a writer for the Juneau Independent remarked: "One can't help feeling that the court wasn't too sure about the whole thing. There seemed to be some question of moral rights involved."

The late Interior Secretary Harold L. Ickes was concerned about such moral rights. So was Congress in 1936 when it passed an amendment to the Wheeler-Howard Act, to permit the forming of reservations for Alaska natives.

When reservations were set up, however, they didn't work out well. Alaska natives wanted—and still want—to join the white man's civilization, not to set themselves apart from it.

At the end of World War II, Secretary Ickes caused a series of hearings to be held in southeastern Alaska, in which Indian claims totaling 3,339,000 acres were lodged. The examiner for these hearings denied validity of 92 percent of those claims. No action was taken on the 8 percent of valid claims.

SCHOOLS PROVIDED

The Federal Government has provided grade school and sometimes high school education for most Alaska natives. They have been helped in forming cooperatives, for which Federal loans have been made. Some of these—salmon canneries mostly—have been successful. Free medical service is provided for Alaska natives.

Formerly, there was a school of thought that Alaska natives were helped most by sealing them off from civilization and letting them continue in their former, essentially Stone Age, existence.

This view has been discarded in recent years—especially by the natives themselves—and it is generally accepted that the criterion for natives' welfare is how well they match up to the white man's standard of living.

ECONOMIC EQUALITY

On that basis, the Alaska native runs a lengthy gamut—from settlements in southeastern Alaska that probably exceed the white United States average, to backward communities in the Aleutian Islands that are below Asia's lower levels.

Ironically, the areas in which help is most urgently needed are the areas where land claims have not even been asserted by Alaska natives. Only in southeastern Alaska, where natives are furthest advanced, has this matter been pushed.

It can be be argued that the white man's approach to this problem has not been moral, but only legal and materialistic—as when natives could prove they had been deprived of land.

This may be a shortsighted view. White men very possibly could gain more by working out compensation that would lift all Alaska natives toward ecnomic and social equality with themselvse (Alaska native have political equality and several of them serve in the legislature.)

Congress recognized some such moral obligation in its act (23 Stat. 24) of May 17, 1884, which provided "that the Indians * * * shall not be disturbed in their use or occupation or now claimed by them, but the terms under which such persons may acquire title to such lands is reserved for future legislation by Congress,"

In one respect the recent Supreme Court decision merely turned the clock back to 1884. For the debt then recognized is still unpaid. And Alaska natives are still looking forward to "future legislation by Congress."

Price Supports

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
' Monday, April 4, 1955

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the Record two editorials, one from the Washington Evening Star, and the other from the Kansas City Star, with regard to the purely political moves being made to repeal the flexible price-support program we adopted last year but which has not yet gone into effect.

I am also inserting a letter from a farmer which recently appeared in the Richmond Times Dispatch.

[From the Washington Evening Star of of March 23, 1955]

APPEAL FOR RESPONSIBILITY

A persuasive appeal for responsible House action on farm price supports has been made to that body by a bipartisan minority of the Agriculture Committee. It is an appeal to defeat legislation which would restore mandatory 90 percent of parity supports for five basic crops—corn, wheat, cotton, peanuts, and rice. And it is an appeal that should be honored.

By law enacted last year, the Government is authorized to apply a flexible support formula within a range of 821/2 to 90 percent of parity on these five commodities. Initial application of this authority would apply to 1955 crops and there has been no opportunity yet to establish claims that the flexible formula will be injurious to the farmers or to the national interest. There has, however, been ample opportunity to recognize the damaging impact of a high, rigid price support program that was adopted originally as a temporary wartime formula. The committee minority has summed up this evil result in one effective paragraph, as follows: "Rigid 90 percent mandatory price-support programs have failed to keep farm income from declining, created surpluses that have forced farm prices downward, held commodities off the market at great cost to the Government, undermined public support for sound farm programs, lost foreign and domestic markets, assisted foreign competitors to take our markets, and have taken the right to produce away from both small and

large farmers."

Effectively, too, the committee minority drew some parallels between price structures for the commodities "favored" by the rigid supports and those for so-called nonbasic commodities. "It is an interesting and sig-nificant fact," they pointed out, "that the average price for nonbasic (unsupported) commodities has been higher (as measured by parity price relationships) in every year since 1940, except one, than the price of socalled basic commodities." As a consequence, the outlook today for the nonbasics is better than for those which have been covered by high supports.

The flexible support theory is a keystone of the Republican's administration's program for dealing with the farm problem. Influential Democrats in both branches of Congress have favored it, at least to the point of urging that it be given a trial. Disposal of some of the huge Government-owned surpluses, expansion of research and educational work in agriculture, and some pending recommendations for helping the small, low-income farmers are other major parts of the administration blueprint. At this stage it appears to have much greater merit than a retreat to a program that already has been proved costly and unsuccessful.

[From the Kansas City (Mo.) Star of March 28, 1955]

WHO CALLS THE KETTLE BLACK?

Funny things happen in politics.

Certain groups in Congress now are blaming Secretary Benson for acreage controls, surplus piles, and inadequate sales abroad of farm products, particularly cotton—all of which developed before he became head of

the Agriculture Department.

Benson came into office with a philosophy that farm products were produced to be sold and consumed. He warned that fixed, high price supports meant more and more acreage controls, bigger surplus piles, and difficulties in meeting world prices in export markets. He hoped to put greater emphasis on expanding markets, creating new ones, and finding additional uses for farm products. The Secretary asked for a flexible price-support program which would help put United States products in a competitive position,

The Secretary was able to get a compromise flexible price-support law enacted over tremendous opposition from those who were demanding retention of the old program with its fixed price supports and acreage controls. The new price-support rates will become effective with the harvest of this year's crops.

Those who fought loudest for the rigid supports now see other countries adding cotton acres for almost every acre cut taken They see the big surby American farmers. plus piles, and they find acreage reductions are not nearly so popular as advertised.

But if the Secretary of Agriculture could just whisk those surplus piles away in one way or another, all troubles would vanish. So they blame him for not getting them sold, some way, anyway, on the world market.

Meanwhile, this administration is doing more than any other to attempt to market farm products. Agricultural exports have been increasing since 1952.

Benson has been proving himself right even though he hasn't whipped the farm problem as yet. Blaming him for the trou-bles developed under the old program is striking a low blow.

[From the Richmond (Va.) Times Dispatch of March 30, 1955]

VOICE OF THE PEOPLE

FARMER OPPOSES RIGID PRICE SUPPORTS CALLS FOR SHAKING OFF THE SOCIALISTIC SHACKLES

I notice that a few days ago the House Agriculture Committee in Washington in supporting a farm bill, known as H. R. 12, which will restore the 90 percent rigid price sup-ports on basic commodities. It is also on ports on basic commodities. record that Mr. Walter Reuther testified on behalf of the farmers of America in favor of the support of this bill. Mr. Cooley, chairman of this committee, made the remark that Mr. Reuther gave the best statement in behalf of farmers of any group before his committee.

I am wondering what Mr. Reuther and Mr. Cooley expect to gain for the farmers under the proposed bill, due to the fact that farm prices have declined 25 percent since 1947 under the rigid 90-percent parity and that the flexible support program will not actually go into effect until this fall.

It is a known fact that Mr. Reuther is interested only in benefits to the labor unions to the extent of high wages and low food costs. It seems to me, therefore, that neither Mr. Cooley nor Mr. Reuther are interested in the best interests of the farmers as a whole. I, for one, do not want any labor organization writing or helping write or administering any farm program for me to live

I think that the taxpayers of this Nation would be very wise to familiarize themselves with any and all of the proposed bills that will come up in Washington this year. realize, however, that it is rather hard for a farmer to compete on an equal basis with labor and industry and the highly subsidized economy of today. I believe, though, that we will be far better off as farmers to fight for less controls and fewer subsidies on other groups and at the same time try to shake off the shackles of the socialistic trend in America today.

As I see it, freedom to expand, to grow, to progress is not worth any subsidy control or doles that we might receive at the hand and expense of the Federal Government. It is a shame that many of the people of America today have the impression that money received by them from the Federal Government is free and will never be paid back.

I have a 7-year-old daughter, and far be it from me to credit any debt for which I am not able to pay and leave the responsibility to her to pay with interest in years to come. JOHN M. PUTNEY, Jr.

CUMBERLAND.

Where Times Are Getting Harder

EXTENSION OF REMARKS

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mrs. KNUTSON. Mr. Speaker, an article appeared in the U.S. News & World Report of March 25 with an account of the present farm situation. I include this in the Congressional Record under leave to extend my remarks: WHERE TIMES ARE GETTING HARDER-FARMERS

STILL ARE IN A RECESSION, WHILE OTHER PEOPLE PROSPER-THEIR PLICHT RECALLS THE 1920's, WHEN AGRICULTURE SLUMPED LONG BEFORE THE BIG DEPRESSION-THIS SHOWS THAT THE FARM PROBLEM IS WORSENING NOW, THAT MORE TROUBLE LIES AHEAD

One major industry affecting many millions of people is not sharing in the Nation's business recovery.

This great exception is agriculture.

Farmers are getting less for their crops. They are being forced to grow less. Their costs are high. Their incomes are shrinking.

Last year farmers had the smallest share of the national income on record, 7.2 percent, as shown in the chart on this page.

As yet, there is no solution in sight for their problem. Time and again Government officials have sensed a change for the better. At times, prices strengthened. But each time the improvement proved momentary. Thinking back to the 1920's, some econ-

omists now are wondering if this long-continued trouble in farming may not prove to be a serious weakness for the Nation as a whole. History, especially in the twenties, shows that when farmers suffer over a long period other business is likely to be hit.

MILLIONS ARE AFFECTED

Farmers today are a smaller group but still big enough to have an impact. The Government figures there are about 21 million people living on farms, and about 31 million more in rural areas closely tied to the farm. Thus, nearly a third of the Nation is affected by a drop in farm income.

Farm net income was about \$12 billion last year. That figure makes an allowance for expenses, taxes, and value of homegrown food and feed. Farmers got 40 percent more in their best year, 1947. Thus the drop, from peak prosperity, has been great, though most farmers still are much better off than before World War II. The drop in 1954 from 1953 was 10 percent.

The Government had expected the drop from 1953 to be about 6 percent.

Now, a further drop of about 4 percent, to 11.5 billion, is being forecast, unofficially, by the Federal experts for 1955.

WHAT'S THE TROUBLE

Behind the farmers' plight are two big factors: Price weakness and heavy surpluses. Farm prices just haven't leveled off the way the Government and many private economists thought they would. Right now, in a time of great business strength, farm prices have been showing weakness.

Cotton in rural areas, a short time ago, sold for slightly less than the Government

price support.

Farmers are selling wheat at a discount of about 14 cents a bushel from the price support, corn at a discount of 27 cents, rye at a discount of 31 cents.

Hogs are the cheapest since 1949. Cattle prices are up from last year's lows, but have

lost ground recently.

Supples are so big that, unless there is a war or some other calamity, real strength in prices can't be counted on soon. Farmers will produce less. But consumers will have plenty of meat, flour, fiber, eggs, poultry, dairy products, just about everything the farmer grows.

The supply of wheat on July 1 is expected to be about 975 million bushels. That is more than the United States uses in a year. and three times the normal carryover, as the Government figures it. And a new crop is

Corn at the start of the growing season this year is estimated at 918 million bushels, already on hand. That's a third of what is used in a year, and a whole new crop is about to be planted.

Before the 1955 cotton crop is picked, the United States will have on hand something like 9.8 million bales of old cotton.

EFFECT OF ACREAGE CUTS

The Government hopes to hold production on new crops to less than the normal year's use, thus reducing the huge surpluses. But the surpluses will shrink little, the economists say, unless there is a crop failure. Big supplies still will be hanging over the market at the end of this year.

But acreage cuts will mean this to the grower: Less income, Wheat farmers of the Great Plains will be sowing about 30 percent less than they did 2 years ago, and what they reap brings a lower price.

In Southern States cotton acreage has been reduced by more than 27 percent since 1953. Here, too, farmers are feeling the cuts.

Meanwhile, farmers expect to raise more pigs this year than last. That keeps the price low but holds volume up. Cattle on ranges and farms also are more numerous than they were a year ago, the Government says.

For those who sell livestock, big volume helps offset low prices. Still income declines. Most farmers will have less coming in.

EXPENSES HARD TO CUT

They'll be trying to cut expenses. So far, this has proved difficult. Since 1951, cash received by farmers has diminished by \$2.8 billion a year; production expenses have declined only half a billion.

Feed costs less. But feeder cattle cost more; cost of animals purchased for fattening early this year has risen more than has

the price of fattened steers.

The big corn-hog producer figures his costs at 12 cents per pound of hog; he gets about 15 cents. The 3-cent margin has to pay for his own work, his investment, and family expenses.

Fertilizer is costing less than last year. But seed to be planted on land taken out of corn and wheat has become more costly, especially grass seeds, clover, and alfalfa seed.

Farm wages are down. The farmer is buying less machinery than he did when he feit more prosperous. But the family needs are more expensive. And taxes are rising. Farmers have gone deeper into debt. The

Farmers have gone deeper into debt. The Government says mortgages on farms increased by 7 percent last year. Interest payments on mortgages are increasing.

The overall result is shown in the chart: Farm costs per unit of crop have inched up for the last 2 years despite efforts to cut down.

GETTING BY

What the broad figures don't reveal is the wide differences in the fortunes of different types of farmers. Hard hit are wheat growers on the Great Plains who haven't much choice but to grow wheat, or cotton farmers tied almost entirely to cotton and lacking latest equipment. Small farms without machinery feel a real pinch.

Less hurt is the medium-sized Midwestern farm that is well equipped and versatile. It still supports the family, with some profit, though the profit is smaller than before. There is more leeway to meet hard conditions.

Distress would be greater except that many have moved off the land in the last decade, A smaller income is being shared by fewer farmers. Those who remain are more efficient.

Even so, they feel the pinch. As consumers, they are not able to buy as freely as last year; they share the lowest income since World War II. When most other people are feeling well off, farmers get no lift from the business boom.

The Rose as the National Flower of the United States

EXTENSION OF REMARKS

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, on January 10 I introduced House Joint Resolution 102, to designate the rose as the national flower of the United States. An identical measure was introduced simultaneously in the Senate by Senator Margaret Chase Smith.

Since then there has been a great deal of public interest in this legislation, but at the same time many misconceptions have arisen. Several of my colleagues have expressed a personal interest in this bill and I understand that most Members of this House have received mail on the subject. To assist them in answering inquiries from their constituents, I am offering some further information about this resolution.

FOUR-TO-ONE SUPPORT

The mail I have been receiving on this legislation is about 4 to 1 in favor—with many of those in support representing large organizations and societies. I have been very free in permitting news correspondents to examine this mail, which has made the rose the subject of many fine news stories. These, in turn, have stimulated newspaper editorials in all parts of the United States.

However, some of these stories have emphasized the small proportion of mail which is opposed to the rose and thus gave the impression that this legislation is controversial. One article warned jokingly that a new war of the roses was about to break out in the Congress. Then, one of the most reputable newspapers in the country published an item that the House hopper began to receive bills proposing the national designation for everything from the Easter Lily to the stinkweed. This is completely false, since there have been no other bills on the subject.

OBJECTIONS TO ROSE

What are the objections to the rose as our national flower? The one most frequently raised is that it is not truly native to our soil.

It is difficult to find anything more native to America when you realize that fossils have been found in Oregon indicating that the rose was here as early as 6 million years ago.

Roses have contributed their special beauty to all of American history. An early visitor noted their presence in New Amsterdam and we have evidence that they were also grown in the gardens of old Virginia, New England, and South Carolina.

William Penn was a rose enthusiast and I am told that to this day his heirs annually accept a single red rose in payment for rent on certain Pennsylvania properties.

GEORGE WASHINGTON

George Washington may have been one of the earliest rose hybridizers in this country. His agricultural experiments are well known, and in Mount Vernon's gardens there are plants named Martha Washington and Mary Washington. While their origin is not definitely established, there is reason to believe that the General himself created them.

Rose hybridizing got an early start in America. A South Carolinian named John Champney created Champney's Pink Cluster around 1810, and the Reverend William Harrison, of New York's Trinity Church, originated Harrison's Yellow about 20 years later.

By the time of the Civil War, hybridizing techniques had improved and Robert

Buist published a Manual of Roses listing more than 900 varieties. Another author who contributed to the literature on the rose was the famous Francis Parkman who wrote the Book of Roses about his hopby.

Today the people who grow roses in the United States are legion. It is estimated that there are more than 30 million rose gardeners in this country and the number is growing each year.

OTHER NATIONS' INSIGNIA

Another objection is that the rose is the national flower of England. However, some type of rose is also the national flower of Honduras, Iran, and Luxembourg. But all of these have been adopted so long ago that we would not recognize them as the cultivated rose we know today.

Nor do we have the exclusive rights on several other national insignia. The red, white, and blue colors are used in the flags of 17 countries: Burma, Chile, China, Costa Rica, Cuba, Czechoslovakia, Dominican Republic, Paraguay, Panama, France, Liberia, Iceland, Netherlands, New Zealand, Norway, Thailand, and United Kingdom.

And the eagle is used in the coats of arms of at least six countries, Mexico, Panama, Ecuador, Poland, Syria, and Spain.

You might be interested to know that other national insignia of the United States, which we take almost for granted today, were the centers of considerable controversy before they were adopted.

FRANKLIN WANTED A TURKEY

On July 4, 1776, Congress set out to acquire a great seal for the new Government. Benjamin Franklin, John Adams, and Thomas Jefferson were appointed as a committee to bring in a design for a seal. Each submitted a different design and one using the eagle, was finally adopted on June 20, 1782. But the venerable Franklin was very much opposed to the eagle. His choice was a turkey. Franklin wrote in 1784:

I wish that the bald eagle had not been chosen as the representative of our country; he is a bird of bad moral character; he does not get his living honestly; you may have seen him perched on some dead tree, where, too lazy to fish for himself, he watches the labor of the fishing-hawk, and when that diligent bird has at length taken a fish, and is bearing it to his nest for the support of his mate and young ones, the bald eagle pursues him and takes it from him. With all this injustice he is never in good case; but, like those among men who live by sharping and robbing, he is generally poor, and often very lousy. Besides he is a rank coward; the little kingbird, not bigger than a sparrow attacks him boldly and drives him out of the district. He is therefore by no means a proper emblem for the brave and honest Cincinnati of America, who have driven all the kingbirds from our country; though exactly fit for that order of knights which the French call Chevaliers d'Industrie. I am, on this account, not displeased that the figure (as represented on the medals or badges of the Order of Cincinnatus) is not known as a bald eagle, but looks more like a turkey. For a truth, the turkey is in comparison a much more respectable bird, and withal a true original native of America. * * He is, besides, (though a little vain and silly, it is true, but not the worse emblem for that), a bird of courage, and would not hesitate to attack a grenadier of the British guards, who should presume to invade his farmyard with a red coat on.

The Star-Spangled Banner was not accepted as our national anthem for more than 100 years after it was first proposed in Congress in 1830.

The song was the object of furious attacks. Its words were termed too belligerent and too bumptious. The music was branded as inappropriate and above all "utterly unsuitable" since some of it was said to lie beyond the range of the average voice.

ANACREON IN HEAVEN

Many people were distressed over the fact that Francis Scott Key's words had been put to the music of Anacreon in Heaven, the club song of an 18th century English convival society.

Some Members of Congress said the song should never take precedence over My Country 'Tis of Thee, Yankee Doodle, and the Battle Hymn of the Republic. Others claimed the words were too uncomplimentary to our English brethren and thought Hail Columbia would be more appropriate.

As late as July 2, 1926, the singing of the Star-Spangled Banner caused a near riot in New York City and police reserves had to be called out to quell the disturbance.

The Congress adopted it as our national anthem on March 3, 1931.

Finally, one of the objections is that we in the National Government should have more important things to do than to consider the subject of a national flower.

NEED FOR DIVERSION

None of us in this greatest legislative body on earth need apologize for the proportion of vital legislation we consider day in and day out. In these times of international turmoil we are so pre-occupied with troubles and failures, crises and frustrations, that we should welcome an occasional diversion of this sort. The rose is a beautiful product of nature. We think of it in a bouquet that a boy lovingly presents to a girl, or on a table piece at some bright celebration. Or perhaps we associate the rose with contemplative hours in a garden where the worries of the day fade before the glow of its soft colors.

Yes, it has thorns. Yes, some varieties can be terribly difficult to keep alive. But that, too, is beauty—something to be cultivated and cherished.

I would like to see the rose—which symbolizes peace, loyalty, love, devotion, and courage—associated with the United States of America in the minds of people in all corners of the world.

This legislation is now before the Committee on House Administration. It would be helpful if Members of Congress and the public generally would let the committee know of their support.

Banking's New Look

EXTENSION OF REMARKS

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mr. AUCHINCLOSS. Mr. Speaker, I hope my colleagues will read the article entitled "Banking's New Look," written by David Rockefeller, senior vice president of the Chase National Bank, of the city of New York, which I append to my brief remarks. In this speech, delivered recently before the Executives Club in Chicago, Mr. Rockefeller reviews the past, the present and the future in the banking profession. His analysis is clear-cut, readily understandable, and displays a vision of public service and efficiency which is stimulating and gives assurance for the future. Bankers who think in the terms and along the lines suggested by Mr. Rockefeller inspire confidence and support the theory that America today is on the threshold of a new era of expansion and service to humanity.

BANKING'S NEW LOOK

It is probably a good assumption that everyone here today uses a bank and is familiar with the services banks perform. Yet I suspect that some of those present may not have noticed the revolution which has occurred in banking in the past quarter of a century. This resolution has been gradual and orderly but is nonetheless real. If it were more fully recognized, I believe the view of banks and bankers in some quarters would be modified and their ability to serve society would be enhanced. Because I believe this to be so, I will review some of the recent changes in banking and point out certain areas where further constructive developments can be expected.

A PICTURE OF AUSTERITY

Cartoonists and satirists long depicted bankers as conservatively attired, elderly gentlemen who look with hard and unsympathetic eye on those who seek a loan. While this austere image was never fully justified, it must be conceded that the traditional banking house with its Greek columns outside and its vast and uninviting main hall too often reminded one of a mausoleum. The customer often felt unwelcome, insignificant, and ill at ease. ers at a certain period in the past frowned upon salesmanship as dangerous and undesirable for a lending officer. The customer was expected to take the initiative. If he needed a loan, he could ask for it, figuratively speaking, on bended knee. I hope I need not tell this audience that such an approach is long since outmoded.

Changes in banking have been especially pronounced in the recent past but it would be inaccurate to leave the impression that banking in this country was ever static. It is surprising what a number of activities banks at one time undertook, indeed in some instances pioneered, with which they are no longer concerned. At various times, for example, they issued and redeemed paper cur-

rency, issued life as well as marine and casulty insurance. They were travel agencies and real estate brokers. They underwrote and marketed corporate securities. In most instances, these and certain other functions were abandoned by commercial banks because it became clear that society would be better served by having them performed by more specialized agencies. Apart from the trusteeships, banks have tended to concentrate more on their basic function; Deposit handling and lending.

The great changes that have occurred in

The great changes that have occurred in banking in the past quarter of a century have been in response to fundamental upheavals in the world. These have been touched off mainly by the great depressions and World War II, both of which induced tremendous

social and technological changes.

The depression had a profound effect on the American banking system. Some of the climatic events of the depression-the stock market crash, going off the gold standard. and the bank holiday-all were associated closely with the supply of credit. Banks became a convenient scapegoat for the troubles of the times. It was natural, as a consequence, that the banking system should have been given close and careful scrutiny by the public, by the Government, and by its own management. The result was a number of changes, some internal, brought about by legislation-some of which, it must now be admitted, have turned out to be in the long-run interest of the banks.

The Securities Acts of 1933 and 1934, for example, established rules governing the issuance and sale of securities. The amount of money banks could lend for the purchase of securities was placed under regulation. The Federal Deposit Insurance Corporation was established to protect the small depositor. The Banking Act of 1933 prohibited commercial banks from underwriting or dealing in corporate securities. Most of these measures, and others which accompanied them, were widely criticized at the time. Despite inequities, however, some of which have since been corrected, their underlying wisdom is now accepted by most.

NEED FOR A NEW APPROACH

These legislative measures were supplemented by other forces and governmental policies. Thus, the cheap-money policy which characterized the depression, and which was pursued during and for a time after the war to help finance Government spending, caused bankers to be more inventive in finding new ways to assist industry. They were forced to become more sales conscious and to change their approach to borrowers, both big and small. Then, again, during the lean years of the depression and during the war, banks did not need or could not secure large quotas of new employees interested in a bank career. At the end of the war there was urgent need for men in the junior executive ranks, not only for banks but in industry generally. A scramble for able recruits became keenly competitive. Thus, banks found to their chagrin that their field no longer had glamor as a career for the young college graduate and that' industry was outbidding them. So bank executives belatedly turned their attention to the need for modern personnel policies to attract young men of top caliber for their important positions.

I have indicated some of the forces which have worked to bring changes in the banking system and some of the reactions to these forces. The far-reaching significance of the changes that have been the result can best be demonstrated by a few concrete examples of recent innovations in banking practice.

Lending always has been a prime function of banks. One might think there is little new that could be introduced in this area but that is not the case.

Until the 1930's, commercial bank loans in this country rarely exceeded 3 to 6 months. Then banks developed the socalled term loan in response to changing requirements of industry. Today term loans of 1 to 5 years are commonplace, and some run substantially longer. It is not too much to say that the great postwar expansion of trade and industry would have been impossible without the term loan. It has been used to equip new facilities, to finance the purchase of machinery designed to cut costs and to carry larger inventories and receivables. Term loans do not and should not replace equity capital and long-term debt, but they do create an element of elasticity in supplying funds to business. The importance they have come to assume is reealed in their volume-approximately \$8 billions in 1953, or about 30 percent of all bank loans to commerce and industry.

Another innovation is to be found in the petroleum industry. With the expanding use of petroleum products in the United States, and the entrance into this field of hundreds of small companies and individual drillers, a new basis for extending credit was needed. The banking system came up with an ingenious solution-the production loan. In this case, the loan is made against proven supplies of underground oil which the bank itself appraises. The security for the loan is the oil and the loan is paid off as the oil is produced and marketed. While this procedure now sounds simple and logical, 25 Years ago most oil producers had to meet the same credit tests based on financial statements which would be required of a department store or a textile mill. Departure from traditional standards was only possible because banks were willing to gain thorough knowledge of the technical intricacies of the oil industry. Some banks in the petroleum business today employ geologists, engineers, and economists to advise them in making production loans. We are especially indebted to banks in the Southwest for ploneering in this credit development.

NEW FINANCING IN AN OLD INDUSTRY

Finally, let me cite one more illustration of a new type of loan—this time developed to accommodate a special situation in the tele-Phone industry. There are about 6,000 individual telephone companies in the United States. Many of them are small, ranging from a half-dozen rural telephones on up to many thousands, yet they perform essential and efficient service in many places. After World War II, these companies were confronted with a crisis. Population growth, decentralization of industry, and technical change created urgent demands for expansion and modernization. Credit sources open to large companies were not at that time available to the small ones. Chase stepped into this situation and, after learnsomething about the business, began making loans, some with amounts as little as \$1,500. Part of Chase's task was to assist in developing sources for long-term funds in rather modest amounts as a method of funding such loans. This it accomplished by bringing them to the attention of institutional investors who were in a position to purchase securities directly. Here was a case, then, where a bank was called upon to fashion a new mode of financing for an im-Portant segment of an industry. Without such financing, many independent telephone companies could not have survived, let alone maintained their growth and improved the quality of their service.

It is not only through the development of new loan techniques that the banking community is keeping up with its customers' growing needs. Many large corporations transfer substantial funds from one point to another, either as incoming settlements to the central office from branch offices or as outgoing disbursements to cover branch ex-Through the imaginative use of improved wire communications, means of accelerating the flow of these funds have been developed with the consequent increase of important amounts of working cash available to the companies concerned. As another illustration, let me cite an arrangement that Chase has worked out with the major scheduled airlines in the United States, Canada, and Mexico. These lines share receipts resulting from passenger and freight operations between widely separated points on the North American continent. The bank functions as a centralized clearing agency for the settlement of the resulting interline balances by simply debiting and crediting the accounts which the lines maintain with the bank. Since the plan began in 1950, \$11/2 billion of interline bills have been processed. The annual saving to the airlines has been something like \$30,000 per

Other cases could be mentioned where creative banking has come to the aid of customers with a special problem. Trust departments of commercial banks, for example, have been pioneers in the development of common trusts which have proven a blessing to many small estate owners. Similarly, they have broken new ground in the development of pension trusts, the importance of which in today's capital market is too well known to require amplification. Rather than go into detail on these or other examples, let me turn to another broad development in banking-one that in many respects is as significant as the change in credit arrangements-namely the growth of retail banking.

DEVELOPMENT OF RETAIL BANKING

The term "retail banking" is used to describe certain banking services made available to the general public on a convenient and reasonable basis. These services include popular checking accounts with no minimum balance requirements, savings accounts, personal loans on a monthly repayment basis, money orders, Christmas clubs, and safe-deposit facilities. These services have departed sharply from tradition. The use of bank checks to pay household bills, for example, was a convenience not known to many housewives a generation ago. Today it is coming into widespread use. But perhaps no consumer service has grown so much as installment credit. As recently as 1940, such credit extended by banks amounted to only \$1.5 billion. In late 1954, they had more than \$8.5 billion of installment credit outstanding. Twenty-five years ago, relatively few banks extended installment credit to individuals whereas today almost all do. Banks now account for about 40 percent of all installment loans.

Why is it that banks have gone so avidly after the business of the consumer? The answer is simple. With the impact of steeply graduated income taxes on the wealthy and the growth at the same time of middleincome groups, it is logical that banks have sought to replace a smaller number of large accounts with a much larger number of accounts drawn from the middle-income group. Moreover, the rise of the middle-income group has been chiefly responsible for the higher level and greater stability in the demand for all those goods which contribute so much to modern living—such as auto-mobiles, electric appliances, TV sets and the like. By adjusting to the needs of consum-ers, banks are playing a major role in creating the conditions under which the higher demand for these products can be made effective. At the same time, they are protecting their own future by tapping a new source of deposits at a time when corporate treasurers, eager for maximum earnings, are tending to keep surplus funds invested in Government securities rather than in cash.

BANKERS TURN TO SALESMANSHIP

The trend toward retail banking is good business. More than that, it reflects a change in the way bankers approach their business, Banks for the first time have become sales conscious. They now try to sell their services and seek new business wherever it is profitable, just as would any other business. This is a sharp departure from the practices of the days before the 1930's when bankers waited for business to come in. The alert bank executive today must be a salesman as well as a credit officer. Each bank is competing with others for available business and new outlets. The extent of the change is evident in aggressive and imaginative advertising, in the concern of banks with public and community relations and even in the architecture and decor of their newest build-

The appearance of new banking premises today contrasts strongly with the conservative buildings of old. Classic columns, cold marble interiors, wired-in tellers' cages, and drab colors are disappearing in the newer buildings. Perhaps the modernistic appearance of the Republic National's new building in Dallas, or the Fifth Avenue and 43d Street Branch of the Manufacturers Trust in New York, may shock some who are accustomed to the old style. It is interesting to note. however, that the architects, Owings & Merrill, who designed the Manufacturers Trust branch, have just won the 1955 gold medal of the Architectural League of New York for their achievement. In any event, these banks are pioneering and, in my opinion, are on the right track. They seek to attract the public by being open and light and by using warm colors. The furniture is simple, comfortable, and well-designed. Tellers are at open counters. The atmosphere is friendly and inviting.

Further than this, in suburban areas many banks now provide free parking facilities, Others have drive-in windows where banking transactions can be handled from the driver's seat. In one Westchester County bank I know, loilopops are handed out to children and dog biscuits for the dog. This is, indeed, a far cry from the banking operations as they were carried on 30 or more years ago.

Along with other segments of the economy, banking today is stronger, healthier, and more competitive than it has been for a long time. I emphasize competition since recent mergers have caused some to question whether banking was tending toward monopoly. Actually competition, not monopoly, is the key factor in the current wave of mergers. Our prospective Chase-Manhattan merger makes good sense not because the resulting bank will be bigger but because it will be better-better able to compete with other New York City banks in the retail field. New York State, unlike Illinois and some other States, authorizes branch banking within restricted and specified areas. Chase, which has 28 branches, almost all on Manhattan Island, and the Bank of Manhattan. with the 65 branches it brings to the merger and which are largely in the Boroughs of the Bronx, Brooklyn, and Queens, combine to give the merged institution a citywide coverage which neither alone could claim. It is a remarkable fact that there is virtually no duplication between the 2 branch systems, or for that matter to any significant degree in any phase of the business of the 2 banks.

There are some 14,000 commercial banks in the United States. In New York City alone, 57 banks have approximately 560 outlets. In Chicago, there are 72. Clearly this makes for highly competitive activity. It is also a fact that banks in Chicago not only compete with one another but also compete effectively with those in New York, Boston, Detroit, and San Francisco, to name only a few cities, in providing loans and services on a nationwide scale. Moreover, banks find themselves in competition with other financial institutions. For example, they compete with insurance concerns, finance companies, savings and loan associations, credit unions, and the securities markets. of course, the Government has become more of a competitor in the field of financemore important, in fact, than many believe necessary. The keenness of competition in banking today is beyond dispute. If anything, it is increasing.

All this competition acts as an energizing, stimulating force in bringing about constructive change. It has been a powerful factor in developing retail banking. Since this involves many small operations, and relatively low return per unit, competition has forced banks to reduce costs by the mechanization of operations. The day of the handwritten ledger book is far behind us. High-speed business machines for handling bookkeeping, check sorting, currency counting, dividend calculating, and record reproducing are in general use. Banks cannot accept primary credit for developing such equipment, but many have cooperated with manufacturers in the process. Chase, for example, has a small unit which devotes full to the study of mechanization. It is working with a firm of engineers in determining how electronics can best be adapted to our operations. These advances may have far-reaching ramifications for our operations in the future.

BANKERS AND THE PUBLIC WELFARE

Banks have changed in still another respect, one which also is having important consequences. Their management has become increasingly aware of its public responsibility. Banks perform a rather unique function in that they are the institutions which bear heavy responsibility in administering the Nation's money supply. Al-though the profit motive is firmly entrenched in banking, as in other segments of our economy, bank executives have come to recthat they must examine problems ognize and policies from the standpoint of the pub-This was not always so-parlic welfare. ticularly in days when our economy was less complex and our position in the world less central. Today, bankers recognize that they must respond to the needs which emerge as great social and technical forces work themselves out. Enlightened leadership will be required if we are to keep up with this dynamic age—an age which has the con-stant stimulus of a growing population, rising living standards, and a continuing technological revolution.

Banks, like industry, must weigh the implications of these vast new developmentsboth for the world of which they form a part and for the discharge of their special functions. As an example, it has seemed clear to us in Chase that atomic energy will find wide adaptation in industry. The harnessing of this new source of energy will be tremendously expensive and will require bank credit as well as other capital. In anticipation of this development, we have added to our staff Dr. Lawrence Hafstad, formerly head of the Reactor Division of the Atomic Energy Commission. He is one of the country's leading authorities on peacetime application of atomic energy. His task will be to help in adapting atomic energy to industry. Through him we believe that we are helping to speed effective peaceful use of atomic discoveries, and we hope to find ways in which bank credit can be applied to an important new field.

Peaceful use of atomic energy on a significant scale is of course something for the future. For the present, the ability to release nuclear energy by dropping it from an airplane in a bomb has quite a different set of implications. Among others, it means that this country no longer can afford to live by itself. Ocean barriers do not protect us from the atom. The airplane, coupled with the rise of imperialistic communism in Russia, has exposed every part of our country to the possibility of devastation by air attack with little or no warning. These facts force us to seek friends in building a common de-The strength and well-being of other lands have become important to us.

Here again is a development from which banks cannot stand aloof. To do so would be to admit that private enterprise is not capable of contributing to one of the fundamental tasks of our time-the financing of economic development throughout the free world. To admit this is to abdicate in favor of government. Here once more is a field in which we may expect to see further experimentation and change by banks over the next generation. Until World War II, England and the continental European countries were the principal international bankers. Even today, although the United States plays a leading role in international affairs, our banking system has not fully measured up to the task of shouldering a major share of international financial operations.

A NEW SERVICE FOR EXPORTERS

A good beginning has been made, however, and further progress is in prospect. By way of illustration, the Chase is taking a leading part in developing a new enterprise to be known as the American Overseas Finance Corporation, which will make available for the benefit of American exporters mediumterm credits to companies in other countries which require machinery and equipment from the United States. AOFC, which will be an independent corporation, will buy foreign importers' paper. The common stock will be largely or wholly owned by Chase. Such financing has not heretofore been available. Lack of it has been a strong deterrent to exports by American companies which compete with foreign products sold on favorable credit terms under Government guarantee. In the past, term credits have not been made available to foreign importers by American banks because of the political and exchange risks. AOFC does not eliminate these risks, but it will spread and share them.

American manufacturers wishing to take advantage of these services will purchase preferred stock, and then, in addition, will assume 25 percent of the risk of the goods they export. Importers will be required to make a downpayment of 20 percent. The Export-Import Bank will guarantee an additional 25 percent of the risk. Moreover, the risk will be spread over many importers in many countries. With the protection this spreading of risk provides, plus the further backing afforded by the equity of the corporation, we believe commercial banks will be willing to buy the senior notes of AOFC which will be sold to provide the necessary financing. In that way, the banking system for the first time will be in position without unreasonable risk to participate in the financing of exports on a term basis, and yet will be able to assure export manufacturers of 80 percent of the sales price of their exports in cash immediately and without recourse. I feel sure that this corporation, when it commences to function, will be only a forerunner of other techniques which financial institutions will develop as a means of expanding our own trade and helping in the economic development of the free world.

Thus it is apparent that banks in this country have undergone, and are continu-

ing to undergo, many changes. This progress is good, for it expresses the dynamic qualities of the world we live in. what I have seen of banks, I am convinced they will rise to the challenge and opportunity the future holds for them. Certainly they will not fall for lack of leadership, for never has bank leadership been more in tune with the times than at present. As banks contribute to the great effort to create & society which is at once forward moving, stable, and peaceful, within a framework which enables men to remain free, I believe they will morit increasingly the high confidence which people of this country feel for them.

They Learn New Ways

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BARTLETT. Mr. Speaker, under the above title Max K. Gilstrap, chief of the central news bureau of the Christian Science Monitor, wrote an article on the Eskimo people in Alaska which appeared in the paper March 23. Because it is of general interest I take pleasure in calling it to the attention of the House:

KOTZEBUE, ALASKA.—President Eisenhower and Cowboy Roy Rogers are nip-and-tuck choices as the most popular heroes of the wideawake Eskimo children who give a touch of rousing gaiety to this native village north of the Arctic Circle.

The most engaging experience in our Alaskan trip has been a lively exchange of questions and ideas with eager, alert, young descendants of an ancient race whose mysterious beginnings are lost in antiquity.

It has offered further reassurance that Alaska's future will be in the intelligent hands of an enlightened native as well as a progressive white population if—and this should be emphasized—needed assistance is forthcoming from the United States to build more and better schools.

We stopped by the white frame school as we trudged about in this native village on the bleak tundra that overlooks the wide horizons of the ice-caked Arctic. In midwinter it becomes a rippling mass of snow-drifts.

With nearly 1,000 inhabitants, Kotzebue is the second largest (after Point Barrow) Eskimo village in Alaska. Now a regular airline stop, it is becoming famed for its native activities, including the spring dog-team races and ice breakup and its Fourth of July celebration featuring native dancing, skin blanket tossing, kayak racing, and spear throwing.

Of the many Alaskan aborigines, the Eskimos here and in other parts of Alaska are the most numerous, totaling about 18,000 in the territory. Closely related to the Eskimos are the Aleuts (pronounced alley-oots) in the southwest. There are also Indians. Tlingit (pronounced klink-et), Tsimshian, and Haida of southeastern Alaska. A few have retained their tribal customs, but most of them have adopted western ideas and living conditions.

CHANGING ATTITUDES

The impact onrushing civilization is having on the Eskimos and their culture can best be found in the attitudes and lives of the young people. For this reason we were especially delighted when Jack Bartlett, superintend-

ent of schools, invited us to vist the various classes, beginning with the one taught by Mrs. Bartlett.

What would Eskimo children most like to see on a visit to the United States?" asked Mrs. Bartlett's dusky, bright-eyed students. "A horse, skyscrapers, the Lincoln Memorial, Grand Canyon," they chorused.

What would they like to eat while there? "Anything fresh—fresh cabbage, fresh turnips, fresh cucumbers."

What would they like to do? "Take a subway ride, go to the circus, visit cowboyland." How many had ridden in a dog sled—in an airplane? Merry laughter rippled forth.

Both types of transportation are vital in this

isolated area.

In their mimeographed publication, Reindeer Roundup, the children had told of what they liked about living in Kotzebue:

"Playing along the beach, watching the big boat come in in summertime with all the good things to eat, picking berries and gathering bluebells and fireweed on tundra, hearing the birds sing and watching the big cranes come by with their long necks sticking out, putting seal and whale meat in our ice cellars, helping herd the reindeer, exchanging letters with school children in the States who think we live in ice igloos, Which we don't, and who think we always eat raw meat and blubber and wear furs all the time, which we do only part of the time.'

PROBLEMS OF TEACHING

Mrs. Bartlett finds the Eskimos easier to teach than white children. From families Who exercise little discipline, they respond readily to supervision at school. None questions the teacher's authority.

Naturally very polite, they have resonant voices and a natural ear for tone. Their immediate abilities lie in singing, in folk dancing, and in drawing and carving. With limited vistas and influenced by the old Eskimo tradition that each day begins a new life, they are inclined to speak in the present tense, as "I see him yesterday."

The very literal manner in which the Eskimo children often take things was forcefully brought to Mrs. Bartlett's attention one day when she remarked to the class, "We must stand on our own two feet." Everyone

in the class promptly stood up.

We got further acquainted with these children later on the beach-the village main street-2 miles long. As we watched patient Eskimo hunters searching for seal in their power boats amid floating ice, the children swarmed around, with ruddy faces peering from their parkas.

They posed obligingly for pictures, standing by a rack of drying fish, hugging their husky dog friends, teeter-tottering, tossing about in their swings, or swinging their 'yo-yo's"-two small balls on strings that swing simultaneously in opposite directions. A prized picture is one of four children tramping through the snow eating ice-cream cones.

In the rustic frame homes Eskimo women prepared their evening meals. Stews with reindeer, caribou, or ptarmigan are popular. Native berries, seal meat, muktuk White whale meat), shea fish, and a tuberous plant known as the Eskimo potato are staple foods. But canned goods of the white man are increasingly being used, although the idea of salads has not yet caught on.

Women still make most of the family clothing—particularly parkas, gloves, and mukluks (skin boots), but they may reach for a pair of pliers instead of using their teeth in sewing, as they did in former days. Among the old customs that have disappeared here is the one of wife trading. Mystic religious beliefs are giving way as Eskimos are increasingly attending several Christian churches now provided.

Sod and grass huts have been generally replaced by wooden structures. Ice igloos,

used primarily now as in former years by hunters on their trips as a temporary protection from the weather, are not to be found here or in most other present-day Alaskan Eskimo villages.

We stopped to chat with Louis Rotman in white, wooden combination storehis big, hotel. His gracious Eskimo wife and his Eskimo customers have given him a deep appreciation of these friendly, artistically talented, uncannily perceptive, yet sometimes aloof and obviously complex people.

He says they size up strangers quickly and respond to fairness. They are not a people, however, that have become willing to be governed by the clock and are likely to exhaust whatever resources they have at hand without making provision for the morrow.

Between waiting on his customers Mr. Rotman spoke enthusiastically of the shortwave newscasts by the editor of the Christian Science Monitor, which he said he listened to regularly from station WRUL in Boston. "And don't forget," he said, "those broadcasts enter Siberia a few miles over there across the strait, and the Russians are bound to hear them.'

Farther down the beach we entered a store with tinkling bell on the door to make our way under hanging furs into a crowded room full of curios. Here we met the friendly Hugo Eckhardts. Little effort is made by this congenial couple to sell their wares, but few visitors can resist the handsome Eskimomade garments, ivory-carved necklaces from the Little Diomede Island in the Bering Strait, jade jewelry, and authentically dressed wooden Eskimo dolls.

One of the major concerns of Kotzebue and other Eskimo villages is the development of an economy that will absorb the native worker. Some research has been done by the Artic Circle Chamber of Commerce here on opportunities in the area.

Already there is a tannery and native craft work. Some villagers go during the summer to southeast Alaska to work in the canneries, and others dig for minerals and coal in the nearby mines, which are expected to increase in number and production. ties searched for oil near here last summer, and more are expected this year.

Another concern, and perhaps the most urgent one, was mentioned by Mr. Bartlett. For the past several years the Alaska Native Service has included in its year report a request for appropriations to construct a new school in Kotzebue. This request has never been granted. It has again asked for these funds to construct an eight-grade school during the summer of 1955, to which rooms can be added later for high-school

INADEQUATE SCHOOLS

With a burgeoning population in Kotzebue it was necessary in 1950 to convert a log structure, originally built for a school shop, into a schoolroom. Prior to that time school was held and is still maintained in two buildings, each of which is more than 30 years old. Since 1950 it has been necessary to partition larger rooms into smaller inadequate rooms and to use a Quonset but for the increased number of children attending school.

Cost of maintenance and fuel for these widely separated buildings is very high. More desks and more space are needed. Teachers' quarters are inadequate and uncomfortable, adding to the difficulties of getting and retaining competent personnel in this Arctic village

At present children for the first eight grades only are accommodated in Kotzebue, and rooms are crowded and dark.

As an integral part of forward-looking Alaska the Eskimo and other native inhabitants here and elsewhere are entering into roles of responsible citizenship as quickly as their education and opportunities will allow.

Strongly reluctant at first, but now more willing to be swept up in the white man's

ways, they expect and need sustaining support in repayment for their stouthearted efforts to adjust to the civilized wave of the future.

Col. Robert R. McCormick

EXTENSION OF REMARKS OF

HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. BOYLE. Mr. Speaker, the news of the death of the great tycoon of the publishing field, Col. Robert R. McCormick, comes as a shock to many citizens of this country. The Chicago Tribune and Colonel McCormick are synonymous to most of us. Seldom has a publisher been so personally and colorfully identified with the publication he controls. The two have been known to all of us for their unyielding position on the issues which the colonel considered of paramount importance in this Nation.

As a Democrat I was more often in disagreement than in harmony with the great publisher, but I have respected his devotion to the principles in which be believed, and I wish to pay tribute to a great fighter who never backed away from a fight; never yielded ground to the opposition, and always upheld democratic principles as he saw them.

My personal admiration for the colonel's rugged individualism dates back to the period when I as a boy delivered the Tribune to Chicagoland homes. I have watched the functioning of his tremendous organization under his careful stewardship from that time to this.

In these days of political lethargy. where party lines frequently become blurred and differences are often mere shades of difference. I believe the colonel has made a real contribution by painting in bold, clear, decisive colors his policy and the policy of his paper.

I believe that this type of fighting opposition is typically American. Whether the opposition is of a liberal or conservative stripe, this is a contribution to our democratic heritage. A heritage that places among its highest values the right to disagree and the freedom of the press.

Colonel McCormick was a rebel within his own party who fought the New Deal and the new and more progressive elements within the Republican Party with equal fervor. The late Joseph Pulitzer was a different kind of a rebel. This great liberal publisher of the St. Louis Post-Dispatch was a rebel against the old guard and a proponent of the new and the liberal approach to America's problems

The fabric and texture of American democracy must always be sufficiently strong and malleable to accommodate every type of political opinion. The lives of these two great publishers are a tribute to our form of democracy. As a Member of this great legislative body, I should like to place on record today a personal tribute to both of them.

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. WOLVERTON. Mr. Speaker, the fight against cancer is entitled to have the fullest support of Congress, State legislative bodies, and every agency, private or public, concerned with promoting the welfare of our people.

Already much has been done to care for cancer patients and to carry on studies and research programs to combat the In this our National Governdisease. ment, through appropriate legislation, has taken a leading part. There still remains much to be done.

The Courier Post newspaper published at Camden, N. J., has through the years given great help to the cause. date of April 1, 1955, it has published an editorial that gives further evidence of a desire to be helpful. The editorial calls upon all to assist the American Cancer Society. It details the fine work being done by the society and appropriately calls for additional support. The reasons for this help, as set forth in the editorial, are indisputable and justify to the fullest extent our individual and collective interest. The editorial which I include as part of my remarks reads as follows:

LET US ALL DO OUR PART IN THE FIGHT ON CANCER

Cancer kills 200,000 Americans every year-9,000 of them in New Jersey.

Unless it is fought by every means now known, including measures to assure early detection, it will strike 1 of every 2 American families and cause the death of 1 American out of every 5.

Those are two great salient facts to remember as the annual fund canvass of the American Cancer Society begins today in Camden County and throughout the State and Nation.

The American Cancer Society, supported wholly by contributions from the public, is the only voluntary health agency in this country devoted to the control of cancer through education, service, and research. With central offices in New York, it has 60 divisions that operate in every State. It cooperates closely with such organizations as the American Medical Association, American College of Surgeons, United States Public Health Service, and National Research Council. It serves as a coordinating agency for many privately supported activities in cancer research.

Because of the increasing average age of the American people, cancer is killing a higher proportion of them than it did 40 years ago, despite the many unquestionable advances made against it during that time,

The cancer society indeed predicts, because of continuing increase in the age of the population, that in the years immediately ahead there will be an increase in the incidence of cancer. "But," the society says, "it need not necessarily follow that there will be more cancer deaths. With the knowledge and skills we have at hand, thousands of deaths from cancer can be prevented."

The Cancer Society attacks the problem from a number of angles: Educating the public; keeping the doctor up to date; supporting facilities for detection, diagnosis,

Let Us Do Our Part in the Fight on Cancer and treatment; an integrated research program; and training the manpower needed for future research.

The long-range goal of finding the cause of cancer and better methods of prevention, diagnosis, and cure is being steadily pursued by the society, while it also makes available help for the half million persons in this country who already have the disease-help which is effective in rehabilitating many of them and returning them to usefulness in their communities.

"The ultimate cure for cancer," says the society, "still is hidden somewhere among the test tubes, microscope slides, and mouse cages in the laboratories of research scientists."

Yet, though the society uses one-fourth of all funds donated by the public for research, and in spite of increasing public interest and support, the expansion of research activities and training of research personnel is still seriously hampered for lack of money.

"This is an economy our country can ill afford," says the society, and the country likewise can ill afford to economize on funds for the other vital humanitarian activities the society carries on.

Let us all make whatever contribution is within our means to this year's cancer fund appeal, now beginning under the auspices of the Camden County Chapter of the society. Mayor Brunner has well summed up the reasons why we should:

"In order that the 1955 crusade may be a complete success, so that assistance may be guaranteed the victims of this dread disease while scientists seek the cause and perhaps a cure for cancer.

"Our community always has been in the forefront when it comes to appeals for a The cancer-control fight is worthy purpose. a vital one, for it means the saving of thousands of lives. It must succeed. It will, if we all do our part."

Seaway Sparks Billion-Dollar Trade Race

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. MINSHALL. Mr. Speaker, there appeared in the April 1955 issue of Nation's Business an article by Mr. Joseph M. Gambatese which presents a very timely and well-written survey of current plans and planning for the St. Lawrence seaway.

Under leave to extend my remarks, I wish to include this article in the RECORD with the recommendation that it be read by every Member of Congress:

SEAWAY SPARKS BILLION-DOLLAR TRADE RACE (By Joseph M. Gambatese)

The \$1 billion St. Lawrence seaway development, just begun, has sparked a race for port improvements and expansion among a score of cities ringing the five Great Lakes all the way from Oswego, N. Y., the country's first fresh-water port, to Chicago and Duluth, Minn.

Another \$1 billion in both private and public funds is likely to be spent in and around the lakes and connecting rivers before a ship from the Atlantic Ocean steams up the new St. Lawrence scaway and into the lakes with the first 10,000-ton cargo for some lake port. This will happen 4 years from now if present schedules are met.

The prize: More than 40 million tons of increased cargo which will pass through the seaway's canals and seven locks along the St. Lawrence River after the Midwest's gate to the Atlantic is enlarged.

With shipments over the St. waterway now limited by the 14-foot controlling depth of the present Canadian locks and canals in the 114-mile stretch between Montreal and Ogdensburg, N. Y., only 10,000,000 tons of cargo can get through to the lakes. The vessels must be restricted to loads of less than 2,500 tons, even though they may have larger capacity.

When the seaway development is com-pleted, two things will be achieved:

1. Cargo ships of 20,000 tons will be able to maneuver the St. Lawrence, thereby increasing the potential annual tonnage moving between Montreal and Lake Erie to more than 50,000,000 tons.

2. Northern New York State and part of eastern Ontario will share 1,880,000 kilowatts of electricity from a hydroelectric power project at Massena, N. Y., a potential capacity now exceeded only by the 1,974,000 kilowatts of Grand Coulee Dam on the Columbia River.

The United States has authorized \$105.-000,000 and Canada is spending \$261,000,000 for the joint navigation project, which will increase the controlling depth to 27 feet from the Atlantic to Toledo on the western end of Lake Erie. The New York Power Authority and the Ontario Hydro-Electric Power Commission are building the \$600,-000,000 power project, consisting mainly of a powerhouse and 145-foot spillway dam at Massena and a control dam at Iroquois. Ontario. They will share both the cost and the electric power which will start flowing in 1958.

Beyond Toledo, however, waterborne commerce to Detroit and Into Lakes Huron, Michigan, and Superior is limited by a controlling depth in the connecting channels of 25 feet downbound and 21 feet upbound.

The plan to deepen these channels to 27 feet was left out of the present authorization which passed Congress last May, although it was included in earlier seaway development

bills which failed to pass.

Members from midwest States are pushing for approval of the connecting channels phase in this Congress. This will cost \$110,327,000; or \$115,818,000 if a cutoff channel is dug to eliminate a bend in the St. Clair River above Detroit, as recommended by the Army's Board of Engineers for Rivers and Harbors.

The connecting channels plan involves deepening of three links between Lakes Erie. Huron, Michigan, and Superior at Detroit, the Mackinac Straits and the approaches to the Soo Locks. The Welland Canal joining Lake Erie and Lake Ontario is in Canada and will need slight deepening, which Canada is doing as part of the approved navigation project

Opponents of the seaway warn, however, that even the 27-foot depth will be inadequate to make real ocean ports out of lake cities, and that Congress will soon have to provide for further deepening to 30 feet of more at a cost of many more millions.

Such skepticism has not deterred the cities from pushing ahead with big plans to get the jump on their rivals and be ready with the best and the most facilities when the larger ships come steaming in.

As one lake city was advised: "Traffic flows where transportation facilities are provided. Waiting until the traffic exists may not be wise.

These cities want to make sure they get their share—or more—of the increase waterborne tonnage and the anticipated economic benefits from the seaway. These benefits are expected to include attraction of industries which will find the seaway advantageous either for receiving bulk raw materials or for shipping products overseas, and increased business activity related to

foreign made.

Improved harbor and port facilities will benefit some ports even without much seaway traffic, through the handling of more of the present lake shipping and by attracting chemical and other industries which rely heavily on fresh water and shipping within the lake areas. This, of course, has been—and for many years will likely con-tinue to be—the major basis for improvement of Great Lakes harbors, ports, and rivers, which the Federal Government has been doing for more than 125 years.

A Nation's business survey of port activity stimulated for the most part by the coming of heavier seaway traffic into the largest manufacturing center in the world-now being called a new frontler in the heartland

of America-discloses that:

Work in the two major Canadian ports-Toronto and Hamilton, Ontario-has progressed further than in most United States

At least 8 United States cities have made, are making, studies costing more than \$300,000 to find out what economic impact the new seaway tonnage will have on their ports and what, if anything, they should be doing about it. From east to west, these cities are: Oswego and Buffalo, N. Y.; Erie, Pa.: Cleveland, Lorain, and Toledo, Ohio; Detroit, and Duluth.

Legislation is being pressed in State capitals to permit port authorities for Toledo, Erie, Buffalo, and Oswego harbors to facilitate their development, growth and opera-

Some \$8 million already has been spent in Green Bay and Milwaukee, Wis.; Muskegon, Mich.; Hamilton, and Toronto, for ware-houses, docks, buildings and other facilities.

Another \$9 million worth of similar port improvements has been started in Green Bay, Milwaukee, Hamilton, Ont., and Ashtabula, Ohio.

More than \$200 million in port development, exclusive of harbor dredging by the Federal Government, is being planned in Milwaukee, Chicago, Muskegon, Windsor, Ont.; Toledo, Cleveland, and Oswego.

President Eisenhower has asked Congress for more than \$11 million during the next fiscal year for dredging, widening and otherwise improving harbors and channels at Duluth, Sault Ste. Marie, Chicago, Indiana Harbor, Ind.; Cleveland, and Buffalo.

The Army's Corps of Engineers, which handles river and harbor improvements, is doing preliminary work on plans for a \$4,900,000 extension of the Ashtabula Harbor area and for shoal removal and construction of a detached breakwater at Oswego costing \$2,500,-000. Congress has also directed the engineers to determine the economic justification for further improving the harbors of Duluth, Milwaukee, Toledo, Lorain, Cleve-land, and Conneaut, Ohio. Studies have been proposed for Buffalo and other ports as well.

Major lake harbors will require dredging to 27 feet and new facilities to accommodate larger vessels. Only at Duluth, Chicago, Ashtabula, and Buffalo has Congress "authorized" depths of more than 25 feet, and only Duluth's harbor actually is more than that depth. Its lake approaches are 32 feet. Depths of 28 feet have been authorized at Chicago and Ashtabula and 27 feet at Buffalo.

Before getting into the details of what each Port city is doing, let's look at the total seaway development and its impact as a whole.

Basically, developing the St. Lawrence seaway consists of enlarging a series of bottlenecks which now limit the size of vessels Which can navigate between Lakes Superior and Michigan on the west and the Atlantic Ocean on the east-a total distance of 2,350 miles from Duluth to the ocean. This navigation phase involves the widening and dredging of narrow passages and bypassing

dams, unnavigable falls, and rapids with locks and canals so that the ships may rise and drop the 600-foot elevation between Lake Superior and the ocean.

At the same time, the descending water level permits the development of hydroelectric power. At Niagara Falls at present the United States power station has a capacity of 445,000 kilowatts and that on Canadian side has 848,000 kilowatts. the seaway, it is planned to increase the kilowatt capacities to 1,945,000 and 2,276,000,

respectively.
The New York-Ontario power project in the International Rapids section of the seaway at Massena will produce 1,880,000 kilowatts. Water backed up by the 145-foot-long Sault Spillway Dam to be built at this point will create a pleasure lake almost 30 miles long and 4 miles wide, inundating considerable land, mostly on the Canadian side, and forcing the relocation of railroads, highways, and even whole towns.

Below Massena, where the St. Lawrence runs completely within Canadian borders, that country has developed 1,408,000 horsepower (1.083.000 kilowatts) at the Beaharnois powerplant in the Soulanges area and hopes to raise it to 2 million horsepower. It also plans to develop 1,200,000 horsepower farther down at the Lachine locks, near Montreal. (Canadians measure electricpower capacity in terms of horsepower. It takes 1.34 horsepower to produce a kilowatt.)

Thus, there are three major phases of the seaway development: (1) The St. Lawrence navigation project, with Canada and the United States participating jointly; (2) the power project shared jointly by Ontario and New York; and (3) the deepening of the connecting channels, which it is expected the United States will do alone.

The United States section of the navigation project is being built by a Government agency created specifically and solely for that purpose: St. Lawrence Seaway Development It is headed by Administrator Lewis G. Castle, who, when appointed last was president of the Northern Minnesota National Bank in Duluth and of the Great Lakes-St. Lawrence Association, which led the postwar fight for the seaway.

The Seaway Corporation has designated the Corps of Engineers as its agent to supervise construction of the United States section, mainly two locks and a canal to bypass the power project at Massena. Congress fixed a spending limit of \$105 million, which the Treasury will advance as needed against 50year revenue bonds to be issued by the Corporation. Tolls fixed by an International Toll Commission will be charged on the seaway to liquidate the bonds. Congress, in passing its first seaway bill last May, also included construction of a lock at Point Rockway, across from Iroquois, to bypass on the United States side the Iroquis Control Dam, being built as part of the power project. But Canada insisted on building its own lock on its side of the dam, and in fact began construction. As a result, it was agreed a month ago that the United States will not build its lock at the control dam upriver and Canada will not build its locks on the Canadian side of the powerhouse and spillway dam, both Governments reserving the right to build the locks in the future, but not without consulting the other before-

The net result, then, is that the control dam upriver will be bypassed through a Canadian lock at Iroquis and the power project near Massena will be bypassed through two United States locks-leaving each country dependent on the other for through pass-

The United States will also dredge to 27 feet the Thousand Islands section of the St. Lawrence-68 miles from Ogdensburg, N. Y., upriver to Lake Ontario, at a cost of \$2 million.

Canada, in addition to the Iroquis Lock, is building four more locks and digging canals along the 68 miles within the Canadian border from the power project to Montreal, and will deepen the Welland Canal to 27 feet, the latter costing only \$2 million, because the 8 locks within the canal already meet the 27-foot measure.

Lake ports already handle 500,000 tons of overseas shipping a season, much of it United States and Canadian grain, but it is carried

in small vessels lightly loaded.

This tonnage, however, is an almost negligible one-fifth of 1 percent of the more than 250 million tons of total shipping on the lakes, about one-third of it iron ore moving down from Lake Superior.

With the new seaway, overseas shipping is expected eventually to exceed 5 million tons.

During the first year, Administrator Castle estimates that the seaway will carry 12,100,-000 tons of grain, 10,500,000 tons of iron ore, 6,400,000 tons of general cargo, 3,700,000 tons of coal, 2,300,000 tons of petroleum, 800,000 tons of nonferrous ores, and 700,000 tons of woodpulp. Grain and iron-ore shipments are expected to dominate seaway freight.

New and larger ore freighters now on the lakes were built to fit seaway specifications.

The more than 50 million eventual tonnage will exceed by about 25 percent the tonnage through the Panama Canal.

Hardly any luxury ocean-liner traffic is

exptected.

Specific lake harbor improvements planned by the Corps of Engineers during the coming fiscal year and the necessary funds requested of Congress include:

Cleveland: \$5,300,000 to widen bends and alter obstructing bridges in 23-foot Cuyahoga River on which most industrial piers are located. This is part of a \$20 million river program on which \$11 million already has been spent.

Chicago: \$4 million-the beginning of an \$80 million project—to start widening to 225 feet the Calumet-Sag Channel, important link between the Mississippi River and Lake Michigan on the southern edge of Chicago.

Buffalo: \$1,200,000 to complete deepening of the Buffalo River, part of the Buffalo Harbor, to 23 feet. This job was started this fiscal year with \$1,100,000.

Soo: \$338,000 to begin alterations at the Soo locks. This includes removal of an island in the St. Marys River to facilitate approach to the locks and alteration of a railroad bridge. It will take \$3 million more to complete.

Duluth: \$215,000 to complete a 25-foot channel in a part of the Duluth Harbor. Project was begun this fiscal year with \$330,000.

Indiana Harbor: \$45,000 to widen a portion of the harbor canal, which leads into the Calumet-Sag Channel.

Lake Cities Plan for Billion-Dollar Trade Race

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to include another survey of current plans and planning for the St. Lawrence seaway which appeared in the April 1955 issue of Nation's Business.

This survey, by Mr. Joseph M. Gambatese, explains what lake cities are doing to ready themselves for this billiondollar trade race:

Here, in addition to the engineers' program, is what United States lake cities are doing to improve their ports:

DULUTH

Gov. O. L. Freeman has asked the Minnesota Legislature to study the seaway's impact on the State's economy and look toward development of the Duluth Harbor. The three-man port authority has been reactivated and legislation is being considered to create a more effective seven-man authority. The port authority has a \$100,000 budget for each of the next 2 years—\$53,500 to come from the State legislature, \$38,000 from the Iron Range Resources and Rehabilitation Commission, and \$8,500 from a local levy. Some \$76,000 is being spent for a survey of the harbor's economic potential, with four studies by the University of Minnesota's business research division already under way.

MILWAUKEE

A \$200,000 addition to municipal transit shed No. 1 is opening this spring. A \$2 million viaduct is being built to carry harbor truck traffic over two railroad lines. The following \$4,700,000 in projects have been projected for completion before the 1959 seaway opening:

New pier and general cargo ter-	\$4,000,000
Replacing obsolete cranes and equipment	350,000
Dredging outer harbor slips to	200,000
Highways to serve outer piers Expanding harbor railroad sys-	80,000
tem	70,000

Harbor deepening is being sought from Congress, with a study being made by the Corps of Engineers.

There were 188 sailings with 43,000 tons of overseas cargo from this port last year, according to Harry C. Brockel, Milwaukee port director, who is also a director of the Great Lakes-St. Lawrence Association.

GREEN BAY

A new city harbor and industrial commission is directing technical development of the port. A nonprofit industrial development corporation, set up within the Green Bay Association of Commerce, is selling 100 shares of \$100 to raise money for port promotion. Leicht Transfer & Storage Co. has built two \$250,000 warehouses, and is planning another. Efforts are being made to get funds for improving the harbor with a turnaround basin in the river mouth, a project approved by the Corps of Engineers some time ago. Sixty foreign ships used the port last year.

CHICAGO

As part of a 10-year \$125 million program, the regional port board is Issuing \$25 million in bonds to start construction of facilities around Lake Calumet. Present plans include 4 major transit sheds, two 6,500,000-bushel grain elevators, 1,000 feet of universal bulk dock and other docks, heavy lift cranes and other facilities. A large liquid tank farm, positioned to handle rail, barge, truck, lake, and ocean traffic, will also be built.

Because of vast and modern facilities and its unique link between the lakes and the Mississippi River, Chicago expects to handle 50 percent of the general cargo moving through the seaway and also to become, in the opinion of Maxim M. Cohen, general manager-secretary of the Chicago Regional Port District, the most strategic grain shipping port on the American Continent.

Chicago's port handled 178,000 tons of overseas shipping in 1953 and expects this

to increase four times, according to A. H. Schwietert, traffic director of the Chicago Association of Commerce and Industry.

MUSKEGON

This port is planning two more docks to match the existing \$2 million dock and related facilities. With one of the lakes' best natural harbors, it stresses ship repair work but, like many other small lake ports, it is thinking in terms of handling more of the present ficet of 2,000-ton vessels serving Great Lakes and foreign ports.

Larger lake ports will find it uneconomical to handle some of these smaller ships.

John C. Beukema, president of the Great Lakes Harbors Association, says the association has counseled smaller lake ports to be cautious and make detailed studies before making appropriations and letting contracts for improvements which may prove unwise.

DETROIT

A \$50,000 economic survey of the port has forecast an increase in overseas trade from 150,000 tons to 300,000 tons within a year of the seaway's opening. If suitable facilities and services are developed, overseas trade will increase to between 750,000 and 1 million tons 5 years later. There were 320 foreign sailings in 1953, many of them carrying automobiles and trucks to foreign ports.

mobiles and trucks to foreign ports.

The harbor needs little development except deepening of the Detroit River. Gov. G. Mennen Williams asked the State legislature to approve a \$500 million bond issue for highways, to build in 3 to 5 years what would normally take 15 to 20 years. The road program includes a north-south highway from Saginaw Bay, down through Detroit and almost to Toledo, which will aid the port development.

TOLEDO

An \$8,000 study recommended construction of a \$20 million general cargo terminal on the Maumee River and a \$5,900,000 recreational area on the heav

reational area on the bay.

A hot scrap is raging over whether the port should be run by the city or the Toledo-Lucas County Port Commission with new powers of a port authority. Toledo is sponsoring a port authority bill which the Ohio legislature is expected to pass. The bill would let a county set up a port authority with power to issue bonds, levy taxes, build navigational facilities, rent the facilities, and amortize the bonds from revenues.

Toledo, a leading coal port with annual shipments of 20 million tons, also handles considerable overseas shipping of petroleum and grain. Ships of foreign registry in the Toledo port increased from one in 1946 to 80 last year.

CLEVELAND

A \$40,000 port development study is being made by New York consultants.

Cleveland is seeking Federal participation in a proposed \$15 million breakwall 6½ miles long running west from downtown. Inside of this a \$30 million highway would be built facilitating vehicular traffic to and from the harbor.

A \$500,000 service road connecting with a freeway on the east side is being started this spring. Director of Port Control William J. Rogers says the city is considering a \$5 million bond issue to build a cofferdam from 500 to 700 feet out in the lake to permit filling and extension of the waterfront land.

Cleveland leases its two piers to a stevedoring firm. The waterfront will be zoned and made available for development by private industry, which is expected to spend \$20 million for port facilities. Curtis Lee Smith, president of the Cleveland Chamber of Commerce, feels private industry is fully capable of taking care of whatever new business develops from the new seaway.

The Cleveland Electric Illuminating Co. has intensified its promotion of northeastern Ohio as the best location in the Nation for new industry. An international trade exposition in 1959 is being considered by Mayor Anthony J. Celebrezze. Mayor Celebrezze and private industry are cold to a port authority, because the harbor is within city limits and was developed by the city.

Cleveland is also the focal point of a fight over the proposed construction of a 103-mile, \$300 million belt conveyor between Cleveland and East Liverpool on the Ohio River. The enclosed conveyor would carry 20 million tons of fron ore down from Cleveland to East Liverpool, when he barges would take it to Pittsburgh steel mills. In the other direction, the conveyor would move 45 million tons of coal, particularly metallurgical coal from West Virginia needed by steel mills in Youngstown and Cleveland.

LORAIN

A \$10 million harbor improvement is sought to meet present needs. The Corps of Engineers is restudying the economic justification for improving the harbor, which handles 8 million tons of iron ore and 2,600,000 tons of coal. Dr. N. R. Daniellan, president of the Great Lakes-St. Lawrence Association, has been retained as a harbor and seaway expert for 2 years to help get Federal aid for present harbor-improvement needs and to survey the port's expansion possibilities. Dr. Daniellan does not visualize Lorain as a major seaport, pointing out that ports need an economic hinterland to feed on. Lorain is between Toledo and Cleveland.

ASHTABULA

Private industry is spending \$3,710,000 for construction of slips, docks, and handling facilities, including 2 bulk cargo docks 2,000 feet long and 500 feet wide.

Ports of Ashtabula and nearby Conneaut will be aided by a Conneaut-Cincinnati, 350-mile toll highway, costing \$500 million, which the State is planning to build. It will have a spur connecting the State capital Columbus with Toledo.

tal. Columbus, with Toledo.

This northeast-southwest diagonal expressway will connect with, and cross, the 241-mile \$325 million east-west toll road extending from the Pennsylvania Turnpike, near Pittsburgh, across Ohio to the Indiana border, near Toledo. This will be completed in October and will be useful to other Ohio ports as well.

ERIE

Additional dock and warehouse facilities will be built after completion of a survey costing \$15,000. Members of the Erie Engineering Societies Council donated \$30,000 in services in making a preliminary study of the port's potential. The State legislature has been asked to authorize an Erie Port Authority.

BUFFALO

A \$50,000 port study is being made. Findings and recommendations will not be completed until next month, but it is reported the port will need:

A 600-foot, \$2,950,000 pier; and \$800,000 package cargo warehouse; \$500,000 for handling facilities; \$350,000 for administration and engineering; \$500,000 for financing and interest the first 2 years; \$400,000 for contingencies; and \$35,000 for dike repair.

The port board has approved a \$5,535,000 port improvement program as the first phase of a master development plan and is seeking authority from the State legislature to create a Niagara Frontier Port Authority of wider scope.

Improvement of the harbor by the Corps of Engineers is only 36 percent complete, with \$11 million more needed to finish the job.

Buffalo's major gain from the seaway is expected to be ore shipments from the rich open-pit deposits of 600 million proven tons—with a potential of 1,500,000,000 tons—whose postwar discovery in the barren Quebec-Labrador region helped get the seaway through Congress. Buffalo will have an ad-

vantage because it is nearer the deposits than

other lake ore ports.

Six midwest steel and ore companies under the leadership of Secretary of the Treasury George M. Humphrey, then head of M. A. Hanna Co., participated in the discovery and development of the deposits. Almost \$300 million is being spent on the Quebec-Labrador project.

A railroad was built to carry the ore 360 miles to freighters at Seven Islands on St.

Lawrence Bay.

This Quebec-Labrador ore will supplement the dwindling deposits of the Mesabi Range on Lake Superior which have fed more than 3 billion tons to hungry iron and steel mills since the Soo Locks were opened 100 years ago this spring. The centennial anniversary will be celebrated at the Soo on June 18.

First ore shipment from the new Canadian deposits left Seven Islands July 31, and more than 1.700,000 tons was moved before the shipping season-only 244 days-closed because of freezing. Most of the ore went to east coast and European ports on large ore freighters, but 170,000 tons moved up the St. Lawrence on 2,000-ton canalers to mills near the lakes. Almost 70,000 tons went to

A survey of more than 700 companies in western New York has been made by the Rochester Chamber of Commerce to determine what use they might make of seaway shipping. The potential tonnage indicated will serve as a guide in planning port development. Preliminary examination of the questionnaires returned indicates "quite a bit of interest," according to Fidelis J. Taylert, chairman of the chamber of commerce subcommitteee making the survey.

OSWEGO

Oswego is the lark port closest to the seaway and at the terminus of the northern branch of the New York State Barge Canal, whose 9-foot depth extends from Buffalo to Albany on the Hudson River-the shortest water link between the lakes and the Atlantic.

Here is its program:

1. A \$20,000 study indicates it will take \$10 million to improve and expand the harbor to attract seaway shipping. This covers only harbor deepening to 28 feet and construction of a \$2,500,000 detached breakwall approved by Congress, but funds for this have not been appropriated.

2. A budget of \$20,000 for the employment of Arthur W. Mengel of Cleveland as port director and for port promotion activity. Port Authority legislation is being sought.

3. Advertising Oswego as the "Port of Central New York" to attract foreign-trade shipments.

4. Stepping up "Operation Oswego," which last year induced three companies to locate in the area.

5. Obtaining the Federal funds necessary to improve the harbor, which handles more than 2 million tons a season. Lionel A. Mohnkern, executive manager of the Oswego Chamber of Commerce, says more than \$11 million in improvements has been planned and approved by the Corps of Engineers,

ELSEWHERE IN UNITED STATES

There is also considerable activity in many other cities on the lakes and along the seaway route.

In Michigan, the Monroe Port Commission is improving its port, hoping to attract waterfront industries and become a rail-truck-water terminal for lower Michigan and upper Indiana. Grand Haven plans to improve its channel; the city plan commission is working on waterfront industrial subdivision projects. Benton Harbor plans to move a ship canal and build a slip and a 500-foot dock and wharf.

Along the St. Lawrence, Ogdensburg, and Massena—46 miles apart at the ends of the

International Rapids where the power project and United States navigation construction is taking place-are planning largely for tourist business and new industries which the seaway and the power will attract. Many recreational facilities will also be developed around the huge lake and inlets which will be created between them.

Canadian lake port activity is concentrated at Toronto, Hamilton, and Windsor.

TORONTO

Planning and construction for the seaway began 3 years ago. A \$1 million freight terminal for handling ocean ships and a \$1,250,-000 new dock wall have already been built. A new dock within the new dock wall is being studied. Toronto expects soon to have port facilities for 20 larger ships which will come up the St. Lawrence. After the seaway is a fact, it hopes to accommodate twice that many.

HAMILTON

Hamilton has built a \$2,750,000 harbor administration building and has started an additional \$2 million dock expansion and improvement program. It is extending the Welland Street docks to take care of six more oceangoing vessels and installing modern equipment to handle any kind of cargo.

On the books for later: construction of more docks toward edge of city nearer to the big industrial area.

WINDSOR

Allocation of \$2,800,000 for new dock facilities is the first step in a recommended development which will total \$19 million. Construction of dock space and terminal warehouses would follow.

Paul V. McNutt

EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I wish to insert the following remarks of Herman B. Wells, president of Indiana University, at the funeral service in Arlington National Cemetery on March 28 for an outstanding political figure from Indiana, Paul V. McNutt:

After I received the sad news which is the occasion of our gathering today, I stood and looked for a time from my window out on the old central quadrangle of the campus where Paul McNutt achieved distinction as student, professor, and dean. Through the ancient trees I could see Maxwell Hall where he began his teaching career and won the proud rank of professor which he dearly prized. Though separated from the campus by distance and decades, he never relinquished his position but remained professor of law at Indiana University, on leave of absence—on leave of absence for service to the State, the Nation. and the world.

Viewed against the background of his early years, the vast panorama of his career can be seen in all of its dramatic outline, replete with struggle, triumph, and unselfish devotion to public duty. He has not left his power without witness, "but has shown it by mighty proofs." Even the listing of his achievements is impossible in the time allotted to me. Instead, I shall mention two qualities which were dominant

in his personality and character.

The first is integrity. To this I can bear personal testimony. It was once my duty to present to him two possible courses of action in dealing with an important problem of Government regulation. One was in the broad public interest, the other unques-tionably served better his immediate personal and political fortunes. The proposed measure was technical, understood only by the specialists, but would establish a precedent of such importance that the opposition was willing to pay any price for its defeat. We met alone, only he and I to know the nature of his decision. As soon as he comprehended the significance of the issue, without a moment's hesitation he chose the course beneficial to the public. The measure was enacted in Indiana for the first time in any State. One by one other States followed, and now it has been adopted by the entire Nation. In Milton's phrase, he met the temptations of the day "Godlike erect, with native honour clad."

The second quality I would mention is courage. He spoke often of the importance of courage in meeting life's problems. In his inaugural as Governor of Indiana during the dark days of 1933 when our society was in danger of distintegration, he said. "It is possible to know the truth without fear, to meet a crisis with indomitable courage."

The poet sings:

"Courage-an independent spark from Heaven's bright throne.

By which the soul stands raised, triumphant, high, alone."

Throughout his life, clad in the armor of integrity, he was fearless in meeting his responsibilities.

Born with a generous endowment of intellectual and physical strength, he eagerly bore more than his share of the day's work. Years of heavy burdens did not wear away his stature, and so today his life looms large upon our horizon, its high peak of achievement a source of lasting inspiration.

Devoted husband and father, brilliant scholar, dedicated public servant, loyal friend, unforgettable leader of men, we hold him in grateful and affectionate memory.

Electoral Reform

EXTENSION OF REMARKS OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 10, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following article by the distinguished author and commentator, Raymond Moley, which appears in the April 4 issue of Newsweek:

TO FORM A MORE PERFECT UNION (By Raymond Moley)

A number of constitutional amendments have been proposed in the present Congress which are designed to reform the present inequitable and perverted system of electing the President and Vice President. The Senate Judiciary Committee is holding hearings on them and there is reason to believe that one of them will be submitted to the States for ratification.

Supporters of these substitutes are agreed upon the defects in the present system. They all contend that it is neither a truly popular choice nor is it in the republican

pattern intended by the founders of our Government.

One of the plans would provide for the direct election of the President and Vice President by the voters of the Nation en masse. This was introduced by Senator Hubert Humphrey on March 4. At a press conference the following week, the President indicated that he saw no reason to abolish the electoral college and that he feared that under a straight popular vote there might spring up such splinter parties as have been the curse of nations on the Continent of Europe with which he is familiar.

Another plan which would also abolish the electoral college is the so-called Lodge-Gossett plan which passed the Senate in the 81st Congress. This would give each candidate the proportion of the electoral vote of a State which would be determined by the exact proportion of the popular vote received. Thus, in a State with 10 electoral votes in which 1 candidate received 40 percent of the popular vote he would get 4 votes.

Now he would get none.

The Humphrey plan is based upon the assumption that the United States is a democracy and that, as somebody said in the old days of the Progressives, "the remedy for the evils of democracy is more democracy." Or, as a perennial reformer said at that time: "The trouble with democracy is that

it doesn't 'democ.' "

The nostrums of those days cured little, however. They merely weakened party responsibility. A direct popular election of the President would assume that this is a single, unitary National Government. That was not the intention of the makers of the Constitution, nor, I believe, is it the preference of thoughful people today. They believe with Madison that our Government "cannot be deemed a national one, since its jurisdiction extends to certain enumerated objects only and leaves to the several States a residuary and inviolable sovereignty over all other objects."

If we grant that this should be a democracy and to that end prefer a direct popular election of the President, let us be consistent. Let us then abolish the Senate, deny to the courts the right to pass upon the constitutionality of legislation, establish a nationwide initiative and referendum on legislation by Congress, and elect a national assembly by proportional representation. This, in effect, would abolish constitutional government. The national assembly would decide what would be law. In a few years such a national assembly would substantially wipe out the identity of the States. This, I assume, we want to avoid, for it would be tyranny either by a controlling clique in the assembly or by an overmastering executive backed by popular vote.

The peril in the Lodge-Gossett plan is that to grant its premise of proportional representation in the electoral vote would pave the way for proportional representation in Congress. The memory is still with us of the fragile republics, notable in Germany, which bridged the short space between the First World War and the dictators. They were based upon proportional representation. Witness also the short trial of Puerto Ricans in New York City when Communists sat in the council in numbers far beyond their numerical strength in votes.

The best of the plans before Congress is the Coudert-Mundt amendment. This would preserve the electoral college and measurably restore it to its proper place in a republican form of government. It would keep in the momentous choosing of a President the Federal principle of a voice for each of the basic units of the Nation—the districts and the States. It is simplicity itself. Its key sentence is this: "Each State shall choose a number of electors of the President and Vice President, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress,

in the same manner as its Senators and Representatives are nominated and elected."

Thus each congressional district would select an elector pledged to one of the candidates for President. Each State would elect 2 electors in addition likewise pledged to 1 of the candidates.

This would strengthen our system of representative government because it would underline the importance of the congressional district while preserving the interest that small States have in their relative strength in the Senate. It should be very popular in the South, for it would preserve the integrity of their States.

Its superiority to the present system can be most vividly shown by considering the case of New York. A handful of voters can throw those 45 electoral votes one way or the other. That is more than 17 percent of the minimum number which is necessary under the present system to elect a President.

Only three times in 70 years has a candidate been elected without the vote of New York. And New York has no real majority party. The present Governor owes his office to the splinter Liberal Party. That party is likely to decide 9 out of 10 statewide elections. Consider what might happen with branches of such a splinter party in a number of other large States. All two-party responsibility would be lost. The foundations of Republican government would be swept away by something miscalled democracy.

The Coudert-Mundt amendment would be safe insurance against such a peril.

Salary Increases for Employees of the Post Office Department

EXTENSION OF REMARKS

HON, GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. FALLON. Mr. Speaker, I have here Senate Resolution 28, by Senator Dempsey, of the Maryland State Legislature, requesting the Congress of the United States to pass legislation granting salary increases to the employees of the Post Office Department.

My feelings on this matter are summarized expertly in the resolution. I am convinced the postal employees deserve and need a 10-percent raise, and I believe the majority of my colleagues agree that the sooner we get this legislation through Congress the better. Many postal employees feel other pay bills have been given preference over theirs. For this reason, and in the best interest of the postal employees, I urge immediate action on this legislation.

The resolution follows:

Senate Resolution 28

Resolution requesting the Congress of the United States to pass legislation granting salary increases to the employees of the Post Office Department

Whereas the postal employees of th United States Government have had no increase in their wages since July 1951 and, as the result of the great increase in the cost of living, postal employees have found it necessary in many instances to seek other partime jobs in order to supplement their meager income and have been forced to have their wives seek employment and thereby take them from their domestic duties and care of children; and

Whereas the Congress of the United States is presently considering Senate bill 1 and House bill 1592, which, if enacted into law, would grant postal employees a 10-percent increase in their wages, with a minimum raise of \$400: Now, therefore, be it

raise of \$400: Now, therefore, be it

Resolved by the Senate of Maryland, That
the Congress of the United States be requested to enact Senate bill 1 and House
bill 1592 and thereby grant salary increases
to the deserving employees of the United
States Post Office Department; and be it

Resolved, That the secretary of the senate send copies of this resolution to the United States Senators from Maryland and to each Member of the House of Representatives from Maryland and to the chairman of both the Senate and House Post Office and Civil Defense Committees of the Congress of the United States.

By the senate March 8, 1955.

Louis L. Goldstein,
President of the Senate.
C. Andrew Shaab,
Secretary of the Senate.

A War Party?

EXTENSION OF REMARKS

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, other than a few wicked, would-be profiteers, whose god is the dollar, and, in number, a comparatively small group of sincere individuals who mistakenly think war is necessary to establish and maintain world peace, no one wants war.

There is no war party. Nevertheless, yesterday, in the Senate, a former candidate for the Democratic presidential nomination, referring to the President, said:

There are forces in his (Eisenhower's) administration so powerful and apparently so eager for a war with China that they are becoming almost impossible to resist. That the United States should be plunged into a war over Matsu and Quemoy ought to be unthinkable. Yet there are those in high places in the present administration itself who are plotting and planning to bring such a war about, whatever the risks involved.

The conclusion is inescapable that the present war party is attempting to create a situation and an atmosphere in which the President would have no choice but to follow

Perhaps the gentleman is laying the groundwork for another campaign for the presidential nomination and, knowing that no one in his right mind wants war, wishes to create the impression that he is the one who can and will, if elected President, keep us out of war—hence, charges the Republican administration with being a war party.

His statement cannot be excused on the ground of ignorance. He is a former Member of the House. He has served in the Senate 6 years. He knows that it was Wilson, a Democrat, who won election in 1916 with the slogan "He kept us out of war," but that in April of 1917 we became involved in World War I.

He knows that the policies of Democratic President Franklin Delano Roosevelt plunged us into World War II.

He knows that Truman, another Democratic President, at the request of United Nations, sent our men into the Korean war.

The gentleman knows, or at least he should know, from his experience and his knowledge of what has happened in Washington, that it was the unsound foreign policies of Acheson, Roosevelt, and Truman which involved us in World War II and in the war in Korea.

He also knows that it is the adherence of Secretary of State Dulles and the State Department to some of the policies of Acheson and the previous Democratic administrations which has us in a situation where we must now-to use a common expression, the meaning of which is clear to most—"either fish or cut bait"; back out or fight.

On several occasions, those speaking for this Nation have asserted that neither Quemoy nor Matsu, nor Formosa itself, is vital to the defense of the United States of America. Then, on other occasions, we have been led to believe by those high in authority that, if Red China attempted to take any one of the three, we would go to war to defend them.

Let me repeat—the present dangerous situation was inherited by the present Republican administration. If we go half way around the world to fight another war, in my opinion, it will not be because that war is necessary for our national defense, but because policies conceived and carried out by previous Democratic administrations have forced us into a situation where we must either acknowledge our mistakes, or establish a new line of defense which is necessary to our national security, and which we can successfully hold.

That we should send our conscripted men more than half way around the world to fight in a war, to hold islands the possession of which is not vital to the defense of America, and in which our allies have said they will not join us, is something which I cannot understand, and to which I will not subscribe.

Inasmuch as the present situation is but the harvest of the thinking and the action into which the gentleman's party has involved us, it ill becomes him to throw mud at the present administration. It may be that his purpose is to distract attention from the follies of his own party, and to promote his own campaign for a presidential nomination and election

Great Circle

EXTENSION OF REMARKS

HON, PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. HILLINGS. Mr. Speaker, under leave to extend my remarks, I wish to Place in the RECORD an editorial which

appeared in the Los Angeles Times of March 27, 1955.

The editorial follows:

GREAT CIRCLS

President Eisenhower has under consideration the request of Pan American Airways to operate over the great circle route by way of the Aleutians to the Orient. The matter has been referred to him for a final decision. Pan American flights to the Orient now fly the mid-Pacific route by way of Honolulu and Wake Island, covering a distance of 7,000 miles. The great circle route from Los Angeles to Tokyo would cut this by 1,100 miles.

At the present time 37 percent of all Orient travel originates in California. Increased travel could be anticipated with the addition of the great circle route to Pan American's operations with a corresponding increase in the importance of Los Angeles as an international airport and a jumping-off point for both Orient and round-the-world service.

The county board of supervisors has passed a resolution urging that Pan American be granted the right to fly the shorter route, and similar action has been taken by the chamber of commerce and city through the airport commission. A favorable decision will have a beneficial effect, not only for the airline but for the airport and the city.

Five Things That Should Be Known About the Yalta Controversy

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. WOLVERTON. Mr. Speaker, some individuals would like to divert the attention of our people from the Yalta papers by attacking the way they were made public rather than discussing what happened at Yalta, why it happened, and who was responsible.

A careful analysis of the situation at Yalta has been made, and it appears that there are at least five salient points which are entitled to be emphasized, particularly at this time when a further conference is under consideration.

These salient points are as follows:

1. The decision to make the Yalta papers

public was right. The American people are entitled to know

the facts concerning the conduct of the Na-This is particularly so tion's foreign affairs. in this case where the papers reveal the details of a conference as a result of which thousands of American boys died on the

It is the policy of this administration to inform the people concerning the conduct of the people's business. We do not believe in making secret deals which sell out our allies and which are deliberately kept from the American people.

The position of those who oppose making the papers public is consistent. In one breath they say there is nothing new in these papers. In another breath they say they contained information so sensitive and secret that their release has been harmful to the national security and to the relations with

From the standpoint of the Nation and the free world, it was particularly wise to make the papers public at this time. Sug-

gestions are being made to hold another conference with the Communist leaders. As we consider whether such a conference should be held, the records of previous conferences should be made public so that they can be studied not only by the diplomats but by the people of the free nations.

Only in this way can we be adequately prepared to meet the ruthless tactics of the Communists at the conference table. We will also be reminded again that in the past a Communist's word has meant nothing once the papers were executed. Only by studying the record of previous conferences can we avoid making the same mistakes in the future.

The sensitivities of diplomats, either ours or those of our allies, cannot be the decisive factor in determining whether to make public the record of a conference held 10 years ago. No diplomat's face is worth the life of one American boy.

2. What happened at Yalta and the price we have paid and are paying for the mis-takes which were made?

Up to this time the most well-publicized result of the Yalta conference has been the sellout of Poland and the Eastern European nations. Poland, the Balkan nations, and all the rest have Communist governments tobecause of the deals made at Yalta.

What happened in Europe as a result of Yalta was bad enough but what happened in Asia was even worse as far as the interests of the United States are concerned. As a result of a secret deal made at Yalta, concessions were given to the Russians which paved the way for the Communists to take over China. The Korean war, the war in Indochina, and the crisis in Formosa resulted directly from the fact that China went Communist.

The Yalta deal contributed in two ways to the Communist victory in China, ing over to the Russians rights to the jugular-vein Manchurian Railway and the warm-water ports, together with the recognition of Outer Mongolia as a satellite state, were concessions which materially assisted the Communists in their stuggle with the Nationalists. In addition, the fact that this agreement was made without the Nationalist Chinese being consulted had a disastrous effect in destroying the face of Chiang Kaishek and the Nationalists once the deal was made public.
3. Who was responsible?

Generally speaking, as the President has pointed out, we should look to the future rather than to the past except where studying the past may help us to avoid mistakes in the future.

However, Senator Johnson, Senator LEH-MAN, and others have declared that the decisions made at Yalta were military rather than political, and they have even charged that General Eisenhower and General Mac-Arthur were responsible for those decisions.

Alger Hiss took this same line when he testified before the Committee on Un-American Activities on August 3, 1948. He said that the decisions at Yalta with regard to the Far East were military rather than political decisions.

General Marshall, however, testifying in 1948 before the House Foreign Affairs Committee, said the Far East decisions at Yalta were political rather than military, and that he, as Chief of Staff, was unaware of them, although present at Yalta.

Both General MacArthur and President Eisenhower have denied that they were consuited with regard to the Yalta Conference. If any further proof is needed to establish that the Marshall, rather than the Hiss, view is the correct one we find it in Secretary Stettinius' book, Yalta and the Russians. He states categorically, on page 95, that Averell Harriman, then Ambassador to Russia, was the man who was solely responsible

for conducting the negotiations with the Russians with regard to concessions which should be made in Asia. And in Winston Churchill's Memoirs, volume VI, Triumph and Tragedy, page 389, we find the Stettinius conclusion confirmed again.

This may be why Senator LEHMAN is protesting so strongly that the decisions China were military rather than political. Governor Harriman was the man primarily responsible, and since they have raised the issue, it is important to put the responsibil-

ity where it belongs.

Finally, it is to be recalled that the Far East decisions were so secret that even our State Department didn't know about them until after President Roosevelt's death 3 months later (see Stettinius' book).

4. The role of Alger Hiss at Yalta.

It has been claimed that there is nothing in the Yalta papers to indicate that Alger Hiss advocated pro-Communist positions. It is interesting to note that at no time in his career did Hiss publicly take decidedly pro-Communist positions, despite the fact that we all know he was convicted of lying when he said he did not turn Government documents over to an esplonage agent. is also to be recalled that Whittaker Chambers testified that men like Hiss in the Soviet apparatus were strictly prohibited from publicly taking a pro-Communist line.

The important question concerning Hiss is not whether he took a pro-Communist position but what documents he had access to. On galley page 91 of the Yalta papers, it states: "All memoranda for the President on topics to be discussed at the meeting of the Big Three should be in the hands of Mr. Alger Hiss not later than Monday, Janu-

ary 15."

On other words, Hiss had access to the secret-briefing papers which were used by our side during the Conference. If he was an esplonage agent at that time, this information was made available to the Communists. At a conference table a negotiator can have no greater advantage than to know what moves his opponents are going to make.

5. The lessons of Yalta.

The decisions at Yalta paved the way for the communizing of Poland, for the Communist conquest of China, and for all of the tragic results which have flown from those events. Those who represented the United States at the top level-Roosevelt, Stettinius, Harriman, Hopkins—were not deliberately pro-Communist but they exhibited a fatal lack of understanding of Communist tactics and strategy and, consequently, they were completely taken in by Stalin.

This Conference was typical of the kind conducted with the Russians during the Roosevelt-Acheson-Truman regime. In every conference we got a piece of paper-the Communists got a piece of territory.

Their mistakes were of the head rather

than the heart. But regardless of why the mistakes were made, the Yalta Conference was catastrophic as far the United States and the free world were concerned.

That is why the records of our previous conferences with the Communists must be thoroughly examined and publicized so that we do not make the same mistakes in the future that we made in the past.

Suspicious of a Military Government

EXTENSION OF REMARKS

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, some think I am altogether too suspicious of the objectives and procedures of the armed services. Benjamin Franklin once said:

Experience keeps a dear school, but fools will learn in no other. We may give advice, but we cannot give conduct.

Congress tries to prevent waste, inefficiency, but-read on.

It is not my contention that we are fools, but sometimes it seems we are foolish in not insisting upon reforms in Gov-

In 1947, following hearings over several years, it was my privilege, as chairman of a House committee, to assist in writing and reporting out the so-called unification bill. One of the purposes of that bill was to maintain the integrity of the Marine Corps; another was to minimize and, if possible, end waste in connection with duplicate purchasing, competitive bidding, by the Army, Navy, and Air Force.

As I stated at the time, the bill did not require the doing of anything which the Armed Services could not voluntarily do were they so inclined.

That our legislation was not effective, did not accomplish the purpose the committee and the Congress had in mind. you will learn if you read the article captioned "Ridiculous Waste in the Armed Services" in the April 1955 issue of the Reader's Digest-

Ignoring the repeated efforts of the Congress, the armed services have insisted upon following their own ways of doing business-many of them ridiculousmany of them wasteful-many of them inefficient. Congressional committees continue to hold hearings, make recommendations; have them disregarded.

From the Digest article, permit just three citations:

First. Fort Totten in New York harbor needed a carload of sugar. Almost within sight was a refinery turning out sugar for the Army, but instead of shipping the sugar across the harbor to the fort, it was shipped through Army channels, 150 miles away to an Army distributing depot, thence, back to New York—300 miles in all.

Second. The Army shipped 800,000 pounds of California canned tomatoes to the east coast, but the Navy also shipped 775,000 pounds of east-coast tomatoes to California.

Third. Just one more-and believe it or not, investigators for the Hoover Commission learned that 13 tons-13 tonsof cement were shipped by air to Bermuda.

This Reader's Digest article may give you an inkling of why, after years of experience here, I am just a little unwilling to accept at face value everything said and done by the armed services.

I cannot accept the armed services' conclusions that it is necessary in order to defend the United States of America to conscript every mentally and physically fit young American for a period of 8 years-96 months-to take orders from the armed services—when we have an unequalled Navy, the guided missiles, the A-bomb, and the hydrogen bomb.

Have we swallowed too much fear propaganda?

Is Alaska Defended?

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BARTLETT. Mr. Speaker, in the March 26 issue of the Christian Science Monitor, Louis R. Huber, special correspondent for that newspaper raises the question of whether the so-called heartline concept for the defense of Alaska and of the Nation has validity in this nuclear age. Mr. Huber's article is worthy of attention:

The age of nuclear plenty certainly has affected the defenses of Alaska.

Alaska not only has some "intentional" targets which an aggressor would want to destroy, but is on the route planes likely would fly in attacking the United States.

Said Capt. Samuel V. Cox of the Chemical Corps, United States Army, in speaking before the Fourth Alaska Science Conference in

Juneau recently:

"The enemy pilot who, for one reason or another, is unable to deliver an H-bomb in the States where it is intended, is not going to take it home with him. He may jettison it over Alaska." Captain Cox is civil defense liaison officer for Alaska.

These thoughts are sobering to Alaskans, as are thoughts of how defenses are arranged up

It was about 1949 when the Joint Chiefs of Staff visited the northland and worked out the defense pattern up here. There were two important considerations then: Congress was of no mind to spend much money. and the United States felt it had a monopoly on nuclear developments.

So the decision was not to fortify all Alaska, but to concentrate defenses in a 600-mile belt running from the Navy headquarters on Kodiak Island northward along the Alaska Railroad through Anchorage to Fairbanks.

About \$1 billion in military works have been poured into this belt of strengthwhich would be all right if the Soviets didn't have the H-bomb.

"If we hold this line, we shall hold all Alaska," was the theory-but is it practical any more? Isn't the belt of strength now just a convenient target for H-bombs. Alaskans ask these questions.

ALEUTIAN BASES ABANDONED

In the light of nuclear plenty there should be a complete revision of northern defense concepts, many Alaskans think. It will cost more-a lot more-but until it is done are defenses up north worth much?

Extreme dispersal of all facilities seems to be the only answer. Ironically, that was the concept developed during World War IIand abandoned as soon as the war ended-

In those days the Aleutian Islands in particular were well fortified and had at least two air bases from which intercontinental bombers could operate.

Today the Aleutian Islands are almost totally abandoned. Billions of dollars' worth of installations, installed from 1942 to 1945. are still being sold off as scrap. The Navy recently contracted with Japanese firms to remove some of it.

MUCH GOOD WEATHER

If widespread dispersal is called for, the Aleutian Islands are tops; furthermore, their location is attractive. They stretch well into the Eastern Hemisphere: Attu is on the same longitude as New Zealand, and within 400 miles of Asia.

Furthermore, Arctic cold will not hamper operations in the Aleutians—they are the "Florida" of Alaska. The central point of the island chain is only 250 miles north of Seattle's latitude.

Weather in the Aleutlans has been called "the worst in the world," but it isn't. Winds do blow at times, and the island configurations turn them into twisting, unpredictable "williwaws"-but there is much good weather

Northeast Airlines has been flying along the Aleutian Islands to and from the Orient for years, and its officials say the winter Weather there is better than on the Minneapolis-Chicago run.

"Should war come with Russia, it is almost certain that the Aleutian Islands would be at least as important as in World War II, and perhaps more so," says E. L. BARTLETT, Democrat, Alaska's Delegate to Congress. "Then we should be confronted with the huge task of building them up again under wartime conditions.'

MITCHELL VIEWS QUOTED

The residents of Nome and other far-flung communities of Alaska feel that way about lack of defenses in their areas and they ask about the radar network.

"It is hundreds of miles from the 'belt of Who is going to protect it?" they strength.'

Alaskans are fond of quoting the late Brig. Gen. William Mitchell, who served in the Army Signal Corps in Alaska in his youthful days.

It was General "Billy" Mitchell who raised such a rumpus in the 1920's by championing bombers over battleships. He was courtmartialed and disgraced for his unorthodox views, but posthumously he was honored for his brilliant prophecy of the importance of airpower.

Here is what he said in 1935: "Alaska is the most central place in the World for aircraft, and that is true either of Europe, Asia, or North America. I believe in the future he who holds Alaska will hold the world, and I think it is the most strategic place in the world."

Collingswood Endorses Deeper Channel for Delaware River

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. WOLVERTON. Mr. Speaker, the municipalities of southern New Jersey are greatly interested in the deepening of the Delaware River channel. The Borough of Collingswood, one of the largest boroughs located in Camden County, N. J., has expressed its interest in a resolution adopted March 21, 1955, by the mayor and commissioners of the borough.

It reads as follows:

DEEPENING OF THE CHANNEL OF THE DELAWARE RIVER FROM TRENTON TO THE SEA

Whereas the Board of Commissioners of the Borough of Collingswood, Camden County. N. J., believe that the deepening of the channel of the Delaware River from Trenton to the sea to its authorized depth of 40 feet is vital and essential if the area of Camden County is to develop to its fullest potential; and

Whereas the Board of Commissioners of the Borough of Collingswood, N. J., strongly endorse the action of the Camden County Chamber of Commerce, who are presently waging a vigorous and intensive campaign to have the channel deepened to its authorized depth without any local participation or without exacting tolls from any maritime user of the said river; and

Whereas the Board of Commissioners of the Borough of Collingswood, N. J., is fully aware of and conscious of the fact that it has always been the responsibility of the Federal Government as one of its delegated powers to dredge navigable streams of this country at Federal expense without expecting any local participation from municipalities that may be located along the banks of navigable streams and also without any contribution from industries whose plants abut and are adjacent to the said navigable rivers; and

Whereas the development of the Delaware River to its fullest use by deepening the channel to its authorized depth will open new vistas of prosperity together with industrial and business growth throughout south Jersey which is unprecedented: Now, therefore, be it

Resolved by the Board of Commissioners of the Borough of Collingswood, Camden County, N. J., in a regular meeting on this 21st day of March A. D. 1955, That the channel of the Delaware River from the sea to Trenton be immediately dredged to its congressional authorized depth of 40 feet and that the Congress of the United States immediately appropriate such sum or sums of money as may be necessary to effectuate and complete this project without any local participation and without financing the project by the exaction of marine tolls from the users of the said river; and further, that copies of this resolution be immediately sent to all congressional and New Jersey State legislative representatives from this area, and to the

ARTHUR E. ARMITAGE, M. F. VANISTENDAL, Jr., WALTER C. THOMAS, Board of Commissioners. Adopted March 21, 1955.

R. S. WIGFIELD. Borough Clerk.

A. Boyd Campbell, President of the United States Chamber of Commerce

EXTENSION OF REMARKS OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, the great State of Mississippi has been honored by the election of one of its favorite sons to the presidency of the United States Chamber of Commerce. The new president of this great organization, Mr. A. Boyd Campbell, of Jackson, Miss., has long been active in Mississippi affairs, and has contributed greatly to the growth and expansion of Mississippi industry and agriculture.

We who know Mr. Campbell congratulate the United States chamber on its selection. We know that he is a proven leader, and that the chamber will never have cause to regret its choice of Mr. Campbell as its president for this year.

Since his election, many deserved tributes have been paid to Mr. Campbell in the press throughout the Nation. Practically every newspaper in Mississippi has taken notice of the great honor he has brought to our State, and the Mississippi Legislature has passed a concurrent resolution commemorating Mr. Campbell's election.

Mr. Speaker, it gives me particular pleasure to add my congratulations to Mr. Campbell, along with my personal appreciation for having brought such distinctive recognition to my congressional district. Therefore, under leave to extend my remarks in the Appendix of the RECORD. I include the following resolution of the Mississippi State Legislature, and editorials from several Mississippi newspapers, dealing with Mr. Campbell's election as president of the United States Chamber of Commerce:

Senate Concurrent Resolution 13

Senate concurrent resolution commemorating the election of A. Boyd Campbell, Jackson, Miss., to the most important office, President of the Chamber of Commerce of the United States

Whereas Mr. A. Boyd Campbell, a native of Attala County, Miss., who completed his col-legiate education at Millsaps College with honors, has made his home in Jackson, Miss., since the beginning of his business career;

Whereas Mr. Campbell has been the organizer and owner of several splendid businesses in the capital city of Jackson, Miss.; and

Whereas the city of Jackson has been fortunate to have the services and guidance of Mr. Campbell through civic, church, and economic fields of endeavor; and

Whereas Mr. Campbell has served in the city of Jackson, Miss., as president of the chamber of commerce and thence through numerous appointments in various fields of endeavor in the United States Chamber of Commerce: and

Whereas Mr. A. Boyd Campbell was recently elected to the most important position. president of the Chamber of Commerce of the United States of America: Now, therefore, be it

Resolved by the Mississippi State Senate (the House of Representatives concurring therein). Through this resolution bespeak the innumerable fine qualities of our fellow Mississippian, A. Boyd Campbell, and wish for his tenure of office the fullest in accomplishment and the brightest in administration in the history of the chamber; be it further

Resolved, That a copy of this resolution be sent to Mr. A. Boyd Campbell, to the United States Chamber of Commerce, to the Chamber of Commerce of the city of Jackson, Miss., and to the Senators and Representatives of the State of Mississippi in Washing-

[From the Jackson (Miss.) Daily News of March 23, 1955]

A big welcome will await Boyd Campbell, one of Jackson's best-beloved businessmen and industrial leader, when he makes his appearance at the regular meeting of the Rotary Club next Monday. Brother Rotarians are deeply appreciative of the honor paid Mr. Campbell in his election to the presidency of the United States Chamber of Commerce, highest honor within the gift of the business people of the Nation. Moreover, Boyd Campbell fully rates the honor. He has for several years shown a keen, intelligent, and constructive interest in the work of the organization and is fully acquainted with its wide ramifications and the work it is carrying on in all parts of the country. It is well that Rotarians should flood Boyd Campbell with honors, because he is a living exemplifica-tion of its motto, "Service above self." Always he has been alert to all opportunities to is so ardently devoted.

[From the Jackson (Miss.) Daily Clarion-Ledger of March 23, 1955]

With his sane observations on segregation and other issues, our Jacksonian who has become president of the United States Chamber of Commerce, A. Boyd Campbell, has already started his valuable and distinctive service in his new office. He is already at work on the job to which he has been so recently elected.

The national organization did well by itself and the leadership which it represents in choosing our own Mr. Campbell as its new president. This vital national organization, representing over 1,600,000 business leaders, who are chamber of commerce members, now has a president who will not only uphold but will also enhance the high stand-

ards of his great office.

The Nation admires his modesty in describing himself as "unquestionably the smallest man in commercial stature ever to hold this office." We also like his candid admission that he has no pat formula for solving the country's economic and social

Friends of free enterprise are heartened at Mr. Campbell's firm declaration as an adherent and supporter of the time-tested way of life which has made this the world's greatest power. This declaration, made in his simple statement that "I believe in free enterprise," will go far to reassure all who have viewed with distress an inexplicable tendency of some to drift toward the welfare state and centralized bureaucracy.

Having had valuable experience as an educator and school administrator, Mr. Campbell believes that education and business are inseparable partners. He considers education as a State and local responsibility. He does not believe there can be Federal aid to education without Federal control. His views in this respect coincide with those of many fellow Mississippians who are proud of this latest honor accorded to one of foremost leaders.

A firm advocate of education, Mr. Campbell believes that raising educational levels of our people also raises economic standards of white and colored alike. He says: "We cannot compete with enemies who seek to destroy our idealogies on a numerical basis. We must do it by raising our educational levels."

Such sound judgment and keen insight in local, State, and National problems will stand Mr. Campbell in good stead during his tenure of service as president of the United States Chamber of Commerce. His wisdom and vast knowledge has been of inestimable value in the past to his city and State. It will prove of even greater value when applied on a national level, for the benefit of the organization and economic system which he so ably represents.

We congratulate our own Boyd Campbell on his election to this high office. We also congratulate the United States Chamber of Commerce on their most fortunate selection of leadership. They will soon learn what folks in Jackson and Mississippi have known for years—that he is a sterling citizen and outstanding executive who measures up to every standard of responsibility. We could use more men like him locally and nationally.

[From the Jackson (Miss.) State-Times of March 19, 1955]

Selection of A. Boyd Campbell as president of the United States Chamber of Commerce comes as no surprise to those who know this business, civic and education leader. His activities have been so wide in scope, his influence so certain in the right direction and his enthusiasm for good causes so bound-

unselfishly serve the community to which he less that such honors almost inevitably come his way.

Mr. Campbell is not a native of Jackson, as most of us are likely to believe. However, he has been so long and so intimately associated with the growth and development of the city that Jackson has a prior claim on him. He has headed one of Jackson's major business establishments for more than 30 years; he is a director of several of its financial and commercial institutions; he has served his community in ways too numerous to mention, through its civic organizations, its churches and its schools.

Education has always been one of his primary interests, and as head of a United States Chamber committee, he did yeoman work in stimulating national interest in the public

schools and their needs.

Jackson and Mississippi are proud of him and his high attainment . It is a deserved tribute to him personally and reflects honor upon his State and community.

[From the Vicksburg (Miss.) Post-Herald of March 20, 1955]

It was indeed pleasing to receive the news of the election of A. Boyd Campbell, of Jackson, to the office of president of the United States Chamber of Commerce. A distinguished Mississippian and a personal friend of many years, Boyd Campbell now adds lustre to his own outstanding career of public service and he brings added glory to Mississippi, in heading the national chamber.

There is very little that can be added to any story of Boyd Campbell. In every avenue of public service, he has been in the fore-In his own community, in the State of Mississippi, he has distinguished himself through his unselfish service and his contructive work. He will bring to his new office a wealth of experience in all types of civic and community work, and he will have an eminently successful administration.

We extend hearty congratulations to Boyd Campbell on the signal honor which has come to him.

Mr. Speaker, Mississippi is proud of A. Boyd Campbell, but Mr. Campbell is also proud of Mississippi. He has exercised leadership in bringing progress to Mississippi, and his leadership of the United States Chamber of Commerce will give the Nation the benefit of his abilities. Mississippi offers its congratulations to the United States Chamber of Commerce. A better selection could not have been made. We know because we know Boyd Campbell.

Delaware River Improvement by Deepening Channel Should Be a Federal Project

> EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, March 31, 1955

Mr. WOLVERTON. Mr. Speaker, already much has been said to justify the deepening of the Delaware River Channel between Philadelphia, Pa., and Trenton, N. J., but at no time has anything more logical or forceful been stated than that which is set forth in the editorial appearing in the Courier-Post newspaper, published in Camden, N. J.,

entitled "Deeper Channel Facts; Budget Bureau Arrogance." It reads as follows:

DEEPER CHANNEL FACTS; BUDGET BUREAU ARROGANCE

A resolution has been introduced in the Pennsylvania House calling upon the Federal Government to pay the full cost of deepening the upper Delaware River channel to 40 feet.

It will doubtless be approved when called up for a vote, thus following the lead of the New Jersey Assembly in urging Congress to carry out the program for the upper Delaware which it authorized last year and pay no heed to the Budget Bureau's demand that "local interests" contribute \$18 million toward the \$91 million project, a demand for which no precedent exists in the history of major American port-waterway development.

The Pennsylvania resolution points out that "the mighty Delaware River Valley continues to serve as the keystone of the eastern seaboard and is vital to the defense of the United States and its democratic institutions," and hence the 40-foot channel should be financed by the United States, not by any private interests.

This legislative declaration is only one of many being made throughout the whole Delaware Valley at this time by governmental, business, and civic organizations in support of the channel being financed at full Government expense. Two strong resolutions just adopted supporting that principle, one by the Pennsauken Township Committee and one by the Manufacturers' Association of Delaware County, Pa., are typical.

A statement by a well-known Camden industrial realtor on Monday should be suffcient to demolish, if it has not already been demolished, the myth that the deeper channel would benefit only U. S. Steel Corp., and that U. S. Steeel should therefore be compelled to pay part of its cost.

Since Congress authorized the deeper channel last year, said George B. Robeson, his office had received many queries from industries and business firms regarding sites on or adjacent to the waterfront from

Camden north.

Title to about 850 acres of waterfront north of Burlington has been "assembled by our firm in one ownership," Robeson said, to make it available for a new plant when the channel permits movements of large, deep-draft cargo ships."

An industry interested in a large riverfront plant site is waiting only for Congress to make initial appropriation for the deeper channel to move in, Robeson continued. Most of 2,500 undeveloped acres along the New Jersey riverfront between Camden and Burlington will certainly be occupied by in-dustries that will move in if the channel is deepened, he said, adding his own personal conviction that the deepening will result in prosperity, industrial expansion, more jobs. and added ratables that should materially reduce local tax rates."

Those conversant with the facts know that Robeson's predictions can be depended on to materialize when the channel is deepened. and the widespread benefits that the project will bring surely dispel the arguments of the Budget Bureau, which is responsible for the contention that U. S. Steel should pay part of its cost because it would be the only beneciary.

The Courier-Post hopes that Congress will take heed of the Robeson statement, not to mention the New Jersey and Pennsylvania legislative resolutions, and not allow itself to be bulldozed by the Budget Bureau on this issue.

The "local contribution" issue thoroughly debated and fought out last year in Congress. Congress specifically rejected the idea when it authorized the deeper chanhel, to be paid for wholly by the Federal Gov-

As Philadelphia Councilman Victor E. Moore, has just pointed out, the Budget Bureau has not only "distorted and misrepre-Sented" the facts about the channel project.

The Budget officials "seem to think they should have the power to veto an act of Congress. The Senate Public Works Committee heard all the arguments for a local contribution and rejected them. Both Houses of Congress agreed this was a job for which full responsibility rested on the Federal Govern-

Yet the Budget Bureau, in the channel matter, is setting itself up as a supergovernment, superior to Congress, determined to impose its own will—that of a nonelective bureaucracy-upon the will of the elected representatives of the American people.

This is not the first time the Budget Bureau has attempted—and sometimes succeeded-to exercise such arbitrary, domineering tactics with complete contempt for Congress and the recorded will of Congress.

The Budget Bureau's ideas are not the supreme law of the land, though it seems to think so and is trying to make them so.

The Budget Bureau has grown too big for its breeches and should be slapped down,

Congress should show whether it or the Bureau is the boss, and there can be no better issue on which to do so than the deeper channel.

The Yalta Conference-Right or Wrong

EXTENSION OF REMARKS OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuseday, March 22, 1955

Mr. FEIGHAN. Mr. Speaker, the Public release of some papers and documents of the Yalta Conference has caused thinking people to reflect on the events of just a few short years ago. Ten years time is but a fleeting moment in the long history of mankind, but the events which the Yalta Conference caused or gave license to, represent the destruction of what man took centuries of great sacrifice to build. I speak of a civilization based upon morality and legal tenets predicated upon that morality. I speak of a civilization in which all nations, large and small, were regarded as having fundamental and natural rights.

All too frequently we hear the charge made that hindsight is cheap and a practice for those who are unwilling to actively participate in the shaping of future events. But studious hindsight can be of real benefit for those who honestly seek the right and just course for our national conduct. An excellent case in point is made by the Sunday Visitor in its editorial of March 27, 1955. In that editorial we can find some of the reasons which compel people who should know better to rise in fury against any action to open up the records of the past.

Among other things this editorial Points out that in February 1945 Walter Lippmann, columnist on international affairs, was wildly enthusiastic if not fanatically blinded by the results of the Yalta Conference. He sought to equate the Vatican, the legitimate Polish Government in exile, and Germany, because all three failed to cheer wildly for the results of the Yalta Conference. Lippmann also assured his unsuspecting readers that Russia's aims in Europe were good aims by our standards.

The editorial from the Sunday Visitor follows:

RIGHT OR WRONG

It has always been our contention that the daily press is so influenced by advertisers, by politics, by current fads in the world of ideas, that it gives either a distorted or only a partial picture of the truth.

During the thirties and the forties, the days of the popular front with the commies, the secular press (with certain honorable exceptions) trailed right along, boosting the party line, following the fashion of the hour. That is why so many publications rise in fury against anyone who would turn over past records. That is why investigation is denounced—generally by those with a bad conscience. Any rattling of skeletons could only embarrass them.

Generally speaking, we Catholics have no cause to blush. Guided by fixed principles of right and wrong, we saw communism as infamous back in 1846 as well as in 1918, 1933, 1943, and right now in 1955. It made no difference to us that diplomatic recognition was tendered the U.S.S.R., that Communists became influential in our political and cultural life, that Hitler forced them into military alliance with us, that anti-Communist opinion was officially frowned on as divisive.

We weren't fooled. Communism was still wicked.

We are grateful then to The Josephinum Review for providing a sort of snapshot of editorial opinon back in 1945. Someone on the Review went to the trouble of looking up the files of Time and Life. The editors are discussing the Yalta Agreement. We Catholics have always denounced it as calamitous. In that, it is said that we are benefitting by hindsight. But a comparison of Our Sunday Visitor (and it is typical of the Catholic press 10 years ago) with the rest will refute that opinion:

Here is Time, February 19, 1945, page 15: "By any standards, the Crimean Conference was a great achievement (see International). All doubts about the Big Three's ability to cooperate, in peace as well as war, seemed now to have been swept away. On the basis of the Big Three's communique, no citizen of the United States, the U. S. S. R., or Great Britain could complain that his country had been sold down the river.

"For Americans, there was a special recognition of certain precepts which Americans have always held dear, and which would reassure many a citizen that World War II was not being fought in vain.

"For one, the principle of 'free and unfettered elections' by universal suffrage and secret ballot was unequivocally stated. This was imbedded in the Crimean Charter specifically as to Poland, and generally for all liberated countries."

And on page 22, same issue, same magazine:

"If words meant anything, the Big Three did more for their nations and their world at Yalta than they did at Teheran. After their Persian meeting, they proclaimed agreement only in the broadest generalities. After their Crimean meeting, they not only proclaimed agreement on every point taken up in their announcement, but on the most difficult points broke down the agreement into hard specifics."

Life, in its editorial of February 26, 1945, page 24, wrote:

"Walter Lippmann said, "There has been no more impressive international conference in our time.' The chief exceptions to the general joy were the Vatican, the London Poles, and, of course, the Germans, who called it 'an unlimited triumph for Stalin.' * * * As conferences go, this one was a success. * * *

"For the present Russia's aims in Europe are good aims by our standards-the demilitarization of Germany, self-determination and democracy for the rest of Europe's peoples, we need not be too afraid of differing over the meaning of those words, for Americans will be there to measure any gaps be-tween the words and the practice * * *"

The New York Times, February 12, 1945: This Conference marks a milestone on the

road to victory and peace." Here is Our Sunday Visitor's comment,

February 25, 1945, page 2:

"It looks as though Mr. Roosevelt has once more been outsmarted by the unscrupulous statesmen of Europe. Trampling on the issue which opened the war-Polish independence-and ignoring the sympathies and aspirations of the millions of Polish-Americans who helped elect him last November, he has consented to the donation to Russia of one-third of Polish territory, including the city of Lwow, which, as second largest city, is the Chicago of Poland.

'This division of Poland on which Russia has been insisting is that worked out in 1939 between Molotov and Hitler's Foreign Minister Joachim von Ribbentrop. For Poland it means not only the loss of Lwow, but also the sacrifice of her rich Galician oilfields and the mass transfer of 9 million of her popu-

"This was the saddest day of the war. Our hearts are heavy. We have committed ourselves to a program which goes against principle and integrity.

"The whole war started, remember, because Poland refused to hand over territory to Hitler. England and France jumped to Poland's defense. Russia didn't. She was helping Hitler from behind. And after Hitler had conquered Poland he and Stalin split it between them. Mr. Roosevelt has just ratified this grab, except that the part formerly claimed by Hitler reverts to Poland.

"Russia has outplayed us. That's clear. Our bond money has helped to provide her with military equipment and funds for propagandizing in non-Communist areas. The Russian armies lay outside Warsaw and let the Nazis destroy the city.

"Don't feel reassured, either, about the promise of a free election in Poland. With Molotov holding a veto over the setup, all returns are bound to be favorable-to Russia."

This was written over 10 years ago. Hindsight?

Life magazine, in its issue of March 28. 1955, carried the following editorial entitled "The Source of Yalta's Tragedy":

THE SOURCE OF YALTA'S TRAGEDY

The full record of Yalta, which the State Department published last week contains many new sidelights but no real surprises for anyone who has read good histories of World War II, such as Churchill's (Life, November 9 and November 16, 1953) or Chester Wilmot's (Life, March 10, 1952). It does furnish the Republicans with more ammunition against the memory of Franklin Roosevelt. blushes, for example, to learn how kittenish were his attempts to make friends with Stalin by means of cheap digs at the British behind Churchill's back. In a way the Yalta record is one long argument for greater Anglo-American unity, making Roosevelt's alternative "Grand Design" of Big Three unity seem as unrealistic then as now.

But that is not the whole story. Yalta is still one of history's major tragedies, and its full meaning calls for the full contemporary setting of February 1945: The Red army sweeping into Prussia, the Western allies just recovering from the setback of the Bulge. General Marshall estimating a million American casualties to conquer Japan without Russia, etc., etc. There was every excuse for Roosevelt and Churchill to make concessions to Stalin. The question is why they made the concessions they did, and how the wrongness of those concessions can be recognized in future situations of similar tempta-

tion and pressure. The chief victims of Yalta were free Poland and free China, which went into Communist captivity as a direct or indirect result. Neither country was represented at Yalta. The atmosphere of Big Three arrogance in which their fate was decided is illustrated by a statement of Roosevelt's: "He did not attach any importance to the continuity or legality of any Polish Government, since he thought in some years there had been in reality no Polish government." Yet his own administration had all along backed the Polish Government in exile and had many signed agreements with it, including the Atlantic Charter. The same heady note was more bluntly struck by Stalin, who declared it "ridiculous to believe that Albania would have an equal voice with the three great powers who had won the war * * * ". could not live in such an atmosphere was not only the voice of small nations, but the voice of any general principles of law and conduct that are the only alternative, in international as in domestic affairs, to the rule of fear and force.

"In increasing disregard of the right of weaker nations"—that was the source of Yalta's tragedy, wrote Historian G. F. Hudson in Commentary nearly a year ago. "During the last 2 years of his life Roosevelt fell more and more under the spell of his vision of a world governed arbitrarily for its good by a conclave of three men. . . . But it was necessarily Russia, and not the Western Powers, that gained by Big Three dictatorship, for it implied principles of an authoritarian, and not of a democratic order. The democracies can never play the totalitarian game unless they themselves become totalitarian; their interest as democracies lies in a world of independent and freely associated nations large and small."

It will take years of a more principled foreign policy before the West can wholly live down Yalta and reestablish its own coherent system, in which order is a function of consent and power is "not the parent but the servant of the right to command." The lesson of Yalta for the powerful is to resist the temptation to appease communism with other people's freedom, be they Poles, Chinese, or the Albanians for whom Stalin expressed such scorn. Yalta's victims remain on the agenda of liberation, That is what we confront when we turn from recriminations over Yalta to the long task of explating it.

Mr. Speaker, that editorial is both blunt and inspiring. It warns that "it will take years of a more principled foreign policy before the West can wholly live down Yalta and reestablish its own coherent system." It rightfully concludes that the period of recrimination must end by rectifying the terrible mistakes of Yalta and that the enslaved nations make up our agenda for liberation. Life is to be congratulated for this hard hitting and stimulating editorial.

Under leave to extend my remarks in the RECORD, I have inserted these editorials, and commend them to the reading of all Members of Congress.

Ready for What?

EXTENSION OF REMARKS

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, before this Congress approves H. R. 4393, which would authorize the building of a fifth supercarrier for the United States Navy, my colleagues should read a recent comment from an authoritative source in Great Britain on the new British supercarrier, the Ark Royal. I would like to point out in passing that the new British supercarrier perpetuates the name of one of the proudest vessels of the age that gave Great Britain control of the seas. It was a stroke of propaganda genius to propose that the new United States supercarrier carry the name of the legislative body that is asked to authorize and appropriate funds for it.

Mr. Speaker, I have in my hands an editorial from the February 27, 1955, issue of the London Sunday Express, which is owned and published by the distinguished and influential Lord Beaverbrook. It is called, "Waste, Waste, Waste, Waste" and the waste it refers to is the carrier. The London Express states without qualification that the 25 million pounds-almost \$75 million-that has been spent on the Ark Royal, which was 12 years abuilding, is a "prodigious and totally unjustified waste of money." This carrier would be useless in any of the narrow seas, including the Mediterranean, in which British interests chiefly lie; an atom bomb dropped a mile away would wreck it beyond control, and a near miss would melt it away.

Great Britain has long been a Navy power, dependent upon the control of the seals not only for security but for the supplies necessary to her economy and to the welfare of her people. But a realistic appraisal of the lessons of World War II has convinced the British that airpower is decisive in modern war, and their great military leader. Field Marshal Viscount Montgomery, of Alamein, has spoken for the British people in emphatically and repeatedly declaring that.

The British have not evolved a program of supercarrier construction, however, and it is doubtful if the British would have started construction of the new Ark Royal today. It was begun 12 years ago, before the development of nuclear weapons and planes that fly supersonic speeds. Britain today depends realistically for her security on longrange, land-based bombers carrying nuclear weapons at speeds of 600 miles an hour, rather than on carriers all but static at 40 miles an hour in the open

The London Express sums it up bluntly:

Aircraft carriers are finished. In mid-20th century war strategy there is no place for them. They are futile. They are as obsolete as the London trams. They are no good at

These are startling words to hear at a time when the United States is just getting well started on its program of supercarriers. We must be ready, we are told. for sudden, devastating attack. We must be ready to launch an annihilating counterattack. But the readiness of the supercarrier can disappear as quickly as the Navy's fleet was knocked out at Pearl Harbor. We must be ready, yes, but ready for what intelligence tells us to expect, and with something adequate to answer the attack.

If the United States is directly attacked, it will be by intercontinental land-based heavy bombers, of which we know the Russians have an advanced model. If we are to use massive retaliation, it can only be with land-based bombers. If carrier-based aircraft are involved in another war their use will be peripheral. The danger is that under the American program we are building enormously expensive weapons of probable secondary importance while diverting funds from the construction of those weapons on which our security primarily depends.

Mr. Speaker, I ask leave of my colleagues to extend my remarks and insert in the Rscorp the following editorial from the London Sunday Express, as follows:

WASTE WASTE WASTE

The new aircraft-carrier Ark Royal joins the fleet. She slides massively out to sea on her first shakedown cruise.

For nearly 12 years men have tolled to build her. Now she is ready at last.

But here is the question.

Ready for what?

The Sunday Express believes in the Royal Navy. It is a service with a splendid tradi-tion. It is a magnificent fighting instru-ment. It is superbly manned.

But the Sunday Express has no belief whatever in the aircraft carrier. It considers that the £25 million spent on the ATE Royal has been a prodigious and totally unjustified waste of money.

What are the arguments for this carrier? Certainly her speed cannot be one of them-At full stretch she will go at something over 30 knots. That is only half as fast as the family saloon car.

But, of course, her champions say she will be able to hide in the oceans.

Which oceans?

She will not be able to sail the North Ses or the White Sea, the Baltic or the channel. Biscay, or the Mediterranean. Not a chance of concealing herself in any of those confined spaces. Enemy radar will seek and swiftly find her. And then the bombers, traveling at 20 times her speed, will come like lightning in pursuit.

Next, the Ark Royal's apologists say: "But look how marvelously equipped she is for emergencies. If necessary, her engines could

be operated by remote control."

What sort of fatuous nonsense is that? An atom bomb dropped a mile away would wreck the Ark Royal beyond control of any kind. And a near miss would melt her.

Then there is the argument that her own aircraft would be capable of defending her. But under what conditions? They could not do the job at night. They could not even do
it in bad weather against radar-directed bombers carrying nuclear weapons.

So that argument falls too.

And always the Ark Royal would be vulnerable to submarines unless a large pro-tective surface force were sent out to her around. How fantastic to spend on much effort and waste such resources on defending her when her function is intended to be offensive.

Aircraft carriers are finished. In mid-20th century war strategy there is no place for them. They are futile. They are as obsolete as the London trams. They are no good at all.

What offensive weapon should Britain concentrate on instead?

There is no doubt about the proper answer.

The land-based bomber.

The striking power of the lumbering carrier is utterly negligible by comparison.

Soon the land-based bomber will be able

to fly nonstop round the world.

That is where more money should be going. That is the weapon to which our military planners, scientists, and manufacturers should be devoting their skill and drive.

The mass production of long-range bombers must henceforward lie at the heart of

our whole strategy.

For the future of Britain's defense depends not on a 35-miles-an-hour service but on these devastating, nuclear-equipped aircraft, sweeping across the earth faster than sound, which alone would give us security from attack.

The Soul and The System

EXTENSION OF REMARKS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, April 4, 1955

Mr. BENNETT of Florida. Mr. Speaker, I have the privilege of being a member of the Riverside Christian Church of Jacksonville, Fla. The very able pastor of that church is Dr. Richard James. Recently I was deeply impressed by one of his sermons, and I asked him to send it to me. I regret that the space limitations of the Congressional Record will not allow me to include the entire sermon, but I hope that the following excerpts from it will present a challenge to all of us here in Congress in thinking of our responsibilities in these important years:

A man stood on the street corner and begged a pittance with which to buy a meal. He had been robbed. We will not stop to examine who robbed him; sufficient to say that he had been deserted for half dead. It could have been the neglect of an educational system that failed to make this man fit to match the world in which he lived. A System which used his energies to the fullest extent then cast him off with no feeling of responsibility for him when his services Were no longer needed, could have robbed him. It may be that he was the victim of a shobbish society which engendered a feeling of defeatism in his thinking, thus stripping him of his self-respect. Perhaps he was a warrior returned from the battlefields only to find his friends and society indifferent to his problems. We are not concerned here with this man's individual robbers; those who left him on this street begging for bread. I say he could have been the victim of many forces which operate constantly in our midst.

We are, however, concerned today with what happened to this man on the street corner. For on this particular day a minister drove by in his car on the way to perform a wedding in the nearby fashionable church. As he turned the corner, he caught sight of the man, but he had only a few

minutes in which to make his engagement where the couple and friends anxiously awaited the performance of his services. After all, matrimony was an important thing in people's lives, and those who hold the sanctity of this ceremony must not be given reasons to doubt either the sacredness of the obligations nor the ability of the ministry. So he stepped on the gas to make his appointment with a grand religious practice.

A few minutes later, a prominent lawyer passed down the street on his way to court. As he stepped on the sidewalk, a glance at his watch told him that he had only 5 minutes to make the courtroom and he must hurry. He pulled his hat down against the cold wind and tucked his briefcase tightly under his arm and proceeded. At this point he was interrupted by the beggar on the corner. "Mister, can you—" He got no further before the lawyer replied, "Sorry, chum, in a hurry. See you later, maybe." On dashed the lawyer to likewise attend the machinery of a noble legal system.

Now in the light of this man's experience, let us read again Jesus' parable as recorded by Luke:

"A certain man was going down from Jerusalem to Jericho; and he fell among robbers, who both stripped him and beat him, and departed leaving him half dead. And by chance a certain priest was going down that way: and when he saw him, he passed by on the other side. And in like manner a Levite also, when he came to the place, and saw him, passed by on the other side. But a certain Samaritan as he journeyed, came where he was: and when he saw him, he was moved with compassion, and he came to him, and bound up his wounds, pouring on them oil and wine; and set him

on his own beast, and brought him to an

inn and took care of him." (Luke 10: 30-37.)

There was in the Museo delle Terme, in Rome, the Roman copy of the Discus Thrower. As the statuary is preserved there is no head nor discus. The fingers of the left hand are missing. The left leg has been broken off at the ankle, and the entire left arm is gone. How is it possible to say that this is a statue of a discus thrower? The answer is simple. We understand the postures of the human form and have seen discus throwers in action. We understand the system and hence know the individual within such a system. Individuals create systems for their own betterment and then the same persons operate within the boundaries of such organizations. The soul and the system must be balanced.

There are three ways of meeting a storm in a sailboat: by taking down the sails and putting out a sea anchor; by running free before the storm or by arranging sails so that the boat is hove to. In the latter operation, the boat faces the storm and rides it out with least danger and greatest maneuverability. Amid the conflict between souls and systems, there have been those who have taken down the sails and drifted along with the storm. Whichever way the winds of popular opinion dictated, they have gone reluctantly along. Many of them have been helplessly dashed against the rocks of an unfriendly coastline. Others, delighting in the storm, have set their sails to run before the wind, too often to find that disaster followed in its wake. Yet, others, knowing the power of the wind and the frailty of their craft, have dared to face the storm. Accordingly, they have set their sails in the position to ride the storm through to the They have met the waves of opinion end. which clamored for the system head on. The wind and waves have beat them back for the while, but the storm's passing found them captains of their craft and able once more to plot their individual courses.

In our time, part of the world is arrayed on the side of a system which would control

every detail of men's lives. The other part is fighting for the freedom of the individual. With our side victorious by its powerful military system, we must again be reminded that the system was created for the good of our citizens. Love which brings unity between liberty and law has the answer to our problem of balance. The love of men would have stopped the preacher on the corner that day to minister to the soul of the needy man. Then there would have been a union of the soul of a man to a religious system. The same love would have caused the lawyer to see an individual within the framework of the laws. He would then have understood how the laws were instruments for the betterment of men. "Love worketh no ill, therefore love is the fulfillment of the law." The principle of love keeps the balance between souls and systems.

The Soul and the System

EXTENSION OF REMARKS

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. HARRIS. Mr. Speaker, recently
Mr. Joseph William Hanley, a Doorkeeper of the Senate of the United States,
presented an article which was carried in
the Handclasp, the official organ of the

presented an article which was carried in the Handclasp, the official organ of the Vaughn class of Calvary Baptist Church here in Washington, on the subject The Influence of One Life. This is a most interesting and impressive article by Mr. Hanley. In these days when we are striving for solutions and trying to find the answer for the future, I believe this most helpful and worthy of consideration. Certainly, in my opinion, we need to think it over. In order that it might be available for the Members, under unanimous consent, I ask that it be included in the Appendix of the Recorn:

THE INFLUENCE OF ONE LIFE

Millions have perished in war and terror. We survive. Millions are homeless. We are sheltered. This night in all the world, for every man well nourished, three are hungry. We are fed.

The world's abundance should have blessed mankind with homes, health, and competence. Instead, it has been used to destroy all these—to breed pestilence, misery, and poverty.

The finger of the bitter past points to a bloody page * * * "and we shall meanly lose or nobly save the last best hope of earth."

Each life is tested by its answer to the question first asked in the world's beginning: "Am I my brother's keeper?"

One life was lived in answer. By all the formal measurements of greatness it should have failed. "Twas such a little span of years in such a far-off lonely little land.

He was born in a village stable. No birth could be lowlier, hence none need despair because of lowly birth. Possessed of profound wisdom, He had but meager education. None, therefore, need despair for lack of schooling. No wife, no child. Ha showed each lonely heart its deepest need.

For 30 years, near the village of His birth, He grew and learned His simple trade, shaping the native wood to serve the wants of home and craft.

Three years He wandered, teaching, shaping the native hearts to service of truth and love. He was never more than a few hundred miles from His birthplace. He held no earthly rank or office, wrote no book, no song; painted no picture, builded no mon-

His native land was ruled by conquerors and foreign legions. While still in the flush of youth, His own people turned against this Man who strangely taught that evil can only be overcome by good.

He was denied by His close friend, deserted

by most, betrayed for 30 pieces of silver by

one He had befriended.

One dark hour He knelt in the garden, His hour of decision. He gave Himself over to His enemies, was tried and condemned in mockery, spat upon and lashed, nailed to a cross between two thieves.

He died asking forgiveness for His persecutors while His executioners gambled for His only earthly possession-His robe. He

was laid in a borrowed tomb.

Nearly 2000 years have passed and none has reigned or wrought, or served, or dreamed who has so touched and moulded human He is the ideal—the example—who has inspired the noblest and the humblest lives—the great unalterable, wholesome, growing influence in a world of blood and tears.

He who was friendless would be friend of all. Homeless He dwells in countless homes. Books on His life fill libraries. His Gospels cover the earth. Song and music in His praise fill the heavens. Pictures, spires, and praise fill the heavens. Pictures, spires, and monuments proclaim His influence. Scholars, illiterates, rich men, beggars, rulers, and slaves . . all are measured by His life.

The names of Pharaohs, Caesars, emperors, and kings of all ages that have come and gone are but ghosts upon a printed page. All their combined legions and military might are dust upon the land; their proud sea-borne armadas rust upon an ocean floor.

But this one solitary life surpasses all in power. Its influence is the one remaining and sustaining hope of future years.

JOSEPH WILLIAM HANLEY.

Governor Meyner, of New Jersey, Submits Recommendations for State Expenditures for Mental Health

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1955

Mr. WOLVERTON. Mr. Speaker, it is extremely gratifying to realize that there is a growing interest in the problems of mental health. In the past the interest has been too often displayed in merely providing custodial care. However, over a period of years there has been a realization that the problem requires consideration from the standpoint of cure as well as care. This has been evidenced by a Federal research program created by legislation resulting from hearings conducted in the House and Senate committees having jurisdiction in the matter. The results attained in such research programs and Federal participation with State agencies has been such as to encourage even more extensive programs.

One of the most encouraging signs of an increasing interest upon the part of individual States was the strong and sincere message addressed to the New Jersey State Legislature by Hon. Robert B. Meyner, Governor of New Jersey, in which the Governor set forth in plain and forceful language the obligation that exists to care for the mentally ill and to find ways and means by research and otherwise to improve their condition.

Because of the significance of this worthwhile message of Governor Meyner, the pertinent information it contains and the valuable recommendations the Governor has made, I include the message as part of my remarks. It reads as follows:

SECOND SUPPLEMENTARY BUDGET MESSAGE OF ROBERT B. MEYNER, GOVERNOR OF NEW JERSEY, TRANSMITTING TO THE 179TH SES-SION OF THE LEGISLATURE RECOMMENDATIONS FOR CAPITAL AND OTHER STATE EXPENDITURES FOR MENTAL HEALTH FOR THE FISCAL YEAR ENDING JUNE 30, 1956, TRENTON, N. J., MARCH 21, 1955

To the Members of the Senate and General Assembly:

In my supplementary budget message of March 14, I promised to present to you today my reasons for recommending the sum of \$3,500,000 to intensify our attack on the problem of mental illness. Of this sum \$2 million would be set aside for a fresh attack on mental disease along lines which I shall describe; the remaining \$1,500,000 would be used for the conversion of Bordentown Manual Training School into a research and training center for the mentally retarded.

SCOPE OF THE PROBLEM

As I pointed out to you a week ago, mental disease has been termed by a task force of the Hoover Commission as the greatest single problem in the Nation's health picture. More persons suffer from some form of mental illness than from any other malady. More than half of the Nation's 1,500,-000 hospital beds are for mental patients, and a commission appointed by ex-President Truman estimated in 1952 that there was need for 330,000 more beds for this type of patient.

The pressures of modern life are causing 250,000 new admissions to mental hospitals in the United States each year. A total of 2,500,000 people were treated in hospitals, clinics, and in private psychiatric offices last year. At least 10 million people, or more than 6 percent of our entire population, are suffering from some sort of mental disorder. In 1934, the chance of being hospitalized for a severe mental illness was computed as 1 in 20; today, it is nearly 1 in 10.

FIGURES FOR NEW JERSEY

New Jersey, of course, follows the national trend. In 1945, the resident population at Greystone, Trenton, and Marlboro Hospitals was 11,315; by 1955, this figure had grown to 15,589-an increase of more than 37 percent. To use another set of figures, from 1930 to 1950, the number of New Jersey patients in State and county mental hospitals increased from 11,000 to 19,000-a rise of almost 75 percent in 20 years. At the same time, the general population of the State increased only 20 percent.

PRANKENSTEIN MONSTER

A costly new mental hospital has just been opened at Ancora and in a matter of months it will be filled to capacity. At the current rate of increase of mental illness-requiring 500 new beds a year-New Jersey will soon need a fifth mental hospital, and then a sixth and then a seventh, ad infinitum. In 1949 and in 1952 the people of New Jersey approved bond issues of \$50 million for the department of institutions and agencies. Must we go before the voters in the next few years with the proposal of another large sum merely to house the wards of the State, or

should we attack the Frankenstein monster before it devours us?

CONSTRUCTIVE APPROACH

It is with this alarming set of facts in mind that I approach you with some suggestions for a constructive approach to mental illness so that many people now under lock and key may be restored to their homes and their families and their gainful occupations; and so that many people now threatened with mental difficulties may be given early treat-ment to forestall months and years of confinement. In the past year, I have given much study to this problem, and I have had the advice of some of the Nation's leading authorities. A year ago last February, I attended a governors' conference on the subject which produced valuable conclusions, some of which are adopted in this message.

FLOOD TIDE

I wish I could tell you that out of all this has come a sovereign solution; unfortunately, this problem is beset with so many difficulties, and so many unanswered questions, so many unexplored places of the human mind as to baffle professionals and laymen alike. But I am convinced that fuller use of modern scientific methods will produce excellent results, and that such methods will help to stem the flood tide of mental illness which is now upon us. Let it be emphasized that many of our mental patients are merely in custody, meaning that they are fed, clothed, and housed behind locked doors. They are not being treated at all. Indeed. for lack of personnel, even certain primary decencies of custody are being neglected. this point, I will address myself later.

A STEPCHILD

At the top of my list of requirements. I would place research. It is a lamentable fact that, in this age, when the frontiers of human knowledge are being extended in so many fields, the problem of mental illness has been treated like a stepchild. In 1951, over the Nation, only \$4.75 per mental patient was spent for research, as against \$44.90 per polio patient and \$25.60 per cancer patient. I daresay the disparity is far greater in 1955. Without disparaging the huge sums being raised for polio, cancer, heart disease, muscular dystrophy and other ailments. I am certain the great and growing preva-lence of mental illness demands far more study than it is getting.

PROMISING LEADS

Let me cite some examples. At a congressional hearing last year, Dr. George S. Stevenson, medical director of the National Association of Mental Health, testified it has been shown that in schizophrenia the adrenal glands do not function properly. "This is a lead of such tremendous human significance," said Dr. Stevenson, "that instead of a few laboratories in which bio-chemical research is being pursued, it would pay us to put 100 researchers in one place, sweeping through this problem and ferreting out every promising path of progress." Experience patients indicates that much of with senile their difficulty may arise out of social neglect. that there may be nutritional interference with brain functions, or that degeneration of arterics can be modified. "Where else in medicine," asked Dr. Stevenson, "would we find such promising leads passed by or given so little attention?'

NEW APPROACHES

In the field of psychiatry, at such places as the Menninger clinic in Kansas, new ideas are constantly being produced as to dealing with distortions of the human intellect-The uses of electric and insulin shock treatments lend themselves to further study Such therapy has been notably successful with involutional melancholia, once considered incurable. Today 90 percent of such patients receiving the successful to the successfu patients receiving shock therapy return to their homes within a relatively short timePsychosurgery has a place—if only a limited one—in the whole picture.

WONDER DRUGS

We have recently been learning of new so-called wonder drugs that are being used experimentally on mental patients, with a reported degree of success. I refer to such drugs as chlorpromazine and reserpine. A Cincinnati psychiatrist, Dr. Douglas Goldman, told his professional brethren a year ago that a revolution is at hand with the use of such drugs. With all prudent reservations as to premature announcements, New Jersey should be kept fully abreast of new discoveries. Pharmaceutical companies which produce the new drugs are already cooperating in their application.

RAYS OF HOPE

In these and other respects, there are new rays of hope for the treatment of mental disease—more hope than has existed for centuries. It was with that in mind that the department of institutions and agencies requested for research the sum of \$262,000 for the coming fiscal year, as against authorization of \$50,000 for the current fiscal year. Part of this money would be used to keep New Jersey informed of the work being done in other States, in the universities, in the laboratories, psychiatric clinics, and hospitals

It is my belief that the new commissioner of institutions and agencies—and a strength-ened staff of the division of mental health—will want to go deeply into the research aspect of mental health. I therefore recommend that funds for research be authorized to allow flexibility and professional discretion. Obviously, this is one of the optimistic areas in our fight against what otherwise may appear as an endless emphasis on more and more hospitals.

PROPER ATMOSPHERE

Now I come to a second suggestion, which I would like to preface by these general observations. On the whole, where there is a possibility for recovery by mental patients, much depends on whether the institution—in addition to providing full medical services—can create an atmosphere conducive to recovery and can provide ample opportunities for patient participation in wholesome social activities. Such a progress means occupational therapy, educational and recreational programs, personal attentions such as beauty shop treatments, and controlled contacts with the outer world.

A DETAILED SURVEY

I. therefore, recommend additional nurses, attendants, and psychiatric technicians. This recommendation is the outgrowth of a study begun last August by the Civil Service Department as to the adequacy of ward care of patients. The survey covered currently authorized positions at Greystone, Trenton, and Mariboro. There was a direct inspection of every ward, with the responsible employee in immediate charge and with the top officers of the institution. The staffing problem for each ward was carefully reviewed, and there were many conferences with nurses, technicians and charge attendants in each area.

MORE NURSES AND ATTENDANTS

The result of the survey was a finding that we lack sufficient personnel to create an atmosphere conducive to recovery. The carefully documented survey of the Civil Service Department justifies a request for some 600 additional nurses, attendants, and technicians—which would cost, at the minimum of present salary ranges, approximately \$1,400,000.

I strongly recommend serious consideration of this appropriation because it will be aupported with other related services. If we can develop a total program whose emphasis will be on active care and treatment, sup-

plemented by research and by the strengthening of our local community programs, we can be certain that investment in proper ward care will return huge dividends.

A HUMAN AND SPIRITUAL APPROACH

In this connection, a special effort should be made to recruit men and women who are willing to give devoted service to their less fortunate fellow human beings. This is not an assembly-line proposition-a job whose requirements are satisfied when all the mechanical parts are put into place and all the bolts are tightened. It is a job with rich human and spiritual overtones, whose accomplishment is accompanied by many deep inner satisfactions. Surely, in New Jersey there are many people who would welcome such an opportunity and who would respond to a properly-conducted recruitment pro-Such a program, of course, would stress New Jersey's fresh and total approach to the whole problem of mental illness.

THE NEED FOR MORE DOCTORS

I have spoken of research and of the need for more ward care. I now come to a third great need—that of strengthening our medical staff in the State hospitals. Though New Jersey has no medical school of its own, the State lies between two of the greatest centers of medical education in the world—New York and Philadelphia. In the Philadelphia area alone, 10 percent of all the Nation's medical graduates are produced. We should be far more alert in tapping these two sources of medical and psychiatric talent.

HOW TO ATTRACT THEM

Here, again, we must lure young doctors by convincing them that New Jersey has a new and progressive program, from which they can learn much. The Mayo Clinic in Minnesota has no difficulty in obtaining promising recruits because of its tremendous reputation for the use of thorough modern methods, any more than Notre Dame has in attracting the best high-school and prep-school football players. What young psychiatrist can be induced to come to a What young State content with ancient methods and the drudgery of custodial care, instead of one where new vistas of recovery are being opened up? What young physician wants to take a humdrum job where the workload of patients is so burdensome that personal attention is well nigh impossible?

TO MEET MINIMUM STANDARDS

In order to meet the minimum standards—let me underscore minimum—of the American Psychiatric Association, our State hospitals require 64 additional resident and senior resident physicians at a total cost of more than \$400,000. These physicians will not be immediately available, but I am requesting sufficient funds be made available to the Department so that hospitals can recruit professional men as they become available.

CLOSER TIES

Related to the need for more professional staff is the desirability of closer relationships between New York and Philadelphia medical schools with our State hospitals. To this end, I have had many meetings with psychiatrists throughout the country and with the heads of the psychiatric departments of several New York and Philadelphia schools. Together we have discussed ways by which New Jersey can benefit by intimate ties between these schools and our hospitals.

Beyond that it is my hope that we can develop a plan by which leaders in psychiatry in all parts of the Nation may be invited to spend some time each year for resident work and consultation in New Jersey hospitals. I believe that for great teachers, researchers, and practitioners to spend a few weeks annually in New Jersey would be immensely stimulating and inspirational to patients and resident staff alike.

IMPORTANCE OF EARLY TREATMENT

Of equal or even greater importance than the care and treatment of patients already in mental hospitals are measures designed to prevent mental disease at its inception. Early and intensive treatment is now regarded as the key to cure in many disorders. This was dramatically demonstrated during hostilities in Korea, when battlefront firstaid stations were established for mental casualties at the point of breakdown. As a result of such emergency psychiatric treatment, 70 percent of such casualties were returned to active duty in 2 weeks or less. 25 percent after a somewhat longer period, and only 4 percent ended up back at home in a hospital. Testifying before a congressional committee, an expert witness said: "These same curative skills can be applied in civilian life."

NEEDS OF MENTAL HYGIENE CLINICS

For many years, the State of New Jersey has supported mental hygiene clinics working out of the three State hospitals and giving diagnostic service in communities served by the various institutions. The purpose of these clinics was the all-important early detection of mental disorders. To fulfill this purpose, the clinics need more effective central supervision and, in my budget message of January 31, I recommended the creation of new positions for the division of mental hygiene.

There is also an obvious need for the expansion of the work of these clinics. Additional staff would provide services of diagnosis and treatment. Many clinics are now operated on a part-time basis only, and cannot hope to meet the burdens placed upon them. These clinics should be regarded as frontline trenches in our fight against mental illness.

TO NIP IT IN THE BUD

If we strengthen the clinics, we will encourage local and county government to add to the funds spent by the State. Study should be made of the experience of New York State, with its new community mental-health services act, by which the State will share to a greater extent in the cost of expanded facilities at the community level.

In short, let's nip mental illness in the bud whenever it is possible to do so.

FAMILY CARE FOR OLDER PATIENTS

One of the most pleasant aspects of the mental health problem is that selected older patients are able to leave the hospitals for approved boarding homes in the community and a more normal life, receiving hospital supervision as needed. This policy was adopted in 1951 by the passage of the Family Care Act. The State paid a reasonable per capita cost for board and lodging and, in effect, saved the cost of providing many additional hospital beds.

Heretofore, the hospitals have financed the modest beginning of this activity by balances in their accounts. This year, when more patients could receive such family care, there are no balances in the hospitals' funds. So, the social service staff has been faced with curtailment of the program—and with the return of a number of patients to the hospitals. This, it seems to me, is both unwise from the State's point of view and most unfortunate from the individual's.

TRAGIC FACT

I have directed that additional funds be made available to continue the program, and I recommend that the department be allowed to allocate additional funds in 1955-56 from this supplementary mental health appropriation to continue and expand family care. The department is also exploring the possibility of obtaining the benefits of public assistance programs for a greater number of patients. It is a tragic fact that many older

people find themselves in State hosiptals, not because of mental disorder, but because they are poor or neglected.

CONVERSION OF BORDENTOWN SCHOOL

After long study, the State Board of Education has recommended the closing of the Bordentown Manual Training School—a recommendation with which I am in agreement. In my annual message of January 11, I said: "We may be able at this site to develop a center which may substantially reduce our waiting lists for the mentally retarded, while at the same time developing a foremost training and research center. Such a center could help us to develop qualified staff for our training schools and, at the same time, help to find answers to some of the unknown quantities in this important field."

FIVE HUNDRED TO SIX HUNDRED BEDS

I suggest that the Bordentown plant be transferred to the department of institutions and agencies to accomplish the foregoing purposes. To provide for the necessary structural changes and renovation of the plant and to provide operating funds for a portion of the fiscal year 1955-56, I recommend the sum of \$1,500,000. This amount is based on engineering estimates. Prompt legislative action will make it possible to make the new facilities available during the coming fiscal year. This would produce 500 to 600 beds, and would relieve the pressure of the 4 other training schools for the mentally retarded—Woodbine, New Lisbon, Totowa, and Vineland.

A CRUSHING BURDEN

The waiting lists of urgent cases number more than 800. It is unnecessary for me to tell you that the presence of retarded children in otherwise normal families is a crushing burden on the parents and is a source of psychological damage to other children in the families.

In addition to reducing these lists, we feel it is in the best interest of the State to develop a program that will train and return many patients to their communities within a reasonable period. Moreover, we feel that the proposed new institution will be valuable for training teachers who will instruct mentally retarded children in their communities under the legislation adopted last year to expand special classes for them in the public schools.

AN OPPORTUNITY FOR LEADERSHIP

You and I can work together to give vitality to a fresh approach to the problem of mental health, as outlined in this message. We can look forward to the appointment in the near future of a new commissioner of institutions and agencies and to a stimulated division of mental hygiene. It is my hope that the \$2 million recommended in this message for mental health be made available to the new leadership with considerable latitude. If everything possible were to be done, more than \$2 million would be needed. But I look forward to a gradual launching of the program, leaving it to leadership to decide from its experience what phases should be given priority.

PAST ACCOMPLISHMENTS

New Jersey in the past has cut many new paths in government, including the field of mental health. We can be proud of the diagnostic center at Menlo Park; of the important work at the Arthur Brisbane Child Center at Allaire; of the advances being made at the Neuropsychiatric Institute at Skillman. With additional funds to forge a new attack on a massive problem; with

the support of the legislature and the executive; with the help of the thousands of men and women who are devotedly doing the work of the department of institutions and agencies; and with the support of an aroused public opinion, we can go far.

PROMISE OF THE NEXT DECADE

A century and a half ago the mentally ill were set free from their chains. A century ago the fight began to substitute the hospital for the prison to house these unfortunates. In the last half century, there has been a steady search for new answers. There is evidence that the next decade will produce more victories in the war against mental disease than have ever been made before. I know you and I are eager to see the banner of New Jersey in the front ranks.

Respectfully submitted.

ROBERT B. MEYNER, Governor,

Attest:

RODERT J. BURKHARDT, Secretary to the Governor. MARCH 21, 1955.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 85 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of Which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 728, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Appendix

Address by Hon. George Bell Timmerman, Jr., Governor of South Carolina

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by the Governor of South Carolina, the Honorable George Bell Timmerman, to the Southern Regional Conference of Attorneys General, at Charleston, S. C., on April 1, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address by Hon. George Bell Timmerman, Jr., Governor of South Carolina, to the Southern Regional Conference of Attorneys General, Charleston, S. C.

South Carolina is honored to be your host. I am happy to welcome you. I congratulate you on your conference.

I am pleased that so many of you have brought your ladles to our ancient and lovely city of Charleston. They complement the charm of a community whose roots extend deep into the history of our civilization—a community whose charm has been world renown far longer than the United States has been a Nation.

To them I would like to be able to say that we have made our flowers blossom for you and our birds to sing in your honor. Unfortunately, an unseasonable freeze has destroyed many of our flowers and caused our birds to seek warmer weather. But it has not cooled our warm welcome.

To the men, dedicated to the profession of law, I remind you that you meet in a city and in a State, which has contributed brilliant men to the practice and development of our profession from colonial times.

A few blocks from this banquet hall is historic Broad Street, the law range of Charleston.

As you move west on Broad Street from the great concentration of law offices, you come to the Corner of Four Laws. It is so named because at this intersection stand St. Michael's Protestant Episcopal Church, representing the law of God; the city hall, representing municipal law; the county courthouse, representing State law; and the United States building, representing Federal law.

Moving west again you come to a marker at a fine old residence which was the home of John Rutledge in the 18th century.

John Rutledge, the lawyer, played an important role in his time. When the Colony of South Carolina declared her own independence from England 3 months before signing of the Declaration of Independence, it was John Rutledge who was chosen president of our republic. When the business of affirming independence from the British crown became a full-time job, John Rutledge was given the absolute powers of a wartime head of state.

His biographer reports that before joining in the signing of the Constitution of the United States, John Rutledge had written that document practically single-handed.

John Rutledge accepted a challenge. More important, he conquered it.

A great challenge faces the lawyer of today. It is the challenge to help preserve constitutional authority. It is the challenge to help protect the fundamental safeguards of a free people.

The task is not an easy one. Two diametrically opposite views are being tried in the court of public opinion. The verdict may determine the future character of our Government.

One view adheres to the fundamental principle that the meaning of our basic law does not change like the color of the chameleon—that it remains the same until changed by the orderly method provided for its amendment.

The other view advocates that the basic law means whatever the Government thinks it ought to mean.

This view finds expression sometimes in the executive branch, sometimes in the legislative branch, and more currently in the judicial branch.

Too often the inherent power of Government is mistaken for constitutional authority. There is a difference between the two. Authority comprehends the things that a government has the right to do. Power may extend to the things that a government has no right to do.

The abuse of authority is the use of power that exceeds authority. The police officer has power. When a prisoner is abused, the police officer uses his power, but he exceeds his authority.

Whether you live in Vermont or Virginia, or in any other State, your constitutional freedom is reduced every time the inherent power of Government is used to exceed its constitutional authority. The degree of reduction is proportionate to the degree of abuse.

Since the establishment of our Government, power has been used in excess of authority. Some abuses have been limited in scope. Many have been temporary. A few may have become enduring. These things are inherently the evil in all government.

The real danger is our acquiescence in the gradual extension of power beyond the scope of authority. Usually people in other locales have little concern about the abuse of authority so long as it immediately affects only others. It is this normal indifference that supports the evil of gradualism. It is by gradualism that successful inroads are being made into the rights and prerogatives of the States and their peoples.

The Constitution is not peculiar to our country. Every nation has a basic organic law or principles of government embodied in written documents or found in established institutions and customs. What is peculiar to the United States is the simple but essential fact that our people are the authors of their Constitution.

The people are the authority for its origin. The people are the authority for its continuance. The people are the authority for its amendment. It is this exclusive authorship that distinguishes our Nation for its government of the people, by the people, and for the people.

The Government did not establish the Constitution. The Constitution established the Government.

It is fundamental that the Constitution is designed to define and to limit governmental authority for the protection of the people. It is fundamental that the authority of the Government is derived solely from the Constitution. It is fundamental that the Government possesses no authority from any other source.

Every proposed change in our Constitution is within itself a proposed change in our existing form of government. The merits or demerits of proposed changes can only be evaluated properly when considered in the light of that simple truth.

The authority to change the Constitution encompasses the authority to destroy it, and ultimately the form of government. The authority to destroy by change can be safely reposed only in the hands of all of the people.

These things are basic and being basic are often ignored for the sake of expediency.

When our Founding Fathers wrote and adopted the charter of our freedom, they recognized the need for providing some orderly and representative means for making desirable changes.

The Constitution specifies the manner in which it may be amended by the people. It authorizes no other method of change. Twenty-two times, since the Constitution was adopted, it has been changed by the amendment of the people.

amendment of the people.

One of the world's better known women recently said: "No law is static. All laws respond to the development of the world and the nation."

That may be true in a very generous sense, but the philosophy that the Constitution must remain static unless the Government usurps the authority to change it is untrue in any sense.

Our Constitution is intended to be mobile to the degree that it can be amended, but solely by the people. A constitution that can be changed by the Government is responsive only to the Government.

The surest way to make our Constitution a meaningless, dead document is for the people to yield to the effort of Government to change it. If Government can change it to accomplish a purpose that you approve, Government can change it to accomplish a purpose that you do not approve.

There are a few lawyers who fail to recog-

There are a few lawyers who fail to recognize or deplore a willful breach of a written contract that can be performed.

We ought to be greatly concerned when the most famous of all contracts is broken. We should be primarily concerned when the Government is the party breaking that contract

The segment of persons who disapprove of the constitutional method of changing our basic law perhaps have found a quicker method. Perhaps they know that by legal means they might fail altegether to attain their end.

The system that they advocate is apparently easier for them at the present time, but completely unconstitutional.

To this group the fundamental law is not like the eternal truths—the same yesterday, today, and tomorrow. What a word meant when it was used is of no concern to them. Neither is the prescribed method of changing that word.

Should this philosophy be carried to its logical conclusion, there would be no reason for a written Constitution.

One of the great dangers to constitutional authority will be found in the abuse of judicial power. This danger is not limited to the compulsory social mixing of large numbers of two biologically different races during the formative years of their lives and against parental wishes.

But that is the problem that outside intermeddlers are forcing upon South Carolina. It particularly affects the Clarendon County School District involved in the school segregation cases, where school facilities for Negroes are the equal of those for white children. It is a vital problem to us because in that district there are in round figures 2,800 Negro pupils to only 250 white pupils.

But as great as that local problem is to us, it is involved in the greater issue that encompasses the Nation. That issue is whether the judiciary shall usurp the authority reserved to the people to change their Consti-

tution.

When abuses of the executive branch become known, the people can change the executive. When abuses of the legislative branch become known, the people can elect new

representatives.

No one realizes, better than you, the effectiveness of the public will in removing an elective official from public office in either the executive or legislative branch. When abuses of the judicial branch become known, the will of the public cannot act as effectively.

There is great danger in vesting absolute authority in one final appellate court far removed from the locus of many of the cases coming before it. Realizing this, our Founding Fathers made positive provision for curbing the scope of the appellate jurisdiction of the Supreme Court of the United States.

The Constitution in article III, section 2, authorizes the Congress to make such exceptions to the appellate jurisdiction as the Congress may deem wise.

The Congress could enact legislation curbing the appellate jurisdiction of the Court for the future protection of all citizens.

This the proponents of a judicial hiearchy oppose.

Already efforts are being made to amend the Constitution so as to strike from it this guaranty against judicial tyranny. The enemies of constitutional authority are resourceful people.

The Congress must share the responsibility for future judicial infringement on the prerogatives of the States and the people or it must accept the responsibility for maintaining constitutional government.

There is nothing sacred about the judiciary. It is composed of the same fallible men that compose our other branches of Govern-

When the Supreme Court of the United States was established, the total population of our Nation was about that of the present population of North Carolina. Today, our population exceeds 160 million.

Then, there were only 13 States, located along the Atlantic seaboard, all closely knit by a common heritage and mutual problems. Today, there are 48 States extending from the Atlantic to the Pacific and from Canada to Mexico. Two additional Territories actively seek statehood.

The local problems of the States are varied. Their people are basically different in their thinking, their traditions, their standards.

To expect 9 normally intelligent human being selected by 1 normally intelligent human being to exercise final judicial authority in a way that will render justice among so many people scattered over so large an area is almost, if not, wishful thinking.

To paraphrase a new and novel judicial expression, the clock cannot be turned back to 1776

The appellate jurisdiction has not kept pace with the development of our Nation.

It is inevitable under our present appellate system that the opinions of the Court will be varied and lacking in uniformity. is surprising that they are not more varied and more lacking in uniformity. It is reasonable to assume that they will become even more varied and more lacking in uniformity as the Court extends the doctrine that the Constitution means what the Court thinks it ought to mean.

To find a workable and politically acceptable appellate system that will be adequate to the increasing variety of interests and problems of a populous and sprawling Nation without destroying constitutional authority is one of the great problems of today. The present system dating as it does from the time of the oxcart and the wilderness is incapable of dispensing final organic justice because man is incapable of attaining all wisdom.

There is no lawyer in America who can advise a client with any degree of certainty in the field of constitutional law. That fact is an inescapable indictment of our present appellate judicial system.

Without asking for it, you were given a rich heritage of freedom. It came to you as easy money comes to some. Money that

comes easily, goes easily—and quickly.
Will that be the way of our heritage of freedom? Or will we recognize its priceless value, a value not to be regained once dissipated? If we recognize the value of our heritage, we shall work to preserve that heritage, so that we may give with pride to our posterity the guaranty of freedom that was given to us.

Excerpts From Address by Vice President Nixon Before American Association of School Administrators

> EXTENSION OF REMARKS OF

HON. FREDERICK G. PAYNE

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the address of the Vice President of the United States before the American Association of School Administrators at Cleveland, Ohio, on April 3, 1955.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Aggressive international communism prethe only threat to world peace. There will be no major war unless the Communist nations begin one.

How can we best deal with this threat? The guiding principle of our policy is peace without surrender. History shows that in dealing with dictators, a policy of weakness and concessions may bring a temporary truce in the short run. But in the

long run such a policy leads to war. We believe this is the policy which has the best chance to bring peace without sur-

Militarily and economically: Keep the United States and the free world stronger than any potential aggressors.

Diplomatically: On the one hand, firmness in which our will and determination to use our strength against aggression when it

occurs is made clear to the world. On the other hand, fairness and friendship in which we emphasize:

Our readiness to join with other nations in converting the power of the atom to peaceful uses.

Our willingness to participate in big power conferences when conditions are such that there would be a chance to reduce world

Our desire to explore every means of reducing the level of armaments, a determination which was made dramatically clear by the unprecedented appointment of Harold Stassen to Cabinet rank as assistant to the President for disarmament.

Some who question the wisdom of this policy have suggested that the United States should announce to the world at this time that certain named areas would not be defended by us if attacked. Apparently they believe such action would avoid war.

But a study of history casts grave doubt on this contention.

In January 1950 Secretary Acheson announced that Korea was outside the defense zone of the United States. Some may have breathed a sigh of relief at that time in the belief that there would be no war in Korea. But in June the Communists attacked and we had to go in unprepared.

It was just 17 years ago that we heard the cry, "Why die for Danzig?" No one died for Danzig then-millions died later.

History shows that surrender of territory in itself never satisfies an aggressor; it only

increases his appetite.

The possibility that surrender of territory demanded by an aggressor might remove the chance for war over that territory-now. must be weighed against the effect action would have in increasing the chance for a bigger war-later. This is the difficult decision which confronts the President, a decision which he correctly insists can and should be made only when we see the nature of the attack.

Of this much we can be sure. Where s dictatorial aggressor is involved the only way to eliminate all chance for war is to surrender completely. We believe that, if we are not to do that, the least chance for war and the best chance for peace will be created through following a policy of strength and firmness with the door always open to negotiation but never to appeasement.

There should always be open discussion and criticism of our policies because the decisions we eventually make must represent the very best thinking of the Nation. But this we should get straight at the outsetthere is no war party in America.

I know of no one in the House or Senate. Democrat or Republican, no one in the administration, no one of our top military

leaders, who wants war.

Anyone who charges that there is a war party in the United States is unfortunately feeding the Communist propaganda mill which has been grinding out this big lie and trying to peddle it around the world for years.

Let us advocate vigorously the policies we think are best designed to avoid war and obtain peace. But let us do so without questioning the motives of those who disagree with us. We may disagree on the means but we all agree on the end.

I have sat in the councils of the administration over 2 years. No two men could be better qualified and more dedicated for the task of finding peaceful solutions to world conflicts than President Eisenhower and Secretary Dulles.

They bring a wealth of diplomatic and military experience to their positions.

They have the judgment and temperament which comes from long participation in the making of great decisions.

The Nation can be sure that there will be no trigger-happy decisions as they lead the Nation during this period of world tension. Eightieth Birthday Anniversary of Former Senator Henry Fountain Ashurst, of Arizona

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13, 1955

Mr. WILEY. Mr. President, I was privileged to read a speech by a former Member of this august body, Henry Fountain Ashurst, which he delivered at a dinner tendered him by John Russell Rence, on the 80th anniversary of the Senator's birth.

I saw the Senator recently, and he was looking fit as a fiddle—his eye was keen, his step was firm, and his brain was working keenly and alertly. I remember so well when he was one with us in the Senate, how many a day was made brighter by his getting up just before the end of a session and giving us 5 or 10 minutes of beautiful English surrounding jeweled ideas.

I ask unanimous consent, therefore, that the text of Senator Ashurst's speech be printed in the Appendix of the Recogn

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY HENRY FOUNTAIN ASHURST AT A DINNER TENDERED TO HIM BY MR. JOHN RUSSELL RENCE ON THE 80TH ANNIVERSARY OF MR. ASHURST'S BIRTHDAY

When a man reaches the age of 80 years he should have learned many things; he should have learned to make peace with the Lord; with mankind, with himself and to make his will. When he reaches 80 years he has atoned, or tried to atone, for the wrongs he has committeed and has forgotten the wrongs, if any, against himself. As he grows old he probably grows better—not that he is so much inclined to forsake his sins but that his sins will forsake him. His ambitions are behind him; they are either achieved or are faded and diminished in importance.

He finds that life runs in a sort of cycle; he is born without teeth or hair and in old age he is usually bereft of teeth and hair. In early childhood days one's steps are short and uncertain—in old age one's strides will be short and uncertain. He has learned that as one grows old, one either develops the childish intolerance of hardened arteries or slides gracefully into a beautiful senility.

He has learned that fame and riches may take wings, but that cultural and spiritual resources abide with him. He has learned that happiness may not be captured as a general would capture a city or as a hunter would capture a wild beast; he has probably learned the lessons taught by the Prophets of ancient Palestine and the Sages of ancient Athens; that happiness always eludes those who seek it for themselves, alone, but wells up like a loving tide around those who seek to give happiness to others.

I would not have you to believe that I, myself, have learned all these beautiful things—I am far too young in spirit to have learned these lessons quite fully.

No words at my command can express my gratitude: gratitude to the Lord; to my country; to my brothers and my sister and to my friends. Few men through life have

so many loyal friends as I have. I have no children but my stepson; Mr. Renoe has for 50 years given me a love and a devotion seldom witnessed in this busy world. Many times when I could not see my way through, he has guided me.

I am grateful that my eye has not been dimmed; that I can still see the American flag; that I can still read great literature; that I can still see beautiful women; still see the brave red, royal-hearted rose; still see the violet—one of my favorite flowers—so becoming to me as it is the emblem of modesty and self-effacement; still see the golden wedges of a desert sunset and still see the splintered moonbeams glitter on the midnight snow-crust; grateful that I can still hear the multitudinous voices of the ocean; still hear the litany of the wind; still hear Beethoven, Mozart, Chopin's divine Polonaise and Good Night Irene.

I am of the opinion that all persons, whether rich or poor, have equal and equivalent measure of joy and sorrow, of pleasure and pain. It is well through life to cultivate the art of making flowers grow from the plowshare of sorrow. We do not expect those persons who sit in the shadow of a great sorrow to pour forth lyrical notes but they may cultivate the beautiful art of making grief a way of growth.

There is a lesson in the life of Edwin Booth, the great American actor. There suddenly one evening fell upon him without warn-ing, and without blame, the lightning-blast of disgrace, obloquy, abuse, contempt, poverty and blighted fame when his brother, John Wilkes Booth, assassinated the President. But Edwin Booth, with his manifold graces and virtues, with courage, with an agreeable disposition rose from his despised and repulsive condition and lived so good a lifea life so richly filled with the jewels of kindness and good deeds that he became one of the most beloved characters of his day. All the world admired the gallant way in which he struggled upward and onward and made pure, white lilies grow and float upon the dark, muddy stream of his brother's wasted life.

Youth should be prudent along with its boldness—for youth has much to lose; therefore, do not sow your wild oats in youth—you might live to reap the terrible harvest—sow your wild oats in your old age and you will not live till harvest time.

I do not need to be prudent—for me the voyage of life is nearly over and, although I have always been a landlubber. I shall act the part of a good seaman; steer my ship into a peaceful harbor, take down the tall masts, fold the wide and swelling canvas in preparation for the eternal anchorage and these things I do with a grateful and contented heart.

Plans of Bald Knob Christian Foundation Inc. for Erection of Giant Cross on Bald Knob Mountain, Ill.

EXTENSION OF REMARKS

HON, PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement relating to the plans of the Bald Knob Christian Foundation, Inc., for the erection of a cross in southern Illinois.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As a result of the tireless efforts of the men and women of the Bald Knob Christian Foundation, Inc., there is to be erected in Union County, Ill., a mammoth 500-foot cross, the world's largest, and dedicated to a greater unity of religious thought and effort. The location is near the population heart of the United States and the great cross is to be built atop Bald Knob Mountain, to be known as Mount Calvary, in southern Illinois. Illuminated at night, the great cross will be visible over an area of 7.500 miles spreading its important lesson of the importance of religion to each and all.

This huge cross with its connected building will be a shrine for all denominations of all religious beliefs. This is a magnificent undertaking embracing the greatness of all the concepts of the American way of life.

This undertaking is due to the unselfish work of C. Lester Biggs and Wayman Presley of Union County, Ill., Joined by the General Federation of Women's Clubs headed by Mrs. Theodore Chapman, Jerseyville, Ill., and Mrs. R. I. C. Prout. The General Federation of Women's Clubs with 5 million members throughout the United States is conducting a fund drive for funds aimed at raising \$3 million for the construction of the cross.

In proper recognition of this splendid monument dedicated to embrace and signify our freedom for religious belief and as a further recognition of the efforts of the American people to make this great shrine a reality, it is fitting and proper that we reflect upon the significance of this worthy effort and that as individuals we do everything that is proper to further it.

The Mandate of the Hoover Commission

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, during the past few months various reports have been submitted to the Congress by the Commission on Organization of the Executive Branch of the Government, popularly known as the Hoover Commission. Some criticism has developed because certain of the Commission's recommendations have concerned governmental policy, as well as economy and efficiency.

Under leave to extend my remarks, therefore, I am including certain editorial comments, which reveal that the Congress specifically intended that the Commission should make recommendations for substantive changes, as well as procedural and administrative improvements:

[From the New York Times of February 15, 1955]

IN THE NATION

(By Arthur Krock)

THE HOOVER GROUP MOVES TO BROADER GROUND

Washington, February 14.—The first report to Congress of the current Hoover Commission marks the fundamental difference between the function assigned to the original group and to this one. The Lodge-

Brown Act of 1947 directed a commission headed by former President Hoover to recommend better procedures and administrative practices in the Federal Government as it is. But the Brown-Ferguson Act of 1953 empowered a second such body, under the same chairmanship, to propose substantive changes. This it did today with its first set of proposals, among them one to separate politically appointed officials who make policy from a permanent career service for the administration of policy.

This difference in assignment was explained in a booklet prepared for the distributed by the Citizens Committee for the Hoover Report. The authors-Ray Harvey, Louis W. Koenig, and Albert Somit of New York University—stated it in this way: "If, for example, the first Commission had established a task force to study the operations of Army bakeries, that task force would have reported on the efficiency [of] . . . the program and would (possibly) have made recommendations designed [for improvement]. * * * A similar task force established by the new Hoover Commission can now go beyond • • and raise the more basic issue of whether some, or even all, of the Army bakery activities conflict or are competitive with those carried on by private enterprise * * * and conceivably recommend the abolition or sharp curtailment of almost any program on substantive grounds."

This new authority is derived from clause 5 of the Brown-Ferguson Act instructing the Commission to look into "eliminating nonessential services, functions and activities which are competitive with private enterprise," regardless of the efficiency with which they are being conducted. Hence, while the first Commission dealt largely with the organization patterns of each department and agency of the Government, the second is examining functions that are general in the Federal establishment. The findings will be released in about 20 reports before May 31, the group's terminal date fixed by Congress.

A MORE CONTROVERSIAL FUTURE

These papers will survey and make recommendations concerning such general, cross-governmental activities as the following: lending, procurement, budgeting, water resources, research and international intelligence. Since many recommendations will be for changes in policy, several are sure to enter a field of controversy new to the Commission. It is one thing to propose better procedure in Army bakeries—as the first Hoover group did. It is quite another to recommend the end of "political clearance" requirements for rural letter-carriers—as the Commission now has done.

But, despite the broadening of the original writ both groups have concentrated on economy and efficiency. A saving estimated at \$3 billion annually was implicit in the recommendations of the first Commission that Congress adopted, but these were quickly wiped out by the Korean war and inflation. It is the hope of the current group, Congress willing, to show the way to even more substantial economies. In proposing today a senior Civil Service of career employees, enlarging as well as giving permanency to these, the Commission noted that this and other personnel suggestions could reduce the annual costs of Federal employee turnover by about \$50 million a year,

The original Commission did very well in Congress, considering the fact that one of its targets was wasteful political patronage. It made 273 recommendations of which 196 have been partly or wholly legislated. And some of the proposals of that group are still going to the Capitol, an example being the suggested change in postal rates to cover the deficit of the Post Office Department.

The quality of the Hoover Commission reports reflects not only the distinction of

the Commissioners but that of members of the task forces as well. Dr. Harold W. Dodds, president of Princeton University, headed the group that made the study on which today's recommendations to Congress were based. And, while the Commission exercises final judgment on the conclusions of its task forces, it sends them along to Congress, whether or not endorsing them. An instance was provided today by a Dodds committee finding that was ignored but passed on by the Commission. This was that a group of distinguished citizens should at once make an inquiry into the Government's personnel security system. (To this the President also has turned a cold shoulder.)

How many careers does the work in hand make it for Herbert Hoover? The number depends on the compiler of the fabulous catalog. But it could be computed as seven; World premier mining engineer; savior of European children in the path of the First World War; Government business counselor as Secretary of Commerce; President of the United States; historian of his times; autobiographer; and now chief architect of Federal reforms.

[From the Washington Star of March 22, 1955]

EXPLORING FAR-BY MANDATE

The Hoover Commission is being accused of going too far afield in its latest report to Congress, covering Federal lending and insurance activities. Dissenting Commissioner CHET HOLIFIELD (there were a total of five dissents) complained in his minority report that the Commission was willing to roam far and wide in the field of public policy. He expressed doubt that Congress intended it to do so. It is true that the Commission has explored very extensively the broad field of Government lending and insurance, returning recommendations that are plainly controversial. But the madate which Congress gave the Commission was a very broad The Commission could have been accused of shirking its responsibilities if it arbitrarily had limited its inquiries.

Representative Hollfield correctly said that Congress reestablished the Hoover group "to study the present organization and operations of the executive departments and agencies, with a view to better management and economy." He added, however, that he does not believe Congress wanted advice on public policies of every sort. But Congress granted the group far wider authority than that given the first Hoover Commission. Whereas the original Commission could recommend only reorganizations and consolidations within or among the agencies, the present Commission was empowered to recommend, also, "abolishing services, activities, and functions not necessary to the efficient conduct of government" and "eliminating nonessential services, functions, and activities which are competitive with private enterprise."

The majority of the Commission was acting under this specific authority, therefore, when it recommended that some Federal lending agencies be brought into the private-enterprise system, that other agencies be mutualized along lines of mutual savings and insurance institutions, that hidden subsidies be disclosed to the public, and that these agencies generally be made self-supporting. Since aid to farmers, veterans, and other substantial and politically potent groups would be affected by the proposed reforms, Congress has been handed a hot potato by the Commission. But the bipartisan Hoover Commission has shown no reluctance to tackle politically explosive subjects in the past. It has gained prestige and public respect for that very reason. It would be refreshing if Congress showed comparable objectivity in considering the recommendations of the Commission.

Roosevelt and Yalta Controversy

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Hatred of Roosevelt Is Key to Yalta Controversy," which was published in the Sacramento (Calif.) Bee, and which was also published in the Modesto Bee and the Fresno Bee of California, on March 22, of this year.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HATRED OF ROOSEVELT IS KEY TO YALTA CONTROVERSY

Like scavenging hordes of little foxes, the haters of Franklin D. Roosevelt are digging in the boneyard of Yalta.

The release of the incomplete, already challenged records of the Yalta Conference has been leaped upon with smug indignation or ill-concealed delight, to degrade, belittle and deface the man who did as much as any single person to see America through both its worst domestic crisis and its greatest hour of peril.

The defamers of the dead are almost drooling over every action and word of Roosevelt which in their own extensive hindsight can be presented as a mistake.

Sooner or later their vindictive second guessing is bound to boomerang. The American people are not that stupid, not that petty, and not that ungrateful.

Had it not been for Roosevelt, Winston Churchill, yes and Josef Stalin, there might not have been a Yalta Conference. It might have been a Berlin conference presided over by Adolf Hitler and Benito Mussolini to which America, Britain, and Russia might have gone as defeated supplicants.

The bold and ridiculed goal of 50,000 American fighting planes set by Roosevelt, the lend-lease deal which kept Britain in the war, the long struggle back from Pearl Harbor, the unbelievable acceleration of American industry, the high level of national morale and the brilliant battlefield strategy all were in part contributions of Roosevelt to his Nation's victory and salvation.

Yet never since Abraham Lincoln has any American encountered such hatred and deprecation as that heaped upon Roosevelt. It is an unrelenting hatred which he incurred by the methods he employed to save the Nation from economic disaster just before he was called upon to shoulder the burdens of a World War. It is a hatred which does not have the best interest of the American people at heart.

To these detractors Roosevelt in death is a threat. It is necessary from their view to destroy even his image and reputation. To accomplish this end they cry imprecations against a voice which is silent; with eyes which have seen all that has happened these last 10 years they dam those eyes which, being mortal, could not foresee the precise future. And to make this cowardly hypocrisy supreme many who now denounce Roosevelt's efforts in Yalta to keep Russia in the war are the very ones who cheered loudest when he succeeded in doing just that.

The man who attended the Yalta Conference did not have long to live. He did not see V-day. He had led the Nation out of the pit of fear in the depression and done

much to invest it with sufficient strength to save the free world.

Certainly he deserves from all freemen a resolute resistance to the present nibbling of the scavengers. Deep in the heart of the hatred of Roosevelt is hatred of the people themselves. The affection the people held for Roosevelt is what the defamers really seek to destroy. Only disgust and indignation should greet their efforts.

Byrd Is Commended for His Consistency

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Byrd Is Commended for His Consistency," written by Frank R. Kent, which was published in the Washington Star of March 27, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BYRD IS COMMENDED FOR HIS CONSISTENCY— VIRGINIAN ALSO IS PRAISED FOR PERSONAL COURAGE

(By Frank R. Kent)

The more the record of S. nator HARRY F. BYRD, of Virginia, is studied the firmer becomes the conviction that in consistency and courage no one in public life is more outstanding and effective than he—exceedingly few his equal. He is a real national asset, a credit alike to his State and his country.

This may seem overpraise. Actually it is not. It has been true for many years, but what makes it appropriate to restate it now is the manner in which he has twice demonstrated these qualities in a single week. For example, few will dispute that had it not been for Senator Byan, President Eisenhower would have been defeated in his Senate fight to prevent the Democrats from enacting their \$20 handout tax bill. This would have maimed the administration's fiscal program, greatly accelerated inflation, and wrought considerable havoc with the national economy. Of course, four other Democrats, including Senator Robertson of Virginia, George, of Georgia, Holland, of Florida, and ELLENDER, of Louisiana, voted against their party's scheme, recognized as purely political. But few will dispute that it was Senator Byrn who struck the hardest blows and was most responsible for the Eisenhower Senate victory on March 16.

Of course, this greatly pleased the President and the Republicans generally. But if they reasoned it meant that Senator Byrn had become a thick-and-thin administration supporter, that he was a party bolter like the garrulous Senator Wayne Morse, of Oregon, then they were greatly mistaken. This was demonstrated when 2 days after he had voted on the tax issue Senator Byrn delivered a blistering indictment of the administration's vast road program.

At the end of the Senator's speech it was generally conceded he had crippled the administration's plan. His opposition was not because of hostility to the building of new and better roads to keep pace with changing times. Rather it is based on two things concerning which the Senator has very strong convictions, indeed. One is that the program would largely take away from the States control of the roads within their own

boundaries. The other is that its method of financing would involve a great waste of money and an inevitable increase in the national debt.

To these two things Senator Byen is unshakeably opposed. This was why he so strongly supported the President in his fight to prevent the Democrats from emasculating his tax proposals. For the same reasons he is opposing the President's road proposals. Now, the fact is that President Eisenhower and Senator Byrn are in accord on both these basic things. Equally they want to prevent the waste of Government money, they favor control by the States of their own internal affairs. In this matter the point is not as to which is right in his contention about the method of financing the roads. There is a plausible argument on both sides. The point here sought to be made is that Senator Byrn votes and talks the way he believes regardless of who is President or what the so-called "political angles."

In brief, he is a man of character and courage. There are, of course, others in Congress, but they are not many, and he is the outstanding one. His opposition to the Eisenhower road program after his essential support of the Eisenhower tax proposals recalls an incident in the 1930's when Mr. Roosevelt was President. One morning while the old AAA bill was pending in the Senate Senator Byrn got a call from the White House. "HARRY," a voice said, this is your old friend Franklin Roosevelt." "Yes, Mr. President," said Senator Bygg. "HARRY." said the President, "said Senator Bykn. Harry, said the President, "I want you to do me a great personal favor." "Anything I can I'll do, Mr. President," said Senator Bykn. "Well," said the President, "I hope you will vote for this agricultural bill which is com-ing up today." "Now. Mr. President," said Senator By.n. "I would be glad to do anything I could for you personally, but I just can't vote for that bill because I believe it is an unsound bill which violates the Constitution and would not benefit either the farmer or the country."

Without another word the President hung up. From that day to Mr. Roosevelt's death Senator Byrd was not invited to the White House in either his personal or official capacity. This rather amused Senator Byrd, but it was entirely typical of the small, vindictive spirit of Mr. Roosevelt toward those whom he was unable to charm or coerce into support. Perhaps it is worth mentioning that after this breach between the President and the Senator. Senator Byrd in 1940 was renominated in Virginia with no Democratic primary opposition and that the Republicans put up no candidate against him in the general election.

Report by Senator Smith, of Maine, on Trip to the Far East and Mediterranean Areas

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. PAYNE. Mr. President, during the congressional lull in late February and early March, my distinguished and able colleague, the senior Senator from Maine [Mrs. Smith] went on a trip entirely at her own expense through the Far East, and Mediterranean areas.

Upon her return she wrote a report on her observations for the Trunk, which is an excellent little newspaper published by the Maine Council of Young Republicans.

Senator Smith visited some 13 countries on her trip. She conferred with Generalissimo Chiang Kai-shek on Formosa; President Magsaysay in the Philipines; Prime Ministers U Nu in Burma, Nehru in India, Mohammed Ali in Pakistan, Nasser in Egypt, Menderes in Turkey, Scelba in Italy, and Chief of State Franco in Spain. But in her traditionally thorough way, Senator Smith did not merely talk with the leaders in the countries she visited; she also talked with average citizens in the villages and countryside.

In order that all Members of Congress may have an opportunity to read Senator SMITH'S interesting and enlightening summary report on her trip which appeared in the April 7, 1955, issue of the Trunk, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[From the Trunk of April 7, 1955]
REPORT ON RECENT TRIP ABROAD
(By Senator Margaret Chase Smith)

Recently I returned from an extensive trip overseas for which Communist Russia attacked me calling me an Amazon warmonger hiding behind a rose. The length of it in miles was approximately 30,000 miles. The length of it in time was 4 weeks. It was not at taxpayers' expense as the Government did not pay for a penny of it but rather I paid for it out of my own personal funds. During a goodly portion of the time that I was gone the Senate was in an undeclared recess with the understanding that no important business would be taken up so that Republicans could speak at Lincoln dinners and Democrats could speak at Jefferson-Jackson dinners.

VISITS CHIANG, HORACE HILDRETH

It was a person-seeing trip and not a sightseeing trip since there wasn't enough time to do leisurely sightseeing. The places that I went to were Japan, Formosa, Philippines, Vietnam, Hong Kong, Thailand, Burma, India, Pakistan, Egypt, Turkey, Greece, Italy, and Spain. Some of the national leaders I had conferences with were Chief Justice Tanaka of Japan; Generalissimo and Madame Chiang Kai-shek in Formosa, where I also inspected the Chinese Nationalist troops; President Magsaysay in the Philippines, where I also addressed the Philippine Senate; Prime Minister Diem in Saigon, Indochina, where I also went to refugee camps out in the country and where I also conferred with Gen. Lawton Collins; the Acting British Governor General in Hong Kong; Foreign Minister Prince Wan in Thailand, where I also visited schools in the country; Prime Minister U Nu in Burma; Prime Minister Nehru and Vice President Radhakrishnan in India, where I also visited in small country communities with Indian natives; Prime Minister Mohammed Ali in Pakistan, where I visited Horace and Katherine Hildreth and where Horace is doing a magnificent job; Prime Minister Nasser in Egypt; Prime Minister Menderes in Turkey, where I also visited small Turkish country villages and schools; Prime Minister Scelba in Italy; and Chief of State Franco in Spain.

TRIP PARTIALLY TELEVISED

Because I felt that I could share some of the experiences of interviews on my trip with millions of Americans, I agreed to give permission to have some of the conferences recorded for later showing on television. While none of these were shown in Maine, I have been informed that the kinescopes have been made available free of charge to all Maine TV stations desiring them.

TALKED WITH LITTLE PEOPLE

But I didn't talk only to the leaders, went into the villages and talked with the little people as well. I talked with them to learn their feelings and their problems. I told them of the desire of America and Americans to be their friends-of how we wanted them to be free and remain free from Communist slavery. I told them how we lived. I told them about our wonderful State of It is a great source of satisfaction to me that all the embassies of the countries I visited have reported that I served the interest of our country well and that my visits produced desired results.

UNITED STATES PRESTIGE GOING UP

I am glad to report that the prestige of the United States abroad is not on the wane. It may have been a year or two ago but not now. To the contrary, the prestige of the United States abroad is going up very much. I think that this is largely because President Eisenhower in the last few months has begun to exercise real leadership.

SEES CHANGES

I saw a difference in reaction on this abroad between the time of my trip last October when repeatedly people said to me that they wished President Eisenhower would give the world more vigorous leadership and that they were almost hungry for him to do so and that they would quickly follow.

In my trip last month, I found that this attitude had changed. People in the various countries are inspired by the manner in which President Eisenhower has been asserting world leadership. It has done much to build up their courage against resisting the threat of communism.

COMMUNIST FALLACY SEEN

There is growing realization in Asian countries that communism is nothing less than Russian colonialism or Russian imperialism-something far different from the past colonialism they seek to throw off. For example, many of the people of northern Vietnam who took the side of the Communists now say with bitter disappointment and disillusionment, "The Communists promised to give us the land and they didbut it hasn't done us any good because they take everything we produce from the land away from us.'

ANTI-AMERICANISM IN JAPAN

There has been some talk and some reports about anti-Americanism in Japan and that it is growing. But let's be realistic about that. It is a natural feeling on the part of a nation that is in the transition stage between coming out of being occupied by a foreign conqueror to returning to national independence.

Our Army commander, General Hull, in that area, explained it to me this way. said that it was really a pro-Japanese feeling that sometimes evidenced itself in political criticism against our occupation troops and that it was not really anti-Americanism. He pointed out that the Japanese admire and respect us-because they found we could do things better-we defeated them and while they may resent the defeat they nevertheless respect us for our victory.

He further pointed out that Japan has a traditional hate for and fear of Russia-that history shows repeated warfare between Japan and Russia—and that as between the United States and Russia, we can depend upon Japan to fight very strongly on our

MEDITERRANEAN STRENGTH

At the present our position in the Mediterranean is very strong-particularly on the ends of the Mediterranean with Spain on the west and Turkey on the east being our most loyal allies. And it is getting better in the long last joined the Western European Pact. Of course, we have strength in our good ally Greece.

WEAK SPOTS

Our weak spots are Yugoslavia and north Yugoslavia has a strange form of communism supposedly independent from Russia. One weakness in north Africa stems from the continuing conflict between Israel and Egypt. Egypt has considerable distrust Another weakness in north Africa is the rebellion against French colonialism. It is similar to the problem in Indochina.

All in all I came back from the trip very encouraged. I was surprised by the warm feeling and friendship shown me by the little people as well as the leaders in every country that I visited. In spite of the gloomy reports I had read and heard, I found that America and Americans are far better liked and respected in these foreign countries than I think we realize.

WE ARE GAINING

There is no question but that we are gaining ground against communism. We may be gaining ground slowly but we must remember that Asia is going through a most critical period of readjustment as people shift from past colonialism to future independence and self-reliance. In going through such a transition, the nations of Asia are suffering from growing pains.

One of the overall impressions I gained from the trip is that we should act more from confidence in our country and less from fear of Russia. I believe we must start charting our course on the basis that we are not going to let Russia scare us any more—that we are plenty capable of taking care of ourselves-and that we must strive for positive construction instead of fear-minded, negative defensiveness.

TRIP BENEFICIAL

Perhaps the most beneficial result of the trip to me and the good people of Maine whom I represent is that it gave me first hand, personal information which wil make me better able to pass on important legislation involving foreign relations and na-tional security—to pass on the many billions of dollars of appropriations for military and economic aid programs in my capacity as a member of the Senate Appropriations Committee and the Senate Armed Services Committee.

The Late Harold R. Beckley

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. JOHNSON of Texas. Mr. President, among those who are close to the Senate, the passing of Harold R. Beckley, superintendent of the Press Gallery, meant the loss of a member of the family. He was a faithful and devoted friend and counsellor to Senators, correspondents, and Senate officials for nearly three decades.

I ask unanimous consent to have printed in the Appendix of the RECORD a resolution approved by the standing committee of correspondents and a tribute paid to Mr. Beckley by Dr. Frederick Brown Harris, Chaplain of the

There being no objection, the resolution and tribute were ordered to be printed in the RECORD, as follows:

middle now that France and Italy have at RESOLUTION ADOPTED BY THE STANDING COM-MITTEE OF CORRESPONDENTS

Whereas in the untimely death of Harold R. Beckley, after 29 years of devoted service as Assistant and Superintendent of the Senate Press Gallery, the Washington correspondents have lost a warm companion and coworker; and

Whereas Harold R. Beckley, during his faithful and valuable service in the Senate Press Gallery, won the high respect of members of the press and public officials: Therefore be it

Resolved, That the standing committee of correspondents on behalf of the members of the press galleries express to the family of Harold R. Beckley their deep sorrow at the passing of a beloved and outstanding asso-

TRIBUTE TO HAROLD R. BECKLEY, SUPERINTEND-ENT OF THE SENATE PRESS GALLERY, FRIDAY, APRIL 1, 1955, AT FUNERAL SERVICE, BY DR. FREDERICK BROWN HARRIS, CHAPLAIN OF THE UNITED STATES SENATE

We have come at this hour to bring our tender tribute to one now gone from our side and sight, who across fruitful years lived in his house by the side of the road and was a friend to man.

We remember gratefully those fragrant virtues of the spirit which made his life as the garden of the Lord. His gentleness made him great. We think of this comrade beloved as one who wore always the white flower of a blameless life. In all his rela-tionships with his fellow men he kept his honor bright and his integrity unsullied. His words, his deeds, his motives, and his dealings with a great company he constantly touched were as white as the dome under which his busy and useful years of national service were spent.

He regarded his relationship to those who are the channels of the day's happenings to the waiting millions as a sacred trust and task, to be administered with patience, diligence, fairness, painstaking care, and understanding. Now that his sun has gone down while it is yet day we bear witness to those high, personal qualities which made him utterly dependable. For him promises were made to be kept; appraisals based on facts, and never on personal prejudice. With the strictest standards of work and ethics, nevertheless kindness and thoughtfulness of others was the law of his behavior.

His little, nameless deeds of loving kindness bound him as with bands of steel to the souls of a great company who appreciated his worth and cherished his friendship.

And now that he has come so suddenly to the end of his earthly Journey, we think of him as one who could walk with kings nor lose the common touch; as one who, in the school of life, as a good workman had learned "to think without confusion clearly, to love his fellow man sincerely; to act from honest motives purely, and to trust in God and heaven securely."

Burley Tobacco Program

EXTENSION OF REMARKS OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. CLEMENTS. Mr. President, on March 31 the President signed into law H. R. 4951, to redetermine the 1955 burley tobacco marketing quotas and for other purposes, thus becoming Public Law 21 of the 84th Congress.

My colleagues will recall that during the debate of this measure on the Senate floor the day prior to its approval by the President it was brought out that increased yields over the past several years and the production of excess tobacco had brought the burley tobacco program to a point where drastic reductions would be required if the program were to survive. Through this legislation, which was advocated by the growers and the farm organizations in the tobacco areas, a referendum will be held on April 28, at which time the growers will have the opportunity to accept or decline an additional reduction in their quota for this year. Not only does the legislation authorize a reduction in the 1955 crop, it also revises several compliance features designed to strengthen the program, and includes an increase in the penalty on the marketing of excess tobacco from 50 to 75 percent.

By unanimous consent, I should like to place in the Appendix of the Record an editorial appearing in the Cynthiana Democrat on April 7, 1955, in which this legislation is discussed, for I believe it represents the thinking of those in the Commonwealth of Kentucky concerned with the future of the tobacco industry.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONTROL IS THE ONLY SOLUTION

The Secretary of Agriculture has been authorized to reduce marketing quotas on burley tobacco for 1955, with the cut limited to 15 percent in addition to the 10-percent slash ordered last fall by the Secretary.

Some persons already have formed an opinion that, if the new cut is not approved, the program will revert to the 10-percent cut. Under terms of the law, two-thirds of the growers must approve of the cuts in a referendum to be voted this month or there will be no burley support program at all for this year, and consequently no controls whatsoever.

This legislation was designed only to bring production more in line with demand. Its necessity was brought about by overproduction of the commodity which had resulted in a stockpile crisis forcing that such action be taken if this segment of the agricultural economy is to survive.

Those farmers who have lived through the bitter experience of offering their tobacco on an open market without controls and a Government support program know full well what to expect for their crop under such conditions. They have only to compare their average of last year with those of any year when the controls were not in effect to arrive at a reasonable conclusion.

The only way that farmers of the tobacco-producing sections have any measure of assurance of preventing overproduction is to accept the cuts which have been proposed when they are given the opportunity to vote on the referendum. We doubt that the farmers of Harrison County and the rest of those in the burley-growing business would strengthen their economy by doing otherwise. The question they should ask of them-

The question they should ask of themselves before going to the polls to vote on the forthcoming question is:

"How many of the things can I buy that I want if tobacco drops to 10 cents a pound?"

None likes to see his potential earning capacity reduced by 25 percent, but what assurance is given that if production continues in line with the past that the reduction will not be even greater?

Statistics show that a higher quality product, even in limited quantities, can always command a better price than those of inferior quality produced in volume.

The seriousness of the burley producer's problem is apparent to all persons having

any connection either directly or indirectly with the tobacco industry. The ultimate choice is up to the farmer. All are hopeful that he chooses well.

Representative Edith Green, of Oregon

EXTENSION OF REMARKS

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13, 1955

Mr. NEUBERGER. Mr. President, Representative Edith Green, from Oregon's Third Congressional District, is perhaps one of the busiest Oregonians in our Nation's Capital.

Representative EDITH GREEN represents the finest tradition of women occupying high public office.

It is with a great deal of pleasure that I ask unanimous consent to have printed in the Appendix of the RECORD an informative article about Mrs. GREEN by Ann Sullivan, from the columns of the Oregonian for April 8, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPRESENTATIVE GREEN FINDS CAPITAL JOB GRILLING, ANTICIPATES SUMMER

(By Ann Sullivan)

One of the busiest Oregonians in Washington is Congressman EDITH GREEN, the brighteyed Portland Democrat who swept into office last November.

Home for the first time this week to participate in the Hells Canyon Senate hearings and to do a little congressional snooping for her own, she's easily 15 pounds lighter than when she left for Washington. Blame the rigors of 16-hour days, the opening of a new Congress and Edith's own conscientiousness.

She hasn't had time for any Washington sightseeing, though son Dick, 13, and his father. Arthur, have done a lot of it. She spends her traveling hours pretty much in the 10-minute subway walk between the old congressional office building and the House of Representatives.

The Greens live at the new 4200 Cathedral (named for its address) apartment house, where they have a good-sized living room, dining room, kitchen, and two bedrooms. They found that so far they do considerable eating out because of the social and work demands. A cleaning person comes in three times a week to help with housework.

DICK MISSES FRIENDS

Dick is in the seventh grade at Alice Deal Junior High School, a public school. He misses his Portland friends but is looking forward to being here for the 3 months of the summer vacation. He will return then with his father, who will tend to some business. Mrs. Green will join them when Congress adjourns, probably about August 1. They expect to stay with Mrs. Green's mother. Mrs. Julia Starrett, 5615 Southeast 80th Avenue.

Wistfully, Mrs. Green remembers that Oregon summers are so delightful and Washington is so hot. But, between then and now comes a lot of work to keep the browneyed, graying solon right busy. Thus goes a typical day:

She gets up at 6:30 a.m., and unless she had one of many breakfast meetings scheduled, will breakfast with her family before dressing. That's usually orange juice and several cups of black coffee coupled with a variation of eggs or meat. She skims two papers, the Washington Post and the New York Times.

BLUE, BLACK PAVORED

Usually she wears conservative suits to her office, most frequently blue or black. She takes the family car, a 1955 green De Soto sedan, from the apartment house garage, and drives it to the office, often getting to her office at 8 or 8:30 and at least by 9.

The driving takes 10 minutes, unless during rush hours, and she has no trouble parking, for there are spaces reserved for congressional Members.

Her office is room 312 on the third floor of the old congressional office building, looks over a courtyard. It has two high-ceilinged, spacious rooms, one of which is occupied by a staff of three and the other by Mrs. Green.

The inner office has a green carpet, black leather overstuffed furniture, including chairs and a davenport, a desk, bookcases, and other chairs.

OREGON ARIA RETAINED

Prominent on the walls are pictures of Oregon scenery, which she had sent out from Photo Art studios, about a dozen in all. Some of them hang on the walls of her apartment and some in the office. From her desk she can see one of Mount Hood, another of the city of Portland with Mount Hood in the background and a third of the St. Johns Bridge.

First order of business is looking over the mail, which sometimes runs to 100 letters or more a day. All are answered.

Soon after 9, people started dropping in, including frequent visitors from Oregon.

She dictates from 9 to 10 a.m., then marches off to a daily 10 a.m. committee meeting. She is on two, the Interior and Insular Committee and the Education and Labor Committee. The latter usually meets in her building, and other in the new congressional office building.

GAVEL FALLS AT NOON

At noon the House convenes, and it takes her 10 minutes to walk there through the subway. During Iull in activities she usually lunches either in the congressional Members' dining room a floor below or another Members' dining room where they can take guests.

There are also several snack bars and a cafeteria available.

From all these congressional Members can be called, 1 bell for teller vote, 2 for aye-andnay vote; 3 for a quorum call, and 4 for adtournment.

MORE STUDY FOLLOWS

After adjournment, Mrs. Green goes back to her office, studies, and reads bills and background material, sees people, and works on legislation.

What time she goes home depends on the amount of work. Sometimes her family will join her for dinner at the Congressional Hotel, and she will go back to the office afterward. Some of her work she'll take home.

"I don't think I've ever yet gone home without work to take with me."

Even on Sundays on the way home from Westmoreland Congregational Church, she usually stops at the office to look at her mail. Saturdays she's always there.

"I've never spent so many hours on a job in my life," she explains seriously.

SOCIAL DUTIES CONTINUE

Social obligations, particularly heavy the first few weeks, are still demanding, but she remembers most vividly the pleasant congressional reception and luncheon at the White House. She even recalls what they ate, which was pheasant, wild rice, broccoli, consomme, a tossed salad, and peach ice.

She's most proud of a real honor given her, election to the presidency of the Democratic 84th Club, which is composed of all the new Democratic Members of the House. They meet once a week for breakfast.

"I spend lots of time sitting in chairs, you see."

Results of Questionnaire Mailed to Iowa

EXTENSION OF REMARKS

HON, THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a tabulation of the votes I have received from the State of Iowa in response to my annual questionnaire.

On March 1, I mailed 42,561 questionnaires to the people of Iowa. I have distributed similar questionnaires in the First Congressional District of Iowa during the past 5 years but this is my first statewide distribution.

The only statement accompanying the questionnaire was a letter printed thereon as follows:

MARCH 1, 1955.

DEAR FRIEND: The following questions are based primarily on the budget report, economic report, President Elsenhower's message to the first session of the 84th Congress on the state of the Union, and his special messages to Congress. I am sending this questionnaire to every 20th householder of Iowa—both town and country. (I have used rural directories for each county, and all city directories. For towns without householder directories, I have used every telephone directory obtainable.)

In order to help us tabulate the returns, please check your answers but do not add any comments on this side. Use the back of this sheet for your comments if you wish. Your individual opinions will be kept strictly confidential.

I am also distributing yellow sample copies to other persons for their information regarding the poll we are taking. These yel-

garding the poll we are taking. These yellow copies will not be tabulated but replies to them will be highly valued by me.

This questionnaire gives Iowa householders the opportunity to join together without regard to party affiliation in stating their views on the Issues covered in the questionnaire. I plan to summarize and present to Congress the returns received during the next 4 weeks. Undoubtedly Congress will consider this summary as the prevailing view of Iowa on these issues. Later on I will send a copy of my report to each person to whom questionnaires and sample copies have been mailed. I hope my report will be of interest.

We have received a total of 6,599 replies which are included in the tabulation. This return of 15.5 percent is unusually high for this type of poll, and I am deeply grateful to the people of Iowa for their generous response.

The occupations listed by those replying were as follows:

mig were as ronows.	
Farmer	2,373
Labor	1,223
Business	745
Professional	691
White collar	885
Miscellaneous	682

Yellow sample copies were distributed freely and we received 6,119 sample-copy replies which are not included in our tabulation

Both yellow and white ballots brought us hundreds of good discussions on many

of the issues of special interest. These special discussions are of utmost value to us.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

MY DUTY AS A MEMBER OF CONGRESS

Mr. MARTIN of Iowa. Mr. President, each year I have received several inquiries regarding the purpose and use made of my questionnaire. The source and substance of the questionnaire grew out of my analysis of the President's reports and messages to Congress, and I developed my method of distribution of it after consultation with Dr. George Gallup. The purpose of the questionnaire is best described in the words of

Edmund Burke, 18th-century British statesman, as follows:

Certainly, gentlemen, it ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinions high respect; their business unremitting attention. It is his duty to sacrifice his repose, his pleasure, his satisfactions, to theirs—and above all, ever, and

in all cases, to prefer their interest to his own.

But a representative's unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to any man, or to any set of men living. These he does not derive from your pleasure—no, nor from the law and the Constitution. They are a trust from providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion.

The Offshore Entanglement

EXTENSION OF REMARKS

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD what I regard as one of the most able analyses of the Asiatic problem which has been written since January 29, when we passed, in the form of Public Law 4, the extraordinary authorization requested by the President of the United States. The article to which I refer was written by Walter Lippmann, and was published in the Washington Post of April 12. The title of the article is "The Offshore Entanglement." In my opinion Mr. Lippmann has in this article set forth an unanswerable argument in opposition to the administration's present foreign policy in relation to Quemoy and the Matsus.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
THE OFFSHORE ENTANGLEMENT

In the 2 months that have passed since Congress voted the Formosa resolution, the President has been hearing an increasingly heavy burden of responsibility. It has been a strange development especially for him, so sincerely convinced a believer that personal government is undesirable and that Congress should participate with the Executive in the great decisions of war and peace.

The Formosa resolution has left it to him to decide whether to defend the offshore islands at the risk of a general war. This is an extreme delegation of authority. President Eisenhower must determine not only whether war is justified because a known and established vital interest of the United States has been violated. President has that power and that responsibility. He must determine whether or not, and in what degree, there is an American interest in these offshore islands. has left the decision entirely to him. There is no treaty obligation, there is no principle of law, which establishes an American interest in these islands. The President and Congress have not agreed upon any clear and definite juridical, strategic, or political standard to guide the Chief Executive in making the greatest decision that he can be called upon to make.

Ever since the vote in Congress, the President has been under pressure from all quarters to make a decision one way or the other. This he has thus far refused to do. Lacking a definite principle and a policy to guide him, it has seemed better to wait and see whether Peipiag does anything which, when it is already happening, the President then judges in the heat of the crisis to be vitally related to the defense of Formosa. Amidst all the uncertainties and pressures which converge upon the White House, it has seemed better not to make a decision and not to risk the displeasure of those who would not like the decision.

Yet this is an unsound position for the Chief Executive: that without public criteria known in advance, he must decide for peace or war after the confusion of war has begun. Can it truly be argued that it is good policy

to make the Chinese guess how President Eisenhower will guess if they attack the islands? And in any event, the policy of not choosing a policy until the adversary has precipitated a crisis is an invitation to Peiping to proceed in such ways as will cause the most division and confusion in this country, in Formosa, among our allies, and in the uncommitted Asian countries.

It is never safe to assume that your adversary is a fool. And therefore it is not safe to assume that the Red Chinese will take such obvious military actions that it will be easy for the President to make a decision that will unite the country and rally its allies. There are, as anyone who has been reading the papers knows, ways of attacking these offshore islands which would not be "recognizable," to use the words of the President's message, "as parts of, or definite preliminaries to, an attack against the main positions of Formosa and the Pescadores."

Our problem is how to extricate the President and the country from this predicament. When the President was persuaded in January, perhaps against his better judgment, to accept personal responsibility for the offshore islands, two things were hoped for. One was that an overwhelming vote by Congress would deter the Red Chinese from any serious military action in the Formosa Strait. The other hope was that a truce could be negotiated in which the offshore islands would be used as an important bargaining point.

As to the first hope, experience has shown, I believe, that even if the Red Chinese are deterred from an open full-scale assault, they have been given a strong incentive to proceed by the other means—just short of open conventional war—which are available to them. But it is on the second point, on the hope of negotiating a ceasefire, that our knowledge now is most definite. We know, I believe, that a ceasefire cannot be had by the negotiation of a public agreement signed by all the interested parties.

A cease-fire by negotiation cannot be had because neither the Chinese government in Peiping nor the Chinese Government in Formosa can sign such a document. For they would be agreeing to end the civil war by a partition of Chinese territory. Chiang would be renouncing his claim to be the head of the rightful government of China; Mao Tse-Tung would be renouncing his claim to be the head of the legitimate government of China. Peiping cannot be expected to sign such a renunciation. And we would have the greatest difficulty in persuading Chiang to sign it.

Since a truce in the Formosa Strait cannot be had by agreement between the two Chinese governments, the best chance of preventing a dangerous war is to cut the Gordian to establish the cease-fire by an ac-Knot: tion of our own. We have the power to do that. It is not often that one nation has power of that kind. But in the Formosa Strait we have it. For all practical purposes, and over a considerable period of time at least, a military cease-fire would exist if the Nationalist forces were brought back to Formosa, if their naval and air raids, which are mere pin-pricks, were discontinued, and our position in the Formosa area were made to conform to the law as laid down in our treaty with Nationalist China. This treaty provides for the defense of Formosa and the Pescadores. It was ratified with explicit assurance to our people that it calls for no American participation in the Chinese civil

This would be solid ground for the United States to stand upon. We would then be within our certain military capacities. Our stand would be in accord with our national interests. It would be acceptable, or better than that, to our allies. And last but by no means least, the ground on which we stood would be lawful ground.

The only known objection to such a forthright policy is that a decision to evacuate the offshore islands will shake the morale and perhaps the allegiance of the Chinese forces and Chinese officials in Formosa. Though there are countermeasures which can be taken to reduce this risk, we must assume that it is a genuine risk.

But let us ask ourselves whether there is any other policy which will eliminate this risk—the risk of internal subversion and of defection. Our present policy of keeping everyone guessing and in suspense is hardly likely to keep morale high anywhere, and least of all in Formosa. How must the Chinese from the mainland, threatened with attack on the islands where Chiang has committed so many of his troops, feel when they are told that after they are under attack, the President will decide whether to support them or to let them be overwhelmed? It is not a pleasant fix to leave them in.

But suppose, then, that the President comes down off the fence and declared that these islands will be defended. How long would morale be kept high in Formosa? The answer, I submit, is that it will be kept high a little longer, but only as long as it looks possible that in defending these islands the United States will become involved in a general war to overthrow the Red government in Peiping.

For the only reason these islands are so important to the morale of the Nationalists in Formosa is that they raise the hope that the United States will become involved in a general war—in a general war which will restore Chiang and his followers to power on the mainland. The islands are of no strategic importance to the defense of Formosa or to the personal security of the Chinese in Formosa. It is not their "defense" which makes these islands so important. It is that they are the last best chance of entangling the United States in the unfinished civil war. That is the bitter truth about what is called, quite unequivocally, the defense of the offshore islands.

It is the paramount interest of the United States that whenever we must fight a war we shall fight it for the legitimate and clearly defined interests of the United States—and not because we have become entangled and cannot muster the moral courage to disentangle ourselves.

Yalta Dud

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Yalta Dud," which was published in the Washington Evening Star of April 6, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YALTA DUD

There is a high probability that Senator GEORGE is right in saying that the bombshell which some Republicans are trying to manufacture from the Yalta papers will turn out to be a political dud.

Senator Goldwater, who heads the Republican Senatorial Campaign Committee, thinks highly of a document prepared by the GOP, presumably based on material in the Yalta papers. "This," Senator Golds

WATER says, "will show the American people that they shouldn't return a party to power which engaged in such a sellout."

Why? If the Republican version of Yalta is accepted at face value, it was Franklin Roosevelt, not the Democratic Party, who was guilty of the sellout. But Mr. Roosevelt has been dead for 10 years. Is the Democratic Party disqualified for office in 1956 because of something allegedly done by one man a decade or more ago? If this would be the case in 1956, when could the party redeem itself? Never?

These points serve to deflate the substance of Senator Goldwater's claim, and also to support the view that Senator George is on firm ground in saying the Yalta contrivance will prove to be a political dud. The American voter can be bamboozled. But it is not quite as easy as the Yalta-minded Repub-

licans seem to think.

Benjamin A. Tober

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record an editorial appearing in the March 24 edition of the Portsmouth Herald, together with an article appearing in the March 23 edition of the same paper, in Portsmouth, N. H., relative to the late Benjamin A. Tober, a distinguished citizen of my State and one of our civic leaders, who died recently.

There being no objection, the editorial and news article were ordered to be printed in the Record, as follows:

BENJAMIN A. TOBER

At times, it is so hard to be understanding—so hard to continue our religious beliefs and the things taught us in childhood. The decisions of our Almighty God should be above question. Yet, many times we do question and wonder.

In the death of Benjamin A. Tober, the men and women not only of our community but also of the entire State of New Hampshire have lost an active, sincere, conscientious worker for all that is good for all.

Ben gave so much of himself in so many ways for civic, community, religious and business ideals. A man more active at his age will be hard to find.

In the prime of life, with so many years ahead for continued service to his community and mankind, Ben has been called—we try to believe for a greater service beyond

our comprehension. This must be God's will. It is the firm conviction of The Portsmouth Herald that our entire community has suffered a great loss. Mere words are inadequate as comfort to his family, his friends and the community in general.

We can only say, "We'll all miss you, Ben."

BENJAMIN A. TOBER, BUSINESSMAN, DIES

Benjamin A. Tober, 40, of 707 South Street, prominent in local and State Jewish community affairs and a former president of the New Hampshire Council of Retail Merchants, died today at Elliott Memorial Hospital, in Manchester.

He was taken ill Thursday while in Manchester on business and death was believed due to a heart attack. Born in Dorchester, Mass., on January 4, 1914, he was the son of Mr. and Mrs. Louis Tober, of 308 Broad Street. He attended local schools and was graduated from Portsmouth High School in 1932, and from Boston University's College of Business Administration in 1936.

A leader for several years in the Portsmouth Jewish community, Mr. Tober was serving on the board of directors of Temple Israel. He had served two terms as president of the Portsmouth Zionist District and in 1945 was elected president of the New Hampshire Zionist Federation.

In 1944, he was honored by the Jewish Advocate, a Jewish newspaper in Boston, as one of the outstanding figures in New England.

Among the positions he had held were vice chairman of the New England Zionist Emergency Council, as representative for New Hampshire, member of the executive committee of the New England Zionist region, member of the executive committee of the New England Jewish national fund, New England zone chairman of the United Jewish Appeal, member of the Portsmouth Zionist Youth Commission, secretary of the Portsmouth Jewish welfare board committee, secretary of the Portsmouth Hebrew School, member of the United Jewish Appeal Committee of Portsmouth, and the national committee for the United Palestine Appeal,

Also Mr. Tober served for several years as chairman of the Portsmouth Recreation Commission, resigning 2 years ago, when advised by doctors to give up outside activities.

A staunch proponent of the Portsmouth Air Force Base, Mr. Tober was instrumental in organizing the Air Base Defenders, which fought off attacks aimed at cancelling the installation here. He was among the group of Portsmouth area businessmen and civic leaders who went to Washington, D. C., to plead for the reactivation of plans for the base here when canceled unexpectedly earlier in 1953.

He was a member of the finance and program committee for the ground-breaking ceremony held at the air base last July 4.

A past chairman of the chamber of commerce's retail board and a member of the chamber's board of directors, Mr. Tober was elected head of the State's council of retail merchants in 1951.

merchants in 1951.

He was also a member of the Portsmouth Country Club and the Rotary Club.

Besides his parents he is survived by his wife, Mrs. Lee Tober; two sons, Stephen, 5, and Robert, 14; three brothers, David Tober, of Portsmouth; Irving Tober, of Manchester; and Dr. Edward Tober on the staff of Mount Sinai Hospital in New York City.

The Gottesman Collection of Dead Sea Scrolls

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. LEHMAN. Mr. President, on March 16, 1955, Mr. D. Samuel Gottesman, an eminent citizen of my State, was honored at a reception given him at the Embassy of Israel. On that occasion His Excellency Ambassador Abbaseban and the noted scholar, Prof. William Albright, paid tribute to Mr. Gottesman in connection with his donation to the people of Israel of four

highly treasured Biblical scrolls of great antiquity.

I ask unanimous consent that the remarks of Ambassador Eban and of Professor Albright and the response of Mr. Gottesman be printed in the Appendix of the Record.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

THE GOTTESMAN COLLECTION OF DEAD SEA SCROLLS

(Remarks of Ambassador Abba Eban, Prof. William Albright, and Mr. D. Samuel Gottesman at a reception in honor of Mr. Gottesman held at the Embassy of Israel, Washington, D. C., on March 16, 1955)

Ambassador Abba Eban. I cannot recall any occasion within the walls of this Embassy which evoked such a profound and unique emotion. There is an attribute of generosity which like all other attributes can be exercised with varying degrees of generosity and skill and imaginativeness and our guest of honor, Samuel Gottesman, has here performed an act of generosity within the highest dimensions of human history. We are assembled to express the appreciation of the Government and people of Israel for the part which he has played in restoring to our national possession the four priceless ancient scrolls inscribed with literature from the ancient period of revelation, the period in which the Hebrew mind developed its deepest insight into the nature of man and the

The origins of this act of generosity confure up a most dramatic and vivid story, a story which begins in 1947 when a Bedouin shepherd near the northern shores of the Dead Sea inadvertently stumbled upon the jars containing certain scrolls which when opened, appeared to be inscribed in Hebrew. Three of these scrolls were immediately acquired by Professor Sukenik, of the Hebrew University of Jerusalem, who at much risk, went to Bethlehem at the height of the disturbances there in order to acquire them. Four, however, left the country in the custody and possession of the Syrian Archbishop Athanasius Samuel and were swallowed up in the vastness and expanse of this Republic. To our mind they had vanished from our possession forever. We assumed that they would be acquired by one of the universities or academies of this country, more lavishly endowed than any of our own institutions. Imagine, then, our surprise when General Yadin, the son of Professor Sukenik, read an advertisement, of all places in the Wall Street Journal, announcing these Biblical manuscripts for sale. This surely should be an exhortation to all of us to aspire to a catholic interest in our daily reading. As a result of this providential surprise, the generosity of Samuel Gottesman enabled us to acquire what our own resources would certainly not have brought within our reach, the possession as a national trust of the remaining scrolls which you see depicted here.

The first is the Book of Isaiah, the oldest known manuscript of that great work of poetry and prophecy, a scroll 20 feet long, in an excellent state of preservation and revealing the almost uncanny consistency of the textual tradition over a period of some 15 centuries. The second, a commentary on the book of Habbakuk; the third, a work called the Manual of Discipline which sets out the organization of the life of a religious sect, probably akin to the Essenes, on the northern shores of the Dead Sea; and the fourth, perhaps the most exciting of all, not yet opened, the Revelations of Lemach, a scroll of 2,000 years of antiquity. the opening of which raises many technical problems of opening it without destroying its text and its legibility.

These then are four of the newly discovered gems of ancient Hebrew literature which have now been brought back to Jerusalem the Government of Israel has decided to establish the Hakhal Hasefer, the Shrine of the Book, and around these scrolls will be built a museum and a library portraying Israel's connection with its ancient This great institution will serve literature. This great institution will serve to remind the people of Israel of the essential element in their destiny, the fact that we are not a new people writing its history upon a clean slate; we are in our own consciousness and in that of the world the living descendant of the ancient Jewish kingdoms which proclaimed to mankind the most authentic messages of its own indi-This is the vidual and collective salvation. central theme in Israel's restoration and it is here, despite the turbulence of other preoccupations, that the destiny of our people must lie, in this realm of spiritual and literary creativeness. I think Mr. Gottesman therefore will realize that he has expressed his generosity in almost immortal terms, in choosing this as the avenue in which to give his assistance. Accordingly, these scrolls will be named the Gottesman scrolls and we celebrate this act of generosity here today at the very moment when in Jerusalem the Hekhal Hasefer, the Shrine of the Book, is being opened by the President of the state of Israel upon the soil of the Holy Land.

I would like to invite two of our guests to address you. First, Professor Albright, of Johns Hopkins University of Baltimore, who has rendered such incomparable services to scholarship and archeology relating to the Holy Land. He, I am sure, will be able to tell you something of the excitement which this event has evoked in circles of Biblical and oriental scholarship everywhere. Professor Albright.

Professor Albright. Your excellency, Mr. Gottesman, ladies and gentlemen, needless to say it is a great relief not to hold this particular secret confidential any longer. Ever since the end of May, I have been keeping it as secret as possible, dodging questions and questioners on every possible occasion and trying my best to combine absolute truthfulness with total ignorance. One Christmas week I was reduced to the ignominious position of having to concentrate on a New York bank, since I had no idea in the world what bank may be involved, if any was involved. But there were many people who knew about the secret, in this country and in Israel, and there is also a certain Mr. Green who was intimately involved; not the rabbi of Washington, my old favorite student, but a certain Prof. Hy Olinsky of the Jewish Institute of Religion, New York City, who assumed the name of Green for the direct negotiations with the archbishop's representatives so that the archbishop had no clear idea to whom they were going and no one else knew anything about it.

Anyway, it is finished now and this we owe to the generosity and magnanimity of Mr. Gottesman. I think it is an extremely happy idea of the Ambassador of Israel and his staff to arrange this reception for Mr. Gottesman because it is very rarely that we find a gentleman of such breadth of horizon, such interest in the history and the future of his people, as to go so far as to spend all the money necessary to buy this collection. Of course, since then, I understand, his beatitude has been riding around in Cadillacs and so forth, but anyway the scrolls are now in Israel. In the middle of August I met Yadin again at the Israel Embassy in London and the first thing he said was, "The scrolls are now in Israel." Well, they are certainly in Israel and, as the Ambassador has already said, this is an absolutely unique collection of extremely important documents. A scroll of the Prophet Isaiah which is undoubtedly 2,000 years old and may even be as much as 2,000 years and a century old. I remember the early days—1949, 1950, 1951—when there

were loud objections to the antiquity and authenticity of the scrolls which were described as hoaxes and so forth. Since then the cave itself has been excavated. Yassin settlement in Khirbet Qumran, south of Jericho, has been excavated, and other caves, Qumran IV. have been excavated and here were found all kinds of corroboratory material. They found, for instance, coins from about 100 B. C. down to the year 68 or 69 C. E. which represents the end of the settlement and the latest possible date for any of these scrolls. Here is the great scroll of Isaiah from somewhere between 150 and 50 B. C.; and the scroll of discipline, which describes in considerable detail the beliefs and practice of this famous Essene sect, the third of the great sects of Israel in the last day of the second temple. And that is a little later, possibly of the first half of the last century before Christ. And over here is that priceless scroll of Lemach, which is the only book in Jewish Aramaic from between the time of Danielwhich is at the latest, the Aramaic part I mean, about the early third century before Christ-and the scroll of fasting, the Megilat Taanit, from the early second century Common Era. That means that a period of 400 years was represented not by a single work in Jewish Aramaic, the language of the Jewish people for everyday purposes. have it and I understand that Professor Avigad, of the Hebrew University, is now at work unrolling that priceless scroll.

And the other scrolls are important not only because of their unique historical significance but also because now the scholars of the Hebrew University and other scholars in Israel can get new infrared and ultraviolet photographs and they can clear up various obscurities which still remain. It is a wonderful collection and I must congratulate Mr. Gottesman for having had the breadth of vision to acquire them for the land of Israel.

Ambassador Esan. Ladies and gentlemen, Mr. Gottesman.

Mr. D. Samuel Gottesman. I am overwhelmed by the profound and gracious remarks of Ambassador Eban and Professor Albright and I want to express my sincerest thanks to them for their warm and generous words.

Speaking for myself, as well as members of my family—of whom I see quite a few in the audience—I want to express our deepest appreciation for the great honor that has been conferred upon us this evening.

When I visited Israel a little over a year ago, I was thrilled by the signs of progress being made in all directions. However, the outstanding feeling that I brought home with me was that the greatest contribution Israel would make to civilization and the world at large would be in the fields of spiritual and cultural development.

Shortly before my visit to Israel, I had expressed the thought that the administration of human affairs had fallen behind our technological advances with the result that the physical and moral self-destruction of the human race was in the air. I said, further, that it was not to science that we must turn for guidance, but to the humanities-the several fields of learning having to do with the social and moral fiber of our people; that we must develop the ethical, cultural, and philosophical values; and in that way only could we build up the liberalism and understanding so necessary to win the race against the weapons of man's own creation.

It is, therefore, a source of deep pride to me and my family to be associated with this spiritual and historic project whereby our ancient Biblical manuscripts will now reside in the center of the land of the Bible—Jerusalem.

May I may with great humility that in conferring the Gottesman name on these precious scrolls, you are honoring America rather

than myself for I am only the instrument through which it has been made possible for the parchments which bear these inspired words to be restored to the land and people which first gave voice to them. These ancient scrolls—manuscript recordings of our prophets whose teaching has enriched not only Jewish life, learning, and history, but has made its impact upon world civilization—are a massive contribution to Biblical scholarship and, in the future, they will be available to scholars and research workers of all nations. I would like to regard this not as a gift of the Gottesman Foundation but as America's gift to Israel.

I am particularly gratified by the decision of the Israel Government to establish in Jerusalem a special "Shrine of the Book," in which the Gottesman scrolls will be displayed and which will in time acquire additional ancient Biblical manuscripts and thus become the primary center of Biblical research and scholarship in the world. It is our sincere hope that such projects will help to heighten the great spiritual values which we all cherish, and which we hope will forever hallow the atmosphere in which the State of Israel can grow, flourish, and prosper.

I thank you all once again for your kindness and your tributes and extend my best wishes to the state, the people, and the Government of Israel.

Report by May Craig on Her Observations in Europe, the Middle East, and Russia

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13, 1955

Mr. PAYNE. Mr. President, May Craig, Washington correspondent for the Guy Gannett Publishing Co., of Maine, has just returned from a trip to Europe, the Middle East, and Russia. A report on her observations was filed upon her arrival back in this country at Boston. In this report May sounds a warning that everyone in this Nation should heed. She says:

The Communists will attack the free nations when they are ready if they have not been able to destroy all other forms of government by subversion or cold war first.

May is not a defeatist, however, and she believes the struggle can be won through strength. She reports:

I feel more deeply than ever that communism can only be beaten by strength, military and moral. And that the free nations must stick together.

In order that all Members of Congress may have an opportunity to read May's summary report on her trip which appeared in the Portland (Maine) Sunday Telegram on April 10, 1955, I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOUR FAILS TO CHANGE VIEW

(By May Craig)

Boston, April 9.—The Communists will attack the free nations when they are ready

if they have not been able to destroy all other forms of government by subversion or cold war first.

That has been my fixed belief and nothing I saw in my tour of Iron Curtain countries in the past 7 weeks has changed it in any way.

Returning to Washington after 7 weeks and 28,000 miles in 14 countries, with plane touch downs in several others, I feel more deeply than ever that communism can only be beaten by strength, military and moral. And that the free nations must stick together. Also that we must accept neutralism for what it is worth—that if neutral nations are not positively on our side, that at least they are subtracted from the Red side.

Winston Churchill and President Eisenhower have both said in 3 to 4 years Russia will have enough nuclear power to strike. Whether or not they do strike depends on whether they can get their way without war. That was my belief when I went into Russia.

Czechoslovakia and Poland are so completely under Red surveillance and terror that they have no voice in the decision. I believe that there is an anti-Communist feeling which might come to the aid of the free nations if the Red grip on them can be broken. But they can do nothing now. Countries visited were Germany, Austria, Yugoslavia, Turkey, Cyprus, Egypt, Greece, Italy, France, England, Sweden, and Denmark.

CAREFULLY SUPERVISED

In Russia the editors' group was carefully supervised. We did not see one single official in Czechoslovakia, Poland, or Russia, though we asked in writing in advance. Excuses were given-that there was no time; that officials had been away, and were busy and tired on return; that we were "in transit. Replies to our requests to see officials, to see this or that, were delayed until a few minutes before our departure, or were never given at all. This is the Communist method-"Don't say no, but don't let them do it." I was even denied a visit to the docks of Leningrad on the ground that the harbor was frozen. I said I represented a paper in the port city of Portland, where people would be interested in Russian docks. The guide said the gates were locked during the frozen months. I asked to ride by the docks. Reply was that request would be considered. Nothing happened, and I did not see the docks.

In Czechoslovakia and Poland the satellite fear was heavy as a fog. We had the feeling of being watched all the time. In Russia, there was utmost politeness, but our time was wasted tramping through handsome museums and cathedrals turned into libraries and museums. One rare permission was to go over the plant where official Communist newspaper Pravda is printed, with several other smaller papers and many Communist Party magazines.

CYNICAL EXHIBIT

This was a propaganda privilege, as was the Stalin auto works in Moscow, first auto works in the U. S. S. R., founded 31 years ago. Nothing I saw showed anything that could match the industrial potential of the United States, but that may have been policy. Maybe they think what they have is good; maybe they were concealing their best, to deceive us as to their industrial achievement.

Baldest illustration of their attitude toward the United States was the exhibition of comparative religions, cynically set up in the ancient Cathedral of Notre Dame in Leningrad. This will cover all religions, the guide said. At present it includes only a sketchy Greek exhibit; a Judaic exhibit as background for the extensive Christian exhibit. This exhibit portrays Christianity in its blackest history of the Spanish Inquisition, un-Christian economic exploitation and slave driving in colonies, with special attack on the Pope and the Vatican, and authentic photographs of lynchings in the United

States. The United States is linked with the Roman Catholic Church in this portrayal, and there are bronze statues of young Soviet youth kicking over a block of bronze labelled "USA," in their march toward peace and freedom.

PEACE BANNERS FLAUNTED

Everywhere, even in a gay circus we attended, there were banners bearing the word "peace" in a dozen languages. The United States is everywhere attacked as a warmonger. The atheistic attack on all religion is part of the Red plan to destroy all religious allegiance, and put the state on the altar. In Moscow, the ordinary people in the subways were curious and friendly, but they had their orders. The permission to take pictures was subject to illogical bans—as the doorman at our hotel. Everything we saw was calculated to present communism in a favorable light.

The neutralism we found in Yugoslavia, Austria, Sweden, Finland, is evidence of the effort of communism to set up a buffer belt, and it may succeed, through terror, though Sweden and Austria, certainly want to be on our side.

Great gain for us is approval of German rearmament; the Turkey-Iraq-Pakistan pact; the Turkey-Greece-Yugoslavia pact. The Kremlin fears this growing unity and strength on our side and if we hold, or increase it, it may deter them from hot war and checkmate them in cold war plots.

Medical Social Work Offers Expanding Career for Men and Women

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. DOUGLAS. Mr. President, every American concerned with the Nation's health and rehabilitation needs knows that a growing population requires more hospitals, clinics, and rehabilitation services. We have the habit of thinking first of buildings, beds, and laboratory equipment to meet these needs. Of equal or greater importance, however, is the tremendous shortage of highly trained persons we must have to man the hospitals, clinics, and other health services.

In a very real sense it is the present and future generations of college and high-school students who hold the key to what kind of health and welfare services we will be able to have in this country. We of the older generations can help to provide the buildings, the beds, and the budgets but these will be of limited value without more and more young men and women stepping into the ranks of the health and welfare professions and allied occupations.

Not everyone who is interested in a health career can or should be a doctor or a nurse. Most of us know little or nothing about the other health professions which play an important part in caring for sick persons. Parents, as well as students, should inform themselves about the educational requirements and career opportunities of these professions also.

Medical social work is one of the health professions which offers expanding career opportunities for young men and women with a sound liberal arts college educational background and specialized university training. Like all worthy professions, the standards of preparation are high. A parent can feel proud to have a son or daughter choose this unique profession which combines knowledge of medical and health problems with the skills of social work.

I am especially pleased to have a letter from Miss Josephine Taylor, director of social service at Cook County Hospital, calling attention to the unusual opportunities for medical social work professional education in the city of Chicago. Miss Taylor is one of the distinguished members of her profession as well as an outstanding leader in health and welfare activities in Illinois.

I ask unanimous consent that Miss Taylor's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 4, 1955.

Senato PAUL DOUGLAS,

Senate Office Building,

Washington, D. C.

My Dear Senator Douglas: Knowing your great interest in the rehabilitation of citizens who have had severe injuries or disabling illnesses, I am venturing to write you about the opportunities for young people in medical social work—one of the professional groups working in the fields of medical care and rehabilitation.

Medical social work is an especially appealing profession for those who are interested in the medical setting and who want to help sick people return to health or gain the maximal recovery from disability. Medical social workers have since 1905 been valued members of the medical team working in clinics, hospitals, and medical-care programs. It is our job to help patients and their families solve some of the social and emotional problems which interfere with their recovery or their adjustment to disability. Through 2 years of specialized graduate work in a school of social work (after graduation from college), medical social workers are trained to work with doctors, nurses, and other medical specialists.

Persons with this training are in great demand for important positions in the ex panding programs of medical care and public health. The sad fact is that there are not nearly enough trained medical social workers to fill all of the positions in which they are badly needed. During World War II, it was found that there were only half enough trained medical social workers to fill the jobs then existing, and since then the needs of the armed services, the Veterans' Administration hospitals, the increase in civilian hospitals establishing social-service departments, and, most recently, the expansion of rehabilitation programs, have made the shortage more severe. It is estimated that 3,500 newly trained medical social workers must be recruited by 1957.

We in Illinois are fortunate in having a long-established and excellent teaching center for medical social workers in the University of Chicago School of Social Service Administration, with the University of Illinois School of Social Work ready to start such a curriculum by the fall of 1955 if prospective students present themselves. University of Chicago is able to train a far larger number of students in the next few years, and I hope that we may have your help in bringing to the attention of young people seeking careers the opportunities in this growing profession which so badly needs more recruits to keep pace with the impor-tant health needs of the country. Young people who wish to have their training in our great State of Illinois should write to Miss Marietta Stevenson, dean, School of Social Work, University of Illinois, Urbana, Ill., or Miss Helen R. Wright, dean, School of Social Service Administration, University of Chicago, Chicago 37, Ill. The American Association of Medical Social Workers, 1700 I Street NW., Washington 6, D. C., will also give information to any interested college students or their parents.

As director of social service in this large public hospital in our State, I know at firsthand the needs and opportunities for trained staff in this field. As a medical social worker with many years of experience in the field, I also know the rewards of satisfaction and interest which medical social work through service to ill and handicapped persons offers to those who enter the profession.

Yours very truly, JOSEPHINE G. TAYLOR, Director.

Challenge Seen

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Challenge Seen." which was published in the Greenville (S. C.) News of April 2, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

CHALLENGE SEEN

Speaking before the southern attorneys general, Governor Timmerman has called again for a congressional curb on the power of the Federal Supreme Court. He made his first proposal that Congress limit the appellate jurisdiction of the Court in his inaugural

address in January.

While the Court's school segregation decision has brought the matter to a head, Governor Timmerman feels that a great national issue is involved. "That issue is whether the judiciary shall usurp the authority reserved to the people to change their Constitution."

It is Mr. Timmerman's belief that constitutional authority is threatened by the view finding favor currently in the judicial branch that "the basic law means whatever the Government thinks it ought to mean."

We think the South Carolina Governor was right when he told his audience:

"Whether you live in Vermont, or Virginia, or in any other State, your constitutional freedom is reduced every time the inherent power of government is used to exceed its constitutional authority."

He added that the great threat to our libertles lies in our acquiesence in the gradual extension of governmental power areas in which the framers of the Constitution did not intend it to go. And actions by the judiciary are especially dangerous, because the public cannot act as directly in its own defense against judicial abuses as it can when elected officials are involved in error.

Certainly when the Court interprets broad and sometimes undefined terms it may be determining questions of public policy, supposedly left to Congress and the executive branch. Personal attitudes and opinions of the Justices can easily play an important role in the decisions reached. It was Charles Evans Hughes, then not a member of the Court, who said many years ago, "We are

under a Constitution, but the Constitution is what the judges say it is."

There are many people throughout the country who agree with Governor Timmerman that Mr. Hughes' description is still apt, and who would like to see Congress take the necessary steps to restore the traditional separation of powers.

Judicial review has been a subject of controversy for 150 years. We have a feeling that if Chief Justice John Marshall, who upheld it in Marbury v. Madison, could examine the practice today his views might remarkably resemble those which Governor Timmerman has so cogently expressed.

Tribute to Civilian Conservation Corps

EXTENSION OF REMARKS OF

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. NEUBERGER. Mr. President, a tribute written by Mr. Clarence Case and others, honoring the Civilian Conservation Corps, is submitted for printing in the RECORD on the occasion of the 22d anniversary of its founding. This properly should have been submitted on April 7. but the Senate was in recess at that time. I therefore ask for its inclusion at this time, this being the first day of our return following Easter.

There being no objection, the tribute was ordered to be printed in the RECORD,

as follows:

Where once were fire-scarred tree trunks and cut-over timber are now magnificent, green, growing tree plantations.

Where once were eroded, useless lands, are

new fertile, productive farms.

Where once were deserts are now irrigated grazing lands, fertile areas, lush with trees and fruit and flowers.

Where once were lakes and rivers, at the end of the lumbering era, full of logs and debris, were unnavigable and dangerous, are now free-flowing waters, full of fish, enjoyed by millions of people.

Where once were impenetrable forests and swamps, inaccessible treasures of beauty, are new fire trails and highways. Have you been on Virginia's Skyline Drive view—its breathtaking beauty? Just remember, it would not be there except for CCC boys.

Bridges, dams, fish hatcheries, swimming beaches, National, State, and local parks, recreation areas, rejuvenated national cemeteries, and monuments, restored shrines, public buildings, and all the rest.

CCC boys transformed a Nation's face. What they gave to all America, the United States, Alaska, Hawaii, Puerto Rico, the Virgin Islands, has permanent worth. Each year it becomes esthetically more beautiful, economically more valuable, used and enjoyed by millions of people.

They came to the CCC camps out of school, unemployed, very often homeless, malnourished, frustrated, restless. There were the friendly and the friendless. There were the hopeful and the hopeless. Ours was a rugged life in our wilderness home.

When Pearl Harbor came and World War II (December 1941), in a Nation sick with fear, CCC boys by the hundreds of thousands, voluntarily, walked into the recruiting offices of the armed services, took off one uniform, put on another.

Well fed, bronzed, muscled, trained and skilled in many ways, familiar with Army policies and procedures, accustomed to living and working together in the out of doors, CCC boys were the best prepared fighting men this country has ever produced.

All around the world in World War II and since, CCC boys have a wonderful fighting record. Many of them lie with the honored dead in military and civilian cemeteries at home and abroad. And today, war veterans, in their thirties and forties, married, with children, living in every community, in all walks of life, unknown, you never hear a peep out of them. True heroes.

The alumni of the CCC camps, about 3 million, plus their families, humanity uprooted, 20 years ago, are today among our finest citizens. The CCC gave them purpose for life itself, purpose for good citizenship. In the process of being helped to help themselves, they learned to help each other, to help everybody. Today, in every commu-nity, in all walks of life, they are a wonder-ful base upon which to build community and national programs to conserve our human and natural resources.

I ask the Members of Congress, I ask the whole American people, to pause and consider the contributions of the Civilian Conservation Corps. Each year they are esthetically more beautiful, economically more valuable, historically more significant. It should make us all very thoughtful indeed to recall that, as humanity uprooted, the alumni of the CCC camps once were called hoboes and hoodlums. Yet they have given so much that is the Nation's wealth, that is the Nation's pride. It is time for research into the official CCC records, related records, into the lives of the alumni of the CCC camps, in order that the American people may really grasp the colossal contribution made by the CCC, of permanent worth, which will last, be beautiful, valuable, useful, long after they have gone, long after you and I have gone, wealth for posterity.
I suggest that the Nation consider what

would be appropriate recognition for the alumni of the Civilian Conservation Corps. These were our youth—our youth in distress. They lived in a world they had not created. that others had created for them. What a mess it was. But when they go to their graves they will have the supreme satisfaction, known only to a few men, they helped to make this world more beautiful, valuable, useful.

What the Civilian Conservation Corps gave to all America, all the world, in peace and in war, is unprecedented, unequalled, unapproached in American history, in the history of mankind.

What the CCC camps gave to all America, to the world, is the most socially significant program of art in the history of mankind.

Dramatic Victory Over Polio Scourge

EXTENSION OF REMARKS OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. SADLAK. Mr. Speaker, it seems that the outstanding news of the day is the sensational discovery of a vaccine that will combat the dreaded disease which we have known for so long as infantile paralysis and which is now commonly referred to as polio. Our newspaper, radio, and television reports are filled with descriptions of the discovery of this vaccine and each surmises as to its possibilities and meaning to manDuring my return trip by train last night, I obtained a copy of the Philadelphia Inquirer. The editorial concerned itself with this new discovery and is so well written that I desire to bring it to the notice of the House, feeling that each of us can join in the sentiments there expressed. Entitled "Dramatic Victory Over Polio Scourge," the editorial is as follows:

DRAMATIC VICTORY OVER POLIO SCOURCE

Announcement that the Salk vaccine is successful in preventing polio is a tremendously heartening climax to one of the greatest medical advances of the 20th century.

It means that thousands upon thousands of children who might have been crippled or killed by poliomyelitis will live out their lives untouched by this fearful disease.

It means that large-scale outbreaks of polio, which in the past spread terror over whole communities, may soon be controlled, and quite probably stopped altogether.

It marks one more stunning triumph for man in his struggle to conquer deadly or crippling diseases, a triumph shared by medical men, researchers in many fields, and millions of Americans who contributed the money to pay the cost of this campaign.

Because the vaccine used in tests whose results were announced yesterday bears his name, Dr. Jonas E. Salk, of Pittsburgh, will receive great credit for his contribution to the defeat of polio, and properly so. His development of a vaccine which would produce the antibodies to fight off the polio virus was indispensable to success.

Dr. Salk, however, would be among the first to emphasize the fact that the onslaught against polio was a team enterprise, beginning years ago when the existence of the polio virus was first confirmed, and leading to the mass tests last summer which were the basis for yesterday's announcement.

There are few Americans who cannot take some small share of credit for those tests. They were financed by the National Foundation for Infantile Paralysis, an organization which has supported research against polio for the past 17 years. And the foundation, in turn, got its money from contributions to its March of Dimes, casual contributions most of us never dreamed would produce such dramatic results.

It is significant of the new teamwork and the broad scale of the attack made on these diseases, that 1,829,996 children in 44 States took part in the tests. Some received no inoculations at all; some were given dummy shots, and the rest received injections of the Salk vaccine.

The world now knows the results. The Salk vaccine is 80 to 90 percent effective in preventing paralytic polio. It is not a cure for polio once it is contracted, but it is a highly successful means of preventing the disease we once knew as infantile paralysis from getting a start.

In a few weeks the new vaccine will be sent out to do battle on a thousand fronts against polio, and the situation will call for caution and calmness. Since polio strikes children far more frequently than adults, it is self-evident that the rule of "children first," invoked by the National Foundation in its plans to inoculate children in the first and second grades, should generally apply. Careful parents will consult their physicians, and will recognize the dangers of dropping all other precautions simply because the vaccine has been found successful.

The problems of making the vaccine available—eventually to adults as well as children—do not in the least detract from the magnitude of these new achievements.

A disease whose very name has chilled the hearts of countless parents appears to be facing final defeat. We have a right to hope that before very long polio will join diphtheria, smallpox, typhoid, and other oncelethal diseases on the list of those man has conquered.

There is hope, too, for those now fearing cancer, heart disease, or other killers whose toll has been much higher than that of polio. The causes, cures, and prevention of these diseases may be different, but the same concerted and coordinated attack which brought victory over polio may one day produce equally spectacular results in other fields—and every day, in dozens of places, research toward that end is now going on.

toward that end is now going on.

These hopes are for the future. Today, the whole world may join America in hailing all who shared in the triumph of science, perseverance and faith over one of man's cruelest invisible enemics.

Mr. Speaker, prior to coming to the floor this noon I received a telegram, which is self-explanatory, from a constituent at Fairfield, Conn. In connection with this discovery which has been attributed to Dr. Jonas Salk and his associates, I was pleasantly reminded of the contribution that can be claimed also by Dr. John Franklin Enders, another constituent from West Hartford, Conn. The wire, under permission granted, is also included:

ANTONI N. SADLAK,

United States Representative at Large, House Office Building,

Washington, D. C.:
Surely the first person to deserve a medal of honor for polio and other vaccines is the modest initiator, namely, John Franklin Enders, doctor of philosophy and doctor of science, a native of West Hartford, who is a member of the class of 1919 Yale College and won Nobel prize in December 1954. Polio and subsequent vaccines should be known as Enders and Salk vaccines, etc.

ROBERT P. SHELTON. FAIRFIELD, CONN.

The New Joseph Pulitzer

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. UDALL. Mr. Speaker, the St. Louis Post-Dispatch has always been a newspaper noted for its excellence. Certain of its departments have been especially distinguished, and if merit derives from literary quality, clean-cut presentation of issues, and a consistent and fearless moral idealism the editorial page of the Post-Dispatch is perhaps the best in our country.

When Joseph Pulitzer, Jr., succeeded his father last week as publisher of this newspaper he issued a statement reaffirming his faith in the famous Post-Dispatch platform first enunciated by his grandfather. This statement adds stature to the Pulitzer reputation and gives strong evidence that the old strain has carried forward into the newest generation. I am printing this statement in our Record today. It should be read by journalists everywhere, and by thoughtful men who prize a free press and its highest traditions:

THE TIDES OF TIME

A flame of integrity was extinguished at the death of my father, Joseph Pulitzer, but

its light will always radiate to newspapermen of conscience everywhere.

Joseph Pulitzer was devoted to the journalistic commandments written in 1907 by my grandfather, the first Joseph Pulitzer, and carried daily as the platform of the Post-Dispatch. These words are a monument of granite which the tides of time will never efface.

Guided by the platform, my father exerted all the skill, conviction, imagination, force and courage with which he was unusually endowed to make the Post-Dispatch responsive to the needs of mankind. He never made a mean decision; on the contrary, his generosity of mind and heart made him a shining guardian of my grandfather's ideals.

Inspiration alone cannot move stones; so my father achieved his distinction by inspiration conveyed to loyal men and women. The Post-Dispatch is fortunate to be brought out day after day by people who are devoted to the ideals which gave this newspaper its character, acclaimed in recent days from near and far.

Today the platform continues to proclaim its proud, timeless message. We of the Post-Dispatch shall abide by the standards we have inherited.

With all the moral strength, the intellectual strength, the professional strength at our command, we will continue to labor as public servants. Not only will we report the day's news but we will illuminate dark places, and, with a deep sense of responsibility, interpret these troubled times.

Opinion will be strong for what we believe to be right, and equally strong against what we construe to be wrong. We also know that laughter is a joy and we hope we will entertain.

For public service our reward will be what each of the men and women of this newspaper and the broadcasting stations will carry within himself. Each will know his voice has merged in a mighty chorus which will resound as heretofore in our city, our State, our Nation and the world.

That chorus, I am confident, will be recognized and I hope it will be found to have added more splendor to the noble profession of journalism.

JOSEPH PULITZER, Jr.

Our Defense Setup on the Pacific Coast

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. PELLY. Mr. Speaker, I take this means of emphasizing to the Members of Congress and particularly to those Members who are on the Committee on Armed Services that we have an Achilles' heel in our defense setup on the Pacific coast.

One look at a map and it becomes apparent that some combat units of the Pacific Fleet should be based, for operational purposes, in the Pacific Northwest. Since existing naval facilities already are established in Puget Sound, no major change or expense is involved. Many so-called hard-core naval officers for years have admitted privately that the concentration of our fleet in southern waters and at Pearl Harbor should be augmented by the location of at least one killer unit in the Pacific Northwest; and I am hopeful, in the light of the Soviet's growing naval strength, that Puget

Sound will be designated as an operational base for certain of our Pacific Fleet combat ships.

Under permission to extend my remarks and include extraneous matter, I offer an excerpt from a talk I made to the Lions Club in Bremerton, Wash., on April 6, 1955, which gives some explanation and background to this defense vacuum in northern Pacific Ocean waters:

When the Navy Department was first established in 1798 there were six shipyards on the east coast which were given contracts for building vessels. These six yards were Portsmouth (New Hampshire). Charlestown (Boston), Brooklyn, Philadelphia, Baltimore,

and Gosport (Norfolk).

You will recall from your American history the purpose of providing these so-called men-of-war was to protect American shipping from the Barbary Coast pirates. The Mediterranean had just been opened to us by treaty with Spain. Other nations were paying tribute and our Congress considered a substantial appropriation for this purpose, which brought the cry of millions for defense but not a cent for tribute.

Since those early days of our Republic, in spite of much political pressure, no doubt, on our east coast the location of naval bases has been developed and maintained on a well-dispersed and logical basis in order to protect the entire Atlantic coastline and our

established supply lines.

At approximately a midway point between Maine and Florida the Navy Department has its largest operating base to which all types of combat vessels are attached. This is Norfolk, Va. However, strategically dispersed to the north and south of Norfolk are other naval establishments where various types of vessels are based: Portsmouth has submarines; Boston has cruisers and destroyers; Newport, R. I., has destroyers; Quonset Point, R. I., has carriers; the New London, Conn., naval station has submarines; Charleston, S. C., is a mine craft center, and at Key West, Fla., are submarines and destroyer-type vessels.

Now, let us turn to the west coast. The Navy's first base in the Pacific was established in 1854. This was Mare Island.

Incidentally, I read once that a report on a possible location for a naval base on Puget Sound was filed in Congress in 1850. This was before the first settlers founded Seattle. The proposal was that by cutting a canal Lake Union would provide a fine deep-water anchorage secure from enemy attack. If the suggestion had been adopted I doubt if Lake Union would be a carrier yard today.

In any event, our Puget Sound Yard was next to be established in 1890, while San Diego came much later. The term "base" to the Navy is a facility which overnight can support a fleet of nominal size and is capable of provisioning, fueling and manning ships. The distinction we of Bremetton are so

The distinction we of Bremerton are so conscious of is that of being a home base to ships of the fleet, which brings us to San Diego which began as a radio station in 1912. In 1917 it became a Naval Air Station and in 1919 a hospital and training station. Then in 1920 it became a destroyer base which was the beginning of its development as an operation type of base, or similar in point of importance to Norfolk on the Atlantic.

As you know, since then there has been a standing joke in the Pacific Northwest to the effect that the basing of combat units of the Pacific Fleet was arrived at, as to location, through careful analysis of morale factors including the availability of smooth waters, more sunshine and strategic dispersal of naval families near golf facilities. Certainly prior to World War II Pacific Fleet operations limited possible discomfort to the naval personnel manning our warships as far as northern waters were concerned to a

summer cruise and colorful but brief visits to ports in Puget Sound during Navy Week. In July or August this provided a pleasant change and relief from the seasonal heat further south. Also the admirals were said to have found this arrangement with its change of golf courses stimulating.

Whether it was preference and wishful thinking on the part of the Navy or whether politics entered into the situation, the fact remains that no units of the fleet are based north of San Francisco. Meanwhile, unlike the period prior to World War II, the theater of Navy responsibility includes the vast coast of Alaska—for in an air age Alaska has a very strategic importance for both offense and defense.

From a defense standpoint, not because it would help Bremerton, some units of the Pacific Fleet should be based in Puget Sound.

Rose as National Flower

EXTENSION OF REMARKS

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Rose as National Flower," published in the Mobile (Ala.) Register of March 23, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROSE AS NATIONAL FLOWER

In the movement for selection of a national flower of the United States, the Realty Board of Portland, Oreg., has adopted a resolution recommending the rose.

That resolution, we believe, reflects majority public sentiment of the Nation.

If the question of an American national flower were submitted to a nationwide referendum the rose, in our opinion, would win easily.

Some localities, as in the case of Mobile, the azalea capital of the universe, have gained distinction far and wide for achievements with other flowers.

Mobile is an outstanding national example of this, as a matter of fact. Its azaleas grow in a magnificent variety and abundance that has brought it international acclaim and fame.

Yet we in Mobile must be broad enough in our views to concede that this is really no argument for choosing the azalea as the American national flower. A national flower, if chosen, should be more common to the country as a whole than can be claimed for the azalea or any other popular flower except the rose.

"Unquestionably," says the Encyclopedia Americana, "the roses are the most important flowers cultivated. They are prized by everyone who cares for flowers at all, and throughout the civilized world are probably grown in more gardens than any other flowers."

If we are going to have a national flower of the United States, it should be the rose. For this purpose, the rose has no rival—not even in the azalea which has done so much to emblazon the name of Mobile wherever gorgeous flowers in profusion are appreciated.

In spite of all the present-day tribulations, the world still possesses the essential character which inspired the poet Frank L. Stanton to write of it years ago: "This world that we're a-livin' in Is mighty hard to beat; You get a thorn with every rose, But ain't the roses sweet!"

The flower that best qualifies as the national flower of the world's greatest Nation is the rose.

The Role of the Ukrainian Congress Committee of America

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. FEIGHAN. Mr. Speaker, one of the most dynamic and leading national organizations in the fight against Russian Communist imperialism is the Ukrainian Congress Committee of America. Under the able leadership of its president, Dr. Lev E. Dobriansky, who is also professor of economics at Georgetown University, this nationally representative group of 11/2 million Americans of Ukrainian ancestry, has, through its manifold efforts, contributed heavily to public knowledge and understanding of the plight of the non-Russian nations in the Soviet Union and of the true nature of the Communist aggressor. In this respect, its educational and informational service is unsurpassed not only within the boundaries of this country but throughout the free world. Its many expert representations before numerous congressional committees and in a number of executive departments are common knowledge among those concerned with foreign policy and the relations of the United States with the Soviet Union

One of the most outstanding qualities of this American organization is its unique unity, which embraces fraternal, civic, religious, youth, cultural, athletic, and similar types of organization with branches in over 36 States. Delegates from these States and local groups participate every 3 years in the national convention of UCCA, and next month, from May 27 to 30, the 6th triennial Congress of Americans of Ukrainian ancestry will be held at the Commodore Hotel in New York City. This event will fortify further the role of the Ukrainian Congress Committee of America in the affairs of our country.

This role is best expressed in an address delivered by Dr. Lev E. Dobriansky to the New Jersey State conference of UCCA affiliates in Newark, N. J. Under leave to extend my remarks, I include the main excerpts of this address on UCCA's Role in America:

UCCA'S ROLE IN AMERICA

The Ukrainian Congress Committee of America is thoroughly and completely an American Institution. There are not, nor can be, any marks of hyphenation, split loyalties, or divided allegiances among its wide membership. As you and I know, in its representation of 1½ million Americans and with branches in over three-quarters of the States, our uniquely united organization is made up of native-born Americans, nat-

uralized citizens who arrived at these shores long prior to World War I, and the most recent immigrants from Ukraine. Happily, the last of these are rapidly adapting themselves to their new environment, and see in its great traditions, free enterprise, and preeminent institutions what they always hoped and prayed for in long-enslaved Ukraine. In our composition natural stresses are inevitable, but never of such a nature as to justify any unhealable breaches. The congress committee is unquestionably unique in its splendidly attained unity; and this organizational unity is a valuable asset, a tremendous source of power and resource, that must at all costs be safeguarded and treasured from the reckless designs of any irresponsible individual or group.

Richly endowed with resources of knowledge and experience as concerns Russian communism in practice and also events and developments throughout the entire Russian Communist empire, UCCA is solely and ex-clusively a working organ of elected individuals whose only purpose and function is to translate into political action the ideas, sentiments, and feelings of the great majority of the people, groups, and communities that are represented by their delegates at our triennial Congress or convention. Contrary to certain ill-formed impressions and illusions of some people, UCCA is in no sense of the term any Ukrainian Parliament, composed of displaced politicians or aspiring Ukrainian diplomats and the like. Nor is it. nor can it ever be, an American medium to be exploited by any political party or group with a mentality, behavior, and direction of allegiance that are not essentially and characteristically American. UCCA is completely and necessarily independent of any political party or group situated and operating in any foreign land. It functions wholly in terms of American categories of political thought, through our American channels of political action, and toward the fulfillment of basic American objectives of maximum national security, national preservation and peace, with expanded freedom. Those who would arbitrarily impute to the nature and character of UCCA ends and objectives that are not primarily American, either do not understand our organization or are maliciously intent upon undermining its work and national significance.

Within this framework, then, the role of UCCA in America becomes unmistakably clear and concretely definable. Its role is fundamentally educational in that it continually seeks to inform the American public about Ukraine and the other non-Russian nations in the Soviet Union in their historic struggle for freedom and independence. Today no thinking American can afford not to know as much as he can about other parts of the world, especially those closest to the mortal enemy of America itself, namely, Mos-As the largest non-Russian nation behind the European Iron Curtain, Ukraine deserves the greatest amount of study and attention not only on the part of our military and political strategists but also on the part of every school boy and girl. nately, this interest is growing rapidly, and I can tell you that in scores of our colleges and universities young men and women have assumed as their task the thorough study of Ukraine, its people, its history, its tremendous strategic importance to our country in the current struggle, UCCA has in innumerable ways inspired, implemented, and served this wholesome development and, for the full success of this educational role, must continue to do so in all circumstances of our national life.

Our educational endeavors, however, do not exhaust our role in America. To act on one's knowledge is just as important—if, in a sense, not more so—as to acquire and possess it. Our role, therefore, is cast in the flexible mold of political activity, focused primarily on the sound formulation of

American foreign policy toward the Soviet Union and the numerous nations imprisoned there. Whether it be in the present phase of the cold war, in the midst of a hot one. or beyond military victory over Russian Communist imperialism, we and our innumerable friends are convinced that a free and independent Ukraine, the freedom and independence of all the non-Russian nations in the U. S. S. R., are in the vital interest of our own Nation, in the vital interest of enduring world peace. Our political work is com-pletely dominated by this orientation. There can be none other. The Russian Commu-nist onslaught upon freedom, upon free institutions everywhere, significantly identifies the fundamental interests of America with those of Ukraine. To work and strive for Ukrainian freedom and independenceindeed, the freedom and independence of all Communist-dominated lands-means to work in the noblest and selfless fashion for the continued freedom and independence of our own Nation. This is the essence of our role: this is the guiding spirit of our manifold work. And it is this kind of work, marked by tangible performance and results that, I am convinced, our people want. This is the type of work, to their benefit and to the benefit of all Americans, that our people have been getting these past few years.

But, as many of you can well appreciate, this kind of work cannot be undertaken and developed without ample spiritual and material resources. Actually, it is only when you're in the throes of such political activity, glving day-to-day attention to problems, events, and people, that you begin to fully realize how expensive the tasks we set for ourselves are. It breeds heavy pressure, and becomes almost burdensome when any marked expansion of activity is attempted.

To succeed wholly in the attainment of our goals, we need only persevere, persist and constantly keep punching. We are greatly empowered with truth and fact; and with your moral and material support, we cannot lose. Our endeavors are planned and set into stages of operation adjusted to the particular trends and conditions of the moment. Oftentimes it requires patience, sober analysis, and prudent timing before an advance is made. But our principles are fixed and ultimately determinative. The total picture of our work is a continually changing and expanding one, as we concentrate on the strengthening and refinement of its many parts. It is always necessary to keep this total picture in mind, if you're to understand and appreciate each operation contributing to the success of our total endeavor. And one such outstanding operation is your concerted effort to federate our branches in this State into an organized setup that can deal more efficiently and effectively with the common problems that arise in any of our States.

It cannot be too strongly emphasized that the power and capacity of UCCA in its national undertakings depend ultimately on the strength and organized activity of its State and local units. The medium of a State federation enhances such strength and activity largely because it facilitates neces-sary relations with other State federated groups and enables you to act in closer rela-tionship with State representatives and officials on the many problems that emerge in your State and in Washington. Our people in the State of Connecticut have such a federation and when, in 1950, it was necessary for me to impress upon Senator Brian McMahon the importance of considering testimony from us on the Genocide Convention, the assistance of the Connecticut federation was decisive. The existence of a State federation represents a consolidation of strength of all the units so federated; it serves as a direct agency to your Senators and State officials; it is an indispensable medium of coordination and cooperation for the efficient accomplishment of our program. It is crucial to our work in Washington and on the national scale. It is urgent that you combine your efforts to make this federation a reality and also a functioning model for our groups in every other State; that they, too, will soon follow suit and give prime evidence of their faith in the ever-expanding work of UCCA.

Your federation will undoubtedly enjoy a broader sphere of influence upon national and state affairs. Through your Senators and all of your Congressmen in Washington you will make known for the public record our stand on the dangerous myth of peaceful coexistence, on the insularities of the present containment policy, on the necessity for a sound and winning policy of liberation, on the inadmission of Red China to the United Nations, and on the superlative work of the Select House Committee on Communist Aggression which, under the able chairmanship of Congressman Charles J. Kersten, Wisconsin, investigated such aggression against the Ukraine and the other non-Russian nations in the Soviet Union. Federation signifies a combination of forces in a new unity. It creates new sources of power and strength that are so urgently needed in our national organization.

We have the people; we have loyal minds and hearts that are unswayed from the course of basic principle; we have the organization which you here, today, seek to strengthen through federation. With all this, nothing can cause us to desist in our good fight. Unity is our achievement in UCCA. The time now is for unity in the States through federation. With such unity, success cannot possibly elude us.

The Bricker Amendment

EXTENSION OF REMARKS

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, under permission granted, there is printed herewith a letter written by our former colleague, Kit F. Clardy, to the Wall Street Journal, which is certainly pertinent to an issue which will continue to be before our people until correctly solved:

LANSING, MICH., March 24, 1955.

Wall Street Journal,

Chicago, III.

DEAR SIR: In your March 22d Issue you published a letter and an editorial dealing with the Bricker amendment. Your editorial correctly states the law, but I think the letter is vulnerable on some counts you did not cover.

In the last sentence of his letter, Mr. Backus pleads for support of the Constitution "as it now stands," yet every other sentence in that letter is in plain contradiction of that plea. What he really seeks is an unwritten modification or amendment of the Constitution by executive interpretation and misuse.

He is impatient with the idea that there should be some observance of the constitutional limitations on a President's power to commit the Nation to any course he chooses. He wants the President to have unlimited and untrammeled power to do by executive agreement that which the Constitution commands to be done by treaty or treaties.

He says that "in these troubled times" we should not "limit the power of the President as Commander in Chief to cooperate with an ally in the tactical disposition of troops on United States soil." The first four words in that sentence betray the "crisis" thinking that would excuse any departure from the Constitution or laws whenever a manufactured "emergency" is created. That's the thinking and reasoning of those who for more than two decades have sought to excuse every unconstitutional move with the cry of "emergency." It's based on the theory that ours is a "fair weather" Constitution that can safely be abandoned at the will of a "ruler," on the claim that "troubled times" demand.

But the balance of the sentence discloses an absolute lack of understanding of the wording and intent of the amendment. The "power" of the "Commander in Chief" is not touched by the Bricker amendment. Your editorial points up the real meaning. It seeks to prevent the continued substitution of a rule of man for a rule of law. The conduct of foreign relations is not involved in his argument for a President's "power" as the Commander in Chief is not the source of his authority to conduct foregin relations.

Nor is he apparently aware of the fact that there is no constitutional authority for executive agreements. That is something that just grew. And such were initially supposed to deal only with temporary problems—not matters involving a permanent treaty. He seems unaware of the increasing tendency on the part of the executive to bypass the Senate and to ignore the plain contitutional requirement that treaties be used in making arrangements with other nations. The Yalta incident should alert him to the danger of this grave departure from constitutional processes.

You have correctly noted the important legal point that disturbs practically every lawyer in the Nation—the decisions which, in effect, would enable the President to substitute his own judgment and action for the entire legislative processes. It is obviously of the greatest importance to the Nation's welfare for us to restore the Constitution and its meaning to the position it formerly occupied on this point. The pernicious idea that one man working with representatives of other nations can overturn the laws governing our domestic problems without the people or their representatives having any voice in the matter, certainly demands immediate and effective attention.

But equally important is the necessity of getting back to an observance of the constitutional provision about treaties. We must do away with the idea that this section can be ignored at will and executive agreements substituted whenever the executive departments fear to give the Nation the facts. One Yalta is enough.

The chief lesson we should learn from that historical blot is that the substitution of secret executive agreements for treaties requiring Senate ratification is certain to endanger the welfare of the Nation. It destroys the heart of our system—checks and balances. Clearly the Executive deliberately flouts the Constitution in entering into agreements of a kind that should be submitted to the Senate in the form of a treaty or treaties. This point seems to have escaped nearly everyone who has commented on Yalta. The Bricker amendment in part is designed to make a repetition impossible.

If the Constitution is properly interpreted, the power of the President to bind this Nation is subject to his submitting the treaties he has negotiated to the people's elected representatives for their approval or rejection. Mr. Backus is pleading for the right of a President to ignore that section of the Constitution whenever he wishes. He raises the untenable argument that requiring a President to observe all the provisions of the Constitution constitutes an unwarranted interference with the President's power to conduct negotiations with other nations when in fact it does nothing of the sort.

What he really means is that the constitutional provision requiring Senate participation is not to his liking—and should therefore be treated as dead.

With the advent of the U. N., the abuse of the executive formula, has been accelerated at an alarming rate. The rabid internationalists unquestionably view this as a sure-fire method of undermining national sovereignty and bringing us into a world government. It is too bad that some intelligent folks do not really and wholeheartedly subscribe to the idea that spurred our Founding Fathers into formulating our Constitution—the idea that we must have checks and balances to prevent the rise of a dictatorship.

Very truly yours,

KIT F. CLARDY.

Easter, the Atom, and Automation

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. WILEY. Mr. President, prior to the Easter weekend, it was my privilege to deliver an address over station WGN, Chicago, regarding the message of Easter in our time.

I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Record, as follows:

EASTER, THE ATOM, AND AUTOMATION

Eight days from now, we will celebrate Easter Sunday.

I would like to talk to you on this occasion, my friends, on a pre-Easter theme.

I would like to talk to you about faith in the future, as against fear of the future. The Easter season is, of course, a season of

The Easter season is, of course, a season of birth and rebirth.

The great spiritual message of this spring-

The great spiritual message of this springtime is the conquest by life over death; we realize through every budding flower and every bird singing in the trees, the significance of immortality. We relearn the triumph of the things of the spirit over the things of the flesh, the triumph of beauty and good over evil.

And so, during these next 15 minutes, I would like to see how you and I can approach the problems of our country with the same spirit of faith.

Let's put to practical use the inspiring message of the Way-Shower, which you and I will be hearing from the pulpits of our churches during this Easter season.

I am going to answer now a series of questions on this subject of the fears of our time, and faith for our time.

Question. Senator Wiley, what would you regard as some of the principal fears which are expressed widely today?

Answer. Well, there are a great many fears. I am just going to list a few, because I don't believe that we should dwell too long on them, as such. I don't believe in giving power to fear or evil.

But first, of course, we all know there is the fear of war.

Then there is the fear of depression and unemployment.

There is the fear of inflation.

There is the fear of Communist conquest of the world. There is the fear of trouble at home—of a long series of strikes in our country, resulting in harm to labor, to management, and to the public.

Question. Do you think that there is substance to any of these fears?

Answer. No. I don't believe so. None of these feared conditions need actually come about. If we use our God-given intelligence and judgment, we are not going to have war.

We are going to enjoy continued peace. If we use our God-inspired wisdom we are going to enter into a golden new age of prosperity and expansion.

You know, by 1975, there are going to benot 165 millions of us, but 220 million Americans in this country. They are going to enjoy comforts and conveniences such as we have not enjoyed today.

have not enjoyed today.

If we use our heads, our God-directed intelligence, then the miracle of atomic energy and the miracle of automatic factories—of the new science, called automation—are going to producer a higher standard of living for our people than we have ever before enjoyed.

And, too, we can have industrial peace in our country, with higher pay envelopes for labor, and more real purchasing power.

We can assure higher income to American farmers, and can halt the serious drift away from our farms. All of these things are possible, provided we use our God-given intelligence and initiative.

VIGILANCE AGAINST RED MENACE

Question. Then, in your judgment, Senator, there is no real reason to give way to the fears which we mentioned earlier in the broadcast.

Answer. Very definitely not.

That doesn't mean that we should ignore serious problems which do definitely exist.

The fact of the matter is that world conditions are very troubled. International communism is constantly on the march, constantly agitating new trouble for us—in the western Pacific Ocean, in Europe, in South America, in Africa. We have got to be vigilant against the Communist menace everywhere.

DANGER IN PACIFIC

Question. What about that Pacific problem, Senator, the problem of Matsu and Quemoy? Is there going to be war over it?

Answer. I hope not. I pray not. And I don't believe there will be war. America wants peace—peace with honor. What I do want to emphasize is that we've got to keep our faith in the President of the United States. He is the Commander in Chief of our Armed Forces. He has available the latest, most confidential, top secret information as regards Red China's ambitions and capabilities. The President is the spearhead of United States foreign policy. He doesn't want war, but neither does he want appeasement.

Let's not usurp his functions. It is not for the Congress to try to act as Secretary of State or as members of the Joint Chiefs of Staff. I say there is much too much of a tendency these days for people to forget the constitutional division of powers between the legislative, executive, and judicial branches.

Question. How do you mean that?

Answer. Well, I want the Congress very definitely to do its job, but I don't want the Congress to try to take over the Chief Executive's job also. And remember, no one is going to force the President of the United States to do anything that the President doesn't want to do and doesn't feel should be done, if the President, as Commander in Chief, determines it is not in the best interest of our country. On the other hand, whatever the President does decide, Congress and the American people will definitely back up. There may be honest dif-ferences of opinion. But we are Americans first and can support our American President. Partisan politics come last. America comes first. Unity behind our President is essential. So, I say, give him your faith. His burdens are many and they are heavy. He merits our respect and admiration. He is going to see the crises through successfully.

Question. Now, what about another problem—right here at home? What about this much-talked-about problem of automatic factories, Senator WILEY? Are they going to take the place of manpower completely? Are we going to have mass unemployment?

Answer. I believe the answers to those questions are clear, and they are encourag-

ing, not discouraging.

We are definitely going to see more and more automatic operations in private in-We are going to witness what has been called a second industrial revolutionso-called push-button factories. We are going to see fabulous new electronic control machines. They can store up a bewildering variety of complex information and can actually supervise and run entire assembly These control machines are going to completely alter the pattern in more and more of our industries.

MANY EFFECTS

Question. What will be some of the effects of this automatic technology?

Answer. Well, the effects will be many. I

can list them as follows:

1. First, there is going to be a great demand for skilled workers, for more and more brain, and less and less brawn. That means, we need better-educated Americans. in turn means more schools, and better-paid teachers. It means we need many times more engineers, physicists, chemists, executives. Adequate education is no longer a luxury, it is an absolute job and national necessity.

2. Second, there will be more opportunities for women to perform tasks which might formerly have only been handled by men, who required some degree of physical

strength.

Women already number more than 28 percent of our labor force, and by 1975, 1 out of every 3 American workers will be women.

3. We can and will have more elderly Americans working. Here, too, as is the case of women, the skills of years of experience will be more important than merely the physical strength of male youth, as such.

4. More mechanization will mean lower prices and expanding markets. That means for you, my listeners, more refrigerators, washing machines, air conditioners, automo-

biles, radios, and television sets.

Question. What other effects will occur? Answer. Well, here is a fifth effect. There is going to be a tremendously increased outlay for new capital goods. Vast new equipment must be built. In 1953, production of capital goods and services amounted to \$54 billion, or around one-seventh of our gross national product. It provided 8 million jobs. But this will be small compared to the increased capital-goods jobs in the future. And, too, we are going to have to replace machinery faster because it will become obsolete faster, and that will mean more jobs.

6. Sixth, most important of all we are going to have more leisure for the American people, more opportunity for personal growth and development and enjoyment of the good

things of life.

AVOIDING UNEMPLOYMENT

Question. But now, Senator Willey, what about the big fear that automatic factories are going to mean mass unemployment, throwing vast numbers of workers out of jobs?

Answer. I think the answer to that question is this: What automation is going to mean is indeed a readjustment in many

American industries and jobs.

There is going to be some job dislocation. But for that matter, every time a new industry has burst on the American scene, there has been some dislocation.

The automobile industry literally revolutionized the Amercian scene. It eliminated

the horse-and-buggy business and a great many other obsolete, affiliated businesses.

But now, with sound cooperation between labor, management, and the public, there is no reason whatsoever why dislocation should not be relatively mild and temporary.

Now, I want to make it perfectly clear that unemployment-becaues of automation or any other reason-is no light matter. When a breadwinner is out of work, whether it is for a day or a week or a month, that can be serious, serious for himself and for his loved ones, serious for his morale, serious in terms of the community.

Fortunately, unemployment in recent times, has been comparatively mild. But that does not mean that we should not use every ounce of our energy so as to keep it to

an irreducible minimum.

Many communities of my own State and of Illinois and its neighbors have often been hard hit by unemployment. We are determined to have no unemployment, but full employment and full purchasing power for our people.

But to achieve it, you cannot resist change. You cannot hold back the wheels of progress, you cannot try to freeze the status quo. have got to accept change and to work with

change.

CONCLUSION

Question. Well, Senator Willey, you have discussed quite a few phases of current problems. You have discussed the problem of applying faith in our time. You have mentioned the necessity for truly applying the You have Easter message in our daily lives. mentioned the need for faith in the President of the United States and for vigilance against the Communist menace. You have stressed that there is no real ground for fear of the future, fear about misuse of atomic energy, or fear about any harmul effects o the new science of automation.

Answer. Yes; that about sums it up.

I want to say to my listeners that it has been a real pleasure to speak to you through the kind courtesy of station WGN, especially in this beautiful pre-Easter season. I look forward to the pleasure of talking with you again in the future.

I hope that in the intervening period you and I will know the full beauty, the full joy of Eastertide. I hope we will always have that faith which, as Paul said, is "the substance of things hoped for, the evidenec of things unseen.

Thank you very much.

What Is Our Mission in the World Today?

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. DINGELL. Mr. Speaker, under unanimous consent, I include in the REC-ORD the following speech of my good friend James A. Farley, which he delivered before the Economic Club of Detroit on March 14, 1955, to a distinguished assembly of members and guests following a luncheon meeting:

WHAT IS OUR MISSION IN THE WORLD TODAY? (By Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp.)

I am one of a number of American political leaders who believe the United States has a world mission. She did not seek it. Frequently she has done her best to avoid pick-

ing up the huge check implied in having a mission; but history has handed it to her. When history makes a date for a country the country must keep it with strength and honor and dignity, or find itself in serious trouble. You will remember the prophet Jonah in the Bible. The Lord told him to go to Nineveh and preach there. Jonah did not want to go and started for somewhere else, whereupon the combination of the storm and the wave took him to Nineveh anyhow, against his will.

Our country wished to mind its own business and develop its own affairs. It was so successful in this that it found itself one of the 2 or 3 strongest nations in the world. looked to by many peoples as a mighty force which must try to bring peace and law to a torn and unhappy world. This, I think, the United States has tried to do to the best of its ability.

Now, the mission is in a dangerous phase. Three or four years ago, the Soviet Union talked boldly of seizing all Europe-but the United States was there, and the Soviet Union settled for the less violent policy of coexistence. Today the young Chinese Communist revolution talks belligerently and rattles a borrowed Russian sword. The United States has no earthly interest in possessing or governing Formosa, still less in trying to run China. It has every earthly interest in not letting a new imperialism run riot over the whole Pacific Ocean and is endeavoring to make that clear. There will be other anxious moments as time goes on. My point now is that the American mission is primarily moral rather than military. may have to defend ourselves by force, but our ultimate victory, of which I am certain, will come by conversion rather than conquest.

America which was cradled in the principles of freedom and human dignity cannot retire within its own orbits and do nothing. Such a position represents spiritual sterility and mental cowardice. I do not know how long it will take us to overcome the dark forces of totalitarianism, but since we are obliged in the name of decency and good conscience to accept the challenge we shall not fail-just as we have never failed when called on to defend a righteous cause. I say defend because we are a people who are opposed to attacking others and interferring with the internal affairs of other nations. But we will defend to the last man our right to maintain our way of life in our

The answer to this lies in the history of our country and in the traditions of our people, who acknowledge freedom to differ without impairing national loyalty.

The United States, a Republic dedicated to freedom, came into existence in 1776. It had no great military power and little foreign influence. Nevertheless the example of America was followed throughout most of the world so that a century later much of the earth's surface was ruled by democratic governments. Clearly, America had a mission then and performed it. The mission was to show the world that free government was workable. Our pre-Civil War forefathers were convinced that the American experiment in freedom was divinely inspired, and was practical, and that America was to be a beacon light of liberty, pointing the way for others to follow. Amazingly, they did follow.

To the midtwentieth century politician the speeches and writings of our forefathers seem a little self-centered. In the light of today they seem to lack appreciation of the fact that other peoples too have contributed to the art and practice of free government and made their own contribution to democratic living. In those days, America was nationalistic, and talked that way. Then, of course, the United States could afford that luxury of thought. Sailing ships were slow, North America was empty, and the rest of the world was far away.

This attitude does not altogether fit a modern world in which you can have breakfast in Paris and dinner the same night in New York, or in which an attack on an Asiatic peninsula like Korea could set strategists calculating whether Alaska, Seattle or San Francisco may not be threatened. And yet there is a good deal of nationalist sentiment still active in the United States.

It can be useful. It can help us to understand new and young nations just coming into independence and to appreciate the intense nationalist sentiments of those countries. Some of them have come into existence as a revolt against imperialism, just as we did. Thoughtful Americans will appreciate that nationalism of these new countries springs from the same cause that made us nationalists a hundred years ago.

Our duty toward the world, I think, is still to demonstrate that free government is workable and is more desirable than any other. To fulfill it, however, we must stand by certain principles.

First and foremost, we must continue to make democracy work at home. That is the cornerstone of any American sense of mission today. This means that we have to bring our practices and our ideals into line. Freedom to take part in the processes of government and economics is not an occupation for the few or for isolated groups. It is part of the life of everyone. The American system has given a larger share of power and participation in public life and in private affairs to all of its people than any great country in history. We have trusted our people, and the trust has been repaid.

This needs some explaining abroad. Some Europeans particularly quarrel with American tastes. Some even think and say we are vulgar. These are the ones who forget that tens of millions of Americans from humble backgrounds take part in American cultural, as well as American political life. Never on such a scale as here have literature and music and art and journalism and business and politics been open to a whole population. Of course we get a result different from the results where learning and the arts and government have been kept in a relatively small circle. The power and the strength and the glory of the American way is witnessed by a single fact. No group of peoples who have ever lived in America for any length of time have ever desired to leave America and go back from whence they came. South American politician once said, "Other people talk about freedom; you practice it; and it has proved the most assimilative system in the world."

We must maintain that freedom at home. Any attempt to limit or mistrust it endangers our primary mission. Free government is workable, and we have proved it.

What we are learning today is a corollary proposition. We cannot and should not attempt to export our particular form of government unless it is voluntarily sought. American democracy cannot be foisted on others. Woodrow Wilson talked about the self-determination of peoples-and he meant it. This goes for us as well as for others. There are parts of the world in which American institutions and the American economic system are not wanted, and perhaps would not work. Democracy means different things to different people, depending on their traditions, and their habits, their religion, and their way of thinking. Our tradition calls for tolerance and respect for difference. Indeed respect for difference is one of the great forces binding us to our friends. If elsewhere peoples choose to adopt in whole or in part some of our ways they will do it be-cause having looked at the example they want that result. Any salesman knows that you cannot force a product where it is not wanted; if it is adopted it is adopted on its own merits. The American mission thus is not the same as the mission of the Roman Empire, nor do we now talk of the white man's burden as they did at the end of the last century.

If the problem could be stated in those terms we could stop here or at least be smug.

However, we cannot accomplish the American mission alone. In fact, we cannot live alone now, even if we wished to do so. Wright brothers settled that one day when they flew a contraption through the air at Kitty Hawk, if it had not already been settled when man learned to send communications from anywhere to anywhere in a split second. Safety and well-being today depend on an international system which observes some rules of morality and of law, producing international relations established more or less on the rules of fair play. We have fought two wars on that theory. It is true that from 1919 to 1939 most of the country seemed to feel that the rule of law in International affairs could be maintained if the United States lived alone in unprepared isolation and urged pious resolutions outlawing war. World War II, I think, taught us by bitter experience that international cooperation is necessary if any rule of right and law is to be maintained. At the close of that war the atomic bomb launched from long-range aircraft blew up forever the idea that Americans are entirely masters of their own desti-That is why I supported, as I hope you did, the formation of the United Nations, and while it has a long way to go I am free from doubt that the principle will eventually succeed. If this United Nations fails another will have to be built to take its place. As we fought to withstand aggression in Korea and to prevent new Koreas and to provide the aggressor of our time-the Communist faction-with clear-cut evidence that the lawless expansion could not be permitted, so we are bound to work with others in building a worldwide community of nations.

Now this will be a long and difficult task, as anyone who travels abroad as I do knows very well. The world of nations outside our own has its realities, and its hard facts. We have to work with that world as it is and not as we think it ought to be. We will have to work with peoples who do not think as we wish they did, and often govern themselves as we wish they did not. At the moment, we work with the other nations of the free world chiefly to assure military safety and to protect ourselves and them against lawless aggression. But while we are doing this we can help to extend and strengthen the moral foundation of the community of nations.

Even a politician reads occasionally and profits from it. A book by Arnold Toynbee makes the point that whenever the culture of one nation enters another a wide contact is established which continues to unforeseeable limits. A country which first becomes familiar with American manufactures and manufacturing methods eventually may come to learn the dominant principles of American life, just as close relations with Europe have made us somewhat acquainted with their ways. The salesman and the politician, the Army officer and the journalist. the engineer and the student who work abroad are carrying out the American mission for good or evil, whether they know it or not. The policy now famous as point 4, offering technological assistance to other countries, was perhaps one of the most imaginative ways by which America could perform its mission. Other, better, ways will continue to be developed as the days go on, as we realize more and more their importance.

A new duty is placed on the United States by this modern conception of America's mission. This is the duty to be strong nationally. Even Abraham Lincoln, struggling for peace, was willing to go to war to assure that the Union should be preserved-else there was danger, as he put it, that Government of the people, by the people, and for the people might perish from the earth. We shall not achieve a community of nations at peace merely through strength; but it is perfectly clear that we shall never achieve it without strength. We are quite clear that our mission does not require us or even permit us to try to rule the world. But we are equally clear that our mission includes being a bulwark of the free world and joining in its defense. But this means the most careful attention to foreign policy. Someone observed that the British Empire was acquired in a fit of absentmindedness. America could have the same experience if we do not draw a careful line between democratic leadership of a free world and practices which might slowly lead to an American imperialism.

The men (there are a very few noisy ones) who talk loosely about going it alone and who want to pull out of cooperative arrangements like the Inter-American Organization of States, and the North Atlantic Treaty Organization, and who want to torpedo the United Nations, have not learned an important lesson. Fortunately, few in this

country agree with them.

It is barely possible, of course, that the United States could make itself into an empire and organize an American century. But if we did we would slowly and steadily find our cherished freedom disappearing. There would no longer be freedom of speech. and freedom of assembly, and free inquiry, and fair trial, and the right of every American to look all these ideas in the face. Even as we are fighting the Communist menace at home and abroad, we must be sure that we do not betray our own traditions. Under free institutions America grew. By free institutions America forged her position. Under free institutions she defended herself against totalitarian enemies, and by virtue of free institutions she has become the senior free Nation of the world. We do not want a police state, or thought control, or rule by the hysteria of fear in our system.
The success of the United States is largely

due to one fact. We have discovered the art of throwing thousands of free minds against a problem. We do this in politics, we do it in business, we do it in education, we do it As a result, we have come up in science. As a result, we have come up with the right answers more often than those who depend on a small group of party offi-cials, politburos, or police chiefs. This is often confusing to foreigners. They hear the noise of our debates and discussions and do not realize that out of these discussions come firm decisions. The result has given America the most stable government and the most stable economy of our time. It is respected by our enemies, hence their sound of fury. The fact is that most of the countries under Communist domination would like to achieve what America has achieved and will try to do so as soon as they are free to make attempt. Because of this, I do not think a third world war will be attempted; and if it is attempted I have no doubt of the result.

For the first time in our history, we are called on to maintain continuously a measure of armed might. I venture to think that the arms are as strong, and no stronger, as the free institutions which bring them into being. Armed strength so supported can be trusted by America, and by the neighbors of America. Armed strength not derived from free institutions would be a danger to us and to the entire world.

As I see it then, America's mission is still to demonstrate that free government is workable, not only for the United States but for the world. Nationally we must cherish and foster and maintain our institutions, and use them to give our own citizens progress toward wider life and fit them to be the heirs of a great civilization. Internationally, we

must, in strength and not in weakness, work toward a community of nations steadily developing a wider common base in morals and It will be said that this is ideal in law. rather than practical. I can only say that, as a politician accustomed to deal with an infinite number of practical matters, I know that a chief source of power can be an ideal, since the ideal alone gives consistency to the efforts of the day.

The Need for Moral Principles in the Conduct of Foreign Relations

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. FEIGHAN. Mr. Speaker, on Monday, April 11, I had the pleasure to attend the fifth annual all-Jesuit alumni dinner, which was held in the ballroom of the Hotel Statler here in Washington. Attending this dinner were the presidents of over 20 great American colleges and universities, graduates of those institutions and their friends. I was privileged to be one of the Members of Congress present.

The speaker of the evening was Secretary of State, John Foster Dulles. His refreshing address was titled "Principle in Foreign Policy." He wisely cautioned against the crafty scheming of the Kremlin to create a world demand for peace at any price—a plan calculated to put all the nations and people of the world into Russian slave chains. Our attention was directed to the new closeness of all things in this world because man had harnessed air for both communication and transportation—the complexity of factors which of necessity enter into the taking of decisions bearing on our security and the conflict which often arises between spiritual and material considerations, especially when efforts are made to exclude morality from the arena of judgment. Secretary Dulles made it clear that our enlightened selfinterest requires us to follow a consistent and dependable national course guided by those moral principles which are rooted in the basic faith of the American people. This comes as a pleasant and sound rebuttal to the un-American beliefs which hold that there can be no morality or legality in the conduct of affairs between nations. Under leave to extend my remarks, I include this address:

ADDRESS BY THE HONORABLE JOHN FOSTER DULLES, SECRETARY OF STATE, AT THE FIFTH ANNUAL ALL-JESUIT ALUMNI DINNER, HOTEL STATLER, WASHINGTON, D. C., MONDAY, APRIL 11, 1955

PRINCIPLES IN FOREIGN POLICY

I

This is a gathering of learned persons. It is an occasion when it may be permissible to talk in terms of general principles. That, I can assure you, is not a purely academic exercise. National action should always reflect principles. Therefore, those who have responsibility for action have also a responsibility to assure that what they do represents something more than immediate political expediency

However, the guides to conduct are not always clear and simple. Often, indeed, they seem to conflict. Perhaps it will be of interest if I indicate some of the problems which confront those who try to find, in morality and in reason, a compass to direct their course.

Let me mention, as a first problem, that of peace versus liberty.

Peace is a goal which men have always sought. It is a goal which we particularly think of at this Easter season when we commemorate the resurrection of the Prince of Peace.

It is difficult to exaggerate the horrors of war or the longing of humanity for peace. Wars used to be limited in their scope and they were regulated so as to spare civilians from most of its dire consequences. I, myself, can think back to the days when private property was immune from seizure in time war; when interruption of trade was limited to particular ports which were closely blockaded, or to contraband of war, by which was meant the actual tools of war.

As a youth, I attended the Second Hague Peace Conference of 1907 which drew up protocols designed to prevent the use in war of the new scientific developments of that time. It was, for example, sought to forbid the dropping of explosives from balloons."

The First and Second World Wars showed that modern war is "total" war, and that it is whole peoples, rather than the military, who suffer its cruel effects.

Furthermore, we know that war more than ever involves compulsory enmity, outrages against the human personality, cruelty, vengefulness and wanton distortions of the

Today, throughout the world there is a rising demand for protection against the misery, the agony of body and of spirit, the massive destruction of life and or property, which modern war wreaks upon man.

There is, however, another aspect of the matter. Peace can be a cover whereby evil men can perpetrate diabolical wrongs.

During recent years the Communist rulers, through their propaganda, have sought to capitalize on love of peace and horror of war as a means of extending their rule over all the human race. Through such propaganda efforts as the Stockholm "peace" appeal, they have tried to divert the peoples of the free world from necessary measures of defense and create throughout the free world a popular demand for peace at any price.

Craft scheming underlies that The Communist leaders know that if pacifism becomes a prevalent mood among the free peoples, the Communists can easily conquer the world. Then they can confront the free peoples with successive choices between peace and surrender; and if peace is the absolute goal, then surrenders become inevitable.

In this connection, we should remember that while modern developments have made war more terrible, they have also made the consequences of retreat and surrender more terrible. Modern war could now destroy much of the life on this planet. But also it Modern war could now destroy may be possible that craven purchase of peace at the expense of principle can result in destroying much of the human spirit on this planet. Peace, under certain conditions, could lead to a degradation of the human race and to subjecting human beings to a form of mental decay which obliterates the capacity for moral and intellectual judg-

We know, in individual cases, the effects of brainwashing. It leads men to repudiate their cherished beliefs and to accept as fact what, if they were sane, they would know to Not infrequently those who have been brainwashed come sincerely to believe that they committed acts elsewhere than where they physically were at the time.

There are now techniques which make it possible to alter profoundly the human spirit. Furthermore, this can be done on a mass scale. Certain falsehoods are incessantly pounded, without respite, into the consciousness of those whose minds are terrorized, whose spirits are disheartened, and whose bodies are weakened from malnutrition. In the end the peoples become abnormal.

One cannot but shrink from buying peace at the price of extending over human beings the rule of those who believe that men are in fact nothing more than animated bits of matter, and that, to insure harmony and conformity, they should be deprived of the capacity for moral and intellectual judgment. Man, we read in the Holy Scriptures, was made a little lower than the angels. Should man now be made little, if any, higher than domesticated animals which serve the purposes of their human masters?

So men face the great dilemma of when and whether to use force to resist aggression which imposes conditions which violate the moral law and the concept that man has his

origin and his destiny in God.

Another dilemma which we face is that which I might call the dilemma of maps versus people.

Maps have an extraordinary fascination and a profound influence. They provide a temptation to seize, as solutions, what are not real solutions.

Up until a few years ago the American people were educated in terms of maps of Mercator's projection. They showed the North American Continent isolated from the rest of the world by the expanse of great oceans. George Washington, in his Farewell Address, spoke of "our detached and distant situation." That concept, originally valid, has dominated the greater part of our na-

Now we face a world in which air is the means of communication. But air cannot be portrayed by maps alone. It is an invisible envelope that enfolds the earth without a break. So maps now need the supplement of an intelligent imagination. Some help can be got from polar maps. They help to teach that under modern conditions of communication areas which used to seem remote are in fact near.

Under present circumstances, divisions of land and water, of desert and mountain range, of river, and of plain, have lost much of their significance. More than ever before, the human family has become one.

Nevertheless, it is still necessary to draw lines. There are national lines, which have a meaning. But even national lines do not have an unchanging meaning. That is well illustrated by Europe. A map of Europe today looks as it did a few weeks ago. But, in fact, in Western Europe, an immense change is in process. It means that while nationalities will still exist, there will be cooperation so that the boundary lines will have lost much of their former forbidding significance. A new Western Europe is being born and maps cannot reflect the ending of age-old rivalries.

In Korea, the 38th parallel became famous as a line between the free and Communistdominated parts of Korea. But the line did not demarcate the hopes and aspirations of the people. I recall being in Korea in June 1950 and addressing at Seoul a religious gathering of thousands of refugees. They had fled from the north, and crossed the parallel to the south, in the hope of finding the freedom of religion which they cherished.

In Vietnam, a line was drawn at the 17th parallel. But hundreds of thousands of refugees have crossed it, fleeing to the south. Again the driving force was a longing for religious freedom.

And there is this to be remembered: For each person who succeeds in becoming a

refugee from communism, there are many more who do not want to be contained by the lines which statesmen have drawn in the hope that that would solve their problems.

In the world today, with air the means of communication, with time and space almost annihilated, geography still remains a fact. But geographical solutions rarely coincide with human solutions. That is why we do not accept the finality of a divided world.

11

Another dilemma that we face might be described as that of the part versus the entire

story.

It is almost always easy to find a solution it is not part of a problem is known. It is my experience that those who are most positive about political problems are able to be positive only because they do not know all the relevant facts. Those who are most harsh in their judgments are able to be harsh for that same reason. When the whole of a problem is known, solutions become excessively difficult and judgments are not easily made. Tolerance has become a vital need.

There is hardly any international problem which lends itself to easy or sure solution. Those who principally know Europe readily judge that the problems of Asia are unimportant and that almost any solution will serve so long as it does not trouble Europe. Those who are principally concerned with Asia are sometimes annoyed if it is suggested that Asian problems cannot be solved without regard for Europe.

The fact is that today any problem in any part of the world ramifies into almost every part of the world. There are no longer any simple problems, nor any easy solutions. A course of action for Indochina may have to be judged in the light of its repercussions in Europe, the Middle East, or Moscow; and vice versa.

I have the impression that in the days before the world became so unified, it was easier to take decisions. The issues were, or seemed to be, simple. Also, they could readily be explained. Today, almost every problem has many complications, so that it is difficult adequately to explain the reasons for a decision and the multiple factors which go to make up that decision.

There is a habit of mind which is sometimes called "localitis." Those who are close to a problem, or those who only see part of a problem, quickly find a solution that seems obvious. Those who know more may find that the "obvious" solution is no solution at all. Balancing scales may, from one angle, seem clearly weighted on one side. But when seen in proper perspective, they may seem to be equally balanced, or weighted on the other side.

This need for balancing many factors has some undesirable consequences. I have already alluded to the fact that it makes adequate explanation difficult. Also, it often tends to deprive decisions of the dynamic quality which is needed to make them effective. Often the mainspring of action is a sense of certainty. Unhapplly, those who are best informed are often deprived of that satisfaction.

The great deeds of history were wrought primarily by men with deep conviction and dynamic faith. They were sure that they were right.

It seems today that sureness can be dependably found only in the spiritual realm but that, when moral principles are sought to be practically applied, confidence tends to vanish. Certainty is not readily found in the mundane realm, at least where there is full knowledge of the facts. The yearning for more certainty and precision than is compatible with the complexity of affairs encourages only doctrinaire or fanatical attitudes and ultimate disillusionment. Perhaps it is good if fanaticism, in worldly terms, is on the way out.

I

Then we have the dilemna which might be called that of the spiritual versus the material.

There are some who believe that moral considerations ought not to influence the foreign policy of a nation; that moral considerations are all right for the individual but not for the collective unity. Corporate bodies, it is argued, should be directed only by material considerations.

It is, I suppose, always true that those who act in a representative and trustee capacity do not have the same freedom as is had by individuals in dealing with their own lives and the property they own. Thus, directors of a corporation are, in general, not free to use corporate assets for charitable purposes unconnected with the welfare of the corporation. To a degree, I suppose, the same principles apply to those who are trustees for a nation.

It is, indeed, generally the case that those who represent a government operate only for the immediate and direct self-interest of the nation they represent. That is why suspicion generally attaches to governmental grants. It is assumed that governments do not give away their taxpayers' money unless they see some specific quid pro quo.

The Government of the United States has, I like to believe, a rather unique tradition in this respect. Our Nation was founded as an experiment in human liberty. Our institutions reflect the belief of our founders that all men were endowed by their Creator with inalienable rights and had duties prescribed by moral law. They believed that human institutions ought primarily to help men develop their God-given possibilities, and that our Nation, by its conduct and example, could help men everywhere to find the way to a better and more abundant life.

Our Nation realized that vision. There developed here an area of spiritual and economic vigor the like of which the world had never seen. It was no exclusive preserve; indeed, world mission was a central theme Millions were welcomed from other lands. to share equally the opportunities of the founders and their heirs. We put our ex-periment on public exhibition so that all might see and follow if they would. Through the establishment of schools and hospitals, often under religious auspices, American ideals were carried throughout the world. We gave aid and comfort to those elsewhere who sought to follow in our way and to develop for themselves societies of greater human freedom.

These conditions prevailed for 100 years and more. Then, as our material power waxed, our spiritual power seemed to wane. We appeared to be less concerned with conducting a great experiment for the benefit of mankind and to be more concerned with pilling up for ourselves material advantages. Our vision seemed to contract, and our sense of mission to lessen.

We had to meet the severest test that can come to a people, the test of prosperity.

It was said by Jesus that material things will be added unto those who seek first the Kingdom of God and His righteousness. But when that happens, then comes the great trial. For, as Jesus warned, those material things can readily become the rust that corrodes men's souls.

Thus there is a familiar pattern. Men who feel a sense of duty to some higher being strive here to do His will. Because of their faith, they have power and virtue and simple wisdom. They build not only for the day, but for the morrow; not merely for themselves, but for mankind. A society so founded will, when nature favors, produce wealth and luxury for many. When those byproducts come, they seem so good that they become promoted to be the all-sufficient end.

So there came a time when our people were drawn away from long-range creative effort and when they struggled to get and to hold material things. Practices, originally designed to reflect a faith, may not have been adequately vitalized by continuing faith. I believe, however, that it can fairly be said that, since the end of World War II, our Nation has recaptured the faith in which it was founded and has resumed works such as those which in the past were called the great American experiment.

With 60 other nations we have actively participated in the United Nations in its quest for peace. We have lent our moral, military, and material support to many free people. With more than 40 nations we have special mutual-security arrangements. These measures are our contribution to the creation of a world which is safer and more secure for human freedom. This basic interest is the common bond between us and the other free nations.

We exert in every part of the world an influence—an influence which we try, as far as is humanly possible, to make an influence for justice and not an influence for self-aggrandizement.

No doubt we have made mistakes. But broadly speaking, our Nation has played a role which I believe history will judge to have been honorable. It is a role which we could not have played unless those who exercised the power of government had believed that they were justified in putting moral considerations above material considerations.

. 7

I have outlined some of the problems and perplexities which confront those who have political responsibility. I have deliberately tried to avoid being dogmatic. Rather I have sought to stimulate your own thinking. I will, however, close with this general observation:

It seems to me that a nation situated as is ours needs to follow a consistent and predictable course. We represent great power in the world—morally, intellectually, and materially. Other peoples and nations who are free and want to stay free usually want to coordinate their policies with our own. I do not speak now of coordination in detail. As to details, there are almost always differences. That is inevitable, because differences are the attribute of freedom. It is only despotism that produces conformity. I do, however, speak of such basic harmony as freely emerges from those who feel a sense of common destiny, and who want to help, and be helped by, each other.

A measure of harmony exists today throughout much of the free world. It binds together, in a spirit of partnership, many of different races, creeds, and nationalities in many parts of the world. But the harmony for which many thus grope will never be perfected and preserved unless the United States pursues a dependable, consistent course.

There are many who, in particular cases, would like it if the United States would deviate from our basic principles to help them meet their particular problems. We rarely do so. That accounts for much of the superficial criticism we encounter abroad. But underlying these surface dissatisfactions lies, I feel, a deep, worldwide sense of respect for the United States because even though we sometimes fall short, we do in general stand like a rock for certain principles and follow a course which, in its broad nature, is consistent and predictable. Without that, there can never be harmony. and a sense of security, as among the free peoples.

Obviously, a consistent and dependable national course must have a base broader than the particular beliefs of those who from time to time hold office. Our policies must, on the one hand, be dependably embraced by our own people, and, on the other hand, reflect a decent respect for the opinions of mankind. It would seem that only principles which conform to moral law meet

that specification. So not only the basic faith of our people, who are essentially religious, but also enlightened self-interest, combine to urge that moral principle be a guide, not merely to individual conduct, but also to the conduct of the nations.

Spread the Word-The Recession Has Faded Away

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article by Roscoe Drummond from the April 12, 1955, issue of the Detroit Free Fress, pertaining to the fact that the recession has faded away:

SPREAD THE WORD-THE RECESSION HAS FADED AWAY-SIX-MONTH GAINS POINT TO GROWTH, STABILITY

(By Roscoe Drummond)

WASHINGTON.-Nobody is yet leaking the biggest story in the United States today. It isn't classified and it's staring us right in the face. The pessimists may hesitate to admit it and the optimists may fear they will not be believed. But there is full evidence to support it and there is no use delaying the news:

The 1954 recession is over.

Every significant business indicator is on the rise and has been on the rise for months.

At several points the economy is beginning to set records. The upturn has now been so sustained and so steady that it is accurate to say that the recession which began in July 1953, reached its depth in March 1954, and began to saucer out in October 1954, is well in the past.

A new period of growth and stability is at hand.

Here are the most meaningful business in-

dices which justify this report:

Industrial production has risen from a low of 123 on the Federal Reserve index in the March-August period last year to an estimated 135 in March this year.

The gross national product has grown from a low annual rate of \$355 billion to about \$369 billion during the last year.

Personal income, made up largely of wages and salaries, has risen from a 1954 low rate of \$283.4 billions to an all-time high of \$292

The average work week has moved up from 39.3 hours to 40.7.

New plant and equipment spending has begun to increase, reversing a 2-year downtrend.

Industrial employment has risen steadily for 7 months and industrial unemployment has gone down consistently for 6 months and now is leveling off.

Total unemployment was down 548,000 this March from a year ago and total employment was up 400,000.

Some precisionists among the economists Will want to throw in a layer of "ifs" and "buts." Throw them in and you still come up with the conclusion that, while there may be another recession sometime, this one is over. It has been a remarkable experience-remarkable for three reasons:

Because it was one of the most shortlived and least severe slumps in American economic history.

Because it showed that, although there will continue to be "wrinkles" in the Nation's economy, man-made measures-both private and governmental-are capable of controlling the extremes of the business cycle.

Because it proves anew, and increases confidence in, the resiliency of the American enterprise economy.

It is impossible to measure which factor or which set of factors did most to shorten, to cushion and to reverse the 1953-54 recession. But there are discernible measures which contributed to that end. They are:

1. The brilliantly timed and perceptive shift of the Federal Reserve system, in advance of the recession, from a "hard money" policy to an "easy money" policy which re-lieved many pressures toward forced liquidation.

2. The deliberate and, for its standpoint, substantially unorthodox decision of the Eisenhower administration to carry through the scheduled lowering of income and excess profits taxes despite an unbalanced budget.

3. The fact that business stuck by its

long-range investment and did not run to shelter at the first sign of trouble.

4. The visible impact of the built-in shock absorbers which government has added in the past 20 years to the functioning of the economy-unemployment insurance, social security (both expanded in the last 2 years) plus the general leveling up of incomes.

The Federal Government resisted the pressures and the political temptation to inaugurate a "crash" spending and "reflation" program at the onset of the recession. It was called blind and heedless by some. In retrospect its diagnosis proved accurate and its actions equal to the need.

Easter Sunday in Arizona

EXTENSION OF REMARKS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial written by Mr. William M. Ryan, publisher of the Glendale News, Glendale, Ariz., which appeared in the Glendale News April 7, 1955:

EASTER SUNDAY IN ARIZONA

Easter Sunday in Arizona is no different from Easter Sunday any place else in the Christian world. People go to church who seldom pass the portals of a house of worship. Easter finery is displayed, with emphasis on milady's hats. Feasting begins where lenten fasting stops.

This year a disturbed citizenry is insecure. Peace asociated with the reawakening of religious fervor can be a lasting thing, or it can end with a tremendous blast if Godless communism has its say, and the devil today is lashing his tail like a stalking beast.

What these people seek to gain is beyond the understanding of minds that honestly believe the philosophy of "live and let live.

The hunting instinct in a small boy is strong but his desire to kill birds and animals wanes as his mind matures and he sees the utter senselessness of killing. He soon learns that fishing and hunting is a wonderful sport only when game is used for food or

We can understand the thinking of indoctrinated multitudes when selfish leaders promise a better way of life. Until they are

enlightened to the false promises there will always be wars. How to enlighten humans behind an Iron Curtain, especially when many of them do not want to listen, is impossible.

If they could only see that a war will mean destruction of a large segment of the human race they would not be so eager to start a

holocaust.

Even in our country you often hear the words: "Why not drop an atomic bomb on them and end the struggle for supremacy." Why not, indeed?

Regardless of which side starts the fighting this time a chain reaction will make other world wars look like a cops-and-rob-

bers game.

The American people do not want war. We want to see and want our children and grandchildren to observe many Easter Sundays.

Only by recognizing a higher authority than man can we survive.

If we place enough faith in that higher power the world will still live in comparative quiet.

Faith is the one gift which lightly taken turns to evil.

We will need all the faith we can muster from now on.

National Conservation

EXTENSION OF REMARKS

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. MARSHALL. Mr. Speaker, I want to call the attention of the House to the following editorial from the Minneapolis Sunday Tribune of April 10, 1955. It reminds us that our natural resources are a national heritage and conservation is a national responsibility in cooperation with State and local governments.

NATIONAL CONSERVATION

It is too early to comment fully on proposals to turn the Federal soil conservation program over to the States. Details of the plan have not been made public.

But it is not too early to note that, in one important respect, turning the Soil Conservation Service's responsibilities over to the States might hurt the national interest.

Members of the Commission on Intergovernmental Relations are now being polled as to a plan recommended by the Commission The staff proposal would place the work of the SCS on a basis similar to that of the Extension Service, with State officials having primary responsibility. The staff bethis would be more consistent with lleves the National-State relationships prevailing in other agricultural technical assistance programs.

Senator HUMPHREY, a member of the Commission, has offered a substitute proposal which recommends that the present program of soil conservation technical assistance to farmers be continued on a National-Statelocal governmental partnership.

The Humphrey proposal does not run directly counter to the idea that State and local groups should take a greater part in the soil conservation program. On the contrary, it asks legislation that would provide for more State and local responsibility.

The plan advocated by Senator HUMPHREY, however, recognizes the importance of the fact that conservation work must not be restricted by the political boundaries of States. Rain and snow are no respecters of such

boundaries; watersheds sometimes involve whole blocks of States; creeks and rivers flow without regard to political lines.

For this reason the most effective conservation work can be done when there is broad, overall planning on the basis of topography rather than political divisions. Any proposal that ignores or minimizes this salient fact comes short of being the best way to conserve this Nation's greatest natural resource.

Freedom of Worship

EXTENSION OF REMARKS OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communications:

GALLAHER STORES,

Lawrenceburg, Tenn., April 6, 1955. The Honorable Ross Bass

House of Representatives,

Washington, D. C.

DEAR Ross: The enclosed copies of my letters dated March 4 and April 4, to the Secretary of State, speak for themselves. incidents related are in my considered judg-

ment basic and thought-provoking.
Since it is the right of any American to worship in his own way in this land of refuge, it shocks him to see police force used against Americans in a country where his tax dollar was used to help stabilize its economy.

Some would seek to minimize the repression of small Protestant sects as marginal cases, but are they not indeed indicative of the measure of liberty enjoyed, and in truth, suggestive of nondemocratic systems?

Freedom must be total and for all or else

it is not freedom.

Wishing you the best, I am,

Sincerely.

MARCUS A. GALLAGHER.

LAWRENCEBURG, TENN., March 4, 1955. The Honorable JOHN FOSTER DULLES, Secretary of State,

Washington, D. C.

My Dear Mr. Secretary: According to an Associated Press dispatch with Rome dateline the Church of Christ won a legal decision permitting it to operate and to place signs at its places of worship. Rome's police defy court, it further stated, and for the third time in 2 years, "the chisel and hammer squad," descended upon church premises in Rome, Thursday, to chisel the name of Christ from its portal and to arrest an American preacher.

The police action against the Church of Christ even after the first "provocation" was beginning to draw the attention of and protests from independent Italian newspapers. La Stampa of Turin, one of Italy's great dailies, published an article after the first interference deploring the "arbitrary ac-tions of police" that, it said, violated one of the fundamental freedoms recognized by the Italian constitution.

The decision of Rome's tribunal sharply criticized police for twice tearing down signs from the church's temple there. It also stated the Protestant group was protected by provisions of the Italian constitution guaranteeing religious liberty to all cults.

As the American Embassy pointed out on a previous occasion, the United States-Italian Treaty of Friendship specifically guartees the right of American citizens to hold

religious services in Italy unless public morals and safety are endangered.

Mr. Secretary, the unfolding picture of the continuing harassment of American missionaries with the police interfering with activities of the Church of Christ at every turn are repetitive acts of "force in the guise of the state." and such incidents are acts fraught with hostility toward religious freedom which stand out in arrogant contrast to freedom not only to worship but also publicly to promote one's religious beliefs as upheld and practiced in the United States.

In a recent formal agreement detailing the religious rights of Americans stationed in Spain, it appears that church law there is civil law, and that when you are in that country you operate under the laws of that country. However, it would appear in Italy, that the Italian Catholic State and the Roman Catholic Church are not harmonious entities, yet, according to the courts these Americans were conforming to Italian law.

When one considers the World War I aid, lend-lease, and the numerous grants and loans to Italy which have exceeded \$5 billion in addition to our sacrifices there in World War II, such repetitious violations of religious freedom are shocking indeed, whatever the ecclesiastical identity or nationality of the parties immediately concerned.

While your Department is to be commended in making all reasonable efforts toward saving this country from Soviet domination, a country with whom we have a treaty of friendship, yet, a country presenting many anomalies, may I strongly urge your continued vigilance in upholding that concept of freedom granting to minorities the right to publicly worship God as they are convinced that He should be worshipped, which is a salient feature of the American tradition.

Tolerance is the epitome of religious freedom It is the same spirit of tolerance that achieved religious freedom that alone can preserve religious freedom, our most precious heritage. Bigotry must disappear in the free

The American Government takes no restrictive measures against the present influx of Italian missionaries into the United States while relatively few American missionaries are in Italy. Certainly tolerance is not a one-way street, and may I commend to your favorable consideration such firmness and appropriate action that may be consistent with the traditional American emphasis on religious liberty.

Respectfully yours,

MARCUS A. GALLAHER.

LAWRENCEBURG, TENN., April 4, 1955. The Honorable JOHN FOSTER DULLES, Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: On March 4, I wrote to you protesting the denial of full freedom of worship and the apparent delight of some in Italy in heaping abuse upon those of the Protestant faith, which at least a knowledge of, if not the consent of the Italian Government with whom we have ties of friendship and for whom the American taxpayer has sacrificed both in war and peace.

The police have interfered with activities of the Church of Christ in Italy at almost every turn, but it has continued its evangelistic activities and maintaining an orphanage under an uneasy truce negotiated by the United States Embassy in 1952. However, the Church of Christ won a legal decision early last month permitting it to operate and to post signs at its places of worship.

Even as purported superior religious and political reasons have made it necessary to restrict freedom at home. Premier Scelba, who also as head of the Ministry of the Interior, heads the entire police force in Italy, receives the hand of welcome and friendship

from an ever-generous American Government.

Just as in the words of the elder Pitt, the poorest man could in his cottage bid defiance to all the force of the crown, since our birth as a Nation the humblest citizen has enjoyed among other basic rights, that of petition.

Perhaps more compelling or expedient matters occupying the attention of some in your Department have precluded even a routine acknowledgment to my March 4 communication, but certainly to my knowledge nothing has happened since that time to allay my concern over this serious matter. I trust that if a definitive policy has not al-ready evolved that an honest and forthright approach within the American concept will be undertaken expeditiously.

Yours very respectfully.

MARCUS A. GALLAHER.

Seasoned to Taste

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. PELLY. Mr. Speaker, I have just received two publications relating to race relationships. One is a Wilson Library bulletin entitled "Seasoned to Taste" by the director of libraries, University of Washington, Harry C. Bauer. This article takes six from a list of Negro librarians with distinguished records and cites their work as a significant example of professional attainment in spite of the struggle a Negro must make to gain recognition.

The other bulletin received is the 1954 annual report of the Seattle Urban League which seeks to help Negroes overcome discrimination through vocational guidance and opening the door wider for them in employment opportunity. Obviously these two publications are related in that one is a study of successful careers of Negroes in a professional field while the other is a report of community activity to make such careers possible.

It is of more than passing interest therefore to briefly describe the activities of the Seattle Urban League during 1954.

(a) The Urban League continued to remind Seattle that a policy of discrimination in employment against Negroes and other nonwhites is unsound economically as well as morally.

(b) In its program of vocational guidance, the league sought to enlighten young people as to work opportunities and how to prepare for them.

(c) The league helped establish during the year three commercial club type of organizations for district community service and mutual cooperation.

(d) The league worked with childplacing agencies toward getting more foster parents and adoptive families for nonwhite families.

Finally, Mr. Speaker, the Seattle Urban League report shows clearly its many activities, all related to each other, have a central objective: "To help the Negroes of Scattle live better, fuller. happier lives, and so to serve the Negroes

and the whole community." I am proud of the Urban League's record in my district and shall certainly try and do what I can on the Federal level to supplement their efforts and objectives.

Easter at the Canyon—A Symbol of Divine Majesty

EXTENSION OF REMARKS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. RHODES of Arizona. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorials which appeared in the Arizona Republic and the Phoenix Gazette on Saturday, April 9, 1955. Both of these editorials point out the incomparable beauty of Arizona's Grand Canyon and call attention to the building of the great Shrine of the Ages to be constructed on the rim of the Grand Canyon:

EASTER AT THE CANYON

The story is told of a traveler from a distant land who stood at the reservation desk of a hotel on the rim of the Grand Canyon.

"May I have a room from which I can see the canyon?" asked the awed visitor.

"I'll give you a room from which you can spit into the canyon," answered the jaded room clerk.

"Sir," said the visitor, "I would not spit in the face of God."

Perhaps apocryphal, this story nevertheless reflects the attitude of thousands upon thousands of visitors who see the Grand

Canyon for the first time.

Tomorrow morning, as he has each Easter Sunday for the past 20 years, Howard Pyle will describe the glory of a sunrise seen from the rim of the canyon. Across the Nation unnumbered listeners will hear his sermonette carried over an NBC radio network. Later it will go to the Armed Forces overseas,

A year from now, if all goes well, the shrine of the ages will stand near where Mr. Pyle makes his annual broadcast. A campaign has been started to raise \$1 million for an interdenominational place of worship, to be erected on the canyon's rim, Local, State, and national leaders are on the shrine's advisory board, and the project has been given Protestant, Catholic, and Jewish approval. The National Park Service has okayed the plans for the building drawn up by one of the country's best known church architects.

The shrine of the ages is intended to provide a place where more than half a million visitors a year, each in his own way, can pay homage to the Creator while viewing His handlwork. It will lend a new reality to the eternal truths of the canyon.

A SYMBOL OF DIVINE MAJESTY

For those of the Christian faith there is no happier or more deeply significant occasion than that of Easter. It is an anniversary of hope for a better world, a time of remembrance that the powers of good ultimately prevail.

Such hopes transcend individual religious beliefs and are common to all those who worship and have faith in God. And it is to that larger congregation, in whom all faiths and denominations join, that Arizona's own annual observance of this time of year holds great appeal. For the Easter sunrise services at Grand Canyon offer spiritual rejuvenation to all who hear them.

The description of the symbolic dawning of a new day over earth's greatest natural example of God's majesty has thrilled multitudes through the years. Howard Pyle, who has let neither high office nor distance interfere with his now-famous broadcast, has returned to Arizona for the occasion. This year it has the new meaning of an effort to establish a permanent place of worship at this scene of awe-inspiring grandeur.

The Shrine of the Ages is a fitting name for the prospective church on the rim of the Grand Canyon—a chapel intended for the use of all religious groups. Nearly a million people are visiting the canyon each year. None can see its beauty without consciousness of the Supreme Being. Yet no place of worship in the whole area is in any sense adequate to the need.

That need can and undoubtedly will be met through generous participation in the fund campaign now going on in Arizona and soon to include the Nation. Located on the same beautiful site from which tomorrow's services will originate, the Shrine of the Ages chapel could be a monument to human understanding of the works of God.

The Question That Wasn't a Question

EXTENSION OF REMARKS

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1955

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks I include the following editorial from the Green Bay (Wis.) Press-Gazette of April 8, 1955:

THE QUESTION THAT WASN'T A QUESTION

We quote, with considerable interest two paragraphs from a news story that appeared recently in the Democratic newspaper at Madison regarding a television interview with Representative Reuss, of Milwaukee:

"REUSS was asked if he agreed with the view that 'we should back Chiang Kai-shek in an all-out atomic invasion of the Chinese mainland,' which various high Republican leaders have advocated.

"He answered: 'I certainly do not. It is time we took our foreign policy out of the hands of Chiang Kai-shek and put it in the hands of the President of the United States, Dwight Eisenhower, where it belongs."

Although the interview took place in Milwaukee, the story carried a Washington date line without any press service insignia, from which we deduce that it was really a publicity release from REUSS' office which was printed uncritically by the Madison newspaper.

This is what is known as the hidden propaganda type of publicity release, except that in this case the propaganda isn't hidden very well. Even the busiest editor of a Wisconsin country weekly would have spotted the casual way in which the words "which various high Republican leaders have advocated" are tacked on to the alleged "allout atomic invasion of the Chinese mainland."

Just what "high Republican leader" has advocated such a course? Even Senator Knowland, the most vociferous of the war hawks at Washington, has not ot our knowledge made any such proposal. Whenever we find ourselves in a tense international situation, and have an ally who we are helping and who is helping us, there are charges that

the ally is running our foreign policy. And, of course, the allied leader is being accused at home of knuckling under to Uncle Sam.

Our policy with regard to the situation in the Formosa Straits is a very serious matter indeed, and a proper subject for debate among all our people including Congressmen. But snide, untrue allegations made by Congressmen and printed in propaganda sheets masquerading as newspapers, do not contribute much to that debate.

Public Lands

EXTENSION OF REMARKS

HON. CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. YOUNG. Mr. Speaker, one of our valued rights as American citizens is the privilege to petition our Government for redress of grievances. Unfortunately, as our Government has increased in size and complexity, the influence of the individual in presenting his problems has diminished in proportion. And when you add to the growth in the magnitude and scope of Federal activities the fact that some of our States, such as the one I have the honor to represent, are located several thousand miles from the seat of government, it makes even more difficult the task of an individual citizen who seeks a sympathetic and thorough consideration of his problems, important though they may be.

With nearly 87 percent of the State of Nevada under Federal ownership, it is to be expected there should develop occasional objections to the manner in which this area is administered. However, when objections are more than occasional it is time for Congress to seek ways of improving the rules of administration.

In my State, concern over the present public land system is particularly acute. Recently with an unprecedented influx of population in the State, and an unforeseen increase in public land activity the land disposal program of the Department of Interior has been unable to keep pace with the demand for service.

In an effort to improve this service, there was recently organized in the southern part of Nevada a group which in many respects recalls to mind the attempts of early settlers of Nevada and California to work out solutions to their public-land problems—efforts which eventually resulted in congressional action of the kind that is needed today.

When gold and silver were first discovered in California and Nevada there were no Federal laws to govern the recovery of these minerals from the public domain. Local districts were formed by these hardy pioneers. These districts established rules and regulations to govern day-to-day operations and activities of those who had discovered and developed valuable claims. When Congress later enacted legislation, it adopted to a large extent the rules that had been worked out by these locally formed mining districts.

The pioneering organization to which I am referring is the Southern Nevada Home-Siters, Inc., a grassroots organization composed largely of those who have made application for sites on the public domain under the Small Tract Act of 1938.

The backlog of cases jamming the office of the Bureau of Land Management and the lack of clear information on the disposal program gave birth to this group. Widespread confusion was present in that area as result of inadequate efforts made by the Federal Government to handle the many problems involved. The actions of this organization concurred with the best principles of democracy and admirably carried on the vigorous spirit of self-help and initiative which were rooted in the mining districts organized over 100 years

In a short period of time the Southern Nevada Home-Siters organization has accomplished the following:

It has organized applicants who are interested in securing small tracts so they would have a more effective voice in, first, improving the administration of existing laws; and, second, changing regulations and laws where it seemed advisable. It has served as a vehicle for better government for many people who perhaps as individuals would not have been heard or heeded. In short, it has breathed new life into their petition for redress against bureaucratic delay and legislative neglect.

It has served to secure and disseminate accurate information in an area where confusion was rampant. The Government was not discharging its obligation to furnish adequate service and self-appointed non-Government experts were profiteering as result of speculation, misinformation, and lack of knowledge.

It has been the source of constructive force to improve the services of the Bureau of Land Management office in the State of Nevada.

It has been in the forefront of moves to work out plans with the FHA, other Government organizations, and the communities of southern Nevada to develop the land resources in an orderly, intelligent way with an eye toward the future.

It has come to my attention that the 2,000th member recently joined this organization. This itself is a fine tribute to the excellent work they are doing at a local level. I wish to take this opportunity of pointing out the organization's splendid efforts and commending the officers and members on their fine contribution to better government, as well as the excellent example they are setting of grassroots democracy in action. No small measure of the credit for improvements already noted is due their untiring efforts. If future achievements are made in modernizing our public land laws and the administration thereof, these Nevada citizens will have contributed substantially to such progress.

American history is replete with examples of the general public being ahead of its elected servants in recognizing needs and working for solutions. I am sure we have another such occasion in

the present public land law tangle and that this body could well profit by following the lead of Nevada's modern-day pioneers.

Greece: The Symbol of Freedom

EXTENSION OF REMARKS

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial written by Mr. Harry H. Schlacht, which appeared in the East Side News on March 26, 1955, upon the occasion of the 134th anniversary of Greek independence:

GREECE: THE SYMBOL OF FREEDOM (By Harry H. Schlacht)

This week marked the 134th anniversary of Greek independence. For it was on March 25 when the Greek flag of liberation was unfurled.

What liberty-loving heart does not throb, does not swell, at the thought of Greek independence? We hail her unconquerable soul which has ever been the proud possession of the Greek people. We salute with joy "not the glory that was Greece" but the glory that is Greece. For the history of Hellas is the history of the world.

No tyrant has ever been able to crush her, and no tyrant ever will. The torch of democracy was first lighted in Athens. The Greek people have demonstrated in the most terrible of all wars that they still possess the flame which made their ancestors transcendent examples of what the human spirit can achieve.

They have emerged triumphant through every test of fire and sword. They showed the world that as they had taught other peoples how to live—so would they demonstrate their willingness to die while defending their liberty. No prophet is needed to predict that the people of Greece will continue to exemplify the noblest attributes of man.

Greece stands resolute as the pillar of civilization. Her past is unrivalled in intellectual richness. Her past is studded with every form of human achievement. Her past is kindled with the eternal love of liberty.

Liberty is an Hellenic quality. The historical annals reveal that the spirit of democracy found its full fruition and development in ancient Greece. Its grandeur in every domain of human endeavor has never been excelled. Its poised brow, like that of her Olympian god, was ranked high above the contending forces that surged below. Its spirit of freedom, its love of music and arts, all of the finer impulses of the heart and mind, flourished and blossomed with such rich fertility during the golden age of Pericles that they have never been surpassed in history.

Greece has been a brilliant light throughout the centuries, casting its illuminating rays upon the nations of the world. Her gallant leaders, true to the traditions of Thermophylae, Marathon, and Salamis, chose the path of honor in the last world conflict. Despots have attempted to subdue and crush her valiant spirit with hunger, exposure, and death. But her unshakable will to live as a free nation has remained ever constant and steadfast through all her tribulations.

Nor have the Greeks ever surrendered or compromised their lifelong convictions and ideals. For they have manifested, in blood and suffering, the invincible spirit of their martyred heroes who fought and died for liberty. From the lamps of Acropolis, the tragedies of Euripides, the songs of Menander, the poems of Palamis, the thought of Aristotle, the science of Archimedes, the light of liberty will never be extinguished.

Spring has come to the golden land of Hellas, spring with all its national freshness and exuberance. The warm breezes play gently over her pastoral Arcadia. The red poppies of Attica bloom beneath gray-green olive trees. The branches in the Thessalonian orchards are now heavy with buds. The season brings the joy of Greek music, songs, and folk dances.

On her face is the smile of liberation. It is radiant with freedom. It is softened by sorrow. It is sweetened by sacrifice.

Greece will rise again to greater heights of splendor. She will live again in the fullness of her ancient glory and valor. For the luster of her historic fame can never be dimmed.

O, Greece, for you; your long and glorious line of statesmen, philosophers, scholars, poets, and artists must be singing a heavenly chorus of halleluiahs.

Here's to the land of Hellas: One nation, one language, one history, one greatness, may your country ever be worthy champions of justice and liberty. Long live Greece.

National Sunday School Week

EXTENSION OF REMARKS

HON, WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. JUDD. Mr. Speaker, may I call attention to the fact that the week of April 11 through 17 is one that is to be observed as National Sunday School Week—a special week dedicated to the youth of America, no matter what their creed. For the past 11 years this worthy cause has been promoted throughout the United States under the auspices of the Layman's National Committee, Inc., an organization made up of men and women from business and industry who have pledged themselves to the common cause of furthering religion in our everyday life. However much they may differ on other matters, they unite in supporting religion that reduces itself in action to the principle of the Golden Rule, which is the foundation of the best in our American life. And so very strongly does this committee feel about the continuance of our American way of life that its members are constantly devoting untiring efforts to the proper dissemination of information regarding the fundamental principles on which our Nation was first established. They must be understood and preserved and strengthened if our country is to be preserved and strengthened.

This year the Laymen's National Committee has chosen as its theme for Sunday School Week "Sunday Schools Are the Root-Strength of Our Nation's Youth."

The Yalta Conference in Historical Perspective

EXTENSION OF REMARKS

HON, STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. UDALL. Mr. Speaker, historians tell us that in examining the record of the past perspective is the sine qua non. Columnist Walter Lippmann has just completed a series of articles in which he has attempted to put the Yalta Conference into its proper historical perspective.

Perhaps it is too early for any person to wholly succeed in this task, but Mr. Lippmann's comments and observations, shunning as they do any partisan political considerations, should prove helpful to serious students of the World War II period in our history. Reprinted herewith is the second of these interesting pieces:

THE YALTA PAPERS: II

Had the State Department handled the Yalta papers with more discrimination, it would, so I argued in the preceding article, have recognized the difference between the genuine record of agreements and of official papers, on the one hand, and, on the other, the unverified individual jottings which belong to the domain of personal memoirs. Without falsifying the legitimate record, this critical distinction would have decontaminated this collection of Yalta papers of their worst mischief.

Yet, with or without the gossip and the chitchat, and in the hindsight of 10 years, the student of these papers will find that while it is easy enough to say what he wishes had happened differently in Eastern Europe and in the Far East, it is far from clear and certain even now how a different result could

have been brought about.

When we sit in judgment now, we must bear in mind the overriding condition which was decisive for President Roosevelt and his American advisers. This, as many have already noted, was the military situation at the time of Yalta. The Red army was across the Oder River and within 40 miles of Berlin. Eisenhower was not yet across the Rhine. Japan was in occupation of Manchurla, Korea, the whole coast of China, all of Southeast Asia, and of Indonesia. The combined, that is to say, the British and American, Chiefs of Staff had reported to Roosevelt and Churchill that they must plan for 18 months of war against Japan. If Secretary Forrestal's diary is correct, General MacArthur was calling for the intervention of 60 Red army divisions in Manchuria.

There were dissenters in the Navy and the Air Force who believed Japan could be defeated by sea and air power. But the mili-tary consensus was tha: Russian interven-tion was necessary if the enormous casualtics of a landing in Japan were to be avoided. The paramount idea in the minds of most Americans was how to end the war quickly, cheaply, and victoriously, and not how to the best position for a good political settlement after the war was over. As I recall the mood of Congress and of public opinion at the time, the sacrifice of American lives for the sake of a postwar settlement would have been regarded as verging on betrayal of the vital interest of the American people in saving the lives of their sons. Churchill and Stalin came to Yalta with their eyes fixed on the postwar settlement, and each was prepared to take military risks and to pay a military price. Not so the

Americans, beginning with Roosevelt and including all the rest of us.

We know now that the military leaders had overestimated Japan's resistance. The Japanese war could have been won, and in fact was won, without the assistance of the Red army. It is, therefore, true to say that Roosevelt was overanxious to buy Stallin's intervention in the Far East. He could, we now see, have gambled on a victory without Soviet participation. This, however, leaves open the question of what the United States would have done had Stalin intervened anyway, seizing what he wanted. It is not easy to answer that very "iffy" question.

In February 1945, in the European theater, there was no margin for gambling as theoretically, at least, might have been done in the Far East. Had the Red army sat down or, worse still, made a de facto truce with elements of the German Army, the danger to Eisenhower would have been enormous.

The overriding fact was that the Western democracies had become grossly dependent for their security upon the power of the Red Army. In February 1945, they had not vet become able to make themselves secure without, much less against, the Red Army. This is the key to Yalta. It is true that the Western allies had become less dependent than they were from 1941 to 1944, and that American power, if its development had been sustained for another year or two, might have made the West independent and superior. But at Yalta, the West paid the political price for having failed to deter Hitler in the 1930's, for having failed to unite and to rearm against him. The dom-ination of the Yalta conference by Stalin was founded upon the weakness of the Democratic West in the years before Yalta. From the day Hitler attacked Russia in June. 1941-6 months before Pearl Harbor-until the middle of 1944, the defense of what remained of Western Europe, and the prospect of mounting an invasion to liberate Western Europe and Scandinavia, depended upon the fact that Russia was absorbing the force of Hitler's blows.

No one is a good historian or a fair judge of the mistakes made at Yalta if he allows himself to forget the military weakness of the West during the first years of the war. For the errors, apart from the verbal indiscretions, of the Westerners at Yalta reflected the experience, the wishful thinking, and the rationalization of men who during long agonizing years had had to depend so much—too much—upon the fighting power of the Red Army.

In this perspective, then, the mistakes are still mistakes, and the unhappy chitchat is still too bad. But those of us who point the finger today have no ground for self-right-eousness. How many are there in public and private life—apart from Churchill and his few supporters—who really worked to keep the West from being too weak to take care if itself? Who demanded massive rearmament in the 1930s? Who worked for an alliance to deter aggression, to defend the West? A mere handful.

Yelt if Stalin's commanding position at Yalta is to be understood, we must remember what had happened in London, Paris, and Washington during the years while Hitler was rearming Germany and while Japan was conquering China. We must not forget that we were not ready to set foot upon the European Continent until 2½ years after Hitler declared war against us. In those years the stage was set for Yalta. In those years the Red army fought its way back from Stalingrad and the gates of Moscow. The Red army overran Poland and had reached the gates of Berlin. When Roosevelt and Churchill went to Yalta, Stalin already held in the grip of the Red army virtually all the lands that lie now behind the Iron Curtain. They went to Yalta compelled to deal with what was an accomplished military fact.

The Corsi Affair

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include 2 editorials from the New York Times, 1 of April 9, 1955, entitled "The Corsi Affair," and 1 of April 13, 1955, entitled "Corsi Surrender":

[From the New York Times of April 9, 1955] THE CORSI AFFAIR

If President Eisenhower has ever wondered why it is sometimes difficult to get firstclass citizens to serve in important jobs in his administration, let him look at the treatment meted out to Edward Corsi, former industrial commissioner of New York.

Mr. Corsi has been a distinguished public servant for more than two decades. His first public office of note was Federal Commissioner of Immigration here, a post to which he was appointed by Herbert Hoover in 1931. A liberal Republican, he has been his party's nominee for United States Senate and also for mayor of this city. Because of his expert knowledge of and sympathetic interest in immigration problems, Secretary Dulles named him last December as special assistant for refugee and migration problems, presumably on the theory that if anybody could make sense out of the Refugee Relief Act of 1953 Mr. Corsi could. In appointing his old friend, as he called him, Mr. Dulles noted that for this job Mr. Corsi was the best qualified man in the United States.

But when Mr. Corsi came to Washington he had two strikes against him. He had been a vigorous and effective opponent of the McCarran-Walter Immigration and Naturalization Act of 1952. Furthermore, he was serious about trying to make the 1953 law work—and he actually started to do something about it. There are people in Washington who do not want the Refugee Relief Act to work. And Representative Walter, a Pennsylvania Democrat, has apparently not forgiven Mr. Corsi for what he said about the McCarran-Walter Act.

Mr. Walter suddenly accused Mr. Corsi of having had Communist associations. Mr. Corsi denied the charges. Preliminary security investigations give Mr. Corsi a clean bill of health, as expected. Yet Mr. Walter persisted, and Mr. Walter is an important figure in Congress. We are left to conclude that rather than fight Mr. Walter and stand up for his personal appointee Secretary of State Dulles capitulated. It is not the first time.

Even in capitulating the State Department says that security is not the issue. Of course it isn't. The issue is a refusal to defend an appointee who was especially called to Washington to do a certain job but who has the administration rug jerked from under him the minute he becomes the target of political attack. Mr. Corsi has been offered some kind of alternate job as a consolation prize. Whether he accepts or refuses it we hope the administration will learn that this is not the way to win the respect of the American people.

[From the New York Times of April 13, 1955] Corsi Surrender

The Office of Secretary of State is, next to the Presidency, the most important single executive post within the Federal Government. The man who fills that post is the representative of the United States to all the world, and therefore it is particularly important that he have the confidence respect of the American people. The position of Secretary Dulles and the State Department in the Corsi affair has not, we regret to say, enhanced that respect.

The failure of Secretary Dulles to continue Mr. Corsi in his job as special assistant on refugee and migration problems became public on the heels of Representative WALTER'S repeated denunciations of Mr. Corsi for alleged pro-Communist associations. That these allegations had no validity was underlined by Mr. Dulles himself, who specifically stated that Mr. Corsi was not a security risk. Why, then, was he fired?

The State Department claims that Mr. Corsi's original task was completed and that he had "indicated his disinclination," in the Department's phrase, to perform the "painstaking work and administrative detail" that would follow. It is difficult to accept this labored explanation. Much more logical is the suggestion that he was dropped in order to avoid a fight with Representative WALTER and other defenders of a restrictionist immigration policy. Unfortunately, there is the truth in Mr. Corsi's charge to Secring of retary Dulles that the refugee program "will not work until you and the administration are willing to rescue it from the grip of an intolerant minority both in Congress and within the Department itself."

It is perfectly true that Secretary Dulles can do nothing about the wording of the law, which has been described by a former Solicitor General of the United States as "in many respects the most discriminatory, the most restrictive and generally the worst piece of legislation on the subject ever enacted in the history of this Nation." It is true that Mr. Dulles cannot change the remarkable stipulation that administrator of the law be identical with the head of the State Department's Bureau of Security and Consular Affairs, who happened then and happens now to be Scott McLeod. But it is also true that unless there are people like Mr. Corsi around who really want to make the act work if it is humanly possible to do so the act won't work and its administration will be narrow, illiberal, and timorous. Furthermore, as Mr. Dulles has said, "craven purchase of peace at the expense of principle can result in destroying much of the human spirit on this planet." This thought can apply to peace with Congressmen as well as to peace with the world.

Rice as a Weapon

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. SMITH of Mississippi. Speaker, I hope the report contained in the following editorial from the New York Times is accurate. We have a major surplus of rice in the United States, and it would be foolhardy not to make effective use of this weapon in our effort to check the advance of communism in Asia.

The use of our rice as a weapon would be very little in the way of additional expense by comparison with the vast military expenditures deemed essential to our position in Asia. If we can use this commodity now stored in surplus to check the effort at economic expansion Red China is now making into Japan, India, and southeast Asia, we may save the cost of new fleet patrols in Asiatic waters, to say nothing of lessening the danger of major conflict in that region.

I hope the potential value of our rice surplus will be fully considered in the proposals for economic and military aid to Asia which will be submitted soon by the President. It will be the height of folly not to take advantage of this great opportunity to use an effective weapon.

RICE AS A WEAPON

Rice may become an important weapon in this country's fight against the spread of communism in the Far East. Administration officials are reported to be seeking methods of using our surplus rice to counter Red China's determined effort to win the major Indian and Japanese rice markets away from Burma and Thalland-nations friendly to the United States. Communist China, despite hunger in her own land, is exporting rice and attempting to undersell Burma and Thailand in order to advance her foreign policy in India and Japan. United States farm experts believe that by increasing our own exports to the rice-hungry peoples of Asia we can block China's plan to undermine the market positions of Burma and Thailand-exporters of two-thirds of the world's rice trade. Moreover, we can give valuable assistance in strengthening the marketing and distributing systems of those 2 nations so that they will be better able to stave off the Communist threat to their present economic status.

It has often been pointed out that our military policy in the Far East must be supplemented by effective trade measures in order to win the people of Asia. Thus Washington is on sound ground in searching for ways to make our rice surplus curb China's economic ambitions in India and Japan. Rice can help us win the cold war in the Far East while the 7th Fleet prevents a hot

A Petition To Remove Compulsion From Social-Security Legislation

EXTENSION OF REMARKS OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing a copy of a letter and petition which I received from one of my constituents, Mr. Ralph Bly, who has forwarded to me his own signed petition plus 101 others signed by members of Individuals for Freedom, and requested it be placed in the Congressional RECORD:

BLY AUTO SUPPLY, Shelby, Ohio, April 4, 1955. Hon. J. HARRY McGREGOR,

Washington, D. C.

DEAR HARRY: Under separate cover I am mailing you 101 signed petitions for the Individuals for Freedom. I will make this request that they be entered in the Congres-SIONAL RECORD, as opposition to the compulsory clause in the social-security legislation. I might add that in obtaining the signatures to the petitions that when the hard cold facts of the swindling features of the socialsecurity law is bared to the people they want no part of it.

Yours truly.

RALPH BLY.

-The petitions have been signed in triplicate; each Senator will also receive the same names.

A PETITION TO REMOVE COMPULSION FROM SOCIAL SECURITY LEGISLATION BY INDIVIDUALS FOR FREEDOM, MARY D. CAIN, SUMMIT, MISS. CHAIRMAN

To the Congress of the United States:

I, as a member of Individuals for Freedom, acting under amendment 1 to the Constitution of the United States, "to petition the Government for a redress of grievances" forth the following grievances against the so-called social security legislation and respectfully request permission to be omitted from the program, both as contributor and potential recipient of its benefits:

1. For 150 years of matchless American history, the general welfare clause in the preface to the Constitution was interpreted as our Founding Fathers explained it in the Madison papers, where James Madison explained that our government was not an indefinite one but a limited one, "tied down to the specific powers, which explain and define general terms." There is no grant of power to the Government to engage in forcing citizens to buy insurance against their wills.

2. In my opinion, social security legislation violates two of the Ten Commandments, upon which we believe our Christian Nation was conceived: 1. "Thou shalt not covet":

"Thou shalt not steal." and 2.

(a) I feel that this generation is being taught by the Federal Government to covet property that belongs to their neighbors. I cannot be a party to this breakdown of morality. Covetousness is one of the diseases common to communism.

(b) The social-security program is not actuarially sound. While it can now pay its way, it is freely admitted that payments to future beneficiaries depend entirely on how much tax the next generation can afford to pay. I feel that this generation is stealing from posterity, a move in which I wish no part as I want a clear conscience.

(a) and (b) jointly constitute a violation of amendment 1 which states plainly that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." It is against my religious beliefs to engage in breaking any of the Ten Commandments, all of which are

important.

3. In my opinion, social security is one of the main spokes in the wheel of communism which is destroying individual freedom in America today: It is, as a part of the communistic income tax structure, "a heavy progressive income tax"; which is the exact wording of plank No. 2 of the Communist manifesto. As a loyal American citizen, I can embrace no part of communism and I ask to be released from this edict which violates both the American and the Christian concept of individual freedom of choice.

(a) According to pamphlets issued by the Social Security Bureau, the present tax on employees will go, by 1969, to 31/4 percent and for their employers a like percentage; and for self-employed persons it is scheduled to rise to 4% percent. This certainly makes

it both heavy and progressive.

4. Social-security legislation violates amendment 5 of the Constitution, which plainly states: "Nor shall private property be taken for public use, without just compensation." Any possible compensation for people depends entirely on the whim of Congress and the willingness of people to continue being so outrageously taxed. The money is taken for public use because its

benefits presently go to people who have, in many cases, contributed practically nothto the program but who are availing themselves of the fruits of the toil of others-with Government holding the big

5. This social-security legislation violates amendment 8 which states that no excessive fines shall be imposed, nor cruel and unusual punishments inflicted. I am informed that failure to conform to this social-security legislation subjects the offender to a fine of \$10,000 and/or imprisonment. To Americans who prize freedom of choice and who wish to care for their own old age, without Federal dole, this is a violation of everything sacred.
6. Social-security legislation violates both

the 9th and 10th amendments because nowhere in the Constitution or Bill of Rights is the Federal Government empowered to engage in the business of either public wel-

fare or insurance in any form.

7. The Federal debt at this time stands at \$275 billions plus the temporary upping of \$6 billions. Interest alone on this national indebtedness now costs us annually \$61/2 billions. This is a staggering debt to leave Senator HARRY BYRD recently posterity. stated that, in addition to this fantastic sum, there must be added \$200 billion in contingent liabilities, and the impossible-toestimate cost of the social-security program which he described as "no longer actuarially sound."

8. Freedom to engage in the work of one's choice is no longer possible unless one conforms. "Pay social security or cease to work." is the edict, applying to the once-free press as well as every business. This is a flagrant violation of all that is American. Are we free-born citizens, or are we creatures existing at the whim of the Federal Government?

I therefore now respectfully request that I be released from any responsibility or re-ward in the matter of social security and to that end ask that all compulsion be removed, letting only those employers or employees who wish to participate in the program to do so, at their own risk and out of their individual pockets, which is the true American way.

Further, I here and now urge that any person desiring reimbursement of sums paid into social security, be paid that exact sum, plus interest, if he wishes it. As for me, personally, I wish neither principal nor in-terest returned. It is my wish to help get rid of the national debt and this is my small contribution to that end.

RALPH BLY.

SHELBY, OHIO.

Facts Forum Poll

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the results of a Facts Forum poll. Facts Forum is a well-known institution in this country and from time to time it conducts polls which are very representative. I think the results of this poll will be interesting to the Members of Congress and to the public generally in this country.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

January 1955 Facts Forum poll results Ves

(percent) Does the United States need the atoms for peace plan?_. Are we showing signs of increased appeasement to communism? Is Mendes-France really our friend?___ Should school and college students debate United States recognition of Red China? Should John Paton Davies has been fired? Can we win the fight against communism using only defensive measures?____ Should the Federal Government spend \$50 billion on our highways?___. Will a rearmed Germany be an able ally?_ Should the United States break off relations with Russia?_ Is drastic reduction of Government the best way to curb corruption?__ Do most Americans prefer freedom to security? Should the question "Who promoted Peress?" be answered in full? Should the secret Yalta agreements be made public?___ Are public Xmas decorations planned to undermine Christian tradition?_____

The Education of Mr. Corsi

EXTENSION OF REMARKS OF

HON, PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Washington Post of April 9. 1955, entitled "The Education of Mr. Corsi," and an editorial from the Newark Evening News of April 12, 1955, entitled "The Corsi Blunder":

[From the Washington Post of April 9, 1955] THE EDUCATION OF MR. CORST

Secretary Dulles put a somewhat different face on the Edward J. Cosi case by offering a new job to the ousted deputy administrator of the Refugee act, and Mr. Corsi took some heat off the State Department by agreeing to consider the offer. This turn of events does not, however, alter the fact that a serious blunder was made. Despite the current efforts to make amends, the Department placed itself in the position of pulling the rug out from under Mr. Corsi as it had done in the cases of John Paton Davies, Reed Harris, Theodore Kaghan and others.

Whether or not Mr. Corsi may, at some time in the past, have joined an organization now frowned upon by that self-established arbiter of polltical acceptability, the House Committee on Un-American Activities, he was for a number of years a highly respected and responsible official of the State of New There is no reasonable doubt as to Mr. Corsi's loyalty to the United States, and the State Department insists that he was not fired for security reasons. Moreover, his governmental experience in New York made him peculiarly fitted for the task which the Secretary of State asked him to undertake in Washington.

But Mr. Corst has long been a firm supporter of the rights of minority groups and vigorous critic of the McCarran-Walter Immigration Act. He was, in addition, committed to the idea that the emergency refugee law ought to be made to work in such a way as to admit more than a trickle of

refugees to this country. These ideas incurred for Mr. Corsi the bitter enmity of Representative Francis Walter-a man who has come to regard any criticism of the immigration law as a Soviet-inspired form of subversion. Mr. Walter hurled wild, unsubstantiated charges at Mr. Corsi who promptly denied them. The State Department denied them, too; but it appears that the Secretary of State has no stomach for a spat with Mr. WALTER, and so Mr. Corsi's job suddenly became nonexistent, and he was belatedly offered another assignment.

"I never came down here asking for any job," said Mr. Corsi rather pathetically. "Mr. Dulles, in a personal telegram, requested me to take on the work. I came down solely relying on the integrity and honesty of Mr. Dulles." As some of his predecessors could have told him, however, the State Department is a place where employees frequently fail to find protection against a political

onslaught.

91

91

[From the Newark Evening News of April 12, 19551

THE CORSI BLUNDER

Edward J. Corsi has refused a consolation post in the State Department and, in view of the treatment he has received, who can blame him?

A respected man in his State and community, Mr. Corsi went to the Department last January to accelerate administration of the Refugee Relief Act of 1953. He was welcomed by Secretary Dulles as "the best qualified man in the United States" for the work.

Today "the best qualified man in the United States" is out of his job and out of

the Department.

It made no difference that Mr. Corsi's experience traced back to President Hoover. under whom he served as Immigration Commissioner; or that he had served New York State as industrial commissioner as a longtime member of the Dewey team.

Representative Walter, a Pennsylvania Democrat and coauthor of the McCarran-Walter Act, has attacked him, alleging association with Communist-front organizations in the 1930's. Mr. Corsi entered a categorical denial and the Department itself said no question of security was involved. But before the WALTER attack the State Department folded.

Now it is said that departmental frictions were responsible. This unofficial and belated explanation comes after other and contrary impressions have been imbedded in the public mind.

It wasn't expedient, it seems, to antagonize a Member of Congress or to resist internal political pressures. Mr. Corsi was expendable and, considerations of justice having come to rest in the office wastebasket, expended he was.

There is no use arguing the Corsi blunder was a minor miscalculation in a department dealing daily with war or peace; or to say that it was all the fault of that Democratic liability, Representative WALTER, and a couple of other fellows.

A principle has been breeched and responsibility rests with Secretary Dulles. That is where it belongs.

Are the Islands the Issue?

EXTENSION OF REMARKS

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. SIEMINSKI. Mr. Speaker, is the issue aggression, or is it Quemoy and One used to read—and not too long ago—about the penalties of aggression, as well as the rewards of negotiation.

Have we changed?

Split Personality in the Democrats

EXTENSION OF REMARKS

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. DEROUNIAN. Mr. Speaker, the following article by David Lawrence, which appeared in the New York Herald Tribune on Tuesday, April 13, 1955, is, I believe, worthy of special attention:

STEVENSON SEEN AS ROCKING THE BOAT AT A CRITICAL TIME

(By David Lawrence)

WASHINGTON, April 12.—If Adiai Stevenson had contrived purposely to encourage the Communist Chinese to believe that America is disunited and that her allies are seriously at odds with her on a Far Eastern policy, he could not have delivered a more convincing speech to that end than he did on Monday night.

For, while to many Americans the former presidential candidate would seem to have been motivated merely by domestic political considerations and by his own ambitions—which can be realized only by undermining the political popularity of President Eisenhower—the Red Chinese could well imagine that the speech represents the beginning of a retreat by the Democratic majority now in control of Congress.

Only a few weeks ago they voted solidly to support the resolution authorizing the President to use our military force to defend Formosa and related positions and territories of that area. Is "bipartisanship" to be spelled differently now, with divisive speeches by partisans at a time of grave crisis in international affairs?

There are, of course, differences of opinion here and abroad over the extent to
which the related areas, namely, the offshore islands, shall be defended. But the
issue was thoroughly debated in Congress,
and it would seem that Mr. Stevenson now
is merely accentuating a difference that has
already been resolved. For the Congress
was informed that there was no intention
on the part of the President to defend
the offshore islands as such, but to defend
them only in situations which are recognizable as parts of, or definite preliminaries to,
an attack on Formosa.

GOING IT ALONE?

This has been made clear to Members of Congress on the Democratic side, and especially to Senator Walter George, Democratic chairman of the Senate Foreign Relations Committee. But now it would appear that Mr. Stevenson has publicly repudiated the leadership of the Georgia Senator and prefers to go it alone in proclaiming what he believes should be the foreign policy of the Democratic party.

Mr. Stevenson, moreover, calls for a declaration by the Allied nations condemning the use of force in and around Formosa. This is predicated on the assumption that the Red Chinese will likewise refrain from using force. Senator George favors the renunciation of the use of force in and around Formosa, and so does President Eisenhower, who has called for a cease-fire to be arranged by the U. N. It is not Mr. Eisenhower or our allies who can regulate whether force shall be used. Only the

Red Chinese can decide whether there is to be war in the Far East. Any pronouncements about United States policy should be left to the President of the United States to make.

The speech by the former presidential candidate is full of contradictions so characteristic of many of his addresses. for example, he condemns the Eisenhower administration for not doing what it says, and for not meaning what it announces in its threat of "massive retaliation," Mr. Stevenson unfortunately chooses as his illustration the allied retreat in Indochina. For this he blames America when he ought to know that the United States backed down from the use of force there because neither the French nor the British-our allies-would go along with us. Here was a case in which Mr. Eisenhower and Mr. Dulles did precisely what Mr. Stevenson now pleads should be done-namely, adopted an attitude deferential to the wishes of our allies. But having followed our allies, America is now blamed by Mr. Stevenson for the loss of Indochina. He certainly cannot have it both ways.

Mr. Stevenson's speech exhibits a greater concern for the feelings of the allies than it does for the feelings of the American people. This is probably due to a desire to make it appear that in foreign policy the administration is inept and incompetent.

ROCKING THE BOAT

While professing high motives himself, Mr. Stevenson accuses the administration of yielding to "considerations of domestic political expediency" in making its Far Eastern policies. There are critics inside the Republican Party, but fortunately they have not been in favor of appeasing the Communists, and are trying instead to keep the administration from yielding to those "peace at any price" elements in the Republican Party which, like Mr. Stevenson, advocate withdrawal from the offshore islands.

Mr. Stevenson would, of course, wash his hands of any responsibility if the policy he advocates were really adopted. If, for example, after the United States withdrew moral support from the Nationalist government and a disintegration of morale developed on Formosa among the troops of Chiang Kai-shek-which Mr. Stevenson now significantly derides as "overage"—the titular leader of the Democratic Party probably would not concede that, by his speech and proposals, he had helped to break down the morale of the Nationalist troops on Formosa, just as the Truman-Acheson administration did in pulling the rug from beneath Chiang Kai-shek's forces on the mainland of China in 1949.

Mr. Stevenson is rocking the boat at a critical time, and if his words are heeded by the Democratic majority in Congress, then America is headed for the era of chaos and divided government predicted by many observers last autumn. The American people during the campalgn were promised cooperation by the Democrats in upholding the hands of the President, especially in foreign policy. But Mr. Stevenson evidently does not feel obligated now to see that this pledge is fulfilled.

Brooklyn: Frontier of Freedom

EXTENSION OF REMARKS

OF

HON, EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article by Andrew S. Roscoe, president of the South Brooklyn Savings & Loan Association, which appeared in the March issue of Flatbush, published by the Flatbush Chamber of Commerce, Inc.:

BROOKLYN: FRONTIER OF FREEDOM

(By Andrew S. Roscoe, president of South Brooklyn Savings & Loan Association)

Such organizations as the Flatbush Chamber of Commerce must be vitally concerned with the social and material progress of our community.

community.

Indeed, it is only duty to make an inventory from time to time of our accomplishments, our growth, and our needs. Brooklyn has never been static. No city in America has the history of service that our borough may claim.

Ever so often some of us become alarmed because we hear of an industry moving to the South or West, where taxes are certainly lower and labor apparently more eager to meet halfway with the problems of management. We read occasionally that it is becoming more and more difficult for our industry to meet the competition of those entrepeneurs who, more fortunately, are located in areas where industry is given generous subsidies. We hear, too, of the exodus of our wealthier Brooklyn families and the arrival of new citizens of a lower-income group.

All these alarms would seem to justify immediate abandonment of this great borough and would seem to suggest a furious rush away from it all. But let me assert that Brooklyn is not doomed, that Brooklyn does not despair.

Our community is probably the most resourceful, the most American in the Nation and no community with its ideals, its location, its leadership, political, educational, and religious, will ever cease to grow. We are, of course, too modest. When the history of our great Nation is completely written you may be sure that some great historian will discover what Brooklyn has done. Primarily by virtue of our location, with harbor facilities unequaled in the world and crowded with newcomers from all nations we meet citizens of the world daily. Brooklyn probably absorbs more newcomers to America than does any community in the Nation, and we teach new Americans to live together without prejudice, to follow the pattern of American ideals, and to find peace, comfort, and security in our group. Brooklyn not only knows no religious, race, or color bias; it has shown all other communities the simple truth that all peoples can live together as Americans.

I am willing to venture that our residents of Brooklyn because of their training as Brooklynites have gone out into new communities as leaders in all that is America. My historian of the future undoubtedly will tell us that.

Our economy, too, is strong. While the rate of acceleration in industrial growth here may falter somewhat percentagewise in the future, this may well be because of our maturity, not because of hardening of the arteries. Our social welfare is the best; our organized community activities and charities have faced a series of complex situations unlike social conditions in any other community. It has faced problems sometimes described as insolvable and has invariably come up with a pattern of good neighborliness.

Of these evidences of active social service, perhaps the most significant and the greatest is the American Red Cross. Voluntary hospitals, health and welfare institutions, supported by private gifts, add to the pattern of good neighborliness. Today we enjoy the benefits of privately supported schools, colleges, and universities, in which ideals of faith and goodness as well as of intellect, give to the community men imbued with the

great command of service to their neighbors. Yes, indeed, long before the phrase "welfare state" was known we had developed a truly free welfare society.

When I read of vast sums of money given by the Federal and State Governments to create new communities in the wayward West or the softer South, I think that some day a brave group of Brooklynites will introduce a bill in Congress which will be a bill for services rendered.

It will read something like this: "For services rendered in meeting newcomers to our shores, in training as sound Americans, in developing social, religious, and educational institutions unsurpassed; in creating sound industry and in providing comfort and security for millions and finally for establishing a pattern for all Americans to follow in creating new communities, we ask the sum of"—you may name that sum; in my judgment it will be enormous.

Such bills, however, cannot be paid in money. Their payment comes in pride. Let us be proud of Brooklyn.

Antitrust Legislation

EXTENSION OF REMARKS

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. WILLIS. Mr. Speaker, the recommendations of the Attorney General's committee in regard to the antitrust laws are provoking a great deal of comment from many sources. This is as it should be under our democratic legislative process, because only through public discussion can we clearly view and understand both sides of the coin.

In that connection, I wish to make a part of the RECORD the letter I received from Mr. Clyde G. de la Houssaye, attorney and secretary of the New Orleans Retail Grocers' Association, dated April 1, 1955. The letter follows:

New Orleans Retail.
GROCERS' Association,
New Orleans, La., April 1, 1955.
The Honorable Ebwin E. Willis,
House of Representatives,
Washington, D. C.

DEAR ED: According to the very latest reports from Washington, it seems that the Attorney General's national committee to study the antitrust laws, which will be made public in the near future, or may already have been made public by the time that you get this letter, will be hostile to strengthening the Robinson-Patman Act and make recommendations to oppose the equality of opportunity bills, namely Senate bill No. 11 and House bill No. 11.

I believe that monopolists in this country are presently, and have been in the past, endeavoring to ruin the chances of the small-business man and there is no doubt in my mind that if the committee's report is such as I have stated in this letter, they should be condemned for taking such a position.

This country of ours is composed of small-business man and when those men are ushered out of the business world, the backbone of our country will crumble and the control of prices and commodities will fall into the hands of a very chosen few. As an example, at the present time there is a movement afoot in certain sections of this country endeavoring to see to it that a few of the large corporations control the food

business and run the small man out of business. When that happens, all consumers, as well as the farmers and producers of food in the United States, will have to pay prices set by a group of monopolists who will dictate the future of the food business. This, we hope, will not occur, but unless something is done to stop this movement, the cause will have been lost.

So, therefore, it is incumbent upon me to plead on behalf of those men who own small businesses in the food field that you and all of the Members of Congress endeavor to stimulate enough interest to overthrow the recommendations of the Attorney General's national committee regarding the antitrust laws, and let there be a movement forward strengthening those antitrust laws, and especially the passing of the equality of opportunity bill, which will benefit the Nation's business as a whole.

The time has now come when the Members of Congress must decided whether or not this country will be ruled by a group of monopolists who will control the future and destiny of this Nation.

I would appreciate it very much if you could see fit to read this document before the House and let it be made a part of the CONGRESSIONAL RECORD.

Yours very truly,

CLYDE G. DE LA HOUSSAYE.

Mr. Speaker, for my part, especially as a member of the House Committee on the Judiciary having jurisdiction over antitrust legislation, I am going to take a long, hard, and searching look at the report before acting on or accepting the recommendations of the Attorney General's committee.

Retired Federal Employees Should Be Given Adequate Pension Boost

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, after Congress acts to give salary increases to postal workers and other Federal employees, I trust that prompt action will be taken to improve pension benefits for retired Federal employees.

There will, of course, be those who will oppose an increase on the grounds that the Nation cannot afford it. It seems to me that it is the other way around. If we are interested in a strong and healthy economy we should give some thought to the tremendous surpluses that are piling up in the Nation's store-

And there are big surpluses, not only of food and farm products, but of all kinds of electrical gadgets, automobiles, and other consumer goods while at the same time there is a desire and in some cases dire need for these goods and services we have in abundance.

The Nation's loss in real wealth that results from idle men and machines is so great that it is difficult to estimate. The loss in national income is another example of false economy and curtailment and hard-money policies which are

designed to make adjustments downward and backward.

If we forget human needs, if we are indifferent about permitting elderly folks to have a modest share of the abundance which is ours, we should not forget the importance of keeping our industrial machine going and our economy and our Nation strong.

Mr. Speaker, with my remarks I wish to include the following material on this subject from the Washington Post and the Washington Star:

[From the Washington Post of March 30, 1955]

RETIRED GOVERNMENT WORKERS

(By Frank J. Wilson, president, National Association of Retired Civil Employees)

The current actions and discussions in the Congress on pay raises for various groups of Federal servants to enable them to meet the increases in the cost of living eloquently call attention to the plight of the forgotten men and women of the Federal Civil Service—the retired employee and the survivors of deceased retirees and deceased employees. A brief reference to what Congress is doing for the active groups may stimulate thinking about those living on pensions.

The pay of Senators and Representatives has just been increased by 50 percent; from \$15,000 to \$22,500 a year, and the new rate is more in keeping with their expenses and responsibilities in relation to the cost of living.

The changes in the Social Security Act at the last session raised the minimum benefit from \$25 to \$30 a month, about 20 percent, and changed the maximum from \$85 to \$98 for those already retired and to \$108 for those retiring thereafter, increases of 15 to 27 percent, respectively.

Congress is presently considering a pay raise and classification for postal employees. The average raise in the House bill is 7.6 percent, and the Senate bill provides an average of 10 percent for both postal and classified employees. It is assumed that the House will also provide a 7.6 percent raise for classified employees. The President has indicated he does not favor increases above 7.6 percent average. It is reasonable to assume that increases will eventuate either at 7.6 or 10 percent or somewhere between the two.

The Congress is also considering—the House has acted on—a bill to increase pay of members of the Armed Forces and commissioned services ranging from 6 to 25 percent and it is fairly certain that increases along these lines will eventuate. In this connection it should be remembered that the retired personnel of these services will automatically receive increases in their retired pay when the active pay is increased—an advantage not enjoyed by retired civil-service personnel.

Congress has just provided a contributory life-insurance plan for active Federal workers and will undoubtedly provide also a contributory health and hospitalization insurance plan. Civil-service workers retired before these plans are instituted are ineligible to participate, though their need for features of these plans are greatest when retirement is reached.

One need only look at the current statistics and realize the unfortunate status of most annuitants. The average annuity paid to retired civil-service employees in the fiscal year ended June 30, 1952, was approximately \$1,400 as a result of his and the Government's contributions. Those in the group retired for disability averaged less than \$1,200 a year and the widows and dependent children averaged less than \$600 a year.

Since the inflationary spiral which commenced about 15 years ago, the value of

the dollar has been cut approximately in half. Annuities have not been geared to the cost of living. It would take approximately \$2,400 of today's dollars to have the equivalent purchasing power of the \$1,200 annuity at the beginning of the inflationary cycle. Annuities have been increased twiceonce in 1948 by \$300, or 25 percent, whichever was lesser; and again by \$324, or 21 percent. This latter increase did not apply to anyone whose annuity was in excess of \$2,160. Annuities lag behind living costs even where they are based upon higher pay adjustments during the inflationary cycle.
What is necessary is a practical, perma-

annuity payments to nent plan to gear living costs so that the annuitant gets speedy and adequate adjustment. Pending this the Congress should, at this session, grant relief, to stop-gap makeshift though it might be, the hardships and worries of retired Federal civil servants. Rising prices erode fixed incomes, whether under or over \$2,160, and this discriminatory bar should be removed and all annuitants permitted to receive relief in the appropriate proportion—the higher the annuity the lesser the percent of relief.

During 1954 the Civil Service Commission

reports 10,157 civil service retirees died, or nearly 28 every day in that year. Survivors of retirees died at the rate of approximately three each day in 1954.

Congress is on the threshold of taking significant steps to improve the program of treatment of the active employees of the Government. They should not fail at the same time to take prompt and adequate action for the relief of those who have served so well in the years past.

FRANK J. WILSON, President, National Asosciation of Retired Civil Employees.

[From the Washington Star of March 18, 1955]

RETIRED EMPLOYEES READY TO ASK PENSION BOOST AFTER PAY ACTION

(By Joseph Young)

As soon as the Federal pay raise legislation is enacted into law, the retired employee organizations will ask Congress for an immediate pension increase this year for retired Government annuitants.

The retired employee groups, who have been holding their fire until the Federal pay raise legislation is approved, feel the time is right to get an annuity increase. They will also seek annuity benefits for widows of Federal retirees who died before 1948.

Leading the fight are the National Association of Retired Civil Employees and the United States Retirement Benefits Associa-

These groups point out that Congress, this year, has raised the salaries of its own members and is about to raise the pay for Government classified and postal workers as well as military personnel. They declare that re-tired Federal workers need an increase in their pensions just as urgently. They point out that the average Federal annuity is \$1,200 a year. Increases also will be sought for those employees who retired on disability. Their average income is less than \$1,000 a year.

Retired employee leaders realize they face an uphill fight. There has not been too much enthusiasm in Congress for any retirement legislation this year. The feeling seems to be to wait until next year to reexamine the entire Federal retirement system, in light of the Kaplan Committee report, and decide what action should be taken.

However, retired workers are hoping that Congress will see the justice of their cause and grant them some relief this year from the rising living costs which have plagued them since their retirement. Such groups as the National Association of Retired Sivil Service Employees have not been inactive during the last few months. Its officials say that most of the organization's 75,000 members throughout the country have written individual appeals to their Representatives and Senators urging action on increased annuities this year.

[From the Washington Star of March 20, 1955]

IN FAIRNESS TO RETIRED EMPLOYEES

While considering pay legislation for Federal employees, Congress should not forget the plight of retired Government workers. The average pension of these veterans of the civil service is \$1,200 a year. Those who retired for disability receive less than \$1,000 a year on an average. Increased living costs hit retired employees just as hard as those on the active payrolls of the Government. President Eisenhower not long ago told Congress of the need for liberalizing benefits under the Federal retirement system. So did the Kaplan committee, which made a thorough study and recommended merger of the Federal pension and social security sys-

The Kaplan report, bearing the general indorsement of the President, is before congressional committees, but early action on a general overhaul of the retirement program is not likely. In the meantime, Congress would be justified in granting some increase in present pensions, as a matter of fairness to thousands of former public servants.

The Cathedral of the Pines

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD a letter I have received from Mr. Douglas Sloane, founder of the Cathedral of the Pines, at Rindge, N. H., in which an invitation is extended to all Members of Congress to attend services at the Cathedral of the Pines.

I sincerely hope that any Member who is in a position to do so will visit Cathedral of the Pines.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CATHEDRAL OF THE PINES, Rindge, N. H., April 5, 1955. The Honorable Styles Bridges, Senior Senator from New Hampshire, Senate Office Building,

Washington, D. C. DEAR SENATOR BRIDGES: I enclose a schedule of services to be held in the Cathedral of the Pines during this our 10th anniversary sea-You will note the occasion scheduled for 3 p. m., May 30. At that time and before the Altar of the Nation, a memorial for all the American war dead, the debt we owe for the sacrifices of so many will be acknowledged.

Please note especially the participation by the women. This is good. Most of the memorials to the war dead recall the sacrifice of men. Whether in uniform as a part of the Armed Forces or as members of the Red Cross, the Salvation Army, the K. of C., whether killed on the battlefield, the battleship or in the air; whether killed in war service while at work in the laboratories, the shops or the factories; whether killed while gathering news to boost the morale of those

at the front or in the families at home or whether bosting morale by bringing laughter to the fighting forces, all those women and men whose lives—one as precious os an-other—were sacrificed in common cause against the foe in perpetuating Americaall are remembered here.

The altar of the Nation is built of rough rock wrested from New Hampshire soil by the pioneers. In the face of this shrine are stones as tributes from each of the 48 States and similar stone tributes from President Eisenhower, from Fleet Admirals Leahy, Nimitz, and Halsey; from Generals of the Army Marshall, MacArthur, and Bradley and from Generals Ridgway and Doolittle. Here these rocks are bound together to symbolize the strength and unity of a grateful Nation in this memorial to all her war dead.

We are grateful to have your stone here and also those from Senators Estes Kefauver and EDWARD MARTIN.

Will you please extend an invitation to all the Members of the United States Senate to visit the Cathedral of the Pines, cated to Almighty God as a place where all people may worship." There never are parking charges, admission fees, nor are collections ever taken at any service, sacred concert or at the daily organ meditations.

For your further information, according State troopers and local police on traffic duty, more than 1,500,000 persons have visited here these past short 9 years. have come from all the countries of the world. Thirty-four different faiths-Protestant, Roman Catholic, and Jewish, each in its own way, have conducted services of worship here. As this cathedral is unique, because of the stones and other treasured gifts, because of the sweeping, awesome view from the cathedral, many of the 64 million peo-ple of America who have "no connection with any church of any sort in any way' come here looking for answers. No visitor has left here without some sense of appreciation of or obligation to the Creator. Even those who have said "There is no God" come here out of curiosity whom it would be difficult to get back into a familiar place of worship. These people have not left the cathedral with this philosophy.

Forwarding the word of the Cathedral of the Pines is true service to God and country, our State and men everywhere. be grateful for your further help.

With warm regards,

Sincerely,

DOUGLAS SLOANE, Founder.

Alaska Statehood and Defense

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BARTLETT. Mr. Speaker, in connection with the statehood bill, H. R. 2535, which has been reported by the Interior and Insular Affairs Committee and which is now before the Rules Committee, I call the attention of the House to an editorial which appeared in the Washington Post and Times Herald on April 7:

ALASKA AS A FORTRESS

President Eisenhower deserves credit for stating frankly, if not altogether explicity. his reservations about statehood for Alaska. In a letter to Senator Jackson the President wrote of his concern lest statehood legislation impair freedom of movement and of action by our (military) forces in large areas of this critical region. Mr. Eisenhower expressed doubt whether any legislation could wholly remove his apprehensions, but prom-

ised earnest consideration. Offhand, it is difficult to see how freedom of action for the military forces would be hampered by an enlightened statehood law. The President always retains paramount powers for national defense. Moreover, the present statehood bill provides for a large Federal reservation in the northern part of Alaska for defense purposes. Statehood advocates have offered many times to meet every reasonable request; the difficulty has been that they have not known spe-cifically what was required. The President's letter is encouraging in tone but sheds little more light in terms of specifics. It seems to us that the President and the National Security Council still have an obligation to say precisely what the legislative requirements are so as to give Alaskans a fair chance to meet them.

Agricultural Pilot Rating Urged for Aerial Crop Spraying and Dusting

EXTENSION OF REMARKS

HON, OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I wish to insert the following resolution passed by North Dakota's 34th Legislative Assembly, pointing up the need for the creation of an agricultural pilot rating for pilots engaged in the aerial application of agricultural chemicals. Such a rating would increase the number of available pilots qualifying for this type of work necessary more than ever now in many of our midwestern farm States.

Senate Concurrent Resolution X follows:

Senate Concurrent Resolution X

Concurrent resolution memorializing the Congress of the United States to enact legislation which would create an agricultural rating for pilots engaged in the aerial application of agricultural chemicals

Whereas the need for pilots and airplanes for aerial application of agricultural chemicals in the State of North Dakota and many other midwest farm States is increasing more rapidly than the available commer-

more rapidly than the available commercially licensed pilots; and
Whereas in North Dakota during the year of 1954, over 200 airplanes and pilots were licensed by the State aeronautics commission to engage in aerial crop spraying and dusting, and as newer chemicals are developed for the control of insects and plant diseases, the needs of the farmers of this State may require as many as three or four hundred agricultural planes and pilots; and

Whereas in the State of North Dakota and other agricultural States there is a large reserve of privately licensed pilots and flying farmers, some of whom could qualify for a Pederal agricultural rating, if the rating were based on flying ability, flight hours, and knowledge of agricultural chemicals, which would greatly relieve the present and future shortage of pilots qualified to engage in agricultural flying: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the Congress of the United States is hereby memorialized and respectfully petitioned to enact such legislation as may be necessary to create an agricultural pilot rating for aerial crop spraying and dusting activities in the United States: be it further

Resolved, That copies of this resolution, properly authenticated, be sent by the secretary of state to the Civil Aeronautics Administration, Washington, D. C.; to the chairmen of the House and Senate Interstate and Foreign Commerce Committees of the Congress of the United States; and to each member of the North Dakota congressional delegation.

C. P. Dahl,

President of the Senate.
EDWARD LENO.
Secretary of the Senate.
K. A. FITCH,
Speaker of the House.
KENNETH L. MORGAN,
Chief Clerk of the House.

What Is a Boy?

EXTENSION OF REMARKS

HON, HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the Record a brief article from the current issue of the Freeman:

WHAT IS A BOY? (By Charles F. Hamilton)

What is a boy? With each passing day he is something that becomes more and more difficult to define.

Basically, he is, as he always was, an absentee. He is more easily described by the marks he leaves behind. So, nostalgically, we sometimes say a boy is a jelly smudge on the pantry door; a broken window across the street; a pocketful of assorted junk from agates to zombie potions. A boy, we say, is a fellow who starts for school and ends up at the swimming hole, or who on his way to the store is sidetracked by a ball game. A boy is an ever-present and evertibsent Kilroy who leaves his mark on heart, home and community. Boys are boys the world over; but when we get sentimental enough to try to describe them, we call to mind our American boys.

But do you really think of them? If we do, how does this sound to you? What is an American boy? Basically he is as he always was, an absentee. Only today he is more of an absentee than ever before. Here, a boy is a fellow who starts out to think about his high school studies and ends up thinking about war; a lad who, in need of a job, decides to have a little fun before he is drafted. Then, he is a letter from training camp or from one of many far-off countries—democracy's outposts. He is a photograph on his mother's dresser.

What else is an American boy? An American boy is a lad whose Government has contributed him to the North Atlantic Treaty Organization and who ends up a prisoner in solitary confinement—judged and found gullty by laws of another country. He is doomed to serve his sentence in a foreign jail because as the Constitution now reads, treaty agreements supersede the law of our land. An American boy is an American who, without his own consent is sent abroad to fight for the preservation of our inalienable constitutional rights but ends up having his own rights arbitrarily taken from him. An

American boy is a lad who volunteers or submits to military draft as an American soldier and ends up being a United Nations soldier in a Communist prison. He knows who sent him because he swore allegiance to his country on induction, but he doesn't know who will bring him back. He is a boy who wonders, "Is allegiance reciprocal—or is it transferable without consultation?"

An American boy is a bewildered chap, dearly loved by his parents back home who hopefully await his return and meanwhile wonder—wonder how the promise of a man has become driftwood on a sea of political blunders.

Ten Christopher Proposals for Citizen Participation in Our Foreign Policy

EXTENSION OF REMARKS

HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. REUSS. Mr. Speaker, I submit herewith a 10-point proposal to enable American citizens to fulfill their responsibility in shaping our foreign policy, presented by the Christophers, 18 East 48th Street, New York, N. Y. The proposals merit the attention of thoughtful citizens everywhere:

TEN WAYS TO STRENGTHEN YOUR GOVERNMENT

Here are 10 Christopher proposals that may help you to fulfill your responsibility in shaping American foreign policy. We merely submit them to you. You must decide for yourself how, when, and where to apply them.

- 1. Be alert. We live in an atomic age. The slightest delay or mistake may be disastrous. Take nothing for granted. Think and act quickly as well as honestly and courageously. Merely complaining or theorizing accomplishes little. Translate your good ideas into practice. Put your ideals to work.
- 2. Develop sound principles. Remember your judgments will never be any better than your values. See that they are rooted in the changeless truths of Almighty God. Too many people are fooled by half-truths and sugar-coated remedies, and forget, for instance, that our Nation is founded on the sacred truth that each individual derives his rights from his Creator—that government is his servant, not his master, and that its chief purpose is to secure for him these God-given rights.
- 3. Keep informed on world developments. This is difficult, even for the experts. But the average person with sound values who conscientiously tries to keep intelligently informed is endowed to God with a "sixth sense." If he speaks out of conviction based on facts, not opinions nor rumors, he can often nip in the bud dangerous risks.
- 4. Pray for those who represent you. Every person in the State Department, from top to bottom, is a public servant and is entrusted with the enormous responsibility of protecting your best interests and those of every other American citizen. The better equipped he is and the higher his sense of purpose, the better for you and everybody else. But despite the best of intentions, he is human and can make mistakes. He needs your prayers.
- 5. Encourage others to vote. Expressing one's opinion at the polls is one of the greatest safeguards of free government. Remind others that their vote counts. Only 6 out of 10 of those privileged to vote went to the

polls at the last Presidential election; less than 5 out of 10 last November; and an average of only 1 out of 10 at most primary elections throughout the country. This is a dangerous trend. Self-government gradually disappears when too many individuals take the attitude: "my vote doesn't count." Remember that bad politicians are elected by good citizens who don't take the trouble to vote.

6. Make your voice heard. Don't overlook the fact for one moment that the Senators and Representatives from your State represent you. If you think they are doing a good job, tell them so. They have a right to know what your convictions are. Write what you think in your own words. Keep in touch with them at reagular intervals. Speaking up only in times of crisis is not enough. And merely complaining about what's wrong is too negative. Make positive, constructive suggestions that show sympathy and understanding of problems. Write also to the State Department, Washington, D. C., and to the United States Delegation, United Nations, 2 Park Avenue, New York 16, N. Y.

7. Let editors and broadcasters know where you stand. Encourage newspapers, magazines, as well as radio and television stations to present more articles and programs that uphold the Constitution and fundamental American principles that are based on love of God and country. whenever you believe there has been a be-trayal of these principles. Be specific in your letters. Mention the article or program you object to (if more than one, indicate by listing them) and give your reasons. Disagree without being disagreeable. A friendly approach is a sign that you wish to

be more than a faultfinder.

8. Work through your organizations. There are 3 million organizations, small and large, in the United States of America. vast majority belonging to them do little more than pay dues. Any group that merits your financial support needs your intelligent participation even more. Attend meetings not as a passive onlooker, but take an active part in the deliberations and in the shaping of policy. Rather than harp on the defects of your political party, start working from within to refresh and regenerate it. Stimulate it to take a courageous stand on important issues rather than to compromise or take the easy way out. Encourage others to take a similar interest in union meetings. veterans' organizations, women's clubs, fraternal gatherings, foreign affairs associations, and similar groups. You personally and individually can do much to develop a keener appreciation of the part all can play in applying to our changing times the changeless truths upon which our Nation is founded.

9. Encourage more with talent and high ideals to take up career work in our State Department. For the past several decades this particular branch of our Government has affected the destiny of every one of us. Its contributions should not be underestimated, nor its mistakes ignored. For the critical years ahead, each one of us can do something to increase the good and lessen the margin for error. One of the best ways to do this is to see that it is adequately staffed with well-equipped individuals who are dedicated to the highest and noblest interests of our country.

10. Be willing to undergo hardship. Expect to pay a price for making your voice heard. You are bound to be challenged by apathy, cynicism, misunderstanding, hostility, as well as countless other obstacles and temptations to discouragement. Christ himself warned of the price all must pay who would champion the truth: "If any man will come after Me, let him deny himself, and take up his cross daily, and follow Me." (Luke 9: 23.)

Bank Mergers

EXTENSION OF REMARKS OF

HON, ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. WIER. Mr. Speaker, there are indications that our antitrust laws are either inadequate or not properly policed. The press is continually announcing new mergers. These mergers are common to all segments of business and quite pronounced in banking circles. Whoever thought that the First National Bank of New York would lose its identity. Why did the Chase National Bank and the Bank of Manhattan merge? Both were colossal banking institutions. One merger brings about other mergers-a race between Chase National Bank and the National City Bank to be the biggest in New York and second in size in the world. As the great banks of the country grow fewer in number, competition presumably would lessen and competition is a necessary spur to good service. Those that would monopolize usually give good service in perfecting its plans for a monopoly but once the monopoly is formed, it is the dead hand on progress. Monopoly is a stab in the back to a capitalistic system, as capitalism is not truly capitalistic unless competitive. Eric Johnston, former President of the United States Chamber of Commerce, said that European businessmen must bear the lion's share of the blame for socialism's sweep over Europe: capitalism did not fail, businessmen failed capitalism.

H. R. 2674, among other things, would check the merger expansion through the holding company device. It would be a block to a nationwide system of multiple banking. It is a part answer to the merger epidemic. The passage of this bill would help preserve in a definite way the future of the small banks of this country, permit them to continue as community enterprises. This bill would put bank holding companies under the same rules and regulations as those pertaining to banks. While a bank holding company is not a bank, it is "Mr. Banker". These holding companies own practically all the stock of their subsidiary banks and as an owner, of course, run them by distant control. The holding companies attempt to fool the public into believing that their subsidiary is a community bank by having a local board of directors front for them but the board serves at the will of the corporation without a complete and full ownership of stock in the local bank. The holding company is a device that has been used for the purpose of evasion. Evasion should not be countenanced.

There should be a continuous place in our economy for the community bank-the local institution, the institution that is the heart of the business of our villages and small cities. These local bankers naturally know their communities well. Responsive to the needs of the people of the community, these small banks provide a personal service that is hard to match. The banker is helpful in numerous ways and beyond the natural scope of banking. Small business has a hard row ahead; it needs the help of another small businessthe local bank. The two tie together and their interests are common. It is hard to believe that a branch of a gigantic corporation, with its headquarters many miles away, will have the sympathetic understanding of the needs of a community as does the local bank which is so definitely a part of the community life.

Mr. Speaker, I urge the passage of H. R. 2674. It is legislation that is urgently needed and it is legislation that, in my opinion, is of great importance. We cannot afford to have a few large financial organizations dominate the credit machinery of this country. I believe in community-owned banks; I deplore the trend toward system banking regardless of the form it takes because multiple banking, that is, a bank with many offices, is a concentration of economic power greatly to be feared.

Urgent Need for Lifting Canadian Emon Rust-Resisting Wheat

> EXTENSION OF REMARKS OF

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to include a resolution passed by the 34th Legislative Assembly of the State of North Dakota urging that import restrictions upon Selkirk wheat be eased, so that a portion of a highly rust-resistant wheat developed in Canada will be made available to our farmers for this year's planting.

House Concurrent Resolution Z-1 follows:

House Concurrent Resolution Z-1 Concurrent resolution urging that import restrictions upon Selkirk wheat be eased

Whereas the farmers of the State of North Dakota suffered heavy damage during the 1954 crop season resulting from a heavy infestation of 15B rust upon hard spring wheat; and

Whereas a hard spring wheat named Selkirk has been developed in Canada which is highly rust-resistant; and

Whereas such Selkirk wheat is available for sale in Canada, but cannot be exported to the United States because of an embargo by the Canadian Government; and

Whereas if a sufficient supply of rustresistant varieties of hard spring wheat is not obtained by the farmers of the State of North Dakota extreme hardship may result during the 1955 crop season: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Senats concurring therein), That this legislative assembly hereby urges and requests that all responsible officials of the United States Government take all possible action to obtain the termination of the embargo imposed by the Canadian Government on the export of Selkirk wheat so that a reasonable amount of Selkirk wheat of a purity test not less than 95 percent can be made available to the farmers of the State of North Dakota for planting in the spring of 1955; be it further

Resolved, That copies of this resolution be forwarded to the Secretary of State of the United States, the Secretary of Agriculture of the United States, and to all members of the North Dakota congressional delegation;

be it further

Resolved, That the control and purchase of such Selkirk wheat as may be obtained be handled by the North Dakota Experiment Station at the Agricultural College at Fargo and distributed throughout the State by the county extension agents on a fair and equitable basis.

K. A. FITCH,
Speaker of the House.
KENNETH L. MORGAN,
Chief Clerk of the House.
C. P. DAHL,
President of the Senate.
EDWARD LENO,
Secretary of the Senate.

Ira Hayes, of Iwo Jima: Our Accuser

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. UDALL. Mr. Speaker, Ira Hayes, the little Pima Indian who brought glory to his country and fame to himself at Iwo Jima, died 2 months ago in his native Arizona stretched out in a field like soldiers die. He lay in state in the capitol of my State, and later was given a military funeral here and buried at Arlington. I have heard recently that there is a movement afoot to bury him and his flag-raising comrades near the bronze statue which commemorates their feat at the end of the Mall near the Potomac.

Very little was said at the time about the cause of his death. The hard truth was that Ira was an alcoholic, and it was easier to avoid mentioning this fact. Although he and his people reside in my district, when I was asked for a statement at the time of his death, like others, I hardly knew what to say. However, Ira's addiction to drink tells only a small part of the story of Ira Hayes and his untimely passing.

A few weeks ago an editorial letter appeared in the Christian Century magazine written by one who attended his funeral at the Arizona Indian village of Sacaton and later talked with his relatives and friends. I am indebted to the National Congress of American Indians for calling this editorial to my attention, for it says some of the things that should have been said last January.

This editorial should be read by all Americans. It is not pleasant reading for it contains a truth that sears and cuts deep. It is too late to try again, as many good people did, to save or help Ira. Unfortunately, most of us never

tried at all, and probably would not have known what to do had the opportunity presented itself.

However, we can still profit from Ira's death and thereby do him new honor posthumously where we failed him in life. We can solemnly consider the old wrongs that bothered Ira, and weigh our shortcomings as individuals and as a society. These are the things commented on in this editorial I now present:

[From the Christian Century of February 9, 1955]

IRA HAYES: OUR ACCUSER

Today thousands of whites and a few Indians filed through the Arizona State capitol past the flag-draped casket of Ira Hayes, hero of Iwo Jima. Yesterday, thousands of Indians and a few whites, of whom I was one, attended his funeral in the Presbyterian church at Sacaton, 50 miles to the southeast. On February 2 this Pima Indian will be given a military funeral in Washington, and will be buried in Arlington National Cemetery, near the huge bronze statue celebrating the raising of the flag on Iwo Jima, in which he shared. Veterans' organizations here have collected money so that Hayes' parents and three brothers will be able to make the long journey to the National Capital. There they will see where Ira was once received by President Truman and decorated with the Medal of Honor. They may see the sights he once saw in a tour personally conducted by an Arizona Member of Congress. They may recall how he was honored there when a film commemorating Iwo Jima, with him as one of its principal actors, had its premier showing. They will stand where he stood less than 3 months ago when the Iwo Jima statue was unveiled.

The statue was completed in the nick of time, so far as Ira Hayes was concerned. Before he was able to make the trip to Washington for its dedication, he was given a course of treatment to relieve him sufficiently of his addiction to liquor so that he could carry out the role to which he was assigned in the unveiling. He was an alcoholic, and far gone. A year ago-November 12, 1953-the Arizona Republic of Phoenix reported that Hayes had spent the previous night in jail on a drunk and disorderly charge. The story said this was the 42d time he had been arrested since 1941. With one exception-escaping from a prisoners' work gang-all these arrests were on the same charge. The library of the Phoenix paper has clippings on eight arrests subsequent to November 12, 1953, for drunkenness.

Once Ira Hayes was picked up on skid row in Chicago, dirty and shoeless, and sent to jail. The Chicago Sun-Times discovered who he was, got him out of jail, raised a fund for his rehabilitation, secured him a job in Los Angeles. Many organizations, including church groups, tried to help. thanked everybody and said, "I know I'm cured of drinking." But in less than a week he was arrested by Los Angeles police on the old charge. When he returned to Phoenix he received no hero's welcome. He told a reporter: "I guess I'm just no good. I've had a lot of chances but just when things start looking good I get that craving for whisky and foul up. I'm going back home for a while first. Maybe after I'm around my family I'll be able to figure things out. talked of joining Alcoholics Anonymous, and was later placed in their custody by a court, but to no avail. A few days ago drink overtook him for the last time and stretched him all night on the ground in the cold. By morning he was dead.

I

Yesterday in the big bare Sacaton church, crowded to the doors with Indians of the Pima tribe and a few whites, surrounded by hundreds who were unable to obtain entrance, more than one worshipper felt that the tables had turned and Ira Hayes was the accuser, not the defendant. He accused the liquor industry-the distillers, the advertisers, the sellers, and more than anybody else the "friends" who were always offering to buy the drinks for a picturesque public figure. In death he accused everybody whose standard of hospitality requires liquor to create the simulation of fellowship when its reality is lacking. His still form, lying in a flag-draped casket before the pulpit of the church, rebuked the lying advertising which tries to make the drinker seem a man of distinction, but which will never present the picture of Ira Hayes in that role, or carry as a testimonial the epitaph of this national hero: "I've had a lot of chances but just when things start looking good I get that craving for whisky and foul up."

Judgment began at the house of God yesterday, and before it ended it cut a wide swath through our whole social order. The words of Esau Joseph, pastor of the Sacaton church, and of Roe B. Lewis, pastor of the Phoenix Indian Presbyterian Church-both members of the Pima tribe-were gentle, but the truth implicit in the situation was terrible to bear. An American Legionnaire with whom I talked outside the church put it bluntly: "That boy was killed by our Government and our people." After the war, he said, Ira Hayes was constantly sent here and there for bond drives, Red Cross drives, patriotic celebrations. He hated public displays and was irritated at being made over as a hero. Drinks were pushed toward him on every occasion, and he took them. Everybody was pulling at him-patriotic groups, welfare groups, service groups, the church, even his own tribe—seeking to "honor" him, forgetting all the time that underneath the veneer of Ira Hayes the symbol was the reality of Ira Hayes the man. That he was a desperate and dying man nobody except a few seemed to know or care. What they cared about was the symbol, the hero who helped raise the flag, and the gain they or their cause stood to make by exploiting their nearness to him. Toward the end he returned to his family in the little Pima village of Bapchula, near Sacaton, hoping to "be able to figure things out." Instinctively sought here the saving love he could find nowhere else, and struggled to find in their presence the answers which eluded him.

11

What bothered him? Ira Haves knew he owed his fame to the fact that Joe Rosenthal, an Associated Press photographer, snapped the dramatic picture of the flag-raising on Iwo Jima which caught the imagination of the country. The photographer did not secure the names of the six marines-an oversight understandable in the circumstances of battle. The Marine Corps supplied the names later. Up until the end of 1946 Hayes insisted that one of the six was his buddy, Corp. Harlan Block, of Weslaco, Tex. Block, who was killed in that battle, was not named as one of the fiag-raisers. Hayes tried again and again to right what he believed to be an error and an injustice, but without success. He lapsed into silence after the Marine Corps "rechecked" and stuck to its story. But it is not impossible that one of the things that disturbed him was his experience of conflict between official truth and his own knowledge.

Another factor that came to the surface more than once was his sense of grievance over the poverty and neglect of his own people, the Pima Indians. In 1950, according to press report, he took to the Bureau of Indian Affairs "his plea for freedom for the Pima Indians. * * * They want to manage their own affairs and cease being wards of the Federal Government." Behind such words lay a deeper resentment, which flashed to the

surface in 1953 when he was asked to speak on Phoenix' KOY broadcast for Flag Day. He was then in Chicago. "I was out in Arizona for 8 years and nobody paid any attention to me," he said. "They might ask me what I think of the way they treat Indians out there, compared to how we are treated in Chicago. "I'd tell them the truth and Arizona would not like it."

Ira Hayes did not speak for KOY, but Phoenix did not hold it against him. Some weeks later the Gazette editorialized: "Hayes feels bitter about his failure to find a job in Arizona when he returned as a hero from World We don't know who was to blame War II. and it isn't particularly important. * * Certainly there should be a place for such a man in Arizona." There was. Just before he died, Ira Hayes was earning \$3 a hundred pounds picking cotton. What would he have said about an attitude which hastily tries to cover with charity the plight of a typical Indian family when the death of its hero-son brings its poverty into embarrassing public view, but will not lift a finger to remove the obstacles of racial prejudice and economic discrimination which make charity necessary in an emergency, not only for a family but for a race?

m

When one thinks of it, it is astonishing how many elements in American life might have helped Ira Hayes but did not. The Government of the United States, as represented by the Marine Corps and then by the bond-selling Treasury, had its chance and failed. When he was a boy the little Presbyterian Church in Bapchule could not reach him, although his parents are mem-Neither could the Roman Catholic Church, although he associated with young people of that church. The schools did not bring him the kind of teaching which produces stability of character, although they did prepare him to risk his life in battle for country. The voluntary organizations which were so eager for his services after he became famous used him and left him hungry. The motion-picture industry got what it wanted from him but left him unchanged, Television caught him in its bright light, then passed on. The patriotic societies only speeded his downfall. So it went. Ira Hayes passed up and down in our society, knocked on the doors of all our institutionsfound nobody who could save him from himself.

Even the Indian family of which he was a part, and the tribe to which it belonged, had lost their old capacity to heal their own. And America, whose manifold pressures are grinding and shattering the economic and spiritual substance of Indian tribal and family life, finds itself less than half willing to share its own social and economic heritage, and only half certain that its inner resources are adequate for living together as equals in multiracial nationhood.

The accusing memory of Ira Hayes is stronger because he was never bitter and never blamed anybody except himself. On the day before he reached his 32d birthday on January 12 he wrote a man who had offered to help him find work: "Just a short letter this early morning before we go out to the cotton fields to pick cotton. You asked me once if I was ever in need of a job to come to see you. Well, it seems I'm in that position, that is very soon, as the cotton season will be finished in a week or two. I feel I will make it this time. My folks are all in back of me."

He did not make it, and a great many Arizona people are sincerely sorry. One of them, Senator William A. Sullivan, has introduced a bill proposing immediate creation of a State commission to treat alcoholic victims before it is too late. He estimates that there are 12,000 alcoholics in Maricopa County alone. It is to be called the Ira H. Hayes bill.

F. D. R.'s Name Untarnished

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, no American was more beloved in his day than former President Franklin D. Roosevelt. His deeds, as well as words, won for him the affection, not only of the American people but the freedom-loving folks in all lands.

Just as every great champion of human rights and social reform became the target of personal attacks, slander, and abuse, Franklin D. Roosevelt, too, was a victim of vicious personal attacks.

Today, 10 years after his death, these unjust assaults upon his good name continue. Efforts are made to discredit the very name of Roosevelt. But in the hearts and minds of the American people Franklin D. Roosevelt is remembered for the wisdom and courage he has shown, and for the great deeds that were accomplished by his administrations which lifted a Nation and its people from the hopelessness and despair which were so prevalent in the dark days of the early 1930's.

It is no secret that the campaign to belittle him and to discredit the Roosevelt family name is led by those who are embittered because of the social reforms that have been made and because of the social gains that the people have won as a result of New Deal policies.

The attack on the name of Roosevelt reflects their hatred of humanitarian legislation and social reform as well as a desire to turn back the clock of human progress. It is less difficult to attack the name than to attack the legislative program which has become so popular with the people.

Mr. Speaker, together with my remarks, I wish to include the following editorial from the current issue of the Railroad Trainman in honor of former President Franklin D. Roosevelt:

F. D. R.'S NAME UNTARNISHED

Ten years ago the man who did more than any other to defeat nazism and fascism abroad and to forestall the growth of communism in this country died.

That man was Franklin D. Roosevelt.

It is customary for labor in eulogizing Mr. Roosevelt's life to tell what a great friend he was of the working men and women of America. Of course, that he was, but his consideration for labor was only incidental to his devotion to the dignity of the individual generally and to the principles of human decency that are inseparable from the democratic system.

Early in the game F. D. R. recognized the threat to America's security, well-being, and freedom in the ruthless march of conquest of Hitter and Mussolini. He saw the evil, the cruelty and the arrogance of the dictators' sweep across Europe and he made it clear to our people what they had to do if the lamp of liberty was not also to be snuffed out in our country.

By rallying the moral, economic, and later the military support of the United States to the cause of the beleaguered Allies, Roosevelt played the key role in insuring their ultimate victory over the dictators.

To make its mighty contribution toward that victory, America had to be strong economically and spiritually. F. D. R. also played a key role in achieving this.

When Roosevelt became President, the country's industrial system was stagnating, many millions were without work and without hope; relief rolls bulged and hunger and despair stalked the land. A national administration, the Hoover administration, adhering to outdated ideas of rugged individualism, had refused to make democracy serve the people.

Under these somber conditions foreign and repugnant ideas, both Communist and Fascist, had begun to grow among the people, many of whom were ready to turn to any system that promised bread for their children.

F. D. R.'s first dramatic moves headed off those trends and every public act of his thereafter was calculated to strengthen our democracy by making it serve all Americans instead of a favored few. Employment was provided in the intial WPA and similar emergency measures. Then came the breathtaking laws, too numerous to list all here, which brought broad social reform and stability, and confidence to the Nation. These included social security, public housing. bank deposit insurance, natural resources conservation, TVA, railroad retirement and unemployment compensation, and many, many others. By reactionary standards these accomplishments represented a revolution. It was bloodless, however, and our freedoms were and are intact. And we believe this was due to F. D. R.'s astute leadership qualities which made it possible for him to take the country resolutely in the direction of expanding democracy.

Some politicians are today trying to make F. D. R. appear as a traitor. Perhaps he made some mistakes, but those errors, if they were errors, must be judged against the tempo of the times in which they occurred, and not in the light of today's hysteria.

Some conscienceless Republicans are trying somehow to blame today's Communist aggression and ruthless excesses on Roosevelt instead of the Iron-fisted leaders of the Kremlin. Not many Americans will fall for this political slime. F. D. R. is remembered as a foe of injustice and an enemy of all forms of totalitarianism. If he were alive he would undoubtedly be leading the anti-Communist crusade, probably with considerably more intelligence, effectiveness, and perception than we can observe today at either end of Pennsylvania Avenue.

Roosevelt was a great American, and a devoted soldier in freedom's service. His contributions to civilization cannot be tarnished by the opportunistic gyrations of certain Members of Congress, whose chief claim to fame is remarkable hindsight. Many of them wept as we did when F. D. R. died. And as history has developed without him, it appears those tears came with good reason.

"Lame Duck" Corsi: He Hates to Lose That Job

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer, of April 9, 1955:

"LAME DUCK" CORSI: HE HATES TO LOSE THAT JOB

The temporary nature of the immigration job in the State Department, from which he has been dismissed, must have been known to Edward J. Corsi when he was named to it in January. Secretary of States Dulles at his news conference last Tuesday made it clear that the appointment had been for 90

Yet we now find the New Yorker, who held a State job under former Governor Dewey for 11 years, expressing bewilderment and indignation and stating that he would never have accepted the post if he had known it

was for a limited period.

And he has the effrontery to hit back at Mr. Dulles as though a grave injustice had been done him. "I never came down here asking for any job," he asserted. "I came down solely relying upon the integrity and honesty of Mr. Dulles."

Corsi had been State Industrial Commissioner in New York and at one time United States Commissioner of Immigration. He was named to the new Federal job in the belief that as a supposed expert in the field of immigration he could help speed up the refugee immigration program. The law authorizes special admission for 214,000 immigrants by the end of 1956, but only about 22,000 have been given visas to enter the United States since the program became effective 17 months ago.

A visit to Western European countries was made recently by Corsi to determine what could be done to step up the flow of refugees to this country. Meanwhile he had come under congressional fire, directed particularly by Representative Francis E. Walter, of Pennsylvania, the coauthor of the Mc-Carran-Walter Immigration Act.

Walter attacked Corsi for alleged association in the past with Communist-front organizations, a charge which Corsi denied. WALTER then announced that he had "documentary evidence" of the charges made, and he accused Corsi also of pledging himself to "junk" certain immigration laws and of "calling legislators-in effect-Nazis and candidates for the insane asylum" for supporting such laws.

Corsi managed also to tangle with Scott McLeod, the State Department's chief security officer, who administers the Refugee Relief Act. It was reported that Corsi had devised a plan to reorganize the administra-tion to take it out of McLeod's hands.

All in all, the "lame duck" from the Dewey staff made himself pretty troublesome during his brief stay in the Department, and the termination of his 3-month appointment must have been hailed with relief. His uncalled-for jabs at Mr. Dulles merely make his exit more graceless than it otherwise would have been.

North Dakota Hard Spring Wheat Farmers Hurt by Unfair Acreage Allotments

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BURDICK. Mr. Speaker, to indicate to this country what a great hardship has been visited on farmers of North Dakota in the reduction of the acreage of spring wheat, I submit herewith a Senate concurrent resolution of the Legislature of North Dakota.

The legislature ought to know firsthand what this drastic reduction in acres means to the farmers raising hard spring wheat. This is significant since there never has been any overproduction of this kind of wheat. The resolution follows:

Senate Concurrent Resolution V

Concurrent resolution memorializing Congress, the President, and the Secretary of Agriculture to take appropriate steps to correct unwarranted and unfair discrimination in respect to acreage allotments for hard spring wheat farmers in North Dakota

Whereas there has never been and there is not now a surplus or oversupply of hard spring wheat; and

Whereas the allotment of hard spring spring wheat acreage throughout the State of North Dakota is so low in many instances that many farmers can not operate their farms successfully and produce sufficient agricultural products and livestock to provide a livelihood for themselves and their

Whereas there is unquestionably an unfair discrimination against the small hard spring wheat farmers in North Dakota as compared with soft wheat farmers in other States: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That Congress, the President of the United States, and the Secretary of Agriculture are hereby urged and requested to take all necessary and appropriate steps to provide a premium on milling grades of hard spring wheat and to allocate as a minimum to any operator who has raised 100 acres or more of hard wheat during the past 5 years, an acreage equal to the maximum acreage of such operator, but in no event should such allocation if under 100 acres ever be reduced; Be it further

Resolved, That the secretary of state is hereby directed to forward properly authenticated copies of this resolution to the President of the United States; to the presiding officers of the United States Senate and House of Representatives; to the Secretary of Agriculture; and to each of the Senators and Representatives of the State of North Dakota in Congress.

C. P. DAHL, President of the Senate. EDWARD LEIN, Secretary of the Senate. K. A. HATCH, Speaker of the House. KENNETH L. MORGAN, Chief Clerk of the House.

Man of Achievement

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BARTLETT. Mr. Speaker, the Bucknell Alumnus has, in its March issue, honored one of Alaska's leading citizens, Dr. Charles E. Bunnell, a graduate of Bucknell University in 1900, who went on to become a teacher, a lawyer, a Federal judge, the first president of the University of Alaska and now its first president emeritus. Under leave to extend my remarks, I offer here the article referred to which sets forth but a portion of the contributions Dr. Bunnell has made to Alaska:

Dr. Charles E. Bunnell 1900, H 1925, occupies a prominent place in the January 25, 1955, issue of the Fairbanks, Alaska, Daily News-Miner. This issue is devoted entirely to the University of Alaska, which was established in 1921 with Dr. Bunnell as its head. He had for years dreamed of a university in Alaska and gave the next 28 years of his life to building up this institution, which now is one of the recognized landgrant colleges of the country.

The University of Alaska, situated at Fairbanks, 200 miles south of the Arctic Circle, is in a strategic position as far as the defense of North America is concerned. The Geophysical Institute, established there upon the recommendation of the National Research Council and housed in a milliondollar building, is making significant con-tributions to the study of the upper atmosphere, which presents serious problems in this part of the world. Mining and agricultural interests of Alaska, as well as the preparation of teachers for the Territory, have been important concerns of the university leaders.

In the early days the Alaska Agricultural College and School of Mines, as it was then called, had only a handful of students. day the regular college population numbers 450. Two community colleges-at Anchorage and Ketchikan-along with a rapidly growing summer school and more than 1,000 students in extension courses bring the at-tendance to approximately 2,500. To meet tendance to approximately 2,500. the growing enrollment the board of regents is asking the territorial legislature for an appropriation of \$6 million for the current biennium.

Charles E. Bunnell, one of Bucknell's most eminent alumni, and by many considered the number one Alaska pioneer, entered on his career as a university president with a solid background of achievement. An outstanding Bucknell athlete and top student in his graduating class, he went to Alaska in 1900 as a teacher in a mission school. From there he moved to Valdez as principal. After 5 years he entered law and at the age of 37 was appointed by President Wilson judge of the Fourth Judicial District of Alaska. After 7 years as judge, he became the university's first president, which posi-tion he held until his retirement in 1949.

This story may sound like a very tranquil step-by-step movement from one position to a higher one. Don't be deceived. He was a leader in practically every move for the educational, economic, and moral improvement of Alaska, and no fighter like Charles Bunnell would have a tranquil life. Right now he is writing a history of the university.

Bucknell salutes this man of achievement.

First Report of Un-American Activities Committee

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, April 13, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Dres Recalls First Report," written by David Lawrence and pub-

lished in the Washington Evening Star of April 11, 1955.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

DIES RECALLS FIRST REPORT-FORMER CHAIR-MAN OF UN-AMERICAN ACTIVITIES COMMITTEE DECLARES ROOSEVELT AND ADVISERS BLUN-DERED AT YALTA

(By David Lawrence)

Representative MARTIN DIES, of Texas, Democrat and former chairman of the House Committee on Un-American Activities, says President Roosevelt blundered at Yalta and that to acknowledge the mistakes "is not a condemnation of the Democratic Party." Dies has written to this correspondent a letter which is presented here in full text:

"Of all that is being written and spoken concerning the tragic mistakes at Yalta, certain basic facts are being ignored or overlooked. In order to understand Yalta, it is essential to know the attitude of the Roosevelt administration toward Russia and communism when the President and his advisers met with Churchill and Stalin to decide the

future of the world.

"No judge or juror can render a fair decision if he has preconceived opinions or if he heard the case with his mind made up in advance of trial. I know it to be a fact from my conversations with Mr. Roosevelt, Mr. Ickes, Mr. Hopkins, and other members of the Roosevelt team that Mr. Roosevelt and his advisers went to Yalta with tragically erroneous ideas about Russia and communism. As I have reported many times since 1939, Mr. Roosevelt and his key aides told me quite frankly and definitely that they did not believe the findings and conclusions of the Dies committee with reference to the criminal and aggressive plans, tactics and methods of Communists at home and abroad, and that they believed that the future of America depended upon close collaboration with Russia and a tolerant, if not protective, attitude toward Communists in the United States. They ridiculed the finding of the Dies committee contained in our first report dated January 3, 1939, which reads as follows:

"'We have shown that communism is a world-wide revolutionary movement aiming ultimately at the setting up of a world union of Soviet Socialist republics. This is a proposition which is beyond dispute. It

is substantiated by voluminous literature of the Communists themselves.

"'In this plan for world revolution, the Communists have omitted no country or people as too small or insignificant to command their attention. They have, on the other hand taken the logical position of concentrating their attention upon the richest and most populous countries of the Among these the Communists recognize the United States of America as the foremost. The Communists' conquest of the earth will be far less than complete until it has conquered America and destroyed our free institutions.

"It follows logically from the Communist International's plan of world conquest that every possible tactic, device, maneuver, and intrigue would be employed to gain such an end as the communization of America. These tactics, devices, maneuvers, and intrigues are both boldly open and patently subtle, both violent and insidious. The tactics and maneuvers for revoluntary ends are the meat and drink of a Com-munist. They are the very air he breathes."

"Mr. Roosevelt treated this and many other warnings issued by me and the committee concerning the tactics and aims of the Communists as a huge joke. On one occasion Mr. Roosevelt laughingly told me that he thought I 'saw a Red under my bed at night.' Mr. Ickes called me a 'zany' and ridiculed me publicly. Mrs. Perkins made the false statement publicly that I had accused Shirley Temple of being a Communist

"It is this sort of attitude and thinking which Mr. Roosevelt carried with him to Yalta. Is it any wonder, therefore, that America lost at Yalta the fruits of hard-won victory and that Stalin came out of the conference with concessions that changed the map and future of the world?

"I do not mean to imply that Mr. Roosevelt was actuated by ulterior motives. I do not believe there has ever been a President of our country who intentionally did some-thing contrary to the best interest of our country. Neither do I seek to detract from Mr. Roosevelt's great leadership during the dark days of the depression. But it is important to our children that we face up to the ugly truth of Yalta in the hope that future generations will profit by our mistakes and avoid another Yalta.

"Blind and misguided partisanship which defends the indefensible does not serve the best interest of our country. It is not a condemnation of the Democratic Party today to acknowledge one of the worst blunders in the history of our country. The Republican Party has been guilty of tragic blunders, such as the reconstruction era after the war between the States which did so much to retard the political, economic, and spiritual growth of our country.

"The 'party hacks' who condone and defend the mistakes of their party, are neither statesmen who serve the interest and welfare of their country, nor politicians who serve the ultimate interest of their party.

"Despite all the denials and countercharges, Yalta was a terrible blunder which has already cost our country precious lives and billions of dollars and which may yet plunge us into a devastating war. if we recognize it as a blunder and acknowledge its cause can we profit in the future and save our civilization from destruction.

"There are none so blind as those who will not see; there are none so deaf as those who will not hear. In the world in which we live we cannot survive if we are blind and deaf to our mistakes."

The Postal Pay Increase

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. FRELINGHUYSEN. Mr. Speaker. under leave to extend my remarks, I am including a most thoughtful and interesting letter which I received recently from Mr. M. C. Nave, president of the National Association of Postal Super-

In this letter, you will note, the National Association of Postal Supervisors and other groups, representing 125,000 postal employees, support H. R. 4644 as 'a reasonable and proper compromise." Unless early agreement can be reached on some such compromise, I agree with Mr. Nave that the postal employees again this year may not receive an overdue and much needed increase in pay. To avoid such an unhappy result, it does seem highly desirable that prompt action be taken by the Congress on some suitable compromise legislation.

The letter from Mr. Nave follows:

NATIONAL ASSOCIATION OF POSTAL SUPERVISORS, Washington D. C., April 4, 1955.

Hon. PETER FRELINGHUYSEN, Jr., Member of Congress,

My DEAR CONGRESSMAN: The confused situation which has arisen concerning the pending postal pay legislation has become a matter of serious concern to the 21,000 postal supervisors in post offices throughout the Nation, and the purpose of this letter is to briefly analyze and clarify conflicting views on a just and equitable solution. This association sincerely believes that H. R. 4644. presently on the House Calendar, would treat all employees fairly and justly.

Morristown, N. J.

In his message to Congress on January 11, 1955, the President recommended legislation to provide a 5-percent general pay raise, with reclassification to adjust long-standing inequities. On January 25, Chairman MURRAY, of the Committee on Post Office and Civil Service, introduced H. R. 2987 based on those principles, the estimated cost of which was \$129 million. Following extensive hearings, the committee made more than 50 liberalizations and changes in the salary and reclassification provisions of the bill to meet desires expressed by all employee groups and it was reintroduced as H. R. 4644, with an increased cost of \$32 million, all of which would go to employees in the five lower salary levels, predominantly to the clerks and carriers in level 5.

As now before the Housie, H. R. 4644 is definitely a compromise between the original administration proposal and the expressed desires of all employee groups. The reclassification provisions of the bill have been generally agreed to by all employee groups, but those groups who would be in level 5 are still urging a further increase above the 7.6percent average now in the bill to 8.3 percent, which would further raise the cost by more than \$15 million, all of which would go to only 2 of the 9 major groups of em-

Reliable administration sources have assured that any further increase in cost above the 7.6 percent now provided in H. R. 4614 would invite a certain veto, and rather than action which could result in no pay raise this year, we earnestly urge your support of H. R. 4644 as a reasonable and proper compromise.

This association has consistently supported this measure since its presentation to Congress last January and joins with the National Rural Letter Carriers Association, the National Association of Postmasters, the National League of Postmasters, and the National Association of Special Delivery Messengers, with a combined total membership of 125,000 of the 500,000 postal employees in mutual support of H. R. 4644. Sincerely yours,

M. C. NAVE, President, National Association of Postal Supervisors.

Public Interest Demands Retention of Long- and Short-Haul Clause in Interstate Commerce Act

> EXTENSION OF REMARKS OF

HON, OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I present this resolution adopted by the 34th Legislative Assembly of the State of North Dakota, opposing repeal of the long- and short-haul clause of section 4 of the Interstate Commerce Act:

House Concurrent Resolution O

Concurrent resolution opposing repeal of long and short haul clause of section four of the Interstate Commerce Act

Whereas there will be proposed and introduced in the Congress of the United States legislation providing for repeal of the long and short haul clause of the fourth section of the Interstate Commerce Act; and

Whereas the repeal of the long and short haul clause would permit railroad companies to assess lower rates and charges for long hauls than for shorter hauls over the same route in the same direction: and

Whereas the charging of a higher rate for a short haul than for a longer haul, the shorter being included within the longer, is now forbidden on North Dakota intrastate traffic in section 49-0409 of the North Dakota Revised Code of 1943; and

Whereas the passage of such legislation will result in increased freight rates and charges on articles moving in interstate commerce to and from North Dakota, particularly on grain, lignite, and other commodities, to the detriment of producers, shippers and consumers of the State of North Dakota; that it would encourage discriminations in rates against small shippers in favor of large shippers that would be against the public interest; and would, we believe, be in the end detrimental to the best interests of the railroads themselves: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakoa (the Senate concurring therein). That the Congress of the United States is hereby respectfully memorialized and urged to deny the passage of any legislation providing for the repeal or amendment of the long and short haul clause of the fourth section of the Interstate Commerce Act, when, as, and if presented for its consideration; be it further

Resolved, That the Senators and Representatives of the State of North Dakota in the Congress of the United States be requested to put forth every honorable effort to defeat the aforesaid type of legislation upon presentation to the Congress of the United States, and that copies of this memorial be forwarded forthwith to the President of the United States, to the President of the Senate, to the Speaker of the House of Representatives of the Congress of the United States, and to the Senators and Representatives of the State of North Dakota.

K. A. FITCH,

Speaker of the House.

KENNETH L. MORGAN,
Chief Clerk of the House.
C. P. DAHL,
President of the Senate.

EDWARD LENO,
Secretary of the Senate.

United States Information Agency Libraries

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. WILSON of California. Mr. Speaker, recently the New York Times magazine published an article on the

library at the United States Information Service Center in Rangoon, Burma, Some of you may have seen the article. It describes the library as "a striking instance of how democracy can win friends and influence people."

Today this seems to be the consensus of opinion on the United States Information Service libraries. Recently, Vice President Nixon remarked that he had visited United States Information Service libraries in 22 countries and he had come to the conclusion that the library program is one of our most effective overseas information operations.

The writer of the New York Times magazine article, Mrs. Peggy Durdin, was writing from Rangoon. She had inspected the library layout, browsed through the book shelves, noted the variety of library visitors, checked on its influence. She gave a most striking example of that influence. The father of a Communist university student—the Communists in Rangoon, as in many other countries, make a special effort to win university students—had borrowed a standard United States economic textbook. He read it and passed it on to his son. They studied it together. Returning the book to the library, the father said simply:

This book gave my son the true facts. He is no longer a Communist.

Mrs. Durdin wrote of the help the Rangoon library had given officials of the Burmese Government. But, she added, the library's influence extended beyond officials. It reached private citizens such as the former young Communist and his father. It had books for children. The shelves were open. Men, women, children of all ages poured over the racks, took notes, looked at pictures, read, or took books home.

She continued:

The library's books travel by river boat, by plane, and on the backs of human porters * * * across thousands of miles of jungle and mountains. Burmese read them eagerly in an umbrella cooperative in Bassein, a school in Mandalay, a prisoner's reading room in Myitkyina, an army officers' club in Akyab, a youth league in Moulmein. A doctor who has to perform a complicated new operation, a merchant who wants to make sparklers, and a landowner who plans to set up a model village on his property turn for help to the American library.

There are 157 of these United States Information Service libraries today in 67 countries. The story told by Mrs. Durdin could be repeated, with slight adaptations to suit the particular country, for each one of them. They are all over the world, ranging in size from the 2,200-book library in Curacao, Dutch West Indies, to Vienna, which boasts a collection of 175,323 books.

These libraries have special shelves devoted to particular subjects. The agency's support of President Eisenhower's atoms-for-peace proposal, for example, inspired the setting up in most of our libraries of special shelves on that subject. All libraries have made a special feature of books dealing with the economy of the United States. They stress technical subjects heavily, although fiction is not ignored.

All books have been chosen to present to the peoples of other lands a balanced

picture of American life, culture, and thinking. In my opinion, they are making a vitally important contribution in today's fight to keep free the minds of men.

The influence of these libraries, as Mrs. Durdin wrote, is extended into remote areas. Most of them support bookmobiles that tour the smaller cities, villages, and rural areas. People write in for them. There are "book trunks" that go to towns where libraries are unknown.

In light of the attacks once leveled at the United States Information Service libraries, it gives me great pleasure to pay them this tribute. I agreed with Vice President Nixon when he said recently:

The library service, unfortunately, received criticism which it did not deserve a couple of years ago.

In all new projects, mistakes are apt to be made. If the United States Information Service libraries slipped on a few occasions in the past, I think today they have profited by experience. The New York Times writer felt the American taxpayers could be proud of the Rangoon library. Let me enlarge that and say that all of us can be proud of the United States Information Service libraries, wherever they may be.

Twenty Years of Low-Rent Housing

EXTENSION OF REMARKS

HON, JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Twenty Years of Low-Rent Housing," which was published in the Birmingham (Ala.) News of April 2, 1955. The editorial deals with the report of the Birmingham Housing Authority and gives some of the facts and figures relating to 20 years of this operation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWENTY YEARS OF LOW-RENT HOUSING

This year the Housing Authority of the Birmingham district will have been in existence 20 years, having been chartered as a public corporation under the laws of Alabama in 1935. Since then it has built and presently operates 6 public low-rent housing projects totaling 3,762 family dwelling units, and has initiated and is responsible for 2 slum-clearing projects, the medical-center extension, and the North Avondale redevelopment programs, all within the city limits of Birmingham.

The recently distributed annual report of HABD for the year ending June 30, 1954, provides some measure of the value and service of this agency to the community. Some 12,344 people were living in the 6 projects it operates; 5,910 of these were children 18 years of age or under, and 1,150 were persons 65 or over. Widows were heads of some 37 percent of the families, and 20 percent of

the families were of 5 or more persons. Almost 39 percent of the families received some form of aid—old-age benefits, aid to dependent children, Government pensions, or the like.

Average annual income of families in the projects was \$1.625.72; average monthly rent was \$21.65 for Negro families and \$26.65 for

white families.

The city of Birmingham received from HABD payments in lieu of taxes last year of \$87,150.96, almost \$7,000 more than the previous year. Total payments in lieu of taxes to the city of Birmingham for the 6 projects from January 1, 1938, to June 30, 1954, were \$794,228.68. Ad valorem taxes for the properties on which the 6 projects are located for the last year before each property was acquired for low-rent public housing, came to only \$13,788.58.

A letter from Frank E. Spain, Birmingham attorney and civic leader who was chairman of HABD from 1938 through 1943, recalls some of the conditions which the agency has helped to correct. The Dowling Survey of 1933-35 canvassed 22 blighted areas constituting 10 percent of the municipal area but containing 22 percent of its population.

Writes Mr. Spain:

"We found that 60 percent of the families living there had no private tollets and 80 percent of all the community tollets within the city were in these areas. Ninety percent of the houses had no running water. One water spigot in the yard or court served many families. These tragic conditions were magnified by the concentration of people living there. Out of 711 cases of delinquency within the city nearly 300 occurred in this 10 percent of its area. Half of all the petty crimes were committed by persons in it and 40 percent of the major crimes. We found there 40 percent of the city's mortality rate and 50 percent of its lilegitimacy."

The Housing Authority with its low-rent housing projects has contributed greatly in helping to remove this blight from the landscape and character of the community.

Expert Paints Grim Picture of Red Horror

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the Record, I wish to insert the following article from the March 30, 1955, issue of the Patriot, Harrisburg, Pa., and containing the statements of the Honorable Charles J. Kersten regarding communism:

EXPERT PAINTS GRIM PICTURE OF RED HORROR

An expert on life behind the Iron Curtain in Russia and the countries it has made captive last night told members of the Harrisburg public forum that "if we don't find a way to checkmate the Communist conspiracy in this generation, our children will spit upon our graves."

Former United States Congressman Charles J. Kersten, of Wisconsin, head of the House Committee on Communist Aggression which spent nearly 2 years studying Soviet techniques of conquest, drew a horrifying picture of how the youth of Russia is being trained by Communist leaders.

"Never in the history of the world has any government so assaulted the spiritual nature of its people," he asserted. "The young people are systematically bereft of all moral principles, of all belief in a Creator. Their young doctors and commissars are being taught how to inflict the most unspeakable tortures, their young psychiatrists shown ways to drive people insane."

INHUMAN DEVILS

"The nightmare of destruction by atomic warfare is a terrible one. But even worse, to me, is the thought of our American boys being opposed and made prisoner by millions of such inhuman devils—say 5 or 10 years from now."

Congressman Kersten reviewed the work of his committee in examining 335 witnesses and more than 1,500 documents, all concerned with the methods used by the Soviets in taking over other nations, keeping them subservient, and maintaining their own power within Russia.

He pointed out that the people of no nation, including Russia, ever willingly accepted communistic rule. In the 37 years of their existence, the Kremlin lords have imposed their will upon peoples by force, and kept control by slaughter, deportation, and the slave labor camp.

LISTS PREPARED

The speaker described how Soviet agents prepared detailed lists of entire populations of countries they intended to take over, with every citizen placed in a category, so that no time was lost after the occupation in eliminating any elements they knew would prove dangerous.

Such lists of Americans already are in their possession and they are kept up to date. Remember that the symbol of Russian occupation is a cadaver with a bullet through the skull and hands tied behind the back.

Congressman Kersten said his committee had drawn various conclusions from their exhaustive studies of Red tenets and techniques, and had made certain recommendations to Congress,

VILE CONSPIRACY

Chief among them was to withdraw diplomatic recognition of "this thing" which is not a government at all but a vile conspiracy against the world. The recommendation also would include Red regimes in captive countries.

"At the same time," he declared, "the United States must reaffirm our friendship for these enslaved peoples, including those in Russia. They are not our enemies—their

kidnappers are.

"We should encourage the defection of military personnel from Communist armies wherever they are. Such men ought to be urged to join the defense of Western Europe, but allowed to keep their own national identities. Also, we should stop trading with Red governments, increase our information program, and never enter into any agreement around the conference table with Soviet

"Our country's policy must be founded consistently on the principles of liberty and belief in God—the direct antithesis of those in the Kremlin."

Testimonial in Honor of Milton E. Goldman

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the Rec-

ord, I include therein the following article written by Mr. M. Martin Turpanjian, of the Hudson Gazette, a wellknown weekly circulating in Bergen
County, N. J. On Saturday, March 26,
1955, some 400 men and women from all
parts of New Jersey attended the testimonial banquet in honor of Mr. Milton
E. Goldman, editor and publisher of the
Shield, the civil-service newspaper of
Union City, N. J. Mr. Goldman has a
long and distinguished record in behalf
of civil-service employees.

The article follows:

SHIELD PUBLISHER MILTON E. GOLDMAN LION-IZED BY STATE AND NATIONAL LEADERS AT TESTIMONIAL BANQUET FOR ESPOUSING CAUSE OF CIVIL SERVICE

(By M. Martin Turpanjian)

Last Saturday night some 400 men and women from all parts of New Jersey paid a signal honor and extraordinary tribute to Milton E. Goldman, editor and publisher of the Shield, the civil-service newspaper, of Union City, at a testimonial banquet in the grand ballroom of the Robert Treat Hotel, Newark. Mr. Goldman has been its general manager and publisher for the past 20 years. Irving Brody was the founder and original publisher of the Shield. He passed away several years ago.

Congressman Frank Osmers, who owns a chain of newspapers in Bergen County, delivered the keynote speech. He told of the struggle encountered by Brody at the beginning of the new venture and how the honor guest, Milton E. Goldman, worked strenuously and most effectively to help bring about its position as a power for good in all communities of the Garden State.

Irving Brody and M. Martin Turpanjian, editor of this newspaper and president of New Jersey League of Weekly Newspapers, with which the Shield is connected as a member, attended Emerson High School together in Union City and both began to work on the Hudson Dispatch as reporters back in 1918. Brody became legislative correspondent at State House, Trenton, and Turpanjian was serving as a State auditor from 1929 to 1935 in the State House, Trenton.

Secretary of State Edward J. Patten, originally referred to by this newspaper as the "ambassador of good will of New Jersey" was introduced as such to the great gathering. He made things quite interesting with his sharp wit and wisdom in a splendid oration.

R. Earle Leonard was the toastmaster for the occasion. President Willam F. Kelly, Jr., of State civil service department; James E. Rossell, director (retired) second United States Civil Service region; James P. Googe, director second United States Civil Service region; Frank Walker, past president of New Jersey Civil Service Association; Henry Campbell, staff writer for the Shield; Leo Steiner, managing editor of the Shield; and Raylond F. Male, executive assistant to the Governor, were also among the speakers. John J. Goff, State president of New Jersey Civil Service Association, which sponsored the testimonial banquet in honor of Shield editor and publisher Milton E. Goldman, made a happy little speach complimenting the unusual services by the honor guest for the benefit of the civil-service workers throughout New Jersey. His remarks were listened to with rapt attention. The Reverend Perry Van Dyke, Protestant chaplain, Newark Police Department, offered the invocation after the singing of Star-Spangled Banner. Many gifts were presented to the guest of honor who was accorded a rousing ovation when he was introduced to speak. Milton E. Gold-man is an authority on civil-service administration and proved to be one of New Jersey's leading orators. He has a heart of gold and

is widely known as a doer of things. The Reverend Thomas J. Conlon, pastor of Church of Sacred Heart, Newark, offered the benediction. Rabbi Benjamin B. Tumin, of Temple Emanuel, of Englewood, lionized the honor guest as a patriotic citizen and believer in Golden Rule principles. Dr. William S. Carpenter, former president of civil service department, and Banking and Insurance Commissioner Charles R. Howel were also present.

Thirty-Seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted at the 37th anniversary of Lithuanian independence by the Lithuanian Council of New Jersey:

Lithuanian Americans of New Jersey, gathered under the auspices of their state-wide council, to celebrate the 37th anniversary of Lithuanian independence, on February 27, 1955, in the city of Newark, unanimously resolved the following:

"To thank the honorable Governor of their State, Robert B. Meyner, for his proclamation of February 16 as Republic of Lithuania Day in New Jersey, in tribute to a freedomloving and valiant people who are suffering under Soviet oppression.

"To also thank the members of the delegation to the Governor, who represented the largest Lithuanian-American organizations in the State, namely, Rev. Michael Kemezis, Anthony Malakas, Edward Thompson, Christine Korbet, Al Jankauskas, and Andrew Salvest; and

"Whereas in 1920 Soviet Russia recognized for eternal times' the independence of Lithuania, and her sister Baltic Republics of Latvia and Estonia; and

"Whereas just 20 years later, the Baltic States were peremptorily occupied by the armed might of the Soviet Union, constitutional governments were deposed by the Communists and replaced by puppet officials, sham elections were staged by imported Russians, and the Baltic States became the first victims of Soviet aggression by their forced incorporation into the Soviet Union; and

"Whereas there followed a succession of tragic experiences for the Baltic peoples in 1940-41 under the imposed Soviet regime with the arbitrary deportations, imprisonments, and executions, with its suppression of all civil liberties, of religion and worship, which have left deep scars upon the national consciousness of these peoples and have deepened their devotion to liberty and independence; and

"Whereas the Soviets are continuing today acts of genocide against the populations of Lithuania, Latvia, and Estonia, threatening their very survival; be it further resolved:

"To thank the members of the congressional committee and all the Members of the House of Congress for investigating the seizure and forced incorporation of the Baltic States by the Soviet Union and the genocide perpetrated on the Baltic peoples, thereby raising the hopes of the suffering peoples for eventual liberation.

"To again thank the Government of the United States which has never recognized

the absorption of these countries by the U.S.S.R. for the promise and hope of eventual release of these unfortunate countries from Soviet captivity.

"To thank in particular their Representatives in the United States Senate and the House of Congress who are heeding their pleas in behalf of Lithuania.

"We pray that the Soviet Union abandons its aggressive and totally unjustified claims to the territories and peoples of the Baltic States voluntarily and by peaceful means."

Lithuanian-American Council of New Jersey: Jack J. Stukas, President; Albin S. Treciokas, Secretary; Walter J. Dilis, Treasurer; Rt. Rev. Msgr. Ignatius Kelmelis, Honorary President; Charles F. Paulis, Legal Adviser; Eva Treciokas and Stasys Jakstas, Vice Presidents.

What Does Future Hold for Us?

EXTENSION OF REMARKS

OF

HON, COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Park Region Echo, Alexandria, Minn., of April 7, 1955:

WHAT DOES FUTURE HOLD FOR US?

"What does the future hold for us?" is a question we all undoubtedly are pondering at this time. We spent the weekend in central North Dakota and while there huge dust storms covered most of the State Saturday and Sunday. Monday we again were reminded of this when the sun literally was hidden from sight by dust in the Alexandria area. Reading our daily newspaper or listening to the radio we again received more bad news when we were informed that the worst dust storms since the Dust Bowl days were raging in Texas, Oklahoma, and Kansas. Yes, "What does the future hold in store for us?" certainly should concern all of us.

We aren't attempting to frighten anyone but conditions at this time appear alarming and it is entirely possible that we will have other things to worry about than the prospect of war in some far-distant country.

If we aren't concerned about the economy of the country, we maybe can get some satisfaction out of figures which show that we have in storage an abundance of food so we shouldn't starve in the immediate future. But how long will this so-called abundance last? We recently read a report which showed that we had a farm inventory surplus of a little more than \$1 billion while at the same time we had a military surplus inventory valued at \$129 billion. Seems to us we're much better prepared for war than we are to keep our people healthy and well fed.

In spite of these so-called surpluses, readers will find a news story in this issue of the Echo calling for more production of durum wheat. If such a situation could develop in a hurry as far as durum wheat is concerned doesn't it sound reasonable that the same thing could happen to almost anything else we grow on our farms?

Maybe it can't happen here but it is entirely possible that we'll be thankful that nature has rewarded us so bountifully in recent years. Maybe then those who have been cursing our abundance will change their way of reasoning.

Dr. Janis Alfra Kaktins

EXTENSION OF REMARKS

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. AIKEN. Mr. President, during these days when we hear so much about the operation of the displaced persons program, it seems to me well to determine, if we can, what has become of some of the displaced persons who entered this country under the program which was begun in the fall of 1948.

Although I do not know what has become of most of them, this morning I wish to call attention to what happened to one of them, Dr. Janis Alfra Kaktins, a native of Latvia.

Dr. Kaktins was educated at the University of Riga, and was one of four Latvians to receive a Rockefeller fellowship in recognition of outstanding scholarship. He became a professor at the University of Riga, and later became very well known in medical circles around the world.

As a result of the war he became a displaced person, and went from one place to another, until finally, under the displaced-persons program passed by Congress in 1948, he was admitted to this country. In the spring of 1949 he settled in the small city of Barre, Vt. He became a part of the life of that community. He served the Barre City Hospital and the State hospital at Waterbury as a pathologist.

He died last month, and the Rotary Club, of which he had become a member, attended the funeral in a body.

The esteem in which this displaced person was held by the people of his newfound home is well expressed in an editorial which is published in the Barre Daily Times of March 25, 1955. I ask unanimous consent to have the editorial printed in the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

QUIETLY IN OUR MIDST

For the past 5 years, Prof. (Dr.) Janls Alfra Kaktins quietly lived among the people of Barre. We saw him walk to the book store for his daily paper. We saw him go to his office and laboratory in the hospital. His fellow Rotarians saw him every Wednesday at their weekly meeting. A close group of friends grew to appreciate his vast array of knowledge—almost encyclopedic knowledge. They appreciated his keen—and sometimes sharp remarks—in conversation. They liked him as a man—human being like themselves.

Patients in the Barre City Hospital rarely saw his short figure or serious face. But, he knew the case history of almost every patient who entered its doors. He studied the slides made after operations. He had charge of the research work. In many cases, he determined what would be the best medication for a particular infection. He named the germs and described their process. Dr. Kaktins was a professor—a teacher of medical doctors. He was what is sometimes called a pure scientist. He did not practice medicine—he taught medicine to those who practiced.

As happens so many times, few people in Barre realized that this quiet man was known throughout the world. True, he did not his prominence in Barre. We only profited by what he had learned elsewhere in his extensive studies and laboratory work. The people of his native Latvia remember him as one of the outstanding scholars in the history of their country. He was one of only four Latvians ever to win the coveted Rockefeller fellowships for advanced study. His fellowship was spent at the great Pasteur Institute in Paris. Later, out of pure scientific interest, he studied bacteriological warfare and has been noted as among the world's authorities on that subject. His mail carrier testifies that his mail-even in the quiet of a little Vermont city—came from scientists almost around the world.

Yet quietly in our midst he lived. When we met him on the street, we might have thought that he was preoccupied; probably he was. Great problems—larger than most of us will ever know—went through his mind. When we saw him in the hospital, we might have thought he was a serious man; he was. Being thrown out of your native land and forced to start life all over again in a foreign land is a serious business. It takes something that most of us never possess to do so gracefully and with success.

Quietly in our midst a great man has lived. The people of his Latvia, the scientific world, and the patients at the Barre City Hospital rejoice in his achievements. The rest of us are proud that we could have the opportunity to know him as a man and a friend and help him and his family—strangers from a far land—feel at home in our midst.

F. L. L.

Death Pensions Urged by North Dakota for Widows and Orphans of World War II and Korea

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BURDICK. Mr. Speaker, the North Dakota Legislature by concurrent resolution has asked Congress to pass legislation in regard to granting death pensions to surviving widows and orphans of the deceased World War II and the Korean conflict veterans in the same manner protecting surviving World War I widows and orphans.

The resolution follows:

Senate Concurrent Resolution Q

Concurrent resolution memorializing the Congress of the United States to enact legislation granting death pensions to surviving widows and orphans of deceased World War II and Korean conflict veterans, the same as death pensions granted to surviving World War I widows and orphans

Whereas the Congress of the United States has passed legislation granting death pensions to surviving widows and orphans of deceased veterans of World War I who had 90 days or more of active military service in the Armed Forces of the United States or who were discharged for disability incurred in active military service in less than 90 days, we believe the same legislation should be passed giving the surviving widows and orphans of deceased World War II and Korean conflict veterans the same death pensions as are granted to surviving widows and orphans of World War II due to the fact that the surviving widows of World War II and the Ko-

rean conflict deceased veterans have young children and are very much in need of assistance in caring for their families: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the Congress of the United States be memorialized to enact necessary legislation granting to the surviving widows and orphans of deceased World War II and Korean conflict veterans the same death pensions as are granted to the surviving widows and orphans of World War I deceased veterans; be it further

Resolved, That the secretary of state be, and he is hereby, instructed to send copies of this resolution properly authenticated to the presiding officer of each House of the National Congress of the United States, and to each of the United States Senators and Representatives from the State of North Dakota.

C. P. Dahl,
President of the Senate.
Edward Leno,

Recovery of European Economy

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Wednesday, April 13, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Europe Back on Feet," written by Constantine Brown and published in the Washington Evening Star of April 11, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE BACK ON FEET—FREE NATIONS' ECON-OMY BETTER THAN EVER; UNITED STATES INDUSTRY FEELING COMPETITION

(By Constantine Brown)

Recent official reports from Western Europea paint a very rosy picture of the European economy as of this year. The per capita consumption in the 17-member nations of the Organization for European Economic Cooperation is placed at 12 percent higher than before World War II. Exports were 70 percent over those of 1938, the year before the outbreak of the war. Imports were only 12 percent higher, a healthy figure indeed. Over all, the economic health of the free nations of Europe appears to be better than it has ever been and the general standard of living is significantly improved.

These cheerful figures are all the more astounding when it is considered that in 1945 most of Western Europe was prostrate. Production, diverted to military needs for every 5 years, had shuddered to a halt under the hammer blows of war and bombings. Production machinery of all kinds was worn out if it had not been destroyed. Even agriculture, badly disorganized and struggling without manpower and machinery, was crippled to the point that starvation was real and hopeless. Transportation was battered and disrupted over huge areas of the entire continent, rolling stock wrecked and worn out, roads, bridges, and railroad tracks destroyed, organizations broken up and bankrupt.

Yet today, we find that same war-torn continent in better shape than it was in the so-called prosperous days before the march of Hitler's Nazi legions in the fall of 1939.

Of course, the tremendous and always amazing ability of mankind to revive, rebuild, and reorganize is here the dominant factor in this almost incredible rebirth of Europe from the ashes. But even the most determined people in the world need tools to work with, capital to launch productive enterprise, supplies, and equipment to rebuild dams and bridges, railroads, and power stations and all the other manifold necessities of a modern society. All of things and much more, were provided by the taxpayers of the United States in a series of plans for grants-in-aid and other economic assistance, most of which will never be directly repaid.

The philosophy behind these unprece-

The philosophy behind these unprecedented gifts to Europe—and they went to both friend and foe alike—was to the effect that a sick Europe would be easy prey to the hungry march of communism.

History is replete with examples of the ease with which half-starved, beaten, and discouraged people will dumbly surrender their last vestiges of freedom and self-respect for any panacea and political or economic system appearing to hold forth hope for food and shelter and some sort of economic security. That this security is akin to that of the concentration camp appears to make little difference to the sufferers.

So the United States, thrown by the fortunes of war into the unenviable position of the world's leader and spared most of the destruction and dislocation visited on Europe, untied the purse strings and helped unstintingly to set Europe back on its feet.

The Marshall plan, the several economic assistance organizations stemming from it, the present-day FOA administering the point 4 program all over the world, the NATO military buying in European member nations—all these and many more organized and costly efforts have gone into the reviving of Europe's devastated economy.

Some justification for this vast expenditure of American funds extracted from the production and pockets of every American can be readily found in the check so obviously administered to the designs of the master plotters in the Kremlin.

But the time has very definitely come for a halt to the largesse, while responsible American policymakers take time out to assess the situation as of today against the need for continued expenditures. American industry is already beginning to feel the pinch of sharp competition from underpriced European production. It would seem the most bitter of ironies to continue to tax American industry and American labor for the purpose of strengthening the very competition that now bids fair to severely lower the American income.

Indeed, the proper time for such a reappraisal is long since past. The unhappy suspicion grows that the business of American giveaways to the rest of the world has become such a colossus of bureaucracy that it cannot be controlled.

Anniversary of Bataan Day, 1955

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. McCORMACK. Mr. Speaker, 13 years ago Americans and Filipinos fought side by side with a heroic determination to prevent the fall of the Philippines, Outnumbered—with their supplies dwindling—ravaged by sickness and fatigue, and finally surrounded on the Bataan Peninsula, the defenders fought on to the bitter end. The Battle of Bataan stands today as a symbol of the will of freemen to remain free.

History has erased the defeat at Bataan. From that defeat the Philippine people, through the same tenacity and determination which they demonstrated at Bataan, have risen to create a republic which today is a beacon of freedom in Asia.

At Bataan we shared with the Philippine people both defeat and the will to avenge that defeat. We shared the victory which followed. In a spirit of mutual understanding we subsequently shared in the many complex responsibilities of the transition to complete Philippine independence. We have watched with unstinted pride as the Republic of the Philippines in its own right has assumed its place among the democracies of the world. On this anniversary of Bataan Day, we continue to share with the people of the Philippines that devotion to freedom which could not be quenched by a military defeat on the Bataan Peninsula.

Little Missouri River Compact

EXTENSION OF REMARKS

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to submit the following resolution adopted by the 34th Legislative Assembly of the State of North Dakota, urging authorization for the States of North Dakota, South Dakota, Montana, and Wyoming to negotiate an agreement providing for an equitable apportionment among the States for the water supply of the Little Missouri River:

House Concurrent Resolution J-1

Concurrent resolution requesting Congress to authorize North Dakota, South Dakota, Montana, and Wyoming to enter into a compact for an equitable division among the States of the water supply of the Little Missouri River

Whereas there is an urgent need for a compact among North Dakota, South Dakota, Montana, and Wyoming for equitable apportionment of the waters of the Little Missouri River and its tributaries among those States to assure owners of lands lying near or adjacent to this river or its tributaries their equitable share of the waters thereof for stock watering, irrigation, and domestic use: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Senate concurring therein). That the Congress of the United States be, and is hereby, requested to authorize the States of North Dakota, South Dakota, Montana, and Wyoming to negotiate a compact or agreement, upon such terms and conditions as Congress may deem fit, and require, not later than January 1, 1959, for a division and equitable apportion-

ment among the States for the water supply of the Little Missouri River and streams tributary thereto; and be it further

Resolved, That the secretary of state of the State of North Dakota be, and is hereby, directed to mail copies of this resolution to the President of the United States, to the Senators and Representatives from North Dakota in Congress, and to the Governors of the States of South Dakota, Montana, and Wyoming.

K. A. FITCH,

Speaker of the House.
Kenneth L. Morgan,
Chief Clerk of the House.
C. P. Dahl.,
President of the Senate.
EDWARD LENO,
Secretary of the Senate.

Confusion Among Columnists

EXTENSION OF REMARKS

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. AYRES. Mr. Speaker, I have noticed lately that many of our columnists are expressing opinions that in all probability are being construed by our allies as facts. Any individual has a right to his opinion and we should not criticize him, even though his ideas may differ from ours. I cannot, however, condone any man for being wrong in his facts. Many American columnists are ever so quick to criticize Members of Congress. It is not my intention as a Member of Congress to criticize the 2 columnists I am about to make reference to.

Last evening on my return to Washington I picked up a copy of the Cleveland News, and on turning to the editorial page I read a column by the distinguished editor, Mr. David Lawrence, entitled "Eden will work well with the United States." The following paragraphs were two of several in his column:

What most Americans are anxious to know is whether the ascension of Sir Anthony Eden to the post of prime minister will affect British relations with the United States. Rumors have it that he does not get along so well with Dulles, but the truth is that they get along personally very well and that the only differences are those which arise when understandings reached at one conference later have to be modified or abrogated.

Broadly speaking, Sir Anthony Eden will maintain the policy of close cooperation with the United States because it is logical for the Conservative Party in Britain to do so. The British Socialist-Labor Party plays it the opposite way, and there is frequent needing of the Conservatives with respect to American policies. Basically it arises out of a desire to embarrass the Conservatives rather than because of any inherent anti-Americanism.

After reading Mr. Lawrence's column, I turned from page 16 to page 17, and there was a column by Mr. Drew Pearson captioned "Dulles and Eden Don'ts Get Along." A paragraph included in Mr. Pearson's column read as follows:

Inside fact is that Eden and John Foster Dulles just don't get along. Eden considers Dulles a novice and a bumbler. Dulles, in turn, has referred to Eden in private as an appeaser,

Our strongest allies are the British. If I were a Britisher I would be asking this question: "How confused can the American columnists become?" Not being a literary expert and believing in freedom of the press, I cannot criticize the columnists for their style of writing or the opinions they offer. I can only suggest and prayerfully ask, "Please, gentlemen, won't you be more certain of your facts in the future? You both can't be right."

For the benefit of those of you who may have read my remarks, the two columns are printed below:

EDEN WILL WORK WELL WITH UNITED STATES
(By David Lawrence)

Washington.—"There is so much to do in the world and so little time in which to do it."

These words, from the pen of Winston Churchill on his 25th birthday, are contained in an unpublished letter written from imprisonment to a relative in the United States when as a British war correspondent the future Prime Minister had been captured during the Boer War.

Just a year ago, when this correspondent was alone with Sir Winston before lunching with him at 10 Downing Street in London, there was an opportunity to ask him why he had written that comment.

Mr. Churchill replied that as a young man he didn't think he was going to live past middle age because he was frail, and he reminded me that his father had died in his forties.

In the 55 years that have elapsed since that 25th birthday, Winston Churchill has spanned the longest period of history of any man in public life today. They were turbulent years, but his courage was always manifest in any emergency. Perhaps the reason for the success of the famous British statesman is that he never felt panicky in a crisis. He sailed through stormy seas without flinching in the slightest.

Sir Winston's influence in the world can-

Sir Winston's influence in the world cannot be measured by written records of state papers or his memoirs. His personal power has been extraordinary. He never forgets that he is half-American. He has never falled to pay tribute to America. He has differed with American policies at times, but he has always known the motivation of such policies and has understood their true meaning.

A story was being told a year ago at the Geneva conference, where Anthony Eden, then British foreign secretary, headed the British delegation and at times found himself at variance with American policy. On one occasion, after a crisis that seemed to fill the headlines, word is said to have come from Churchill to Eden which may be paraphrased as follows: "Listen carefully to what the Americans say. Express your own viewpoint as forthrightly as you can. Then perhaps you better do what the Americans want you to do."

This may be too broad a generalization but in certain circumstances when American cooperation was desired, and it was not deemed desirable to let a rift in relations develop, the Churchill concept would seem to have been logical. But, conversely, there have been some occasions when President Eisenhower, an intimate friend of Sir Winston, has sent word to Secretary Dulles that it might be best to defer to the British view.

What most Americans are anxious to know is whether the ascension of Sir Anthony Eden to the post of Prime Minister will affect British relations with the United States. Rumors have it that he does not get along so well with Dulles, but the truth is that they get along personally very well and that the only differences are those which arise when understandings reached at one conference later have to be modified or abrogated.

Broadly speaking, Sir Anthony Eden will maintain the policy of close cooperation with the United States because it is logical for the Conservative Party in Britain to do so. The British Socialist-Labor Party plays it the opposite way, and there is frequent needling of the Conservatives with respect to American policies. Basically it arises out of a desire to embarrass the Conservatives rather than because of any inherent anti-Americanism.

DULLES AND EDEN DON'T GET ALONG (By Drew Pearson)

Washington.-You can write it down as certain that American-British cooperation on foreign policy isn't going to get any big lift from the ascension of Sir Anthony Eden as Prime Minister-unless Eden deals exclusively with President Eisenhower.

Inside fact is that Eden and John Foster Dulles just don't get along. Eden considers Dulles a novice and a bumbler. Dulles, in turn, has referred to Eden in private as an

appeaser.

Once, during the Indochina crisis, he felt that Eden was trying to win a Nobel peace prize for himself at the expense of a firm

stand against communism.

Immediately after taking office, the new Prime Minister showed his complete lack of confidence in the Dulles foreign policy by sending a cable to the British Ambassador in Moscow asking the Kremlin's help in trying to prevent war in the Far East.

Eden instructed the British Ambassador to call on Foreign Minister Molotov and urge that Russia lay a restraining hand on the Red Chinese and keep them from participating war. Eden added that he was sure the Russians didn't want war. In turn, he promised that he would use his influence to calm Washington.
On at least three occasions Dulles and

Eden have clashed on foreign policy.

One was prior to the Geneva Conference last year when Vice President RICHARD NIXON talked about sending the United States Army into Indochina, and when Adm. Arthur Radford tried to persuade Sir Winston Churchill to cooperate with us in sending airplane carriers to help beleaguered Dien Bien Phu. Dulles thought he had an agreement with Eden on a joint, get-tough policy, only to find Eden supported neutralist Premier Nehru, of India, instead.

Other differences took place at the Geneva Conference where Eden, not Dulles, played the major role in bringing about a compro-

mise Indochinese peace.

Eden and Dulles also differed regarding French cooperation in the European Defense Community. In the end Eden's views prevailed.

It's more than likely, therefore, that Prime Minister Eden will insist on dealing with President Eisenhower and let Mr. Dulles walk on the opposite side of the street.

When Will It Stop?

EXTENSION OF REMARKS

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Frazee Times, of Frazee, Minn.: WHEN WILL IT STOP?

Purchasing power of the Minnesota farmer continues to drop month after month.

At the present time State farm products' purchasing power is at its lowest level since 1939.

This was the report made Tuesday by Harlan G. Lampe, University of Minnesota agricultural economist.

The decline in farm prices which started in 1951 continues with only slight upward trends now and then with the overall trenddownward.

During this same period farmer costs have

remained fairly steady.

When income goes down and costs remain on an even keel, the end result is loss of purchasing power.

A comparison of farm prices in February 1955 and 1954 follows:

Wheat down 9 cents, corn down 6 cents,

oats down 4 cents, barley down 5 cents, rye up 9 cents, flax down 48 cents, hay up \$1, soybeans down 36 cents, cattle up \$1, calves down \$2.20, sheep and lambs up 4 cents, chickens down 4 cents, milk down 35 cents.

Is it any wonder that the farmer is clamoring for a return to parity and that many Republican Members of Congress who voted against parity are shaking in their boots?

Discrimination Has No Moral Justification

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955 Mr. ANFUSO. Mr. Speaker, I am to-

day introducing a bill to promote further respect for, and observance of, civil rights in the United States.

We have made considerable progress in recent years in the direction of eliminating discrimination and racialism in this country, but we still have a long road to travel before we can attain true understanding, equality of opportunity, and human brotherhood. Among the most important basic principles that have been handed down to us by the founders of our great Republic is the heritage of freedom, the concept of equality of opportunity, the belief that the individual should be judged strictly on the basis of ability and achievement. The flames of intolerance would have consumed this Nation long ago if these principles had not been made the core of the American

One of the greatest struggles within the conscience of the American people today is to justify our practices of racial and religious discrimination in the light of our moral and democratic principles. The fact remains that there is no moral justification for racial or religious discrimination. It undermines the foundations of our way of life and it destroys the economic opportunities for all. Discrimination based upon a person's religious beliefs, or his national origin, or the color of his skin, cannot be reconciled with the American concepts of justice and the brotherhood of man. In order to build and maintain a great Nation such as ours we must make use of all the human resources of the country, but if we deny certain groups among our

citizens the opportunity to develop their skills, then it is not only a contradiction of our own principles but we are actually hurting our country and its interests.

Whenever conscientious efforts instead of timid experiments have been attempted in the field of race relations the results always have been encouraging. There is no simple solution for wiping out prejudice, but undoubtedly the first direct step is to remove the legal sanctions of discrimination. So long as old racial laws remain or new legal barriers are imposed racial tensions will continue. So long as stereotyped ideas about minority groups are not modified bigotry and intolerance will flourish.

Law is an effective instrument for changing social conditions and law acts as a powerful factor in preventing discrimination. It fosters the conviction that discrimination is wrong by fixing standards which are respected by the majority of the people. Because people as a rule are lawabiding, their behavior tends to create customs which are in

harmony with the law.

For some time now Communist propaganda has been exploiting every manifestation of prejudice in the United States in order to spread hatred against us among the peoples of Asia and Africa. They tell many untruths and half-truths about our treatment of minorities, while the true facts are distorted to give a false impression of the extent of discrimination in our country. This forces us to be on the defensive and apologetic, and it affects American prestige and moral leadership among the peoples of the world

Consequently, I believe the time is long overdue for us to seek to eliminate all remnants of discrimination in this country through the means of effective legislation. For this reason, I have drawn up a civil rights bill which is comprised of four titles, dealing with specific civil rights problems. These four major sections of my bill are as follows:

First. Civil Rights Commission: I propose to authorize the President to establish a Civil Rights Commission composed of three members, for a period of 3 years each. The purpose of this Commission shall be to conduct a continuing study of the policies, practices, and the enforcement program of the Federal Government with respect to civil rights, and of the progress made throughout the Nation in promoting respect for and the observance of civil rights. The Commission shall report its findings and recommendations each year to the President and to Congress.

Second. Prohibition against poll tax: This section of my bill recommends that the requirement for payment of a poll tax as a prerequisite to voting or registering to vote in a primary or other election for President, Vice President, and Members of both Houses of Congress, shall be abolished. It shall be declared unlawful for any State, municipality, or other governmental subdivision to levy a poll tax on the right to vote or registering to vote.

Third. Protection from mob violence and lynching: Groups of two or more persons who commit or attempt to commit violence upon an individual or a

group because of their race, color, national origin, or religion, shall be recognized as a lynch mob and violence committed by them shall constitute lynching. Members of such lynch mobs who willfully incite or commit a lynching shall be guilty of a felony and punishable by a fine up to \$10,000 or imprisonment up to 20 years, or both.

Fourth. Equality of opportunity in employment: The last and most important section of my bill deals with discrimination in employment. It declares such discrimination based on race, color, national origin, or religion as contrary to American principles of liberty and equality of opportunity, deprives our country of its full productive capacity, and foments industrial strife and unrest. Discrimination in employment is made unlawful.

The bill creates a commission to be known as the Equality of Opportunity in Employment Commission, composed of seven members to be appointed by the President. The purpose of this Commission shall be to seek to prevent or discontinue discriminatory practices in employment through investigation, concillation, and persuasion. Where necessary, the aid of regional, State, and local agencies should be obtained. Where voluntary methods fail, the Commission is to be empowered to issue complaints, conduct formal hearings, and issue cease-and-desist orders enforceable in the courts.

Mr. Speaker, this is a time when the people of this country must be on the alert to defend our civil rights through the adoption of legislation along the lines indicated in my bill. To abuse our civil liberties and to permit the practice of discrimination against some of our fellow citizens is proving very injurious to the American way of life and all that America stands for.

Equality of opportunity for every citizen of this country is essential to the welfare and progress of our Nation and our civilization. Liberty-loving people throughout the world look to the United States as the leader in the cause of freedom and human rights; hence, it is our sacred duty to afford all American citizens the opprtunity to participate in every phase of our national life and to serve this country with pride and dignity. When we speak of the belief of the American people in freedom and human rights, we are not resorting to idle words; to the American people these words represent a wonderful idea and a cherished goal, they reflect the fundamental attitude of the people of this country who appreciate the meaning of true democracy.

This country is comprised of people who come from all races, religious beliefs, and national origin. All of them have made important contributions toward the development of the United States as a great nation and toward shaping its destiny. I am strongly opposed to setting up second-class citizenship for any group in this country, because I do not believe in the superiority of one race or one nationality group over another. As soon as we encourage second-class citizenship, we open the door for discrimination and bigotry.

Somewhere recently I came across the following lines:

Give us wide walls to build our temple of

liberty, O God.

The North shall be built of love, to stand against the winds of fate;

The South of tolerance, that we may building, outreach hate;

The East our faith, that rises clear and new each day; The West our hope, that even dies a giorious

way.
The threshold 'neath our feet will be

humilty:

The roof—the very sky itself—infinity.

God, give us wide walls to build this great temple of liberty.

Mr. Speaker, we must continue to build with love and tolerance; we must continue to have faith in our country and its future, and we must continue to hope for human brotherhood, for freedom, and for true understanding among the nations and the peoples of the world.

Bank Holding Companies

EXTENSION OF REMARKS

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. KILBURN. Mr. Speaker, there is a bank holding company bill up before the House Committee on Banking and Currency. I thought the Members would like to read the following article giving an outline of the situation from a non-partisan standpoint:

[From the United States Investor]
BANK HOLDING COMPANIES

Every once in a while a committee of Congress is asked to hear the complaints of a portion of organized banking against bank holding companies. We do not understand that the American Bankers' Association spearheads the group of antagonists or that it has any lively interest in the movement. The complaint is sponsored by a small, though reasonably numerous, bankers' organization. In due course the complainants have recently had a public hearing at Washington on the Spence bill—their present tangible suggestion for law—and have received their usual measure of newspaper publicity.

Maybe their voices carried a bit further on this occasion than in some previous years, for the numerous mergers of banks all over the country in recent months have naturally turned attention toward this other form of bank union, the holding company. Whether the Spence bill has any better prospects of enactment into law than similar bills offered in years past we do not venture to guess. Our recollection is that Congress has not cared to apply the big stick to bank holding companies heretofore. So the 18 holding companies whose ownership of banks carries them into 22 different States continue to operate and to perform a service or to be a threat to localized banking, according to the side which you choose to take on this perennially mooted question.

The 18 companies vary in setup from the Transamerica Corp., operating in seven States, and the Northwest Bancorporation, whose operations spread across a considerable portion of the Northwest, to corporations confining their activities to single States like the Marine Midland Corp., of New

York, or the Baystate Corp., of Boston, or the Shawmut Association of Boston, both of these latter being active only in Massachu-The more common practice among the 18 is to be bank holding companies only. but the Trans-America Corp., as we remember it, gets only 26 percent of its income from ownership of banks and actually gets 45 percent from its ownership of a great insurance company. We believe there are others of the 18 principal holding companies that have invested to some extent outside of bank shares, believing that diversification of investment is a helpful course for a holding enterprise to follow and tends to strengthen the financial position of the underlying

LET THE RECORD SPEAK

In this article, we shall not consciously assume the role either of antagonist to holding comanies or of their sponsor. They have shown over the years that they are quite capable of being their own spokesmen. What is more to the point, however, than their ability to present data and to marshal arguments in their own behalf, is the fact that each of them has now had a long career. Part of them, at least, are old enough to have lived through the great depression and the trying years which followed. and to have shown what their ability is to grapple with the troubles which that period brought upon banks. Their conduct, therefore, from the date of their respective organizations down to the present, is an open book. What their attitude has been toward the individual banks which they own, whether they have been cooperative or otherwise with banking authorities, whether they have brought strength or weakness into the banking situation-all these questions can be answered, not from abstract thinking, nor from prejudice, but from the record. What we shall have to say in this present article is with a view to clarifying popular understanding on the whole subject of bank holding companies. We think that there is need for some definite statements in keeping with that objective.

EXAMINERS KNOW

The fact cannot be too strongly emphasized that every bank in these holding company groups is subject to regular and thorough examination by public authorities. Those which operate under national charter are amenable to the examinations and discipline of the Office of the Comptroller of the Currency. Those chartered under State law are held to similar account by the State superintendent or commissioner of banking. And State banks which are members of the Federal Reserve System come under supervision of the Federal Reserve Board Federal Deposit Insurance Corporation also has supervisory power over its insured banks. What we have in mind when we say that this fact cannot be too strongly emphasized is that some folks persist in believing that ownership of a bank by a holding company does, in some subtle way, change the character of the controled bank. That simply cannot be so, except in such ways as we shall presently indicate. The examiners from State or National staff have access to every record and every account and every scrap of information in the possession of the bank. The examiners know all about the deposits and the treatment accorded depositors, they know the character of the loans and of the investments, they know exactly what have been the relations between the bank and the holding company which owns it. They have read the records of the directors' meetings. and if the votes taken at these sessions indicate subservience to the holding company. that fact is discovered in all its outline. Needless to say, the examiners report in detail on all their discoveries to the heads of their respective banking systems, namely, the Federal supervisory authority at Washington or the State supervisor or commissioner at the State capitol. You see, nothing about the operations of the owned bank is hidden from the eyes of the trained examiner or from the eyes of his chief to whom he reports. We suggest that it is significant that one hears no uproar from the Federal supervisory authorities nor from representative State supervisors as to the holding companies. In fact at the recent hearings Comptroller Ray M. Gidney in offering two amendments to the present law said, "There is not apparent to us a need for an extensive or general revision." Certainly these men should be in position to become very vocal as to these organizations if they sense a need for disciplining them.

Next, we think the facts should be clearly noted that bank-holding companies have not reduced in any area the lively competition of controlled and independent banks alike for deposits and for loans. Indeed, from our own acquaintance with the banks included in holding company groups, we can testify that the tempo of their competition is livelier for the very reason that the con-trolled banks must give a good account of themselves to the company which owns

OUT FOR BUSINESS

In fact, we can recall at this very moment a case where two banks operating in different parts of the same city are owned by the same holding company. If you think that same holding company. If you think that because of that ownership the two are parceling out some sort of division of territory between them, you are in for a bit of a sur-The two are out for business with a vim and quite as ready to encroach on each other's district as if they were owned by entirely independent banking organizations. In view of what we know from our own contacts with part of the holding companies and what we hear about the others, we question whether anybody can discover any reason for believing the customers of banks owned by holding companies have any part in the movement to put these companies more tightly in leading strings.

Still another rather patent fact, as it seems to us, is that when a holding company acquires a bank, it must, in the very nature of things, preserve a high degree of local character for it. It may or may not place a new figure at the head of a bank, as president or executive vice president, for example. We shall have more to say on that matter in just a moment. But the men who operate the holding company are just as well aware as anybody that the prosperity of the purchased bank must depend upon holding the deposits it already has and increasing them and upon preserving friendly relations of local customers. Nothing could be more mistaken on the part of the holding company than a spirit of absentee landlordism in its conduct of a bank. The local contacts of a bank are among its most precious assets and no holding company is going to dissipate such assets.

SAVED BY A HOLDING COMPANY

Just what does the coming of the holding company into the ownership of a bank mean, when you have stripped your discussion of any shape of prejudice? Sometimes, as we can recall from experiences in the troubled days of the 1930's, it has meant the salvation of the purchased bank. not out of place to do so in print, we could name a number of banks in some of our States whose continued existence right down to this day can be traced back to intervention in their affairs at the critical moment by a holding company. But, in general, there are three contributions which a holding company can make to the welfare of any bank. First, it can supply the bank with a capable management when need for that arises. It is a curious fact that a number of authorities on banking have spoken out, during the past year or so, on the need within banks for sturdier management-training programs. There is not sufficient attention, they say. North Dakota Indian Commission, under

within a good many of these banks, to making likely members of the staff capable of larger responsibilities or to getting junior officers ready for the day when they must assume senior duties. That particular problem has been accepted by the holding companies as one of their assignments. They do provide heads for banks who measure to the jobs they are given, and they have others in training for similar advancement.

A GREAT SERVICE

A second activity of a holding company organization can be to assure to each controlled bank an adequate system of accounting. How much need there is for that has been made clear by the numerous addresses at bankers' conventions on safeguards which banks need to set up against embezzlements. It has been rather startling to learn from some very good authorities speaking at these conventions how frequently the audit system of banks is ineffective, how lacking in internal controls so many banks really are. Here is a field where the holding company has frequently performed a great service for the banks owned by it. And of course there is the familiar field of alding the local bank in the selection of investments for such of its funds as are not required for the making of local loans. The picking and choosing of bonds for a local bank is frequently an enigma for the local management and one whose solution can be aided by experts at the holding company's headquarters.

SPREADING THE FACTS

Just how large a figure did the 18 bank holding companies make against the background of the total banking operations of this country? Well, they have 4.17 percent of all the commercial banking offices operating in the United States, and these offices hold 5.83 percent of the total deposits. We are informed that on December 31, 1954, they had 321 fewer offices and \$2,343,000,000 less deposits than on December 31, 1946. That is not too grim and threatening a picture, is it? It does not look as if the balance of banking power were moving in the holding companies, does it? But your critic of the holding companies would ask for some figures that come nearer to supporting his position than these do. So let us see how large are the outlines of the holding company picture in the 22 States where they actually do operate. (You see, there are 26 States where they are not to be found at all.) In these 22 States, they have 8.83 percent of the banking offices and the deposits at these offices amount to 11.20 percent of the total bank deposits of the 22 States. So here you have the measure of the problem. Does it fill you with dread forebodings and make you wish to scurry down to Washington, asking that the bars be put up against further advances of the holding companies, or do you share the feeling of a good many other people that, in many communities, the holding companies have brought a strengthening influence into the banking picture? We have said at the beginning of this article that we are not going to take sides in this debate. We are merely spreading some of the facts in the case before our readers, so that they may draw their own conclusions.

Turtle Mountain Program Makes Indians Self-Sufficient

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. BURDICK. Mr. Speaker, the

the able management of John Hart, has demonstrated that certain industries can be set up where Indians can find jobs close at home and make their own way without Government doles. Such an industry was set up on the Turtle Mountain Indian Reservation for the manufacture of parts to watches, and the Indians have done well and have proven themselves good mechanical workmen.

The Legislature of North Dakota has memorialized Congress on this subject and passed the following concurrrent resolution:

House Concurrent Resolution V

Concurrent resolution petitioning the Congress of the United States to enact legislation authorizing a study and investi-gation into the feasibility of establishing additional manufacturing enterprises adjacent to Indian reservations in this

Whereas the establishment of a jewelbearing plant adjacent to the Turtle Mountain Indian Reservation has provided much needed job opportunities for Indians residing in the area and has brought into productivity a formerly unutilized labor force and has thereby been an aid to the general economy of the area and to the wealth of the Nation; and

Whereas the employment records of the jewel-bearing plant located adjacent to the Turtle Mountain Indian Reservation show that absenteeism and turnover among Indian employees are lower than the national average for similar industries; and

Whereas the locating of such enterprises adjacent to Indian reservations is a positive act of providing social and economic opportunities for rehabilitation of and self-help for Indians; and

Whereas the establishment of such enterprises adjacent to Indian reservations has proved to be beneficial to the Indians residing on and near such reservations, to the State of North Dakota and to the United States: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Scnate concurring therein), That the Congress of the United States is hereby memorialized and respectfully petitioned to enact proper legislation to provide for a thorough investigation and affirmative encouragement for such self-rehabilitating projects which will result in the elimination of dependency and the establishment of a substantial selfsupporting status for Indian people; be it further

Resolved, That copies of this resolution, properly authenticated, be sent by the secretary of state to the President of the United States, the presiding officer of each of the Houses of the Congress of the United States. to the Secretary of Interior of the United States, the Director of Defense Mobilization. and to each of the members of the North Dakota congressional delegation.

A. H. FITCH, Speaker of the House. KENNETH L. MORGAN, Chief Clerk of the House. C. P. DAHL, President of the Senate. EDWARD LENS, Secretary of the Senate.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Address Delivered by Senator Neuberger Before the City Club of Portland, Oreg.

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. NEUBERGER. Mr. President, during the recent trip of the Senate Committee on Interior and Insular Affairs to the Pacific Northwest for hearings on S. 1333, to authorize Federal construction of Hells Canyon high dam, I had occasion to address the City Club of Portland on April 8, 1955. This is an organization known throughout my home State for its conscientious and thorough approach to public affairs. The City Club has gained national fame for its painstaking research into critical public problems. For example, its study of corrupt-practices laws and election expenditures now is winning the study and approval of political scientists and governmental officials throughout the United States.

I ask unanimous consent that excerpts from my remarks to the City Club in Portland on April 8 be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

EXCERPIS FROM REMARKS OF SENATOR RICHARD L. NEUBERGER, TO CITY CLUB OF PORTLAND, OREG., APRIL 8, 1955

CONGRESS FACES A CRISIS IN AMERICAN AGRICULTURE

In the 3 months that I have served in the Senate, many important matters have come before the Congress. The list would be well known to you. It includes the most important of all, our foreign policy, and urgent domestic needs such as schools, highways, resource development, adequate pay for Federal and postal workers, and taxation. I shall return to some of these later. But I want to stress first what I believe to be the most critical problem now plaguing our domestic economy: the continued decline in American farm income.

In recent months, the scope and the dangerous characteristics of our deepening agricultural crisis have been brought to the consciousness of the Congress and of the Nation from many sources and with ever greater urgency.

Let me cite just a few random examples:

Less than 2 weeks ago, the New York Times reviewed the drop in farm income caused by falling prices and stringent acreage limitations in an article headlined "Crisis in Farming Threatens Boom." The subheads read "Income Sliding Fast," "Small Farm Forced Out." A well-documented article in the U.S. News & World Report for March 25 reminds us of the sinister parallel with the 1920's, when a spectacular industrial and financial boom obscured the early danger signals of a prolonged agricultural slump.

The article states the facts with the logic of simplicity:

"Farmers are getting less for their crops. They are being forced to grow less. Their costs are high. Their incomes are shrinking."

And it concludes that "the farm problem is worsening, now that more trouble lies ahead."

THE FACTS SHOW THE OMINOUS TREND

Congressional committees have repeatedly studied the farm problem and have reported the ominous downward trend. In reporting out the Agricultural Act of 1954 in the 83d Congress, the House Committee on Agriculture reported a 13 percent decline in net farm income in the preceding 2 years, while the rest of the economy reached new heights. In reporting out a new farm bill last month, the same committee again reviewed the facts:

"Farm prices down an average of 22 percent since 1951. Net farm income down 28 percent since 1947—10 percent below 1953, with further declines scheduled for this year and 1956."

The House Appropriations Committee reports that "the cost of farming continues to increase, with a 14-percent increase in prices paid by farmers during the past 5 years." Farm mortgage debt has nearly doubled since the end of World War II.

Farmers' share in the national income has dropped from 9.4 percent in 1951 to 7.2 percent in 1954.

Yet consumers have not benefited from lower prices. Pacakaging and other costs of distribution and merchandising have increased the spread between farm and grocery store prices. Thus, between 1949 and 1954 food grains dropped 9 percent, but cereals and bakery products rose 22 percent; dairy products rose 6 percent at retail but brought the farmer 8 percent less, and fruit and vegetable growers got 4 percent less while housewives paid 12 percent more. Farmers now receive only 43 cents-gross, not net-of each dollar spent on food, while the other 57 cents go for distribution charges.

The crisis is not confined to 1 or 2 sectors of agricultural production. In the Capital, we know that the squeeze between high costs and reduced acreage and support levels has hit cotton, corn, and other commodities as well as the wheat and the sugar beets of Oregon. The farm problem exists for the growers of fruits and vegetables in the Williamette Valley, and—as my wife's mother has graphically told me of her own farm—it is acute for the dairy farmers of the Northwest, of the Midwest, and elsewhere.

But perhaps the case of wheat will serve as a good single example.

THE CASE OF WHEAT

In its April issue, the Farm Journal poses the question, "Can We Rescue Wheat?" This article, and the other sources I have mentioned, give us some of the dimensions of the problem.

The carryover of wheat on July 1 will be nearly a billion bushels—as much as 5 times the amount considered a normal carryover—and \$2½ billion worth of that is held by the Commodity Credit Corporation. The carryover will be more than a whole year's supply of wheat for this country, without this year's crop.

Yet acreage restrictions—which have forced 24 million acres, about 30 percent,

out of wheat—and reduced support percentages show little promise of restoring order to wheat production. Rather, they add to the pressure to grow varieties which will yield the most bushels per acre, regardless of quality—to produce more wheat, of types which no one else may want, for the number 1 customer, the Federal Government.

What kind of a national farm policy can

provide a solution?

I do not pretend to know the answer. I declined to pose as a specialist on agricultural legislation during the campaign last year, and I have not become an expert in 3 months in the Senate. But I return to my original point: The danger to our national economy of the threatening farm depression is the greatest present problem we face in the field of domestic policy.

In the case of wheat, perhaps the domestic parity certificate plan—sometimes called the "two price plan"—offers some hope. That is not a new approach; Congress approved parts of it long ago in the McNary-Haugen bill, and the House of Representatives has recently revived it. Its relation to the support programs for corn and other feed grains, and to a stable world market, will require careful scrutiny.

FLEXIBLE SUPPORTS INADEQUATE

But in this field we cannot seek perfection; we must choose between imperfect alternatives. The administration offers no leadership beyond its insistence on the eco-nomic wringer of its "flexible" support program, which seems designed to seek a kind of agricultural "survival of the fittest" putting a substantial number of farm families through bankruptcy. To call this approach inadequate is an understatement. Over 20 million people live on farms, and over 30 million live in rural areas economically dependent on farm prosperity. It is completely illusory to contemplate a continued boom for big business, for banks, for the stock market, while an agricultural depression knocks the economic props out from under these 50 million Americans-onethird of the Nation.

RURAL AMERICA NEGLECTED

The purely economic future of our farm population and of our small rural communities presents problems of great difficulty and, as I have said, of immense importance. But in the formulation of other national policies which affect farmers, whether as farmers or simply as citizens living in the rural areas of our country, their interests are often neglected by the present administration.

I shall take time only to mention briefly a few examples.

The great tax reduction bill of 1954 gave billions of dollars in tax savings to industrial corporations and their shareholders, but it gave no or very little relief to individual taxpayers, including the average farm family.

The second Hoover Commission—not to be confused with its predecessor, which avoided policy questions and stuck to administrative efficiency—recently recommended sharp curtailment of a series of Federal lending programs which have made low-interest credit available for necessary purposes, many of them of special value to farmers. Chief among the latter has been the rural electrification program. Already starved for power by the power policies of the present admin-

istration, this valuable program, which has brought modern civilization to millions of farm families, faces extinction if the views

of the commission prevail.

The ambitious road construction program submitted to the Congress by the administration recommends total expenditures on highway construction in excess of \$100 bil-Twenty-five billion dollars are to be furnished by the Federal Government to be expended over the next 10 years. Only \$41/2 billion of this is "pay-as-you-go" financing; \$2016 billion are to be borrowed at a cost of \$1116 billion in interest, at rates significantly higher than those usual for obligations of the Federal Government.

You may have read about the weird financing scheme devised to raise this large Federal contribution without adding to the national debt. I am a member of the subcommittee on roads of the Senate Committee on Public Works, which is considering highway legislation, and I have heard administration witnesses explain this project. But the best thumbnail sketch was provided by Senator HARRY BYRD of Virginia, the Senate's chief watchdog of fiscal probity, who appeared as a witness to tell the commit-

tee:
"It establishes a Government corporation without income or assets and authorizes this corporation to borrow \$21 billion for 32 years without declaring it as a debt, and by leger-demain excludes this debt from the debt limitation fixed by Congress. The interest will be \$11.5 billion or 55 percent of the funds borrowed."

In view of Senator Byan's stinging dissection of this scheme, it is widely conceded that the fiscal features of the administration's program will not be adopted. But beyond that the program itself places far too great an emphasis on completion of the interstate network, at the expense of the secondary and farm-to-market roads.

We need a network of safe and fast limited access highways for long-distance travel and transportation. But the needs of our rural population to travel between the smaller towns and to take their produce to market must necessarily be met from the same sources of financing which will pay for the interstate system. We cannot afford a pro-gram which will dry up those sources in the interest of fast transportation between our metropolitan centers and starve out the badly needed improvements of the other types of roads.

I expect the Subcommittee on Roads, under the able chairmanship of Senator Gore, of Tennessee, to strike a reasonable balance between these needs. At the same time, I think it essential that the necessary financing be more nearly on a pay-as-you-go basis. Therefore, I have proposed a 1-cent increase in the Federal tax on motor fuels, while exempting farmers and fishermen who use gasoline or diesel oil in off-the-road

equipment.

REAL AID FOR EDUCATION NEEDED NOW

The same preoccupation with fiscal gimmicks rather than with real needs is delaying progress in a field equally important to urban and rural communities—the approaching crisis in our educational facilities. Again. the administration's proposals are expressed in terms of very large sums of money, but offer virtually no real assistance. The only direct aid offered by the administration program—a very small amount—would be available only to so-called impoverished school districts. The districts of Oregon—and the same is true elsewhere in the Nation—are staggering under an ever-growing burden of school needs to cope with rapid increases in school population, but they are not "im-poverished." Yet, except for the small sums offered to impoverished districts, the administration offers only new borrowing facilities.

Not only are our overburdened school dis-

tricts thus to be encouraged to add to their debts, but, as Mr. Rex Putnam, the State of Oregon's superintendent of public instruction, wrote me, the administration's proposal to underwrite a 31/2-percent interest rate on school loans might stimulate a wave of borrowing so as actually to drive up interest which now average less than 21/2 percent.

The need is urgent for real help now, not for studies and conferences. A generation of children who get part-time education in old, overcrowded schools is forever lost to our vital reservoirs of skill and leadership. Therefore, I have cosponsored and urged passage of Senator Hill's bills for immediate aid to school construction, and to earmark for aid to education the Federal oil revenues from the outer Continental Shelf.

. PRIVILEGE TO SERVE WITH SENATOR MORSE AND REPRESENTATIVE EDITH GREEN

In much of the legislative work of which I have spoken, and in our efforts to assist our constituents with problems in the National Capital, I have been privileged to cooperate closely with my two colleagues who also represent Multnomah County in the Congress-our senior Senator WAYNE MORSE and Congresswoman EDITH GREEN. I have benefited much from Senator Morse's wide knowledge and the experience he has gained in 10 years of representing the interests of the people of Oregon in the Senate. Mrs. Green has at once established herself. as we who know her knew she would, as one of the outstanding freshmen of this or any other session. I look forward to working in close association with these two fine, liberal, public servants in the years ahead.

Many issues which come before the Congress appear there in forms shaped by party programs and party strategy. This is a necessary result of the organization of Senate and House committees by the majority party with proportionate minority representation, and it is essential if our great national political parties are to remain alternative instruments of representative government.

Sometimes the lines get badly blurred. The reciprocal-trade agreements law, for example, is a program of Democratic origin which the Republican administration of President Eisenhower has made a cornerstone of his legislative program. Yet, although a Republican President has called its extension essential to our national interest, the reciprocal-trade bill can be passed only by the efforts of a majority of Democrats over the opposition of a majority of Republicans. Our own legislature in Salem, dominated by the party whose chief slogan is that it likes Ike, has memorialized the Congress to defeat the reciprocal-trade bill. The resolution against granting the President's urgent request for this important authority passed the State senate with the support of 17 of the 24 Republicans and the house with the votes of 30 of the 35 members of the President's party.

In this field, I think my own party in the Congress has shown a sense of responsibility for putting national above sectional and local interest.

SEARCH FOR PEACE ABOVE PARTISANSHIP

But I want to close by referring briefly to that area of congressional responsibility which must transcend partisanship, the field of foreign policy.

In the short 3 months since the day I first took my seat in the Senate, our Government has made foreign policy decisions of historic importance. My seat in the Senate is No. 96, and I have been most conscious of being the most junior of freshmen Senators during consideration of these important decisions.

In domestic matters bearing upon the economic and social direction of his administration, I have—as I have discussed earlier today-felt both competent and free to oppose the President's policies. But in matters of foreign policy I have, sometimes in spite of misgivings, voted to give the President the support he needs to carry out his responsibilities as the spokesman of our Nation in its relations with foreign governments. Thus, I voted for the Formosa resolutions, for the mutual defense treaty with Nationalist China, and just last week for ratification of the agreements admitting an independent West Germany into the North Atlantic Treaty Organization, and paving the way for its rearmament.

I believe that, as long as we have confidence in the purposes and objectives of a President in foreign affairs, we must permit him the authority to match his responsibil-During the last administration, the opposition in Congress constantly fought this principle of Executive responsibility in foreign affairs-a fight that culminated in the near-passage of the Bricker amendment.

But I am confident that President Elsen-hower's objective is peace. We know in Washington that the American people do not want war over Quemoy and Matsu, and I think the desire for peace will prevail. as I have said, I have had misglvings, it has been because the deliberate uncertainty of our position toward those island outposts of Chiang Kai-shek has seemed to me unneces-

sarily costly.

Eventually, I think, the President will decide against war. But in the meantime, a heavy strain has been put on our Atlantic alliance, which must remain the keystone of our global policies. Attention has been diverted from more important crises in southeast Asia, which are of greater significance to the free world. And ammunition has been given those who picture us as a nation dedicated to atomic militarism, when the real problems of Asia require economic solutions, technical assistance, and above all, mutual confidence and understanding.

Thus, critical issues and room for disagreement remain even in the field of foreign policy. But the record shows, I think, that this debate is generally being kept at a level above party politics, and that most of us seek alternative ways to the goal which is common to the entire Nation-peace with security.

Proposed Revision of McCarran-Walter Immigration Act-Excerpts From Statements by Governor Harriman, of New York, Senator Lehman, Paul M. Butler, and Carmine G. De Sapio

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, April 14, 1955

Mr. LEHMAN. Mr. President. March 9, 1955, the Nationalities Division of the Democratic National Committee held what was called a strategy dinner at the Waldorf-Astoria Hotel in New York City. The dinner was presided over by the eminent and truly distinguished Governor of Michigan, Hon-G. Mennen Williams, who is the new chairman of the Nationalities Division of the Democratic National Committee.

At that dinner a most impressive group of leading figures in American political life addressed the gathering. One of the recurrent themes of most of the remarks made at that meeting was the need to revise and overhaul the McCarran-Walter Act. I ask unanimous consent that pertinent excerpts from the remarks made by Gov. Averell Harriman, of my own State of New York; by Mr. Paul Butler, chairman of the Democratic National Committee; and by Mr. Carmine G. De Sapio, National Democratic Committeeman from New York, be printed in the Appendix of the RECORD, along with pertinent excerpts from a message which I addressed to the assembly, and which was read in my behalf by my administrative assistant, Mr. Julius C. C. Edelstein.

There being no objection, the excerpts from the statements were ordered to be printed in the RECORD, as follows:

Address by Governor Harriman at the Dinner of the Nationalities Division of the Democratic National Committee, Waldorf-Astoria Hotel, March 8, 1955

You who are here tonight have an especially deep and personal understanding of the need for the United States to take its proper place of leadership in the world.

No nation can go it alone—not even powerful America. From a military standpoint, we cannot. From an economic standpoint, we cannot.

But over and beyond these materialistic reasons are others just as compelling—reasons of history and religion and culture, of sentiment and emotion. America will always be bound to the lands where all of us, whether recently or long ago, have our family roots.

The sons and daughters of every one of the nations bordering on the Atlantic and the Mediterranean and the European seas and rivers have made their contributions to America—contributions of industry and enterprise and character. We have a common heritage. And so we who happen to be on this side of the Atlantic can never forget that we are part of a larger community. And none in that community can be secure unless all are secure.

Nor can any of us be truly secure as long as a large part of our community—reaching from the Baltic States through Poland and Czechoslovakia, to the borders of Greece—remains enslaved. We know that the flame of freedom will never be extinguished in those countries, and that they will again one day carry on their proud traditions in liberty and self-government.

So our common goal—and the goal of our Nation's foreign policy—must be to strengthen the ties that bind together the North Atlantic community, and beyond that the larger community of all the free coun-

tries of the world.

I need not tell this audience how injurious to this whole objective is our own
immigration policy. Two and a half years
ago the President said the McCarran Act
had to be revised to eliminate its discriminatory, un-American features. But today
the McCarran Act still stands as written—
and still proclaims to the world that America does not really practice what she
preaches about the equality and innate
worthiness of all people of every land and
creed. We can thank Senator Lehman and
Congressman Celler and their Democratic
colleagues for taking the initiative to revise
the act in the absence of the leadership the
President had pledged.

Equally injurious is our refugee policy. An act of Congress proposed to admit 209,000 refugees over a 3-year period. Yet, as of January 28, when half the life of the act had passed, fewer than a thousand bona fide refugees had been admitted to this country. The administration of the act has

made a travesty of what was to have been a great humanitarian undertaking.

Unhappily, in the last 2 years, there has been a tragic decline in American prestige and influence among our friends and allies throughout the world.

Why is this? Why has it come about? I believe it can be traced to a basic causeand that is the unwillingness of the Republican administration to do those things necessary to fulfill the role of world leadership which the circumstances of history pressupon us.

The last 2 years have been a period of retreat from leadership.

ACKNOWLEDGEMENT OF HERBERT H. LEHMAN OF STATUETTE OF LIBERTY AT NATIONALITIES DI-VISION DINNER, WALDORF-ASTORIA, MARCH 8, 1955, READ ON BEHALF OF SENATOR LEH-MAN BY JULIUS C. C. EDELSTEIN

There was a time—not so long ago—when our country received immigrants annually not in thousands or hundreds of thousands, but in millions. And who is there who can say that our country is not the greater for it today—a country which 300 years ago was impassible wilderness, unconquerable desert, and storm-swept mountain range. Our country today is the world's center of power—the leader in productivity and in technological progress: a land of challenging opportunity for all its citizens.

Yet today our imigration laws reflect not these great facts of our history and tradition, but rather the fearful prejudices of fearful minds which contrived 30 years ago to place on our statute books—and to maintain it ever since—a law steeped in bias and dedicated to the proposition that all men are not created equal, as far as admission to the

United States is concerned.

We have slammed our gates shut, cut admission of legal immigrants down to a trickle, converted our immigration system into a series of hurdles and hazards built around race and national origin, and make a shabby mockery of our national traditions.

The national origins quota system, enshrined and revalidated in the McCarran-Walter Act, is a travesty upon America. It is a rebuke and insult to every one assembled at the Waldorf tonight; it is a reproach to every American. There are other provisions in that law, the McCarran-Walter Act, which demean the status of American citizenship, which make a joke of justice and fair dealing, and which treat every allen—imigrant or visitor—as a potential spy, saboteur, and criminal. All of this holds us up to contempt and criticism in the eyes and in the opinion of free mankind.

If there is one law, above all others, which furnishes grist for the Communist propaganda mill, and which is contrived to lend aid and comfort to the Kremlin, it is the McCarran-Walter Act.

How ridiculous we appeared in the eyes of the world only last week when a great chain of American newspapers proposed editorially that Russian farmers be invited to visit the United States to study our farming methods, and the Soviet Government quickly endorsed the proposal.

For it developed immediately, regardless of the wisdom of the idea itself, that the Russian farmers couldn't be admitted to the United States as visitors because of the Mc-Carran-Walter Act * * unless the Russian Government accredited these farmers as Soviet diplomats.

So, my friends, it seems to me that one of the first goals to be marked out, not only for the Nationalities Division, but for all Americans of goodwill—should continue to be the drastic amendment and overhaul of the McCarran-Walter Act, to eliminate its bias and prejudice: the iniquitous national origins quota system, and to humanize and liberalize that law in all its aspects, both

citizenship and immigration, in order to make that law conform to the great traditions—the true traditions of America.

And I hope the Nationalities Division, and all its friends, and all those with whom it has contact—and the Democratic National Committee—and all those with whom it has contact—will mobilize all possible support—in ever-increasing amounts—for the drastic revision of the McCarran-Walter Act. And in this connection, I invite attention—and support—to the omnibus immigration and citizenship bill, S. 1206, introduced in the Senate on February 25 by myself and 12 colleagues—and in the House by Representative EMANUEL CELLER, and a number of his colleagues. I hope that in due time the Lehman-Celler bill will prevail.

I am glad to extend a similar invitation of support for this bill to the Republican National Committee, and to President Eisenhower. While my hopes are not high, I would be glad—and I know all of you would be glad—if that invitation were accepted.

Speech by Paul M. Butler, Chairman of the Democratic National Committee, at the Nationalities Division Dinner, New York City, March 8, 1955

In this connection, let me speak of one of the men to whom we pay particular tribute tonight, the great Senator from New York, Herbert H. Lehman, who is one of the very finest statesmen of our times. Senator Lehman has for years been a leader in the fight of the Democratic Party for fairer immigration laws, the fight to rid our country of racial injustices, the fight to secure a constitution for the Commonwealth of Puerto Rico, and in no end of other causes where equality and liberty are at stake.

Senator Lehman continues to devote his time, his energy, and his life to these great goals. We in Washington look for him to be with us not only for another term, after

1956, but for many more terms.

Senator Lehman's ideals represent in a sense what the Democratic Party seeks to accomplish for our citizens of foreign birth. Many of you are familiar with the bill of which he is a cosponsor, the Lehman-Celler bill, to revise and replace the Immigration and Nationality Act of 1952, which contains so many inequitable and discriminatory provisions.

The introduction of the Lehman-Celler bill to put our immigration laws more in step with the best in American traditions, is just one more example of how Democrats are offering positive and constructive policies to meet our Nation's needs. When Mr. Eisenhower was a candidate back in 1952, he said in a speech here in New York on October 16, 1952, that he thought the McCarran-Walter Act was discriminatory and ought to be revised.

But since January 1953, the Eisenhower administration has offered little more than talk about this matter, as is the case with so many other problems facing the American people. In the field of fairer immigration laws, it is left to the Democrats in Congress to introduce constructive proposals, while the Eisenhower administration backtracks, sidesteps, and doubletalks, exactly as it has done on schools and housing, tax reductions, and national defense.

You will recall that President Truman vetoed the McCarran-Walter act because he believed it discriminated, by means of the national origin quota system, against Italians, Greeks, Poles and others from southern and eastern Europe. This demonstrates the courage and devotion to principle that made Mr. Truman the great President that he

George Washington spoke from the heart of America when he said: "The bosom of America is open to receive not only the Opulent and Respectable Stranger, but the oppressed and persecuted of all nations and religions; whom we shall welcome to a participation of all our rights and privileges, if by decency and propriety of conduct they

appear to merit the enjoyment."

The several bills introduced by distinguished Democratic Members of the Senate and the House to make our immigration laws a more faithful reflection of Washington's great affirmation ought to receive a full hearing in Congress and the support of all those who reject as un-American the discriminatory National Origins Quota System.

In considering these proposals, some of us might well remember what Will Rogers, a great Democrat who was part Indian, used to say: "My ancestors went down to the

shore to meet the Pilgrims."

Just as we must turn to Democratic leadership if we are to expect intelligent revision of the Immigration act of 1952, so we must look for little forthrightness on the part of the Eisenhower administration if we hope to do anything about the mockery of humanitarianism represented by the Refugee Relief Act of 1953.

That act was supposed to allow 214,000 refugees, escapees, expeliees and orphans to enter the United States as nonquota immigrants. Yet under this act only 14,106 visas have been granted as of January 29, 1955. In other words, just a fraction of the total provided for has been admitted with the act due to expire next year. And of those who have come only 68 are escapees, only 204 are refugees. This from the Eisenhower administration which boasts that although conservative in economic matters, it is "liberal" with respect to human beings.

The distinguished chairman of the House Judiciary Committee, Congressman EMANUEL CELLER, of New York, pointed out only a few days ago that the operation of the Refugee Relief Act is "tangled and snarled in nightmares with nightmares, forms, questionnaires, security checks, duplication."

That we should seek to insure that no Communists or others who would subvert our free institutions enter America is something on which all of us certainly agree. But as Congressman Celler said, the State is "playing a cruel game by pitting legal paragraphs against human lives. Escapees from behind the Iron Curtain (of the Communists) into free territory, beckoned by the light of liberty, have dared to cross barbed wire, risk gunfire, spend harrowing days and nights in escape from the Iron Curtain countries only to find themselves finally barred by bits of paper * *."

Yet the Republican administration talks glibly of liberating enslaved peoples.

In the first 18 months of the Displaced Persons Act, enacted and administered by Democrats, over 126,000 displaced persons came to this country to build lives for themselves and to enrich American life by their presence.

Compare this number—these numbers of human beings, if you please—with the pitifully few persons admitted by an Eisenhower administration estensibly devoted to a liberal attitude toward human life. You will then understand more deeply, I think, why it is the Democratic Party which offers most hope and most opportunity of realistic action on one of the problems of greatest interest to Americans of foreign descent.

Address by Democratic National Committeeman Caemine G. De Sapio Before the 1956 Strategy Dinner Sponsored by the Nationalities Division of the Democratic National Committee at the Waldorf-Astoria Hotel, New York City, March 8, 1955

Although I have been able closely to observe the activities of the nationalities division of the Democratic National Committee

through the years, tonight its effectiveness, its activities, and its significance have been brought home to me with vivid reality. This division, in every sense, is representative of our American population. Thirty-four million of us were born in other countries or are immediately descended from parents born in other countries. The rest of us are of ancestors who came to America not many generations ago in search of liberty, of faith, of hope, and of a secure future.

New York City itself is representative of the population of the world, and we New Yorkers are so proud of the achievements by Americans of French descent; Americans of Polish descent; Americans of German, Italian, Rumanian, Danish, Spanish, and South American descent; in fact, Americans who can trace their ancestry to every corner of the globe; Americans of all religious beliefs—Jewish, Protestant, and Catholic. We take pride—all of us—not only in our ancestry but in the fact that here we are just good American citizens, particularly devoted to our country, its ideals, and our fellow men and women.

This city, like our country, is enriched by the varied backgrounds from which our people come, and this city, in turn, has enriched our State, our country, and all of the world.

In our party's platform in 1952, we advocated the admission into our country of a considerable number of refugees, principally from lands behind the Iron Curtain.

These people have been the victims of barbarous totalitarianism, the cruelty of which staggers the imagination. They come from places in the world from which the relatives of many of us in this room come and they need have and help. But the Republican Party, while giving lip service to the idea of extending aid to these refugees, wrote a law which contains so many obstacles and barriers as to be entirely meaningless. It is incumbent upon our conscience as a party and as a people to remedy this situation, so that the provisions for the admission of refugees will parallel our national heritage.

Likewise we have an immigration law which cruelly discriminates against countries from which many of our recent ancestors sent so many people who have made incalculable contributions to the welfare of our Nation. This immigration law disgraces both the dignity and the philosophy of our country and casts a cynical shadow upon the ideals expressed by Thomas Jefferson and the other authors of our national independence.

Measuring Weather Modification

EXTENSION OF REMARKS

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. CASE of South Dakota. Mr. President, 9 months ago a new agency, the Advisory Committee on Weather Control, began its work. It is working in a field which has more potential meaning for all forms of human endeavor than any field one can name.

I ask unanimous consent to have printed in the Appendix of the Record a letter from the executive secretary which, while not intended by him to be an interim report, nevertheless gives very interesting information.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Advisory Committee on Weather Control, Washington, D. C., March 21, 1955.

Hon. Francis Case, United States Senate, Senate Office Building, Washington, D. C.

DEAR SENATOR CASE: At your request I am, in this letter, putting into writing some of the things taken up at our meeting in your office February 22. May I first say that it was enjoyable meeting with you and your staff and I hope that you considered the discussion worthwhile.

In speaking of the difficulties incurred in evaluating weather modification experiments, I certainly did not wish to give the impression that these difficulties cannot be overcome. We think that we are developing techniques that will enable us to get the answers with a positiveness never before possible.

AVERAGE BETWEEN 0 AND 30 PERCENT

I did not wish to give the impression, either, that we feel that cloud seeders are not producing the results in increasing precipitation hoped for when the legislation was drawn up and passed.

It does now appear probable to us that average increases are not of the magnitude of those believed to be a consequence of the early experiences, that is, increases of 50 to 100 percent, and even higher. Such increases, if invariably the consequence of every cloud-seeding experiment, would certainly have shown up by now.

The fact that they haven't seems to indicate that the average increase may lie between 0 and 30 percent. Individual operations could still produce higher increases.

It seems reasonable to expect that if we can detect the circumstances that may produce the greater increases, then the cloud seeders can surely improve their techniques to produce greater increases with greater regularity, since those techniques at present are in an early stage of development and are in some instances disputable.

But increases of the magnitude of 5 percent or 10 percent can produce consequences of tremendous significance to the economy of the Nation. Consider these facts, as worked out in an economic study sponsored by the Advisory Committee and carried out by a group supervised by Dean Eberle:

COST REQUIRES ONLY SMALL RETURN

Only one-hundredth inch increase of rainfall on spring wheat can pay for the cost of a cloud-seeding operation. Working on the basis of 8 inches of rainfall on the wheat crop this increase would be only one-eighth of 1 percent and is an amount too small to measure with rain gages or to detect with statistical analyses.

A very slight increase in rainfall, therefore, can produce a favorable benefit-cost ratio and we figure that increases of 20 percent or more may very easily produce benefit-cost ratios running up to 300 to 1 which is, of course, very far in excess of any benefit-cost ratio which can be anticipated for any ordinary water-resources development of conservation project.

EXPERIENCE ON COLORADO RIVER

We calculate that a 10 percent increase in precipitation following operations in tributary areas of the Colorado River could produce a benefit-cost ratio of 14.8 to 1 during an average season. This 10 percent increase could produce 2,270,000 acre-feet of average increased seasonal runoff. We estimate the cost of the operation at approximately \$1 million.

Davis Dam has a capacity of 1,820,000 acrefeet and cost \$35,900,000 (figure supplied by the Bureau of Reclamation and does not in

clude the cost of the power installation,

\$24,500,000, but only the storage).

The cloud-seeding operation, therefore, could provide enough additional water to fill Davis Dam.

Our calculations include the value of increased hydroelectric production, additional agricultural production and increased grazing land yield but, of course, increase sonal runoff in the Colorado River Basin would have additional value for the reason that the river runoff has been overallocated and is the subject of very serious conflict between the States in the area.

Additional water in the eastern States would have a great deal more value because of higher grade uses (industrial and municipal) and unquestionably more spectacular benefit-cost ratios could be established.

Now I want to say something about our program of evaluation. The legislation, of course, commits us to the evaluation of public and private experiments in weather modification and since the question is not only "whether?" but "how much?" we inevitably have to use statistics.

CONFERENCES ON EVALUATION

When we looked over the first reports we received from cloud seeders we realized we had a much tougher problem than we had

previously thought.

We decided to call on the advice of the most competent people in the country and we obtained, first a series of papers from scientists, statisticians, and the cloud seeders themselves which papers we have bound up into a volume which we sometimes refer to as the "bible" of evaluation. We then called a series of conferences on evaluation using the papers as a starting point.

Our first conference was at Cambridge. September 22-25, our second at San Francisco, November 8-9, and our last at Wash-

ington on January 11-12.

Our confidence was severely shaken when at the first conference about half of the scientists present seemed to express the opinion that statistical evaluation could never produce reasonably conclusive answers and the other half seemed to feel that it might be done but would certainly take some 10 to 20 years.

So, here we were, committed to a program of statistical evaluation and having less than 2 years in which to do it, and having many of the top people express doubts whether it

was worthwhile doing at all.

PHYSICAL EVALUATION IS DEVELOPED

This led to some serious soul searching. It led Capt. Howard T. Orville, United States Navy (retired), the chairman of the committee, to devise the concept of "physical evaluation."

It led Capt. F. A. Berry, United States Navy, our chief scientific adviser who came aboard on September 15, to explore a new method being worked out at MIT for forecasting or hindcasting precipitation on targets, and to search for a statistical crew having special ability and experience which could be expected to devise new methods for improving the sensitivity and validity of statistical

Captain Berry presented his proposal for accomplishing this statistical work to the full committee when it met October 20. was approved and the crew began work on January 3 of this year. The head of the group is Mr. H. C. S. Thom, formerly Chief Climatologist with the Weather Bureau. Because of his presence here in Washington. he and Captain Berry were able to work the scheme of operation previous to January 3 so that the group was able to start work on data the first day the people showed up.

We now have confidence that the committee staff will be able to produce statistical evaluations superior to any so far performed and envisaged at the present time, for the

following reasons:

SHORTEN THE TIME REQUIRED

1. We have the first group ever assembled which can tackle the job of statistical evaluation on a full-time basis with the facilities necessary to do the job. This concentrated approach means that the group will be able to develop (and has already developed) new ways of carrying out analyses.

As I mentioned the other day, our group has been able to handle as much data in 2 weeks as another group handled in a study extending over a period of over 2 years. also expect to use an electronic computing machine for handling some of the data.

2. We have examined practically all statistical analyses carried out by other individuals and groups. We are confident, therefore, that we are abreast of the latest developments and can proceed from there.

3. Mr. Thom's group has developed a model into which theoretical precipitation increases can be plugged. This model enables us to determine almost positively the sensitivity of our analyses. This eliminates one factor of uncertainty in previous analy-

YEARS CAN BE TELESCOPED

4. By requiring reports from the cloud seeders on reporting forms we supply, we can get more data and more uniform data

on the experimental work.

This means we can carry out more individual evaluations than was the case before and also we can combine the data of more experiments than ever before. Whereas one experiment might seemingly show an increase in rainfall which could easily be attributed to accident, or normal variation, a number of positive results would decrease the likelihood of their happening by accident, or increase "significance."

A typical remark concerning an individual evaluation might be that "it will take 10 years of data to detect at a specified significance level an increase in precipitation of 15 percent." Combining individual evaluations will have the effect of telescoping years so that smaller increments of precipitation can be measured with the specified degree of

significance.

5. Mr. Thom has also newly adapted a "sequential procedure" to the evaluation of weather-control experiments. Instead of the old method of testing after completion of an arbitrary number of rain-increasing operations, the tests or evaluations are made on 1 operation, then 2, then 3, etc.

Each test tells whether precipitation was increased or not increased or tells the evaluator to add in another operation. The combined evaluation stops when the evaluator gets a "yes" or "no" answer. Trying the procedure out on the model mentioned above, the group found that it detected a specified increase with specified significance using only 14 operations, whereas the classical procedure required 40.

Obviously, the new procedure will save time and work and, by the same token, money.

CLOUD SEEDERS ARE CONSULTED

6. Our group will make its practice to fully consider meteorological and physical factors before and during the carrying out of evaluations. A failure to do this has to a considerable degree invalidated the results of some previous evaluations. In this connection we have established a practice of consulting with the cloud seeders about work done on their projects. In this way we have obtained some vital information, the lack of which would make our evaluations less certain.

7. The philosophy of our operation involves taking into account what the statisticians refer to as the "type II error." This concept was first applied to the evalution of cloud-seeding operations by Mr. Thom.

I will try to explain the concept in a simplified manner, as follows: The statistician

might insist that a 25-percent increase in precipitation, say, be demonstrated with 95 percent significance; in other words, might insist the odds be 20 to 1 that the effect was caused before he will consider the conclusion statistically significant. In that way he protects himself from accepting a hypothesis that may not be true.

But what are the odds that he may thereby

reject a hypothesis that is true?

It is also important for the Nation's welfare that we protect ourselves against the type II error, especially since the benefits from increased precipitation are so great compared to the cost of the operation. In making many decisions the businessman often has to proceed with less than 20-to-1 odds in his favor. If he is going to possibly benefit to the tune of \$30 for every \$1 he invests, he will very likely be willing accept much lower odds that he will receive this benefit.

NORMAL MUST BE KNOWN

8. Earlier on I mentioned a new method developed at MIT for determining what precipitation on a target should be or should have been without cloud seeding.

If we can ascertain with a reasonable deof accuracy what the precipitation should have been without cloud seeding, then, of course, we can simply subtract that figure from the precipitation that actually occurred, and we will have the increment. The method is known as the Wadsworth-Malone scheme of continuous typing.

Another agency of the Government is sponsoring a test run of the scheme at our behest and with our cooperation. We are hopeful that the test run will show that the method can aid greatly in our evaluations.

To further assist us in coming up with the answers desired by the President and the Congress, we have determined on a program of physical evaluation. Our budget request for fiscal year 1956 totals \$295,000 and of this sum \$95,000 has been set aside for physical evaluation performed by contract. The Budget Bureau has approved of this request. I can describe physical evaluation the following broad and general manner:

It is possible at generator sites to measure the output of silver iodide crystals; it is possible to track the flow of air, and pre-sumably the silver iodide borne by that air, by tracers or by means of no-lift balloons carrying reflectors which can be seen on radar; it is possible to observe the development of storm cells in clouds by means of radar: it is possible to measure silver iodide concentrations at points removed from the generator sites; and it is possible, though difficult, to detect silver iodide in rain or

We hope to carry on some outdoor work at critical points of this cycle which will confirm, deny, or measure the presumed effects of silver iodide as used in commercial operations.

QUESTIONS YET TO ANSWER

It is surprising that almost 9 years after Dr. Vincent J. Schaefer first seeded clouds over Massachusetts we do not have answers to some very basic and seemingly simple questions about the commercial-type opera-

A few weeks ago, a group composed of Dr. Schaefer, Dr. Bernard Vonnegut and S. E. Reynolds met in our committee headquarters to help us work out details of a simple physical evaluation program to get a few (but essential) answers. You will recall that Dr. Vonnegut, then with General Electric, was the person who discovered sliver iodide as a seeding agent. Dr. Reynolds carried on pioneer work on the decay of silver iodide under certain conditions.

All of the above indicates, I think, that we are making an intensive effort to get reasonably definite and positive answers by June 30, 1956. The legislation contemplated that this would take 3 years; we hope to get the job done in 2.

We are reasonably confident that when the present Congress meets for its second session we can come up with some concrete recommendations as to whether and how the United States should "experiment with, engage in, or regulate activities designed to modify weather." This may very well involve some type of legislation and at the time we are ready to make recommendations, your interest in this legislation will certainly be remembered.

There are other things I had wished to discuss while at your office, but I particularly wanted you to know how the work on evaluation is coming. We appreciate your patience and interest in listening to and reading a presentation which unavoidably gets somewhat complicated and technical.

My very best wishes.

Sincerely,

CHAS. GARDNER, Jr., Executive Secretary.

President Eisenhower and Religious Worship

EXTENSION OF REMARKS

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a copy of a letter which was addressed to the Senator from West Virginia [Mr. Neely], and signed by Leon B. Gladish, minister of the House of Hope Presbyterian Church, St. Paul, Minn.; and to this letter I say "Amen."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE HOUSE OF HOPE
PRESENTERIAN CHURCH,
St. Paul, Minn., April 7, 1955.

Senator Matthew M. Neely, The Capitol, Washington, D. C.

DEAR SIR: I have had before me for the past few days your criticism of the President for his attendance upon services of worshipping God. I have wondered what would be the purpose in such criticism? A minister can never know a man's purpose in worship anymore than a constituent can know a Senator's purpose in attacking a good habit.

Paul the Apostle points out many times that the severest judgment is upon the one who causes his neighbor to fall, who by his own action or inaction starts his neighbor on the road of misdeeds. Contrarywise, the good example is to be most commended.

The Christians of this land can be proud to have a President who does go to church to worship One higher than himself; that he believes that God does help guide the affairs of men and so opens his meetings with prayer. It is rather a different stamp upon our national life to have a president who believes in the stamp upon our coins: "In God we trust."

Today we need the good example at every level of life and from every leader of our land, including you. Senator. God knows a man's motives, but there are some acts which are innately good—attending church is one. Let you and I not judge whether the President is a hypocrite but be thankful for his good example. There are too many big

issues which require big thinking by big men to squander our thoughts in little thinking. Sincerely,

LEON B. GLADISH, Minister.

Death of Capt. Edward A. Hayes, Past National Commander of American Legion

EXTENSION OF REMARKS

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. BRICKER. Mr. President, Capt. Edward A. Hayes, past national commander of the American Legion and a close personal friend of mine, passed away in Chicago April 1, 1955. A man devoted to family and country, Captain Hayes will be mourned by all who were fortunate enough to know him.

Military services for Captain Hayes were conducted in Chicago. Brig. Gen. Julius Klein, Legionnaire, and past national commander of the Jewish War Veterans, and Dr. L. Robert Mellin, past commander department of Illinois, Military Order of the World Wars, delivered the eulogies.

In Captain Hayes' home town of Decatur, Ill., solemn requiem high Mass was conducted in St. Patrick's Catholic Church by Captain Hayes' brother-inlaw, Rev. Father Thomas Muleady. The Reverend Father Robert J. White, retired, rear admiral of the Navy Chaplain Corps, eulogized Captain Hayes at these ceremonies.

These services illustrate so clearly the contributions made to our Nation by Captain Hayes, that I ask unanimous consent for their insertion in the Appendix of the Record, and also the editorial tributes paid to Captain Hayes by the Chicago Daily News of April 4, and the Decatur Daily Review and Herald of April 6.

I am sure that my distinguished colleagues join with me in extending condolences to Captain Hayes' widow, Mrs. Margaret Hayes, and their devoted family.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of April 4, 1955]

EDWARD A. HAYES

Farsighted men sometimes become irritated with the short-range vision of their contemporaries, and it may have been this which caused the late Edward A. Hayes often to seem acidulous in criticizing softness toward communism. For he was predicting its evil future many years ago, at a time when many considered it merely an interesting social experiment.

As national commander of the American Legion in 1933, as a special assistant to Col. Frank Knox, when the latter was Secretary of the Navy, as politician, as successful lawyer, and civic-minded citizen, Ed Hayes was always acutely aware of the menace to America posed by international communism.

His was an outstanding career, carved out entirely by his own ability. One of four sons of an immigrant Irish railroad worker, he trained himself to be a court stenographer. Acquiring a taste for the law, he put himself through St. Louis University. Step by step he rose to eminence in his profession, as he did in the Navy, enlisting as a seaman and rising to the rank of captain by appointment of Colonel Knox.

As Colonel Knox's assistant, he aided in the first investigation of the Pearl Harbor disaster, and wrote much of the report made to the Nation in the early days of the war. In 1954 he sought the Republican nomination for United States Senator, and his defeat was a deep disappointment.

Mr. Hayes served his country with sincere devotion. In his untimely death last week, from a heart attack, Chicago loses one of its most distinguished citizens.

[From the Decatur (III.) Herald of April 6, 1955]

BROUGHT HONOR TO HOME TOWN

Edward A. Hayes came home this week to be buried in Calvary Cemetery. He had lived in Chicago since the end of World War II, during which he served as an assistant to the Secretary of the Navy. Obituary notices in the metropolitan press sometimes neglected to mention that he had lived in Decatur.

But Ed Hayes grew up in Decatur and practiced law here after his military service in the First World War. It was as Ed Hayes, of Decatur, Ill., that he moved steadily along in the American Legion until he was elected national commander.

Always active in Republican politics, Ed Hayes should have qualified for major appointive office in the Federal Government except for the change in administration in Washington, just as he had attained national prominence. But he did not complain. He accepted a series of responsible wartime assignments under the new Commander in Chief.

Ed Hayes brought honor to his home town, and his old friends and neighbors are grieved by his untimely passing.

[From the Decatur (III.) Herald of April 6, 1955.]

EDWARD HAYES LAID TO REST WITH TRIBUTE

Funeral services for Edward A. Hayes, former Decatur attorney, national American Legion commander and assistant secretary of the Navy, were held here yesterday noon-

The solemn requiem high Mass in St. Patrick's Catholic Church was celebrated by Hayes' brother-in-law, the Reverend Father Thomas Muleady, Chenoa. Burial was in Calvary Cemetery.

Hayes, 62, died unexpectedly in a Chicago hospital Friday. He had lived in Chicago and practiced law there and in Washington. D. C. since 1945.

Serving as pallbearers were 6 past commanders of the Castle Williams Post, 105, American Legion.

Honorary pallbearers included Gov. William G. Stratton and dozens of high Government, military and Legion officials from several States.

The Reverend Father Robert J. White, of Washington, D. C., retired rear admiral of the Navy Chaplains Corps, eulogized "Ed Hayes, Christian gentleman."

He recalled an incident in Miami, Fis., years ago, "when he was commander and I was chaplain." The crowds were cheering, and Commander Hayes smiled. "I wonder how many will know us in a year or two."

Many more did. Pearl Harbor brought the appointment as special assistant to Secretary of the Navy Frank Knox, and a dangerous mission to North Africa, a trip behind enemy lines in connection with the surrender of the Italian Fleet.

He undertook these duties with "complete dedication to the task and a complete faith in providence," Father White said.

Kindliness and grace followed him all the days of his life, and he should dwell in the house of the Lord."

Father White, closed the eulogy noting this is Holy Week, wishing Mr. Hayes "eternal rest, eternal Easter morning."

[From the Decatur (Ill.) Herald of April 5, 1955]

PALLBEARERS LISTED FOR EDWARD HAVES

Six past commanders of Castle Williams American Legion Post No. 105 will serve as pallbearers today at the funeral of Edward A. Hayes.

The 62-year-old former Decatur attorney and one-time national commander of the American Legion died unexpectedly in Chicago Friday.

Serving as pallbearers will be: Joseph H. Riggs, Charles Lee, Carl J. Meacham, Ben J. Moody, Loren L. Shaw, and Fred W. Ziese.

The solemn requiem high mass will be at 11 a. m. in St. Patrick's Catholic Church. The Reverend Father Thomas Muleady, Chenoa, will be the celebrant; the Reverend Father Edward Adamski, of St. Patrick's, will be deacon, and the Reverend Father Richard Jones, S. J., of St. Joseph's Hall will be sub-

The eulogy will be delivered by the Reverend Father Robert J. White, Washington, D. C., a retired rear admiral in the Navy's corps of chaplains.

The Reverend Father White served as national chaplain of the American Legion while Mr. Hayes was national commander.

Castle Williams Post will preside at military graveside services at which Mr. Hayes' national and State American Legion commander flags will be displayed.

The J. J. Morgan & Sons Funeral Home is in charge of funeral arrangements.

Honorary pallbearers will include the fol-lowing Decatur men: Poyntelle Downing, Emanuel Rosenberg, Arthur F. Delahunty, Larry Teall, Jack Powers, Jeremiah Driscoll, Bernard Graliker, Lawrence Kuhle, Edgar E. Nicholls, Lynn Clark, and Dr. A. F. Goodyear.

Others will be:

Gov. William G. Stratton.

Mayor Martin Kennelly, Chicago.

James P. Ringley, past department commander, Illinois American Legion.

Brig. Gen. Julius Klein, past national com-

mander, Jewish War Veterans.

Brig. Gen. Lafeton Whitney, commander, Chicago Chapter, Military Order of the World

John Stelle, past national commander, American Legion.

Adlai Stevenson, former Governor of Illinois.

Seaborn Collins, national commander, American Legion.

Stuart List, publisher, Chicago American. Don Walsh

John O'Keefe, general manager, Publishers Association.

Carl Stockholm, national president, Navy League of the United States.

Warren Wright, State treasurer of Illinois. Gov. George N. Craig, of Indiana, past national commander, American Legion.

Edward A. Clamage, past department commander, Illinois American Legion.

Irving Breakstone, department commander, American Legion.

Harold Cummins, Cook County commander, American Legion.

Clarence F. Cross, past commander, Naval Post, American Legion.

Comdr. Hamilton Vose, United States Navy Reserve.

Capt. Roger White, United States Navy Reserve.

R. Haskin Damon.

Rear Adm. Emmett P. Forrestal, commandant, Ninth Naval District.

Lt. L. Robert Mellin, past department commander, Illinois Military Order of the World Wars.

Gen. Robert E. Wood.

Col. Henry Crown.

Rear Adm. Daniel V. Gallery, chief, Naval Air Reserve Training Command.

A. Andrew Boemi, president, Ninth Region, Navy League of the United States. Robert Crown, president, Chicago Council,

Navy League of the United States.

Col. Matthew J. Murphy, past department commander, American Legion, Department of Illinois.

Capt. Michael J. Ahearn.

Perc Brautigam, national executive committeeman, American Legion.

Maj. Gen. Kenneth Buchanan.

James F. O'Neil, past national commander, American Legion.

E. F. McGinnis.

Maj. Gen. Frank Schwengel.

William Downey, assistant to Governor

MEMORIAL SERVICES FOR EDWARD A. HAYES, PAST NATIONAL COMMANDER OF THE AMERI-CAN LEGION

(Address delivered by Brig. Gen. Julius Klein)

This gathering of a loving family and devoted friends pays tribute to Capt. Edward A. Hayes. Not final tribute because his life was devoted to building a monument of respect and admiration that will be carried from generation to generation.

Ed Hayes will be chronicled in the Book of Time as a man dedicated to his wonderful family, his country, and his faith-a crusader for tolerance, justice, and fair playa champion of America's fighting men.

I count myself among those fortunate individuals who followed his courageous leadership toward a better America. strange is the course of fate and yet how wonderful that over 30 years ago our paths should cross and that this friendship should draw us together over life's span.

The spark of greatness was born in this man and it kindled a flame that brightened our Nation. And yet even with the fame and honor of his achievements, his first thoughts were always directed toward his devoted family.

Ed Hayes fought on many battlefields. Every promotion, whether in the United States Navy, in his profession as an attorney, or as a veteran and civic leader, was won the hard way-through the ranks and always to the top.

Twice in his lifetime did he volunteer his services to his country. In 1917 he began his naval career as an apprentice seaman and worked his way up through the ranks to receive his well earned commission, and although the war ended, he so strongly felt the dangers to America's shores that he volunteered again and was commissioned in the United States Naval Reserve.

As the years passed on and the pages were torn from the calendar, new prominence and continued success came to this man as an attorney and civic and veteran leader.

In 1933 his became the most powerful voice of all American Legion national commanders. He spoke for all faiths, races, and creeds and around the world his words were felt when he, as national commander of the American Legion, spoke like a prophet before the tomb of the Unknown Soldier and warned of the Red menace. And because this man knew of war, he fought for peace and a strong defense. Yet even in his battle for peace, he found that for a second time in his life, he again would have to volunteer to serve his country in war.

Before Pearl Harbor, before war was declared, Ed Hayes gave up his successful law practice and left the arms of his loving family to don his uniform in service to his country. He served with valor and honor on all of America's fighting fronts. No man could offer his country more than did Ed Hayes.

As a Legionnaire, may I say the American Legion is strong today and will grow stronger for the good of our country because men like Ed Hayes were our leaders. We must keep this sacred heritage and carry on. Thus, we shall show ourselves worthy of the memory of Ed and it will inspire us until we, too, join his ranks.

He made his last journey to our Capitol, which he so loved, with me only 2 weeks ago, in the interest of the great cause of Americanism. Already sick and in pain, he did not shirk his duty, his friends, and country. In Washington, the citadel of democracy, I was with him and we returned to Chicago together. He felt his job was done. He should have cared for his own health and welfare first, but as always, with Ed Hayes, duty came first irrespective of the sacrifice and his last mission was again-beyond the call of duty.

His last words were characteristic of that noble spirit when he turned to his beloved wife, Margaret, and said, "I love you."

And that is what we say to Ed Hayes today. We love you and will always love you.

Not only 18 million veterans salute you today, Captain Hayes, but all other good citizens bow in reverance and in prayer. May your soul rest in peace. May the good Lord give strength to your wonderful family and bless them so that they may carry this heavy

Farewell, Comrade Hayes. Sleep in peace.

MEMORIAL ADDRESS BY DR. L. ROBERT MELLIN, PAST COMMANDER, DEPARTMENT OF ILLINOIS MILITARY ORDER OF WORLD WARS

Ed, as I stand humbly before you to speak a few words to you, I am sure that 20 million veterans and the widows and orphans of our comrades who have died join me in telling you that you died for them.

For 35 years you dedicated your life to the service of your comrades in need.

You, too, like many others could have left behind you many pieces of gold and silver, but instead you willed to us a heritage of Americanism, a love of humanity and a dedication to the service of our comrades.

All of us who have had the privilege of knowing you, knew that when you gave your

hand you also gave your heart.

I saw you daily during the last days of your earthly visit and I knew that you were aware of what was just ahead for you and in those last moments you were constantly at peace with God for next to your beating heart entwined about your left arm was the holy rosary.

If I could have read your mind in your last moments I am sure the following thoughts were there:

"I fear no foe with Thee at hand to bless, Ills have no weight and tears no bitterness, Where is death's sting? Where, grave, thy victory?

I triumph still, if those abide with me. Hold then Thy cross before my closing eyes. Shine through the gloom and point me to

the skies. Heaven's morning breaks and earth's shad-

ows flee. In life, in death, O Lord abide with me." Ed, your body lies there in its last sleep

but the spirit of your soul to remind us all of the greatness of you shall live forever.

BIOGRAPHY OF EDWARD A. HAYES

Born January 5, 1893, Morrisonville, Ill.; St. Teresa's Parochial School, Decatur, Ill., 1898-1908; Brown's Business College, Decatur, Ill., 1908; court stenographer, 1909-12; St. Louis University (Law), St. Louis, Mo., LLB degree, June 1915; admitted to practice, Ill., October 1915; member, firm Hayes & Downing, lawyers, Decatur, Ill., January 1916 to June 1917; enlisted United States Navy, June 1917, as apprentice seaman, advanced to chief yeoman; commissioned ensign United States Naval Reserve, August 1918; served as aide to Admiral Moffett; discharged March 1919; returned to law practice at Decatur, Ill.; assistant attorney general, State of Illinois, 1928-33; department commander, Illinois, American Legion, 1929-30; chairman, American Legion rehabilitation committee area D (13 Midwest States), 1931-32; national chairman, American Legion rehabilitation committee, 1932-33; commissioned lieutenant commander United States Naval Reserve, November 1933; national commander, American Legion, 1933-34; chairman, resolutions committee, Republican Grass Roots Conference, Springfield, Ill., July 1935; manager, campaign committee, Frank Knox for President, 1935-36; chairman, platform committee (Midwest area), Republican Party, 1938; called to active duty United States Navy, July 1941; executive assistant to head of Domestic Intelligence, United States Navy, August to November 1941; special assistant to Secretary of Navy, November 1941 to April 1944; commissioned commander, United States Naval Reserve, July 1941; commissioned captain, United States Naval Reserve, June 1942; released from active duty April 27, 1945; chief counsel of the Subcommittee to Investigate the Administration of the Trading With the Enemy Act, March 1, 1953-January 1954.

Partition of Ireland

EXTENSION OF REMARKS

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles Lucey, from the Catholic Standard of April 8, 1955:

THE BACKDROP—THOSE SIX COUNTIES

(By Charles Lucey)

DUBLIN.—This essay, written after a short visit to Ireland, is about the bitterness growing out of partition of the six counties of northeast Ireland from the Irish Republic.

It seems accurate to report there is no actual tension today over partition, but the question of how this abrasive problem is to be solved has become clearly livelier in recent months. Here are the reasons:

1. Secretly organized and maintained bodies of troops, committed to using force where it can be used against British authority in the six counties, are drilling and under arms in the south of Ireland.

 Armed raids have been staged in recent months on British garrisons in Armagh and Omagh. In one case a quantity of British arms was seized; the second raid was frustrated.

3. Prime Minister Costello and ex-Prime Minister DeValera of the Republic of Ireland have urged talks with officials of Northern Ireland on the partition issue. But these officials say there is nothing to talk about—that the separation of the six countles has been "finally determined."

4. There has been some public discussion in England of the importance of all Ireland in case of major war. Some interests have

contended that if war came, Britain would have to press its interest in the use of Irish ports—a matter of bitter relations in the past which, in World War II, also involved the United States Government.

It is difficult to be sure how much support there is among Irishmen for the recent stirrings against division of the island into two separate political entities. Mr. Costello has contended that partition must be solved by peaceful means. Yet well-informed Irishmen say the Costello Government, through the regular army and the national policy can hardly fail to be aware of the secret drilling that goes on among those using the same designation as the insurgents who fought the war against the British 40 years ago—the IRA or Irish Republican Army.

NEW SYMBOL

There's another two-letter symbol, A. P., which also is coming to have meaning all over the country. It stands for antipartition, and was apparent in Ireland's St. Patrick's Day parades. And partition was the theme of top government officials in holiday addresses.

Some here believe that so long as political differences in the six counties are founded in great part on religious differences, with pro-British Protestants in control of the government and Catholic Nationalists in an overall minority, it is all but hopeless to look for solution by negotiation. They say the only answer is by force and the loss of a generation of young men of the Irish Republic, as in the 1916–20 period, to make the case before the world.

ANOTHER SOLUTION

Others see a solution through a considerable population movement from south to north, which has had some beginning and which could force greater political recognition for Irish Nationalists whose strength is minimized now because of gerrymandering of seats in the northern parliament.

Then, still others say Ireland itself at home can hope to do little about what they see as northern stubborness well supported by Great Britain. They also say that eventually the answer to partition must come from America and from the fact of America's traditional sympathy for the principle of self-determination.

Now, in relation to Communist aggression and to any threat of atomic warfare, it may seem that what happens in this little island in the North Atlantic has no great cosmic significance. But the fact is that Ireland does have something to contribute to the free world's side. Its strategic location in relation to Atlantic sea and air crossing facilities is obvious.

Ireland knows that economically and otherwise its interests are closely tied to England. Remove the artificial barrier, Irishmen say, and that tie can grow and become stronger and more prosperous on a basis of real friendship.

Bolitha J. Laws, Chief Judge, United States District Court for the District of Columbia, Reports on Public Defenders Measures

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following letter I received as chairman of Subcommittee No. 2, in connection with the public hearings on bills relating to representation of indigent defenders in United States district courts by public defenders:

UNITED STATES DISTRICT COURT, FOR THE DISTRICT OF COLUMBIA, April 1, 1955.

Hon. THOMAS J. LANE,
House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN LANE: As requested by you when I appeared before your committee in Congress as a witness on Wednesday of this week, I am sending you herewith a statement of average sentences imposed by judges of this court compared with those imposed at other points. You doubtless will recall that in our court we handle major cases which customarily arise in State courts, as well as those which arise in United States courts. Therefore, the figures which we have assembled include certain types of United States cases such as narcotics, interstate car theft, fraud, and other thefts, assault and robbery on United States Government reservations and high seas, in respect of which our average sentence is compared with the national average; and we also compare cases usually arising in State courts such as various types of homicide, rape, larceny, robbery and burglary, in which we compare the average sentence here in comparison to the average sentence imposed in each of our neighboring States of Maryland and Virginia. We do not have readily available at this time the national average in State cases, since we have not been furnished figures from other than the two States mentioned. The figures which I am sending were furnished our court by the Administrative Office of the United States Courts and the United States Bureau of Prisons.

At various times in the past we have read about statements being made that our sentences in narcotics cases have been low. You will note from the chart that the sentences in the District of Columbia in narcotics cases average over 2 years more than the national average. You will also note that with the sole exception of robbery cases, the average sentence imposed by our court in the District of Columbia in all of the categories listed is higher than the national average. I do not know the full definition of robbery in other jurisdictions, but I do know that in Washington robbery includes stealthy seizure and purse snatching, as well as armed or other robbery by force.

I am especially interested in calling your attention to our average sentence in rape cases. You may recall Congressman Fornesters stated at the hearing on Wednesday he understood our average was around 2 years. In fact, the average sentence in rape cases for the fiscal year ending June 30. 1954, was 12.7 years, and in assault with intent to commit rape the average was 9.1 years. In addition to this, rape cases in the District of Columbia include the statutory crime of carnal knowledge, that is committed when a male has relations with any female under 16 years of age, even with her consent.

The chart I am sending you is not in any great detail and relates only to the fiscal year ending June 30, 1954. (The Virginia figures cover the last 6 months of the fiscal year.) However, we have made similar studies as to previous years so far as cases in United States courts are concerned and the results have been substantially the same. I think you will agree the information I am sending you strikingly refutes some of the unfounded talk which has resulted from published articles within the last several years. In submitting these figures I do so in order that the true facts may be known

to Members of Congress, some of whom apparently have been misinformed. I do not intend to convey the impression that I believe lengthy sentencing is the sole, or necessarily, the principal deterrent to crime.

I am grateful to you and the other members of your committee in making it possible to send you this information.

Sincerely yours, BOLITHA J. LAWS.

Why Lower Tariffs?

EXTENSION OF REMARKS OF

HON, EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include an excellently written article on the subject of Why Lower Tariffs. This article is written by Mr. Ernest H. Gaunt, formerly a resident of Andover, Mass., a part of my congressional district. It is printed in the March 31, 1955, issue of America's Textile Reporter. The arguments presented in this article are very timely and specifically relate to the Trade Agreements Extension Act of 1955 now pending in the United States Senate.

The article follows:

WHY LOWER TARIFFS?

(By Earnest H. Gaunt)

MOST OF THE LEGISLATORS, WRITERS, ACADEMI-CIANS, AND ECONOMISTS ADVOCATING LOWER TARIFFS HAVE NO DIRECT STAKE IN DOMESTIC

With the recent renewal by President Elsenhower of the proposal to extend the reciprocal trade agreements for 3 years with

a possible reduction each year of 5 percent in import duties—shortly to come before Congress—this complicated and vital subject is again facing the industry. The influential Committee For Economic Development recommends extension for 5 years with a possible total tariff reduction of 25 percent. Two members of that CED dissented on the ground that any further lowering of the present duties should await more normal conditions.

A Gallup poll announced January 8 indicated that slightly over half of those interviewed had read or heard something about these proposals. The percentage favoring higher tariffs increased 10 percent over a year

ago.

This current majority against lower tar-iffs is significant. It stands despite the great volume of publicity by governmental leaders and the big mass-production steel, automobile and machinery industries—since the early thirties—on behalf of gradually whittling away all protective import tariffs.

One large group wishing for still lower tariffs sincerely believes they will be in the national interest as well as for the world general welfare; that international trade is a two-way street, that in order for a nation to export surplus goods, and raw materials as cotton, tobacco, and wheat, it must take imports of other kinds of goods and raw materials from foreign countries. The alternative is to continue money aid in various forms to foreign countries which have been or are potential users of American raw materials and goods.

They see the desirability of approximating a balance between values of exports and imports, counting on governmental foreignaid money and tourist money, and increased American investments abroad. The rest, they believe, must be done by this Nation encouraging and accepting more imports which would give foreign countries the

American dollars they need.

In this group are some legislators, writers, columnists, academicians, and economists who have no direct stake in domestic industry but who consider themselves never-

theless objective.

Another group does have a direct interest in still lower tariffs. Some wish to continue their exports or to increase them or to start exporting; others wish to profit as importers. In this group are growers of raw materials of which the United States has a regular surplus beyond its domestic needs; and big mass producers of steel, automobiles, and of business and other machinery-who have built up overcapacity so far as the United States market is concerned.

These mass producers feel they must export, or stop growing. Automobile manufacturers say they consider increased imports and exports to be in the national interest; and they assert that what is in the interest of the automobile industry is also in the

national interest.

Those American automobile makers who have established branch manufacturing plants abroad, expect to take advantage of the cheaper foreign labor and lower foreign living standards. And so they can especially see the advantages to them of this country importing other goods than automobiles. Those other industries to be given the low-tariff treatment for the benefit of automobile makers and others, do not regard their being considered expendable, with the same equanimity as do the beneficiaries of low tariffs.

Those groups opposed to further lowering of tariffs, however gradual the whittling may be, or who want higher protective tariffs-include manufacturers of textiles, watches, electrical equipment, bicycles, pottery, chemicals, independent oil producers, soft coal producers and others. Together, they add up to a very large sector of United States employment. The proponents of protection of domestic American industry argue that this is already a lower tariff country than any other important world-trading nations.

The present aim of the industries wanting protective tariffs is not to grow larger or to export, but simply to be allowed to exist or break even—frankly for their own interest and that of their owners, stockholders, and employees. And like the automobile manufacturers they consider their existence to be vital to the national interest.

Henry Hazlitt, of Newsweek, recently wrote that United States import barriers are nothing compared with the barriers to trade of Britain, and compared with the import barriers of all the countries that have exchange and currency control. He said that the Tariff Commission recently calculated that the American tariffs averaged about 5½ percent of the value of all United States imports; and that on the same basis, it has been calculated that the British tariffs averaged more than 25 percent of the value of all British imports.

Marion Heiss of the Cone Mills of North Carolina stated that foreign inconvertible currencies are implements of trade manipulation; that in most countries outside of North America, exchange rates are not related to economic value or actual purchasing power, but instead they "bob up and down unpredictably according to the whims of their respective governments." Under such conditions foreign goods, values, and exchange rates are often matters quite apart from the facts of the market. They are rigged and manipulated like puppets, to serve the selfish desires of the state.

"Tariff duties (United States) are on the foreign value of imported goods. For this reason the protective effect of an established tariff is never constant. The foreign value is the internal value adjusted to an exchange rate liable to fluctuate at any time. Hence foreign values in terms of dollars are extremely unstable. A drop of 20 percent in exchange rates means the same to the American importer as a 20-percent decline in price and a corresponding decline in the tariff.

"Outside of North America at the end of 1953, there appeared to be no country whose tariffs or trade restrictions against American goods generally were not more severe than 5 years earlier. American cotton goods today are virtually excluded from thee domestic markets of the foreign textile manufacturing countries."

O. Glenn Saxon of Yale University has pointed out the domination by foreign countries of international trade, financial, and monetary relations—by socialistic theories of managed currencies, compensatory spending, unbalanced budgets, monetization of public debts, competitive currency devaluations, arbitrary and discriminatory exchange controls, inconvertibility of currencies, artificially maintained exchange rates among national currencies, discriminatory export and import duties, government fixation of minimum (monopolistic) prices on the exports of major itnernational staples, and state trading as well as state financing.

American protectionists earnestly remind people of the hundreds of small and medium-sized manufacturing concerns in this country which have already been forced to run on short weeks, or shut down, throwing many thousands out of work; or compelled to liquidate or sell out to giant competitors—with many hanging on the verge—partly or largely due to our present low tariffs under the reciprocal trade agreements and to following the recommendations of the international conference called General Agreements on Tariffs and Trade.

They deplore that GATT is not responsible to Congress which constitutionally is supposed to handle tariffs but which are now delegated to the State Department.

The protectionists want State Department officials not to be so prone to attack only

American tariffs as trade barriers, but want them to know about and consider very type of trade restriction used by foreign trading countries as outlined by O. Glenn Saxon when dealing with GATT.

Some protectionists have asserted that representatives in GATT have been too largely theorists, lacking a practical feel or understanding of American industry as a whole. And complaint has been voiced that GATT meetings are held in secret with information about its proceedings unavailable to the public, and that this is contrary to American concepts. Fred G. Singer of du Pont de Nemours Co. recently said that tightly controlled information services have no counterpart in American Government. Dr. Leland Doan, of Dow Chemical Co., also recently said that GATT "has never been authorized by Congress nor has it made a full report of its deliberations to either Congress or the American people."

Other statements are that in GATT's lifetime the United States has lost about twothirds of its textile export trade, which William J. Erwin, of Dan River Mills of Virginia, suggests is this country's reward as the most generous nation in granting tariff concessions. He said that as a result of GATT, foreign nations had taken the easy road of encouraging export of their goods to the United States, the one region of supreme abundance, instead of stimulating the flow of their textiles to those areas of the world where people are in dire need of clothing: that only the United States and Canada under GATT have entered wholeheartedly into the spirit of true reciprocity.

Those American industries affected by low tariffs continue to cite the much lower wages paid in foreign countries whose subsidized exports are entering this country in great quantities under present tariffs—and call this unfair international competition. Britain, for instance, pays its worsted cloth weavers about one-third of what is paid in the United States, and other textile countries as West Germany pay even less than Britain. Japan, which pays its cotton weavers less than one-tenth of our wages, is now getting its cotton textiles into the United States.

Incidentally, both Japan and India are getting their textiles into Britain to the great distress of Britain's milis and textile labor unions. Indian cloth is entering Britain at the rate of 200 million square yards a year, not only duty free but made from cotton subsidized by the Indian Government.

On January 5, the Australian minister of

On January 5, the Australian minister of commerce said that his country might withdraw from GATT "unless Britain stops buying unfairly subsidized exports to Australian detriment." Canada is now debating its tariffs, with a possibility that they may be raised, even on British goods, perhaps doubled in some instances—in order to restore Canada's textile industries to normal health and employment.

On January 8, the Christian Science Monitor reported that Swedish textile manufacturers are now pressing their governments for higher tariffs to protect them from West Germany which in the past 3 years has increased its textile exports to Sweden from 35 percent to 65 percent—the wage costs in West Germany being about 60 percent of Sweden's.

American protectionists are not happy when somebody else is badly hurt by foreign low-wage, subsidized, unfair international competition—but they note with wry humor that it seems inevitable that some people must have their own ox gored before they become aware of what the same digs mean to others.

Comment has been made that some Japanese producers may not be including in their price export price, anything at all for labor, and that they can do so because of the export subsidies paid them by their cartels and government.

Southern cotton mills are protesting the mounting flow of imports of Japanese cotton goods. Work-clothing manufacturers in same region are alarmed at the possibility of a simultaneous increase in imports of Japanese work clothing and an increase in United States minimum wage to 90 cents per hour while the Japanese work-clothing manufacturers pay a wage of around 13 cents hourly.

J. Spencer Love, head of Burlington Industries—is much oposed to a further reduction in textile tariffs. His business is now the largest textile corporation in this country. With its related organizations the Burlingon Mills employs about 36,000 at an hourly average rate of \$1.32. On January 12, he urged that textile men "strongly support the enactment of a 90-cents-an-hour minimum wage." But he said that at the same time they should fight a reduction in the tariff rate which would undermine the American pay scale and threaten future wage raises.

He said that the American textile industry could probably compete with Japan and other countries on the basis of a 90-cent hourly minimum—but to lower the present tariff duties "would be inviting disaster for the entire industry."

the entire industry."

The protective tariff, American manufacturers say that foreign manufacturing nations which "must export or die," unabashedly give export subsidies to their manufacturers as a matter of their protection and in their national interest. American manufacturers who badly need protection by means of adequate tariffs to balance low foreign wages and high foreign export subsidies—cannot understand how some Americans seem to regard "protection" as a nasty word when it is for Americans, but a proper thing when, disguised under foreign cartel institutions and currency and other manipulations, it is used by foreign nations.

ulations, it is used by foreign nations.
George Sokolsky wrote "the American prefers to do his business forthright and direct, and when he tries to be devious, as he needs to be in world leadership, he often becomes ludicrous. It is the ingenue playing the heavy." Mr. Sokolsky also thinks the current struggle over tariffs has become an uneven one between American "bigs" and "smalls."

True reciprocity surely means a two-way street, but the reciprocal trade agreements and GATT have not worked out on a mutual basis—rather as a one-way street in which the United States and Canada have favored the trade of foreign nations. For instance, any tariff reduction by this country to Japan, under the most-favored-nation clause, can also be claimed by nations which do not need that particular reduced tariff. This is a giveaway to the latter nations, to American industries not needing protective tariffs but getting them because they were granted to industries deserving them.

Such giveaways to those nations which are proving able to get up on their own feet are not trade but gifts, and should not be allowed to masquerade as trade, or under the false label of "reciprocity."

Abraham Lincoln was for tariff protection for domestic industries on the ground that by trading with one another one had both the goods and the money. Protectionists of today, as Lincoln in his day, doubt that it is sound world humanitarianism for this country to help its own house be pulled down to assist foreigners to rebuild their houses. Protectionists and most informed neutrals believe this country's help as a nation should be confined largely to aiding such foreign nations as are soundly trying to recover free and fair internal competitive enterprise and to abolish or lessen the stranglehold of monopolistic cartels.

The majority of Americans know that there are prudential limits to their own families' spending, and most should know that at the present time there are prudential limits

to the amount of foreign aid the United States can safely afford, including too-low import tariffs. The idea of balancing trade internationally by giveaways can become an absurdity, as it would be absurd for a doctor to balance his health conditions with his patients by purposely contracting or spreading disease.

Exports made today or tomorrow by the United States at the expense of too many American workers, small entrepreneurs, and investors in vital industries like textiles are not sound economics or democracy.

This country needs exports and imports, but not at the price of sacrificing vital industries, in order to get export trade for steel and automobiles. Nor must this country be more humanely helpful to Japan or other unfortunate or backward nations to keep them out of the Communist orbit and retain them as an outer line of defense. Certainly by embracing or copying the weakening features of foreign state socialism and monopoly cartels—this Nation may be "sinking" the ship to clean out the rats

Most Americans who are not directly or selfishly interested in either lower or higher tariffs but who are fairminded and reasonably objective, agree that if still lower tariffs are today actually in the general welfare, present and near future, those companies and their workers being displaced and sacrificed should receive compensatory damages, and those being helped should pay the costs thereof. Such Americans believe in promoting world welfare but not at the expense of domestic general welfare.

Unemployment insurance is not enough to allow workers displaced by too low tariffs, to adjust by getting new jobs, and learning new skills and to meet the expenses of moving to new areas; and such unemployment insurance does not replace to the owners and stockholders the long-time accumulated value of their investments in plants and goodwill. The simple justice of compensatory indemnity payments by governments to their victims, has long been recognized by all civilized nations acting for what they consider their general welfare, as in building highways, schools, or other public works, which require the taking over of the property of individual persons.

The funds to pay indemnities to low-tariff victims could well come from special export taxes on Americans who directly benefit from low tariffs, such as exporters of American automobiles and other machinery, and steel; and special import taxes on importers of low-wage, subsidized foreign goods. Extra high unemployment taxes could be fairly collected from manufacturing exporters. And the income from such special sources should be earmarked soiely for payment of these indemnities.

The classic argument of free-traders and low-tariff advocates is that tariffs raise the price to consumers. This contention completely overlooks the fact that when protective tariffs aid the domestic consumer to keep in fair competition with the foreign low-wage, subsidized producer, a foreign monopoly of local markets can be prevented. Silk and rubber and coffee are examples familiar to most people, and even though silk and rubber were on the free list, American consumers in World Wars were at the mercy of the whim or greed of foreign monopolies as to the price paid for these commodities in this country.

A Christian Science Monitor news item of January 7 reports that Britain's cotton and rayon mills in 1954 paid their highest dividends since their 1920 boom. And dividends in 1953 were almost as high. During 1953 and 1954, American cotton, rayon, and worsted mills suffered heavy losses and great unemployment.

Informed American consumers will realize that while this Government has not given subsidies to its own manufacturers—low tariffs are in effect subsidies to low-wage for-

Is it good national or international policy to aid the giant industries of any country to wipe out small and medium-sized independent manufacturers, though doing it gradually—like chopping off a dog's tail by inches? Bigness which grows naturally without artificial aid from Government—cannot, and perhaps should not, be stopped in such growth unless its very size becomes a dangerous menace. Bigness could be a dangerous menace by too greatly handicapping many smaller natural growths and institutions vital to national economic and social health.

Another danger from bigness lies in the attempts, so far thwarted by antitrust laws, of some American bigs consorting with foreign cartel-bigs in international trade.

Addicts of the theory that everything is better, see no danger in artificial bigness. Such addicts do not seem notable for quality-mindedness, as the Socialists have not been in some of their programs. State-Socialists and their impatient allies the Communists, welcome all trends towards bigness and concentration, so that the whole nation may more easily be taken over by the State.

Boiled down to its economic phase, are not the basic problems of tariffs these: (1) should one export too many American tobs. and lower decent living standards in order to balance imports of goods from low-wage. subsidized manufacturers in countries like Japan and other exporting nations? Or (2) should one give unneeded assistance American giant mass-production industries which have built up overcapacity and must export to keep on growing? (3) Do consumers really want foreign bargains based on unfair international trade? (4) Should one copy nations enslaved by their monopolycartels, in their policies of "birth-control" of new and small, independent industry, and euthanasia of such small- and medium-sized industries as now exist? (5) Is it wise to go so far in reduction of tariffs as to use up or kill seed-corn? (6) Will the serious crippling or destruction of some of the vital American industries by too-low tariffs resulting in unfair international competition, help the automobile, steel, and machinery industries to sell enough of their product in domestic markets when the many thousands of worker-consumers in the sacrificed industries become unemployed?

Finally, this Nation must keep its highly skilled industries to maintain a better America and a better world.

The Atomic Revolution Is Here

EXTENSION OF REMARKS

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my own remarks in the Record I include The Atomic Revolution Is Here, an exclusive interview with John Jay Hopkins, president of the General Dynamics Corp., appearing in the March 18 issue of the U. S. News & World Report:

THE ATOMIC REVOLUTION IS HERE (Interview with atomic-submarine builder John Jay Hopkins, president, General Dynamics Corp.)

(When people think of atoms, it is usually with fear. They think only of bombs.

(But atoms, says an atomic industrialist, can be a boon to mankind as well as a bane, Atomic power, he predicts, is going to raise living standards all over the world.

(John Jay Hopkins, who makes this prediction, is president of General Dynamics Corp., which built the first atomic subma-

(Atomic power, Mr. Hopkins maintains, is no mere dream of the future. It is here now.

(The United States, in his view, should take the lead in putting it to work. Backward nations can be industrialized—and, he suggests, the United States will gain new markets and new friends.

(In this interview, held in the conference room of U. S. News & World Report, Mr. Hopkins tells how the atom can promote peace instead of war.)

Question. Mr. Hopkins, you have just built a submarine—

Answer. The Nautilus.

Question. Powered by an atomic reactor it generates power from atomic materials? Answer. That's right.

Question. Is this the first commercial use of a reactor, or is this really commercial?

Answer. Well, you might say it is in one sense "commercial." It demonstrates what a reactor can do. It's the same type—although there are a number of different kinds of reactors—that you would build for a commercial installation. It's the first application of atomic power to propulsion—the first that we know of where the heat from a reactor was converted into useful work—into propulsion.

Question. Is the advantage that the Nautilus will be able to travel submerged almost indefinitely?

Answer. You won't have to refuel, although you may have to do something to the reactor from time to time; but the submarine can travel around the earth, under water, at very high speeds. Because the reactor doesn't need oxygen, it frees you really from the power problem. It gives you an enormously greater amount of power within the same space as you had before with the traditional method of the diesel engine and electric storage batteries.

Question. Is the reactor that you built for the submarine going to become practical in industry?

Answer. It would be most practical. This particular submarine reactor may not be the type. This is a small reactor. In a submarine, you need only a limited amount of power. It's a lot greater than any power we've ever had before in a submarine.

For electricity production, however, they're talking about 100,000—or even 200,000 kilowatts. Such a reactor might be as big as a large building.

Question. What would this 200,000-kilowatt reactor do?

Answer. It would take care of a city of about 250,000 people. Perhaps more than that. The largest single unit usually put in a major power station today is 150,000 kilowatts.

Question. Do you thing there is something very significant going on in industrial atomic power throughout the world?

Answer. Oh, by all means. I would say in England and Belgium and France—they have a building started down on the Rhone.

Question. But all of that's in an early stage, isn't it?

Answer. No; not in England. A year and a half ago at the National Industrial Conference Board the senior in charge came over from Harwell and showed actual photographs of their atomic installations.

Question. Are they ahead of us?

Answer. Yes; in having a program defined 10 years ahead. Now, remember, a reactor is not a weapon except that you use it in a weapon such as a submarine. A reactor is a heat-producing unit.

Question. Is this country going to move now more rapidly into the industrial field with atomic energy?

Answer. I think we will be forced to do so. Question. What's holding us back?

Answer. I think there are two factors. is the lack of general understanding on the part of our public. I thoroughly subscribe to the security that we have had on our weapons. We must still have that, but I think in general it's been thought to be too much of a "hush-hush" subject. You are not supposed to talk about it, like "the birds and the bees," and all that. However, other countries have been engaging in the development of atomic energy too, and they are going on talking about it in a very frank manner. The result is that the American businessman hasn't had too thorough a conception of what it is all about.

It isn't because of fallure to have information available. I made a speech, "Atoms for Peace," way back last April in Vancouver, and I've been making speeches for about 2 years now on the use of atomic energy for

peaceful purposes.

I have been pleading for not only American industrialists but others to realize that atomic energy is a great boon to mankind. not just a bane. Fire was dangerous, too, when it was first discovered. It was probably considered very destructive until men learned how to strike it from flint when they wanted to, and how to warm their hands over it, and how to extinguish it when they wanted to. How it could be used for cooking came much later. Atomic energy is much the same thing.

Sure, it's dangerous. But we know already how to handle it and control it, and from now on, now that secret has been learned, atomic energy must be harnessed and put to

Question. Businessmen have to learn how to make money out of it, don't they?

Answer, Absolutely, Question. Can they do that?

Answer. Yes, but you're getting ahead of me. The whole world ought to know about the usefulness of this thing. There's a big philosophy involved. There are a lot of people in this country who are frightened. I think worrying about the use of the Hbomb has affected the whole national psychology. Of course, we have to warn people. They have to have all these installations and civil-defense organizations-Governor Peterson's organization, Federal Civil Defense Administration, has to function.

But there's no reason why people should have that on their minds all the time.

I believe that the beneficent uses of this great power—this God-given fundamental power, what you might almost call God Himself in action-can be explained to people. They can be told how it has the potential of bringing blessings to everybody on this planet. Telling them the creative possibilities in the atom-not just the destructivemight take the edge off some of these worries.

So, 2 years or so ago we started to make talks about that side of the atom and to get some optimistic philosophy out about it.

The first thing we want to get over to the public is that it is a wonderful thing to have this power and that we should get going on it quickly.

Question. Do you think that we are drag-

ging our heels now?

Answer. No, we're not dragging our heels, but I think it's a wonderful thing-a great lift-for instance, when Consolidated Edison of New York comes in and says, "We're going to spend 30 to 40 million dollars on an atomic powerplant."

It's not going to be here for a while unless they find cheaper ways of shielding, and so forth. But they should find cheaper, lighter methods of doing all these things. It's still going to be a little uneconomic in certain centers.

Now, New York City, of course, brings in a lot of coal and oil. You see it in the barges all the time. I don't know what Consolidated Edison's costs are, but they are anticipating 5 years from now when costs will be down and we'll be getting more efficient production in all of these things. Then they'll be all right. But there are many uses other than to generate electric power, like the marine uses we have been talking about here.

Question. Would the British sell atomic reactors commercially in places, for example, like Brazil?

Answer. Oh, sure, they could make them to sell just like you make bollers or electric motors. Just like Babcock & Wilcox, General Electric, and Westinghouse.

Question. Is there a demand for that type of thing today?

Answer. I certainly think there will beand soon.

POWER FOR JAPAN, INDIA

Question. There's a lot of interest in it? Answer, Yes, I'd say that, so far as we are concerned, we are faced with what I call the paradox of the world markets. You see, in the United States electricity is available to us at 4 to 7 mills per kilowatt-hour. Now, that's guaranteed power. We've got all the coal and oil we want, although we import a little oil-the Independent Oil Marketing Association says we're importing too much. But here in this country we are already fuel rich, and we don't need this new atomic fuel very badly, do we?

All right. But now to go to Japan, where it costs 20 mills per kilowatt-hour for electricity, and they can't develop much more power from conventional fuels, even water-

power, on any economic basis.

Then go to a place like India, where they just can't possibly develop even their water-

power-it's too expensive.

And go to France, where they're building their fourth hydro unit on the Rhone and where they told me last May it was the lastit had gotten too expensive to build any more.

Question. What does their electricity cost them?

Answer. I think it is probably around the neighborhood of 12 mills per kilowatt-hourknow it's about 3 times more expensive than ours-so it's about 12 to 14 mills. That's the cost, including the installation They are building their last conventional hydroelectric unit now. And when it's through they're not building any more.

I asked the French, "Well, what are you

going to do then?"

The headman said, "By then-it will be 5 years from now—I think we'll have atomic power."

I said, "I think you're right." So that's why France is working on atomic power. They can use it.

Brazil and Italy, too-even Switzerland. The topman in Switzerland told me they have a 4 million population, or close to that-probably a little bit more. And they don't see how they can have any more people in Switzerland because they don't have any more power. They have developed their waterpower about as fully as possible. And economically-if they keep their present standard of living-the population is about the limit that can live there. And now they don't know what to do about it.

Switzerland is very much interested in atomic power because it gives them hope they can supplement their waterpower and thereby provide jobs for all these mouths that are coming along to be fed.

Therefore, I'm wondering for our country and this is the paradox I mentioned-if it isn't much more important for us to pay attention to the international development of atomic energy in peacetime and not worry too much about our own installations here except perhaps for experimental purposes, and concentrate on going to Japan, on going to India, Brazil, and the other friendly nations. We're working out the know-how

We, who engineer-and we've done it already, that's why we in America lead in this field-we, who engineer and build and manufacture have had better manufacturing facilities and staffs and know-how than any other nation in the world. We can beat England to that and we can beat Germany to that, even. We've done it-that's why our weapons are always more effective. can do this job better than anyone elsebut why do it for ourselves when it does not compete soundly with our present form of power? Why don't we go ahead and do this internationally for others—and that way keep our world markets?

Question. You mean do it in cooperation

with others?

Answer. Naturally-any foreign nation you could work with. We've had a lot of uranium from Belgium—that would be a logical place. South Africa is furnishing uranium. Canada, for instance-

Question. And you would do it from the know-how or technical standpoint?

Answer. Yes. Many nations would look to us. India, for instance, has no manufacturing facilities, but I think India has a pretty good supply of uranium-certainly, thorium.

There would be everything to gain. would do most of the manufacturing and engineering and furnish most of the knowhow. We have the know-how. You can distribute a certain amount of operating know-how wherever you want.

RAISING LEVEL OF LIVING

Question. If they had the atomic powerplants they could go on building up their over-all industry there?

Answer. Yes, And that would give them & chance to bring their standards of living up-Of course, the major factor in any standard of living is the degree of industrializationthat is the major factor in keeping peoples from starving.

We think it won't be long before water for irrigation purposes is created through the application of atomic heat-I mean the purification of saline waters, of sea waters.

The industrial atom will affect agriculture. it will affect medicine. And with that, I think, generally—I'd give it a period of years. 50 years or so—I think you will begin to get the standards of living up all over the world. You will begin to get all these mouths fed. What is it Gandhi said? the millions who have to go without two meals a day, the only acceptable form in which God dare appear is food."

If we could only get a few grains of rice to eat a day, and had to wonder where the next meal was coming from, we would be most unhappy, I think. And the terrible danger, of course, is that some other nation may get the idea and for imperialistic pur-poses appear to Asia's billion people as "God."

Question. Will the atomic reactors abroad ever be able to furnish power as cheaply as the 4 to 7 mills per kilowatt-hour that we have in America?

Answer. That's an engineer's problem, and we've had to do some guessing over a period of years. There will be new discoveries. It's like the beginning of steam, the applications of fire and electricity. Just think what we've done in electricity. There have been we've done in electricity. The vast developments since 1880.

In the last 10 years you've seen the coming of television. I easily remember when we had the old-fashioned-type telephone, the Alexander Bell type. Look at all the changes that have occurred in your telephone since then. Now the same thing is going to happen in this atomic field. Even in the basic science of the field there are going to be tremendous developments and discoveries beyond our imaginations to predict.

Question. Aren't there places where power can be produced cheaper with atomic energy?

Answer. Oh, yes. I would say so. And places we are especially interested in such as Thule, in Greenland, where you have no wood, coal or oil.

Question. You would need a portable re-

actor, then?

Answer. Yes. I hope they will hurry it up. Question. There isn't any reason why we shouldn't work along and hurry up our development in power, is there?

Answer. There is every reason why we should do all we can to develop reactors for submarines, and so forth.

Question. For automobiles and railroads,

Answer. Yes, it would be feasible, although the automobile presents a number of prob-

END OF "HUSH-HUSH" ERA

Question. Is industry interested? Answer. Yes; more and more so. When I talked to the members of the Economic Club of New York just last April, I had many men, heads of great corporations and others, question me because they're vitally interested and need to know more. And I've noticed now in meetings of the Atomic Industrial Forum and the National Industrial Conference Board more and more businessmen are attending-as many as half a dozen from a corporation. The Conference

Board is starting up another 5-day conference, now. The University of Michigan is having one. They are very widely attended now by representatives of various indus-

tries that may be affected by it.

Corporate interest in industrial atomic energy has snowballed in the last 2 years from little or no understanding. Yet so many-we've been watching this, remember, since back in 1947—so many have thought it was one of those "hush-hush" things, something you couldn't even dream about using in any way, that they have had no conception of the controls that have been taken from around it in the last 5 years.

But I think these inhibitions and this timidity are disappearing very rapidly, though you still find it. And there is a natural lethargy, I find, on the part of certain segments of our industry. It's not especially true in companies where you have great leaders such as Mr. Sloan [board chairman] of General Motors, or Bill Price [president] of Westinghouse, Ralph Cordiner [president] of General Electric, and other leaders who are restless and don't let grass grow under their feet-who are always alert and onto new developments. there are a number of companies which are lcthargic—they're making some rapid turnover consumer items and they can't see anything in it for them. They just hope that nobody will drop an atomic bomb on their plants.

Question. Do you find any coal or oil people enthusiastic about atomic power?

Answer. Segments of the oil industry are enthusiastically interested now. They know that if they get into atomic research, they're bound to get a lot of shortcuts in their refining methods. I know they're going to do it in chemistry. Dow Chemical and all the big chemical companies, Monsanto, the rest of them-they've been after this for 3 or 4 years. They saw it right away. I know they're going to get it. And oil is nothing but chemistry, this refining of oil. In fact the new chemical business is run on molecular and atomic research.

Question. That seems to be the biggest part?

A. Certainly it is. Gene Holman of Esso |board chairman, Standard Oil Company (New Jersey) | bought himself some cobalt the other day-irradiated cobalt. He bought all he could-32 pounds of it, or something like that. They've got a \$250,000 building for research in possible atomic approach in oil refining.

ATOM VERSUS COAL AND OIL

Question. What about coal?

Answer. Atomic energy can be used as a substitute for either the solid fuels or the liquid fuels. I think we ought to be careful in using the liquid fuels. We're using them very prodigally. In one way we ought to hold back on it. I don't know how many hundreds of years-100 or 200 years-the supply will last. Liquid fuel is easily packaged. It's easily carried. It has a great many advantages you will never get out of a reactor, which is heavy and has to be more or less stationary.

Well, we've got a portable reactor, too, but it's not like carrying liquids around. And solid fuels for cooking, and so forth-I don't think there is any substitute for making steel with coke, and so on. I can't see that it is possibly going to interfere with either the liquid or solid fuel business at all.

Question. Every once in a while you hear it said that power from the reactor would not be practical unless you make and sell byproducts for the bomb-would you go into that?

Answer. That is more of a question for an engineer and a scientist, but I believe reactors can be practical-profitable, that is-without producing plutonium or bomb material.

Such comments on practicality would probably be valid if you were starting out just for commercial power. It is questionable whether you would ever have been able to sell people on affording an Oak Ridge for commercial purposes, let's say. Nevertheless, today we've got such plants, and they're capable of turning out the kind of fuel that you need for commercial reactors.

Question. In the future, though, unless you maintain these plants to make the material for the bomb, would you have the material for the industrial use of the reactor?

Answer. Yes. You would have to create them if you didn't have them. You might hope to find another process, but it would be pretty much of a job. But they don't need to be used primarily for destructive weapons. In an era of peace they could supply the materials for a new world. Atomic bombs, you know, can be turned into peaceful

Question. Is the supply of uranium a problem any more?

Answer. They are finding more and more of it all the time. Of course, there is a big drive down in New Mexico now and I understand Texas is looking for it. As for highgrade uranium, Czechoslovakia has a big. high-grade deposit. There are very large deposits of a fair grade, just fair, though in South Africa in the gold mining. They've taken these tailings that are up on the surface and they're readily available. There is quite a lot of it there.

In the Belgian Congo I believe there is the richest deposit. Canada has made some important discoveries in the Great Slave Lake area, and so forth. There just seems to be quite a bit of it around. The Atomic Energy Commission has painted a much more promising picture of the supply.

Question. So if industry wants to go in, it can go in?

Answer. Five years ago they were very much worried about the supply. But I suspect some of their optimism now arises from the fact that thorium and some of the other elements, perhaps one or two of the other elements, will show them the way not to use too much uranium.

WORLD WAR'S SOLE BOON

Question. When will the taxpayers start getting some money back from this deal?

Answer. Well, it's probably the only blessing that came out of World War II-the fact that we've got atomic energy. I suppose you would have to look at the cost and repayment potential over a period of 50 years or so. There are a number of blessings that

can come out of it and probably will. Some

have come out already.

On December 1 last, I proposed an international atomic lend-lease plan whereby we would help finance the implantation of atomic reactors in power-short countries all over the world-countries friendly to us, of course. Japan reacted very strongly to the idea. They need atomic power very badly. They want desperately to get started. About 10 days or 2 weeks after the speech had been printed on the front pages of Japanese papers, the Russians announced a plan to give industrial reactors to their satellites.

Question. How about our Government?

Are you getting any response?

Answer. Well, before I accepted the invitation to Japan we checked with the State Department. They know all about it. We also talked with other Government agencies, and they are very much interested. They want to get around to the psychological approach and they need to get across to the world the blessing that atomic energy could really be. You know, we are unpopular in some parts of the world. There are many reasons, some of which, of course, are not fair to us. I've always found, when I loaned money to a friend and he wasn't able to pay it back, I lost a friend. I think we lose our friends by a lot of our activities.

My thesis is to help friendly nations with American know-how, with reactors of the research type and perhaps the portable ones later on; to help them develop the power they need so badly and that we don't need so badly. They could pay us back, of course. Many are so anxious to get it that payment isn't too much of a question.

Question. What would it cost?

Answer. We figured about \$250 a kilowatt, and that's probably around the maximum to build a commercial reactor. For instance, you could start with an experimental reactor for around \$1.5 or \$2 million-that's what these college experimentals are costing. If you go to a portable at \$2 or \$2.5 million you wouldn't get a great deal of power, but at least you'd get a great deal of know-how of these things. Then later you can go into the larger sized reactors. There are plans under way for 10,000, 20,000, and up to 200,000 kilowatts.

Now that's a problem: It would be 3 or 4 times more expensive than steamplant of an orthodox type and it might run up to about \$25 million or thereabouts to build such a reactor now. Later on it would be developed, of course, into a greater reactor but the power cost will be much cheaper. It could mean that a \$25-million installation might take care of a city of several hundred thousand people.

You could really develop Japan's present electrical power if you put in, say, 12 reactors costing around \$25 million apiece. It would strike off the natural limits on their power supply, and let them use their manpowerthey're getting more people all the time. That's one of the big worries—they're getting up to 90 million people. They can live on that island provided they get jobs. They can bring in their food and raw materials, and a boundless supply of nuclear power would let them export their skills and labor without limit. I don't know what we're going to do about it, but Japan's our problem and we've got to get busy solving it.

Question: Well, what you suggest would cost \$300 million dollars. And we've already given them much more than that -

Answer: Oh, yes, we've given them \$2.5 billions already. And this wouldn't be done all at once. This would be over a period of

Question: And you could go to a country like Brazil-

Answer: Sure, and get them way is to get what we ought to do right away is to get what we ought know-how started. We've got Answer: Sure, and get them started. But this operating know-how started. to get a lot of youngsters in engineering schools. This thing is highly complex, and

these operators have to know what they are doing. It's going to take 10 years to do that in a country like Brazil. And the thing to do is to start with an experimental re actor right away. There are probably about 10 or 15 universities all with experimental reactors, and our boys are all learning. Well. that's good, because our boys have got to go and show these Brazilians and Italians the know-how.

ECONOMIC REVOLUTION

Question: We ought to build up our skills, then?

Yes, sure. We ought to create Answer: all the skills because we've got to export those skills sometime-I mean temporarily lend them. There is really a tremendous economic revolution involved. And we've got to look at it as much more of a revolution than the industrial revolution was, because you are dealing with many more hundreds of millions of people. You had a handful of people to deal with in the old days of the industrial revolution. Now you have a really serious situation.

Question: The atomic revolution is here,

then?

Answer: Yes. I want to emphasize this, too, since we're in this field: President Eisenhower did a very fine thing when he appeared before the U. N. and made a great speech and said: Here, now, we'd like to all get together, all of us, including Russia, because they are members of the U. N., and we will talk this (atomic-energy) thing over and get something started. That was his proposal. Russia tried to put it in the Security Council so they would have a vetoyou know all the history-trying to hamstring it and handicap it right away. But they finally got a meeting set up for next August, and they're going to do some talking about it.

I don't see why the United Statesmy approach—has to sit around and wait for the United Nations to do a lot of talking and maybe someday acting on it. Because to me it's a pure American industrialist's plan and program. Why not just have the Government let us go ahead and start pushing it? They are not holding back; the AEC has been very forward-looking, and there are no complaints to make from my point of view. We're used to working with men like Admiral Rickover [director, Nuclear Power Division, Bureau of Ships, U. S. Navy, and chief, naval reactors branch, Division of Reactor Development, AEC| and others, and they've been good training for a lot of our fellows. We've got to get things done today, not tomorrow.

Question. What's holding us back?

Answer. Just a natural lethargy, as far as I can see. There's enough extra fuel that we don't need for weapons. There certainly is a lot of know-how around; and there are certainly a lot of manufacturing facilities and a lot of great companies interested, like Westinghouse, General Electric, Babcock & Wilcox, Dow Chemical; I could name any number. And we're very much interested.

But if we did that with just one country-Japan or India, for instance, or one of your southeast Asian countries where additional power is logical-and said, "Here, we are going to help you," that would make more friends for us around the world. That would make friends in places where we have no friends at all.

RUSSIA STEPS IN

Question. Which is an investment of only \$25 million?

Answer. That's exactly it. It's not only the cheapest thing, it's a wonderful psychological thing. And let's do it, not just talk about it in the U. N. I had no more made a speech involving this program than within weeks Moscow announced that they were going to give Czechoslovakia and Poland some reactors. There is a tremendous psychological weapon involved here.

Question. If you were to get to work right away, how long would it be before you had a powerplant going?

Answer. Of course, Duquesne Light Co. expect their reactor to be completed by Westinghouse about 2 or 3 years from now

Question. The experimentals would take less time than that?

Answer. Oh, yes; there are a lot of experimentals already.

Question. And you could take one of those to those countries?

Answer. Pick out any one you want— Brazil, Peru—we have the reactor. Now, there is a certain security problem, but security problems are not very great in the commercial field. They are very great in the weapons field. There are lots of things that have to be kept secret in the weapons But our people don't see why you can't classify it in the so-called "gray" or one of the light-gray areas. I don't think there is much problem. Because, what's the answer, anyhow? If we don't do it, England's going to, or Russia is going to and it won't be long.

Question. It won't be long?

Answer. No; I expect England will move pretty soon.

Question. What do you think they will do? Answer. They will probably have a practical reactor for commercial purposes at Harwell, in England, within a year or two. They are a year or so ahead of us. They started 2 or 3 years before we did.

Question. You mean they will be ready

Answer. Oh, that will come along later. but they will have this all demonstrated. And what is it from then on? It's just a You build an automobile and duplication. you can always take it apart and lay out all the parts and make yourself a million of

Question. They can show a customer a reactor from which they can make others?

Answer. Yes; and they will know a lot about their costs, too, in building it.

Question. How long would it take to lay

down an experimental reactor?

Answer. We've got experimentals around the place. There are five invo There are five involved in the current pilot programs of the AEC. They are the smaller ones.

MIGHT PREVENT WAR

Question. It wouldn't take very long to build Brazil one, for instance?

Answer. Oh, no. But even the announcement that they were going to get it would I have had a definite philosbe a big help. ophy about all these things for a long time. and I've had a definite interest in getting this thing pushed internationally. Another great advantage is not only that it might prevent another war, but win ourselves friends, such as India.

The essence of the whole thing is that in the next 25, 30, or 40 years we might need a lot of those friends. We haven't got too much uranium of our own. We are nate in having a very friendly nation in Canada, which has lots of uranium, but Canada will find uses for that uranium-it can be sold to others. And it might not be so easy to tie up Belgium once they get into this thing. They may decide to sell that uranium in South Africa or somewhere else. And we haven't got this big continental supply of our own, such as we have even in the oil business. Or the atomic fuel of the future may be thorium, or some other element we haven't got. Where would we stand then?

We better begin to think about some of the friends we need around the world. Our population growth is enormous. I don't know what it will be in 1975, but it is enormous-and it is getting awfully costly to live in this country of ours, and other standards of living are going to come up so we can't sit here and figure we're always

going to have it this good. I think if we have some friends around the world with strategic fuels and raw materials it would be very helpful and convenient. I think we ought to make it evident around the world that we're not selfish about this great discovery.

As a matter of fact, basically, atomic owes its development to people of energy a number of nationalities. For instance, Becquerel, a Frenchman, Rutherford, an Englishman; Einstein, a German; Bohr, a Scandinavian; Fermi, who happened to be an Italian; Ernest Lawrence, an American, and many others. So I don't think we should take a selfish attitude about this.

Now, we know nobody is saying, "Let's keep all this for ourselves," but the effect

is the same.

We should make the point that we are so power-rich in cheap power that we do not immediately need atomic development in our country. But other countries do. It would be a wonderful thing to help other countries, particularly the friends of ours, and through that probably to undertake the best method of preventing another war.

It's a marvelous psychological approach against communism, if we only don't wait until communism has made the offer. Other countries are waiting to see what we will do. You can make an offer, but if you can't make good on it-they catch on to that one, too. I don't know what Russia is going to do. But they said they were going to give Czechoslovakia and Poland those And they's got to make good on reactors. whatever they promise. And, then, just out of our own self-interest, the last point is that maybe we will need these friends someday very much, not in your lifetime or mine, perhaps, maybe not in 50 years, 75 vears. But someday.

ATOMIC PLANE? SECRET

Question: What is the status of the atomic airplane?

Answer: I'm rather under wraps on that. The Air Force keeps us under very strict orders about it. All that is known is that we are working on it at our Fort Worth plant. I believe at Boeing they have in the last year or so had a study contract. General Electric and Pratt & Whitney are working on it. too.

Question: It would be a big plane?

Answer: Obviously, it would involve a large ship. A B-36 weight 230 tons, that 460,000 pounds. So we're used to building big ships. Question: Is that big enough?

Answer: I don't consider the size of the plane to be a seriously limiting factor. It depends on the size of the reactors needed to furnish the power you wanted.

An engineer wrote me the other day-he is a man whose opinions I would listen toand he said, "You're giving everybody the benfit of the doubt when you speak of these costs." He thinks that in 5 to 10 years we'll costs." know how to get electricity direct from the reactor.

Question. Do you believe that they might be able to?

Answer. It's conceivable. I must say that it seems a long way off.

Question. Lighter shielding is a major problem, isn't it?

Answer. Yes. And it's being worked on in a number of places. Somebody is going to come up with it. We don't know, because we probably don't yet know all the elements in the world.

Question. Some companies have complained about the patent regulations, haven't they?

Answer. Yes. In the early days it was natural for the Government to hold on to all those things. In order to encourage industry will tend to lighten up on that. I think there is enough sentiment in Congress for You free enterprise to bring that about. start with one of the world's greatest monopolies—the patent monopoly of the AEC. But, of course, it had to be that way for security reasons. Now you can't expect to change that all over and make it a practical situation all at once.

Question. Can't industry get patents now? Answer. Yes, but important inventions are subject to compulsory licensing, and there are other serious limitations.

I think the patent situation will work itself out and become normal after a time, and get more and more into the commercial aspects.

Question. Another thing they talk about

is insurance-

Answer. Well, that is quite a problem, too. We struck that. Of course, the Government has been, in effect, taking its own insurance in places like Hanford [Wash.] and wherever our men work, but when we were going to bring a reactor in order to put it in the Nautilus hull, one of our insurance companies, a major one, served us notice right away that they would cancel all of our insurance if we brought the reactor into the yard. had us running around in circles for a while.

Question. How is that problem going to be

overcome?

Answer. Well, they will have to get used to it. You're always going to have insurance. You have fire insurance, and I think you're more apt to have fires than you are to have trouble with atomic reactors.

Question. Is the insurance problem the fact that they don't have any way to figure

out what their risk might be?

Answer. Yes.

Question. Will they in time get some actuarial data?

Answer. Unquestionably they will get the data. I think the problem will be recognized for what it is-it's practically nonexistent. The actual experience of the Commission has been that it is the safest industry in the world, but insurance companies are worried about it because of the potential. And, if the Government is willing to pick up at least part of the potential, I think the insurancecompany people will step right in. I believe that is the way it will work out. Have you ever seen them handle these radioactive materials behind lead barriers?

Question. No-

Answer. Well, it is all remote. You can see what they are doing, but they use this remote machinery to pick the stuff up and carry it over from one place to another. And the thickness of the lead glass they work behind depends upon the radioactivity of the materials they are handling. There is always a Geiger counter around, so nothing could happen but what machines would start ringing bells. Everything is marked "Do not touch," and a fellow would have to be very dumb to get caught-most of them around know what the penalties are.

PROFITS FROM WASTE

Question. Once you get a lot of these reactors industrially, what will be the problem of the disposal of the radioactive waste?

Answer. There will be companies set up for that purpose. I think the Government has the right to the waste fuels.

Question. Isn't there a problem of dispos-

ing of the other wastes?

Answer, I think most of it will be very useful in the form of isotopes and such. It's a development problem. It's a reclamable waste. It is true that a few years ago they didn't know what to do with it. They tried to bury some of it.

Question. Haven't they had a lot of trouble getting rid of a lot of this stuff?

Answer. There hasn't been a lot of effort put on that problem—they've just begun to face up to it in the last 2 years. I think they know where to put most of it, but my prediction would be that probably someday they will go back and get it and use it for something else. It's still valuable.

Question. What about the cost of building the Nautilus-is it higher than it might be someday?

Answer. The original cost is, of course, higher. You see, the Nautilus is the first of its type. If you build just one of an item, you have all your research, development and experimental costs in the one craft-not spread out over several. But if 2 or 3 or 4 are ordered, you make great over-all savings because you can build 2 or 3 or 4 of a thing at once.

Question. Aren't you the only makers of submarines?

Answer. No. The Navy Yard at Portsmouth, N. H., is a submarine builder as is Mare Lsland Navy Yard, at San Francisco,

Question. But they haven't built an atomic submarine as yet, have they?

Answer. No. But Portsmouth has been designated for one.

Question. You haven't standardized on an

atomic power plant, have you?

Answer. Well, we're using two different types of reactors now. The Nautilus has one. The Sea Wolf [another submarine] has a different kind. For one thing, it uses circulating liquid metal in the heat transfer rather than pressurized water. We all have confidence that we'll find out what, ultimately, is the least expensive to operate and the most satisfactory. I suppose there'll be 2 or 3 more different types. The Navy, the AEC, industry—all of us on the team—see the real strategic value of the submarine.

SUBMARINE STRATEGY

Question. The combat submarine?

Answer. Yes-the high-speed atomic attack submarine, of course. But the submarine, you know, can be used also for many different military applications, such as underwater

transport of a strategic type.

You probably can't transport large cargoes under water economically or cheaply. I don't claim that. But during wartime it is highly desirable to have underwater tankers or underwater freighters. So, even though Russia may not have a lot of surface ships to attack with-and she may not have any supply lines which we can attack-nevertheless there's tactical value to an underwater approach.

Question. Would it ever be possible to convert the fleet-type submarine into an atomic-

type submarine?

Answer. Well, almost anything is possible nowadays, but you have to consider that the atomic submarine is built for very high sustained speeds under water. The hull shape is a lot different from a conventional submarine.

Question. What about Arco?

Answer. You mean the plant out in

Question. Is that a large reactor?

Answer. Well, they have several different things out there. It would be an interesting place to get to if you could get in. It's a testing area, largely. Out there we erected—with the Atomic Energy Commission, the Navy, and Westinghouse—the so-called submarine in the desert. It has the portion of the submarine hull that houses the reactor, the two major units-the power unit and the propulsion unit. It has been working out there now a year and a half, 2 years.

Question. It has been working successfully all that time?

Answer. Yes. By this means the Navy and the AEC knew a long time ago, long before we completed the Nautilus, that the machinery was perfect and worked perfectly. We had no doubts.

Naturally, they weren't going to spend millions of dollars building something that they weren't sure would work. So, this land-based submarine and its reactor proved everything. They even calculated that it

could run successfully under the Atlantic to Europe—even around the world.

Question. What about the operating cost

of the Nautilus?

Answer. Operating costs of the Nautilus will be determined by the Navy after extensive running of the boat. remember, however, the Nautilus is a unique weapon-and what is required primarily is high potential and performance as a weapon. Operating cost tends to be secondary.

Question. What about building an aircraft carrier or a very large ship for transatlantic

use? Would it be feasible?

Answer. Oh. very feasible, most feasible, Question. Would a nuclear powerplant take less space than an ordinary powerplant because of fuel it requires?

Answer. That's the principal advantage both in the submarine and the merchant

HOW COSTS COMPARE

Question. Then it would be most economic in a cargo ship, wouldn't it? There would be more space available-

Answer. Yes. In that connection I can give you some figures on the cost of electricpower energy. For instance, it depends on such factors as your waterpower, accessibility, your installation costs, your fossil-fuel equivalents. If you ship your fossil fuels long distances, then you run your costs way up. But electric power costs in our country run between 4 and 7 mills per kilowatthour. That's cheap. That's by water and the fossil fuels-coal and oil.

But the United States has about the cheapest power in the world. I think that's a fair statement. Britain is costly. France is costly-the Rhone development has been very costly. So, I'd say most nations would pay for electric power probably twice what

we are paying.

When you get down into ship transportation, you've got another thing. You have to compare what it costs a coal or oil-burning ship to develop the steam power to drive its turbines and propellers as against the cost of

nuclear power.

Now, the initial cost of building a nuclear ship might be more. We're dealing with factors here that haven't really been worked out. We can't really speak in terms of operating costs at this point, but certainly the big advantage is in saving the space for fuel. Frankly, in our country, with its presently cheap electric power, I would expect that the big atomic development over the next 5 years-add 10 if you want, although I expect to see all this move much faster-would be in marine applications, atomic-powered

Q. Well, is there a barrier in laws-is there something needed in the way of new laws?

The Joint Atomic Energy Commit-A. No. tee [of Congress]. I think, has been in the main extremely constructive. The late Brien McMahon, the first chairman, was intensely interested always. Of course, they were looking at it in his day as a weapon, and they didn't have fuel enough to consider it for industrial use. Also, I think the scientists have worked out a lot better method of control in the last 5 or 6 years. But they clamped on very strict security, as they should. It was right after a big war and they didn't want to make trouble, and there was every reason why we should have very tight security, both psychologically and actually. That's the reason for the Mc-Mahon Act. Now the act has been amended, STERLING COLE, who was chairman for a while, has been very helpful.

There are a lot of them on the committee who are most interested. It's been a fine. fine group, and the members have wanted the best for the Nation.

Q. They would give industry a chance to go ahead?

A. They're very anxious for it to do so.

Far East

EXTENSION OF REMARKS OF

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Thursday, April 14, 1955

Mr. NEUBERGER. Mr. President, the Oregon World Affairs Council, under the able direction of its president, Dr. Frank Munk, and Mrs. Hilmar Grondahl, executive secretary, have done much to bring to the people of my State constructive information on world problems.

Last week in Portland, nine members of the Asia Town Hall mission discussed before the Oregon World Affairs Council some of the pressing problems of the Middle and Far East. These Asian leaders stressed the need for understanding for an increase in productivity to raise standards of living, and, most important, the need for peace and time in which to develop.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an interesting and instructive article by Gene Briggs from the columns of the Oregonian for April 8. 1955

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASIA DEEMED AS NEEDING PROMISE OF PEACE. TIME IN WHICH TO DEVELOP

(By Gene Briggs)

Peace and time in which to develop.

These are paramount needs of Asian countries and just as important to the United States and other free nations, as democracies seek to guide the world into a new relationship of prosperity and good will, about 250 persons were told Thursday night by 9 Asians in a discussion sponsored at the Multnomah hotel by the World Affairs Council of Oregon and cooperating organizations.

On the panel of speakers were representatives of the governments or popular leaders from Egypt, South Viet-Nam, Thailand, Indonesia, Iraq, India, Japan, Jordan, and

the Philippines.

RISE OF NATIONALISM TRACED

In general, the speakers told of the rise of nationalism in Asia, the recent independence gained by several Asian countries, and the problems of development they face after generations of backwardness.

Roberta Villanueva, general manager of the Manila Chronicle, the Philippines, said the Asian countries have a common problem of ferment, turmoil and restlessness of spirit. He said "this nationalism is an important dynamic spirit, like yours of 1776."

Villanueva said the "weak are generally suspicious of the strong," but "I urge you to keep on helping people of Asia to gain the necessities of life. Don't be impatient, and some day * * * the people of Asia will work hand-in-hand with you in developing the bright new one-world of tomorrow.

ISRAEL PROBLEM TO EGYPT

Mrs. Amena El-Said, Egypt, said the major problem in Egypt is Israel. She said the Middle East was divided when Israel was created by the United Nations.

"The United States is to blame morally and politically for Israel," she said and as long as Israel exists, there will be no stability

Some Pressing Problems of the Middle and in the Middle East. "Money never buys friends, but you can get our friendship free by giving us justice." Mrs. El-Said concluded. Abdul Kerim Al-Uzri, Iraq, echoed Mrs. El-Said's statement that "We, as Arabs, con-

sider Israel the most important and dangerous question."

For Asia as a whole, Al-Uzri said the major problem is one of poverty. He said, "We must raise productivity. The American people can help provide the necessary technique and, perhaps, some of the capital."

He said Iraq needs little of that capital,

but many Asian countries do.

India's G. Ramachandran, director of a rural workers' training center, said his country has recently rediscovered freedom after centuries of subjugation. "We seek to nurture the freedom that has come to us," he said.

"We inherited a country with the task of rebuilding a shattered land. If there is conflict, we'll be thrown back many years. The greatest need is peace * * * peace for India and Asia."

Cai Thai Boa, Vietnam, said the acute problem of his country is communism. Because of the Communists, he said, we have partition, a country almost destroyed and more than 1 million refugees from north Vietnam.

He said, "We want also peace. Our people

need to live in peace."

George Togasaki, Japanese newspaper publisher, said population is the first problem of Japan. The Japanese population has grown from 33 million at the time Japan was opened to the West to 88 million today. Little of the country is arable, he said, and Japan has turned to industry. The solution is two-way trade, not aid, he said.

Musa Nasir, Jordan, said America should know of the injustice done to the Arabs because it concerns you as much as us. He said the Arabs would rather have one tiny bit of justice than millions of dollars.

Mohamad Roem, Indonesia, ex-cabinet minister, said "Many people in Indonesia believe in democracy and these elements will win in the end." He said the United States should seek closer relations not only with military countries, but with people who are moving in a democratic way.

Miss Nilawan Pintong, Thailand magazine editor, described the Thais as a people happy with their own way of life but caught up in world progress and forced to become modern. She said, "It is the responsibility of the people who brought in new things to teach them and show them what needed."

Disposal of Projects Built by the WPA

EXTENSION OF REMARKS

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Thursday, April 14, 1955

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an opinion of the General Counsel, General Services Administration, concerning the rights of municipalities in the disposal of buildings or projects constructed under WPA. I believe this opinion will answer questions which have arisen in many communities throughout the Nation.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

GENERAL SERVICES ADMINISTRATION, Washington, D. C., March 9, 1955. Re WPA-built barn, Belvidere, S. Dak. HON. FRANCIS CASE,

Committee on Public Works, United States Senate.

Washington, D. C. DEAR SENATOR CASE: Reference is made to your letter of January 21, which was re-ferred for reply to this office by the Archivist of the United States. The inquiry sought information concerning any interest the Federal Government may have in a barn erected by the WPA in the town of Belvidere. S. Dak., which is presently being considered by town officials for disposal by sale.

An exhaustive research of the files of the Works Project Administration reveals that the town of Belvidere, Jackson County, Dak., acted as official sponsor of project OP-65-1-74-2324 to "tear down and salvage materials from abandoned lumberyard, storage sheds on private property for use in constructing horse barn, hog house, stock pavilion and corrals, 500 feet of 2-inch water main from town system to project and perform incidental and appurtenant work thereto on town-owned property."

The foregoing quotation appears in an agreement signed by W. E. Kuhn, chairman, town board, June 1940, which also contained the following restriction: "No sale or other division of the property from public use and control will be made during the useful life of the improvements created under this pro-'The completion date of this project

was October 29, 1940.

In the case of the United States v. City of Columbus, decided December 3, 1943, United States District Court of North Dakota, N. W. D. (54 Fed. Supp. 37), the United States sought to recover from the city of Columbus, N. Dak., the amount expended by it for the cost of materials used and labor performed in the construction of a community recreation building as a WPA project, leased by the city as a liquor store. The court on motions for judgment on the pleadings stated as

"A review of plaintiff's complaint indicates that by virtue of the Federal Emergency Relief Appropriation Act of 1937 (15 U.S. C. A., secs, 721-728), the United States of America agreed with the city of Columbus for the erection of a certain project described as: 'Demolishing old building and construction of the community recreation building'; that the project was properly approved, and that 'the project herein alleged was by this plaintiff in all things performed and completed on January 31, 1939, in the total cost of materials and labor in the sum of \$3,729.90.

The complaint alleges that the defendant 'did convert the project herein * * in that the said defendant leased same to a private individual for the operation of a liquor store, and by reason thereof, the plaintiff herein is entitled to recover from the defendant, the sum of \$3,729.90, the amount expended by this plaintiff for the project herein described.' In effect plaintiff contends that all projects constructed by or through the authority of the Federal Emergency Relief Appropriation Act of 1937 shall be or are impressed with an easement or a restriction limiting the use of such completed projects to the uses described in the act, and that a local municipality, incidentally benefited by the Federal Emergency Relief Appropriation Act of 1937, could use the project thus created only for the purposes set forth therein.

"(1) It seems to me essential, in order to determine whether or not plaintiff's complaint states a cause of action upon which relief could be granted, and that examination be made of the act in question and its purposes ascertained. The evident and declared policy of Congress in passing the various Emergency Relief Acts was that of reducing and relieving unemployment. The joint resolution of June 29, 1937 (ch. 401, 50 U. S. Stat. 352; 15 U. S. C. A., secs. 721-728),

begins by stating:

"That in order to continue to provide relief, and work relief on useful public projects, * * * there is hereby appropriated,
 * * * (money) to be used in the discretion
and under the direction of the President,
 * * * and no non-Federal project shall be
undertaken or prosecuted under this appropriation unless and until the sponsor has
made a written agreement to finance such
part of the entire cost thereof as it is not to
be supplied from Federal funds."

"Numerous courts have had opportunity to define the purposes of the various Federal

Emergency Relief Acts:

"Courts have judicially noticed the fact that the primary objective of the Federal Emergency Relief Appropriation Act of 1935 (15 U. S. A., sec. 728 note) was not to benefit particular municipalities or localities, but to

provide relief for unemployment.

"'By contributing a small part of the necessary expense and by contributing the services of a superintendent and a small number of employees the city of Los Angeles was able to obtain the benefit of the project. It was not, however, city work of which the city had control, but was under the rules and regulations of the Emergency Relief Administration. (Hoover v. Independent School Dist., supra (220 Iowa 1364, 264 N. W. 611); Shelton v. City of Greenville, 169 Tenn. 366, 87 S. W. 2d 1016; Todaro v. City of Shreveport, supra (La. App. 170 So. 356, 360)).' (Taylor et al. v. City of Los Angeles (29 Cal. App. 2d 181, 84 P. 2d 242, 243).)

"We are dealing here with emergency measures which represent the exercise of policy power and have for their purpose the relief of persons in distress by reason of the financial and economic depression. Their primary purpose is to furnish work to the unemployed. The question of making public improvements is secondary; and is but a means of carrying out the primary purpose." (Village of Larchmont, et al. v. Town of Mamaronec, et al. (249 App. Div. 741, 291 N. Y. S. 716, 718.))

"The sole and primary purpose of the various emergency relief appropriation acts and the executive order of the President made in connection therewith, is to give employment to persons requiring relief, and involves a work relief program.' (Block v. Sassaman (D. C., 26 F. Suppl. 105, 106.))

"The Supreme Court of Massachusetts had occasion to pass upon the purpose of the various emergency relief acts. In doing so that court stated:

"'Running through all the laws enacted. the purpose of the Federal Government is found to relieve unemployment directly, through projects, so called. The plan of employment involved the doing by the Government itself of these projects, which, as in the case at bar, theretofore were carried on by the municipalities themselves with some possible assistance from the Commonwealth and county. But we view these projects as undertaken not for the benefit of the municipality, but primarily for the purpose of relieving unemployment, and incidentally for the utility and convenience of the general public, as distinguished from the municipality itself.' (Benoit v. Hathaway (1941, 310 Mass. 362, 38 N. E. 2d 329, 331.))

"(2) It is apparent from plaintiff's complaint that '* * * the project herein alleged was by this plaintiff in all things performed and completed on January 31, 1939 * *.* We are then confronted with the question of what control the United States of America could exercise over the project after its completion. It is apparent that the primary purpose of the Federal Emergency Relief Appropriation Acts had been accomplished when the project was completed. Unemployment had been lessened; relief in the way of public work had been granted. The United States

had paid those properly certified as needing relief for such work as they performed on the project, which, according to the complaint, the plaintiff itself completed. The money was not paid by the United States to the city of Columbus. The city of Columbus, by having a completed building in place of an old and inadequate one, was incidentally benefited. But the purpose of the act was not to benefit the city of Columbus, nor to erect a community building for the city of Columbus. The primary purpose, as stated, was to relieve unemployment, and when the project was completed that purpose had been served. Nowhere in the act do we find any authority or justification for the theory that projects thus completed may be used only for the purposes designated in the act. If the contrary were true, and if the Government's theory were sound, then the Federal Government could exercise control over the many thousands of non-Federal projects created out of WPA labor. That control would not be for any limited time, but theoretically would be forever, or at least until such projects were no longer susceptible of any practical use. The public ball park of a municipality would forever remain a public ball park unless the Federal Government (provided even it had the authority under the theory advanced) consented to its being used for other purposes. Congress intended no such control over incidental benefits of the relief program, and I find no justification for such theory in the acts involved. It is quite true that Congress, in its appropriation, limited the projects upon which such appropriations could be expended. Had the city of Columbus asked for the approval of a project creating a privately operated apartment house, the project would not, of course, have received departmental or executive approval. But once a project, which in its application meets the specifications required by law, and receives approval, and is constructed under the supervision and control of WPA officials, is completed and turned over to the municipality, it is turned over without being impressed with an easement or right or restriction controlled by the United States, and may be used thereafter by the municipality in any manner which the laws governing that municipality allow. A contrary conclusion would, in my opinion, result in entanglements of such infinite complication as to be impossible of administration, judicial or otherwise, and was never within the contemplation of Congress. "(3) It is true that the plaintiff's com-

"(3) It is true that the plaintin's complaint alleges that the defendant agreed that 'the work proposed will be done in full conformance with all legal requirements,' and also that 'All operations will be in accordance with regulations prescribed under the Emergency Relief Appropriation Act of 1937, and orders and regulations issued thereunder,' and that section 8 of Operating Procedure G-1, issued by the Works Progress Administration, provided that 'Projects must be genuinely useful to the public' and 'Projects shall not be undertaken for the benefit of private * * improvements may be made only to public property * *, which property is held either for the conduct of normal governmental function or for the general use of the public'.

ernmental function or for the general use of the public."
"It will be observed, however, that nowhere in the complaint is it alleged that the defendant had any control over the construc-

tion of the project, nor is it alleged that in the actual construction there was any deviation from the bare provisions of the law, nor from the regulations which were duly issued by proper authority thereunder. The United States, plaintiff herein, through its officials

and its agents, had full control of the construction and completion of the project sponsored by the city of Columbus.

"The type of project or proposal, as alleged in the complaint, was a proper one, and the complaint alleges that the plaintiff 'in all things performed and completed' the proj-

ect. Nowhere in the complaint is there an allegation to the effect that the defendant agreed that after the completion of the project the same would be used in any specified ect the same would be the manner or for any paricular purpose or purposes. There has been alleged no fraud on the part of the defendant. The complaint merely alleges that the defendant 'converted' the project, that is, 'the community recreation building,' by leasing the same to a private individual for the operation of a liquor store. The answer, incidentally, denies that the defendant leased the building to another for the operation of a liquor store, but asserts that it operates a municipal liquor store therein and has a contract of employment with the one who manages it. There may be some question whether, under the laws of the State of North Dakota, the city of Columbus could itself operate a municipal liquor store. But, with such questions the United States has no concern. The interest of the United States in the project ceased when the primary purpose of the act had been served through giving work relief, by completion of the project, and its release to the defendant.

"For the reasons stated I am of the opinion that the complaint fails to state a cause of action and the case will be ordered dis-

missed."

Accordingly, it would appear that the several Emergency Relief Appropriation Acts do not require, in the absence of fraud, any WPA projects authorized thereunder to be used only for the purpose contemplated in

the act after their completion.

The completed project when turned over to the municipality is not impressed with any right or restriction controlled by the United States but may be used or disposed of by the municipality in any manner allowed by the laws governing it when the project has served the purpose for which Federal assistance was granted, viz., the relief of unemployment, or when its useful life, as determined by the responsible town officials, has lapsed.

Sincerely yours,

GENERAL COUNSEL.

Stop the Current Drift Toward Atomic War

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. LEHMAN. Mr. President, on April 2, 14 Protestant church leaders joined in an appeal to President Eisenhower to stop the current drift toward atomic war. This is a message which comes, I believe, from the heart of the American people.

I ask unanimous consent that an article in the New York Times of April 3, reporting the dispatch of this letter, and also setting forth the text of the letter, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT ASKED TO STOP WAR DRIFT—FOUR-TEEN PROTESTANT LEADERS SIGN APPEAL AVERT ATOMIC SMASH-CHINA COURSE

Fourteen protestant church leaders urged President Eisenhower yesterday to stop the current drift toward atomic war.

In a letter to the President, the churchmen took sharp issue with White House advisers who have advocated all-out war to destroy Red China's industrial potential. The letter said:

"We are shocked, Mr. President, that these advisers urge you, who have stood always consent to all-out war and the use of atomic bombs. Such an irresponsible policy would expose the United States Government and the American people before the whole world as wanton aggressors."

The churchmen were equally critical of the thesis that the United States is honor bound to defend the Quemoy and Matsu Islands or to protect Chiang Kai-shek from

losing face.

'We think that to risk worldwide atomic war for the prestige of Chiang Kai-shek would not only be a folly, but a crime of the first magnitude," they added.

LIST OF SIGNATURES

Signers of the letter were:

The Right Reverend Norman B. Nash, Protestant Episcopal Bishop of Massachusetts.

Bishop John Wesley Lord, of the Boston area of the Methodist Church.

The Reverend Dr. John A. Mackay, president, Princeton Theological Seminary.

The Right Reverend Charles K. Gilbert, Protestant Episcopal Bishop of New York, retired.

The Reverend Guy Emery Shippler, editor, the Churchman (Protestant Episcopal). The Reverend John Bradbury, editor, the Watchman-Examiner (Baptist).

The Reverend J. Tremayne Copplestone,

editor, Zions Herald (Methodist)

The Reverend Dr. Phillips Packer Elliott, pastor, First Presbyterian Church, Brooklyn.

Emerson Hugh Lalone, editor, the Universalist Leader.

The Reverend Dr. John Towland Lathrop, minister, First Unitarian Church, Brooklyn. Clarence Pickett, honorary second American Friends Service Committee. secretary,

W. Stanley Rycroft, secretary for Latin America of the Board of Foreign Missions of the Presbyterian Church in the United

States of America. John C. Slemp, editor, Missions (Baptist). Stanley I. Stuber, general secretary of the Japan International Christian University Foundation.

TEXT OF LETTER TO PRESIDENT

The letter follows:

"We, the undersigned clergymen, laymen, and editors of Protestant journals, writing as individuals, are profoundly disturbed by the current drift in Washington toward war.

"According to the New York Times of March 26, 1955, high policy advisers are suggesting a strong action against the Chinese mainland, which has been ominously labeled 'Operation Smash China.' Some such advisers, said the Times, advocate war on an all-out basis, with the objective to destroy Red China's industrial potential.

'We are shocked, Mr. President, that these advisers urge you, who have stood always for peace, to consent to all-out war and the use of atomic bombs. Such an irresponsible policy would expose the United States Government and the American people before the whole world as wanton aggressors.

"The New York Times dispatch says it is 'the conviction in official quarters that Russia does not wish to risk a general war' and that 'Red China wishes to avoid involvement in a general war.'

"Why then shall we start all-out war against the Chinese mainland? How, we ask, can the administration expect to have a united people behind our foreign policy? There are millions of upright Americans whose Christian conscience would never tolerate such an action."

PREMISES TERMED "FLIMSY"

"Your advisers say that we are honorbound, to defend Quemoy and Matsu, and the only way to do it would be to smash China,

There is also talk that we must protect Chiang Kai-shek from losing face. We think that to risk worldwide atomic war for the prestige of Chiang Kai-shek would not only be a folly, but a crime of the first magni-

"The arguments in favor of waging preventive war are unbelievably filmsy and faulty. The promoters of the smash China plan predict that Russia would stay out of such a war.

"As you will recall, our military experts were wrong on China in 1950. We fear that they are blundering again. Why should Russia, also honorbound by treaty, stand idly by and see her ally destroyed by atomic

"Mr. President, we implore you to stop this drift toward atomic war. We wholeheartedly agree with a recent editorial in the New York Times that it would be a vast tragedy if we stumble into war against the intentions and wishes of the majority of our people and our allies.

"As Christians and citizens we urge you to exercise in this critical hour your strong leadership for peace. We agree fully with the New York Times editorial which said:

"'It is time that the fire-eaters in Washington, whether in the Pentagon, or else-

where, went into silence.'

"Mr. President, if the world is to be saved from irretrievable disaster, we must be-gin to think and act positively in terms of peace. As Christians we know that war, atomic war, will bring no solution. Mr. President, said recently that 'there is no alternative to peace' and 'the concept of atomic war is too horrible for men to endure and to practice; we must find some way out

"If we blunder into atomic war, there will be no victors and few survivors. The only way to find a solution for remaining con-

flicts is by negotiation.

"In years past we negotiated the Berlin blockade, the thorny question of Trieste, the Korean war, and the jungle war in Indochina. Shall we now plunge mankind into the abyss for the tiny islands of Quemoy and Matsu? These islands are a part of Chinese mainland and we should evacuate

"As for Formosa, we must negotiate either on the basis of the two-China concept or as a neutralized sanctuary for Chiank Kai-shek under the trusteeship of the United Nations.

"Mr. President, as Christians we cannot be silent at this critical juncture of United States history. Our conscience compels us to oppose an aggressive all-out war policy. Your decisions, Mr. President, will not only affect the safety and well-being of 165 million Americans, but your stand for peace will benefit the whole human race.

"We beg you, Mr. President, to continue your action for peace, stop the drift toward war, insist on peaceful settlement of differences between nations. The problem of today is not the prestige of Chiang Kai-shek, but the survival of our civilization."

The Late Reverend Father Peter A. Crumbley

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. McCORMACK. Mr. Speaker, a great man and a great priest whose whole life was a constructive and most

influential one in the service of God and mankind was the late Reverend Father Peter A. Crumbley, O. F. M., Franciscan Order.

We read and hear much of the juvenile problem but Father Crumbley considered this important problem years ahead of others.

In my extension of remarks, I include an article based on an interview with Father Crumbley-or Father Peter as he was endearingly called-written by Louis M. Lyons and appearing in the Boston Globe of November 3, 1935. The views of Father Crumbley are as applicable today and probably more so, than when he expressed them years ago.

Father Crumbley was a friend of mine whom I greatly admired. Anyone who met Father Crumbley during his lifetime was a better person because of such meeting.

The article follows:

NONE PORN A CRIMINAL, DECLARES FATHER CRUMBLY-ONE-TIME PRISON CHAPLAIN SAYS NEGLECTED CHILDHOOD TO BLAME-PUTS IT UP TO PARENTS

(By Louis M. Lyons)

"You've had the confidence of thousands of criminals; what do they tell you gave them a start in crime?" I asked Father Peter A. Crumbly, the Franciscan friar whose experience with crime has ranged from his early connection with juvenile courts and reform schools through a number of years as chaplain of Joliet Penitentiary.

"It's the almost unanimous verdict of criminals that the start of their troubles was a neglected childhood," the priest replied.

"I've talked with thousands in the penitentiaries. 'If I'd had a break when I was a kid,' they tell me—'My father was a drunk-ard. My mother was no good. We lived in a tough neighborhood. I got running with a tough gang. Then once I got in the jug every man's hand was against me. Once a convict always a convict.' That's what they say.

CAN BE REFORMED

"Yet I know the majority of criminals can be reformed. I never met a boy who was all bad. It's the business of the friends of boys and of patriotic citizens generally to discover the good in problem children and fan the sparks into the flame of a good life.

"Take a child almost incorrigible. He is a hero worshiper. Let him attach himself to a fine person and it will make a man of him. Somebody has a responsibility for these young people. In the first place, it is the parents' responsibility to teach respect for authority. But where there is insufficient home influence the employer can do a great deal. If a businessman has a young clerk who is running wild, getting into bad company, drinking, a word from the boss would go further than preaching. The businessman is too apt to say, 'It is not my responsibility' and let an opportunity go to help at a critical time."

The mission father's black pipe went out during this long passage. He got up, gathered his medieval brown robes about him. and made his way to the kitchen of his good friend and old Army mate, James F. Fitzgerald, at Milton, to get some old-fashioned matches. Then his host's children came tumbling in to tell him about the pheasant's nest that he must crawl under the shed to see. But like other veterans he has grown a little thick for crawling under sheds. So he took their word for it. Then there was phoning about the address he is to deliver at the Copley-Plaza ballroom this afternoon on Youthful Criminals—What Is Our Responsibility to Them? His lecture is to help the guild of St. Elizabeth finance its day nursery.

NO AUTOS THEN

His pipe going again, Father Crumbly remarked that his earliest recollection of home was his father with his pipe, and the old gentleman still enjoys a smoke at 80.

"My father could supervise me enough," he said. "There were no autos then. Parents have more of a task now. I'm afraid many of them aren't up to it. When I speak to a Rotary Club I say, 'Look your son over. He has your appearance and characteristics. Did you ever stop to think that he has your temptations multiplied many times by modern conditions?' Young people run their own lives now. Parents let them have their own rein; let them go anywhere, read anything, see anything. marvel to me that chidren are as good as they are.

"We who have responsibility owe them moral support and encouragement. Parents and teachers should protect them from what they lack experience to know is undermining to their lives. If we fulfill our responsibility to them as children, we won't have to lock them up in the penitentiary later on. I say that if we take care of a boy in his teens the rest of his life will take of itself. Keep a boy decent until he is 20 and his life will solve itself. By that time he will be interested in some nice girl and they will plan their lives together. But let a fellow run wild from 13 to 20 and you get

a scarred brand at maturity.
"We have no criminal class," the priest insisted out of his many years' experience with men who have committed crimes. "No one is born a criminal a priori any more than anyone is born to die of tuberculosis; neither science nor sociology will solve the crime problem. It is not due to ignorance, nor heredity, nor environment. It is bred in woeful disrespect for authority—for all authority-domestic, civil, ecclesiastic. If a man doesn't observe the commandments of God, how can we expect him to obey the laws of man? The sanction of an honorable man is conscience. The sanction of the gangster is fear. The first duty is the parents.

RESULTS INSPIRING

"I think the young people today, although they have their elders mystified, have many consoling characteristics to those of us who love and study them. Just before I came here I conducted a retreat for 700 high-school boys in Chicago, and the week before that one for 900 boys in St. Paul. I specialize in that work for high-school boys. The result is most inspiring to me.

'To the casual observer the high school lad appears flippant and irresponsible. My impression is that he is neither indifferent nor irrepressible. He is sensitive and selfconscious and adopts a flippant manner to cover his true feelings. He hates sentimentality from adults. But as soon as he discovers an older person who has a true sympathy for youth expressed in a man-toman way, he returns respect where he finds it.

"The high school lad realizes that he is in between a child and a man. Subconsciously he is aware that he is neither child nor vet a man. A lot of his deviltry is to cover up that. A 15-year-old is all hands and feet and awkwardness in the presence of adults. But in his own gang he can be a ringleader. My method is to get in with them and be a friend. Not a spy but a leader. Soon they lose their restraint. Supposedly tough lads want me to see their football games. They respond to a true interest.

The high school boy of today is convinced that grownups have made a mess of this world. I don't know but he's right. They blame our generation for the depression and the lack of peace in the world. They aren't articulate about it, but they sense that the results we have got don't much appeal to them. Whoever can lead the heart and mind of this generation of young people will con-trol the world. My interest is to develop them for God and for good citizenship."

He described his activity in the Catholic

Youth Order, started by Bishop B. J. Sheil of Chicago, which has recruited 100,000 boys for wholesome interests with its sponsorship of sports tournaments and scholarships.

"It's kept thousands of boys off the streets," he said. "No religious man ever went to jail, whatever his religion. Through the interest the Catholic Youth Order has developed among boys from the crowded quarters of the great cities, we have brought thousands of their families back into touch with religious impulses. Many of their peoplenew here from Italy, Poland, or elsewherehad lost touch with the church. Through their boys' associations, oftentimes whole families have found a church home. A lot of talent is wasted in dealing with youth because everyone has his own fad to try out. But life is not complicated if we will keep our minds clear about it."

On the telephone the guild wanted to know what Father Crumbly would wear for his lecture. He had brought a Prince Albert for an afternoon lecture on a lay subject to a general audience. Mrs. Fitzgerald agreed. Her taste and judgment was against the spectacular. But the suggestion was that he wear the garb of his order because of the romantic appearance of the medieval gown with its cord, and hood, and cross.

The problem was suspended for the time. But it led Father Crumbly to speak of the romance of the Franciscan Order, founded by St. Francis of Assisi in 1209.

CAME WITH COLUMBUS

It was a Franciscan padre, he recalled, who brought Christianity to America with Columbus.

"Padre Juan Perez, O. F. M., was the father confessor of Isabella, Queen of Spain, and also a man of science and as such interested in Columbus' proposed explorations. Padre Perez persuaded Isabella to finance Columbus' voyage, then himself joined it as chaplain and upon the landing at San Salvadore erected a cross and consecrated the newly discovered land to God. So we say we brought the church to America," said the priest.

"Other Franciscans established themselves in Florida and in Canada and Mexico and spread their missions up the Pacific coast to San Luis Rey, Santa Barbara, and as far as Sacramento.

Franciscans take the vow of poverty. Neither they as individuals nor their order may own property. Father Crumbly is now his father's only heir and it became necessary for his father to make a will, since the son cannot inherit his property. To cover the law, his father has willed the priest \$10.

This is the Franciscan missionary's first public lecture here though he has been often in Boston. As chaplain of the 601st Engineers he was attached to the Engineering Training School of the First Army Corps of the AEF where James F. Fitzgerald, of Milton, and Frank Nolan, postmaster of Avon, became his fast friends. A missionary of his order now, the Franciscan travels from Canada to California, holding retreats, preaching a simple religious faith. Buoyant in spirit, hearty in physique, as much a man's man as any of his veteran buddies, Father Crumbly, now graying and broadening to a comfortable middle age, chuckles to recall his first job as a boy in Appleton, Wis., was delivering the Ashland Daily Press whose editor then was Joe Mitchell Chapple, Bos-Mrs. Fitzgerald says her ton editor now. husband's good missionary friend is the most comfortable guest she ever has in the house. For one thing he gets his own matches.

FHA Facilities for El Paso

EXTENSION OF REMARKS OF

HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. RUTHERFORD. Mr. Speaker, under leave to revise and extend my remarks, I submit the following letter which, as the date indicates, was written by me on April 7, 1955, as the result of an incident which transpired during the time Congress was in recess for the Easter holidays:

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES, Washington, D. C., April 7, 1955.

Mr. GEORGE HERVEY,

El Paso, Tex.

DEAR MR. HERVEY: In connection with our telephone conversation of yesterday, you implied that a newspaper report had intentionally or unintentionally left the impression that I was condemning or was critical of persons who sent me telegrams in support of a Federal Housing Administration insuring office in El Paso. Such was not my position or intentions, and I therefore want to state very clearly and as concisely as possible the full situation.

I was recently contacted by an individual who informed me that he was the authorized chairman of a committee of the El Paso Home Builders Association, the purpose and sole function of this committee being to obtain and present factual information to the FHA supporting the office for El Paso. I was specifically told that the approach and procedure would be to present these facts to the district office of the FHA in Lubbock, and then here in Washington.

I was told by this committee chairman that their intent was to show the need and justification for establishing the office in El Paso, and not to engage in political pressure tactics which might be harmful to the project. In this, I concurred.

This report had been transmitted, I understood, to Mr. Norman P. Mason, Chief of the Washington FHA office. The officials requested time to study the report and conduct an investigation and survey so that subsequently, if possible, such an office might be established in El Paso.

Within a few short hours after Mr. Mason had started the survey, an attorney from El Paso, who said he represented you, Sam Guido, Jr., and a Mr. Kirkpatrick et al., presented himself in my office and stated that he was interested in obtaining the office. He made it clear that he represented only a small group of the El Paso Home Builders Association and that he was not to be considered as spokesman for the majority of the members of this organization. He explained to me that under the conditions of a contract he had with you and others, he would be paid the sum of \$5,000 if the office should be obtained for El Paso.

He also stated to me that he urged his clients to engineer a telegram campaign to coincide with his efforts. Now bear in mind that at this time I had not received formal, informal, official or unofficial requests to exert efforts in behalf of obtaining the FHA facilities for El Paso.

I had not received any fact, information or statistics which would place me in a position to make a formal or logical request, and present to the official here the case, founded on facts and not fancy, in behalf of El Paso. You, nor anyone in your particular group, at this point had contacted me in regards to the project requesting the establishment of such an office in El Paso, nor of the status of the situation. As stated, I had no facts whatsoever. Instead, I was greeted by 98 telegrams, and, I presume, others will come.

My position as regards those who sent the telegrams is this: these persons, I assume, were informed by you or your group that their help was needed in obtaining this fa-You possibly told them that the congressional officials here—Senator LYNDON JOHNSON, Senator PRICE DANIEL, and myselfhad all the facts and all we needed was an avalanche of telegrams expressing interest in the project, in order to be able to get it.

These people who sent the telegrams were sincere, civic-minded citizens who, upon the advice given by uninformed and unfair individuals, were given an erroneous impression and were denied the benefit of the full facts. These people were unaware of the true status

and situation.

Had you and your group taken the time and effort to have checked with the Texas Senators and myself, we would have told you that we would be happy to work on the project if you would but furnish us the facts we needed. Then after we had presented the case to the FHA and the proper officials had made a study, should the request have been denied, we would have welcomed and, in fact, solicited additional statements from business and civic leaders in El Paso.

Not only were your actions ill-timed, and of such nature as to possibly hinder our project, but if you had checked you would have known that Congress is not in session due to the Easter holidays and that both Texas Senators are out of town and will be for 2 weeks hence. (I might add, I am here because although the House is in recess, there is much other work than House action to be done here in Washington.)

May I sum this up by stating that at no time will I condemn people for expressing their opinions, and, in fact, I encourage and cordially invite such opinions. But it grieves me deeply when the expressions are engineered on unsuspecting and sincere people who believe in their hearts and minds that they are rendering a service; when, unknown to them, their sincere desire to be helpful is being used for other motives.

Furthermore, I think it was unethical and improper for anyone to pay, or to offer to pay, anyone else a sum of money for obtaining a legitimate project from the Government, for the good of the community. This in itself casts an undesirable reflection upon the project and besides is unkind in its implied purpose of discrediting the sincerity, ability, and desire for cooperation and achievement of the two Members of the United States Senate from Texas, and myself.

I feel that because of a lack of cooperation on your part and the lack of sincerity and purpose of a few individuals, the possibility of obtaining the office for El Paso has been endangered and possibly destroyed. And, I might add, until these tactics were used I think the project had a better-than-fair chance of being obtained.

For your information may I state that I am still personally and officially in support of the project to obtain these FHA facilities for El Paso. I think the request, if based upon fact and legitimate information, is fair; I believe the facility is needed and desirable. And I am hopeful that we can wash away the dirt which has been splattered on this project, making it eventually possible to obtain this service.

Mr. Hervey, the case is not a new one. Such instances have happened in the past, and I suppose, will continue to happen in the future. But it is unfortunate when a few selfish individuals by their intentional or unintentional actions, take a decent, fine, and respectable thing and cause it to be smeared or destroyed.

As I stated to you on the telephone yesterday, in addition to the tactics outlined above, certain improper, illegal, and unethical proposals were made to me in conjunc-tion with this project and I deeply resent such actions. My present position is not to further amplify these advances. My sole reason is not to further jeopardize or cast an ill reflection upon the project and a host of decent citizens who are sincere in their efforts to obtain this FHA facility. However, I will not hesitate to recall the situation around these advances should it justify the purpose.

I hope in the future it will be possible for us to achieve a unity in purpose, brought about by a sincere desire to be of service to the community, in this and other projects. I'll assure you such service to the people of west Texas is my sole purpose and intent. Sincerely,

J. T. RUTHERFORD, Congressman, 16th District, Texas.

Mr. Speaker, the purpose here is to serve notice to this group and to all concerned that I shall not tolerate such tactics or procedure, and that the situation and position stated, by request is here given. It is my hope that we will now go forward for the benefit of all. Nothing could be accomplished by continuing this affair further except to destroy this project and friendly re-

lations.

Would Lincoln Have Dismissed Corsi?-Remarks on the 90th Anniversary of His Death

> EXTENSION OF REMARKS OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, April is a month of significant anniversaries. Ninety years ago on this April 14 Abraham Lincoln was assassinated at Ford's Theater in the Nation's Capital. That tragic event not only has made a lasting impression on American history but saddened and shocked the American people—even the leaders and the people in the South were shocked. For, as you know, the first memorial service for Lincoln was conducted by former Confederate veterans. The body of the President rested for a while under the dome of this Capitol Building and throngs of grieving Americans passed his

It is to be regretted that the great crowds which visit the Nation's Capital each year cannot visit Ford's Theater where this tragic event took place. They cannot visit the Ford's Theater because there is no Ford's Theater. It is advertised as such but, in reality, the present building is merely a warehouse museum to which an admission is charged. Steps should be taken to restore the building as it was on that fatal night, when the mad actor, Booth, struck his fatal blow. Only last year the Congress authorized studies looking toward a partial restoration at least. Let us hope that these studies go forward, and that the admission charge

to enter this shrine be eliminated. There is no admission charge to the Lincoln Memorial, and there should be none at Ford's Theater.

Every school child knows the Lincoln story. Everyone who comes to our shores as visitors or as immigrants knows and is moved by the story of this great American who belongs to the ages. But, today, it is clear that some of the presentday leaders in the great political party which he played a major part in establishing have forgotten, if they ever knew, another part of the Lincoln story which is equally vital and valid, and equally important to our times.

Lincoln, the man of the people, had a high regard for the contribution which the immigrants to America through the years, and the descendants of those who reached our shores in earlier years, have made to our country, for the richness and variety of cultures they brought; for the sacrifices they have made in the battles fought to preserve and strengthen our country; and the contributions these peoples from all the countries of the earth have made to every phase of our

In a speech in Cincinnati, on February 12, 1861, Lincoln said:

In regard to Germans and foreigners, I esteem them not better than other people, nor any worse. It is not my nature when I see a people borne down by the weight of their shackles-the oppression of tyrannyto make their life more bitter by heaping upon them greater burdens; but rather would I do all in my power to raise the yoke than to add anything that would tend to crush them * * * if there are any abroad that desire to make this the land of their adoption, it is not in my heart to throw aught in their way to prevent them from coming to the United States.

One thinks of the lonely railsplitter, the war President, the man of the people, enshrined forever in the magnificent Lincoln Memorial in Washington which is visited by thousands each year from all parts of the country, whose writings and deeds live forever in the lives and minds of his countrymen. And one finds in his words spoken to the German community at Cincinnati an echo in the immortal stanzas of Emma Lazurus which are inscribed on the base of the Statue of Liberty in New York Harbor:

Give me your tired, your poor,

Your huddled masses yearning to breathe free.

The wretched refuse of your teeming shores. Send these, your homeless, tempest-tossed to me.

I lift my lamp beside the golden door.

Yes, we recognize that the political party which Abraham Lincoln helped to establish has contributed much to American life, to the realization of Lincoln's ideas, to the fulfillment of the American dream. But Lincoln's concern with the workingman, with the common people, the concern that was expressed in so many of his speeches, and in such phrases as: "God must have loved the common people, he made so many of them," and his concern with the foreigner who comes to our shore to make a new life has been often forgotten and often betraved.

The political party which made him President has come upon evil days, indeed, when one of its leading figures can take the position he has in regard to the refugee problem, and in regard to Edward J. Corsi, an immigrant born in Italy. I would like to quote here from an editorial in the Trenton Evening Times of Tuesday, April 12, 1955:

THE CASE OF CORST

A great deal of difficulty has been experienced during recent years in retaining desirable and highly qualified men in the Federal service. Washington holds little appeal for them and for one reason or another they pack their bags and depart for home, with or without a friendly note of regret and thanks from President Eisenhower.

There has never been any deep mystery as to the reasons for the continuing turnover in high places in the Government service. It is to be found principally in the readiness of the administration to offer a victim in sacrifice once the wolves begin to howl.

The case of Edward J. Corsi stands as a notable example of official cowardice. Mr. Corsi was regarded as ideally fitted for the post of special immigration adviser when he was named 3 months ago. He was a leading New York Republican who had been the party's candidate for mayor and had held important public offices.

But he proved to be a champion of liberal immigration policies and as such aroused the opposition of the restrictionists.

There were no definite and specific charges, nor is there anything in the record to support a suspicion against Mr. Corsi. In fact, only 8 days ago he was lauded by President Eisenhower for his "integrity and ability." Nevertheless, Secretary of State Dulles, surrendering supinely to a single critic, has dismissed him.

Why should men of ability and loyalty bother with public service when they are aware that there is always the danger that they will be subjected to such indignity?

One can think how saddened Lincoln would be were he alive today to see the ignoble position taken by his party's leaders.

I have joined a number of my colleagues in introducing a bill, H. R. 4533, to amend and revise the laws relating to immigration, naturalization, nationality, and citizenship, and for other purposes.

I can think of no greater tribute to Abraham Lincoln than to make the Refugee Relief Act work as it was intended to work by the Congress, and to enact into law H. R. 4533, which would carry out the noblest of the American traditions.

State Soldiers' Homes

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, on March 30, 1955, I had printed in the Appendix of the Congressional Record a letter from Gen. William J. Keville concerning State soldiers' homes in which he quoted Mr. W. Rex McCrosson. Mr. McCrosson has asked me to correct the quotation by inserting his letter which follows:

New Jersey Memorial.

Home for Disabled

Soldiers, Sailors, Marines,

and Their Wives and Widows,

Vineland, N. J., March 15, 1955.

Col. G. H. STORDOCK,

Secretary-Treasurer, National Association of State Veterans Homes, King, Wis.

DEAR COLONEL: Now as to the subject in the letter of John Quigley regarding the arrangement proposed by the States of West Virginia and Georgia, I must say I am in accord with their action. The State homes, as I see them at the present time, are divided into 2 groups, 1 of whom provides general medical, surgical, and domiciliary care, and the major number of which provide only domiciliary care with nursing attention.

New Jersey was the first State to have a soldiers' home. The laws enacted at that time generally, I think you find, were that any honorably discharged veteran who was necessitous and had not the ability to procure the means for his support and necessary care and attention, was eligible and should be furnished with the necessary subsistence, medical and surgical attention.

Until the advent of the Veterans' Bureau the homes generally carried out this intent. The lack of adequate facilities for mental cases and for general medical hospitals was furnished by these soldiers' homes.

With the advent of the Veterans' Bureau and the development of the Veterans' Administration program of mental and general medical hospitals, many of the cases that were formerly taken care of in the soldiers' homes were diverted to these facilities, and while the eligibility remained, the appropriations were not made by the States to carry out their responsibilities under the then existing laws.

I can see no reason why the home having a full medical program should not have the same support from the Federal Government as a purely domiciliary home for its patients. In fact, I would be in favor of having those patients who receive general medical care secure a greater per diem allowance than those who are given purely domiciliary care. By the same token, I cannot conclude that a particular illness should be excluded from care within our soldiers' homes merely because we label that illness under the general classification of mental

under the general classification of mental. Now if the States choose to have their general medical hospital at one point in the State and their mental hospital at another point, as long as the veterans are taken care of adequately I think that the statute applying to the soldiers' homes for reimbursement should be extended to them, and I think that Georgia and West Virginia will be great examples for encouraging other States who are not now providing for their veterans except in the local, State, or county mental and TB institutions provided for all citizens, to provide the necessary funds and facilities, so that all veterans therein might receive attention under the supervision of the soldiers' homes.

Since there are a great many veterans in all of the States in the mental institutions because of inability to secure beds in the Veterans' Administration institutions we can return to the original policy of the State fully providing for its veterans and the Federal Government extending aid, as they have done since the soldiers' homes were originally instituted for all veterans needing care.

To object or raise an issue by this association I think would hardly be in character. Don't let's be put in the position of preventing our veterans from receiving as much support from all concerned as possible. If the Congress don't choose to make sufficient appropriations for this type of care I think

that is their responsibility. That it will affect the present contribution made to the soldiers' homes as presently operated, is only taking counsel of our fears.

In the final analysis the question that has to be decided is: Is it the Federal Government's responsibility to take care of all veterans, service- and non-service-connected, who require care, or is the Federal Government only going to take care of service-connected cases of all types, including domiciliary, leaving the non-service-connected veterans to the States? If this is the way the Federal Government is moving, do not let us discourage States who are willing to assume additional obligations to their veterans, Very truly yours,

W. REX McCrosson.

Fortieth Anniversary of the National Advisory Committee for Aeronautics

EXTENSION OF REMARKS

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. MINSHALL. Mr. Speaker, the youngest of the laboratories of the National Advisory Committee for Aeronautics, which is observing its 40th anniversary today, is located at the edge of the Cleveland Hopkins Municipal Airport. Its name, the Lewis Flight Propulsion Laboratory, tells its mission—power plant research.

Here, more than 2,500 specialists are searching for ways and means to make our engines—the turbojets, the ram jets, and the rockets—more powerful and more economical in fuel consumption. Upon the success of their efforts depends, in large degree, how much faster and higher and farther can fly the airplanes and missiles we build tomorrow.

One of the most interesting and inspiring days I have ever spent came not long after the voters of the 23d District of Ohio elected me their Representative. Then, I visited the NACA's Lewis Laboratory to see at first hand what was being accomplished.

From Dr. E. R. Sharp, director of the great research center, I was told how the Cleveland location was chosen in 1940 as the site of the NACA's greatly expanded powerplant research activity. I was proud to hear again how the Cleveland businessmen had done everything within their power to assure that the site would be ideal, as in fact it has proved to be.

I was told, too, about the late Dr. George W. Lewis, for whom the laboratory is named. Director of NACA's research program from 1919 to 1947 when he retired because of broken health, as much a war casualty as any man who fell on the battlefield, Dr. Lewis had considered the new powerplant laboratory a personal responsibility, and despite the immensity of the burdens he carried at NACA headquarters here in Washington, he traveled each week to Cleveland to give personal attention to the many complex problems associated with improvement of aircraft engines.

As Dr. Sharp took me around the laboratory, I was impressed by the youth of the technical staff engaged in work which could mean victory or defeat for the United States in any future war. I was equally impressed by the intensity with which these young scientists were working.

Military security limits my telling you what is transpiring today at the Lewis Laboratory. But, by a single example, I believe I can illustrate how valuable is the work being done. Right after World War II, NACA research men at the Lewis Laboratory began pioneering work with thrust augmentation-burning additional quantities of fuel in the tailpipe of a turbojet engine. The problems were many; they were very difficult to solve. The result: today, afterburners are used on the engines which power most of our fast military aircraft. These afterburners can provide as much as a 100 percent increase in the thrust which the turbojet engine provides.

I was interested, just as I know every Member of Congress is interested, to learn what is being done at the Lewis Laboratory about harnessing nuclear energy to airplanes. Again, military security prevents me from making detailed comments, but this much it is proper to note:

The performance capabilities to be realized from using nuclear energy for aircraft propulsion will enable nonstop supersonic flight to any point on the face of the earth, and return. With so large a gain the goal, industry, the Atomic Energy Commission, the military services, and the NACA are participating in vigorous, sustained attacks on the formidable technical problems that remain to be solved.

The huge, complex equipment that is used at the Lewis Laboratory in study of powerplant problems is very necessary, but in the last analysis, it is the caliber of the men and women who work there that counts most. From Dr. Sharp, on down, the people at the Lewis research center are representative of the best in the many scientific fields which have a bearing on aircraft propulsion. They are dedicated people. All America can be proud of the work they are doing.

The Corsi Affair

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by George Sokolsky, from the Washington Post and Times Herald of April 14, 1954:

THE CORSI AFFAIR

(By George Sokolsky)

The Corsi case raises certain general principles, namely, whether an official appointed to a subordinate position in a Government department may determine the policy of that department on a particular question; secondly, whether the head of a Government

department is bound to keep a man on willy-nilly, once he is dissatified with his work or his attitude.

Edward J. Corsi has for many years been a henchman in New York of Thomas E. Dewey, kept on the public payroll in the hope that he could gather for the Republicans a portion of the Italian vote. Most Italians in this State are Democrats, having been duly corralled into that party during the days of the New Deal.

Fiorelo La Guardia was a Republican when he ran for Congress. Subsequently, he became nonpartisan, or, to state it more accurately, omnipartisan, just as he managed to belong to all sorts of nationality and religious groups, "Butch" as his friends called him, was usually in political partnership with Vito Marcantonio who sought, in Harlem, both Fascist and Communist support, eventually leaving the Fascists behind him as numerically unimportant. La spoke a multitude of languages and therefore did as well at an orthodox Jewish bar mitzvah as at an Irish Catholic wake. "Butch" was an amazing vote-getter, but he never succeeded in making Republicans out of Italians.

Nor was Corsi more successful. He ran for mayor against Impellitteri and Pecora, that being the year when the politicians thought only an Italian could win in New York. Corsi was trounced, but Dewey gave him a job, as Dewey always took care of his own. It was only natural, therefore, that when Averell Harriman, a Democrat, was elected governor of the State of New York, Corsi should become unemployed and that a place should be sought for him in Washington.

Why John Foster Dulles, our much bedeviled Secretary of State, should have Corsi loaded upon him, is not too difficult to understand. Where else could Corsi be unloaded? He is a specialist in a foreign language group and in the particular interests of this foreign language group. This relationship is clarified by the intervention of Max Rabb, Eisenhower's political adviser.

So, Rabb apparently helped land Corsi a job in the State Department to "liberalize" the McCarran-Walter immigration law. Of course, if that law or any law is to be changed it is Congress that has to do it. The function of the executive branch of the Government is to administer and execute the laws of Congress, not to change them. So Representative Walter raised up a howl, and Corsi was offered a transfer. Whereupon Corsi shouted, "McCarthy!" and the liberals went into action.

JOE MCCARTHY had as much to do with Corsi's being hired and fired as you or I did, but just as in the circus, when there is trouble, the shout goes up, "Hey, rube!" So among the so-called liberals, the battle cry is "McCarthy!" Then they find themselves organized and fighting. The ADA goes into action, and the individual in question becomes a "victim." Then Jim Haggerty announces that the President never heard about the matter and therefore is not to blame.

Medical Services to Veterans

EXTENSION OF REMARKS

HON, MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks, I want inserted in the Appendix of the Record the following resolution of the council of administration of the Michigan de-

partment of the Veterans of Foreign Wars.

This resolution protests the suggested drastic reductions in Federal medical services to veterans and others as recommended in a recent report by the Hoover Commission.

I should like to add that I support the dissenting view to this report submitted by the Honorable Chet Holifield. It is not in keeping with the often expressed intent of Congress to take a narrow view of medical facilities for veterans. The veteran population continues high, and as it grows older the need for medical service will increase.

It is essential that waste and inefficiency be eliminated but this should not be used as a guise to drastically reduce these important Federal medical facil-

The following resolution was adopted at a meeting in Clare, Mich., and was transmitted to me by Christie J. Braun, department quartermaster, adjutant of the Department of Michigan, Veterans of Foreign Wars:

I hereby move or resolve, as the case may be, that this council of administration go on record as opposing the recommendations of the Hoover Commission task force as they pertain to the treatment and handling of the veterans and their benefits in this country; and that the Hoover Commission be reminded that if they would serve these United States, they would cause to be worked out some method whereby the aged, the tubercular, the paraplegic, and the mentally disturbed veteran be taken care of as befits the greatest, and wealthiest, and the most powerful Nation yet to inhabit the face of this earth; and that a copy of this resolution be sent to the Michigan congressional delegation.

NACA 40th Anniversary

EXTENSION OF REMARKS

HON. EDWARD J. ROBESON, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. ROBESON of Virginia. Mr. Speaker, today the National Advisory Committee for Aeronautics, the Federal agency responsible for fundamental, scientific aeronautical research in the United States, is observing its 40th anniversary. I should like to express felicitations. I should like also to wish that in the years ahead the NACA may continue to provide the essential foundation of information upon which our continued aerial supremacy must rest.

I should like to speak briefly about the oldest and largest of the research centers which the NACA operates. It is the Langley Aeronautical Laboratory, located at Langley Field near Hampton in the First District of Virginia which I

am honored to represent.

During its first year, 1915, the NACA was little more than what its name implies, an advisory committee. Composed at the time of 12 members instead of 17 as at present, the NACA promptly decided that if the United States, the birthplace of the airplane, was to regain its lead in aeronautics, intensified re-

search activity was imperative. Within its first year, the NACA had taken the beginning steps to acquire such needed research equipment, and before 1916 had ended, the site now known as Langley Field was chosen.

What a proud name for an aeronautical institution to bear-in honor of Samuel Pierpont Langley. Even before 1889 when Professor Langley went to the Smithsonian Institution, that national repository of historic treasures, he had undertaken trailblazing in the infant science of aeronautics. He continued his aeronautical experimentation, and by 1896 he had flown large, powered airplane models for distances of more than half-a-mile. His standing in the scientific community gave encouragement to many, including Wilbur and Orville Wright, to undertake aeronautical experimentation. Following two accidents late in 1903, his own work was ridiculed. But his failures do not detract from his greatness.

The NACA's first wind tunnel, located at the Langley Laboratory was in today's terms, very small. But it, and the equipment that was soon built, were used so effectively that by the late twenties, the technical journals of Europe were conceding that the work at Langley Field had placed the United States in the forefront of aeronautics. In the years since, our continued aerial supremacy has, no less, been due to the work of the NACA.

It is the paid staff of the NACA, the scientists and the other workers, whom we should salute as being so largely responsible for American leadership in the air. Until 1939, the Langely Laboratory was the only research establishment the NACA operated. The laboratories and field stations constructed since were given a good start by top men being sent from Langley to head them up.

I wish time permitted my naming every one of the men and women at Langely. Instead, I must be content to mention but two:

First, the director of the Langely Laboratory, Henry J. E. Reid. With the NACA since 1921, he was only 25 when he was named head of the scientific staff at the Laboratory. Over the years, Dr. Reid's splendid work as administrator of the Langley Laboratoy has become a model for others who would encourage highly trained young men to become the competent researchers so urgently needed.

Second, John Stack, now assistant director at the Langley Laboratory. In 1947 he was a co-winner of the Collier trophy, aviation's premier trophy. This was for his conception of the high-speed research airplane program which resulted in the first supersonic flight. In 1951 Mr. Stack was again a Collier trophy winner, this time for the work he and his associates did in conceiving, developing, and applying practically, the transonic wind-tunnel throat. I am no scientist, but I have been informed that this development—the transonic wind tunnel-has provided the United States with a research tool of utmost value in the design and production of tactical supersonic airplanes.

Today, the Langley Aeronautical Laboratory of the NACA has more than 3,000 scientists and supporting personnel working intensively on all manner of aeronautical problems. For example, those having to do with enabling our new military aircraft to fly at ever faster supersonic speeds; those which must be solved before the true intercontinental ballistic missile will have become an actuality; in hydrodynamics, making flying boats equally efficient at near supersonic speeds and while floating upon the uneasy waters of the seven seas; in structures, learning how to construct airplanes that will be stronger and yet lighter and safer.

All this, involving the use of giant wind tunnels and other research tools so complex as to make description difficult—all this has been possible because succeeding Congresses have authorized the necessary new construction and have appropriated the funds needed to make fruitful use of that new equipment.

Today, as I salute the National Advisory Committee for Aeronautics and speak briefly of the important role Virginia's Langley Aeronautical Laboratory has played in achieving aerial supremacy, I pray that in Congress we may continue to have the wisdom to provide adequate support for this essential Government activity.

Present and Past Policies in Dealing With Communist China

EXTENSION OF REMARKS

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. SMITH of Kansas. Mr. Speaker, several weeks ago the Chinese Communists released several captive missionaries. They had been held in prison on the grounds that they were spies for the United States.

One of these young missionaries, 27 years of age, when he got back to the United States said:

I am guilty of military esplonage. I confessed my sins and wrote out my confession.

He seems to have been thoroughly brainwashed.

But listen to another story from inside Communist China, from one who was there

Bishop Cuthbert M. O'Gara who heads the Chinese mission diocese of Yuanling-Hunan Province, was a prisoner of the Chinese Communists from June 1951 to April 1953 and is therefore well qualified to speak with authority on the subject of our present and past policies in dealing with Communist China.

Because of the timeliness of Bishop O'Gara's remarks, it is with pleasure that I submit with his permission, this report, and recommend it highly for your reading:

"The people of the United States do not appreciate the magnitude of the defeat the West has suffered since 1945," said Bishop O'Gara. "It is incredible that such a small group of pro-Communists, pseudo-intellectuals, should have effected in so short a time

one of the greatest turnovers in the history of mankind"

Bishop O'Gara said this defeat could not be blamed on stupidity. He charges that it was brought about with full deliberation.

"No group of Americans could be that stupid," he charged. "The deliberate throwing away of our victory after World War II is confirmed by the whole list of 'stupidities' since VJ-day. And these stupidities are still going on. Someone is directing this sellout."

BIG LIE GROWS BIGGER

The Bishop told of the hope and confidence felt in Hunan, his diocese, when the Japanese had been defeated. There the Chinese felt secure, certain that the United States would help keep Chine free.

"But America tossed the fruits of victory away. The Communists were permitted to pour in and take over," Bishop O'Gara reports. "The United States was beaten, the 'Commies' claimed, and their first big lie gained credence. * *

"That lie gained strength as we backed down in Korea, backed down in Indochina, and backed down in the Tachen Islands. That lie grows and feeds on each United States retreat."

The Bishop charges that American leaders are aiding the Communists by not allowing Chiang and the Nationalists to move against the Reds. The excuses given by Washington for yielding the Nationalist islands off the coast of China will not stand up under close examination, he contends.

Bishop O'Gara declared that the latest series of United States retreats falls into the same pattern that started with the defamation of the Chiang government immediately after World War II. He admitted that there had been abuses in Nationalist China—even as there was corruption in Washington. Whatever abuses there may have been in Nanking, these were puny, he says, when compared to the crimes against our people and against our Christian tradition by the United States officials who betrayed their own people and changed the history of the world by traitorously giving atomic and military secrets to Russia.

"But." he went on, "the Nationalist Gov-

"But," he went on, "the Nationalist Government was being shaped in the western tradition and was friendly. The United States should have taken a strong hand in holding the Nationalists in the camp of the free world."

CHINA BETRAYED

"American leaders could have rid China of the bad elements," said the bishop. "Instead we threw over a nation of more than 500 million by giving the Communists their strongest propaganda argument; we protected the ill-gotten gains of a few and presented the continent of China to our avowed enemies, the Soviets, who boast that they are out to destroy us.

"In the days when the Nationalists were being harshly criticized by our pseudo-intellectuals, pro-Red apologists, pinks, and fellow travelers, the Chinese Communists were being built up as a group of high-

minded agrarian reformers.

"I only wish I could get out of China some of the people of my diocese who were hung up by the thumbs and who spent days cooped up in rice bins, and who could give you a better appreciation than I can of the benefits of agrarian reform."

Bishop O'Gara says that by our continued retreats and by yielding to those who cry for more trade with Iron Curtain countries, we are building up the economy of our avowed enemy, who time and time again has declared that his objective is to eliminate the United States as a world power.

"Why should we help keep the Communists in power? Every report we get from released victims of Red China indicates that a push in the right direction would encourage the people to rise up against their Red oppressors. Besides we get no credit for our largesse. Anything the Reds get through trade with the West is labeled before distribution as coming from the Communist Peoples' Government. * * *

"Support for trade with China, whether originating in Britain or in the United States, cannot be written off as mere stupidity. It is deliberate. No one could be so colossally stupid.

"Some person or group of persons is pulling the strings. Sentiment for trade with China is a deliberate policy inspired by Communist sympathizers right here on the home front. That must be evident to anyone who reads the record."

RED CHINA AND U. N.

One of the most disastrous developments of the cold war, according to Bishop O'Gara, is the amazing sympathy in many circles in America and Britain to the idea of a place in the United Nations for Red China.

The bishop can't get over the gullibility of the American people who fall for the line of the "quasi-intellectuals who are sounding off on every opportunity in a concerted drive to win support for a Communist China seat in the U. N."

"Hundreds of Americans are still languishing in Red prisons—hostages in Mao Tsetung's drive for a U. N. seat," says the bishop. "One atrocity follows upon another; coloscal lies are spread against the United States—the most monstrous being that of germ warfare which was driven down our throats in jail—and still our legislators in Washington talk of recognition.

"To accept Red China in the family of civilized nations is like doing business with a bandit who has kicked you, maligned you, beaten you, and robbed you. Would you invite such a bandit to dine with you?

"How Mr. Churchill and Mr. Dulles and

"How Mr. Churchill and Mr. Dulles and other negotiators of lesser stature in the free world can contemplate dealings with these evil men who come to the conference table with hands reeking with the blood of our soldiers and missionaries is beyond comprehension. If Red China is admitted to the U.N., every self-respecting delegation should walk out."

REAPPRAISAL NEEDED

According to Bishop O'Gara we must face the facts of the present international situation with a sober mind and make "an agoniz-

ing reappraisal."

"We instituted a blockade," he said, "but it was ineffective because we did not follow through. When Britain in the days of her ascendency declared a blockade, any ship attempting to break through was searched—as Americans know to their humiliation. But when America blockaded the China coast, British ships plied the China sea doing business with an enemy. Has any accounting ever been made of the American lives lost because of this very broad and accommodating policy of our distinguished all?"

Bishop O'Gara says that every time the United Nations retreat and the Communists advance, there are great demonstrations throughout the length and breadth of China. Schools are emptied, victory parades staged, and floods of lies are spewed forth by expert Communist propagandists. Bishop O'Gara explained: "All of it is designed to make maximum use of the fact that the United States has backed down again, is nothing but the 'paper tiger' Red propaganda has always pictured her to be."

The appeal to national and racial prejudices is most effective on the young students,

the Bishop stressed.

"The Communists already have had control of the youth of China for 6 years. In another decade, the present generation will be irrevocably theirs."

PERSECUTED BY REDS

Bishop O'Gara almost died during his imprisonment. In fact, his recovery is not yet complete. He spoke with feeling against United States efforts to use material or monetary aid in building the free world's bulwark against communism. He deplored the fabuous giveaway programs of the United States, and the U.N. Billions of dollars have been poured into nations that today are solidly against us.

"Sending monetary aid all over the world gained not one single friend. We shall never win the goodwill or friendship of Asiatic countries with blandishments and lavish handouts. True—they will always come back for more; but when the time comes to stand up and be counted, they'll be found on the side that is militarily stronger and politically more aggressive and successful. Gratitude is not in the Communist lexicon. There is but one virtue and that is obedience of mind and body to the people's government.

"We have the brains to work out the me-

"We have the brains to work out the mechanics of the atom bomb," the bishop said.
"Why can't we produce the thinkers who will come up with ideas of how to sell American democracy of Europeans and Asiatics?

"We try to sell them a purely mechanical way of life and they give a deaf ear to promises of motorcars, radios, and TV sets. Our programs are crude and only insult the finer cultural instinct of peoples much older than we. Why don't our spokesmen for America make an honest, even scientific, effort to find out what these peoples upon whom we shower our billions in a futile effort to make them our friends, are really interested in and really do want?"

Attacks Along Borders Continue

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following news item which appeared in the Israel Digest of March 25, 1955:

ATTACKS ALONG BORDERS CONTINUE

JERUSALEM.—A strong protest against the continued detention of four Israel soldiers, held by Syria since December 8, 1954, has been lodged by Israel with Col. J. Castonguay, Chairman of the Israel-Syrian Mixed Armistice Commission. Despite a binding decision of the Mixed Armistice Commission demanding the release and return to Israel of the soldiers, they remain in a Damascus jall.

The attacks upon Israel life and property from across the Arab borders have continued unabated during the past 3 weeks. Following is a partial list of the incidents which took place in the period between March 1 and March 21.

On March 1, a fishing boat from Ein Gev sailing on Lake Kinnert (Sea of Galilee) was attacked by fire from Syrian positions.

On March 2, Jordanians penetrated Israel territory east of the Hebron road and attacked an Israel patrol.

On March 5, an Israel patrol was attacked by Jordanians in the Duweima area of the Negev.

On March 9, Egyptian marauders penetrated into Israel near Ein Ha'Shlosha in the south.

On March 9, Jordanians fired upon workers in fields north of S'de Eliahu in the Beit Sh'an Valley.

On March 12, an Israel Army vehicle traveling northwest of Kissufim in the South was blown up by a land mine. Investigation revealed footsteps leadings from the mine to the Egyptian-controlled Gaza Strip border.

On March 12, members of the Jordan National Guard entered Israel territory southwest of Um-El-Fahum and attempted to kidnap an Israel Arab farmer.

On March 13, Egyptian infiltrators attempted to rob the settlement of Tel Re'im in the South of irrigation equipment. They were repulsed by an Israel patrol and fied across the Gaza Strip border.

On March 14, a civilian vehicle was blown up by a land mine north of Eilat. Footsteps led from the site of the explosion to the Israel-Jordan border.

On March 14, policemen in Beit Tsafafa, south of Jerusalem, were attacked by fire from across the Israel-Jordan Armistice Line.

On March 15, Egyptian marauders blew up a house in the settlement of Sharsheret, not far from the Gaza Strip border. The attackers were repulsed by the settlement's watchman and his sister. The watchman was wounded.

On March 17, watchmen of M'nuha, a settlement northeast of Affule, chased a band of Jordanian infiltrators back across the border.

On March 18, Jordanian infiltrators attacked the settlement of Yizrael near Affule. One settler was killed and a second wounded.

On March 19, an Israel Army vehicle was blown up by a land mine planted near Kissufim in the South not far from the Egyptian-controlled Gaza Strip.

On March 21, Jordanians fired across the Armistice Line at Israelis working in the fields south of Mount Gilboa.

On March 21, Egyptians fired upon an Israel patrol north of Kissufim in the South.

The President Shares a Secret

EXTENSION OF REMARKS

HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, last Tuesday our entire Nation was electrified by the excellent news that American science had discovered an answer to infantile paralysis. Yesterday President Eisenhower, in one of the greatest and most magnanimous gestures ever made, decreed that all mankind should benefit from this discovery, as he made the Salk vaccine available to all nations, regardless of their political complexion.

In this time of strife and tension, I cannot think of a more effective way to demonstrate the true moral fiber of America. President Dwight D. Eisenhower, the man who not long ago offered to share the secrets of the atom for peaceful use with all comers, spontaneously offered the process of the Salk vaccine in order to combat disease and better the lot of human beings wherever they may live.

We have much for which to be thankful, but nothing I can think of makes me more proud and grateful to be an American than does this great and humane act of our great President. I hope that the Voice of America will do its part in telling all the world that the Nation which is alleged to harbor sinister secrets of destruction is giving to the entire world the wonderful secret of how to eliminate infantile paralysis.

Hawaiian Statehood

EXTENSION OF REMARKS

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. SMITH of Kansas. Mr. Speaker, I submit herewith an editorial from a small college paper printed in Dallas, Tex. The name of this publication is Op Cit—Young Men of America.

It is most refreshing and encouraging to read this publication because these young men present their ideas with a depth of conviction seldom found in college papers. This caption appears on their masthead:

A monthly publication devoted to the preservation of constitutional government and Christian civilization—to encourage students to take an informed and active interest in the affairs of our Government.

Their timely editorial follows: HAWAHAN STATEHOOD

The Territory of Hawaii's candidacy for statehood in the Union should be rejected. The strategic location of the Hawaiian Islands makes them of utmost concern to the Federal Government. With vast military, naval, and air installations, with numerous Government personnel, and with vast storehouses of weapons and supplies, the islands bear in their sum total of Federal activities a relationship to the United States more comparable, perhaps, to the District of Columbia than to any 1 of the 48 States. In view of the needs of national defense it is difficult to see how the Federal Government could afford-in some contingency-to entrust to a Hawaiian state government all the functions ordinarily carried out by State governments in continental United States. This is particularly true because the oriental population of the Hawaiian Islands is said to constitute about 85 percent of the total, and it is increasing, whereas North Americans in the islands have a tendency to move to the mainland. With the population what it is, the state administration and also the Hawaiian representation in the United States Senate and House of Representatives in the future almost certainly would (and should) be oriental, probably Japanese or Chinese.

Partnerships in wars are never permanent. We have twice fought in major wars against Britain and have twice been her ally. As recently as in World War II we fought against Germany and now we are trying to secure her as a friend and partner in Europe. It is not possible for anyone to be sure at the present time that in the future we may not be involved in war with Japan or China. Also, it is not possible to state whether in a future crisis the oriental senators from Hawaii might favor their Nation, the United States, or their racial brothers in arms.

Among other problems, one seems formidable. We could hardly by diplomatic means prevent the ships of the world from passing between one part of the new state and some other part, because the intervening body of water is the open Pacific Ocean. Would not, then, an alien power's right to penetrate the territorial waters of the state of Hawaii be a precedent for the penetration of the waters of other States, for instance the Hudson and Mississippi Rivers?

Finally there is the question of communism. The proportion of Communists to the total population of Hawaii is said to be many times greater than is the case in continental United States. These Communists are deeply infiltrated and powerful. Like the Communists of New York, these enemies of our country would propagandize and pressure their senators, and hence wield tremendous power in Washington.

There appear to us to be no good reasons for admitting Hawali, except to please the unofficial government referred to by Senator Jenner. On the contrary, as we have shown, there are many reasons for not granting Hawaii's admission, and giving throughout the future the privileges and immunities of United States Senators to persons who may understandably feel that their interests are more Asiatic than North American. This is the United States of America. Where do the geographical boundaries end?

Shade Falls Over Great American

EXTENSION OF REMARKS

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. HENDERSON. Mr. Speaker, I wish to call to the attention of the House an editorial by Mr. Wilbur D. Matson, editor and publisher of the Morgan County Herald, of McConnelsville, Ohio, one of the most highly regarded weekly newspapers in southeastern Ohio. Mr. Matson's remarks appeared in the April 7 edition of his newspaper and are a eulogy to one of the foremost journalistic giants of our century who recently passed from the national scene.

The editorial follows:

SHADE FALLS OVER GREAT AMERICAN

"To be an organ of no man, however high, no clique or ring, however influential, or faction, however fanatical or demonstrative, and in all things to follow the line of common sense." These are the words of Joseph Medill, founder of the Chicago Tribune and one of the foremost editors of his era. Col. Robert R. McCormick, who died, Friday, was a grandson of Joseph Medill.

In the sanctum of the Morgan County Herald, hangs an autographed picture of Colonel McCormick. It is a cherished possession. We never personally met the colonel, but when news came of his passing, we experienced a genuine feeling of sorrow. To us, his ideal of journalism was a standard about which every editor who loves America and what it stands for, may rally. We grieved because we believed his death was a loss to the cause of freedom and liberty throughout America and the world.

Not long since when reading a life of Grover Cleveland, we came across these moving words, uttered by an able and honest, but misunderstood statesman: "I have tried so hard to do right." These words might well have supplied the keynote to the life of the colorful and many sided Colonel Mc-Cormick. He sought to square his every action, not with what was popular and expedient, but with what was right. Once he had decided that a thing was wrong, he gave vigorous and tenacious battle. Convinced of the rectitude of his opinion, he never wavered or faltered. He hated sham, hypocrisy or cant. The mighty Tribune, most influential and powerful journal of opinion in the world, was largely a reflection of the personality of its owner.

With Colonel McCormick, patriotism was a cardinal principle and a passion. He was adamant in his devotion to the Constitution and to basic American concepts which insure to the citizen a maximum of personal liberty and a minimum of governmental restriction. Believing firmly in liberty for all men of all nations, he thought that America could best serve the cause of freemen everywhere by remaining strong and fiscally solvent, a shield and a sword and a haven for the oppressed of all peoples of the world.

Colonel McCormick hated the New Deal with a high and holy hate. To him, it was the negation of individual liberty and free enterprise; the primrose path to socialism and collectivism; the imported version of the all-powerful states of Hitler, Stalin and Mussolini; the antithesis of all hitherto regarded as fundamentally American.

Through the Tribune, sledge-hammer blows were delivered against Roosevelt, Truman, and all their New and Fair Deal works. His paper became the voice of much of the Middle West which stood for traditional Americanism and against internationalism or any surrender of national sovereignty. His vast wealth and great influence were utilized to preserve the liberties and the nationality of his beleaguered country, and he and his paper stood like Gibraltar in unyielding opposition to New Deal socialism and for the Constitution and written safeguards of liberty.

During the American Revolution, patriots who loved freedom above everything in life rallied to the standard of George Washington. It is no exaggeration to pursue a simile in comparing the millions who rallied around the standard of Colonel McCormick, Taft, and Hoover. These three outstanding statesmen and leaders of our troubled time have done the most to save America from the noisome and formidable threat of creeping collectivism.

All of the active years of Colonel McCormick were spent as a fearless and courageous champion of the cause of liberty. In France he battled for his country as an artillery officer. In Chicago he fought valiantly against every form of vice and corruption which vitiated sound municipal and State government. A stalwart and uncompromising advocate of free speech and a free press, he believed the two form the keystone to the arch of the citadel of liberty, and that freedom could not long exist without either.

To us personally, his Tribune was the ideal paper. It adhered strictly to the truth; it was clean and decent; it was fair; its news columns were not slanted or colored to promote any selfish interest or group. Its editorials were written, not as a bulldup for any individual or political clique, but with a background of what is sound and best, not for Hindustan or Timbuctoo, but for America. Little did it matter to the colonel what selfish or political interest was displeased with his paper. Time without number, the Tribune espoused a cause, opposed to something ephemerally popular. It is a great tribute to its publisher, that in nearly every instance, subsequent events vindicated its position.

The hallmark of a superior mind is the ability to judge character and brains in others. No man can see over his own head. Lacking this ability, Colonel McCormick could not have made the Tribune the mighty organization he created of superior minds. the Tribune's fold were assembled a staff of the best cartoonists, feature writers, and foremost editorial writers in America. Salaries did not matter if an employee could deliver the goods. It is said, that in the future, men trained in the Tribune tradition will carry on in the high ideals of their fallen chief. We sincerely hope that this may be true. In a time of vast confusion and upheaval over all the globe, certainly every true American needs the clarion call and the inspiration of a battling, crusading paper like the Tribunethe mighty organ of Colonel McCormick, who, like Blaine of old, "hurled his shining lance full and fair against the brazen forehead of every traitor to his country and every maligner of his fair reputation."

Col. Robert R. McCormick was undoubtedly one of the great American leaders with a larger personal following than any individual in the Midwest. A towering figure has fallen—one who leaves a definite imprint on the history of the times.

Wheat Certificate Plan Provisions of H. R. 12 Offer Best Way To Solve Wheat Problem

EXTENSION OF REMARKS

OF

HON. SAM COON

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. COON. Mr. Speaker, as the representative of one of the finest commercial wheat producing areas in the world, and as a legislator who is interested in the welfare of all the people in the United States, I am concerned about the misunderstanding and the misinterpretation which has been given to the certificate-plan provisions of H. R. 12.

On March 12, 1955, my esteemed colleague, the gentleman from Indiana, eloquently denounced the certificate plan as unsound. From his remarks, it is apparent to me that he does not understand the full significance of this plan. He repeatedly assumes the plan would dump huge quantities of wheat on the feed market to the detriment of the corn producer. It is his assumption that additional huge quantities would be dumped on the shaky world wheat market. And, blackest of all predictions, while all this dumping was underway. the American housewife would be gouged by higher bread prices.

These assumptions are exaggerations of events that could happen under any program, particularly, the flexible price-support program as it affects wheat. The same safeguards which prevent them from happening now under our present program would prevent them from happening under the certificate

plan.

On February 14, 1955, the Secretary of Agriculture announced at his press conference that the National Agricultural Advisory Commission would be requested to review the wheat surplus situation and consider anew, ways to solve the problem. He indicated an open mind on all programs including the certificate or what is erroneously called a two-price plan. Obviously, he was not convinced the flexible price program was the answer for wheat.

Under the legislation which was passed by the 83d Congress, wheat is the only basic commodity that is flexed downward to any great extent. The price support on wheat for 1955 will be 82½ percent, while other crops are near the 90-percent support level. It has been announced that corn will be supported at not less than 87 percent of parity. There is a chance it might even be back up to 90 percent by the time the final decision is made.

The theory of this legislation, the Agricultural Act of 1954, is that lower price support levels would encourage consumption and discourage production. While this may be true for some commodities, supply and demand for wheat foods are inelastic and show little response to price. Even though wheat is flexed downward more than any other basic commodity, it is doubtful if the program will increase consumption or decrease production.

Statistics show that as wheat prices declined drastically in the early thirties, the acres planted to wheat did not decline. Also, that production control programs have had more to do with acreage planted than has price. The principle of flexibility in a price support program may be sound as related to areas where producers have an opportunity to diversify. In those areas, farmers might be influenced through lower price supports to switch from surplus commodities to those in greater demand

However, a great part of the Nation's wheat production which is on a commercial basis is in areas where there is not a great deal of diversification possible. The flexible support program will flex downward the price on all wheat produced, not just the surplus portion, even though the major part of the Nation's wheat production is used for domestic consumption as food and is entitled to a price comparable to the domestic prices of the things purchased for producing that wheat.

While the price of wheat will be reduced under the flexible support program, there is no possibility that retail prices of food products made from wheat will follow the downward trend. As this margin between the price paid the wheat producer and the price paid by the consumer widens, who is going to benefit? Most Members of Congress have, in the past, expressed concern regarding this spread. The effect of the present flexible support program on wheat should, and no doubt will, cause us to be more concerned than ever.

The certificate plan is described as a device for dumping surplus wheat in other people's markets. As far as the export market is concerned, no one supporting this plan would favor a dumping program. We all desire to maintain a world market for our wheat. No one interested in solving the wheat problem would want to see the international wheat market demoralized. Any threat of dumping would be avoided as now by the wise use of export quotas. May I point out that while the United States is curtailing wheat production, other countries are increasing their wheat plantings. Also, our share of the world market has shrunk faster than the market itself. While we are selling less in the world market, competitive exporters are selling more.

In order to sell wheat at any time and in any place, the price has to be competitive. A difference of a fraction of a cent per bushel will determine a sale. Under this plan, it is probable there would be more aggressive merchandizing than at present when our competitive position depends entirely upon the

amount of subsidy our Government is willing to pay. This subsidy is publicly announced from time to time which invites other exporting countries to come into the market under our price umbrella and sell their wheat for a little less.

Considerable effort and money have been spent in market development work. Unless our surplus wheat can be available at competitive prices, we are merely developing markets for wheat and wheat products from other exporting countries. This market development program does not contemplate trying to take markets from other exporting countries. Millions of people in other lands are underfed. Certainly, there are enough hungry people in the world to use our surpluses, if we can remove some of the obstacles that stand in the way. Price is a primary obstacle.

It should be noted there are 10 countries that guarantee their wheat farmers prices higher than the support price for wheat in the United States, as shown in the following table:

Turkey	3.21
France	3.04
Tunisia	3.03
Germany	2.83
Spain	2.81
Greece	2.40
PACTO MINT HENDERS AND MANAGEMENT AN	2.29
Sweden	2.10
Argentina	2.80
Japan	2.61

For years our domestic wheat program has stabilized the price for producers in other countries as well as our own. The unnecessarily high prices guaranteed producers in the importing countries listed above are encouraging uneconomic wheat production. A realistic pricing system on export wheat from the United States would result in many importing countries reducing their wheat production and growing more economic crops adapted to an intensified agriculture.

The certificate provisions of H. R. 12 could not result in dumping wheat on the domestic feed market. The provision for a floor under surplus-wheat prices would protect the feed grain producer from undue competition. I have been told by corn producers and feeders that if wheat were available in their area at prices comparable to corn, corn would be used in preference to wheat. Transportation costs would keep surplus wheat from moving in volume into corn producing areas. Wheat moving into feed uses under this plan would only equal from 3 to 5 percent of the total feed grain supply.

The charge that the certificate plan is subsidized competition is not a just one. Wheat would be made available at lower price levels, rather than being subsidized for export to the extent it is at the present time, at a cost of millions of dollars annually.

The opponents of this plan seem to think of the certificate as a means of increasing the returns to the wheat producer. Actually, it would merely bridge the gap between the lower price he would receive on all his wheat and the price that he has been receiving under farm programs up to the present time. The average price including the certificate would probably be no higher than under the flexible program, but more wheat

could move into uses. Expanding our markets is the quickest way to solve the surplus wheat problems. Even though the blended return to the wheat farmer under this plan would be quite low, the increased use of wheat in the long run would more than compensate for this fact.

The gentleman from Indiana makes reference to a high and very profitable price that would accrue to the wheat farmer under a protected domestic price program. Actually, under this plan the top price received for domestically consumed wheat would be no higher than the price-support level that has been in effect on wheat for some years. This is true because the modernized parity formula will take effect in 1956 and 100 percent of parity will be no higher than 90 percent under the old formula.

The gentleman from Indiana refers to the Canadian situation and points out that the Canadian wheat farmer makes his living by selling wheat at the world price. Is he saying the American wheat farmer should sell all of his production at the world-market level even though the cream of the crop is purchased by the millers in our country and processed into food commanding prices that could well return parity to the farmer? From 1942-51, an average of 62.2 percent of the wheat produced in the United States was used for milling and seed. This was our best quality wheat and should command a price commensurate with retail prices of wheat products.

Machinery, labor, petroleum products and other items used in producing wheat are not priced at world-market levels. Is it fair to expect the wheat producer to sell all of his production in competition with world markets while other segments of our economy have various types of protection from the influence of world prices? Does my colleague from Indiana choose to support a wheat program that would place the American wheat producers in a situation similar to that of our friends to the north?

Wheat farmers in Canada have entirely different conditions from those in the United States. Land values, taxes, and labor costs are much lower. In spite of this, the Canadian wheat farmer does not fare too well as evidenced by his generally lower standard of living. While the Canadian farmer has been receiving less for his wheat, the Canadian consumer pays less for bread. Today a pound loaf sells for about 18 cents in the United States compared to 12.5 cents in Canada.

We look forward to the time when production controls will be unnecessary. With present supplies, however, they will be necessary regardless of what type of program is in effect.

The movement of wheat into feed and export under the domestic parity plan would be on a gradual basis. With the support level on wheat comparable to that on corn, wheat would not move into feed except in areas where corn was priced considerably due to transportation costs. Qualified officials have estimated that not more than 250 million bushels of wheat would be fed under the program. This is only about 5 percent of the normal feed-grain supply.

It is difficult for the wheat farmer to see what difference it makes to the corn farmer whether wheat is competing with corn on a basis under which the wheat farmer can stay in business, or on a basis under which the wheat farmer would go broke. Either way eventually the corn farmer is going to have some competition because most growers raising wheat in commercial wheat-producing areas have to continue to raise wheat. There are no other alternatives of any importance.

In resolving this difference of opinion, I believe it is necessary to look upon wheat as a dual commodity. Historically it has been used for both food and feed in rather large quantities. Wheat as food justifies a higher price than wheat as feed. If the wheat farmers of this country were to be limited to producing wheat only for food in order to maintain a fair price, they would of necessity produce feed grains on the acres taken out of wheat.

An article by Dr. J. T. Sanders in a recent issue of the Quarterly Review, put out by the National Federation of Grain Cooperatives, shows that feed grains produced on surplus acres would give more competition to the corn man than would wheat on these same acres. About 80 percent of the corn produced is fed in the locality where it is grown. The livestock fattened on this feed are sold in the domestic market at prices that do not have to compete with world prices on livestock products.

Still it is suggested that the wheat farmer sell all of his production at these lower world prices, ignoring the fact that only a portion of the production moves into world use. Even if the wheat producer received 100 percent of parity on a portion of his production, his blended return would be considerably lower than the 87 percent of parity guaranteed the corn producer.

The referendum provided for in this bill is criticized. It should be pointed out that the results of the farmers voting down marketing quotas in the referendum would be much more disruptive to the feed grain producers than it would be if the farmers would vote in favor of the certificate plan for wheat. Noncommercial producers of wheat do not depend entirely upon wheat for their living. Consequently the outcome of the referendum either on marketing quotas or the domestic parity plan would not be of as great importance to them.

From the statement made, it appears the corn producer would like to reserve the feed market for himself. Yet, on the other hand, he criticizes a program that would discourage indiscriminate increase in wheat plantings. It is doubtful if the average corn farmer would be interested in establishing a base for food wheat production on his farm, in view of the fact that he has not chosen to do so under the 90-percent support program.

Even though wheat prices under this plan might be above world wheat prices a part of the time, certainly the amount of subsidy required to move the wheat in export would be considerably less than at present, thereby resulting in a saving to the taxpayer. Just how much exports will be increased over a period of

time is problematical. Work being done presently under Public Law 480 as well as other efforts to increase consumption of wheat in foreign markets offers great promise.

Imports of wheat and flour in the Far East countries increased from a prewar average of less than 54 million bushels to nearly 290 million in the marketing season of 1951–52. While this high demand has not continued, annual import requirements of this area could well stabilize at around 150 million bushels. With a competitive export program, we can share in this expanded market.

The population in Asia alone is expected to increase by 215 million people in the next 10 years—an increase the size of the whole population of North America. Until such countries as lie in this area can raise their standard of living they must, of necessity, subsist largely on cereal diets. Wheat is needed to supplement rice because it is less expensive and more healthful for the people.

In looking ahead one can see the opportunities for expanding sales of our wheat products in Asia. Similar opportunities are available in Europe, South America, and Africa. Members of Congress indicated confidence in our ability to increase the sales of United States farm products when they appropriated \$700 million last year under Public Law 480. By January 1, 1955, some \$453 million had been obligated under this act. 43 percent of which would be spent on grains, mostly wheat and flour. This program is proving that markets can be expanded. All of the major farm organizations have joined in requesting the authority for export sales under Public Law 480 be expanded from \$700 million to \$1,500 million for the 3-year period.

We will never know how much more wheat and flour can be exported from the United States unless we give it an honest try. Only experience will answer that. As long as our domestic price-support program prices our wheat out of the market, we will never know what could be done. There is no surplus of wheat in the world today. There are local surpluses due to poor distribution and inadequate purchasing power. It is apparent our domestic-price policy has encouraged uneconomic production in other countries.

It is almost impossible to effectively control wheat production because weather is the governing factor. In the past 15 years, our growers in the United States have been blessed with twins from every acre. There is no assurance the rains will continue to come. Two years of drought in our Great Plains wheat area, and the surplus would be gone.

Under the rigid 90-percent support program there was little incentive to produce quality wheat. The certificate plan would once again provide an incentive for growing the best wheat possible, because all wheat would be sold on the open market. The farmer would become a salesman once again, getting all he could for his product at the current price. The market would operate freely with differentials for grade and quality and not a multiple-price system as indicated in my colleague's remarks.

The matter of distribution of certificates on an equal basis among producers often comes up for criticism. We know that a greater percentage of some classes of wheat are used in domestic consumption than others. Just what story is told by available figures depends upon the figures used. My colleague's figures show that on an average for the years 1949-53, 77.4 percent of hard red spring production is used domestically. However, if you take the average for the years 1948-53, the figure is 60 percent instead of 77.4.

On first consideration, this plan might appear unfair to the producer of Hard Red Spring wheat. However, it should be remembered that under programs of the past, the acreage reduction has been shared by producers of that area as in other areas. Also, under this plan if the demand for Hard Red Spring is greater than for other classes of wheat, this would be reflected in prices paid producers of this more desirable wheat. The producer of this wheat would receive certificates the same value as producers of less desirable classes of wheat; consequently his return per bushel would be considerably higher. In this way, he would be rewarded for producing highquality milling wheat. This premium would be to his advantage and should offset this objection to the certificate plan, frequently referred to as the domestic-parity plan.

It should be pointed out that under this plan for wheat the situation in the export market would be no different than it is at present. Foreign consumers have for years received wheat products at a lower price through our subsidy program. In some cases, the American housewife pays more for her wheat products than the consumer of American wheat abroad. Without a lower price, foreign housewives with their lower standards of living could never buy wheat foods. In India, for example, the average wage is \$54 per year.

Some opponents of this plan have called it a bread tax and warned that bakers might oppose it. This possibility has been discussed with some of the bakers and they say they have taken no official position regarding this plan. However, it would be natural for them to resist any program that would raise the cost of flour to them.

In discussing this possibility with several millers, I find they are having to pay a considerable premium at the present time in order to get the quality of wheat they need in their milling business. At times they are paying above parity for quality wheat. Under these conditions, this plan would not raise the cost of wheat for milling into flour. In fact, it probably would have an influence in the opposite direction. This plan would encourage the production of quality wheat types desired by millers and a free open market price with quality differentials again in the picture would discourage the production of undesirable wheat. The resultant increase in the supply of quality wheat would enable a miller to buy at a lower price.

The administrative procedure in connection with this plan would be very

similar to that which is currently carried on in connection with wheat acreage allotments, and would not require a great deal of additional administrative activity on the part of the Government.

The gentleman from Indiana has said that this plan would increase the cost of bread and encourage the use of substitute foods. Wheat prices would have to vary approximately 75 cents per bushel to make a difference of one cent in the price of a loaf of bread; consequently, it is difficult to believe that this plan would provide a real incentive for research to develop ways of producing food products that would use less wheat, as inferred by my colleague.

I believe the certificate plan would encourage farmers to take marginal land out of wheat production. The low return on wheat produced in excess of the domestic food quota would discourage production on excess acres, particularly in areas where the wheat producer has some chance to diversify. Conservation practices would compete with low returns from poor lands if the grower received a high enough return for his share of the crop used domestically for food. This should encourage conservation farming.

Many misleading statements have been made on the cost of producing wheat. Certainly, individual cases can be shown where cost of production is way below average. These individual cases should not be used as a basis for lowering price supports to a level where many growers will go broke.

I know the 90-percent support program is not the answer to the wheat situation. Neither will the flexible-support program solve our wheat problem. The wheat certificate provisions of H. R. 12 are a middle-of-the-road approach. It combines the most desirable features of these other two plans. The grower would receive parity only on the wheat which is used in the world's biggest highpriced market-the domestic food market. The rest of the crop would move into other uses on a flexible basis. plan would be fair to the wheat producer even though it would reduce his percentage of parity returns compared to what they have been under the 90-percent program. It is unfair to suggest that all of the wheat produced in the United States with high-cost machinery, tractor fuel, and labor should go at world prices when less than 20 percent of the crop has traditionally been sold to foreign consumers with their lower income. I realize it will take some time to make the necessary adjustments but they will occur much faster with the domestic parity plan. We need to recognize wheat quality, take marginal land out of wheat production, sell wheat for foreign currency, and work with other countries to expand the total world demand for wheat. We are pleased that the gentleman from Indiana admits that as a part of solving the problem, we also will have to feed some of our surplus wheat. I think we all can agree that the above things should be done. The adoption of the wheat certificate provisions of H. R. 12 would assist in doing this job.

It should be emphasized again that under this plan, the certificate would not increase the price of wheat foods. The miller or processor would buy his wheat in the open market at a lower price level and the cost of the certificate to him would result in his paying approximately the same price for wheat that he has been paying under previous programs.

In developing a program for wheat, we have no choice except to start from where we are, not from where we would like to be. We cannot ignore the present situation in which tremendous amounts of wheat are stored at Government expense. It is absolutely necessary that we have a program that will permit wheat to move into all its possible uses. Most of the debate on what type of a wheat program we should have has been whether we should have a high-lean program or a low-loan program. The certificate plan provisions of this bill offer a compromise and should have the support of both groups. It would provide full parity for a portion of the production and permit the flexible features to apply to the surplus. The certificate plan for wheat should be approved by the House of Representatives as a long step in the direction of providing a practical long-range program for wheat.

Rigid Farm Supports Result in Lower Farm Income

EXTENSION OF REMARKS OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. DAGUE, Mr. Speaker, I am pledged to support any program that will improve our farm economy, short of outright grants from the public treasury, but I remain unpersuaded that 90 percent of parity can accomplish that end. In fact, the direct opposite has been the result, and we know that farm prices dropped some 22 points while rigid supports were in full force and effect. I also believe that our overall economy can best be improved by a reduction in the cost of government with a consequent reduction in taxes. The Agriculture Act of 1954 and the revision of our Federal tax laws. both of which were enacted during the Republican-controlled 83d Congress, will in my opinion operate to the improvement of our economy through the stabilization of farm prices and the retention by all of our citizens, through tax reductions, of more of their earnings for their own use. The following letter from Secretary of Agriculture Ezra Taft Benson addressed to Mr. J. Claude Hammond of Gettysburg, Pa., explores these views and is included with these remarks:

DEPARTMENT OF AGRICULTURE, Washington, April 5, 1955. Mr. J. CLAUDE HAMMOND,

Gettysburg, Pa.,

DEAR MR. HAMMOND: Your letter of February 26 addressed to President Eisenhower has been referred to me for reply. I want

to say first that I deeply regret the difficulties in which you find yourself as a result of the adjustments that have to be made in this transition period from one of war to one of peace. These adjustments are particularly hard for agriculture because as we move into a peacetime economy prices for the things the farmer has to sell are the first to adjust to peacetime levels. This is true this time as has always been the case in the past. However, this administration takes pride in the fact that the adjustments that have had to be made in agriculture have not been anywhere near as difficult as those that farmers experienced following the First World War, or the Second, or in fact any other war in our history. This lessening of the impact has been brought about through careful management of our Federal affairs including those of agriculture.

I think you will be interested to know that total sgricultural assets stood at \$162 billion at the beginning of 1955, up slightly over a year earlier. Farm dot, as a percentage of current assets was 23.9 percent on January 1, 1955, compared with 49.3 percent in 1940 and 70.4 percent in 1930. Following World War I, farmland values fell nearly 20 percent below the 1920 peak in 2 years. From the post-World War II peak reached in 1952, farmland values had declines less than 4 percent by January 1, 1955.

clines less than 4 percent by January 1, 1955. The parity ratio, which measures price received by farmers against those they pay for goods and services, has been relatively stable during the past year. It dropped from a Korean war peak of 113 percent in February 1951, to 94 percent in January 1953. Since then it has averaged about 90 percent. Currently it is 87 percent. Thus nearly three-fourths of the decline in farm prices came in the 2 years before this administration took office. All of the decline occurred while we had rigid supports at 90 percent of parity for the basic commodities. The flexible price support provisions of the Agricultural act of 1954 do not become effective until the 1955 barvests.

Since dairy price supports were reduced from 80 percent of parity to 75 percent on April 1, 1954, there has been real improvement in the dairy situation. Consumption is up. Milk production has leveled off. Government purchases of dairy products are sharply down. Surplus stocks are moving into use. In recent months dairymen have been receiving from 84 to 86 percent of parity for all milk—approximately the same as in March 1954 when 90-percent supports were still in effect.

The second part of your letter deals with the tax legislation of the last Congress. First, let me say that everyone agreed-Democrats and Republicans alike-as to the need for a general revision of our Federal tax laws. Such a revision was long overdue. Second, the tax reduction of our administration was unparalleled in the life of our Nation, totaling \$7,400,000,000. This is hard to grasp, but the money the American farmers got last year for all the corn and all the wheat grown in our entire country was \$7 billion. This reduction was made possible through careful elimination of wasteful, duplicating, and often ridiculous spending policies of the big Government operation built by the Democrats. Of the total of \$7,400,000,000 in tax savings brought about by Republican policies, nearly two-thirds, or \$4,700,000.000, goes directly into the pockets of the wage earner and the family and other individuals. This meant a saving for the average American family-a taxpaying family of 4-of \$200 a year.

This 900-page Republican law containing some 3,000 independent tax-law changes contains a long list of benefits to the low-income taxpayer, such as additional child dependency, deduction of tax credit on retirement income, extension of split-income

provisions to widows and widowers with children, lowers medical-expense deductions requirements, gives working widows, widowers, and mothers a tax reduction, liberalizes soliconservation expense allowances for farmers, permits additional allowances for charitable contributions, and a long list of other lowincome benefits.

In short, the largest tax saving in history has been handed to the American people—not to any one group but to all—and, it seems to me, that is the American way.

Sincerely yours, E. T. Benson, Secretary.

NACA Keeps the Ceiling Unlimited

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, in an era so thoroughly dominated by the airplane that it is commonly—and I think quite appropriately—termed the air age, it is fitting to observe the 40th anniversary of an organization which has had a major part in making our country the undisputed leader in the field of aeronautics. I refer to the National Advisory Committee for Aeronautics which today celebrates its 40th anniversary.

Considering that the entire modern history of human flight is not much older than 50 years, the NACA is "old." I am glad to know from firsthand experience, however, that the great usefulness of the organization is continuously increasing, that the rich experience of the past 40 years finds expression in a most constructive and dynamic program of aeronautical research. I know I am on safe ground when I say that it is the work of the NACA which keeps America not only abreast but ahead of other countries in civilian as well as military aviation.

Mr. Speaker, near the cities of Mountain View and Sunnyvale, in the 10th District of California, which I represent, there is an installation known as Ames Laboratory. While much of the work performed at Ames is by its very nature a closely guarded secret, it is common knowledge that flying today in its gigantic wind tunnels are the military aircraft of 1960 and the speedy airliner of 1965. Ames Laboratory is operated by the National Advisory Committee for Aeronautics. Its equipment includes the world's largest wind tunnel, a monster with a test section measuring 40 by 80 feet. Here, under the able direction of Dr. Smith J. DeFrance, the NACA can subject plane models to speeds fast enough to melt any known material on earth; speeds fast enough even to melt diamonds. The answers that are found in the caverns of Ames Laboratory will help the American aircraft industry to build the planes and missiles of tomorrow. I have no doubt that every one of our current aircraft and missiles reflects in important ways the fruit of scientific studies conducted at this California research center.

In 1915, when our Government tock the initiative and appointed the National Advisory Committee on Aeronautics, our country was woefully behind France, Germany, England, and other nations in the development of aircraft. A large measure of thanks must go to the NACA for pulling our Nation far ahead in subsequent years. On the occasion of its 40th anniversary we owe a vote of thanks to this organization which quietly, patriotically, and with great ability helps American wings to fly higher, faster, safer, and more efficiently, and which gives American aviation its true "ceiling unlimited."

Editorials on the Farm Situation

EXTENSION OF REMARKS

HON. ROBERT D. HARRISON

OF NECRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorials on the farm situation:

[From the New York Times]

FOR A SANE FARM POLICY

A congressional showdown on farm policy is approaching. On one side will be the supporters of President Eisenhower's policy of flexible farm-price supports. On the other side will be the congressional farm bloc, which is trying to scrap the flexible program and reinstitute the old system of rigid, high Government support of farm prices for major crops at 90 percent of a mythical "parity."

We are faced today with mounting surpluses of farm produce in Government surpluses that threaten to exceed \$10 billion in value within the next few months. The Government has been trying to cut down current production by imposing acreage and other controls upon farm-The higher the price guaranteed farmers. ers by the Government for a given prodthe more incentive farmers have to uct. nullify acreage restrictions by using more fertilizer and other resources on their reduced area of plantings so as to get higher yields. The high support advocates. short, really propose to make the surplus problem more unbearable than ever.

High support prices tend to keep farm prices in this country at higher levels than they would be under the operation of natural market forces. We cannot sell farm products at prices above the world market price; the result is pressure to subsidize such export sales. But export subsidies are a form of economic warfare directed in the main against our friends and allies of the free world. They bring animosity and recriminations which weaken free world unity. Moreover, as the growers of cotton have learned to their sorrow, high United States prices stimulate the growth of competitive plantings in other countries.

All of us are consumers and taxpayers. We pay for high support prices twice, at the grocery store and in our tax bills.

Farmers, who are also consumers, also pay a higher price, because high supports require that farmers accept a high degree of governmental regulation for their chief crops. Surely it is time that we made an approach to sanity in our farm policy by adhering to the flexible support program.

APPEAL FOR RESPONSIBILITY

A persuasive appeal for responsible House action on farm price supports has been made to that body by a bipartisan minority of the Agriculture Committee. It is an appeal to defeat legislation which would restore mandatory 90 percent of parity supports for 5 basic crops—corn, wheat, cotton, peanuts, and rice. And it is an appeal that should be honored.

By law enacted last year, the Government is authorized to apply a flexible support formula within a range of 821/2 to 90 percent of parity on these 5 commodities. Initial application of this authority would apply to 1955 crops and there has been no opportunity yet to establish claims that the flexible formula will be injurious to the farmers or to the national interest. There has, however, been ample opportunity to recognize the damaging impact of a high, rigid price-support program that was adopted originally as a temporary wartime formula. The committee minority has summed up this evil result in one effective paragraph, as follows: "Rigid 90-percent mandatory pricesupport programs have failed to keep farm income from declining, created surpluses that have forced farm prices downward, held commodities off the market at great cost to the Government, undermined public support for sound farm programs, lost foreign and domestic markets, assisted foreign competitors to take our markets, and have taken the right to produce away from both small and large farmers."

Effectively, too, the committee minority drew some parallels between price structures for the commodities favored by the rigid supports and those for so-called nonbasic commodities. "It is an interesting and significant fact," they pointed out, "that the average price for nonbasic (unsupported) commodities has been higher (as measured by parity price relationships) in every year since 1940, except one, than the price of so-called basic commodities." As a consequence, the outlook today for the nonbasics is better than that for those which have been covered by high supports.

The flexible support theory is a keystone of the Republican administration's program for dealing with the farm problem. Influential Democrats in both branches of Congress have favored it, at least to the point of urging that it be given a trial. Disposal of some of the huge Government-owned surpluses, expansion of research and educational work in agriculture, and some pending recommendations for helping the small, low-income farmers are other major parts of the administration blueprint. At this stage, it appears to have much greater merit than a retreat to a program that already has been proved costly and unsuccessful.

[From the Boston Herald of March 20, 1955] Subsidizing Wastz

We have known a number of farmers (we are a tiny part-time one ourselves) and we have never known one that liked to waste things. Oh, sure, lime sometimes gets let out in the rain before it's spread, and the gears of the manure spreader sometimes lock for lack of oil, but it's lack of time and not lack of concern that does it.

We do not believe that the farmers of America like to see waste by the Government—massive waste, waste of the things the farmers have tolled to produce.

Yet the House Agriculture Committee has reported a bill to subsidize further just such waste. The committee wants to go back to 90 percent mandatory price support for wheat, corn, peanuts, rice, and cotton, irrespective of supply, for 1955 through 1957. It wants to continue the old process of encouraging excess production to be stored until spoiled if it cannot be unloaded on school children or sold abroad in a way to unsettle international trade.

The committee has other gimmicks. It proposes a referendum among wheat farmers this year on a three-price plan. Under this, wheat sold for food would command the 90-percent support price, wheat for animal feed would get a lower price, and wheat for export would go for still less, all to be subsidized.

The wheat farmers might well vote for it, for it would sell more wheat. But it would sell more wheat at the sacrifice of corn. Wheat would replace corn in feed and export. To waste less wheat, we would be wasting more corn. But corn farmers would not be allowed to vote on the matter.

And what a sorry price we have already paid on wheat support. Because the Government has bought wheat just as wheat, without any milling standards, the farmers have planted the coarse varieties, which produce more but are of low quality. In that way, 50 years of crop improvement have been tossed out the window.

Besides which, the dust storms that have been sweeping the Middle West and which are due to continue to waste our rich topsoil blow because Government subsidies have pushed plows through land that should have been left to grass.

Farmers hate that waste. The Farm Bureau Federation, the Nation's largest general farm group, is one of the major opponents to high fixed price supports.

Yet somehow the House Agriculture Committee thinks it's good politics to subsidize waste. Do they really know farmers on that committee?

FOOD PRICES LAID IN PART TO PAY HIKES (By Vincent Burke)

A congressional study suggested yesterday that sharp wage gains made by labor in foodhandling industries have helped keep consumer prices high in the face of a farm price slump.

This conclusion was set forth implicitly in a 10-page report on a study of Farm to Retall Price Spreads by the House Agriculture Committee staff.

Committee Chairman Harold D. Cooley said the study demonstrated that consumers cannot expect lower food prices as a result of the lowering of farm price supports under the administration's flexible farm program. He is advocating a return to high, rigid supports.

The report said prices received by farmers for food, fiber and tobacco were down an average of 7 percent last year from the 1947-48 average. But retail food prices were up 13 percent.

Wage rates for workers engaged in marketing farm food products jumped from \$1.25 per hour in 1947-49 to approximately \$1.70 in 1954 or 32 persons the approximately \$1.70 in

1954, or 38 percent, the report said.

The report said one "important reason" for the rise in marketing costs is the increased cost of processing and packaging—cellophane packaging of fresh fruits and vegetables and the higher costs involved in marketing fresh-frozen fruits and vegetables.

It noted also that railroad rates have increased about 25 percent since 1947-49.

As for profits, the study indicated that food processors made less money in 1953—after the farm slump got underway—than in 1947-49.

It said the Agriculture Department reports that 46 food-processing companies, for which it has data, made 1.9 cents per dollar sale after payment of taxes in 1953, compared with 2.3 cents in 1947-49.

[From the Chicago Sun-Times of March 20, 1955]

PRICE SUPPORT FIGHT IS ON AGAIN

Farm bloc Congressmen once again are trying to raise the price of butter and other foods. They are trying to ditch the Elsenhower farm program.

The farm bloc wants a rigid guaranty of 90 percent of parity on basic crops—wheat,

rice, cotton, corn and peanuts. President Elsenhower last year won the right to move the guaranty down to 82½ percent. The farm bloc wants dairy prices supported at 80 percent, instead of 75. This would increase butter and cheese prices, which, like wheat, already are in surplus.

Some of the Nation's best economists have warned against the rigid price support system which guarantees high prices even when there are bumper crops and prices

normally would drop.

Illinois corn growers are rightly concerned about another phase of the new bill. It would provide for a national referendum by wheat growers on a two-price system for their crops. There is even talk of asking a three-price system.

There would be a guaranteed price for wheat used as food. There would be another price used for wheat put on the market as cattle feed to compete with Illinois corn growers. And a still third price would be provided for wheat exported; this latter price would be whatever the wheat growers could get—they'd dump wheat on the world market.

The wheat surplus problem is serious. There is a 3-year supply on hand. But in solving that problem Congress should be careful not to help the wheat grower at the expense of the corn grower. It should be careful not to upset the world market and turn other nations against us.

Congress will be wise to listen to the sound farm advice of Agriculture Secretary Ezra Taft Benson.

[From the Norfolk (Nebr.) Daily News of April 8, 1955]

THIS IS NOT THE RIGHT MEDICINE

A man had a severe pain in his stomach. He went to his doctor. The doctor asked him what he had been eating.

"Well, Doctor," he said, "my wife made some mince ples yesterday. Now, I like mince ple so I ate four pleces."

"All right," said the doctor, "if you like mince pie go home and eat four more pieces."

No medical doctor would offer a prescription like that for indigestion. But the political doctors in Washington are doing just that.

Agriculture is sick. It is sick because we hired the farmer to overproduce during the war, and he liked it so well we have kept on hiring him to raise big surpluses after the need for them was over. We did it because it was felt to be good politics.

Ninety percent of parity made agriculture sick, say the political doctors, but the farmer likes it, so let's keep on feeding him 90 percent of parity, then he will yote for us.

cent of parity, then he will vote for us.

They say it is good politics, but we are beginning to doubt it. We think the farmer hereabouts is beginning to see that the thing that piled up huge surpluses to depress the market, isn't the thing that will cure what ails his business.

Representative Bos HARRISON, in his excellent address before the chamber of commerce Thursday explained that the Government now has \$7 billion worth of farm surpluses in storage, and that it is costing us a million dollars a day just for storage. We could quit raising wheat for 3 years and still have food enough. There is enough cotton to last an extra year or two. Our exports have fallen tremendously for three reasons. One is that other countries have increased their food production too; another that they haven't the dollars, since we have cut down on foreign aid, to buy our wheat and cotton and butter; the other is that we refuse to sell to some countries needing our food because they are our potential enemies behind the Iron Curtain. But even if all these ills were cured, we should still probably be producing more than we could sell abroad.

Representative Harrison explained how the plan effected by his bill to encourage foreign buying of our wheat is working. In the first year of operation \$453 million worth of our products has been sold. We are setting up programs which we hope will increase the use of our food abroad. But though this plan is working well it will hardly keep up with the annual surpluses.

The largest farm organization in the country sees that something else must be done. We can't keep on stimulating overproduction forever.

The political doctors, we think, will discover that prescribing the wrong medicine, palatable though it may be, isn't going to get the votes.

The farmers are wise to that kind of quackery.

Immigration and Citizenship Act of 1955

EXTENSION OF REMARKS

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1955

Mr. MACDONALD. Mr. Speaker, I have today introduced an immigration and naturalization bill which would completely revise and replace the Mc-Carran-Walter Immigration Act, which was passed over the President's veto in 1952. This immigration and naturalization bill, entitled the "Immigration and Citizenship Act of 1955," is a codification of all existing immigration, naturalization, and citizenship laws, clarifying and simplifying the present act, but above all, remolding American immigration and naturalization policy into its traditional directions of justice and equity. Moreover, this proposed act would establish an immigration and naturalization policy that will give faithful and positive expression to the basic human values to which American political institutions are dedicated.

Before discussing the principal features of my bill permit me to state that the need for a complete reevaluation of our immigration policy is made even more clear by the unwarranted ousting last week of Edward J. Corsi, the State Department's expediter of immigration. The treatment afforded Mr. Corsi, who has served as Commissioner of Immigration under President Hoover, and as New York State Industrial Commissioner under Governor Dewey, is as absurd and offensive as the present immigration policy itself. Last January Mr. Corsi was urged by Secretary of State Dulles to come to Washington to accept the task of speeding up the flow of refugees into this country under the stringent provisions of the McCarran-Walter Act. At that time Mr. Dulles called him the "best-qualified man in the United States" on immigration matters. After the highest praise from Mr. Dulles only 3 months ago he discharged this man who was trying to interpret the repressive immigration laws in the most humane way possible. This seems to me to be as unjust as the McCarran-Walter Act itself. We all know that Mr. Corsi has long been on record as favoring a much more liberal administration of the emergency refugee program, and a com-

plete revision of the Immigration and Nationality Act. Both these objectives will be accomplished under the provisions of the bill I introduced in the House.

At this point, let me remind the spokesmen of both major political parties that they are on record as having assured the American people of a revision of the un-American McCarran-Walter Act and a new refugee law. I appeal to the leadership of both parties to redeem the pledges made by giving prompt consideration to my bill. It seems to me that the basic principle is whether or not we are to have a sensible, humane immigration policy—and that is obviously the concern of both political parties.

The bill I have introduced is a code of permanent immigration and naturalization law designed to enable the United States to meet its continuing obligations in the immigration field without periodic emergency measures, and to meet American needs and requirements at the same time. The proposed bill if enacted into law eliminates the national-originsquota system with its built-in discriminations based on place of birth; eliminates statutory discriminations and distinctions between native-born and naturalized American citizens; eliminates the present insubstantial grounds for revocation and denial of citizenship, and eliminates fractions and arbitrary grounds for denial of admission to the United States.

Moreover, the proposed act would make clear distinction in requirements for entry between (a) aliens seeking permanent residence here, and (b) alien visitors coming here for scholarly or scientific purposes, for pleasure, or for business. In addition, this bill would eliminate special immigration barriers against Orientals and Negroes: establish an annual immigration ceiling of approximately 250,000 a year, but permit immigration up to that limit. It would also require all ordinary immigration from the Western Hemisphere to be included within the annual immigration limits. Another very important feature of the bill would establish a unified quota system, based on national need, individual aptitude, and the requirements of our foreign policy, and last but not least the bill would establish statutory review and appeals procedures in all cases of deportation and exclusion, and for denials of

I wish to point out and make very clear that this bill would promote entry of desirable immigrants on a basis responsive to national need and international responsibility and at the same time protect this country from infiltration by those who would destroy or impair its political institutions. Let us not forget that the present struggle with Soviet communism is political and moral, as well as military, and therefore if we are to win this fight, we cannot allow legislation to remain on the statute books which enable others to accuse us of establishing our own "Redtape Curtain." Beyond any question or doubt, the United States is the leading democratic nation in the world. This fact imposes a grave responsibility on us which we

are failing to live up to as long as the McCarran-Walter Act is the law of our land.

By adopting this bill you will eliminate all racial and national bias, establish a uniform right of review and appeal from administrative decisions, and remove the distinctions between native-born and naturalized American citizens. The national origins quota system would be replaced by a new unified quota system. Likewise, all immigration and naturalization functions, now divided between the Consular Service of the State Department and the Immigration and Naturalization Service of the Justice Department would be consolidated in a separate single agency to be known as the Immigration and Naturalization Commission.

We in the United States know that our population stems from many races, groups, and tongues. It is also clear beyond dispute that our country has developed and prospered because we have made it a practice to offer a welcoming hand to substantial numbers of immigrants who were seeking freedom and equal opportunity. There is no question that our moral and material advancement has been due principally to the fact that we have had a liberal and progressive immigration policy. That liberal immigration policy, which allowed my ancestors to come to this country must be renewed if this country is not to lose an essential source of its great invigorating strength. In my opinion, the proposed legislation will achieve this purpose and at the same time guard the security, health, and welfare of the United States. It is extremely important that the Congress consider, with open and sympathetic mind, these grave problems of immigration and naturalization. We must remember that any injustice in our immigration and naturalization law is a wedge which will weaken our political system and our long established, constitutionally guaranteed, doctrine that all men are created equal.

In conclusion I want to say that the bill I have introduced is a comprehensive revision of the present law designed and intended to reflect the genuine American tradition of equal justice and impartiality under the law for both the alien and the citizen, and to provide a friendly welcome for immigrants, without discrimination or prejudice, but within a fortified limitation as to total numbers. The bill also provides full security against the admission of criminal, subversive, and other undesirable aliens and it provides for the deportation of those inadvertently admitted or already present in this country. In my opinion the two most important reforms advocated are the abolition of the national origins quota system and consolidation of the overlapping immigration functions of the State Department and the Department of Justice. I firmly believe that if this proposed legislation is enacted into law it will represent an essential return to our basic American tradition and concepts of immigration and will remove the inequities and discrimination from our basic immigration and naturalization laws which are presently a sore on our American way of life.

Forest Conservation Legislation

EXTENSION OF REMARKS

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. DAWSON of Utah. Mr. Speaker, with increasing frequency our valuable national forest lands are being nibbled to death by "weekend miners" who have been using the Nation's mining laws to lay claim to valuable stands of timber and choice summer home sites.

These "weekend" miners are not to be confused with the legitimate prospector upon whose optimism, energy and ability the future wealth and safety of our Nation depends. The legitimate miner presents no problem. His diggings—if he is fortunate to find an ore body—are few and far between and present no hazard to our forest watershed areas.

The minority, however, that are abusing the law have in their capacity cre-

ated a national scandal.

The problem of correcting this situation has not been easy to solve. The legitimate prospector and miner understandably objected to changes in the mining law that would, in preventing abuses, put him out of business also. The forest service, commendably zealous, had difficulty in recognizing this fact.

Now, however, after lengthy meetings legislation has been drafted and I have introduced it today in the House. This legislation has the strong support of both the Department of Agriculture and the Department of the Interior.

The new legislation recognizes the requirements of the legitimate miner and prospector but it also will bring to a halt the abuses of the mining laws who seek to obtain areas of the public domain for nonmining purposes.

Briefly, the new legislation would:

First. Ban the location of mining claims for common varieties of sand, stone, gravel, pumice, pumicite, and cinders and make them subject to disposal by the United States under terms of the Materials Disposal Act.

Second. As to mining claims hereafter located, it would, prior to patent:

(a) Prohibit use of the mining claims for any purpose other than prospecting, mining, processing, and related activitics.

(b) Authorize the Federal Government to manage and dispose of the timber and forage, to manage the other surface resources—except mineral deposits subject to location under the mining laws—and to use the surface of the claim for these purposes or for access to adjacent land, without endangering or materially interfering with mining operations or related activities.

(c) Bar the mining claimant from removing or using the timber or other surface resources except to the extent required for mining or related activities. Any timber cutting by the mining claimant, other than that to provide clearance, must be done in accordance with sound principles of forest management.

Third. Provide an in rem procedure, similar to a "quiet-title" action, under which the Federal Government could expeditiously resolve title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims, located prior to enactment of this measure, in any given area.

This legislation is fair and long overdue. I urge Members to study it and to press for its speedy passage by Con-

gress.

Weaverville (Calif.) Chamber of Commerce Endorses Partnership Trinity River Project Plan

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I desire to include a resolution adopted by the Weaverville (Calif.) Chamber of Commerce on March 31, 1955, withdrawing its support of full Federal development of the Trinity River project—and endorsing the partnership plan proposed by the Pacific Gas & Electric Co.

Under this plan, the private utility would construct and develop the power facilities of the project, resulting in a net saving to the Federal Government of nearly \$50 million in capital outlay. In addition, the plan would provide increased annual tax revenue of \$1,400,000 to the Federal Government and \$1,300,000 to State and local governments. Over the repayment period tax revenue would aggregate \$70 million to the Federal Government and \$65 million to State and local governments.

This resolution endorsing the partnership plan is especially significant in that Weaverville is the county seat of Trinity County, the area in which key structures of the proposed Trinity River project

would be located.

It reads as follows:

Whereas a bill has been introduced into the House of Representatives and the United States Senate calling for full Federal development of the Trinity-San Luis project; and

Whereas it is to the best interests of the Weaverville Chamber of Commerce and the people of Trinity County to receive maximum benefits from the construction of the features of the Trinity River project, within the boundaries of this county; and

Whereas said Interests of Trinity County and the Weaverville Chamber of Commerce were not best served by a resolution adopted on March 15, 1955, by the Inter-County Chambers of Commerce of Northern California supporting full Federal development of the Trinity-San Luis project as originally proposed to Congress; and

Whereas the Pacific Gas & Electric Co. has made to the Committee on Interior and Insular Affairs and to the Bureau of Reclamation a partnership proposal to build and pay for the power facilities of the Trinity River project: Now, therefore, be it Resolved, That the board of directors of Weaverville Chamber of Commerce desires to go on record as withdrawing its support of the Inter-County Chambers of Commerce resolution, and further resolve that both Houses of Congress be urged to incorporate the partnership plan into the respective Trinity project bills wherein the power facilities of the Trinity project would be developed by private capital under Federal Power Commission license, thereby increasing the tax base of the county; be it further

Resolved, That the secretary of the Weaverville Chamber of Commerce be instructed to forward copies of this resolution to the President of the United States, to the Members of the California delegation to Congress, to the Governor of the State of California, and to the Secretary of the Interior.

Passed by the members of the Weaverville Chamber of Commerce at a meeting held on the 30th day of March 1955.

Weaverville Chamber of Commerce, Robert Zbinden. President. Lorene Melquist, Secretary.

Toledo, Ohio, Cited for Outstanding Record in Industrial Relations

EXTENSION OF REMARKS

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. ASHLEY. Mr. Speaker, the House of Representatives of the State of Ohio recently cited Toledo, Ohio, for its outstanding record in industrial relations. I feel that it is particularly significant when a city is singled out for such recognition. The text of the resolution adopted by the Ohio House of Representatives is as follows:

Whereas the members of the house of representatives of the 101st general assembly are aware of the increasing significance of stable industrial relations to the prosperity and well-being of our State and country; and

Whereas the city of Toledo, as established by official State records, has led the industrial cities of Ohio in minimizing the losses

due to industrial disputes; and

Whereas this impressive illustration of successful cooperation for the common good will inure not only to the benefit of the city of Toledo, but will perpetuate its benefits by enabling others to profit, now and in the future, from Toledo's excellent example: And, therefore, be it

Resolved, That the statement of Mr. William L. Batt, Jr., executive secretary of the Toledo Industrial Development Council, "these statistics dramatically illustrate the little known fact that Toledo has one of the best records for stable industrial relations of any city its size in the Nation," be appropriately seconded and acquiesced in; and be it further Resolved, That the members of the house

Resolved, That the members of the house of representatives, in cognizance of the accomplishment of the city of Toledo, gratefully acknowledge our appreciation by adopting this resolution and causing a copy to be spread upon the Journal; and be it

Resolved, That the clerk of the house of representatives transmit a properly authenticated copy of this resolution to the mayor and city council of the city of Toledo.

Adopted, February 28, 1955.

CARL GUESS, Clerk.

The Cause of a United Ireland

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks. I wish to include the following statement I received from Mr. William Conlon, 23 Breed Street, Lynn, Mass.:

In honor of the Easter Week, Rebellion of Easter Week 1916, and those immortal and gallant Irishmen who shed their blood for the cause of a united Ireland, I send you the following article for publication:

The cruelty and inhumanity of the penal laws which the British Government enacted against the people of Ireland after the Jacobite collapse have never been equaled in the history of man. So disbolical was this piece of English legislation that the great French jurist Montesquieu wrote: "This horrible code was conceived by devils, written in human blood, and registered in hell."

It is not my purpose to give the details of the penal laws except to say that under them no Catholic Irishman could vote, keep arms, or enter a profession, or hold public office, engage in trade or commerce, live within 5 miles of a walled town, inherit the land of a Protestant, purchase any land, own a horse valued at more than 5 pounds sterling, own land valued at more than 30 shillings (\$6) a year. He could not educate his children and if he sent his children abroad to be educated all his property was forfeited and he was outlawed. But above all else he could not practice his religion. Violation of any of those statutes was punishable by death.

It was not until the American Revolution

It was not until the American Revolution of 1776 that the Irish people were able to find any little surcease from their sufferings. The wily British politicians, having their hands full in the colonies and, later, viewing with alarm the rise of the young Corsican, Napoleon Bonaparte, following the French Revolution, made overtures to the leaders of the Irish volunteers, with the consequent result of the formation of the so-called Irish Parliament of 1782. Even under this assembly, known to history as "Grattan's Parliament" the Catholic Irish were not eligible for election.

There is a great misconception among many Irish people with regard to the formation of the Irish Volunteers of the period. Many are apt to confuse them with the united Irishmen of the era. It is interesting to ascertain just how the Volunteers originated.

During the 80 or more years that the Penal Laws were in force, England destroyed practically every industry. The great woolen and linen trades of Ulster, owned and operated by the Ulster "Loyalists" were not spared and thousands of Presbyterians were forced to emigrate to the Colonies. It is perhaps only retributive justice that history records the fact that these exiled Ulstermen were eager and willing to join with the other Catholic exiled Irishmen to compose about 40 percent of George Washington's army which achieved American independence when Cornwallis surrendered at Yorktown.

The American Revolution helped the Irish cause in many ways. Apart from the fact that both Catholic and Protestant Irishmen united to serve with George Washington in 1776. There was the great factor. That England was forced to withdraw her troops from Ireland in an effort to conquer the "American Rebels." The coasts of Ireland being then unprotected (according to the

British conception) from the ravages of American privateers—the people of Ireland principally those of the counties on Antrim and Down began to form volunteer groups. The movement spread all over the country and before England had fully realized the possibilities of Ireland having an army of her own. Numbering more than 100,000 men fully trained and equipped. Lord Cornwallis had surrendered and the American Colonies had achieved their independence.

The Irish volunteers met and demanded legislative independence for Ireland and the right of free trade. England acquiesced and so was born the Irish Parliament of 1762. But there were many young Irishmen who were not satisfied with the British concessions. Among them were Dolf Tone and Napper Tandy and others who were leaders in the United Irishmen. Their ideal was the same as that of Padriac Pearse—a century later—Ireland completely free of all British tentacles.

all British tentacles.

Under "Grattan's Parliament" the great force of Irish volunteers had been allowed to disintegrate. Many of the volunteers later joined the united Irishmen, during the heroic struggle of 1798. Just before the rising at Wexford a young Presbyterian from County Antrim named William Orr, was convicted of having administered the oath of the united Irishmen to a soldier named Whitly. Notwithstanding the fact that Whitly confessed to perjury. Orr was hanged for treason against the Crown. "Remember Orr," became the rallying cry of the united Irishmen.

Some 60 years after the rising of 1793, John Keegan Casey, Leo of the nation, wrote his inspiring ballad The Rising of the Moon. Even today it is one of the most inspiring and popular patriotic Irish songs. Set to a variant of the immortal Wearing of the Green, it is one of the grandest tributes ever paid to the dead who died for Ireland.

"Oh, then tell me, Shaun O'Farrell,
Tell me why you hurry so;
'Hush, Ma Voochal, hush and listen,'
And his cheeks were all aglow;
'I hear orders from the captain,
Get you ready quick and soon,
For the pikes must be together
At the rising of the moon,'
At the rising of the moon,
For the pikes must be together
At the rising of the moon.

"Oh, then tell me, Shaun O'Farrell, Where the gathering is to be? In the old spot by the river, Might well known to you and me; One word more—for signal token, Whistle up the marching tune, With your pike upon your shoulder, At the rising of the moon.

"Out from many a mud-walled cabin Eyes were watching through that night, Many a manly breast was throbbing For the blessed warning light, Murmurs passed along the valley, Like a Banshee's lonely croon, And a thousand blades were flashing At the rising of the moon.

"There beside the singing river,
That dark mass of men was seen
High above their shining weapons,
Hung their own beloved green,
Doth to every foe and traitor,
Forward! Strike the marching tune,
And hurrah! my boys for freedom,
Tis the rising of the moon.

"Well, they fought for poor old Ireland,
And full bitter was their fate,
Oh, what glorious pride and sorrow
Fill the name of 'Ninety-eight,'
Yet, thank God, there still are beating
Hearts in manhoods burning moon,
Who would follow in their footsteps,
At the rising of the moon."

John Keegan Casey was one of Ireland's greatest songwriters. He was born in 1846 and died in 1870. For a few years of his short life he contributed to the Nation, writing under the pen name of Leo. He is best remembered for his patriotic ballads, principally the Rising of the Moon; Thou Are Not Conquered Yet; Dear Land; God Bless Our Irish Girls; the Flag is Raised; the Green Flag; and Donald Kenney.

Like all Irish poets, he could write very charming love songs. Mamie, My Girl, and My Colleen Euadh are fine examples of his work in this category. There is a tendency among some people to credit John Keegan Casey with the authorship of the Irish Reaper's Harvest Hymn. These songs were written by John Keegan, who was born in 1809 and died in 1849. Since the names of the poets are similar, it is easy for anyone to confuse them. The fact that Keegan's work was known to Casey influenced the latter to use the pen name of Leo.

The Rising of the Moon is a most inspiring song. It can also be very inspirational when given as a recitation with suitable musical accompaniment. My sister, the late Anna Winifred, recited the poem often during the Rambles in Erin radio series over the Mutual network some years ago, while a symphony orchestra played Irish national melodies in the background.

Casey's grand song also inspired the late Lady Gregory to write her celebrated one-act play The Rising of the Moon, when I think of the stirring poem, especially the last verse, in which Casey sings:

"Yet, thank God, there still are beating Hearts in manhood's burning moon Who would follow in their footsteps At the rising of the moon."

And realize that our Irish poets and songwriters never despaired of the future. I recall Thomas McDonagh's last message prior to his martyrdom in 1916.

to his martyrdom in 1916.

"While Ireland lives, the brawn and brains of her manhood will strive to destroy the last vestige of British rule in her territory.

"Let England make no mistake. The generous, high bold youth of Ireland will never

fail to answer the call we pass on to them.
"Take me away and let my bloow bedew
the sacred soil of Ireland. * * * I die in the
certainty that once more the seed will

fructify."

Respectfully yours,

WM. JAS. CONLON.

A Vote of Thanks to Dr. Jonas E. Salk

EXTENSION OF REMARKS

HON, JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. PATTERSON. Mr. Speaker, today I introduced in Congress a concurrent resolution tendering the thanks of Congress to Dr. Jonas E. Salk for his great achievement in developing an antipolio vaccine.

We all owe this brilliant young scientist a heartfelt vote of thanks, and it is fitting that the elected representatives of all the people should offer a word of sincere commendation in behalf of the American people.

This historic contribution to preventative medicine proves again that America leads the world in the development of weapons to save human life and we freely share with the world the noble humanitarian benefits of our greatest scientific achievements.

Dr. Salk, the son of a garment worker, is an example of how an American boy in our great land of free enterprise can achieve success and attain the highest honors.

I wish to add that I am deeply gratified that United States Surgeon General Leonard A. Scheele is taking immediate steps to extend the facilities of the United States Public Health Service in distributing the new polio vaccine.

Sonoma Valley Conservation District Favors Trinity River Power Development by Private Power Company

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I desire to include a letter from the Sonoma Valley Soil Conservation District, Sonoma, Calif., in support of the P. G. and E. plan for developing power on the Trinity River.

If the project should prove feasible and is authorized I believe the partnership plan as proposed by the private utility to the Bureau of Reclamation would be a practical approach. This plan would result in a multi-million-dollar savings to Federal taxpayers in construction costs, plus providing increased revenue in the form of tax payments to Federal and local governments.

I have received numerous endorsements of the partnership plan for the development of power on the Trinity River. Soil conservationists have a great interest in preserving and making the best use of our natural resources, and I take this opportunity of presenting the views of one of the soil-conservation groups in my congressional district on this important subject.

They have gone on record, as follows:

SONOMA VALLEY SOIL,

Conservation District,
Sonoma, Calif., March 31, 1955.

Congressman HUBERT B. SCUDDER, House Office Building,

Washington, D. C.

Dear Sir: At a recent meeting of the Sonoma Valley Soil Conservation District, the board of directors unanimously favored the Trinity River partnership plan proposed by the P. G. & E. Co. to the United States Bureau of Reclamation as indicated in the following ballot:

Chairman, Comdr. J. C. Poshepny, orchardist, aye; directors: Victor Leveroni, rancher, aye; Herman Johnson, rancher, aye; A. "Nibs" Maffei, rancher, aye; Carson Mitchell, dairyman, aye.

The facts present an overwhelming argument in favor of savings to taxpayers and the encouragement of private enterprise. The amount of revenue which would be realized by the Government for the use of

this water would substantially reduce the governmental share in the cost of operations, and so further reduce the present tax burden.

The P. G. & E. is fully equipped to enter into this program with their present facilities, thus saving the Government, the taxpayers, the cost of initial plant and operational expenses and, further, making available more water than anticipated in the original plans of the Bureau of Reclamation, and more power to the P. G. & E. at reduced cost to the consumer.

This board respectfully request that you give this proposal your consideration and attention.

SONOMA VALLEY SOIL CONSERVATION DISTRICT.

M. EILEEN MERONEY, Secretary.

Farm Co-op Asks for Repeal of 1954 Agricultural Act

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the Record a resolution adopted by delegates attending the 24th annual meeting of the Farmers Union Central Exchange held in St. Paul, Minn., from February 28 through March 3, 1955.

The Farmers Union Central Exchange serves 350,000 farmers in the 6 Northwest States of Wisconsin, Minnesota, North Dakota, South Dakota, Montana, and Iowa.

From the tenor of the resolution adopted by the delegates attending the Farmers Union Central Exchange's annual meeting it is very obvious that farmers in this area are not satisfied with the results flowing from the Agricultural Act of 1954. In fact, these farmers are asking for repeal of the law. Here is the full text of the resolution which I commend to my colleagues for their study:

FARM PROGRAM

As a wholesale supply cooperative serving the needs of farmers in a six-State area, the Farmers Union Central Exchange performs a vital function in the overall Farmers Union movement.

It has the endeavor and purpose in common with the other Farmers Union cooperatives and the National and State Farmers Union Educational organizations to preserve the family-type farm for our United States of America, and to secure parity of income and living standards for farm families. This is not just a high-sounding phrase.

The kind of farm program which individuals and organizations develop and support depends on their basic philosophy and purpose. Parity for farmers is not and should not be a matter of partisan politics, but politicians and political parties must be held accountable for their record.

We condemn the 1954 farm act because it is in conflict with the goal and past accomplishments to achieve parity for agriculture. It seeks to regulate production by manipulating prices and to eliminate surpluses by eliminating farmers.

When production control becomes necessary, it should be by democratic farmer participation in control programs, not by application of a protracted economic squeeze ending in bankruptcy and foreclosure.

Our State Department has found in a number of foreign countries that monopoly and large-scale land ownership resulted in conditions favorable to Communist expansion. In order to prevent such expansion, our Government has assisted these countries in land reform programs to replace land monopoly with individual family owned and operated farms. However, the leading proponent and architect of these land reforms for foreign farmers was dismissed by our Secretary of Agriculture as a security risk. And our present program for American farmers is leading toward, not away from, land monopoly.

We recognize that farming operations must keep pace with modern technology and know-how. And that measures for so-called rural slum clearance are necessary. Such measures, however, are a supplement, not a substitute, for price supports. Those who say that we cannot achieve parity of income for farmers lack faith in our free enterprise system and our democratic way of life.

The present administration has promised to develop new farm programs to secure full parity for farm products, both storable and perishable. It has not yet succeeded in doing so, and until it does, we urge that the 1954 farm act be repealed and that the 90 percent supports under the old parity formula be restored for basic commodities; that acreage allotments and marketing quotas be utilized to achieve a better balance between supply and demand.

New England Interstate Water Pollution Control Commission Reports on S. 850

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement adopted unanimously by the New England Interstate Water Pollution Control Commission at Springfield, Mass., on March 24, 1955:

STATEMENT RELATIVE TO S. 890 BY NEW ENG-LAND INTERSTATE WATER POLLUTION CON-TROL COMMISSION, BOSTON, MASS., AN INTERSTATE AGENCY REPRESENTING CON-NECTICUT, MASSACHUSEITS, NEW HAMPSHIRE, NEW YORK, RHODE ISLAND, AND VERMONT

The New England Interstate Water Pollution Control Commission, after careful study and consideration of S. 890, a bill to extend and strengthen the Federal Water Pollution Control Act (Public Law 845), is greatly concerned over this legislation which was prepared and submitted for introduction into the 84th Congress by the Department of Health, Education, and Welfare without consultation with the States.

Several features of this bill would change the entire existing philosophy of cooperative Federal-State relations regarding water pollution control, wherein the Congress recognizes the rights and responsibilities of the States and interstate agencies in conducting their abatement programs.

Moreover, in approving the New England interstate water pollution control compact. the Congress granted certain authority to this commission and its signatory States, which under the proposed legislation would be subject to Federal approbation and control.

The commission, therefore, records its opposition to those portions of S. 890 which would adversely affect the continued successful operation of the New England interstate water pollution control compact.

JOSEPH C. KNOX, Sccretary.

Address by Gen. Matthew B. Ridgway, Chief of Staff, United States Army, to the West Point Society of New York at the Annual Founders Day Dinner, Waldorf-Astoria Hotel, New York City, March 19, 1955

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. McCORMACK. Mr. Speaker, under permission granted to extend my remarks, I include a splendid address made by a great military leader and great American, Gen. Matthew B. Ridgway, Chief of Staff of the United States Army, on March 19, 1955, to the West Point Society of New York at the annual founders day dinner held in New York City.

The views of General Ridgway are worthy of profound consideration in connection with our national defense, and particularly in connection with the strength of our Army during these trying days. In addition to showing that the "land arm" is indispensable in seizing, holding, and controlling portions of the world's surface, he also makes the pointed assertion that—

It is, I believe, indisputably true that weakness in the strength of ground forces anywhere in the free world invites aggression in those areas. Where free-world ground forces are in position in strength, conditions tend toward stability, and the chance of successful aggression lessens.

Also, the further pointed statement:
By remaining strong militarily, and by
taking full advantage of our Nation's human,
industrial, and scientific potential, we can
best hope to deter aggression, or, should it
occur, to deal with it in the manner that
our national interests require. As a decisive
factor in war, there is no substitute for determined troops, adequately trained, properly
armed with modern weapons, well led, and
imbued with the will to close with the enemy
on the ground and crush him. I believe any
contrary concept is a dangerous fallacy,

The address follows:

Mr. Chairman, Mr. Baruch, General Byran, distinguished guests, and members of the West Point Society of New York, it is an honor to be one of this gathering tonight, an honor to share once more in honoring our illustrious alma mater, an honor to be permitted to address this group of eminent Americans and sons of West Point, whose high achievements and dedicated service to God and country, in peace and war, testify eloquently to the worth of West Point's teachings, and to its continuing contributions to the Nation's progress.

Let us first recall with reverent pride the many sons of the United States Military Academy who have given life or limb in battle, defending with unswering loyalty the values and ideals which inspire the people of our Nation. Let us, too, express our abiding appreciation to West Point's sons, who are serving the Nation in our Armed Forces and in civil life, alongside of their patriotic fellow Americans whose service equally elicits our admiration.

Ninety years ago a great human drama was closing—a great historical era in our evolving society was about to begin.

Early in April of that year of 1865, two men of high principle faced each other in that climactic scene at Appomattox. They were famous then. They were to attain still higher eminence. Yet, in spite of the greatness Ulysses S. Grant and Robert E. Lee achieved in later years, perhaps neither ever knew more greatness of soul than that to which adherence to their principles had elevated them at that moment.

I seem to discern, in the perspective in which time now brings those war years and that scene into focus, a parallel with the American scene today. Not since then, I think, has destiny confronted America with such decisions. Not since then has principle stood so revealed as the instrument by which our future shall be decided.

Then, as now, apathy and complacency dragged at the feet of principle, and the search for a less arduous path threatened to sap national resolution. Today, fateful decisions, as in those days, confront our Nation, and the paths which we as a people choose to follow, will no less vitally affect our future before God and man.

We live in an age when science and technology appear to challenge the capabilities of man to control the fruits of his own rapidly increasing knowledge. To the normal hazards of life, as we have known it, there has been added in recent years the power of modern weapons, with destructive capability on an almost unimaginable scale, the magnitude of which goes on increasing—and with it the number and magnitude of the problems we confront.

There can be no dodging these problems, no escaping our national destiny for decisions, no evading our responsibility as a people for the results which will flow from their execution.

These results can have such a staggering impact in future years that I think it pertinent to discuss one or two of them briefly, even if this introduces a somewhat somber note into this pleasant evening. Most of us are members of the active Army. As such, we may well review what the Army's role is expected to be, and how it and we can discharge that role to our country's best advantage, in our evolving destiny.

I think no mind, however fine, can perceive with any sureness the course of events beyond the immediate future. Yet we may be sure that there will be continuing danger of war, while there exists the present combination of implacable hostility toward us by Kremlin leadership, and a great and growing capability under its control for military aggression and political subversion.

So long as this combination exists, the risk of war will remain, in spite of all we do to seek by all honorable means, to prevent war's occurrence. This risk has become an accepted fact in our daily life. We must reduce this risk of war, not ignore it, and we can, if we resolutely maintain our determination to remain strong at all costs, and to take the measures necessary for our protection, while with the dynamic force of faith we renew and intensify our efforts to solve this greatest of all problems—the preservation of peace and the extension of freedom.

Weapons of mass destruction are a twoedged sword. Under our control, they may serve as a deterrent to aggression. In the hands of the Communists they pose a threat. But they are still weapons, with definite limitations as well as capabilities, and subject, like all weapons, to man's control. The United States Army is prepared to employ tactically an impressive family of modern weapons against legitimate military targets.

Until some major change occurs in the world power ratio, and none is yet discernible on the international horizon, I firmly believe we must continue to employ our industrial and technical resources in ways most likely to increase our national security; that we must maintain, and to the maximum practicable extent, increase our superiority in all these modern weapons, atomic, and otherwise; that we must preserve adequate strength in all our Armed Forces, properly proportioned between the land, sea, and air arms.

The Army has inherent military characteristics indispensable in warfare, capabilities which we are ceaslessly seeking to increase. First in importance is the capability of the land arm to seize, hold, and control portions of the earth's surface, and the people who inhabit them. No other service has that capability. It is significant that in many instances where Communist aggression has occurred in the world, Communist ground forces have been the principal instruments of aggression, and that where aggression has been halted and defeated, this has been accomplished mainly by ground forces, with supporting sea and air strength.

It is, I believe, indisputably true that weakness in the strength of ground forces anywhere in the free world invites aggression in those areas. Where free world ground forces are in a position in strength, conditions tend toward stability and the chance of successful aggression lessens.

By remaining strong militarily and by taking full advantage of our Nation's human, industrial, and scientific potential, we can best hope to deter aggression, or, should it occur, to deal with it in the manner that our national interests require. As a decisive factor in war, there is no substitute for determined troops, adequately trained, properly armed with modern weapons, well led, and imbued with the will to close with the enemy on the ground and crush him. I believe any contrary concept is a dangerous fallacy.

Since, in the final analysis, man is the most important element in war, the intangibles that inspire men—the great moral and spiritual influences—are of the utmost importance in deciding issues between warring groups. An army's success in modern war will depend upon its possession of the highest attributes of bravery, patriotism, professional skill, and devotion to duty. The soldier in combat will be placed under the severest stresses to which war has yet subjected him. He will need and must receive the highest type of leadership and that type of leadership the Army will provide.

We can take deep pride in our officer corps and our noncommissioned officer corps—two reservoirs of leaders of character and competence, highly trained, many tested in combat, imbued with confidence, and sustained by those principles which have made our aima mater and our Nation great.

Today these leaders bear, and in the years ahead their successors will bear, heavy responsibilities. The manner in which they are discharged will be of incalculable importance to us and to mankind. If, in reaching decisions which lie ahead, our Nation remains true to the principles of the Founding Fathers; if our Nation matches the dedication to principle exemplified by the victor and the vanquished at Appomattox; then we need have no fear of future trials. For the principles on which our country is founded are rocks, and like the heights of the Hudson at West Point, they are the hills unto which we lift up our eyes, for from them, in truth, will come our help.

Hungarians Seek Freedom—Condemn Communism

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. McDONOUGH. Mr. Speaker, the spark of freedom inherent in the hearts and minds of the members of the American Hungarian Federation burst into a flame of protest against the evils of communism at their recent meeting at Hunter College, New York City.

The federation resolved to organize a committee of 1 million Americans of Hungarian descent to combat communism, and seek to liberate their native country from Russian domination, to restore freedom to Hungary, and to denounce the Teheran, Yalta, and Potsdam agreements which have brought Communist slavery and subjugation to Hungary?

They appealed to President Eisenhower to use the great power of his office to help them acquire their goal.

The firm stand for freedom and independence taken by the Americans of Hungarian descent deserves the full cooperation of the people of the United States.

Resolution adopted on March 5, 1955, at the commemoration of Hungarian Independence, Hunter College, New York City:

"Whereas Hungary by tradition and history had been the bastion of Christianity since the 14th century and by three centuries of continuous fighting at the sacrifice of 4 million of her people, had secured peace and progress for Western Europe; and

progress for Western Europe; and
"Whereas the unjust and cruel consequences of the agreements of Teheran, Yalta,
and Potsdam have led to Hungary's subjection to Soviet domination and Communist
rule; and

"Whereas the Hungarian people have never ceased to remain dedicated to national independence, individual freedom, and Western cultural standards as has been demonstrated even under Soviet military occupation at the 1945 and 1947 elections; and

"Whereas the present Communist regime and Soviet colonial exploitation are being maintained in Hungary only by violent domination by the Red army and arbitrary rule by the Communist secret police; and

nation by the Red army and arbitrary rule by the Communist secret police; and "Whereas the Hungarian people silenced by Communist terrorism have been deprived of all possibilities of expressing their true will and communicating with the free world;

"Therefore, we assemble tonight under the banner of "Free Americans for Free Hungary," and raise our voice in behalf of our brethren in protest against their subjugation and the intolerable slavery into which they have been plunged; Be it

"Resolved, That we herewith create a committee representing 1 million Americans of Hungarian descent and designate the American Hungarian Federation as our agent. The federation is herewith authorized and directed to submit our appeal to the President of the United States, Dwight D. Elsenhower, and simultaneously to call upon him as the leader not only of the American people but of the free world, to reaffirm his solemn pledge against all tyrannies, never to compromise for the sake of illusory coexistence, those eternal ideals of national freedom and

human rights defended throughout American history and to do all in his power to liberate our enslaved people from under Soviet tyranny and Communist degradation."

Youthful Energies and the Civilian Conservation Corps

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. BLATNIK. Mr. Speaker, at this time of year when life begins to stir and tree buds burst, many men in their early forties recall how they once lived and worked in a CCC camp. They recall the depression of the early thirties when they were left with nothing to do-and nothing to do it with. These thoughts come to them because just 22 years ago this month, the first CCC camp was established on the George Washington National Forest in nearby Virginia. It was appropriately called Camp Roosevelt in honor of a great President whose quick action in approving the Emergency Conservation Act helped relieve unemployment by putting men to work on the national forests, the national parks, and others of our public lands.

During nearly 9 years after the act of March 31, 1933, was signed, the people of every State saw young men standing in line to enroll in the Civilian Conservation Corps. Before the camps were closed in 1942 there were over 2,600 such camps in which over 3 million young men had seized the opportunity to build self-confidence while serving their country. I know what it meant, for I was with them.

Like thousands in those days, when I graduated from the Winona State Teachers College in my State, I stood with a diploma in my hand and no place to use my training. The CCC looked good, and believe me, it was good to me. For the better part of 2 years I worked with other young men on the Superior National Forest in northeastern Minnesota as camp educational adviser. The tasks we did depended upon the time of year and the ingenuity of our camp superintendent. We planted trees and built roads, strung telephone wires, searched for the elusive gooseberry bush to free the white pine trees from blister rust, and fought forest fires. As camp educational adviser it was my task to provide educational opportunities in addition to the relief and work programs for which the CCC is more widely known. We worked in warm weather and in cold. There was plenty to do. but we were young. We liked the work; we liked the life; and especially, we liked the opportunity to be a recognized part of American life.

I believe I am the only Member of this Congress who was in the CCC. From this vantage point, I see it as a great movement to renew a spirit of adventure in youth, and to dramatize the protection and restoration of our natural resources. Our efforts up there on the shores of Lake Superior stand out as part of a job being done by thousands of young men in hundreds of CCC camps across the country.

Because of our work, millions of acres of forest land now yield crops of pulpwood and sawlogs, on millions more, fat livestock feed on good grass that we made possible, everywhere sportsmen find better places in which to fish and hunt, and families have places where they may picnic. Now, as never before, I see in the CCC, an evidence of what can be done when direction is given to the energies of youth.

Mendocino County Chambers of Commerce Endorse Proposed Trinity River Power Development Plan

EXTENSION OF REMARKS

OF

HON, HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the APPENDIX of the RECORD, I desire to include a telegram signed by chamber of commerce officials from various communities in Mendocino County, Calif., endorsing construction and development of power on the Trinity River by private enterprise.

Considerable interest has been generated throughout my congressional district in the proposal offered by the Pacific Gas & Electric Co., to develop power phases of the proposed Trinity River project. One such expression of interest is a telegram dated April 13, signed by the president of the Mendocino County Chamber of Commerce; the president of the Ukiah Chamber of Commerce; the president of the Willits Chamber of Commerce, the president of the Fort Bragg Chamber of Commerce, and the director of the Mendocino County Chamber of Commerce. These leaders endorse the "partnership plan" as a sound business proposal which would result in a savings of several million dollars to Federal taxpayers in construction costs, and return to the Federal and local governments tax revenues amounting to multimillions of dollars.

I firmly believe the proposal made by the Bureau of Reclamation by which private enterprise would develop power facilities on the Trinity River should be favorably considered by the Congress.

The telegram referred to is as follows: UKIAH, CALIF., April 13, 1955.

Representative Hubert Scudder, House Office Building, Washington, D. C.:

We note by press release Pacific Gas & Electric Co. has made a formal proposal to the United States Bureau of Reclamation for partnership construction of the Trinity River project. We endorse this plan as a sound business proposal which would re-

sult in a tax savings of several million dollars to the people as well as a saving to the Federal Government by private capital investment.

DON MACMILLAN,
President, Mendocino County Chamber
of Commerce.
CLAUDE FALCONER,
President, Ukiah Chamber of Commerce.

OSCAR GRUTER,
President, Willits Chamber of Commerce.
Gus Nicholas,

President, Fort Bragg Chamber of Commerce.

JAMES PELLASCIO,
Director, Mendocino County Chamber of
Commerce, Point Arena.

National Housing Act or Abandoned City Parishes?

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. RODINO. Mr. Speaker, the following article on housing is dealt with so expertly by the Reverend Thomas J. Finnegan that I am pleased, under unanimous consent, to insert it in the RECORD. It is an interesting and enlightening article which deserves national attention:

NATIONAL HOUSING ACT OR ABANDONED CITY PARISHES?

(By Thomas J. Finnegan 1)

A slum is not the "other side of the tracks" to me; it is not a place I have heard of or read about; it is the neighborhood in which I live. Making the first parish census after my ordination, I found that many of the dilapidated buildings contained dark, dingy hallways, that dwellings were severely overcrowded and lacking in light and air, with outmoded sanitary facilities, often in the backyard or on the back porch, and shared by many families. These dwelling units were so substandard as to be unfit for human habitation. A congressional committee investigating housing conditions throughout the Nation declared this section of our city the second worse slum area in the United States.

The parish to which I am assigned is a parish of old buildings and poor people—people who are sometimes called "slum dwellers." To me these poor people mean the babies who are born and the old people who die in our parish. They also mean the mothers and fathers, sons and daughters, brothers and sisters in the families which I enumerate for the parish census. They are the parents who have to strive against insurmountable odds to do for their children that which should be done for every child in this and every land.

AN APOSTOLIC CONCERN—NOT POLITICS

One of the earlier bishops of the diocese was the rector of this parish, once the great-

est in the city. A glorious story could be told of a bygone era, but this would be of no practical help to the present pastor in his duties.

In recognition of a worldwide housing need, the conditions in our parish being now one example, Our Holy Father. His Holiness Pope Plus XII, made the following statement in an address to the Autonomous Institute for Popular Housing in the province of Rome on November 21, 1953:

"Furthermore, the industrial progress and the consequent development of large cities during the past 100 years has given the question of housing such a special aspect that the pope, the bishops, and Catholic associations have not ceased to give this important and, alas, distressing problem their particular attention. The problem has been painful from the very beginning and has remained so even to this day. * * * Even today we must make our own the words of our predecessor Pius XI of glorious memory in the Encyclical Quadragesimo Anno: 'It is horrifying to consider the impediments that the altogether unbecoming state of housing offers to the union and intimacy of family life' (Acta Ap. Sedis, vol. XXIII, p. 221).

"What a burden arises, therefore, for Christian consciences, when future spouses, new domestic hearths, growing families cannot find any shelter, or only an inadequate or often a too costly one. The Lord alone knows how often under such conditions, human weakness has hindered souls from leading a Christian life and injured them also in their faith. * * This particular apostolic concern for those who, having a family, seek adequate and wholesome housing, coincides with the true interest and the objective scope of the national economy."

VIRTUAL INEVITABILITIES OF SLUM SURROUNDINGS

All the nationalities that have gone into the making of this country had the family as a physical unit of society. Consequently, housing is not only a matter of providing shelter for individuals, it is the business of providing a decent environment for the home. Good housing does not, in itself, create a satisfactory home, but there are few individuals capable of creating a good home in a wretched dwelling. Poor housing makes it easy for a home to fail and difficult for it to succeed.

In overcrowded buildings that are dark and dirty, with poor ventilation and insanitary conditions which grow steadily worse, the feeling of shame smothers family loyalty because an ambitious individual comes believe that his home is an obstacle to self-respect. He is likely to hide his family connections as a detriment to his personal advancement. A home that must exist under bad accommodations is undermined in every aspect of its family life. Proper privacy is impossible. Family conflicts are engendered. Hopelessness stimulates slovenly habits. The proper relationship between parents and child is difficult and, under these circumstances, the children, and sometimes the parents, seek their recreation away from the wretched home. They lose the benefits of contact with one another. They are prey for evil companions; their interest in their religion drops off and they cease attending mass and the sacraments. In bad housing it is not easy for parents or children to keep healthy. Disease germs, to say nothing of rats and vermin, infest many slum buildings. Hot water and adequate bathing facilities are lacking. Many-storied frame structures are poorly heated by a multitude of stoves which create fire hazards. The fire bell and siren are more often heard in a congested section of the city than they are in the better housed sections. A child must be very rugged to survive in this environment.

Jacob Riis, a Danish-born immigrant, noted journalist, and one of the most tireless workers to clear slums in New York City more than a generation ago, wrote:

"The most pitiful victim of city life is not the slum child who dies, but the slum child who lives. Every time a child dies, the Nation loses a prospective citizen, but in every slum child the Nation has a probable consumptive and a possible criminal."

Yet, the man living apart from these blighted areas also shares in this abnormality, for his pocketbook helps to pay for the fire and police protection, the social and judicial services which must be augmented in those wretched sections. Old and antiquated houses, zoning variances altering the character of residential neighborhoods, increased populations, high tax rates, and housing shortages bring about a surge to the suburbs.

"I want to give my child all the advantages I never had." This is the creed of those who are seeking to live in suburbia. However, in this sweep to the suburbs and the small towns, there are several factors to be considered. The utopia in the suburb must have utilities installed; sewers, roads, and schools must be built; and, as the population increases, the need of expanded police protection and fire safeguards grows. None of these figured in the low tax rate which tempted the man to move out there in the first place.

THE ABANDONED PARISH

Then there are the utilities left behind. In addition to those mentioned, there are others of a judicial and social nature. Now we come to that portion that strikes home. What of the parish just left behind in the city? What do we do now? Shall we close it down? It was a grand old place in its day, and there are many memories connected with it, some sad, others joyful. The school, church, convent, the rectory, and club are still there. How are they to be maintained now? How long can the parish treasury stand the reduction in the income? The parish parochial plant still is to be main-The school has fewer children in it, tained. but it is still in operation. The people who moved into old rooms or into the rooms vacated are either not Catholic or, if they are, they cannot or will not enter the parish activities or contribute as much as was contributed heretofore.

Is it sound business practice to abandon these public utilities and these parochial plants or use them at less than capacity while duplicating their services in the suburbs which will not be used to capacity for many years to come?

Slums and blighted areas represent inventory carried at a loss by a city. They are a drain on residential, commercial, and industrial properties. In fact they are being subsidized annually by other real property because the cost of municipal services and facilities for the slums is far in excess of the tax revenues derived from them.

The planning board defines slum areas in our city as being "located within a ring surrounding the downtown business district, although in some instances they extend a considerable distance from the center of the city. Within these areas major problems of health, sanitation, crime, delinquency, and poverty exist."

Studies by the board show that the dwellings on 1,209 acres, or about one-twelfth of the entire city area, should be immediately demolished and completely replaced. This area contains 28,260 bulldings, or 22 percent of the total number of dwellings in the city. These dwellings, according to the 1950 census, are inhabited by over 115,000 people comprising 25 percent of our city's population.

More important than the physical deficiencies in existing housing is the fact that a new dwelling costs much more than most of the families in need of housing can afford to

¹ Four years after his ordination to the priesthood in 1946. Father Thomas Finnegan was appointed 1 of 5 Commissioners of the Housing Authority of the City of Newark, N. J. Only two priests in the United States hold such a position. After 1 year of service as Commissioner, the author of the present article was elected to the office of chairman of the authority and has held that post ever

pay. Little or no new housing is available commercially for low- and middle-income families.

In high-cost metropolitan areas, for example, a new house usually costs \$12,000 or more, and new apartments of average size rent for \$100 or more per month, and owners will not accept families with children. Obviously, these prices are far beyond the means of the family whose yearly earnings are \$4,000, and completely impossible for the low-income family with an earning capacity below \$3,000 per year.

The cost of acquiring a slum area at its market value and of demolishing the existing obsolete buildings is usually much greater than the value of the land when redeveloped to its most appropriate use. Private enterprise has found it economically impossible to do this job, not only because of the formidable cost involved, but also because of the virtual impossibility of large land assembly without power of condemnation.

NATIONAL HOUSING ACT OF 1949

The predicament the average American city now faces is like the crises frequently met by a large corporation which has had its policies, practices, plans or equipment shattered by technological progress. It must make a complete about-face or it will fall utterly. Years ago, street-rallway companies went through this kind of change when busses supplanted trolleys; radio is now in a similar transition, and so are some of the automobile manufacturers and textile firms. Old cities likewise have to be regenerated by a process that is vastly more complex and much more important to the general welfare.

Most communities, because of financial limitations, were unable to meet the problem until the passage of the United States Housing Act of 1937, amended in 1949 and 1954. This act provides annual subsidies, loans and grants-in-aid for low-rent public housing, and for redevelopment and clearance of slum and blighted areas.

In its declaration of policy, the National

Housing Act of 1949 states:

"The Congress hereby declares that the general welfare and security of the Nation and the health and living standards of its people require housing production and related community development sufficient to remedy the serious housing shortage, the elimination of substandard and other inadequate housing through the clearance of slums and blighted areas, and the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family, thus contributing to the development and redevelopment of communities and to the advancement of the growth, wealth, and security of the Nation."

This Federal program is consistent with the principles of our Constitution as well as with Catholic teaching. It is the obligation primarily of private enterprise to provide decent housing within the income level of all our people. It is also a traditional American tenet, to say nothing of the principles of natural law and papal writings, that when private enterprise falls to fill a great public need, the government must and shall fill that need. Such thinking is hardly socialistic; yet it has been attacked as such.

Something had to be done and our Government did it. Low-rent public housing for low-income families was instituted. Our holy father, the late Pope Pius XI, in recognition of a government's duty to provide adequate shelter for families of low-income, made the following profound observation:

made the following profound observation:
"If, however, for this purpose, private resources do not suffice, it is the duty of the public authority to supply for the insufficient forces of individual effort, particularly in a matter which is of such importance to the common weal, touching as it does the maintenance of the family and married people. If families, particularly those in which there are many children, have not suitable dwell-

ings; • • • if the necessities of life cannot be purchased except at exorbitant prices; • • • it is patent to all to what an extent married people may lose heart, and how home life and the observance of God's commands are rendered difficult for them; indeed it is obvious how great a peril can arise to the public security and to the welfare and very life of civil society itself when such men are reduced to that condition of desparation that, having nothing which they fear to lose, they are emboldened to hope for chance advantage from the upheaval of the state and of established order.

"Wherefore, those who have the care of the state and of the public good cannot neglect the needs of married people and their families, without bringing great harm upon the state and on the common welfare. Hence, in making the laws and in disposing of public funds they must do their utmost to relieve the needs of the poor, considering such a task as one of the most important of their administrative duties" (Christian Marriage).

FROM PEINCIPLE TO ACTION TO GOOD

The Housing Authority of the City of Newark, N. J., of which I am a member, is a public corporation formed under the laws of New Jersey by means of an ordinance passed by the local governing body in 1938. The housing authority is composed of 5 commissioners appointed by the city government for 5-year terms which overlap. One commissioner is appointed by the State. The six commissioners of the authority act in the same manner as do the directors of a private corporation.

The Housing Authority has the power to clear slums. It also has the power to build and operate low-rent public housing, and to borrow money for these purposes. It can acquire property by purchase or by condemnation. Its debts are not debts of the city. Its property is technically tax-exempt, but the Authority, in lieu of taxes, makes a payment of 10 percent to the city of all rent money collected. To maintain low rents, Federal funds are available to the Authority, when and if needed.

Public housing was never intended, nor is it to be considered now, as a refugium peccatorum for those who are too lazy to help themselves. Rather, in its true light, those who are interested in public housing consider it a stepping-stone for the occupants to acquire their own homes. Indeed, it is a sort of half-way house between the substandard dwelling and the privately owned home. Most people want to help themselves but are prevented from doing so by large families or by low income, most often a combination of both. To compel helpless people to live in a form of ghetto violates charity and impugns justice.

The big change for these families from slums into public housing brings about the beneficial effects of better environment, and the good is immediately evident. These social effects of public housing were studied and reported upon by Dr. Jay Rumney, professor of sociology at Rutgers University. found the tuberculosis rate and the communicable disease rate at the projects to be half the corresponding rates in the surrounding wards from which the project tenants came. Juvenile delinquency and infant mortality rates were also very much reduced in the projects. The fire rate and the fatal accidents rate in the projects were negligible in comparison with the corresponding rates for the city as a whole. But statistics are hardly needed to prove the importance of a good environment.

Everywhere people ask: "Why is housing such a problem?"

ROOT OF THE HOUSING PROBLEM

The answer to that question, in its simplest form, is that housing is a problem because house-building is a handicraft industry

in a machine age. That is the answer suggested by Fortune magazine after a number of intensive housing studies. Among other things, Fortune reported that more work is done by machinery in farming than in construction. Similarly, the Wall Street Journal found that "construction is the only large American industry still doing things in the way they were done before the Civil War."

In some ways, we still build as the ancient Egyptians did. by putting one brick on top of another. Thirty thousand or more pieces of material are put together by hand to make

a home for one family.

This is an expensive process and many serious consequences result from its high cost. One consequence is that only a few families can afford new housing, and we do not get enough new housing to meet the needs of new families. The Federal Reserve System, in a report in 1946, estimated that the country needed between 1.2 million and 1.5 million dwellings per year for 10 years. The 1.2 million figure has only been equalled once—in 1950.

Another consequence of the inadequacy of the construction industry is that old houses must be used long after they cease to be fit for use. This antiquated housing, which is usually bad housing, is the biggest factor in the poor environment of the low-income families who must occupy it. As a result of this environment, these families have more than their share of disease, crime, and delinquency. To cure this disease, prevent or punish this delinquency requires extraordinary spending of taxpayers' money.

THE HIGH COST OF KEEPING SLUMS

The cost of slums has been studied scientifically in a number of cities. Newark discovered that it was spending an average of \$230 per year for extra city services to each slum dwelling. That is \$19.16 a month per slum dwelling. Newark has 28,000 such dwellings. They receive a hidden subsidy amounting to \$6,500,000 per year.

If the slums could be eradicated and extra services eliminated, Newark's tax rate would be reduced at least 100 points. New ratables which would replace the slums would further reduce the tax rate. For the cities of the United States as a whole, slums consume 45 percent of the municipal budgets; yet, they pay only 6 percent of the real-estate taxes. Consequently other real estate must pay higher taxes.

So that the benefits of public housing may go to those who need it most, the Federal Housing Act requires that apartments in the developments be rented only to families living in substandard dwellings, and with incomes so low that they cannot afford to rent housing from private owners. For each public housing unit built, one substandard dwelling has to be eliminated so that the opportunities of private owners to rent or sell residential property are not restricted by the operations of public housing.

Low-income families can afford only low rents. These rents are achieved through long-term financing at low interest rates, made possible through government guarantics and subsidies. Large-scale planning, construction, and maintenance reduce costs of operation which, together with the non-profit element, make possible a rent scaled down to fit the low income of the families.

In order not to compete with private enterprise, income limitations for admissions and continued occupancy are established.

ARCHBISHOP WALSH HOUSING PROJECT—SOCIAL JUSTICE IN BRICK

A typical low-rent public housing project is the one named for the late Archbishop Thomas J. Walsh, dedicated on May 1, 1953, in a ceremony at which the Most Reverend Thomas A. Boland, archbishop of Newark, was the principal speaker. This project consists of 630 apartments located on the banks of the Passaic River in the northern part of

our city, occupied by low-income families who had been living in substandard dwellings.

The dwelling units are designed primarily for families with children. The apartments range in size from 3 rooms with 1 bedroom to 7 rooms with 5 bedrooms.

Apartment rent is fixed at about 20 percent of family income regardless of apartment size which is determined by family size. Rent includes gas and electricity as well as heat, hot water, and refrigeration.

There are complete sanitary facilities in every project apartment. There is a private lavatory, hot water, kitchen sink, window screens, and incinerators for daily garbage disposal. Each apartment is furnished with a refrigerator, a gas range, and kitchen cupboards. In the cellars there are storage and utility rooms and metered clothes washing and driving machines.

and drying machines.

Only one-sixth of the land in the project site is occupied by buildings. The rest is used as safe play space for children, adult sitting areas and automobile parking. Every apartment has plenty of fresh air and sunlight. The central heating plant and the project offices are in a separate building, which also contains a recreation hall for the tenants of the project.

UNDERSTANDING THE WINDFALL SCANDAL PROPERLY

Recent reports of windfall profits in housing reaped by private entrepreneurs have no relation to public low-rent housing. These profits were made by speculative builders under section 608 of the FHA law—a law intended to induce private financing of housing construction by Government insurance of mortgages. Huge profits resulted from inflated estimated building costs, so that the mortgages frequently exceeded actual costs, and the excess went to the owners as "profits." FHA (Federal Housing Administration) is strictly a mortgage insurance agency for private builders.

Public low-rent housing is built and operated by local housing authorities with the financial assistance and supervision of the PHA (Public Housing Administration). Bonds are issued to cover actual total final construction costs.

In the current struggle of ideologies the victory of the free world will be fashioned by the strength of free men. Our spiritual strengths are respect for the dignity of man, morality, freedom under law and, above all, our religious faith. Complementing these are our physical strengths, the productivity of free men, our family security and our homes.

What greater strength is there among these, excepting our faith in God, than the promise to every man that he shall have a decent, safe and sanitary home in an environment worthy of the dignity of man created in the image and likeness of God.

Santa Rosa Chamber of Commerce Endorses Development of Trinity River Power by Private Utility

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I desire to include a resolution adopted by the board of directors of the Santa Rosa, Calif., Chamber of Commerce, on March 29, 1955, endorsing development of power facilities on the Trinity River by a private utility.

We in Californa are very proud of the fine service and cooperation which we have had from private utilities. We feel that the best interests of our citizenry can more properly be served through private enterprise and numerous organizations and individuals throughout the First Congressional District of California have endorsed the Pacific Gas & Electric Co.'s proposal by which they would construct a considerable portion of the proposed Trinity River project.

I, personally, am of the opinion that the project should not be developed until a survey to determine present and future water needs in north coastal counties has been completed. However, if it should be authorized I firmly believe the "partnership plan" should be put into effect.

The resolution referred to above is as follows:

"Whereas the Pacific Gas & Electric Co. has offered to enter into partnership with the United States Government on the Trinity River project; and

"Whereas they have offered to furnish, install, and operate at power company cost all of the electrical elements of the project, including generators, switch gear, and lines; and

"Whereas this will constitute a saving of \$50 million in capital outlay to the United States Government; and

"Whereas they would pay the United States Government an agreed price per kilowatt hour for all current generated in the various powerhouses on the project; and

"Whereas the power company would agree to wheel power for the United States Government to agreed points connected with this project; and

"Whereas this would result in the producing of taxes from the electrical end of the project to the counties where said electrical equipment is located as well as to the State and Federal Government: Now, therefore,

be it

"Resolved, That the board of directors of
the Santa Rosa Chamber of Commerce does
sincerely support and endorse this partnership proposal of the Pacific Gas & Electric
Co. with the Bureau of Reclamation of the
United States Government; and be it further

"Resolved, That copies of this resolution be sent to Congressman HUBERT SCUDDER, Senator WILLIAM KNOWLAND, and Senator THOMAS KUCHEL."

Adopted at regular meeting of the board of directors of the Santa Rosa Chamber of Commerce the 29th day of March 1955. Approved:

JAMES H. HURLEY, President.

Attest:

Scott Gordon, Acting Manager.

Centennial Celebration-Elizabeth, N. J.

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, I am pleased to call the attention of the Congress to the centennial celebration of the city of Elizabeth, N. J.

On March 27, 1855, Elizabeth was incorporated. At that time it was already a city with a long and rich history, having been settled in 1665.

Elizabeth has contributed much to the growth and culture of our Nation, and I believe the entire Congress will want to join with me in congratulaing Elizabeth on this historic landmark. Under unanimous consent, I include a letter I have received from Mr. John A. Kervick, chairman of the Elizabeth centennial committee, written on behalf of himself, Thaddeus F. Gora, and A. O. Murray, the latter gentleman being vice chairman and secretary of the commit-Under unanimous consent I also include an editorial from the Elizabeth Daily Journal of March 26, commemorating this great occasion in the life of a leading American city:

ELIZABETH CENTENNIAL COMMITTEE, Elizabeth, N. J., March 15, 1955. Hon. Harrison A. Williams,

Post Office, North Broad Street,
Elizabeth, N. J.
DEAR CONGRESSMAN WILLIAMS: May we bring to your attention the fact that our

DEAR CONGRESSMAN WILLIAMS: May we bring to your attention the fact that our city of Elizabeth in New Jersey is celebrating on Sunday, March 27, 1955, the 100th anniversary of its incorporation as a city. The community of Elizabeth is much older, however, for it was settled in 1665, becoming the early capital of the New Jersey colony. It contributed much to the growth of the colonial United States. Elias Boudinot, one of its citizens, served as the President of the Continental Congress. Many other illustrious sons and daughters are noted on the pages of our Nation's history.

Close to the heart of the greatest metropolitan area of the world, Elizabeth, since 1855, has developed into one of the most important industrial cities on our Atlantic seaboard. Its products are well known throughout the world. Its public and private educational institutions are excellent. Our citizens devote themselves extensively to all aspects of public and social welfare. Elizabeth is the home of many churches of all faiths.

The citizens of Elizabeth are not only celebrating throughout the year 1955 our rich historical past and our present achievements, but also trusting in our future. Above all we are dedicating ourselves anew to the continual growth of the human spirit and to reverence to God.

Yours respectfully,

JOHN A. KERVICK, Chairman.

[From the Elizabeth (N. J.) Daily Journal of March 26, 1955]

THE CENTENNIAL OF A CITY

Tomorrow afternoon in the natural setting of Boxwood Hall, Elizabeth, officially. begins the observance of its centennial as a city. In such an inauguration there is an urge, almost a command, to look back and to review a long, long parade of events-of the coming of the Carterets, the firm, unafraid hand helping to steady the cradle of the Republic, the Minute Men, Lafayette, Washington. General Scott returning from the War of 1812, the Civil War, all the wars and Elizabeth the town, burgeoning and bursting into blossom as a city on March 27, 1855. One full hundred years ago. A century. And tomorrow we officially inaugurate the centennial at Boxwood Hall, so close by "Horse Hollow" where the first city hall was built. And we may look back, but we must also look ahead.

Once before we have been permitted to know the pride and excitement of a community observance which, in realization, challenged all the potentials that attend the centennial, Close at hand is a book of 106 profusely illustrated pages with fading and tattered covers which must always remain a cherished possession for two reasons.

Written across the front in lead pencil is the name, "Aug. S. Crane." That means once this book was the prized possession of Augustus S. Crane. And it is a "Souvenir Programme, Elizabeth, New Jersey, Old Home Week, Oct. 6-12, 1907." What pride the beloved publisher of the Elizabeth Dally Journal must have taken in the summons that went out to wandering sons and daughters of Elizabeth through the call for an "Old Home Week." What pride he would experience now as the city he loved so dearly becomes 100 years old.

There is the second reason for never forgetting this celebration which stood the old town on end almost 50 years ago. It is at once a history of Elizabethtown, a meticulous report of the city that existed and a projecting of hopes toward the Elizabeth of today. It should spur projection of new hopes for the city which today begins its centennial. Will we in the Elizabeth of today be less hopeful than they were in 1907? Will we be satisfied to stop now, or emphasizing the advantages in which Elizabeth is so richly endowed point our centennial programs toward 50 years from now?

Here on page 59, hardly more than halfway through the Old Home Week program, is the map of the city of Elizabeth, N. J. (the one that Jacob L. Bauer drew) showing railroad and water transportation facilities. Here is the deep-water channel piercing the Kill Von Kull on its way to New York Bay. Here, winding its way southward to Sandy Hook and the open sea, is still another deepwater channel. Here, the very center of everywhere nestles Elizabeth, pinpointed in a veritable web of major railroads. Is there any who will contend that from such a background there was any presumption in 1907 when Elizabeth men sought to "publish to the world unrivaled advantages of the city from a commercial standpoint and to demonstrate for all time that Elizabeth is a good city to live in"?

Gone from the streets are the horses and wagons that in 1907 stood so patiently before Jim Faulks' plumber shop at the site now occupied by the Elizabeth Carteret Hotel; there are no long troiley cars rumbling and grumbling over rough cobbled streets to await the pleasure of the switchman at the foot of the Broad Street hill. They've gone, and the tiny horseless wagon that posed so pompously before the old home of General Scott has gone, too, gone with the home to make room for a gasoline service station and its softly purring procession of automotive marvels.

The trolley wires have gone, the cobbles have disappeared, the commercial planes are here to stay, there is a television antenna on every roof and the city of hope in its web of railroads has become a city of interlacing highways flanked by a variety of industrial projects that serve every corner of the world.

In 1907 names like Isham and Ryan and Halsey, Trimble, Crane, Bate, Beglan, Chatfield, Morey, Rath, Hersh, Shearer, names of lamented citizens who are no more, looked down a dusty road to the future with hope and faith to publicize to the world the unrivaled advantages of Elizabeth. There are no more dusty roads. There is no dust to dim our vision, only every advantage of an advancing world, every advantage enjoyed by any other major city on the face of the earth—the advantage of geography, the advantage of transportation, the advantage of industry and coveted economy that were mostly hope in 1907. Can we be less hopeful 50 years later? What can be our excuse to the Elizabeth 50 years from now if we fail to rise to our own obligations as we begin observance of the city's centennial?

We devoutly wish that there will not even be standing room tomorrow afternoon in the boxwood shrine of American independence. And we earnestly hope that burning in the hearts of all who may attend will be the flame of those stalwarts who in 1907 gave us Old Home Week. After tomorrow, still left for observance, will be 9 full months of our centennial year. There is still time. We must not let this year fade away without the world knowing through impressive demonstration why as much of the world as can crowd in belongs here. If we have built up all the old streets we can start building new ones. If we are now starting to build higher let's build higher and higher. The men of 1907 showed us the way. We can't say there are no guide posts.

Facts Don't Bear Out Corsi's Abusive Charges

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of April 13. 1954:

FACTS DON'T BEAR OUT CORSI'S ABUSIVE CHARGES

The reckless charges that Edward J. Corsi has made since his dismissal from a State Department post, the abuse he has heaped on Secretary Dulles and his generally intemperate behavior may please those who have been trying, with political motives, to make some kind of martyr out of the New Yorker. But they are of little help to those interested in the facts behind the controversy.

There has been no substantiation for his statement that his dismissal was forced by an intolerant minority in Congress and the State Department or for his charges laying the blame on Congressman Francis E. Walter's attacks. Yet he has chosen to meet Secretary Dulles' denials by accusing that official of lying.

Corsi apparently fancies himself as a victim of persecution to which a spineless Secretary of State acceded, and a number of persons, without bothering to seek the truth in the matter, have been glad to go along with him in his role of the wronged.

But what actually happened? Secretary Dulles has denied all the talk about congressional pressure brought to bear and says simply that Corsi is out because he was not qualified for the office and because he insisted that he be named administrator of refugee admissions, a post held by Scott McLeod.

It was McLeod, whom Corsi later sought to undermine, who first suggested the former Dewey officeholder for a place in his department as consultant on refugee immigration.

He was sent to Europe to secure first-hand information and there proceeded to annoy the State Department by his over-free expressions and his failure to check with our heads of diplomatic missions. On his return to Washington, further friction developed within the Department and while plans were under way to offer Corsi another advisory post, he got himself embroiled in the argument with Congressman Walter regarding past Communist-front affiliations, which Corsi denied.

When his job was terminated, the New Yorker promptly flung himself into a rage, which has been renewed at given intervals ever since, and which has been marked mainly by angry disapproval of the Secretary of State. If Mr. Dulles had given him the office he wanted, doubtless he would now be complimenting the Secretary on his sagacity. He didn't get it, so he screams.

Milk Research Center

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. WILEY. Mr. President, this is an age of delving into the unknown. Man's ingenuity knows no barriers. The alchemists of old were "pikers" compared with our present-day scientists. Where does this statement take us? I recently introduced a bill to create a milk research center in Madison, Wis. An article on that subject was written by Bill Groves and published in the Wisconsin Agriculturist and Farmer of April 2, 1955. I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILEY WANTS MILK RESEARCH CENTER
(By William F. Groves)

In the course of a year several hundred congressional bills relating, either directly or indirectly, to agriculture pass across my desk. It is my duty to scrutinize each bill carefully. I must arrive at a decision on how the passage of these bills will affect Wisconsin's farmers in general and the State's dairy industry in particular.

America is a great, wide country. The interests of the American farmer are greatly diversified and very often contradictory. Consequently the bills introduced into the Congress cover a great variety of subjects. Generally speaking, however, the bills can be divided into four main categories, namely:

- 1. Price supports and production controls.
 2. Plant and livestock disease control and sanitation.
- 3. Soil conservation.

4. Standards, grades, and marketing.

Senator ALEXANDER WILEY, Wisconsin's senior Senator, has recently introduced a bill which doesn't fit any of the above classifications. It is unique in character. The bill makes an entirely new legislative approach to the dairy problem.

Senator WILEY'S bill, S. 788, bears the following title: "A bill to provide for the establishment of a dairy research laboratory."

The first section of the bill instructs the Secretary of Agriculture to establish a dairy research laboratory at Madison, Wis.

The second section defines the purposes of the laboratory:

"To conduct and stimulate continuous research into the basic problems of dairying, including but not limited to research to the improvement of the quality of and the development of new and improved methods of packaging, processing, refrigeration, powdering, condensing, transportation, storing, marketing, distribution, and merchandising of dairy commodities.

"Research relating to the combating of livestock disease, the increasing of dairy productivity, the lowering of dairy costs.

"Research relating to the problems of human nutrition and the nutritive value of dairy products, including gains or losses in nutritive value that may take place at any stage in their production, distribution, processing, and preparation for use by the consumer.

"Research relating to the development of present, new, and extended food and non-food uses and markets for dairy products and byproducts—

"Research relating to the design, development, and more efficient use of dairy ma-

chines and equipment-

"Research relating to any other matters that may contribute to the establishment and maintenance of a more effective dairy industry."

In brief, Senator Wiley proposes to establish in the heart of America's dairyland a laboratory which will explore and analyse every forseeable need, present and future, of the dairy industry.

In this modern era constructive research is a necessity if an industry wishes to expand or even to survive. The dairy industry is no

exception to this rule.

The University of Wisconsin and the public institutions of other States have contributed greatly to the scientific progress of the dairy industry.

Private industry also has played its part in the field of dairy research. Every milk company of any size maintains a laboratory and a corps of expert scientists.

Thus the question arises—Do we need a dairy research center such as Senator Willey proposes? I think the answer to this ques-

tion is "yes."

As Senator Whey says, "Modern dairy research lacks a chart and compass. It has no ultimate goal. It proceeds somewhat as does a ship on a stormy sea without a pilot or a rudder. Coordination and authoritative direction are the crying needs of present day dairy research."

A dairy research center would gather under one roof all the technical knowledge concerning milk which has been accumulated throughout the years. It would coordinate and lend a guiding hand to future experi-

mentation.

"Such a laboratory can become a fitting companion to the great Forest Products I :boratory at Madison which over the years has produced a tide of research findings to enrich the entire woodworking industry," continued Senator Wher. "Think of the good that could be accomplished by intensive research in milk. A dairy research laboratory—working hand in hand with the great universities and great corporation laboratories is a challenge to America."

Crossroads Report

EXTENSION OF REMARKS

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. ROGERS of Texas. Mr. Speaker, in the 18th District of Texas down at Wellington there lives a man by the name of D. E. Scott. He has a native ability to express himself that is not equaled in my humble opinion. The humor with which he tempers factual truths that would otherwise be most distasteful, brands him also as a humani-

tarian. His recent remarks concerning the Department of Agriculture are most appropriate and exemplify his ability of expression much better than I can explain it. I insert this short article that contains so much long thought:

CROSSROADS REPORT

DEAR EDITOR: I note that Mr. True Morse who reigns as Under Secretary of Agriculture up in Washington, told a bunch of farmers here the other day that he figured 80 percent of United States farm operators were so inefficient that they ought to be run out of the business, on account of the effcient 20 percent could raise all the stuff we need.

Went on to say he didn't care where the 80 percent was run to, maybe they could work in factories or somewhere; it wasn't his problem. But I have been thinking, it could bother him a good deal. You take, now for years it has seemed like the main qualification for a Government job is to not be able to make a living at anything else. And to go broke at farming ought to specially fit a man to work for the Department of Agriculture.

Which leads to the thought that one of those millions of federally busted farmers just might be underpowered enough so he could bump Mr. Morse out of his own job as under secretary.

D. E. SCOTT.

CROSSROADS, U. S. A.

Greater Relief for Distressed Industrial Areas

EXTENSION OF REMARKS

HON, KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. KEATING. Mr. Speaker, attention is called to a resolution of the New York State Senate, concurred in on April 2 last by the Assembly of the State of New York, which was inserted in the Congressional Record by the Acting President pro tempore of the Senate and which appears on page 3644 of the Record of April 13.

This resolution directs attention to a problem which is of utmost concern to responsible people in certain industrial areas in my State, and which affects similarly a number of areas elsewhere in the country where the same conditions prevail.

This resolution points out one of those unhappy situations where a highly salutary and commendable policy of our Federal Government collides headlong with emasculating consequences, into another perfectly good and sound policy. In connection with procurement and manufacturing contracts to support our national defense effort, it has been established—and very wisely—that areas will be favored where there are idle plant capacity and unemployed labor resources. This was a basic determination, reflecting the commonsense conclusion that we should not cause new plants to be built or new industries started so as to require shifts in the labor population when there are idle capacity and unemployed workers to do the work elsewhere.

What has developed as a conflict with that policy, severely penalizing areas in my State which would otherwise be eligible under it, is another policy—equally understandable and good on its face—that the Office of Defense Mobilization will not give work to areas having unemployed and idle plant capacity if by doing so it must incur a price differential. In other words, the first policy applies only if the area to be given the work is able to underbid all its competition. Now that saves the Government money, but, in many cases, it defeats the other objective.

It is not suggested that either of these policies be scrapped. It would be ridiculous to insist upon this special dispensation at no matter what cost to the Government. On the other hand, there is no doubt that the present outcome is too harsh. Therefore, what the resolution proposes is that the Director of Mobilization shall be given greater discretion to adjust the conflict between the two in order that neither may be truly vitiated by the other.

The other question raised by the resolution—as to the wisdom of concentrating certain types of production entirely in the hands of a single large producer—also has my full concurrence.

I hope this problem will receive prompt

and serious consideration.

Segregation

EXTENSION OF REMARKS

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, editor of the Gary (Ind.) Post Tribune, reveals practical good sense on a problem which disturbs people who would postpone the inevitable:

MOLEY'S GLOOM IS UNJUSTIFIED

Raymond Moley has been dublous about enforcement of the Supreme Court's ruling against segregation in the public schools of the Nation. His column on this page today reflects his gloomy thinking.

Moley does not argue about the justice of the Court's decision, but he does not understand how it can be put into effect within a reasonable time. His attitude is an example of that "It's a fine idea, but—" philosophy with which so many folks are inclined to

greet new proposals.

No one expects segregation in all the schools to disappear easily and quickly just because the Supreme Court says it is in violation of American constitutional principles. The Court did not so expect. Instead it delayed enforcement until a program could be worked out for arranging compliance in the various States. The Court is about to hold hearings on proposals for implementing its decision.

Some States have gone ahead with programs of integration without waiting for Supreme Court advice. Some States are awaiting further action by the Court, but presumably will follow the integration pattern without too much difficulty.

There are half a dozen others, making up the Deep South, where strenuous efforts are being made to block effectiveness of the desegregation program. In general, their strategy is to eliminate the State as a factor in the public schools. Education would be handled either on a local basis or through pseudo-private schools.

For the moment the extremists are having their day. Demagogues are ranging through the South, and "Citizen's Councils" are being set up in several States. But there are also moderate and sensible leaders in the South, and their voices are beginning to be heard.

The Supreme Court is endeavoring to work out a practical program of integration. It quite evidently intends to deal with the facts of the matter, rather than theories. It is quite possible different plans may be proposed for different States, recognizing varying situations to be dealt with.

Further, it is not likely the Court will be taken in by the various strategems devised to circumvent its order. Scattering responsibility among many local school boards probably could add to legal difficulties of enforcement, as Moley suggests. On the other hand, the people of the South may decide segregation is not worth ripping up their whole system of education. It will be easier to guess on that after the Court has presented its solution.

Nonsegregation has been established as the lawful policy. It is right in principle. It is working in practice elsewhere and it can work in the South. As school integration spreads, the "stubborn six" States will find it easier to make their shift. We have progressed far from the days of secession or defiance of the Federal Government. There is no justification for lamentation over the prospects; rather, there should be friendly but firm assistance to the South in negotiating the changeover.

The Junior Baseball Association of New Jersey

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call the attention of the Congress to a most worthwhile youth program in New Jersey. The Junior Baseball Association of New Jersey has been and is continuing to make a splendid contribution in the field of providing constructive activities for teen-agers and combating juvenile delinquency. I heartily endorse this effort and believe the résumé of the program which is given below may be useful in other areas:

JUNIOR BASEBALL ASSOCIATION
OF NEW JERSEY,
Cranjord, N. J., March 20, 1955.

While statistics published from time to time by our larger cities indicate that in those localities juvenile delinquency is increasing, we are not inclined to agree with many who are prone to overemphasize these statistics to the extent of claiming that the country is raising a bunch of hoodlums. It is a fact that this increase in delinquency among our teenagers is not, as yet, felt in many of our municipalities. This, however, does not prove that they are immune. Therefore, we believe that every possible step should be taken to prevent its spread. To put it briefly, we feel that the prevention of a disease is better than the cure.

We are of the opinion that in order to combat juvenile delinquency where it exists and to prevent its expansion to those municipalities where it is not now of major concern it is necessary that the teenager be made to feel that he is a part of his community and the only way to accomplish this is through the revival of that now oftenneglected characteristic, community pride. If the municipal fathers, the townspeople, the parents, and the press will pull together to make their community one that the teenager can be proud of instead of pulling against each other in order to further their own selfish interests there is no reason to believe that our young will not cooperate, unless we are to concede that our boys are not basically good Americans, which we, as American parents, are not willing to concede. In the main, only in those communities and in those families where supervision and cooperation are entirely lacking do we find any serious amount of delinquency.

In order to assist in developing community pride among our teen-agers, the undersigned have formed the Junior Baseball Association of New Jersey, and are offering to municipalities throughout the State a program providing for the formation of intercommunity and intracommunity baseball leagues in two age groups-13 through 15, and 16 through However, while the program is being offered to all communities, all applications for membership are not being accepted. Since it is imperative that the people of a community indicate their support of a team before the program can succeed, applications are being screened and only those having the support of responsible individuals are con-

Supervision of the program, which has the endorsement of many people prominent in baseball and public life, is in the hands of a board of governors composed of the president, vice president, secretary treasurer, and district commissioners, who are responsible for the administration of the association on the State level. The next lower echelon of supervision is the district council, which administers the program on the district level and is composed of the commissioner of the district and the president of each league in the district. Meetings of the board of governors and district councils are held monthly so that close contact is maintained at all times between the members of the association (the leagues) and the administrators of the program. Annually meetings of all team representatives are held with officials of the association.

In the operation of any program expenses are incurred which are unavoidable and which, out of fairness to the officers, they cannot be expected to pay. This program is no different than any other in this respect but expenses are kept to the minimum necessary for good administration and the furnishing of awards to the State champions of each age group in each classification. To cover these expenditures, intercommunity leagues are asked to pay initiation fees at the rate of \$7.50 per team and intracommunity leagues \$2.50 per team. Annual dues for the former are computed at the rate of \$5 per team and for the latter at the rate of \$1.25 per team. The constitution provides that these amounts cannot be changed without the approval of the members. It is expected that expenses of the association will be covered by the dues and by contributions from persons interested in the program.

Insofar as the operation of the individual leagues and team is concerned, the association has adopted a hands-off attitude and will not interfere as long as they comply with its constitution and bylaws. However, in order to standardize play, provision is made so that no team may exceed 18 in playing personnel, players must reside in the community for which they are playing, and no one is to receive compensation. If it is desired by a league, the association will prepare

a playing schedule for it but we have no standard schedule because of the variance in days of the week that teams may prefer to play. It is expected that a schedule of between 30 and 40 games will be played by each team, depending on the size of the league, with the season opening the third Saturday in June and closing the last Saturday in August. Thereafter, district champions and the State champion in each class group will be determined by an elimination tournament,

It is not the purpose of the association to alter in any way the local playground activities or other programs of recreation directors or citizen groups in any municipality but rather to supplement these programs by providing a uniform basis of play among the communities to encourage community pride. In fact, the association would welcome the assistance of recreation directors and other interested responsible individuals who would be willing to serve in the capacity of a District Commissioner or a League President. We are also desirous of obtaining the services of individuals who would like to aid their communities by acting as umpires and scorekeepers.

A few of the reasons why a community should participate in the program are:

1. It appeals to teenagers, who are inherently have a desire to be a part of something big, because it is statewide.

2. It is run by individuals selected by the municipalities and by their elected representatives.

3. Game admissions and donations to the teams are retained entirely by them.

4. It is a natural followup to any local activities now being undertaken for boys in the age group immediately preceding those covered by the program.

5. Provision is made for the entry of teams in either one or both of two age groups and in this way players, as they become more mature and presumably more proficient, may continue to represent their community.

6. The amateur status of all athletics, so important to those who wish to compete in athletics in our institutions of higher learning in later years, is preserved because no one receives remuneration.

Inquiries regarding the program and applications from individuals desirous of assisting in the program are welcomed and will be given prompt attention if directed to the office of the association at 31 Broad Street, Cranford, N. J.

The Bricker Amendment

EXTENSION OF REMARKS

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent that there may be printed in the Appendix to the Record an editorial which appeared in the October 1954 issue of the Journal of the American Association of University Women, written by Dr. Bessie Randolph, entitled "The Bricker Amendment." I ask unanimous consent that there be printed in the Appendix of the Record, immediately following Dr. Randolph's editorial, a reply thereto written by Mrs. E. Webster Wanner, eastern Pennsylvania coordinator of the Vigilant Women for the Bricker Amendment, and Mrs.

Wanner's letter to me dated March 25, 1955.

It is very encouraging to me to find so many American women who are taking such an active interest in the subject of treaty law. During the past year thousands of people have asked me to supply them with pro and con material on the subject of my proposed constitutional amendment to safeguard the exercise of the treatymaking power. I believe that Dr. Randolph's editorial and Mrs. Wanner's reply highlight the basic issues involved in this historic constitutional debate.

There being no objection, the editorial, reply, and the letter were ordered to be printed in the RECORD, as follows: [From the Journal of the American Association of University Women for October 19541

THE BRICKER AMENDMENT

(We have asked Dr. Bessie Randolph, President Emeritus of Hollins College, Virginia, whose specialty is international law, to comment on the status of the Bricker amendmen. Doctor Randolph is a former chairman of the legislative program committee.—Editor's note.)

Some sort of proposal, perhaps for a constitutional amendment, to curb the President's power over all international agreements is sure to be an issue in the 1954

congressional elections.

Since World War II there has been in Congress and outside an increasing demand for a searching review and limitation of the President's power over foreign policy. The action taken by Presidents Roosevelt and Truman at Yalta and Potsdam has been seized upon-and frequently with little or no attention to hard facts-as proof that those Presidents not only showed indefensibly bad judgment, but, more seriously, acted far beyond their constitutional powers. As the United States has come to face the prospect of an endless cold war with Russia and her satellites, the actions of Roosevelt and Truman have been pictured as more and more iniquitous and their role as scapegoats has become a stereotype for many citizens. Organizations of various types have decided that our participation in international cooperation can most effectively be curbed or stopped short by tying the President's hands in the control of foreign policy and giving to Congress all but the routine mechanics of negotiation.

In February 1952, Senator BRICKER first introduced his famous proposal to amend the Constitution in the matter of treaty and nontreaty agreements. When his proposed amendment was presented to the Senate on June 15, 1953, after changes in the Judiciary Committee, it had two main objectives:

1. To keep all treaty content strictly within the limits of our national domestic Constitution, and also to give Congress power to regulate all Executive agreements. Presumably this power applied not only to the content of such agreements, but also to the procedure of making, executing, and terminating them.

2. To permit those treaties which operate inside this country to become the law of the land, not automatically as at present under article VI, but only after their enactment into statutes by both Houses of Congress; and to keep them strictly within Constitutional limitations.

Presidents Truman and Eisenhower both opposed the proposed Bricker amendment as being a flagrant encroachment on presidential powers under the principle of the separation of powers.

The resulting debates, as clearly reflected in the hearings before the Senate Judiciary Committee (1,800 pps.), and especially in the masses of data from the American Bar Association, and in the individual writings of members thereof, show frequently an amazing ignorance of certain basic facts. For example:

1. The treaty-making power is not derived from the Constitution at all but existed years before, based on the mere fact that United States is a sovereign person, a member of the family of nations. But the exercise of the power was wisely placed primarily (art. II, 2) in the hands of the President, subject to strong control by the Senate. It should constantly be emphasized that the Fathers were convinced that the President should not be granted unlimited treatymaking power, but must be assisted-and definitely checked if necessary-by the Sen-

2. In treaty-making there are not 2 steps

(a) Negotiation by the executive.(b) Approval by the Senate with or without change.

(c) Ratification by the President.
(d) Exchange of ratifications with the other power or powers.

Dates of these steps for any treaty may be found in treaty collections. The Department of State has a list of 60 treaties which were never ratified by the President. About 25 of these were left unratified because either he or the foreign power refused to accept the Senate changes. Apparently these four steps progressing as they should, alongside pre-liminary enactment procedures in both Houses of Congress, have never been worked out definitely at all. There are several pitfalls which may stop the proposed treaty short of ratification by either side.

Be it remembered also that along the way the proposed treaty-statute may run smack into a Senate filibuster, or presidential veto,

or both.

The Bricker proposal was defeated in the Senate; and a few days later (February 26. 1954) the George proposal, last survivor of several compromise Brickeresque substitutes, was also defeated in the Senate, lacking only one vote of the necessary two-thirds. Hence, the resolution was not sent to the House of Representatives.

Some proposal of this kind will doubtless be debated in the congressional campaigns. It will be supported, as before, by thousands Americans who do not understand the dangerous consequences of such a change. Doubtless the continued wrangle between the executive and legislative branches greatly please Russia and her satellites.

Our association has stood strongly for leaving our treaty content and procedures as they now are, and we shall certainly have to continue the fight. It is our belief that before changing the treaty provisions—if they ever are to be changed—the proponents ought to know clearly what treaties are under international law and practice. emphatically not the case at present. It is also our belief that 96 able-bodied Senators are competent to guard the treaty rights of the United States, legal and political.

BESSIE C. RANDOLPH.

THE CASE FOR THE BRICKER AMENDMENT (A reply to Dr. Bessie Randolph by Mrs. E. Webster Wanner)

Dr. Bessie Randolph's screed against the Bricker amendment (AAUW Journal, October 1954) reflects an egotistical emotionalism almost beyond belief.

To be sure, laymen have the final word on the legal issues raised by the Bricker amendment. Nevertheless, ordinary prudence and humility would prevent any lay-

woman, even one of exalted station in the educational hierarchy, from indicting the American Bar Association for an amazing ignorance of certain basic facts concerning treaty law. And to state emphatically that proponents of a treaty-control amendment, including 60 Senators, do not know clearly what treaties are under international law and practice, illustrates the intellectual arrogance which the word "egghead" was coined to describe.

Curiously enough, Dr. Randolph proves the need for the Bricker amendment by her

statement:

"The treatymaking power is not derived from the Constitution at all but existed years before, based on the mere fact that the United States is a sovereign person, a member of the family of nations.

In other words the treaty power, says Dr. Randolph, is unlimited in scope. If the treaty power is "not derived from the Con-stitution at all," it can, as Mr. Dulles confirmed in 1952, "override the Constitution" and "cut across the rights given the people by their constitutional Bill of Rights." is the loophole the Bricker amendment is

designed to plug.

Dr. Randolph points out that the inherent and unlimited power of treaties is safeguarded to some extent by the procedural requirements of article II, that is negotiation the President and approved by two-thirds of the Senators present and voting. This is sufficient protection, however, only if the President and the Senate are infallible. To argue that they can be trusted never to make, wittingly or unwittingly, any treaty denying fundamental freedoms is merely to place reliance on a government of men rather than one of constitutional restraint.

By a happy coincidence, Mr. Benjamin Cohen's article in the same issue of the Journal makes mincement of Dr. Randolph's theory that the procedure for treaty-making (art. II) provides absolute safety against abuse of substantively unlimited treaty power (art. VI). Mr Cohen urges caution in pressing for basic amendments at a UN Charter Review Conference on the ground that their rejection by the Senate and by other governments might weaken the moral and legal fabric of the UN. Then, Mr. Cohen says "the same purposes can be achieved through the normal evolution processes pro-jected in the Charter" without the consent of the American people and their elected representatives.

Dr. Randolph completely ignores the fact that executive agreements, like treaties, become the supreme law of the land under article VI even though not approved by either House of Congress. That is what the Supreme Court of the United States held in United States v. Pink (315 U. S. 203 (1942)) The Court upheld an executive agreement setting aside the law of the State of New York and depriving creditors of property without due process of law.

Dr. Randolph's defense of the Yalta and Potsdam agreements is nothing less than shocking. These agreements placed a stamp of approval on the delivery of hundreds of millions of people into Communist tryranny. They bear witness to the necessity of adopting promptly the Bricker amendment and supplementary legislation. As former President Herbert Hoover pointed out on the occasion of his 80th birthday, "we must make such misuse of power forever impossible."

Toward the end of her polemic, Dr. Randolph concludes that continued debate on the Bricker amendment "will greatly please Russia and her satellites." The relevancy of this remark is not explained. We do know, however, that the Communist Party in the United States is violently opposed to the Bricker amendment and from that we may assume that Russia and her satellites would cheer the death of the Bricker amendment.

VIGILANT WOMEN FOR THE BRICKER AMENDMENT, Philadelphia, Pa., March 25, 1955. Hon. JOHN W. BRICKER,

United States Senator, Washington, D. C.

DEAR SENATOR BRICKER: In the October 1954 issue of the Journal of the American Association of University Women there appeared an 840-word editorial by Dr. Bessie V. Randolph. In this editorial Dr. Randolph attacked your proposed constitutional amendment and the motives of its supporters.

Believing that the intemperate editorial by Dr. Randolph was studded with misstatements of fact and of law, I asked the editors of the AAUW Journal to provide me equal

space in which to reply.

I submitted for publication a reply of the same length as Dr. Randolph's editorial. I was informed, however, that I could have only 350-400 words with which to answer Dr.

Randolph's 840-word editorial.

In the March 1955 issue of the AAUW Journal an abbreviated verson of my original reply to Dr. Randolph was published. To my shock and dismay, however, there was published immediately after my 410word reply a 642-word rebuttal by Dr. Randolph.

Thus, it is obvious that the editors of the AAUW Journal refuse to give their readers any fair presentation of the pros and cons of the Bricker amendment. To offset the lopsided treatment of the Bricker amendment in the pages of the AAUW Journal, I respectfully request that you place in the Appendix to the Congressional Record:

1. Dr. Randolph's editorial in the October 1954 issue of the AAUW Journal;

2. My original article in reply to Dr. Randolph, copy enclosed; and 3. This letter.

Dr. Randolph wrote in her second editorial:

"As to the treaty-making power, it is necessary to remember that it is not based on the Constitution. Many critics apparently think it was so based and is therefore subject to all the limitations of that instru-

That may well be an accurate statement of the extent of the treaty power at the present time. But why, Senator BRICKER, should anyone object to basing the treaty power on the Constitution and exercising such power in accordance with the wise limitations of that great charter of freedom?

You and your colleagues in the Senate should know that Dr. Randolph did not apologize in her second editorial for her slur on the intelligence of 60 Senators who voted for a modified version of your amendment on February 26, 1954. Instead, Dr. Randolph offered this feeble explanation of

her insulting remark:

"As to my alleged charge that all 60 Senators who sponsored the Bricker resolution (1952) do not understand treaties, many of them have stated definitely that they have no opinion concerning the resolution on its merits, but merely wished to have the question fully discussed and, if possible, settled."

Who said anything about 1952? Anyway, the number of cosponsors of Senate Joint Resolution 130 in 1952 was 58, not 60. Dr. Randolph knows that 60 Senators voted for the amendment in February 1954. And these are the 60 Senators who are described in her first editorial as not knowing what treaties are under international law and practice.

I am a member of the American Association of University Women. I know that many members of our organization do not agree with the leadership's position on your amendment.

Please continue your magnificent fight to prevent abuse of the power to make treatles and executive agreements.

Sincerely yours,

ESTHER B. WANNER, Mrs. E. Webster Wanner, Eastern Pennsylvania Coordinator, Vigilant Women for the Bricker Amendment.

A Third Look

EXTENSION OF REMARKS

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Thursday, April 14, 1955

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Third Look," written by Dr. George S. Reuter, Jr., of the Arkansas A. & M. College.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A THIRD LOOK

(By Dr. George S. Reuter, Jr., Arkansas A. and M. College)

Arkansas A. and M. College has completed a 3-year study of general education via the services of professional consultants. first year was: The Philosophy of General Education, and reported as "A New Look," CONGRESSIONAL RECORD, July 22, 1953, pages A4804-A4805. The second year was: General Education as a Pattern in Our World, and reported as "A Second Look," Congressional RECORD, May 18, 1954, pages A3639-A3640.

The theme this year was: Methods of Teaching and Presenting General Education Subjects. Dr. Ernest H. Cox, professor of English and counselor of the University of Florida devoted 2 days addressing and conferring with faculty, students, and patrons concerning this topic on March 3 and 4.

Dr. Cox discussed C-1, American Institutions; C-2, The Physical Sciences; C-3, Reading, Speaking, and Writing; C-4-1, Practical Logic; C-4-2, Fundamental Mathematics; C-5, The Humanities; and C-6, Biological Science. He was concerned with the organization, administration, and methods used in these general education courses at the University of Florida. This discussion was extremely valuable in relating this program to the local situation.

Dr. Paul A. Witty, professor of education and director of the phychoeducational clinic at Northwestern University, spoke on A Developmental Reading Program for Our Schools, Some Characteristics of a Balanced Reading Program, Reading in Modern Education, and Television, Comic Books, and Your Child, on March 24 and 25. Not only did he address the faculty and student body, but a large group of public-school teachers drove in for the meeting.

Dr. Hoyt Troybridge devoted some time in conference with teachers of general education subjects.

This 3-year study has developed many fine thoughts, ideas, ideals, and principles. Probably the two most noted are the following two new courses:

1. Sociology 203, consumer problems: "Development of sound business and consumer principles for single student and family liv-This course is not designed for an economics course on the economic of consumption, but rather for a general education course on consumer problems emphasizing family living. The subject is drawn from any source that helps the student acquire better insight and information on a consumer problem. Materials are included from the fields of psychology, economics, nutrition, government at all levels, sociology, and homemaking to round out the course. Recent findings of the Consumer Education Study, reports of various marketing research organizations, government agencies, United tions agencies, child development studies, studies on housing costs, studies on the causes of marital unhappiness, dollar-cost of divorce, case studies in meeting financial crises."

2. Sociology 123, school and community: "The place and function of the school in a democratic society; changed social conditions and the consequent demands made upon the school. A careful consideration of the individual, social integration, prejudice, demo-cratic living in school, realization of worldwide interdependence, our common humanity, the value and understanding of differences, the ideological conflict, war, the United Nations, the Commission of Human Rights, UNICEF, World Health Organization, the Food and Agriculture Organization, UNESCO in action, an overall view of UNESCO, technical assistance, and patriotism and world-mindedness."

Paul McCarthy-Great Legislator

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very appropriate and welldeserving editorial that appeared in the Boston Traveler, Boston, Mass., on April 5, 1955, concerning a former member of the Massachusetts Legislature for whom all of us, regardless of party affiliations, had great respect and admiration:

IN THE BAY STATE

(By Cornelius Dalton)

The biography of Paul A. McCarthy, as recorded in the official handbook, Public Officers of the Commonwealth of Massachusetts, was unusually brief.

It reads, "Born, Somerville, December 23, 1902; education, Somerville public schools; business, stationer; public office, secretary to mayor of Somerville 1934-35; Massachusetts House 1937-54".

This biography, composed by himself, told almost nothing about Paul McCarthy, who died Sunday night after years of sickness and

suffering.
Paul McCarthy was a great legislator. During his 18 years in the house of representatives, there were probably only a dozen other legislators of whom this could be said.

He was a fierce fighter on the floor of the house chamber, and a kindly, considerate man off it.

He was an intensely loyal and even par-tisan Democrat, and no Democrat was more admired by his Republican colleagues.

He was an eloquent and remarkably effective debater, and his formal education ended with grammar school.

Paul McCarthy was not always right, and he did not always win. But no one ever questioned his sincerity, and even in defeat he usually looked like a winner.

He participated in most of the big debates of the past 2 decades on Beacon Hill. His interests ranged over a wide field, but he knew his subject, whether it was the State budget or the beano racket.

He led many legislative battles-for the workingman, for the aged, for the veteran, for the patients in hospitals-and many of

his bills became law.

But his influence was felt in a hundred ways that never were obvious. No member's advice and counsel was sought more often in the lobby by colleagues, both Democratic and Republican

He was a relentless foe of the Communists. and he was a relentless foe of the racketeers. It was he, more than any other man, who was responsible for outlawing beano in Massachusets. He could not be intimidated, and he could not be bribed.

When he took the floor of the house, the members listened. And he was one of the few legislators who could change votes dur-

ing a debate.

McCarthy suffered from high-blood pressure, and the \$100,000 study of hypertension authorized by the legislature was voted as a tribute to him. He underwent a series of operations, and in recent years was in and out of the hospital.

He was devoted to his wife and four chil-And he was devoted to his religion. But he never made a display of his devotion.

Even in the midst of his own troubles, he thought of others. When the Democrats won the house in 1948, for the first time in history, McCarthy phoned Republican Clerk Lawrence R. Grove from his hospital bed to assure him that he would be retained.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS OF

HON. PETER W. RODINO. JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herein several pieces of correspondence together with certain comments relating to my resolution to establish a National Better Material Handling and Packaging Week:

AMERICAN MATERIAL HANDLING SOCIETY, INC., Toledo, Ohio, April 6, 1955.

Hon. PETER W. RODINO, Jr., House Office Building,

Washington, D. C.

DEAR MR. RODINO: I am in receipt of a letter from Mr. Harry P. Dolan, executive secretary, Caster & Floor Manufacturers Association.

In his letter he writes, and I quote: "We are very happy to join with AMHS and the many outstanding trade associations representing the material handling industry in requesting that President Eisenhower proclaim a National Better Material Handling and Packaging Week. In our opinion it is quite fitting that the 'Moving Force' in America receive the recognition that is its due. * As manufacturers of casters, wheels, and floor trucks, our members have seen a tremendous industry develop and are proud of the important part they continue to play in it."

This organization, which voluntarily adopted a program to develop standards for all products represented in their trade association in January 1952, pursued the pro-

gram so vigorously and efficiently that in 1954 they were chosen to receive the American Trade Association Executives award of merit. The highest honor that can be bestowed on a trade association, the citation reads, in part and I quite: "Presented to the Caster & Floor Truck Manufacturers Association in recognition of its successful endeavors to encourage and develop various standardization and specifications for the products of its industry."

The jury of awards for 1954, which honored

this association were Hon. Sinclair Weeks, Secretary of Commerce of the United States: Mr. Clem Johnston, president, United States Chamber of Commerce: Mr. Harold C. Mc-Clellan, president, National Association of Manufacturers; Mr. Neil H. Borden, president, American Marketing Association; and Dr. George W. Robbins, acting dean, School of Business Administration, University of Cali-

We are happy to include this organization among our sponsors and would request that have established a National Better Material Handling and Packaging Week.

Very truly yours.

J. W. HALL, National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

AMERICAN MATERIAL HANDLING SOCIETY, INC., Toledo, Ohio, April 6, 1955. Hon. PETER W. RODINO, Jr.

House Office Building, Washington, D. C.

DEAR MR. RODINO: I am enclosing 2 letters, 1 written by Mr. E. W. Allen, vice president, Thomas A. Edison, Inc., and 1 written by Tom Turner, vice president, Westinghouse Electric Corp.

In support of the effort to establish a National Better Material Handling and Packaging Week. I would request of you that these letters be included into the CONGRES-SIONAL RECORD as of benefit to this program.

Very truly yours,

J. W. HALL, National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

WESTINGHOUSE ELECTRIC CORP., Buffalo, N. Y., February 16, 1955. Mr. J. W. HALL.

National Secretary, American Material Handling Society, Inc., Westinghouse Electric Corp., Meter Division,, Newark, N. J.

DEAR MR. HALL: Material handling is one of the big items in industry. Anything that can be done to increase material handling efficiency and bring it into the national limelight is worthwhile.

Congratulations and best wishes for the continued success of AMHS.

Very truly yours,

BUFFALO-MOTOR AND CONTROL DIVISION, TOM TURNER, Vice President.

THOMAS A. EDISON, INC., West Orange, N. J., February 18, 1955. Mr. J. W. HALL,

National Secretary, American Material Handling Society, Inc., Care of West-inghouse Electric Corp., Meter Division, Newark, N. J. DEAR MR. HALL: Thank you for your let-

ter of February 7 and attachments having to do with the efforts being made through the Honorable P. W. Rodino, Jr., and others toward the declaration of a National Material Handling Week.

Over the past 30 years I have been actively engaged in promoting the interests of the material handling industry and it is needless to say that any movement which will

contribute to this cause has my unqualified

Yours very truly,

E. W. ALLEN. Vice President.

AMERICAN MATERIAL HANDLING SOCIETY, INC. Toledo, Ohio, April 7, 1955.

Hon. PETER W. RODINO, Jr., House Office Building, Washington, D. C.

DEAR MR. RODINO: I am forwarding to you a letter, written by Mr. H. S. Jones, president, Montreal Chapter, American Material Handling Society.

The letter refers to the effort involved in producing The Bibliography of Material Handling. This is the most complete compila-tion of books, pamphlets, speakers, films and articles on material handling ever made.

The effort was voluntary. Those engaged

The effort was voluntary. Those engaged in the preparation worked long hours gathering the data to be used. It will shortly be published in book form for the use of li-

braries, colleges and industry.

As an example of the devotion of the men of the material handling and packaging field to the principles of their chosen profession. I would like to submit this letter in support of the program to establish A National Better Material Handling and Packaging Week.

Very truly yours,

National Secretary, Westinghouse Corp. Meter Division, Newark, N. J.

THE AMERICAN MATERIAL HANDLING SOCIETY. Montreal, Quebec, March 30, 1955.

Mr. J. W. HALL,

National Secretary AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

NATIONAL MATERIAL HANDLING WEEK

DEAR SIE: Herewith is a summary of the work of our chapter's committee to produce the Bibliography of Material Handling.

At the request of the national president of the American Material Handling Society, a committee was formed from the Montreal chapter to compile a complete and up-todate reference of books, pamphlets, articles, films, and speakers which pertain to material handling subjects.

The need for such a bibliography became evident when it was appreciated that it has become virtually impossible to read all of the ever growing list of magazines which publish material handling articles. Its purpose is to permit men in the material handling field of industry to locate more easily those items which pertain to their own problems.

That this was a tremendous undertaking can best be realized by reviewing the final results. The cost in dollars was not great. The Montreal chapter contributed \$250, and the National another \$100, or a total of \$350. However, in addition to the money, some 600 hours of effort have been expended by the seven committee members. This is not a particularly impressive figure until you realize that it is the equivalent of each member donating his annual vacation to the cause of preparing this bibliography. Thus we feel that the value of this publication can be conservatively estimated at \$2.000.

The completed project required just over 1 year to complete and was only accom-plished in this time through the 100 percent cooperation of a group genuinely interested in the material handling profession, consisting of J. C. Cochrane, P. N. Dufresne, D. A. Gillespie, E. B. Jobien, P. J. McKeough, L. J. Stock, and bibliography committee chair-man, J. L. Smyth. Mr. Dufresne was a graduating student at McGill University and used his work as his engineering thesis.

That the bibliography has proven successful can be appreciated from the numerous requests we have had for copies and the number of firms who have requested permis-

sion to publish it.

I would request you on behalf of the Montreal chapter that the above should be submitted to the Honorable Peter W. Rodino, Jr., for insertion into the Congressional Record as a part of the program to establish a National Better Material Handling Week.

Yours as ever,

H. S. Jones, President, Montreal Chapter and

National Director.

Aid to Asia

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the gathering of delegates to the Afro-Asian Conference in Bandung, Indonesia, adds emphasis to the critical need for formulation and positive action on a reinvigorated program to aid the underdeveloped nations of the world. I wish to call the attention of the Congress to a statement by the Church Peace Union, of which Dr. Ralph W. Sockman is president, on this vital subject:

RESOLUTION ON AID TO ASIA

The Afro-Asian Conference, to convene in April at Bandung, Indonesia, promises to be a widely representative gathering. Of the 25 invitees and the 5 sponsoring countries, 25 have already indicated that they will be represented, and the remaining 5 are expected to accept the invitation.

This meeting may prove to be the prelude to one of the most significant events of our time. For these 30 countries, including well over half of the human race, may be on the way to concerted action which will give voice and sanction to their determination to live no longer as second- or third-class citi-

zens in the world.

The calling of this conference by the Columbo Powers (Burma, Ceylon, India, Indonesia, and Pakistan) serves to highlight the supreme importance of the free Asian nations within the current international situation. If large-scale war is averted, it is our understanding that there will be waged in Asia during the months and years ahead an intensive economic competition between the western nations on the one hand and, on the other, the Soviet Union and Communist China.

In line with our traditional friendship with the Asian people and to assume that the free world shall not lose by default the economic struggle for the loyalty of the free Asian area, we, the trustees of the Church Peace Union, believe that the United States should immediately initiate two courses of action. We, therefore, earnestly urge our Government to give prompt attention to two issues:

- To appropriate as quickly as possible the amount of approximately \$1 billion, the obligational authority requested by the administration for these crucially important Asian programs.
- 2. To devise an efficient way to administer the disbursement of these funds, if the Foreign Operations Administration is allowed to go out of existence on June 30, 1955, as directed by Congress. We hope that the tenure of FOA will be extended, at least until an effective organization can be provided, ade-

quate to handle the immense aid-to-Asia programs. It should be noted that unification of foreign-aid activities under FOA has to date saved both money and personnel.

The United States and its western allies must truly become good partners if they are to participate successfully in the economic competition already being waged in the free Asia arc. More bases of mutual respect and mutual interest must be established. New areas of agreed cooperation for mutual advantage must be found. How we meet this immense problem will be of fateful importance, in both the short and long term, if we aim to widen the reaches of a genuinely free world in which an increasing number of stable, self-reliant, and independent nations are joined. The immediate contribu-tion we can make toward this end is to appropriate adequate funds for the prospective Asian programs and to provide for their efficient administration.

RALPH W. SOCKMAN,
President
HENRY A. ATKINSON,
General Secretary
(For the Board of Trustees, the
Church Peace Union).

Mr. Stevenson Goes It Alone

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the Record an article by David Lawrence which appeared in last night's Washington Evening Star.

It relates to Adlai Stevenson's socalled foreign policy speech and is extremely enlightening as to how one without the responsibility of formulating policy feels perfectly free to adjust his dramatic pronouncements from day to day in accordance with what appears expedient at the moment, regardless of what the inconsistencies and contradictions may be.

The article follows:

Mr. STEVENSON GOES IT ALONE—HE ROCKS THE BOAT AT A CRITICAL TIME, WITH HIS PEACE-AT-ANY-PRICE PLEA

(By David Lawrence)

If Adlai Stevenson had contrived purposely to encourage the Communist Chinese to believe that America is disunited and that her allies are seriously at odds with her on fareastern policy, he could not have delivered a more convincing speech to that end than he did on Monday night.

For, while to many Americans the former presidential candidate would seem to have been motivated merely by domestic political considerations and by his own ambitions—which can be realized only by undermining the political popularity of President Eisenhower—the Red Chinese could well imagine that the speech represent the beginning of a retreat by the Democratic majority now in control of Congress. Only a few weeks ago they voted solidly to support the resolution authorizing the President to use our military force to defend Formosa and "related positions and territories of that area." Is "bipartisanship" to be spelled differently now, with divisive speeches by partisans at a time of grave crisis in international affairs?

There are, of course, differences of opinion here and abroad over the extent to which the "related areas"—namely, the offshore islands—shall be defended. But the issue was thoroughly debated in Congress, and it would seem that Mr. Stevenson now is merely accentuating a difference that has already been resolved. For the Congress was informed that there was no intention on the part of the President to defend the offshore islands as such, but to defend them "only in situations which are recognizable as parts of, or definite preliminaries to, an attack Formosa. This has been made clear to Members of Congress on the Democratic side, and especially to Senator Walter George, Democratic chairman of the Senate Foreign Relations Committee. But now it would appear that Mr. Stevenson has publicly repudiated the leadership of the Georgia Senator and prefers to go it alone in proclaiming what he believes should be the foreign policy of the Democratic Party.

Mr. Stevenson, moreover, calls for a declaration by the ailied nations condemning the use of force in and around Formosa. This is predicated on the assumption that the Red Chinese will likewise refrain from using force. Senator George favors the renunciation of the use of force in and around Formosa, and so does President Elsenhower, who has called for a cease-fire to be arranged by the U. N. It is not Mr. Elsenhower or our allies who can regulate whether force shall be used. Only the Red Chinse can decide whether there is to be war in the Far East. Any pronouncements about United States policy should be left to the President of the United States to make.

The speech by the former presidential candidate is full of contradictions so characteristic of many of his addresses. While, for example, he condemns the Eisenhower administration for not doing what it says, and for not meaning what it announces in its threat of massive retaliation, Mr. Stevenson unfortunately chooses as his illustration the allied retreat in Indochina. For this he blames America when he ought to know that the United States backed down from the use of force there because neither the French nor the British-our allies-would go along with us. Here was a case in which Mr. Eisenhower and Mr. Dulles did precisely what Mr. Stevenson now pleads should be donenamely, adopted an attitude deferential to the wishes of our allies. But having followed our allies, America is now blamed by Mr. Stevenson for the loss of Indochina. He certainly cannot have it both ways.

Mr. Stevenson's speech exhibits a greater concern for the feelings of the allies than it does for the feelings of the American people. This is probably due to a desire to make it appear that in foreign policy the administration is inept and incompetent. While professing high motives himself, Mr. Stephenson accuses the administration of yielding to considerations of domestic political expediency in making its far eastern policies. There are critics inside the Republican Party but fortunately they have not been in favor of appeasing the Communists, and are trying instead to keep the administration from yielding to those peace at any price elements in the Republican Party which, like Mr. Stevenson, advocate withdrawal from the offshore islands.

Mr. Stevenson would, of course, wash his hands of any responsibility if the policy he advocates were really adopted. If, for example, after the United States withdrew moral support from the Nationalist Government and a disintegration of morale developed on Formosa among the troops of Chiang Kai-shek—which Mr. Stevenson now significantly derides as "over-age"—the titular leader of the Democratic Party probably would not concede that, by his speech and proposals, he had helped to break down the morale of the Nationalist troops on Formosa, just as the Truman-Acheson administration did in pulling the rug from beneath Chiang

Kai-shek's forces on the mainland of China in 1949.

Mr. Stevenson is rocking the boat at a critical time, and if his words are heeded by the Democratic majority in Congress, then America is headed for the era of chaos and divided Government predicted by many observers last autumn. The American people during the campaign were promised cooperation by the Democrats in upholding the hands of the President, especially in foreign policy. But Mr. Stevenson evidently does not feel obligated now to see that this pledge is fulfilled.

Panel Discussion: The Roots of Prejudice Examined

EXTENSION OF REMARKS

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the text of a panel discussion on the Roots of Prejudice that was held by the New York Herald Tribune Forum for high schools, and in which young students from six countries of Europe, Asia, and Africa took part.

This panel discussion reveals in a singularly illuminating way how prejudice and bigotry derive from ignorance, from a craving for superiority, and from the example set by the elder generation. I believe that there is much to be learned from the frank views of these youngsters, and I urge my fellow Congressmen to read and reflect on what they have to say.

I also want to express my appreciation and admiration for the New York Herald Tribune, for the very valuable program that they have now been conducting for 9 years. Here is one great metropolitan newspaper that deserves a universal salute for its earnest and effective efforts to bring to the youth of this country, and of others, an understanding of the nature of our world and of our world problems by a direct interchange of views. A program like the Youth High School Forum of the Herald Tribune is an encouraging silver lining to a troubled world cloud.

PANEL DISCUSSION: THE ROOTS OF PREJUDICE EXAMINED

(Epiror's Note.—The panel discussion, The Roots of Prejudice, at the Forum among Gur Ben Ari, of Israel; LeBrecht "Pifi" Hesse, Gold Coast; Marlene Roodt, Union of South Africa; Akram Z. Barakat, Jordan; Per Friis Rusten, Norway, and Hisako Shimazu, Japan.)

MARLENE. I have spent most of my energy during the last 3 months trying to figure out what has been happening to me since I came here. And, Fifi, I still don't know. But one thing I do know. A person can change more in 3 months than I ever thought possible. Sometimes I can't identify myself with the Marlene who left Johannesburg last December to be the Forum delegate from the Union of South Africa.

Firi. I think all of us have had the same feeling to some extent, Marlene.

MARLENE. You see, when I got on that Pan American plane, I had never met a Negro on terms of equality. And I was won-

dering so much about what it would be like here that it never occurred to me the plane would soon be picking up other African delegates. Then we put down at Accra in the Gold Coast. The American cultural attache came up to me and asked if I would like to meet the delegates from the Gold Coast and Nigeria—Fifi and Minjiba. I was scared stiff, knowing how the Gold Coast regarded white South Africa and what they had been saying about us in the newspapers.

Fig. I was scared, too. But I decided to be prepared for anything and play it the way she did. Marlene offered her hand first.

MARLENE. By the time we got to Lisbon the next afternoon, the three of us were sitting on two seats, finishing an enormous box of chocolates I had been given when I left Johannesburg. We didn't stop talking for a minute, and when we got over New York City at 5 a. m. Christmas morning, oh, it was so exciting. All the Christmas trees were lit. At Idlewild we got the first feeling of what the forum would be like—looking for lost luggage, helping and waiting for each other. I didn't know then how complicated things would be fore me here, sometimes.

FIFI. I wonder if you realize how hard things have been for Marlene here?

Marlene. You are still in character, Fift. For when things have been hardest you have often been the one who understood me best; (looking at audience) if Fift knows what I'm talking about when I explain apartheid, why can't you?

FIFI. Why don't you give it another try? MARLENE. The government of South Africa follows a policy of "apartheid" (separateness). It arises from the basic differences between two peoples whose customs, religious habits, and state of civilization are so far apart, and from the fact that power is in the hands of a small minority. There are 2½ million white people in the Union of South Africa, and 8 million blacks. In theory, "apartheid" will set both black and white free to develop to the full extent of their capacities, leaving each free to preserve its own culture, and eventually the blacks will take over their own government and we will keep ours. * * * I have discovered since I have been here that the race problem at home is far more complex than I ever realized. I know that we are not born prejudiced, but that we accept the readymade attitudes of others, and that the social order of today conveys lessons which we absorb without conscious learning.

Fir. Let me try to put this matter of prejudice in perspective. The word "prejudice" comes from two Latin words—"prae," which means "before," and "judicium," which means "judgment." Literally, prejudice means preconceived judgment. People make preconceived judgments—become prejudiced—when they don't know the facts, or when they do know the facts and don't like them. For example, when our interests conflict with the interest of others, we make ourselves believe that others deserve less than we do, in order to be at peace with ourselves. We think of another as inferior, to create for ourselves a feeling of superiority.

CITES SURVEY HERE

Let me tell you about a survey I conducted in some high schools here. I asked a number of Negro girls how often white boys took them out on dates. About 90 percent had never been out with a white boy. The remaining 10 percent could count the number of times on their fingers. The experience of Negro boys was about the same.

What is responsible for this segregation in unsegregated schools, where Negroes and Whites do everything together? Some say the reason is economic; that the average Negro income is less than the White. I don't think this is the only reason, or the most important. It is the old contempt, inherited from the days of slavery. No matter how

widely publicized the Supreme Court decision, the basic cause of segregation still exists in ourselves. We must see that they are removed.

MARLENE. You see how difficult Fifi makes things for me? How easy the policy of apartheid would be if skin color did make one person superior to another.

Fig. Marlene, let me say what needs to be said here, because it is easier for me than for you. There is a fundamental difference in educational development and rate of adjustment to Western machine civilization that makes it difficult for the white South African to treat the native as an equal today. Why this difference exists is another question. But it is also difficult when people used the word "native" as if it were synonymous with "savage" and "primitive" and "uncivilized."

I recently saw an advertisement on a subway here which read: "You need not go native for comfort." It showed a picture of a woman from somewhere in the East Indies, very scantily dressed. It was an advertisement for girdles. Another example of how we are unconsciously taught that "natives" are primitive.

AFRICA IS CHANGING

MARLENE. And, Fifi, let me say what is easier for me to say than you. Through the ages the whites in Africa have believed that the native is not fit for the company of whites, and so must be separated from them. They have not helped the native as much as they should to adjust to the civilization they imposed on him. Too much of our policy has been based on fear of our fellow man, rather than confidence in him. But things are beginning to change. People are beginning to realize that the natives are human beings just like we are, and must have the same opportunities. All Africa is changing-white well as black. And South Africa has achieved more in the last 10 years than was done in the previous 200.

Fig. But to get this conversation in perspective for an American audience, one of us has to say that the situation in South Africa is about 100 times more complicated and difficult than in the most backward of the American Southern States.

Marlene. Thank you, Fifl. Also, our problem is not only between whites and blacks. There are the coloreds and the Asians. The United States of American has solved her problem, legally at least, and the world approves. What we do has repercussions all over native Africa, in the whole Arab world, and all over Asia. If you think your problem of coexistence with communism is difficult, I wonder what you would do with our problem of coexistence if you live in Johannesburg.

Fig. It is the genuine feeling of all of us Africans that blacks and whites can work together peacefully. But under existing circumstances we find it difficult. A famous educator from the Gold Coast once said: "You can play all sorts of tunes on the black piano keys, and all sorts of tunes on the white. But for harmony you must use them both." Marlene, you have testified to our friendship: What would it be like if I came to Johannesburg?

PRECONCEIVED JUDGMENTS

Marlene. You know the answer. But your question gives me a chance to say this: It's something I have been wanting to get off my chest for weeks. I think I have a better understanding of how an American Negro feels, deep inside, than all of you white Americans.

For 3 months now I have been judged—by most of you—not for what I am—me, Marlene Roodt, an individual—but by your preconceived judgments about my country.

Now, Fifi—a direct answer to your question. If you come to Johannesburg it will not be the same, nor would it if I went to Accra. We would both be prisoners.

Firi. I have always hated white South Africans violently, because they are Negro-phobists. But, believe me. I like the first white South African I ever saw very much. I think our stay in this country proved to me that all white South Africans don't fit my stereotype of them.

I recently visited the Museum of Modern Art and saw the exhibit on "The Family of Man." The whole range of pictures was wonderful, and impressed me greatly. But one picture from South Africa impressed me most. It was a picture of a Negro standing by a rock, with his eyes uplifted unto Heaven, and under it was written, "Who is on my side? Who?'

A JORDAN VIEWPOINT

ARRAM. When I was chosen to represent Jordan in this forum, I did not know there would also be a delegate from Israel. Then, in the letter of congratulations from Mrs. Waller, telling us how to prepare for the trip. I saw the name of Israel among the countries to be represented. It was really difficult for me to think how I would act.

My first thought was that I would not speak with him at all, and treat him as our countries treat each other. But this was difficult from the beginning because his country was listed as "Israel" and we call it "Palestine." I talked to some of my teachers and friends to get their advice. Some said I should not speak to him at all. Others said I should treat him just as I would treat any of the other delegates, to show him that we do not have any enmity against people.

When Gur arrived at Kober House the day after I did, together with the boys from Italy and Switzerland, I got to know him just as I did the other delegates. We all had so much in common as members of the same group that our political differences didn't come up.

Two days later we both happened to be assigned to wash dishes together, with some of the other delegates, and Gur and I started to talk about the Palestine problem. I was surprised to find that some of the others had not even heard about it. In trying to explain to them, we had to go easy on the heat in order to shed some light. And although we were talking about a very complicated problem from very different points of view, still neither of us broke a dish.

JUDAISM AND STONISM

Only 3 months ago, I used to think that all the Jews are Zionists. Since I have been here, I have realized that there are some Jews who don't have any faint idea about Zionism. So, a very good thing I learned, first of all, is that Judaism is not synonymous with Zionism. Judaism is a religion. Zionism is a political idea. So we should not confuse the two.

Therefore, although I still have prejudice against Zionism-naturally enough-I don't have anything against Judaism now. However, as an Arab, I do feel prejudice against Zionism because of all the troubles it has brought to this part of the Middle East.

My job here as a forum delegate, in six different host schools and all the others I have visited, has been to talk about my country and explain our point of view. In some of these schools there have been not only large numbers of Jewish students but many Zionists. In many cases I gave them their first opportunity to hear the other point of view. And it was also my first opportunity to discuss this problem with Zionists.

I was so glad you know-I really felt happy-when some of them not only understood my point of view but really appreciated a chance for discussion instead of angry argument. It was the first time for some of them to see that the other point of view is possible.

Now I have talked enough about Palestine. This is just one of the many diffi-cult problems between countries that the 34 of us represent. The thing that the last 3 months has made us wonder aboutsince all of us are friends-is this: Since people from anywhere like people from anywhere as individuals, and since everybody seems to agree that wars usually do more harm than good, where is the point where people forget what their common interests are, and start fighting each other?

This is a complicated question-too complicated for students to solve. Maybe the fact that we have asked the question here, in the U. N., will have some small influence on the official delegates who occupy these seats and who will be back here again next week, trying to find the answers.

ISRAEL'S VIEWPOINT

Gur. I've got another suggestion for the diplomats who come back here on Monday. If they haven't time to wash their dishes together, maybe they could play ping pong? After Akram and I finished doing those dishes he told you about, I went down to the ping pong table with the Arab league. I beat Rifaat, from Egypt, but then Akram beat me.

Speaking of the Arab League, Saniya, from the Lebanon, was washing dishes that day when Akram and I were drying them. She word when we were talking didn't say a about the Middle East. At first I thought she kept quiet so that it wouldn't be two against one. Then I discovered she was having to concentrate all her attention on doing a job she never had learned how to do in the Lebanon.

Five months ago, when I wrote my essay on The World We Want for the forum competition, I wrote as an Israeli, without any international experience. In the course of these 3 months, my horizon has been considerably widened.

In these 3 months, I have often felt myself thinking similar to an American, a Burmese, or a Japanese.

Once I even got myself into a really tough spot! It started as a game. You know that in each host school we have been together with 2 or 3 other forum delegates. tening to each other say the same things about our countries so many times in assembly programs, we practically learn each othspeeches by heart. So, one night in Washington when all of us were together, just for fun we exchanged roles to see how well we could present another's point of view. And I found myself being the delegate from Jordan, trying to convince the delegate from Israel (played by another of the delegates from the Middle East). In the end it was a draw.

OUTLOOK ENCOURAGING

We have had a lot of fun. But we have also discussed many serious problems.

Sometimes I realize how narrow-minded people can be pursuing only selfish interests, and forgetting that there is something more fundamental-serving good international interests, as nations and as individuals. Of course, this is not as easy as it may sound. Coming back to what you said, Akram, about your experience here, and what you discovered about Judalsm and Zionism. My experiences were entirely differ-I am happy to say that all the Jews I met and also most of the non-Jews I talked to were very sympathetic toward Israel and what it stands for. Especially the Zionists, who see in the ancient new country of Israel the fulfillment of their age-long hopes. Our different experiences here show how complicated problems are.

We don't want a world where we can breathe freely in the morning just because no calamity happened overnight. We don't want a world where countries spend most of their energy on armaments in order to bring closer the possibility of dying together. In stead we should be finding a way to live to-

This forum encouraged me to be an optimist. Now I am sure that coexistence is possible.

PROUD OF COUNTRY

This forum helped me in another way. It made me proud of being a citizen of my young country. I was asked many times whether I would like to live here. To me it was like asking, would I like to exchange my parents. However, I find much that is alike in your country and mine. Both countries face the problem of integration, the problem of forming one nation out of people from everywhere. And we are overcoming their prejudices and making one nation just as you have.

Israel is a country of challenge that gives every citizen a feeling of being needed-especially the youth.

What my country needs now, as all other nations, is peace. We have much constructive, creative work to do. War prevents this and solves nothing.

I said I was an optimist. I wonder whether we will be able to impart the wonderful experiences we have had here to as many as we would like to. Maybe that is why I can end by saying I wish the politicians would solve their problems the same way we did. We lived here in the world we want, a peaceful world which, discounting prejudices, can be achieved.

CULTURAL POLICIES

PER. Of course, it is not only through the policies of governments that we get our prejudices toward other peoples.

In Europe, people often go crazy about what they call the "cultural policy" of the United States. Americans, of course, claim that they haven't any cultural policy at all. This is theoretically right, since the American government doesn't control which American movies are sent abroad, or which books.

The practical result is that you do have a cultural policy, determined by Hollywood and Mickey Spillane.

Do people actually have to come here—as we did-to find out how hospitable and friendly you are? Of course, I realize now that you take this side of American life so much for granted that you are not inclined to talk about it. But you must realize that if you want our military solidarity, you must also have our psychological support and we could never respect America in the cultural field through Hollywood as it is today.

So why don't you find a way to let us know

you as you really are?

I wonder, too, how many of our prejudices come from history books we used in school? I am proud of my history teacher. When we read about how the old Vikings used to ravage down in England and Central Europe, he always says, "Remember, boys, this is nothing to be proud of." Few teachers manage to be so objective. And too many stress differences instead of similarities between countries.

CONTRAST IN JAPAN

HISAKO. But sometimes, when countries are far away, they do not stress the differences enough. When I was in Japan, I thought that China was a very far-off coun-Here, to my surprise, many people consider China and Japan the same country.

PER. What are some of the differences you found in Japan and America.

HISAKO. In Japan, people who can have a car are only upper class, and then they use the car mostly for business. Here I saw a washing woman come to clean the house driving a Buick.

It is envious that American women are given much time to please or to develop their knowledge by many convenient ma-chines. It is difficult for us to do something in the world after marriage.

But everything is too automatic and similar here. I wonder if you understand the taste of hand-made things, or the pleasure of delicate variation?

Here I danced with boys for the first time. I was surprised at the scene of the party. If I had written my parents about it in detail. they would have taken me back to Japan.

NORWAY'S DIFFERENCE

PER. Our social life in Norway is much the same as yours, but I did notice one thing in the schools that is different. I got the impression that American high-school teachers may talk about some of their political opinions in classes. As far as I know there are no laws, as there are in Norway, to prevent them from doing so. At home, we may have any kind of political discussion in class, but the teacher has to stay out of it.

I will never forget what I heard in an American citizenship class of 11-to-13-yearolds I visited here. The teacher said, "Today we are going to talk about communism for the first time." The children sat with wideopen eyes. When he finished his description he asked the children what they thought could be done to stop communism. He didn't give a definition of communism, and gave the impression that even socialism, which includes my country, Norway, is a synonym for dictatorship. This is dangerous. A 13year-old does not have the intellectual capacity to question what he hears in school. And because it is human to stick to first opinions, a person tries to make later impressions conform to his original idea, and thereby becomes prejudiced.

MENTAL INDIGESTION

HISAKO. I notice another difference between your schools and ours. Sometimes in Japan we take too many subjects with speedy lesson. It makes us indigestion and our knowledge we get in this way is not real one.

I could not find in the classroom of American high school who is intelligent and who is not so. Here everyone joins in discussion. No one fears that they should make a mistake. It is indeed quite different from us, where only the most intelligent would dare to speak in class.

American children are not shy any they say and do what they think to be right without hesitation. We must learn that character from them, because sometimes we are too polite in discussion and few say their opinions. Even if we knew the answer for teacher's question, we do not say until he points us out.

I think equality and individualism must

be applied to Japanese education.

PER. But, Hisako, Americans have been in Japan for 10 years now. Haven't they already brought new ideas, like individualism, to Japan?

HISAKO, Japanese know the word "Individualism" now, but we don't practice it. Something in our very old thought prevents it. To be conservative, modest, patient, respectful, and obedient is part of our character. I found a word that describes itintrospective, internal. Japanese people have composure.

We do not show ourselves to others. To us, when you express feelings in big expression, it proves you don't feel deeply and will forget soon.

In this we are so different from Ameri-What we think is delicate, you call cans. ungenerous. What to us is modesty, to you is secrecy.

Before I came I knew that there was difference between Japanese and Americans in customs and behavior. Now I know that there is something very different in our minds.

Just after the war, when we began to know the word "democracy," a teacher called her class for an examination. They answered, "No, we do not want to take it. Because now we are free."

We have been much in contact, but we have only understood the surface of each other's culture. We have not yet understood what in each is best.

Gur Ben Ari, 17, born in Tel-Aviv, Israel, attends Hebrew Gymnasium Herzlia in Tel-Aviv. Joined Boy Scouts and Maccabi sport organization. Chief interests are track athletics, rowing, and handball. Has received silver medals for running, long jump, and discus throwing in competitions for the last 4 years. Has played violin for 8 years, and is member of school orchestra.

Lebrecht Wilhelm Hesse, 18, student at Accra Academy, Accra, Gold Coast. Winning of an essay competition in connection with coronation of Queen Elizabeth gave "happiest day of my life." Suffered from hazing in first weeks at school, but soon settled down to enjoy Latin, literature, and history. Never did get to like algebra and geometry. Favorite pastime is swimming and favorite hobby is reading. Also a theater fan and likes to read books he has earlier seen filmed. President of school branch of United Nations Students Association. Hopes to become lawyer.

Marlene Roodt, 17, from Krugersdorp, South Africa, is a crack athlete and wants to be a journalist. Born at Pretoria, describes herself as brunette with hazel eyes. Has studied English, art, biology, history, and geography at Monument High School. Likes languages, but not geography. At school is prefect, 1 of 4 members of student council. Captain of girls' athletic team and hockey team. Holds school record for several hurdle and sprint distances. Played on first team in softball and volleyball, and likes swimming and tennis. Hobbies include oil painting and sketching, collecting classical and light opera records. Likes modern music but says "this excludes wild jazz." Likes public speaking and debating, is fond of knitting, but not keen on sewing."

Akram Z. Barakat, 17, student at Al-Ahliyyah College, Ramallah, Jordan, was born in Jaffa, Palestine, son of a citrus-fruit exporter. Family left Jaffa in 1949 because of disturbances between Arabs and Jews and settled in Ramallah, which had superior educational f-cilities for Akram and his two brothers. Always ranked high in his classes, conduct, and initiative. Was named by his college principal to be a candidate for the Herald Tribune Forum, and easily passed subsequent competitive tests.

Per Friis Rusten, 17, born in Oslo, Norway, is now in secondary public school in Dram-men. Remembers living during World War II in Harstad, in north of Norway. His father died in 1949, since he has lived with his mother in Drammen. Has made several trips to the middle and south of Europe and to Great Britain.

Hisako Shimazu is from Osaka, Japan. Was born in Tokyo in 1936. Has been keen about reading from childhood, and reads all kinds of books. Says that although she was rather delicate, she played games and was good at climbing trees and roofs, like a boy. In 1946, was baptized and named Maria Bernadetta by a Roman Catholic father. Enjoys school and lists hobbies as music, movies, and reading books, of course. Father is head of Dai Nippon Spinning & Weaving Co. at Osaka.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS OF

HON, PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, April 14, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include

herein correspondence together with certain comments relating to my resolution to establish a National Better Material Handling and Packaging Week:

AMERICAN MATERIAL HANDLING

SOCIETY, INC. Toledo, Ohio, April 7, 1955.

Hon. PETER W. RODINO, Jr., House Office Building,

Washington, D. C.

DEAR MR. RODINO: I am enclosing a letter from Mr. W. T. Faricy, president, Association of American Railroads.

In support of the program to establish a National Better Material Handling and Packaging Week I would request that this letter be included in the Congressional Record as a part of the effort.

Very truly yours,

J. W. HALL, National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

ASSOCIATION OF AMERICAN RAILROADS, Washington, D. C., April 5, 1955.

Mr. J. W. HALL,

National Secretary, American Material Handling Society, Inc., care of Westinghouse Electric Corp., Newark, N. J.

DEAR MR. HALL: Pursuant to the promise

made in my letter of March 22, I am enclosing a short item entitled "The Railroads and Materials Handling" for such use as you may desire to make of it in connection with National Better Material Handling and Packaging Week.

Sincerely.

W. T. FARICY.

THE RATLROADS AND MATERIALS HANDLING

Materials handling, even with a specific commodity of uniform size and within a delineated area, such as a warehouse or portion of a warehouse, presents numerous chal-lenges. Consider, then, the complexities of a system virtually without limitation and it becomes clear why the railroads constitute the most versatile materials handling system in the world today. Ever since the invention of the wheel, methods involving its use for the movement of materials have been progressing. The development of the steel rail greatly accelerated this progress and has led to the vast network of railroad materials handling facilities.

The nature of materials to be handled varies greatly. Commodities may be solid. liquid, or gaseous, with extensive differences in size, shape, density, and other character-istics. The versatility of the materials handling system represented by the railroads permits the movement of all these commodities to virtually any destination at any time, regardless of weather, and the dependability of delivery is the key to the smoothly functioning, scheduled operation of industry.

Within the railroads' own plant are numerous examples of progression of materials handling research and study. To see the results of such study one has only to visit the supply department of a railroad and observe its vast and continuous movement of materials through methods incorporating the latest and most modern handling devices.

While the materials handled by the supply department of a railroad are numerous and varied indeed, they are generally consistently uniform within specific limits, and we must visit the freight-station platform where lessthan-carload freight is being handled to observe true diversification of materials. Here we may see articles varying from a small item, such as a box weighing less than a pounds, to packages of varying weights and dimensions.

Studies involving the expeditious and safe handling of such materials have brought about the development, acquisition, installation, and use of many devices, including motorized lift trucks, motorized burden-carrying trucks, tractors, and trailers, roller conveyors, and containers, as well as mechanized conveyor systems involving the use of four-wheeled or two-wheeled trucks attached to and towed by a chain conveyor.

In carrying out their big, basic job of handling materials, the railroads have also developed special equipment like the covered hopper car for the handling of bulk commodities, the automobile rack car for handling set-up automobiles, specially equipped gondola cars for automobile frame loading and rack cars for the more expeditious handling of pulpwood. But railroads go even further than that. There is no other industry that provides material handling equipment comparable to the automatic dumping machines for the handling of lake and tidewater coal and the ore unloading machines for the discharge of vessels. Livestock pens and grain elevators that are, in many instances, owned by railroads are another indication of the extent to which the railroads go to make materials handling easier for the shipping and receiving public.

Still another example of progress in materials handling on the railroads is the development of "piggyback" service, which entails the hauling of over-the-road motor truck trailers on flat cars. Continual re-search is likewise under way to improve the methods of handling such materials as lumber, plywood, plasterboard and similar commodities generally loaded on flat cars, as well as the handling of bulk commodities in covered hopper cars. Another recent innovation is the development of such interior car facilities as permanent lading strap anchors for economical bracing and protection of shipments moving in box cars. Car design advances, including improved draft gear and easy riding trucks, are also highly important. Other contemporary plant improvements relate to tracks, bridges, communications, and signals. One of the most outstanding changes is, of course, the transition from steam to diesel motive power.

In such ways does materials handling continue to receive aggressive attention through research and investment on the American railroads. Improvements in the field are an important factor in enabling railroads to provide the best possible service at the lowest possible cost.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-

TITLE 44, SECTION 182D. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1935, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
 3. Return of manuscript.—When manu-
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. Illustrations.—Pursuant to section 182b, title 44. United States Code (as shown above), requests for authority to insert an illustration in the Record should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the Record and shall be linecuted only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections.—The permanent Recorn is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which I shall be delivered at his residence, 1 at his office, and I at the Capitol.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Mon-roney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia Messrs. Neely (chairman), Gore, Bible, Mc-Namara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Ful-bright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hicken-looper, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neu-berger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible,

Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker,

Committee on Labor and Public Welfare Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Gold-water, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs, Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and

Committee on Rules and Administration

Messrs, Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, Mc-Carthy, and Curtis.
